Jung met Freud for the first time in 1907, when Jung's book *Über die Psychologie der Dementia Praecox* was published. (The English edition, *The Psychology of Dementia Praecox*, appeared in 1909.) Jung began to consider Freud as his master in the field of psychoanalysis, and he came to be esteemed himself, in psychological circles, as the foremost associate and disciple of Freud. The break came with the appearance of Jung's *Wandlungen und Symbole der Libido* in 1912 (English translation published in 1916 as *Psychology of the Unconscious*), which did not follow Freud's theories of the libido and the unconscious. Until his late 30's Jung had put his whole trust in the "logical and intellectual faculties of his mind and in the findings of the conscious universe. It was not until he had passed through a period of intense investigating of the unconscious mind that he came to see that the unconscious phenomena which he had studied in his patients lived also in himself." The book offered "a new key to mythology, a psychological analysis of the myth, a new view into the soul of the universe." Finding that in dreams and visions the same images and symbols had appeared to thousands of people over thousands of years, Jung decided that he had discovered a "collective unconscious" through which the world experience of all times could be tapped. Symbols which to Freud had mainly sexual and personal significance were to him "archetypes," images of "racial experience," much of which was essentially religious.

"I am no opponent of Freud's," Jung said many years after the appearance of his book, which aroused a fury of indignation in Freudian circles for which he was not prepared and which led to his resignation from the International Psychoanalytic Society. "It is perhaps . . . where the question arises of accepting the fact that every psychological teaching which is the work of one man is subjectively colored, that the line between Freud and myself is most sharply drawn." Jung believes, however, that both Freud and Adler overemphasized the pathological aspect of life and interpreted man too exclusively in the light of his defects. To Jung the libido is a "longing, urge, or a push of life . . . something extending beyond sexuality even in its wider sense." The sexual manifestations of childhood, moreover, are not perverse, but are "preliminary expressions of sexual coloring." Finally, Jung places the cause of the pathogenic conflict in the present moment and considers that, "in seeking for the cause in the distant past, one is only following the desire of the patient, which is to withdraw himself as much as possible from the present important period." A neurosis is primarily the result of "misdirected unconscious energy" which must be redirected.

After 1912 Freudians condemned Jung as a "deserter" and a "mystic," and he found himself abandoned; even most of his pupils left him. Jung's whole concern was now a "lonely and inward one: to experience in his own person the unconscious that contains the experience of the race." Events in the outside world contributed to aid him: the First World War turned Switzerland into "a mountain peak surrounded by a ring of fire. Doctor Jung, isolated already by his professional troubles, was literally cut off from all normal contacts." He was, however, medical commander of the British interned in Switzerland during the War. In 1919 he went to North Africa to conduct research in primitive psychology—the first of many such journeys.

Jung's *Psychological Types* was translated into English in 1923. This was "a critique of consciousness and of our psychology hitherto and the complement, the second and greater column of the psychological structure begun in *Psychology of the Unconscious.*" Jung began to attract a following of his own. He wrote many other books, among which were *Modern Man in Search of a Soul* (1933); *Psychology and Religion* (1938); *The Integration of the Personality* (1939); etc.—books which, following the new theories he had evolved, made more and more radical departures from the Freudian psychology, until he was considered an independent theorist and the leader of a new school. Most of his books have been translated into English, several of them by himself. In 1933 Jung was a lecturer in psychology at the Federal Polytechnical University in Zürich, and in 1935 he became a professor at the same University. He held this same position in 1943, as far as was known, for the Second World War again turned Switzerland into "a mountain peak surrounded by a ring of fire." In addition to his M. D., he holds the degrees of LL. D., D. Sc., Litt. D., D. Sc., Oxford, and F. R. S.

Jung has studied Oriental religions and philosophies, has "communed with black medicine men in the heart of savage Africa and stood on the roofs of Taos with the Pueblo sun priest," and has made many visits to the United States—visits in which he made "personal connections with the Negroes and Indians which, in symbolic form, people the unconscious of his American patients." His belief in the existence of tribal habits and institutions among "civilized" nations has grown stronger than ever through these experiences. And he has become more impatient than ever with those modern theories which he calls "psychology without the psyche." He hopes to see a "psychological age, in which the rational and the irrational, the instinctive and the intellectual, the primitive and the civilized, the soul and the body will be accepted as of equal value. He reads its signs not only in the field of the 'new psychology' . . . but in that more popular movement of man's discontent with his material destiny, his need to reach his inner life which is breaking through the crust of rationality in the form of Christian Science, Yogi cults, theosophy, anthroposophy, and thus, from a new angle, bringing East and West together."

"Among all my patients in the second half of life—that is to say, over thirty-five—there has not been one whose problem in the last resort was not that of finding a religious outlook on life," Jung says. He declares, however, that what is "usually and generally called religion" is "to such an amazing degree a substitute that I ask myself seriously whether this kind of 'religion,' which I prefer to call a creed, has not an important function in human society. The substitution has the obvious purpose of replacing immediate experience by a choice of suitable symbols, invested in a solidly organized dogma and ritual. The Catholic Church maintains them by its indisputable authority, the Protestant Church (if this term is still applicable) by insistence upon faith and the evangelical message. As long as those two principles work, people are effectively defended and shielded against immediate religious experience."

Jung's application of such ideas has aroused much controversy. According to I. Hendrick, he interests himself especially in the determination of a patient's personality type and in guiding him in the development of avocations, finding a special interest in the more symbolic elements of the patient's phantasy life and in studying its similarities with those found in art, various religions, and mythologies. "Much of Dr. Jung's procedure appears to psychoanalysts to be far more a stimulating academic tutorship than an etiological therapy, providing the neurotic individual with a new philosophy with which to cloak his suffering rather than effecting a dynamic personality change and capacity for more mature development."

The political implications of Jung's theories have also been the topic of heated discussion. His theory of a "collective psyche" limited to a race, tribe, or family and his insistence that "we cannot transplant the spirit of a foreign race *in globo* into our mentality without sensible injury" have aroused the wrath of anthropologists. Nor has his description of wars and revolutions as "psychic epidemics," uprisings "of the unconscious destructive forces of the collective psyche" which have been suppressed by the rationalism of modern life, ever brought him the Nobel Prize. His dicta on Nazism and on modern dictatorships are, however, as quotable as they are controversial. Writing in *Neue Schweizer Rundschau* in March 1936, for example, he explained National Socialism as the sudden outbreak of "an ancient god of storm and frenzy, who has lain quiet for ages." This god was Wotan, "a basic element of the German soul, an irrational psychical factor, a storm-wind which destroys and sweeps away the pretentions of civilizations . . . a primeval Germanic fact, a supreme expression, and an unsurpassed personification of a basic characteristic belonging especially to the German people."

According to the Swiss psychologist, "the life of nations is like wild water whose master is not man but rather something that has always been stronger than man," and "we who stand on the outside judge the contemporary German far too much on the theory that he is a responsible active agent. It would be much more sensible to regard him as a person who suffers. Something very powerful has hit Germany. . . Wotan will not exhibit his restless, stormy, and violent qualities only. . . National Socialism will not be the last word. . . Wotan's awaking is a stepping back, a reaching back. The river which was damned has burst into its original channel. But the dam cannot last forever. The whole business is *réculer pour mieux sauter.* The water will presently go over the obstacle."

In October 1936, after a trip to the United States, Dr. Jung gave an equally sensational interview in London in which he declared that Roosevelt '42 had "the most amazing power complex, the Mussolini '42 substance, the stuff of a dictator absolutely!" Mussolini, Stalin '42, and Roosevelt he lumped together as belonging to the "chieftain" type of "dictator," while Hitler '42 belonged to the medicine man type—

JUNG, CARL GUSTAV—*Continued*

"a medium." "German policy is not made," Jung said; "it is revealed through Hitler. He is the mouthpiece of the gods as of old." Asked what form of government he thought would follow the dictatorships, he replied: "Oligarchy in some form. A decent oligarchy —call it aristocracy if you like—is the most ideal form of government. It depends on the quality of a nation whether they evolve a decent oligarchy or not. I am not sure that Russia will, but Germany and Italy have a chance. Without the aristocratic ideal there is no stability. You in England owe it to your 'gentlemen' that you possess the world. . . The dictatorships of Germany, Russia, and Italy may not be the best form of government, but they are the only possible form of government at the moment. . . Communistic or Socialistic democracy is an upheaval of the unfit against attempts at order." These pronouncements seemed to many commentators definitely pro-Fascist.

After the Munich Pact, Jung developed these ideas further in an interview with H. R. Knickerbocker '40 in which he announced that "Hitler's mystical gift is what has let him accomplish things which seem to us illogical, inexplicable, curious, and irrational." Hitler, said Jung, is "the reflection of the subconscious of each German," reflecting nothing of a non-German; "not a man, but a collectivity." Furthermore, "instinct should tell the western statesmen not to touch Germany in her present mood. She is much too dangerous! . . Let him go to Russia. That is the logical cure for Hitler."

Doctor Jung is an "introvert" and a solitary. He has said that it has been his salvation that his life was lived in Basel and in Zürich rather than in Vienna, Paris, or Berlin. His favorite dwelling place is a "gray stronghold, of medieval outline, standing alone and apart, surrounded by hills and water . . . where, when his work as a doctor is over, he retires to become for a season the detached scholar and writer who turns experience into theory." Jung has never lived anywhere but in the country. "His most urban roots are set by a gray-blue lake on the rural edge of a modern Swiss city. . . Doctor Jung's patients must take a little steamboat at a landing haunted by gulls and wild ducks and then walk a good ten minutes to a yellow country house standing well within walls and gardens on the edge of the Zürichsee. They must pull a shining brass bell, of old-fashioned mold, and while its fateful ring resounds through the house . . . meet the inspection of a group of skirmishing dogs."

Jung's favorite recreation is research into primitive psychology. He has made many journeys into North Kenya and to other remote places for this purpose. At home he works in a "sober, book-lined study," decorated with Oriental paintings and stained glass of religious pattern. When lecturing at the Zürich Psychology Club he speaks in English (or rather in American), for that idiom, he feels, is best suited to his subject.

Physically, Doctor Jung has been described as tall and "magnetic," powerfully built, with a "sagacious" face and keen brown eyes that "twinkle merrily behind gold-rimmed spectacles." He has a strong mouth with a close-clipped gray mustache, and "the look of a man who has fulfilled all his duties to city, state, and nation." In 1903 he married a "wife of unusual character and distinction, who, like himself, is a Swiss of conservative background." They have five children—four daughters and one son.

KAEMPFFERT, WALDEMAR (BERNHARD) (kempf'fėrt väl'də-mär) Sept. 23, 1877- Editor; author

Address: b. New York Times, 229 W. 43rd St, New York City; h. Century Club, 7 W 43rd St, New York City

In an era of technological expansion and specialization such as the twentieth century, characterized by the prolific spawning of scientific jargons, the layman walks the world bewildered, not only by the natural forces and laws which frightened and dismayed his ancestors, but also by the infinite complexities of a superimposed civilization. Ready to his hand are tremendous forces of energy and power which respond to his control, but which he is unable to understand. Moreover (John Kieran '40 notwithstanding), the well-rounded man of knowledge in the Renaissance sense no longer exists. All men are now laymen—the expert, except within the limitations of his own small field, finds himself confronted with alien conceptions, conceptions couched in terms so foreign to standard language as to be incomprehensible without specific training.

No one has done more to bridge the gap between the abstract hypothesis of the laboratory and the mind of the common man than Waldemar Kaempffert, science editor of the New York *Times*. For several decades he has devoted his time and energy to the popularizing of scientific ideas, not only presenting them in simplified language but in many cases dramatizing them, highlighting their commercial and social applications, using advertising psychology to heighten their appeal. "How does this affect you?" might well be a subheading for innumerable articles he has written on such subjects as (in the early days) airships and radio and (at the present time) vitamins, sulfa drugs, and brain surgery.

Waldemar Bernhard Kaempffert was born in New York City on September 23, 1877, the son of Bernhard and Juliette Kaempffert. He was a brilliant student at the College of the City of New York, from which he received his B. S. degree at the age of twenty. (For his work Phi Beta Kappa later made him a member, *honoris causa.*) By 1903 he had earned his LL. B. degree from New York University and he was admitted to the New York Bar, registering as a patent attorney. His interest in scientific writing was evidenced from the very start of his career, for his position, which lasted from his graduation in 1897 until 1911, was that of assistant editor of the *Scientific American.* On January 7, 1911 he was married to Carolyn Lydia Yeaton (who died in 1933) and in that same year was made managing editor of the *Scientific American*, a position which he held until 1915. From 1916 to 1920 Kaempffert edited *Popular Science Monthly* and then he had an engineering office with the firm of Thomas F. Logan, Inc., later amalgamated with Lord and Thomas. In 1927 he became science editor of the New York *Times*, a position which he held in 1943. (In 1928 he left the *Times* to become the director of the Museum of Science and Industry in Chicago, but he returned as science editor in 1931.)

Kaempffert's literary style is as difficult to describe as a chameleon since he is primarily a journalist—adapting, selecting, emasculating, or glorifying scientific truths and discoveries according to the interests and gray matter of the particular group of his heterogeneous public to whom he wishes to appeal. Over the long years his comments have illuminated such diversified subjects as "Training Captains of Industry in Germany", "Why Flying Machines Fly", "Was the Star of Bethlehem a Comet?", "Origin of Life on This Planet," and "How You Can Hypnotize Yourself." In such articles as "Changing Views of Evolution," published in *Current History,* and "Science, Technology, and War" in the *Yale Review,* Kaempffert presents scientific subjects in simple but lucid and dignified prose, suited to the intellectual level of the uninformed but not necessarily moronic layman. Another section of the public is reached by sure-fire mass appeal articles headed by such streamlined provocative titles as "Why Can't We Live Forever?", "Rocket Ships and a Visit to Mars," and, for that vast unnumbered army, the American footsufferer, the hardy perennial favorite of the daily beauty and medical advice columns, "Foot Troubles and Their Cure." His frequent articles in the Sunday New York *Times* Magazine present a diversified picture, ranging from careful reviews of new scientific books and enthusiastic biographies of great men of science to potboilers consisting of garishly detailed hypotheses on a vaguely scientific basis designed to please the glazed and languid orb of the torpid Sunday afternoon peruser. The subject may be atomic energy, or ersatz products, or a thriller like "End of the World?" (illustrated), but in any case no disturbing concentration is required of the somnolent citizen, and the depths of his mind remain untouched by the importunate knocking of ideas.

WALDEMAR KAEMPFFERT

It is Waldemar Kaempffert's contention that the ordinary man has come to accept all sorts of scientific truths which he cannot understand by means of mass popularization of laboratory facts. In speaking of Compton's theories in physics, for example, he states that "the new views cannot be expressed in language that is intelligible to men and women who have not had training in higher mathematics. This is not to say that the cosmos is forever a sealed book to the uninformed. Ask the corner policeman whether or not the earth revolves around the sun, and he will undoubtedly answer that it does. Ask him to prove it and he will flounder hopelessly and eventually give up the task. The point is that the conception of a central sun with planets revolving around it is accepted as something axiomatic even by people who know nothing of celestial mechanics." Nevertheless Kaempffert is far from satisfied with present methods of informing the public of new developments in his field. In a letters-to-the-editor controversy in the magazine *Science,* he struck back sharply at those who criticized scientists as responsible for the fact that "science is relatively losing ground in popular interest and esteem" because of their "indifference and even hostility . . . to 'vulgarization.'" Kaempffert said (1935): "I see no particular reason why the scientist should become emotional and talk in the vulgate because the newspapers will then give his utterances more space. It is the business of the journalist and not of the scientist to present the discoveries of the laboratory so that the

KAEMPFFERT, WALDEMAR—*Cont.*

many will understand. But heaven forbid that the popularizer should rely too much on emotion. We have passed the stage when gasping wonder can pass for popularization. We need more journalists trained in science. . ."

As early as 1922 Kaempffert had criticized the deplorable attitude of the press toward science and scientists. He scored the false notion of "human interest" taken by editors which lead them to the drawing of purely sensational conclusions from the scientists' theories and to an excessive interest in the personal idiosyncrasies of the scientist himself (such as Einstein's '41 hair) rather than in the facts that he is attempting to prove or communicate. "The newspaper and magazine editor constantly uses the stock argument that he 'gives the public what it wants.' But does he really know? The *facts*, simply, humanly, and interestingly presented are 'what the public wants.'" But by 1935, after a long career in popular and newspaper writing, Waldemar Kaempffert had lost some of his fine faith in the American reading public. "A community gets exactly the kind of newspaper that it can digest—no better, no worse. Editors are aware of this and present the news accordingly. If their readers all wore Phi Beta Kappa keys, they would remold their policies. . . Since newspapers are published to meet the needs of the people by men who know their business it follows that it is the school and the college that are at fault. If we had a public adequately educated in science it would not be necessary to explain the meaning of elementary technical terms and principles or to resort to the literary devices of the primary school reader to drive home the facts about a new discovery."

To no aspect of his life interest in science has Waldemar Kaempffert brought more zest and fervor than to his work as director of the Chicago Museum of Science and Industry during the years 1928 to 1931, when the planning and gathering of exhibits for the famous museum were in full swing. (By the time the Museum opened for the World's Fair of 1933 Kaempffert had resigned, but his influence had permeated the entire structure.) In an article in the *Scientific Monthly* for June 1929 he presents his plans not only for showing machines in motion (for which idea he expressed his unlimited indebtedness to the well known Deutsches Museum in Munich), but for going further by "illuminating the social phases and cultural aspects of science and technology."

He has no patience with the old-fashioned type of museum which displays isolated details of scientific truth in separate dry-as-dust exhibits. The museum, he directed, was to tell the complete story of scientific progress and its effect on mankind—and tell it dramatically, by pageants, labels, statistics. Above all, he wanted the visitor to leave the Museum with the idea that scientists did more to "transform the face of the earth and mold institutions than did Alexander the Great, Julius Caesar, and Napoleon Bonaparte, and that history is made in the laboratory and workshop as well as on the battlefield." In addition, *Time* Magazine states, "Dr. Kaempffert placed as much emphasis on university-like research facilities, a fine library, and highly trained scientists to present 'the technical ascent of man and the social implications of science' to the public as on push-button spectacles."

The extent of his contribution to the city of Chicago and to the practical development of revolutionary museum techniques may be judged by the fact that when, in 1940, Major Lenox Riley Lohr, former president of the National Broadcasting System, took over the presidency of the Museum, and decided it was high time to make ends meet, many scientists were outspoken in stating that with Lohr's changes of policy the cultural life of Chicago had suffered a tragedy.

Major Lohr destroyed some of the basic principles of museum management laid down by Kaempffert by firing experts, making elaborate plans for charging industry space rates on donated exhibits, and for adding "oomph" by utilizing the advice of amusement building specialists. Waldemar Kaempffert's interest in museums and his belief in their far-reaching effects on men and affairs (if properly managed) did not cease with his active participation, for as late as 1940 he wrote an article for *Science* praising and describing in vivid detail the museum planned by Le Corbusier and Paul Otlet. The visitor would start his tour at the top, where he would find primitive man with his hands and brains as his only tools, and, following the various stages of man's skills, would descend by means of an ever-widening ramp which would provide adequate space for the ships, machines, houses, and so forth, created as man's technological conquering of his environment progressed. Finally, for the last exhibit, the visitor would walk through a door and find himself once more "on the sidewalk of the twentieth century, in the midst of a modern city." Such a museum, says Kaempffert, if built (it was to be constructed in Geneva but was shelved because of political bickering), would have played its part in promoting world harmony by "revealing what the nations of today owe to one another and to the past."

During his long career Kaempffert has not confined himself to a mere rehashing of other men's discoveries for the public, but has constantly emphasized and reiterated in varying contexts certain basic ideas of his own. His pet theory that research produces changes not only within science itself but in the whole social fabric, that the scientist is "molding new worlds which will present new problems to men and governments," appears in some guise in a large percentage of his articles. He believes also that "in a highly developed community geniuses are about as common as men who are over six feet tall and that it is not the genius who gives society a new impetus but society that inspires the genius to discover and invent what it wants." What is discovered and invented is determined largely by social circumstances and by the technical heritage of society which the genius may use as a basis. In the social framework existing before the rise of democracy, for example, laboratory research and hence technological improvement were rare because of the social stigma attached to manual labor. Only in a democracy, says Kaempffert, can science thrive, though even there it must contend with the opinions of entrenched classes and principles. In such "totalitarian states" as Germany and Russia, the "objective, dispassionate approach to the outer world" vital to science is impossible of achievement as those states are "now governed" (1939), since the state does not permit the separation of political and professional activities. (The German dismissal of all scientific principles or facts opposed to their race theory is well known, while an example of lack of objectivity in Russia, according to Kaempffert, is the refusal to recognize Mendelian principles of heredity which contradict the theory that the individual is completely molded by such environmental factors as good food, education, housing, cultural opportunity.)

In relation to the War, Kaempffert optimistically believes that many technological improvements in the history of mankind were the direct result of military needs, and that, in spite of its evils, "war brings peacetime gains." He has pleaded for the complete mobilization of science in peace as well as in war and for scientific counsel at the peace table, and he strongly urges international thinking, since "nothing short of a world state can give science its supreme opportunity." In March 1943 he exerted his influence in favor of practical medical reform by denouncing the Procurement and Assignment Division of the American Medical Association (which assigns physicians to the armed forces) to a symposium of doctors as "one of the most inept organizations with which the Government is encumbered." This criticism, says Kaempffert, is "part of a crusade that I have conducted for ten years in behalf of medical reform, that is, reform in medical practice, so that the best that science has to offer may be brought to the millions who are politely classed as 'medical indigent,' meaning that they cannot afford to pay anything for care in sickness."

Waldemar Kaempffert has not confined his efforts entirely to magazines and periodicals but has also written and edited a number of books. He is the author of *The New Art of Flying* (1911); *The ABC of Radio* (1922); *Invention and Society* (1930); and *Science Today and Tomorrow* (1939). Among those he has edited are *Collier's Wonder Book* (1920); *The Boys' Story of Invention* (1924); *A Popular History of American Invention* (1924); and *Modern Wonder Workers* (1931). Active in scientific circles, he is a member of the Meteorological Society, of the Historical Scientific Society, of the Newcomen Society in London, and of the National Association of Science Writers, of which he was president in 1937. Clarkson Polytechnic Institute in 1939 gave him an honorary Doctor's Degree in science and industry.

Who's Who in America 1942-43

KAISER, JOHN B(OYNTON) Jan. 1, 1887- Librarian

Address: b. Newark Public Library, Newark, N. J.

When the board of trustees of the Newark Public Library was informed early in 1943 that John B. Kaiser would accept the position of librarian, Dr. Samuel L. Hamilton, the board's president, publicly expressed the city's gratification at having obtained for its Library the services of so distinguished an expert in the field of library work. "I am convinced that we are getting the man best qualified to carry on the great traditions of the Newark Library," he said. "The people of Newark may rest assured that their Library will continue to be a living, growing institution, and I know that I speak for them as well as for the board when I extend to Mr. Kaiser a hearty welcome to our city." The Newark Public Library has long enjoyed a national reputation as one of the country's outstanding public libraries.

John Boynton Kaiser was born in Cleveland, on January 1, 1887, the son of Peter Henry and Beza N. (Boynton) Kaiser. He was educated at Western Reserve University, from which he received his B. A. degree in 1908. He was awarded a Bachelor of Library Science degree from the New York State Library School in 1910 and a Master of Library Science degree from the same institution in 1917. He also spent one semester as a graduate student at the University of Illinois.

Kaiser began his career as a librarian in 1907 with the Western Reserve Historical Society. The following year he was with the reference department of the Cleveland Public Library and in 1909 he worked in the law division of the New York State Library. From 1910 to 1911 he was assistant state librarian in charge of legislative reference work for the Texas State Library in Austin, Texas, and from 1911 to 1914 he lectured at the University of Illinois Library School and acted as department librarian in economics and in sociology.

For a decade, from 1914 to 1924, Kaiser was the librarian of the Tacoma Public Library and for one year he was literary editor of the Tacoma *Daily Ledger*. He signed his work "Diogenes." When the United States entered the First World War he applied for war service and from November 1918 to January 1919 he served as librarian at Camp Knox, Kentucky. From January to May 1919 he served at Camp Upton, New York, and from May until July he did special work in the headquarters of the American Library Association War Service, Washington, D. C. In 1918 he was also chairman of the Washington State Council of Defense Committee on Book Censorship.

From 1924 to 1927 Kaiser was director of libraries and of the Library School of the Iowa State University. His next position (1927-43) was librarian of the Oakland (California) Free Library and secretary of the Oakland Public Museum, Snow Museum, and Oakland Art Gallery. Kaiser's years with the Oakland Free Library were marked by considerable progress and growth in the library

JOHN B. KAISER

system and services. When the city celebrated his tenth anniversary as librarian Kaiser's accomplishments were summarized for the guests at an anniversary dinner held in his honor. It was pointed out that during those years the number of volumes in the library, their circulation, and the circulation per capita had all increased 100 per cent or more, and the standard of library support had been almost doubled. Six branches had been added to the system during the decade. Those added during the depression stood "as concrete evidence of Mr. Kaiser's success in keeping the total budget and the staff salaries from being trimmed during those years." The *Library Journal* reported that "staff standards have been raised by the creation of new positions and the definition of professional and non-professional work in the Library." "One of Mr. Kaiser's fundamental conceptions regarding library administration," the *Library Journal* continued, "is that it is about the most highly cooperative enterprise, certainly among publicly supported activities, in which communities engage." Kaiser's idea of a useful library is one "which most effectively puts the power of print at the service of man." The library's responsibilities, he maintains, include getting the books to the people if they cannot come to the books and keeping pace with social, economic, and political changes.

The Newark Public Library had been without a librarian since Miss Beatrice Winser retired in September 1942 after fifty-three years of service. The $10,000-a-year post was announced vacant by the local Civil Service Commission, and an unassembled examination was held under civil service regulations. Each candidate was judged on the basis of his education, experience, and general qualifications. In February 1943 it was announced that Kaiser's name led the list of the candidates examined, and the board voted unanimously to offer him the position. In his acceptance wire Kaiser said: "It will be a distinct pleasure, privilege, and challenge to work with the Library board, staff, and public, to continue and develop Newark's prestige in the library and educational field through service to the entire community, civic, cultural, and industrial." He arrived in Newark to take up his duties in April.

When Kaiser walked into the Library on April 16, 1943, he said that he had an unwritten and invisible book under his arm, but that it was nonetheless there. "The title of this book," Kaiser told Mayor Murphy, the library trustees, and the staff who welcomed him, "is *The Future of the Newark Public Library*. The book is dedicated to the illustrious leaders of the past in the hope that the future will do honor to their achievements and offer opportunities for advancement and greater service to the entire community through the power of print." The Mayor promised Kaiser a free hand and the cooperation of all the city's officials. Kaiser told the people of Newark that he intended the Newark Public Library to play a vital role in preparing its readers for improved military and civilian service.

Kaiser is nationally known as an author and contributor to professional journals, especially for his writings on financial management, civil service relations, and personnel management. Among his publications are: *Legislative and Municipal Reference Libraries* (1914); *Newer Functions of University Libraries* (an address published in 1926); the introduction to T. C. Tai's *Professional Education for Librarianship* (1925); "Winning Support," a chapter in Carl Vitz' *Current Problems in Public Library Finance* (1933); chapters on "Library Finance" and "Personnel" in Joeckel's *Current Issues in Library Administration* (1939). He has compiled several brochures, among them *National Bibliographies of the South American Republics* (1913); *The Mountain* (1917); and *Survey of State Supported Library Activities in Washington* (1917).

Kaiser is a member of the Council of the American Library Association, chairman of its Committee on Library Revenues, and consultant on library finance to its Post-War Planning Committee. He is past president of the California Library Association and of the Pacific Northwest Library Association. He has lectured on librarianship at the Universities of Chicago and of California. He was a member of the advisory board of the University of Washington Library School from 1917 to 1922 and he has been a member of the American advisory board of Yenching University in Peiping, China since 1933.

Before going East, Kaiser had been named Northern California liaison librarian for the Army's 9th Service Command. He served also as chairman of Oakland's Red Cross Disaster Relief and Civilian War Aid Division's registration committee. He is a member of the American Society for Public Administration, the Civil Service Assembly of the United States and Canada, the American Association for the Advancement of Science, and several fraternities, including Phi Beta Kappa. He is also a Rotarian.

Kaiser's first wife, the former Gertrude I. Swift, to whom he was married November 14, 1910, died in 1940. In December 1942 he was married to Mary Cooper of Berkeley, California, a member of the staff of the Berkeley Public Library and United States Army librarian at March Field. Kaiser's son by his first marriage, Boynton Swift Kaiser, was recently appointed personnel head at the University of California.

Kaiser has been described as "a tall, spare man, soft spoken but with a certain physical restlessness" and "not without humor." His favorite relaxation is reading fast-moving mystery stories.

KALTENBRUNNER, ERNST (käl'tən-bru̇n-nėr) Oct. 4, 1903- German Government official

Address: b. Czernin Palace, Prague, Czechoslovakia

DR. ERNST KALTENBRUNNER

Deputy chief of the German Gestapo and head of the Special Secret Service, Dr. Ernst Kaltenbrunner succeeded the late Reinhard ("Hangman") Heydrich '42, assassinated in Prague (Czechoslovakia) by a bomb eight months after he had assumed power as deputy protector of Bohemia-Moravia. It was estimated that in payment for Heydrich's murder well over 1,000 Czechs were executed and two whole Bohemian villages, whose populations were not included in the count, wiped out. Little is known about Heydrich's successor, Ernst Kaltenbrunner. He is not listed in any of the German *Who's Who's*. Martin Fuchs, a Viennese journalist, calls him Kalten Kaltenbrunner and makes him an engineer when, in point of fact, he is a lawyer.

Like Hitler '42, Kaltenbrunner was born in Austria. The date was October 4, 1903, and his birthplace was Ried in upper Austria. He attended public school in Raab, then semi-classical secondary school at Linz, one of the Austrian towns with a history of German nationalism. His profession was to be the law, and he entered the University of Prague (Czechoslovakia) in 1921, receiving a Ph. D. in 1926, when he was only twenty-three. He seems to have been successful as a lawyer, for, after serving for a time as junior barrister at the county court at Linz, he became assistant judge at Salzburg, another city with pro-German traditions, before he was twenty-six. In 1929, however, he returned to Linz.

The date of Dr. Kaltenbrunner's entrance into the Nazi Party is unknown. His membership number is 300,179, indicating that he was neither one of its founders nor one of its earliest converts. No doubt the young man was included in what Eugene Lennhoff calls "the more aspiring members of the intelligentsia, especially in the provinces, such as civil servants, doctors, lawyers, and chemists, who could not find enough scope for their abilities in so small a state" and who joined the National Socialist Party for that reason. It is known that upon entering the Party Kaltenbrunner immediately joined the S. S. (Schutz Staffel). By 1933 the young Nazi was already "district stumper" and legal adviser of the 8th Division of the S. S. and a leader of the "Standarte 37," a Nazi unit of some twelve to thirteen hundred men. Later he rose to the command of the 8th Division, the Austrian Legion of the Storm Troops.

Nazi activities in Austria were illegal but were carried on boldly even after Germany, having made a peace treaty with Austria, pretended to have disclaimed the Austrian National Socialists. It was announced that those Austrian Nazis who went on working for their government's overthrow would be guilty not only of treason to their country, but of open insubordination against the leader of the National Socialist Party himself, Reich's Chancellor Hitler. Some leaders of the Austrian Nazi organization therefore decided to form a new central nucleus of the illegal party with people who hitherto had come under official notice as little as possible. They openly formed the "Committee of Seven," supposedly for the purpose of concluding peace between the Nazis and Doctor von Schuschnigg, the Austrian Chancellor. Actually they worked hand in hand with the Nazi Party's illegal executive committee, of which Kaltenbrunner was an important member. The executive committee's headquarters was behind a laundry in the Helferstorferstrasse, where a secret printing press was installed. That center was raided in the spring of 1937, and so the Nazis transferred their apparatus to the Teinfaltstrasse. Meanwhile the Storm Troopers were being reorganized under Kaltenbrunner's leadership. Although these activities were technically secret the police were not unaware of them. "After the raid by the Austrian police on the illegal center in the Helferstorferstrasse," wrote Martin Fuchs in *Showdown in Vienna*, "the same game was played as always occurred when the Austrian Government thought that

KALTENBRUNNER, ERNST—*Cont.*

they had dealt a crushing blow. Herr von Papen '41 [then German Ambassador to Austria] turned up at the Ballhausplatz and implored the Chancellor, in the interests of Austro-German friendship and the execution of the Treaty, not to attach too much importance to 'the trivial affair' and the actions of obviously irresponsible elements who were certainly not supported by the Reich. And Schuschnigg always gave in. He knew only too well that any other attitude would mean an official admission that the policy introduced on the 11th of July, 1936 [the date of the Treaty between Austria and Germany] had failed."

"The 'cultural' process of penetration," wrote Fuchs, "was directed from the Teinfaltstrasse and guided along channels agreed upon with the German leaders. Since the 11th of July, Vienna and the Austrian provinces had been overrun with institutions which poured out thinly veiled propaganda for the Reich. Series of lectures by representatives of German science and technology were arranged, and German artists came to Vienna in large numbers. The central organizations of National Socialist culture politics, the Reich Chamber of Culture, the Reich Chamber of Films, the propaganda offices of the German book trade, were all engaged in propaganda for the conquest of Austria. The Austrian publishing trade and film production, dependent as they were on the German market, were easily swayed by economic pressure, not only to give up any counteraction against National Socialist ideology but to work actively in the service of an 'all-German' conception of culture and its National-Socialist interpretation."

The Teinfaltstrasse was finally raided, and details for an intended Nazi *putsch* in Austria discovered. Nothing, however, seemed to have been done about it, for the actual invasion of Austria by the Germans followed these plans. Sometime during the Schuschnigg dictatorship Kaltenbrunner was imprisoned on the grounds of high treason. His arrest may have taken place during either the raid on the Helferstorferstrasse or the raid on the Teinfaltstrasse. He remained in prison for one year, and seems to have been released before the invasion, for Lennhoff speaks of him as having given the orders for Storm Troop detachment No. 8 to strike.

On March 11, 1938, following an ultimatum from Berlin, von Schuschnigg resigned, and he was succeeded by the Austrian Nazi leader, Artur Seyss-Inquart '41. The latter immediately requested the Reich to send troops to help in preserving order, and some 50,000 highly armed and mechanized forces crossed the border. On March 12 Chancellor Adolf Hitler entered Austria and in a speech before great crowds at Linz he proclaimed the unity of the country with Germany. On March 13 Austria was formally incorporated in the Reich.

Kaltenbrunner was officially in charge of the now legalized Austrian Storm Troops. He was also included in Seyss-Inquart's Cabinet as State Secretary of Security of Austria, and in that capacity he brought about Austria's *Gleichschaltung* (political coordination). He remained in those positions for several years, meanwhile winning rapid promotion on Heinrich Himmler's '41 Elite Guard staff. By the spring of 1942 he had risen to be the second-ranking officer in Himmler's organization. The first was Reinhard Heydrich, deputy director of the German State Secret Police (Gestapo). The year before Heydrich had been sent to "protect" Bohemia and Moravia, an emergency measure necessitated by the spread of sabotage in Czechoslovakia. The extreme cruelty of his administration tried the Czechoslovakian people beyond endurance, and finally, in May 1942, he was assassinated. For a time he was succeeded by Deputy Reich's Protector Karl Dalüge, but in January 1943 Dalüge was replaced by Kaltenbrunner, who was named deputy chief of the Gestapo, as well as chief of the Special Security Division. Kaltenbrunner's treatment of the country in which he had spent his college days is not yet on record. He has charge of the political police, criminal police, press law, arms law, passport matters, and the personal affairs of all public officers of the security police and criminal police.

In June 1943 Himmler dispatched Kaltenbrunner to Romania to reorganize the police force because of the growing unrest in that country.

There seem to be no firsthand descriptions of Dr. Kaltenbrunner available. G. E. R. Gedye, the New York *Times* correspondent, describes the Vienna chief of the Gestapo, who must have been Kaltenbrunner, as "a gigantic Prussian officer in the ominous black uniform of the Elite Guards."

KASNER, EDWARD Apr. 2, 1878- Mathematician; author; teacher

Address: b. c/o Columbia University, Morningside Heights, New York City

Mathematics has long been a bugbear to the harassed schoolboy who swallows it, if he must; traditionally a part of the curriculum, it is presumed to have a disciplinary effect on his adolescent mind. Undisputed queen of the sciences since the thirteenth century, the greatest boost mathematics has ever enjoyed may be credited to the Second World War. Today the need for mastery of the formidable principles of mathematics is ever increasing, especially in the fields of engineering and aeronautics. Trigonometry and calculus are no longer mentioned only in a whisper. A good working knowledge of mathematics is an open sesame to advancement in the armed forces as well as in the skilled war job.

Mathematics has had utilitarian functions ever since bridges have been built and armament expenditures calculated. Lancelot Hogben '41 popularized mathematics as a tool in his *Mathematics for the Million* (1937). But mathematics is more than a science: it is a medley of poetry, music, art, humor, imagination, "beauty bare," and a method of logical thinking.

This is the thesis that Professor Edward Kasner, a distinguished but whimsical mathematician of Columbia University, and James Newman, a Manhattan lawyer and once Kasner's pupil, demonstrate in a "terrifying" book, *Mathematics and the Imagination* (1940). The layman who reads it and is fascinated thereby may not think Gilbert and Sullivan's well known major general (who boasted of the possession of some very cheerful facts about the square of the hypotenuse) an anomaly, after all.

Ranked among the first six mathematicians of the world today, Edward Kasner was born in New York City on April 2, 1878, the son of Bernard and Fanny (Ritterman) Kasner. By the time he had reached eighteen he had received his B. S. degree, along with a Phi Beta Kappa key, from City College (1896). At Columbia University he began work immediately on his M. A., and two years later he followed up that degree (1897) with a Ph. D. (1899). He spent the year 1900 in Europe polishing off his formal education at the University of Göttingen. On his return he embarked immediately upon a pedagogical career in Columbia University, first as a tutor (1900-05), and then, beginning in 1906, advancing through the various stages of his professorship.

In the fall of 1943 Professor Kasner began his forty-third year of teaching. He does not lecture "at" his students, but skillfully leads them into discussions. He is well known for his sense of humor and believes that we can learn *only* through being amused.

It is Kasner's contention that even kindergarten children "can enjoy concepts on graduate mathematics as long as they are clearly presented." (He speaks from experience.) Kasner goes so far as to give the youngsters another deserved pat on the back when he claims that "words of wisdom are spoken by children at least as often as by scientists." Professor Kasner gets his greatest fun out of talking to children.

During his long years of teaching Kasner has continued his research and has written a variety of scientific and learned treatises for the experts, such as *Present Problems of Geometry* (1905); *Einstein's Theory of Gravitation* (1920); and *Polygenic Functions* (1927). These promise to remain closed books to most untutored intellects and faint hearts. But to the man on the street Professor Kasner will long be remembered as the man who gave the world the "googol." The googol, a name invented by Kasner's nine-year-old nephew, is just another example of how mathematics uses "easy words for hard ideas." The definition of a googol is simple: 1 followed by a hundred zeros; more graphically it is 1000000000000000000000000000000000000000000000000000000000000000000000000000000000000000000000000000000—a prodigious but finite number. To elucidate a little, Kasner explains that the number of raindrops falling on New York City in a century is much less than a googol. So is the number of grains of sand on the beach at Coney Island; so is the total number of words spoken "since the beginning of gabble to the present day, including all baby talk, love songs, and Congressional debates." And Kasner isn't fooling. He has been thinking about googols for some years.

DR. EDWARD KASNER

In *Mathematics and the Imagination* Professor Kasner and his co-author jump from googols to doughnuts. Thus the reader, if he will skip or skim as he sees fit, need have no qualms about encountering a dry-as-dust style for what he may have thought to be an unpalatable subject. The book is written with a light, sometimes even poetic touch, and it succeeds in glamorizing higher mathematics. Besides the googol, the intrepid reader will meet "Pie", "plane and fancy" geometry, paradoxes "lost and regained," the subtleties of the laws of chance, two or three classical problems insolvable in the history of mathematics, such as the familiar "squaring of the circle," and all kinds of puzzles, which have long been as popular a pastime as bridge and swing are today. He will learn, for example, that "card tricks are usually arithmetical puzzles in disguise."

It is significant that the mental exercise involved in solving puzzles offers the same stimulus and challenge to the imagination as does cut-and-dried mathematical research. It is not surprising that many famous mathematical principles owe their origin to problems first expressed in puzzle form. Puzzles reflect the undaunted inquiring spirit in man. The imagination, Kasner concludes, has contributed immeasurably to the development of his favorite subject, "for imagination has the pragmatic value that it leaps ahead of the slow-moving caravan of well-ordered thought and

KASNER, EDWARD—*Continued*

often scouts out reality long before its ponderous master."

Professor Kasner characteristically suggests a formula for becoming a top-flight scholar in his field. He cites the example of Descartes, who, because of his delicate health, was allowed to remain in bed each day until noon while at school. Analytic geometry "just came to him" one morning as he was lazily lounging in bed. Kasner has not done badly himself. According to *Time* Magazine, he is "one of the mythical baker's dozen of savants who were supposed to be the only men in the world able to understand Einstein's '41 theory of relativity." At Harvard's Tercentenary Celebration in 1936 he showed how to bisect a "horn angle" (an angle formed by two curves tangent to each other), a problem which had defied all the heroic research of the faithful for more than 2,000 years.

For all that, according to Lewis Gannett '41, there is a rumor that "Mr. Kasner has said that there are only three people in the world who can fully understand all the mathematical treatises listed by Mortimer Adler '40 in *How to Read a Book* as among the hundred great books of all time—and that neither he, Mr. Kasner, nor Mr. Adler is among them." The neophyte should feel reassured by the fact that there are concepts which even seasoned mathematicians do not fully understand.

Professor Kasner is active in a long array of learned societies—the National Academy of Sciences, the American Mathematical Society, the American Association for the Advancement of Science, the Mathematics National Research Council, the Circolo Matematico di Palermo, and the Société Mathématique de France. He is a constant contributor to scientific periodicals.

Although bespectacled, mustached, and possessing a deeply wrinkled brow and thinning hair, mathematician Kasner is unprofessorial in appearance. He is unmarried. He is a genial man and friendly with his students. Among other things, he has a penchant for golf, Gilbert and Sullivan, and Lewis Carroll. He is also something of a magician and can show bewildered spectators how to remove their vests without taking off the coats first. If anyone wants to try it himself, Kasner advises him to be forearmed with a pair of scissors in case of emergency. "No fourth dimension is required. The coat may be unbuttoned, but at no point during the removal of the vest may the arms slip out of the coat sleeves."

KEMPNER, ROBERT M(AXIMILIAN) W(ASILII) Oct. 17, 1899- Political scientist; criminologist

Address: h. 112 Landsdowne Ct, Landsdowne, Pa.

"Geneva, Switzerland, March 25, 1935: Dr. Robert Maximilian Wasilii Kempner, ex-legal adviser of the pre-Hitler '42 Prussian State Police Administration, was executed by a firing squad of the Nazi Secret Police (Gestapo) as an enemy of the Hitler regime." With these words clipped from French, Swiss, Dutch, and English newspapers Dr. Kempner proudly begins his American scrapbook, the record of his "second life" after his narrow escape from Hangman Heydrich '42. That life began with his arrival in the United States on September 1, 1939 to become a research associate at the University of Pennsylvania. After the entrance of America into the War Kempner's knowledge of European police administrations proved invaluable, and he served "as expert and consultant to various Federal agencies in the field of police, administrative, legal, and political techniques and procedures" of the European governments. His advice is sought continuously in the field of reconstruction of European administrative and governmental institutions. Dr. Kempner also testified as a government expert in connection with Nazi spy and propaganda cases, giving court testimony against the Nazi Transocean News Service, the propagandists Frederick Ernst Auhagen, George Sylvester Viereck '40, and Pastor Kurt B. Molzahn.

Kempner's "first life" began at Freiburg, famous city of southwestern Germany, on October 17, 1899. His parents were Walter and Lydia (Rabinowitsch) Kempner—his father, a physician and public health officer, his mother, the world's first woman professor of bacteriology, at one time associated with the Woman's Medical College, Philadelphia. Young Kempner studied political science, criminology, history, and law at the Universities of Berlin, Freiburg, Breslau, and Pennsylvania. He was graduated with the degrees of B. L. and LL. D. and holds the German State Diploma qualifying him for a position as judge, higher civil servant, and member of the Bar.

His official life commenced when, at the age of twenty-seven, he became assistant to the state attorney in Berlin. A year later he became judge of Berlin's Municipal Court. He was then appointed superior government counselor of the Ministry of the Interior. In this position he functioned as chief legal adviser of the Centralized Prussian "76,000 men"—or State Police Administration. Thus he occupied an inside observation post which let him watch the secret maneuverings of the Nazi Party. It was in 1930 that Kempner, as a superior government counselor recommended the immediate prosecution of Hitler for attempted high treason and the dissolution of the Nazi storm troopers. The report warned that the Nazis planned to "create a revolutionary mass movement," to be followed with a conquest by power and "the erection of the Third Reich." But this prophetic warning and prediction was given no official ear by the Weimar Republic. Some months later Kempner made a further appeal to the Reich attorney general requesting the indictment of Hitler, but this too failed, along with the German Coalition Government.

Besides his work for the German Government (1928-33) he lectured at the German Academy of Politics and at the School of Social Work, Berlin, and served as professor of political science and criminology at the Prussian Police Institute (somewhat similar to the FBI Academy) in that city. When Hitler came to power Dr. Kempner was dismissed. He was then put in the notorious concentration camp "Columbiahaus," and was later expatriated "by special decree" of Hitler.

Following his escape from Germany with his wife, Ruth Lydia (Hahn) Kempner, a Berlin social worker (who in 1943 was working on a post-War project), Kempner became administrative president and professor of political science of Fiorenza College at Florence, Italy. Then came Hitler's Axis-creating visits with Mussolini '42, and once again the Kempners found themselves in "confinement," this time as "hostages for the safety of the Führer." In 1938 the Italian Secret Police closed the college at Florence for "not being in line with the Fascist ideology," but it reopened in Nice, France, with Kempner on its staff. Once again, however, the man who had warned his country against the Nazi danger was only one jump ahead of the enemy's reach, and apparently foresaw the way things would go in France. Deciding that the United States, where his mother had taught, would be the best place to live his second life, he arrived in this country on September 1, 1939, the day the Second World War officially began.

Under a special grant of the Carnegie Corp., Kempner became a research associate and assistant of the Institute of Local and State Government at the University of Pennsylvania. His special field was the machinery of European government administration, particularly of law enforcement, public safety, administrative personnel, police techniques and secret organizations. Dr. Kempner also taught and lectured at West Point Military Academy, Columbia University, the Provost Marshal General's School at Fort Custer, Civil Affairs Training Schools of AMG at Northwestern University, University of Wisconsin, University of Michigan, the State Police Training School at Spokane, the State College of Washington, Pennsylvania State College, the University of Pennsylvania, and the Main Line Night Association, Wayne, Pennsylvania. At the last-named his 1941 to 1942 classes in "Backgrounds of the Future" gained a wide reputation as an example of successful political science education for adults.

DR. ROBERT M. W. KEMPNER

Dr. Kempner is the author of several books, among which are *Prussian Police Administration Code* (1933); *Twilight of Justice* (1932); *Blueprint of the Nazi Underground* (1943); and *The German National Registration System* (1943). Numerous articles by him have appeared in various publications in this country. He won a nationwide reputation for such articles as his "Model Constitution for European Vassal States", "The World-wide Net of the Nazi Police," and "The Enemy Alien Problem in the Present War." Of his essay, "Hitler's Criminal Code," Eleanor Roosevelt '40 wrote in her newspaper column: "This article made cold shivers run up and down my spine." In another article, "Pennsylvania's Mission to Prussia," Kempner stated that for post-War Continental Europe new types of administrators must be trained, recruited from all classes and regions of Europe as an "international career service." Until such can be trained during a transitory period, another procedure must be applied. "It is not sufficient to send armed expeditionary forces, nurses, and kitchen units to Europe. They must be followed by American administrative pioneers for the proper organization and management of the liberated countries." He believes that some 5,000 American "administrative pioneers" will be needed—internal security administrators, public safety experts, FBI men, lawyers, engineers, technicians, clergymen—for the proper organization and management of the liberated countries during the transition period.

Besides his writings and lectures, and his expert service to Federal courts in the recent Nazi propagandist and spy trials, Dr. Kemp-

KEMPNER, ROBERT M. W.—*Continued*

ner has also organized the first anti-Nazi German language radio program for the German-speaking population in the United States. Newspapers have called him the doyen of the anti-Nazi immigrants in Pennsylvania. It is Robert Kempner who has pioneered over Philadelphia's station WTEL a series of political broadcasts in German to counter those given out by Goebbels '41 by short wave. Kempner's fifteen-minute weekly series has featured such German refugees and German-Americans as Wilhelm Sollman, onetime Minister of the Interior in Stresemann's Cabinet; Dr. Eric Stoetzner, ex-managing editor of the *Frankfurter Zeitung;* biochemist and Nobel Prize winner Dr. Otto Meyerhof; Dr. A. E. Zucker, professor of modern languages at the University of Maryland. Such authorities are busy telling Philadelphia's 200,000 German-Americans why the Nazis are not invincible. Dr. Kempner believes that, while some of them still listen to Goebbels, they now say: "We heard a German tell us it was not true."

It is evident that the brilliant young government counselor who escaped Hitler and Heydrich has found, in his second life, many ways to serve his adopted country. His hobby is his vast library, which includes a number of rare political reports and a unique collection of material on political and police science, and famous criminal cases.

KENNEY, GEORGE C(HURCHILL)

Aug. 6, 1889- United States Army officer

Address: b. c/o War Department, Washington, D. C.; h. Brookline, Mass.

During the early months of 1942 General Douglas MacArthur's '41 air force in Australia was not giving an overly satisfactory account of itself in performance or results. The most obvious failure was its lack of interference with the Japanese landing at Buna. Several replacements were made, each time with younger air officers in command. Then, in September 1942 MacArthur got an entirely new top command: Lieutenant General George C. Kenney replaced old-time General George H. Brett '42. General Kenney's three new senior officers were young men in their 30's and 40's; the General, at the time of his appointment, was fifty-three. Small, wiry, and plain-spoken, Kenney as an upholder of the offensive went into concentrated action. His bombers began hitting the Japs often and harder: this time the MacArthur air force was getting results.

With the air service since the outbreak of the First World War, George Churchill Kenney was born at Yarmouth, Nova Scotia, on August 6, 1889. (His parents were vacationing there at the time.) He attended Massachusetts Institute of Technology for three years. In June 1917 he enlisted as a flying cadet in the Aviation Section of the Signal Reserve, and soon won his commission as a temporary 1st lieutenant. In November 1917 he sailed for France with the 14th Foreign Detachment. For some time he was a student in the advance flying training centers at Issoudun, France, and was then assigned to the 91st Aero Squadron (February 1918). He was on duty with this organization for the ensuing sixteen months. He was credited with more than 110 hours of flying over the front lines of the Toul and Meuse-Argonne sectors, destroying two enemy aircraft. He won the Distinguished Service Cross for extraordinary heroism in action against a superior force near Jametz, France, and was also awarded the Silver Star for bravery. During the latter part of his overseas service he was flight commander of the 91st Aero Squadron, and he served with the American Forces in Germany until June 2, 1919, when he returned to the United States.

With his captain's commission, Kenney continued service in the United States in August 1919 at Kelly Field, Texas. Then for ten months he was assigned to the 8th Aero Squadron at McAllen, Texas. During the following year he attended the Air Service Engineering School at McCook Field, Dayton, Ohio. Following his graduation in 1921, he became air service inspector at Garden City, New York. In June 1923 he returned to McCook Field for production engineering duties. Two years later he entered the Air Corps Tactical School at Langley Field, Virginia. After completing the course at the Command and General Staff School, Fort Leavenworth, Kansas, he returned in 1927 to Langley Field as an instructor. Entering the Army War College in Washington, he was graduated in 1933, and remained in the Capital for two years as an assistant in the office of the chief of the Air Corps.

In March 1935, as lieutenant colonel (temporary) he again went to Langley Field as assistant to the chief of staff in charge of Plans and Training. A year later he became an instructor at the Infantry School, Fort Benning, Georgia, serving until September 1938, when he was given command of the 97th Observation Squadron at Mitchel Field, New York. Having served as chief of the Production Engineering Section at Wright Field, Dayton Ohio, he was designated early in 1941 to command the Air Corps Experimental Depot there. On March 5, 1942 he moved to Riverside, California, to command the 4th Air Force.

General Kenney had been in Australia for several weeks prior to his appointment there as new commander of the Allied Air Forces in the Southwest Pacific. He had made several visits to advance operational bases to see for himself how things were going. Immediately upon assumption of command he stated that he believed the way to fight this war, so far as the air was concerned, was to "concentrate our strength on worthwhile targets." These targets, according to Kenney, "are planes and ships. The Japs never go anywhere without plane cover. If we knock that down, or destroy it before it has a chance to get up, then we've got them where we want them. If we destroy their ships, they won't be going anywhere, either."

But General Kenney was well aware that attacks against the enemy-held positions would not be a pushover. "Nobody's kidding me about this show," he declared. In November 1942 MacArthur, with General Sir Thomas Blamey '42 leading ground forces and General Kenney in charge of the air forces, began his assault on the Japanese on the Buna Front. Soon an American ground task force reported that the Japanese base at Buna was being heavily bombed; it was reported, also, that there was now no question of Allied mastery of the air over New Guinea. Early in December 1942 the Japanese were unsuccessfully fighting to retain their toe holds at Buna and Gona, their situation reported as "desperate." Kenny was proceeding apparently according to the motto he is said to keep under the glass top of his desk: "The difficult we do immediately. The impossible takes a little longer." Later that month General MacArthur awarded a Purple Heart to him for "meritorious service." The award said that he had invented a new fragmentation bomb which, dropped by parachute, enabled planes to swoop low over their targets and get away before the bombs burst. Kenny is continually improving the bombing techniques of his fliers. His latest innovation is "buzz" or "skip-bombing": the planes come in low, skip bombs on the water; the bombs in turn bounce off the sides of the enemy ships, then explode under water where they do the most damage.

The Battle of the Bismarck Sea in March 1943, the most decisive victory of the South Pacific up to that time, was considered a Kenney miracle. Though outnumbered, Kenney's airmen wiped out a Japanese convoy of ten warships and twelve transports carrying about 15,000 of the enemy, as well as taking a toll of seventy-two to ninety-five planes. About a week later Kenney journeyed to Washington with other members of MacArthur's staff to attend a series of conferences on Pacific strategy and to ask for more planes to make possible similar victories. The successful attack on the key base of Rabaul, New Britain, in October 1943 was another victory that could be credited to the General's first-rate tactics.

One of the shortest American generals—less than five feet six inches tall—Kenney is stocky and vigorous, and has "the blue eyes that are so usual among airmen. There is a long, puckered scar at the right side of his mouth. Strangers always notice his hair—it is graying now, but it stands upright in very pugnacious-looking bristles about an inch long." The general has two children—a son, William Richardson, by his first wife, the former Helen D. Richardson, to whom he was married on October 16, 1920; a daughter, Julia Churchill, by his second marriage to Alice Steward Maxey on June 5, 1923.

Kenney's ideas about how an air force should function he illustrates with a story. "When I was just a kid," he says, "Grandfather told me: 'George, you're a little guy and you've got to remember that if you ever go after a big fellow you're going to need a brick in each hand.' "

LT. GEN. GEORGE C. KENNEY

A conscientious commander, Kenney believes that airmen should be decorated when they perform outstanding feats, such as getting a good bag of Japanese Zero fighters. That the Air Force knows well; and there is a story about one Buna raid in which an enthusiastic young pilot, seeing Zeros on the ground but none in the air, shouted over his radio: "Come on, you. . ! The old man won't decorate us for getting you down there!"

KEY, WILLIAM S(HAFFER) Oct. 6, 1889- United States Army officer

Address: b. Key Bldg, Oklahoma City, Okla; h. 600 Culbertson Dr, Oklahoma City, Okla.

On June 13, 1943 Major General William S. Key was appointed commander of the American garrison in Iceland. The month before, with the death of Lieutenant General Frank M.

U. S. Army Signal Corps

MAJ. GEN. WILLIAM S. KEY

Andrews '42 in a plane crash in Iceland, the "bluff and hardy" Major General had taken over temporary command of the American forces in the European theatre of operations.

William Shaffer Key is listed in *Who's Who in America* as an "oil producer." The son of Callie R. and Hadassah (Fargason) Key, he was born at Dudleyville, Alabama on October 6, 1889, and attended high school in Opelika, Alabama. From April 7, 1907 to March 27, 1910 he was a private of Infantry in the Georgia National Guard. He received his first commission as a 1st lieutenant of the Georgia National Guard on March 28, 1910, and held it through December 31 of that year. In 1911 he began in the hardware business in Wewoka, Oklahoma. He joined the Oklahoma National Guard as a private of Infantry and served as private and sergeant until June 8, 1914. On the following day he was appointed a 2nd lieutenant in the Guard.

On June 27, 1916 Key was promoted to a captaincy in the Oklahoma National Guard and called to border service until March 14, 1917. He was called into Federal service on March 30 of the same year, and he served seventeen months overseas with the American Expeditionary Forces, taking part in the Aisne-Marne offensive. He was promoted to major on February 9, 1918, and to lieutenant colonel (Quartermaster Corps) on February 22, 1919. His organization was mustered out of Federal service on July 21, 1919, and he thereafter accepted a commission as captain of Field Artillery in the National Guard on July 28, 1920. He was promoted to lieutenant colonel on August 4, 1921; to colonel on February 15, 1923. During the state-wide martial law in Oklahoma in September and October 1923 he commanded the Oklahoma City Military District.

From 1924 to 1927 Key was warden of the Oklahoma State Penitentiary, serving as president of the Wardens' Association of the United States in 1926. In 1927, however, he resigned as warden, established residence in Oklahoma City, and became an oil producer. He has been engaged in the oil business ever since that time, in addition to being president of the Key Building Corporation. From 1935 until November 30, 1940 he was also Works Progress Administrator for Oklahoma, and in 1938 he was the unsuccessful Democratic candidate for Governor of Oklahoma. He was promoted to brigadier general of the line on August 18, 1928 and to major general on April 2, 1937, and on November 30, 1940 he assumed command of the 45th Division, called into Federal service at Fort Sill, Oklahoma. In October 1941 the 45th Division moved to Camp Barkeley, Texas, and he with it; but in October 1942 he was named provost marshal general of the European Theatre of Operations with headquarters in England.

On April 12, 1943, as provost marshal general, Key announced that a little West Point to train military police for the United States Army in the European theatre was being established in England. When on May 6 he presided at the opening of this special school, he had already become acting commander in chief of the American forces in the European theatre. The school was to give a thirty-day course emphasizing basic military training, but including emphasis on map reading, methods of patrolling towns liberated from Germany, ways of guarding prisoners, and ways of controlling the flow of refugees. To the group of hand-picked officers and enlisted men who made up the M. P. plebes he confided: "It is largely your appearance that is going to count. To be perfectly frank, I think you all ought to go to the barber shop this afternoon."

Key is a director of the Oklahoma Historical Society and of the Masonic Foundation, a member of the American Legion, a Baptist, and a Mason (33°, Shriner). His clubs are the Rotary (of which he is ex-president), and the Men's Dinner Club in Oklahoma City. On May 5, 1914 he was married to the former Irene Davis. There are three children: William Shaffer, Jr., Irene Genevieve (Mrs. William Lee Harper), and Robert Carleton.

Who's Who in America 1942-43

KIEPURA, JAN (WIKTOR) (kē-pū'rə yän) May 16, 1904(?)- Tenor; film actor

Address: h. Savoy-Plaza Hotel, Fifth Ave. and 59th St, New York City; 708 N. Rodeo Dr, Beverly Hills, Calif.

Jan Kiepura's career is a story of overwhelming popularity, a story revealed not always by the critics' reviews—occasionally dampening—but by the rabid enthusiasm of his admirers. Called the "Polish Caruso" at twenty-four, this magnetic, exuberant tenor with the robust, colorful voice became the cinema idol and operatic favorite of half of pre-War Europe and South America. In Germany he was hailed by critics "as second only to Gigli." In the United States the furor created by his Chicago and New York opera debuts is reported to have rivaled Galli-Curci's and Flagstad's; his concert performances have aroused similar demonstrations; and his appearance in *The Merry Widow* in 1943 "stopped the show cold at every performance," although "local critics lampooned [his] acting."

He was born Jan Wiktor Kiepura in Sosnowiec, in southwestern Poland, the son of Franciszek and Maria (Nalman) Kiepura. Although his parents were both amateur singers, they were not eager to have Jan make a career with his voice, and the staid senior Kiepura, seeing no profitable returns from music, sent his son to the Warsaw University to study less frivolous law courses. Jan had his own ideas, however. Soon after graduation he set out to sing for a living even though he had had little or no musical training. His first jobs were in film theatres and with small touring opera companies; his first money was spent on an impressive fur-lined overcoat, the "hallmark of a successful career in pre-War Europe." Luck, it is said, did not come through this coat, but through the alcoholic indulgences of a fellow artist. Called upon one night in Lvov to take the place of the improvident star, young Kiepura sang the role of Faust for that one performance and was heard by a Warsaw opera scout. As a result he made his Warsaw debut in 1925 in *Faust*, and followed that by singing other leading tenor roles in the municipal opera house. His success was immediate: he became known as the Polish Caruso. But after that his own country had no more to offer him, and his goal became La Scala in Milan.

Kiepura studied for a time in southern Europe before setting about to attain his goal. His first critics did not always give him unqualified praise—his voice showed a lack of technical training, although full of natural beauty and vitality. Soon, however, he attracted a tremendous following. When he made his Vienna debut in *Tosca* opposite Maria Jeritza in September 1926, acclaim was immediate. A correspondent writing for the New York *Times* remarked that "not in years has a tenor awakened such an enthusiastic response." During a concert shortly after this debut "his admirers crowned him with laurel and flung flowers at him." At about this time, in April 1926, Puccini's last opera, *Turandot*, was being given its world première at La Scala. A few months later it was presented at the Staatsoper in Vienna, and young Kiepura was given the honor of singing at its second performance with another rising singer, Marie Nemet. Both were eagerly hailed; Kiepura's success was so overwhelming, in fact, that great jealousy arose among the other singers.

The following year Jan Kiepura appeared as guest at nearly all the famous European and English opera houses and concert halls, singing principally French and Italian roles in *Rigoletto, La Bohème, La Traviata, Tosca, Aïda, Carmen.* Inevitably he reached Milan, where he sang at La Scala during the 1929-1930 season. Later in 1930 he sang at the Teatro Colón in Brazil. It was natural that reports of this international fanfare, particularly from Central Europe, should reach the United States. As early as 1926 Kiepura had received offers to come to America, but it was not until November 1931 that he made his debut there, appearing at the Chicago Civic Opera House in *Tosca.* Again he was "acclaimed alike by critics and audience," receiving fifteen curtain calls that first night.

JAN KIEPURA

That same year he started what turned out to be a spectacular film career. He made his first picture, *City of Song,* in England; and the next year in Berlin he made the first film of a series for UFA-Gaumont-British Productions. The romantic tone of some of the titles of the films made during the '30's—*Farewell to Love* (1933); *My Heart Is Calling* (1934); *My Song Goes Round the World* (1934); and *I Love All Women* (his own favorite)—are suggestive of one aspect of the handsome, boyish Kiepura's immense appeal to audiences. Many more of these foreign-made pictures starring Kiepura were also shown in the United States. The singer became known for his "robustious vim and gusto," his "mood of romantic exuberance." Although he was sometimes accused of overacting or oversinging, "a trifle on the bravura side," he was almost always praised for his rich, magnificent voice—in one review the New York *Herald Tribune* described it as "electric"—and for his great personal charm. *Be Mine Tonight* was exceptionally popular. During 1933 in Los Angeles it broke a six-year attendance record, unusual for a foreign film, and it played a month or more in each of several other large cities around the country.

At the end of 1935 Paramount imported Kiepura to play opposite Gladys Swarthout in *Give Us This Night* (1936). The trip to Hollywood, from Kiepura's point of view, proved to be somewhat unhappy. Although he had enjoyed making pictures in Europe, he felt that Paramount did not understand his "true temperament," and shortly after the completion of his first American motion picture he departed for home. Not being modest about his immense talent, Kiepura has acquired in some quarters the reputation for having a bad case of temperament. This reputation was acquired principally during this first visit to the film colony, where he

KIEPURA, JAN—*Continued*

introduced himself as "the great Kiepura," to the annoyance of similarly temperamental individuals. One newspaperman wrote after an interview with Kiepura that his singing could not be divorced from his personality. He has "a confidence in himself that is often taken for conceit." Also, it is to be noted that reviewers almost always mention the tenor's artistic sincerity.

Kiepura's next visit to the United States was far happier on all counts. In 1938 he came to New York to sign a contract with the Metropolitan Opera Company. His debut on February 10, 1938 was in Puccini's *La Bohème*. As Rodolfo his physique delighted opera-goers accustomed to rotund tenors and, wrote the *New Yorker*, he added "a bit of abandon long needed . . . a high, wide, and sometimes handsome performance."

Other critics were more explicit about this debut, which, like his Chicago one, provoked wild acclaim. "The Metropolitan has undoubtedly found a strong drawing card in Jan Kiepura," wrote the New York *Times*. It was his "electrifying personality," continued their reviewer, "rather than any outstanding abilities as actor or vocalist that counted most saliently in his victory. His voice by nature [is] one of unusually pure quality and evenness. At its best it possessed warmth, sensitiveness of color, and emotional urge."

His performances that season continued to draw capacity audiences. His voice reportedly showed "excessive range and unusually good quality, apart from his tendency to overstress some of the top notes"; "in many ways [he was] extraordinarily impressive," for he brought to the parts "attributes not often encountered in operatic tenors," in spite of "vocal gymnastics that sometimes disregarded both the composer and the conductor," and a "bent [for] acting all the time and all over the place." Said Olin Downes '43 of a performance in *Carmen*: "He is youthful not only in years, but in his spontaneity and warmth of feeling and his complete sincerity. . . He has an unusually fine tenor voice . . . which he tends to force in moments of excitement. . . He is a gifted and also a personable singer; his presence on stage gave the whole performance stimulus. His youthfulness was almost boyishness. . . Several of the arias [he sang] have never been interpreted with such fervor, in spite of some exaggeration which can be forgiven because of the genuineness of the emotion."

At the conclusion of his first season in New York Kiepura went back to Europe and did not return to the United States again until 1939. In Europe, in addition to acting in motion pictures, he successfully continued his operatic work. He was the "stellar attraction," for example, "at the State Opera in Berlin," where previously he had sung for the Winterhilfe. He also appeared frequently in Paris at the Paris Opera and the Opéra Comique, as well as in numerous other European capitals.

At the outbreak of the War he and his wife Marta Eggerth '43, whom he had met on a picture set in Paris and had married on October 31, 1936, were again in France making a film. He served with the Polish Legion for a time and then offered his services to the Polish Legation in France. Before he went back to the United States in October 1939 at the suggestion of the Legation, he and Miss Eggerth toured briefly through the combat zones on the German-French frontier in an attempt to bolster the morale of the war workers. Since coming to America the singer has also been very active in British, Russian, and Polish War Relief. Even during the First World War, while still a youth, he had been active on behalf of Poland, joining a secret patriotic society and fighting the Germans in Upper Silicia.

Since 1939 Kiepura has toured extensively in both Americas, and he has become particularly well known in Chicago. Twice in that city, consumed with ardor for his work, he has knocked out Gladys Swarthout in the third-act tussle of *Carmen*. In August 1943 both his and Miss Eggerth's reputation began to swell the box-office receipts of the New Opera Company's production of *The Merry Widow*, a large amount of them going to the Kiepuras, who worked under a sliding percentage contract. The operetta, which opened in New York on August 4, 1943, was extremely popular with audiences. Although Marta Eggerth had played in New York in 1940 in *Higher and Higher*, this was her husband's first Broadway production, and he found that he liked it very much. To *Cue* Magazine he said, "My character is more gay than opera, this is more right for me, more my true temperament. This *Merry Widow* is the way I am, the way I feel. It makes me happy. I do not like to kill, and opera is full of killings. Always killing Carmen, bah. . . I do not like to kill women, I like to kiss them." However, while praising his voice, many critics claimed that despite his beautiful dancing partners in the operetta, his Prince Danilo could not waltz, and his acting was frequently wooden. But, as several of the same critics pointed out, this was perhaps of no account: his splendid voice atoned for the stiffness of his acting. Other critics commented that his style was too heavy or operatic for such a light role. He might sing, said Olin Downes, "with more finesse and less sheer prodigality of A's and B-flats if he were interpreting a truly subtle dramatic score. But he has a superb voice, of admirable quality, to lavish upon such a role."

The ecstatic enthusiasm of Kiepura's audiences continues, and the tone of the critics' reviews remains substantially the same. These reviewers have much to say about him. After one of Kiepura's recitals *PM* wrote: "In his own field—operatic arias and songs . . . that require bright colors and not too much subtlety—Mr. Kiepura has a brilliance of style and mastery of his voice that sweep all before it. Even what the voice masters call 'whiteness' in his softer tones can be forgiven that operatic temperament." With delicate, charming little pieces, most reviewers agreed, the tenor seems to be out of his depth. His interpretative talent, according to the New York *Times*, "is best suited to dramatic songs of a romantic character," a characteristic which appears to satisfy his admirers. Unfortunately the tendency to force his voice at times, which an early critic prophesied would be outgrown in time, is occasionally still apparent in his singing. Kiepura enjoys his singing and communicates this feeling to his audiences. "When I sing," he says, "it is me singing—all of me—not just the voice." And "sincerity" is the word most commonly used in reviews of his singing. A *PM* critic called him the "tenoriest tenor I have ever heard," commenting after a Town Hall concert that Kiepura used "every vocal and dramatic device allowed by the rules of the game, but always with consummate effect. . . He whispered, sobbed, looked stern, kept one hand over his heart, gestured with the other . . . but never overstepped, either musically or dramatically. . . His voice, a very fine one, may not be the best in the world; but he made one believe after a while that it came pretty close to this, and the rapturous applause of the audience . . . confirmed the impression."

Kiepura is of medium height and somewhat stocky. He has twinkling blue eyes, fair hair, an open, genial smile, and an exotic accent. *Cue* found both the Kiepuras "very European, very charming, an emotional, ridiculously affectionate couple." To indulge his inclination toward de luxe living, acquired through innumerable one-night stands, Kiepura several years ago designed and built a luxurious resort hotel in Krynica, Poland. It turned out to be such a successful venture that it almost distracted him from his singing, and he turned its management over to his father. Before the War it was a symbol of sumptuous living, but today, according to *Opera News*, all that Kiepura has left is a post card and a towel. However, he remains a connoisseur of hotels who bases his opinion of a hotel on its system of water faucets. Like his own Patria it must have hot and cold perfumed water flowing from the same tap. While in New York he lives with his wife and a dog named Tony in the unperfumed Savoy-Plaza Hotel. His hobbies are tennis, swimming, and horseback riding. He speaks seven languages, is a Catholic, and has been decorated with the French Légion d'Honneur, the Polonia Restituta and the Croix de Mérite of Poland, the Northern Star of Sweden, and the Leopold Premier of Belgium. The Poles have made a national museum of his birthplace, and have filled it with mementos of his youth.

KILGORE, HARLEY M(ARTIN) Jan. 11, 1893- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. 4849 Upton St, N. W., Washington, D. C.

To Senator Harley M. Kilgore, New Dealer from West Virginia, the mobilization of America's resources for war seems to have proceeded more or less along the lines of an experimental symphonic performance he once heard about. The musicians decided to prepare for a new symphony without the aid of a conductor and without group rehearsals, and each member of the orchestra conscientiously practiced his part by himself. Although all of them were competent performers, the results might have been predicted: "what was supposed to be a well-organized and integrated symphony turned out to be a jumble of discordant noises—without form, without pattern, without meaning." Overall planning is Senator Kilgore's recommended remedy for the analogous discord within and between war agencies over how the war is to be conducted on the domestic front.

Although Senator Kilgore has not yet been able to convince a Senatorial majority of his thesis, he is a persuasive attorney for his cause: many years of legal experience before his election to the Senate in November 1940 have served him well. Harley Martin Kilgore was born in Brown, West Virginia, the son of Quimby H. and Laura Jo (Martin) Kilgore, on January 11, 1893, and he took his LL. B. from West Virginia University twenty-one years later. That same year, 1914, he was admitted to the West Virginia Bar, and the next year he began practice at the town of Beckley in his home state.

His career as an attorney at law was interrupted shortly afterward by the First World War. In 1917, after attending the first Officers' Training Camp at Fort Benjamin Harrison, Indiana, he was commissioned a 2nd lieutenant in the United States Army, and he served until his resignation on March 15, 1920 as a captain of Infantry. In 1922 he became a major in the West Virginia National Guard, commanding the 2nd Battalion of the 150th Infantry; he was later advanced to the rank of lieutenant colonel. By this time he had returned to his law practice, and in May 1921 he had also acquired a wife: the former Lois Elaine Lilly. In January 1933 he became a judge of the Criminal Court of Raleigh County, and he served as such until his election to the Senate.

In the Senate Kilgore quickly took his place among the liberals and supporters of the Administration. He is a member of the Military Affairs and Judiciary Committees of the Senate, but he is best known as chairman of the Truman '42 Committee's special subcommittee on technological mobilization and as sponsor of more than one bill designed to help mobilize America's resources, material and otherwise, for an all-out war.

As head of the Truman subcommittee Kilgore saw how slow were the OPM and the War Department to realize the necessity for expanding the production of certain essential items, and he came to the conclusion that overall planning was needed on the production front. He saw instances in which scientific developments of likely value to the war program had been deliberately smothered by industry and ignored by the Government, and thus conceived the idea of an Office of Technological Mobilization that would force the licensing of patents and secret processes, promote research on new production methods, and in general,

HARLEY M. KILGORE

mobilize our scientific capacity in the war program. His subcommittee studied the need for "more centralized manpower control" as a means of alleviating the labor shortage which confronted the farms and war industries, and once more the conclusion was similar: "a definite, clear-cut manpower policy which makes sense" was essential.

Other special Senate and House groups were also investigating the conduct of the War on the domestic front and were also reaching conclusions, and in November 1942 their chairmen—Senators Truman, Murray, and Pepper '41, and Representative Tolan—joined with Kilgore in introducing bill S. 607. This bill, generally known as the Pepper-Kilgore bill, aimed to create an over-all Office of War Mobilization which would put production, manpower, and supply "under one single roof" and in command of a single director. Its purpose was to establish "a unified command on the production front which will treat manpower, materials, tools, warehouses, boxcars, and everything else as parts of a whole production pattern, all subject to central planning and direction and use, each fitting into its place in a way which will supply the full requirements of our armed forces as quickly as possible." If we needed a unified military command, Senator Kilgore pointed out, we were no less in need of a unified control and direction of our non-military economy.

Early in January 1943 S. 607 was reported favorably by the Senate Education and Labor subcommittee, and in February ten Senators from all three parties in the Senate joined in reintroducing it. Shortly afterward the Military Affairs Committee succeeded in capturing jurisdiction over it, taking it away from the Education and Labor Committee. Informed Senate circles predicted that its chances of emerging intact from that committee were very slight indeed, particularly since the War Department opposed it as a move to strengthen civilian control of the war effort. Kilgore nevertheless announced that he, Pepper, and their supporters would have a conference to draw up a plan of strategy for keeping it alive.

While this bill remained in subcommittee Kilgore urged passage of his bill to create an Office of Technological Mobilization. On March 30 this proposal enlisted the support of Thurman Arnold '40, who testified: "Had this bill been in effect before the War the Army and the Navy would have been as far advanced in the techniques of rubber as Standard Oil. That knowledge would have been spread to the independent industries that were trying in vain to get licenses under Standard Oil domination." In answer to charges that the bill would "regiment industry," Arnold replied that private research regiments industry. He also pointed out, in reply to the charge that the bill would "put science in a straightjacket," that government research in agriculture actually has stimulated private initiative in agriculture and has stimulated more research, the benefits of which are shared with the public because farming is not "cartelized." Kilgore himself interjected that his bill would provide the same sort of scientific service for businessmen that the Department of Agriculture provides for farmers. In November 1943 hearings were still being held on the bill, while Kilgore was fearlessly exposing industrial cartels and monopolies.

In March 1943 Senator Kilgore, as an expert on the manpower problem, attempted to defeat the Bankhead '43 Bill to defer farm workers from the draft. On March 16 he gave the Senate evidence that blanket draft deferments would actually impede the conversion of farms to war production: with a two-year supply of short staple cotton and a one-to-two-year supply of tobacco already on hand, the nation was about to use almost one-third of its farm labor on the production of more of these unneeded crops, both of which use a tremendous quantity of fertilizer. Both Kilgore and Pepper supported a substitute for the Bankhead Bill which would have provided a $300,000,000 fund for recruiting, training, and transporting a mobile army of farm workers to the areas where they were needed, but their bill was defeated by a vote of sixty-five to nine. Kilgore, of course, then voted against the Bankhead Bill itself. On both domestic and foreign issues Kilgore has a voting record which is, almost without exception, pro-Administration.

On May 12, 1943 the Kilgore subcommittee of the Military Affairs Committee released an interim report recommending immediate consideration of the proposed legislation to create a War Mobilization Board. It was stated that mobilization for war production was confronted by a crisis, with aircraft, tank, ordnance, and other quotas undergoing cutbacks, but that alleged material and manpower shortages were actually due to the lack of proper mobilization policies and the necessary war organization to support them. In Washington attention was concentrated "on how to avoid the inevitable changes in customary government and production practices and relationships which alone will release the mighty productive and manpower resources of the American nation for an all-out war effort."

In the last week of May, President Roosevelt '42 set up the War Mobilization Board and the Office of War Mobilization under Justice James F. Byrnes '41, a step that the sponsors of the so-called Pepper-Kilgore bill felt "incorporated the most urgent provisions" of their proposed measure.

The Senator from West Virginia is just an inch short of six feet in height, and weighs 200 pounds. He has two children, Robert Martin and Elinor Stuart Kilgore. His favorite spare-time occupation is reading local and military history, and he could probably pass any New York *Times*' history test in a walk. He is a member of the West Virginia and Raleigh County Bar Associations, a member of Delta Tau Delta Fraternity, a member of the Christian Church, a Mason, and an Elk.

According to Delos Lovelace in the New York *Sun,* Kilgore "looks like a judge. The features of his round face fall easily into the somnolent detachment of the bench, and when he purses his lips and teeters his spectacles in his left hand imaginative onlookers are more than half sure the next sound will be a bailiff crying 'Order in the court.'"

Who's Who in America 1942-43

KING, MURIEL Fashion designer

Years before fashion-conscious America anticipated clothing shortages or standardized styles, Muriel King, "attractive young arbiter of American fashion," was preaching style axioms which are currently being extolled by the Office of Price Administration. Miss King believes that good design should pay no particular attention to fabrics or colors or seasonal trends. Costumes should look well not only during the first year but also during the second, and third, and even longer. In 1940 Miss King was still wearing a self-designed evening cape made in 1933. "And not a single stitch of it has been changed since then!" she said. Like hat designer Lilly Daché '41, who wears some hats for four years, Miss King believes that good design never goes out of fashion.

Miss King was born in Bayview, Washington, the daughter of Frank and Maude (Smith) King. Like so many people connected with fashion, she is reticent about the exact date. She hoped to become an artist and she studied art at the University of Washington, where she was a member of Alpha Phi Sorority. During one summer she also worked at the Cornish School with Maurice Brown, producer of the play *Journey's End.* At first her interest lay in stage design, but soon she decided in favor of fashion design and went to New York to study at the New York School of Fine and Applied Arts. Then followed several years of free-lance fashion drawing for *Women's Wear Daily,* for *Vogue,* and for a number of New York department stores. During this time she served as supervisor of dress design classes at the school of design where she had studied previously. In 1927 Miss King sailed for Paris. There, and in fashionable continental resorts, she sketched fashion openings for various magazines, including *Modes and Manners* and *Vogue* Magazine.

MURIEL KING

In 1930 Miss King returned to the United States and continued her fashion drawing. Her friends were constantly begging her to design clothes for them, and gradually she gave up her sketching to concentrate on designing. It was not until 1932, however, that a fanfare of publicity announced her debut as a fashion designer. Proclaimed the creator of fashions which revealed the artist's impatience with monotony, Muriel King was "launched" that year by Lord & Taylor, Fifth Avenue department store. Each of the originals accompanying her debut was priced at $125, with copies variously priced from $29.50 to $49.50.

Some months after her debut Miss King opened her first salon, which occupied one floor of a brownstone house on New York's fashionable East 61st Street. She believes that her motto in fashion—"cautious daring"—is also her personal philosophy. She had no money and she had selected the depth of the depression for her new business venture. She felt that she could always convert her salon into a satisfactory home, if the business "didn't go." But the business succeeded so well that it was not long before she occupied several stories above the original first floor. Starting with a few dresses for friends, she was soon designing for such prominent women as Mrs. Thomas Hitchcock, wife of the polo player, and for Mrs. Philip Barry, wife of the playwright.

Three years of designing dresses for New York's topflight society brought Miss King a bid from Hollywood. In 1935 she went out to design costumes for Katharine Hepburn '42 for *Sylvia Scarlett.* Miss King found this experience extremely amusing. "I flew out and back to California twice, and worked very hard when I was there," she said, "and

KING, MURIEL—*Continued*

what designs do you think finally appeared in that picture? A cotton dress, a clown suit, and a raincoat!"

Hollywood was not dismayed by this experience and asked the young designer to return in 1937 to do the costumes for Miss Hepburn, Ginger Rogers '41, and Gail Patrick for *Stage Door*. "At fittings," said Miss King, "Ginger whirled, Hepburn strode like a lithe young goddess, Gail Patrick practiced walking, sitting, and standing to be sure that these costumes moved with fluidity and grace. What delighted me was the sureness that each of these girls showed in deciding on her clothes. Anyone can pose and look beautiful. These clothes had to act, and the girls expected their clothes to perform as they themselves did. The reason for their style sagacity is an obvious one: they have had a chance to see themselves upon the screen and view themselves impersonally. If only every woman could do that!" Later Miss King did the creations worn by Margaret Sullavan in *Appointment for Love*.

Back in New York in 1937, the designer moved to a large graystone salon on East 51st Street, which she closed abruptly some three years later, when, at the peak of her career, she decided to startle the fashion world by a change of business policies. "I stopped because my work suddenly seemed anachronistic," she told an interviewer in 1940. "I don't think people really want to spend that much time and money on their clothes. And for my part, I did not want to be so individualistic in my whole activity. It just seemed too bad not to make a highly specialized talent more useful to more people. . . In the meantime, I'm very much excited at the prospect of 'visiting' in New York. I'm doing all the things I never could seem to manage the time for when I had the salon—watercolor painting, trips to museums, reading, music."

There wasn't much time for leisure, however, because Muriel King was soon busy again, working on a series of dress design patterns for a woman's magazine, making dresses for a special promotion put on by dress and automobile industries, and starting a new dressmaking firm, d'Armand-King. In January 1942 she once again announced a change and returned to Hollywood, where she is exercising her talent for individual designing. By her own description, her way of designing starts "backwards." Line and color are most important to her. She first sketches in color. When the sketch is completed the outline and drape of the garment dictate the selection of the fabric. Contemporaries agree that if she knew more about cutting and sewing, she might be restrained by technical difficulties from trying for certain effects. As it is, she finds that any effect can usually be achieved if the problem is worked upon long enough. During a silk strike her ingenuity asserted itself in her choice of upholstery fabrics.

In April 1943 Miss King introduced the "Flying Fortress Fashions"—all in "flight blue"—a wardrobe for women workers in the aircraft industry which received the approval of three major aircraft companies, Boeing, Douglas, and Lockheed. While visiting the Boeing plant in Seattle she had observed women going to work in hastily improvised work costumes, many wearing men's trousers with sweaters; she was immediately struck with the idea that here was a new field for the designer. This was another opportunity to indulge her pet theme of creating interchangeable parts, making for variety in a basic costume.

Miss King's designs frequently lean toward the Grecian style, prompted perhaps by a month's journey by sailboat among the Grecian Islands in 1936. In spite of all her other activities, she managed nine trips to Europe before September 1939. Her enthusiasm for traveling explains, too, her well known ability to plan travel wardrobes "which are so resourceful that one outfit can be made to look like three." "Besides painting landscape water colors," she says, "traveling is my favorite recreation. I like human beings; and I like to know what they think and do." She lists swimming, collecting sea shells, dancing, and conversation as favorite sports and hobbies. Miss King was married in 1924 to Allen Saalburg. They were later divorced. Their son, Karl, was born on May 9, 1930.

An interviewer in 1940 described the designer as "tall, well built, youthful, with an easy, natural manner, a mobile mouth, and warm eyes which were always smiling. She looked, with the deep red bow in the top of her short black hair, like an American college girl. A second glance revealed that the simple, plum-colored skirt and beige jersey blouse with its stunning heavy gold necklace were part of a plan conceived by a master hand."

American Women 1939-40

KINGSLEY, MYRA Oct. 1, 1897- Astrologer

Address: h. 201 E. 71st St, New York City

Astrology—"the study of planetary influence upon human behavior"—counts its followers in the millions. Twenty per cent of the newspapers in the United States have syndicated astrology columns which reach millions of readers; 200,000 readers buy seven national astrology magazines; almost every drugstore and ten-cent store in the land offers cheaply printed horoscopes; and vast numbers of people consult astrologers at sums ranging from $1 to $50 a session.

Fad-conscious Hollywood is a veritable astrologers' paradise, and Wall Street "has proved a fertile field for astrological activity." Despite attacks in the past by such personages as Jonathan Swift, Benjamin Franklin, and Increase Mather and attacks in the present by both scientists and the Church, astrology continues to find new converts. These thousands of followers do not believe psychologists, who "find no evidence that astrology is of any value whatsoever as an indication of past, present, or future trends in one's personal life or in one's destiny." "The principal reason why people turn to astrology," says a report in *Science Digest*, "is that they lack in their own lives the resources necessary to solve serious personal problems confronting them. Feeling locked and bewildered, they yield to the pleasant suggestion that a golden key is at hand—a simple solution—an ever present help in time of trouble. This belief is more readily accepted in times of disruption and crisis when the individual's normal safeguards against gullibility are broken down. When normal habits are weakened by depression or war, bewilderment increases, self-reliance is lessened, and belief in the occult increases."

Myra Kingsley, one of the leading American astrologers, has made a successful career of prognostication. She was born at 4:15 p. m. on Friday, October 1, 1897 in Westport, Connecticut, the daughter of a socially prominent couple, William Morgan and Susan (Buck) Kingsley, now both deceased. Her father was president of the United States Trust Company, president of the board of directors of Union Theological Seminary, elected to Phi Beta Kappa, and treasurer of New York University. Mrs. Kingsley became fascinated by occultism early in her life and later steeped herself in studies in theosophy, Rosicrucianism, astrology, and psychic phenomena. Before Myra's birth, her mother had become a Theosophist and a vegetarian. Miss Kingsley herself says she "was born a vegetarian."

When Myra was a child her family moved to New York City, and she grew up in a large house on fashionable upper Riverside Drive. She was educated in New York schools, at Horace Mann School and at the Scoville School. In 1916 she enrolled at the Institute of Musical Art, now the Juilliard School of Music, and studied voice. Myra thought she wanted to be an opera singer, but she was not sure that it was a wise choice. Mrs. Kingsley took her to consult the late Evangeline Adams, then "dean of astrologers," whose clients included J. P. Morgan, Caruso, James J. Hill, and Mary Garden. Miss Adams told her that she would never become an opera star. "You can be a very good astrologer, if you wish, however," Miss Adams declared, "and if you ever decide to take it up I will gladly teach you." Myra did not take her advice, returned to her music and was graduated in 1920 as an accomplished pianist and singer. A year later she married George Houston, whom she divorced in 1927.

Until 1925 the blond-haired, attractive girl pursued her musical career, singing in churches, recitals, and in the George Eastman Opera Company in Rochester, New York. But Evangeline Adams had been correct: she never became an opera singer. Her interest in singing eventually lessened, and she went to San Francisco to be with her mother and to learn astrology. Her mother recommended Milton Pierce Ropp, with whom Miss Kingsley studied for some months. While studying with him, Miss Kingsley cast her first horoscope for a friend, who later wrote a prize-winning novel. It was *Fault of Angels* by Paul Horgan, and Miss Kingsley says she prophesied it "to the day." The young astrologer soon decided to continue astrology, and with that in mind in 1927 she opened a studio in New York City. There she became something of a sensation as a young, beautiful astrologer from the top layer of New York society. She knew how to get publicity, and she had many satisfied clients who told others of the success of her predictions. "Reporting on planetary influences for assorted celebrities from Lawrence Tibbett to Lucius Beebe '40, Miss Kingsley became as much of a diner-out as Elsa Maxwell '43."

Kee Coleman

MYRA KINGSLEY

The first astrologer to broadcast since the death of Evangeline Adams in 1932, she was heard in coast-to-coast broadcasts in 1937 and 1938. "But," said Miss Kingsley, "the radio commission in Washington decided that astrology should be banned from the air, and I agreed with them. I canceled my contract in the spring of 1938 and that summer came to Hollywood." "Hollywood, where people are likely to be even more uncertain about the future than they are elsewhere, was naturally delighted when Myra Kingsley, the No. 1 woman astrologer of the United States, arrived in town. Phrenologists, palmists, graphologists, mediums, psychiatrists, and tea-leaf sages noticed a falling off in trade as their clients flocked to consult Miss Kingsley about their horoscopes," remarked *Life* Magazine. Miss Kingsley stayed in Hollywood for a time and then returned to New York after doing hundreds of horoscopes, including those of Rosalind Russell '43, Dudley Field Malone, Basil Rathbone, Orson Welles '41 Vincent Price, Roland Young, Joan and Constance Bennett, and other celebrities.

In the main, Miss Kingsley finds that her clients, both men and women, ask about love. She charges $10 an hour and begins a session by asking a few simple questions about the date and the hour of birth. "Then she . . . consults some books of logarithms, mutters

KINGSLEY, MYRA—*Continued*

a little to herself, and bursts into talk." Miss Kingsley explains her case in charting lives by saying: "I think I have done this work in other incarnations."

Unlike other astrologers, Miss Kingsley candidly admits that she "is probably the only astrologer who will tell you that it is not a science. It should be in a laboratory, but they won't take it in. It belongs in the realm of demonstrable fact." Scientists maintain that "no one has ever really demonstrated that planets have any influence upon human behavior, but this fact has discouraged neither astrologers nor their customers."

Not only do people want personal horoscopes but they want predictions for the world at large. (Miss Kingsley predicted a war in Europe for late 1939.) In 1942 she concurred in a very "doleful prophecy" which was made by Evangeline Adams, who noted that on July 4, 1776, the first birthday of the United States and the time of its Revolutionary War, "the planet Uranus was in Gemini; the next time they met we had the Civil War; and those planets are together again in 1943." Miss Kingsley agreed that 1943 should witness a war (civil or otherwise) in the United States.

A more recent prediction by Miss Kingsley for 1943 was also not substantiated: "In the summer of 1943 Mussolini '42 will come back into some sort of power; it will not be a complete comeback, but will strengthen his present position. Hitler's '42 chart shows Jupiter in the mid-heaven for the first time in twelve years, an indication of renewed might, but there are also some very unfavorable aspects for Hitler. So I would say that if the fighting stopped in 1943 it would not indicate definite victory or definite defeat for the Axis. But I do not believe that the War will be over so soon. . . The things which will help us immeasurably in the coming year are Europe's lack of food and materials and manpower, illness and disease, revolt among the conquered peoples. We will fight and we will win, but not as victorious and happy conquerors. Make no mistake—when this War is over, everyone loses somewhere."

Not only has Miss Kingsley drawn up a world chart but she has drawn up her personal chart as well. It shows that she had to wait until 1933 to meet her second husband. That year she did meet Howard L. Taylor again (he had been president of the defunct Rochester Opera Company), and she married him in 1934. (They have since been divorced.) Both are destined, says Miss Kingsley, to meet their final end by drowning. Taylor, a radio executive, born in Munich, hopes it will be in beer.

Since June 1942 Miss Kingsley has been predicting futures at Roger Stearns' spacious 1-2-3 Club in New York City. In October of 1943 she ventured into astrological decorating, making her debut in the big corner window of W. & J. Sloane's store on Fifth Avenue. Starting off with a bedroom suited to the vagaries of a hypothetical Libra (September 24 to October 22) female, she plans eventually to go around the zodiac with every room in the house represented.

Myra Kingsley has a fair complexion, dark eyebrows, a small snub nose, a pretty, youthful face, soft curly blond hair, and an amiable disposition. Her favorite person was always her father, who, with her two brothers, did not approve of her vocation. She likes to buy gaily colored tropical birds, to ride horseback sidesaddle, to stay up late and to sleep late. She admits that biography is her favorite reading and insists that the older she grows the happier she becomes. She would like to do more children's charts so that she could select careers for them to follow, and she hopes eventually to "do something with medical astrology." An industrious worker, she has lectured and has written magazine articles and an unpublished book called *Celestial Heritage.* More articles have been written about her than about any other living astrologer. She candidly admits: "I do not consider myself the greatest astrologer of today but I do know that I make more noise about it than most of them."

KINGSLEY, SIDNEY Oct. 18, 1906- Playwright

Address: h. Sweet River, Oakland, N. J.

Few playwrights have been so successful as Sidney Kingsley in making serious social messages palatable to audiences. Sometimes he has been criticized for that very reason. "High-grade hokum" and "melodrama" are words that were frequently applied by the more snobbish critics to his early *Men in White, Dead End*, and *The World We Make.* Then, in 1943, came *The Patriots*—and the words no longer seemed appropriate. Critics were seized with an entirely different fear. In *The Patriots*, written in an attempt to provide "a clear and unconfused picture of the word 'democracy' "—"to cleave through the post-World War skepticism on the one hand and Fourth of July fustian on the other"—Kingsley had created a dignified and serious historical pageant rather than a gripping drama they suspected. The struggle of Thomas Jefferson and Alexander Hamilton over the nature of good government was a noble subject (if one agreed with Kingsley's interpretation of that struggle), but perhaps, they hinted, it was also a bit on the stodgy side, theatrically speaking.

It seemed that the critics had underestimated either the drama inherent in a century-old but not untimely conflict or the ability of American audiences to take their history more or less unseasoned. For the meaning of democracy, it developed, was first-page news; was drama; was, even, good box office. New York audiences flocked to *The Patriots*, and argued over it afterward. By April 1943 many of the critics who had at first given *The Patriots* only qualified praise were ready to vote with its original enthusiasts in awarding it the New York Drama Critics Circle plaque for the best play of the 1942 to 1943 theatrical season. The play also received five other awards. It was even the subject of a glowing speech in the House of Representatives.

The man who made Thomas Jefferson one of the most controversial characters in the history of the theatre was in 1943 a lieutenant in the United States Army. He was born Sidney Kirshner in New York City on October 18, 1906, the son of Dr. Robert and Sonia (Smoleroff) Kirshner. His father was a Spanish-American War veteran. He went to public school on the Lower West Side and then to Townsend Harris High School, where he wrote some one-act plays on social problems and also helped direct and acted in most of them. Winning a state scholarship to Cornell University, he continued his work under Professor A. M. Drummond of the Cornell Dramatic Club. He acted with Franchot Tone '40 in several plays, including *The Glittering Gate* and a revival of Sheridan's *The Critic*, wrote more one-act plays, and in 1928 received the annual award for the best one-act play by a student playwright for his *Wonder-Dark Epilogue*, later published in *Cornell University Plays* (1933).

After receiving his B. A. from Cornell in 1928 Kingsley spent four months as an actor with the Tremont Stock Company of The Bronx at $12 a week, played a small part in *Subway Express*, and then apparently decided that he would never be a Barrymore. For several years he worked as a play reader for Brandt Brothers and as a scenario reader for Columbia Pictures in Hollywood, California, in the meanwhile working on plays of his own. These were "optioned" time after time, announced for production again and again, and always held up before they reached Broadway. There was one, *Crisis*, a play about the dilemma doctors face in choosing between a completely satisfying personal life and service to humanity, which he finished in three months and rewrote for three years. During this time he verified his medical data, investigating the Lebanon, Montefiore, Bellevue, and Beth Israel Hospitals in New York.

In 1930 he sold *Crisis* to Louis Cline, who paid the customary $500 for a six months' option on it; but Kingsley's troubles were by no means over. At the end of six months Cline brought the script back because the promised backing had failed him, and the story was repeated with a second producer. At last Sidney Harmon came along to take up the option for the third time, and a year later Harmon came through with a production whose cost was split with the Group Theatre, Inc., and James Ullman. The play, retitled *Men in White*, opened on September 26, 1933 under the direct sponsorship of the experiment-minded Group Theatre.

Men in White was an immediate success on Broadway, where it ran a total of 351 performances, and most critics found its success heartening. Brooks Atkinson '42 of the New York *Times* considered it "warm with life and high in aspiration," with "a contagious respect for the theme it discusses." Joseph Wood Krutch commented that "it furnishes an experience which is thrilling and absorbing, genuine, and complete." There were a few reviewers who gave the Group Theatre rather than the author most of the credit for the success of the production, remarking particularly on the effectiveness of the sharply realistic operating room scene. But John Mason Brown '42 was almost alone in his acrimonious description of it as "a piffling script, mildewed in its hokum, childishly sketchy in its characterization, and so commonplace in its every written word that it in no way justifies its own unpleasantness."

Vandamm Studio
LIEUT. SIDNEY KINGSLEY

In 1934 *Men in White* received the Pulitzer Prize of $1,000, though actually the Pulitzer jury had voted unanimously in favor of Maxwell Anderson's '42 *Mary of Scotland* and had been overruled by the advisory board of the Columbia School of Journalism (which makes the recommendations for the awards to the trustees of Columbia University). The play was also honored with the Theatre Club's medal for 1933 to 1934, and was sold to Metro-Goldwyn-Mayer for $47,000. It not only made a successful film, but was successfully produced in London and other continental centers. Kingsley toured Europe while it was being produced over there, "watched his play receive greater acclaim abroad than it did here, basked comfortably in a hot, pouring sun of European personal adulation—and returned home to hear spiteful whispers about the lightning-stroke which never again would set him aglow or fuse him into a playmaking state of excitement." It was whispered that he was a "one-play guy," and the success of *Men in White* was called beginner's luck.

Beginner's luck it may possibly have been, but the luck continued, long after Kingsley ceased to be a beginner. Soon a second play, *Dead End*, was sold to Norman Bel Geddes '40 with the understanding that Kingsley himself would cast and stage it. The play opened on October 28, 1935, the Gerry Children's Society delaying the opening night curtain a half-hour by insisting that several "robust" lines that the child actors had to speak be deleted. (Kingsley complied, though telling his friends

KINGSLEY, SIDNEY—*Continued*

that some of his young actors had taught him four-letter word combinations he himself had never heard before.) And once more audiences responded warmly, although the critical reaction was mixed.

Dead End dealt with "city waifs who learn the way of the gangster from the facts and fancies of life as it is lived at the edge of a river, beside a swarming tenement that neighbors the back of a garden apartment." One typical enthusiast, likening it to *Winterset,* wrote in *Theatre Arts Monthly*: ". . . its theme is social injustice, its form is melodrama, its place of action is New York City, it is magnificently set and acted, it has boldness and freedom of attack, it is full of excitement and strong currents of resentment and of pity." Critics also generally agreed that Kingsley knew his slum-dwellers perfectly, had "sharp ears for the speech of gangsters, policemen, street waifs, poor mothers, and prostitutes," and that the social effect of his play in arousing the public to the need for cleaning up the slums was highly salutary. It is said that "no other contemporary playwright has had as much direct effect on legislative reform." *Dead End,* according to Senator Robert F. Wagner '41, played an important part in slum clearance legislation.

On the other hand, more than one reviewer decided that *Dead End* owed its effectiveness chiefly to the excellence of the boy actors and to the spectacular set designed by Bel Geddes, and Joseph Wood Krutch commented: "Without being false, it lacks either that originality of intent or that freshness of feeling at least one or the other of which is necessary to make a play great. . . During four-fifths of the time it is running on the level of first-rate melodrama, which grips without ceasing at any time to be obviously a play and without turning up any situation or any thought not essentially familiar." *Dead End* nevertheless won another Theatre Club Award for Kingsley, and was sold to Hollywood for $165,000. It was made as a film with the original actors, who later called themselves the "Dead End Kids" and made a series of films. The term "Dead End Kids" became a part of American language.

"I could have followed *Men in White* with other things in the field of medicine, but I never felt inspired to do it. The same might have been true of *Dead End,*" Kingsley says. "But it is the new technic, the new approach I find most challenging." He next proceeded to write, cast, stage, and finance a "stinging diatribe against the international munitions makers of the First World War, *Ten Million Ghosts.*" The play opened on October 23, 1936 and was a "huge and handsome" production, its cast "carefully selected and carefully trained," its story conscientiously documented; but, according to Burns Mantle, it was "one of those stage protests that play patrons just refuse to accept in the theatre." After eleven performances it went to the storehouse, and the Sidney Kingsley independent producing unit went out of business.

Late in 1939 came *The World We Make,* a play adapted from *The Outward Room,* a best-selling novel by Millen Brand, which told the story of a girl's return to sanity through participation in everyday life and through her recognition of her lover's need for her strength and comfort. Once again one extremely realistic set, showing a steam laundry and omitting "no detail of fetid, noisy fact," provoked almost as much comment as the play itself, but this time the set aroused more criticism than it did praise. And once more the critics failed to agree on the merits of the play itself. Brooks Atkinson called it "the first work of the season to treat a serious subject with insight and skill"—"something worth cherishing as the chronicle of an individual grappling with the realities of modern life." "Written with sympathetic understanding and with enlightened perspective," he continued, "*The World We Make* is a deeply moving play with considerable modern significance; and Margo's luminous description of a character that develops out of personal anguish into the peace of human fulfillment is acting of superlative quality."

Time, however, insisted that "Kingsley exploits realism without achieving reality. Possessing far more of a theatre sense than either a mind or an imagination, he seeks to be effective rather than convincing, to get a point across rather than to be sure his point is sound. His 'realistic' plays are often lurid, sentimental, false, are best described (for all their grime and grimness) as picturesque." Even the realism of Kingsley's picture of tenement life was disputed this time. One critic called it "unusually touching," while another critic accused the playwright of "prettification." *The World We Make* closed in January 1940.

In July 1939 Kingsley had married Madge Evans, the screen and stage actress, who had been playing in the summer theatre at Ogunquit, Maine when he met her. When he brought her home, he says, she discovered that he had saved everything he had ever owned. ("She disposed of all my precious junk. You know, you never can tell when you're going to need an old doorknob.") By this time Kingsley was working on a new play, tentatively titled *Thomas Jefferson.* Soon both he and his wife were so busily going over books, documents, and letters of the period that Miss Evans said later: "Honestly, sometimes I wonder whether I married Sidney Kingsley or Thomas Jefferson." She once had to take him aside after they had entertained a guest at dinner. "Look," she said, "I don't mind when, in the middle of a purely objective discussion on how to grow vegetables you suddenly regard me with a benign smile. I don't even mind it when, a few minutes later, your expression turns to extreme loathing. But I'm sure our guest doesn't understand. Please explain to him that you were merely playing Thomas Jefferson and Alexander Hamilton in your mind and that it has nothing whatsoever to do with your feelings toward me."

After doing the research on his new play, Kingsley spent forty-six weeks in the actual writing of it. The first draft was completed in March 1941 the day before Kingsley was inducted into the Army. The night before, at a farewell party, he read it to Maxwell Anderson, who was much impressed with it and who kept hounding him to polish it up while in the Army. This was a little difficult. Kingsley was made an M. P., and for a long while the pressure of his duties was such that he didn't touch the play. Finally he decided to work on it evenings, and, according to one story, brought it up to the attic of a barracks building in search of privacy and quiet. He discovered in short order that he had selected a firing range! Eventually the play was rewritten to Kingsley's satisfaction, however, and it became the first play by an outsider to be selected for production by the Playwrights Producing Company. For the first time, too, Miss Evans accepted a role in one of her husband's plays. Stationed at Governor's Island, New York, Lieutenant Kingsley found time to revise the script somewhat after rehearsals started and even to supervise numerous rehearsals.

Retitled *The Patriots*, the play opened on January 29, 1943. Covering only a decade of Jefferson's life, from 1790 to 1800, it showed the conflict between Hamilton and Jefferson over how America could best be governed; showed Jefferson's faith in man's ability to govern himself pitted against Hamilton's distrust for "that great beast, the people" and consequent encouragement of a plutocracy.

Stark Young commented: "The play adds up . . . to one of the few serious and pertinent things out of a low-grade season. It puts us, for a change, in good company, on a fine plane. It is thoughtful, full of warm feeling, and its general content is rich, honest, and noble as regards its application to our day." Louis Kronenberger, however, summed up the feeling of many other critics when he wrote: "The play, to my mind, has neither sustained vigor nor appreciable artistry; its dialogue falters, its interest fluctuates, its characters never for a moment come alive. It merely records history; it does not recreate it."

In other quarters the play created even more intense controversy over its political soundness and historical correctness than over its dramatic merits. As Samuel Grafton '40 said: "Sidney Kingsley's play has already driven some of his critics into acute melancholia. They do not see why on earth Thomas Jefferson has to come along, at a time like this, and raise the questions of whether one loves the people very much and what one proposes to do about their futures." Particularly irate was Burton Rascoe, who claimed that the author "had slanted the play . . . in such a way as to make Alexander Hamilton, who was later to become a sort of patron saint of the Republican Party, the villain of the piece and Jefferson the hero," and that "in doing this, Mr. Kingsley had obviously intended his audiences to identify Mr. Roosevelt '42 with Mr. Jefferson and to have the villain, Hamilton, of his presentation represent in his audiences' minds the embodiment of all those who oppose or differ with Mr. Roosevelt on political ends or on the means of effecting those ends." He called this "a distortion of history and also a demogogic attempt to cause false identifications; for, in political theory, Mr. Roosevelt and his advisers are much more closely akin to Hamilton than they are to Jefferson." Kingsley was astonished. Actually, he said, he had tossed out some of his material because of its contemporary parallels.

On May 2, 1943 at the annual dinner of the New York Drama Critics Circle a plaque designed by Henry Varnum Poor '42 was awarded to Kingsley with a citation noting his play's "dignity of material, its thoughtful projection of a great American theme, its vigorous approach to the characters portrayed, and, in spite of certain limitations, its driving final effect on the stage." On April 30, 1943 the Newspaper Guild had also presented Kingsley with its Page One Award, citing *The Patriots* as "the play of the year which best promotes the principles underlying the four freedoms." On May 8 the New York City Federation of Women's Clubs called it "the best American play of the season," and awarded it a prize. In December it was one of the first plays presented by the new New York City Center of Music and Drama. (It had closed on Broadway some months before.)

"This will be my last play for a long time," said Kingsley, who had applied for overseas duty and who hoped to get it. "There's another important job now—a war to be won." But after that all-important job is accomplished, he plans to return to his wife and to his own personal Monticello—a fifty-acre farm near Oakland, New Jersey. "Behind it is a mountain covered with dogwood. At the front door is a little stream, stocked with trout. There are all kinds of trees—black walnuts, oaks, peaches, pears, apples, and cherries." (Kingsley's hobby is tree surgery.) It was there that most of his plays were written, the house echoing and re-echoing with the sound of Kingsley reading his lines aloud, and the ten rooms often covered with a trail of cigaret butts and handwritten manuscripts as he wandered nervously from room to room. When at work on a play, which he likens to "giving birth to an elephant," he seldom went to bed before 5:30 in the morning. The Army has changed all that, but the playwright is not complaining. Of military life he says: "I love it. I never had experienced to any special degree companionship with men; certainly nothing like the companionships of the Army." And, in more theatrical terms, he hopes that "very shortly my duties may carry me to some more distant and turbulent stage to play my small role in the greatest drama of our time."

KIPLINGER, W(ILLARD) M(ONROE) (kip'ling-ėr) Jan. 8, 1891- Journalist

Address: b. 1187 National Press Bldg, Washington, D. C.; h. 6609 River Rd, Bethesda, Md.

Washington Is Like That (1942), by the editor of the *Kiplinger Washington Letters*, was the product of two years of compilation and assembly by W. M. Kiplinger, a considerable staff of helpers, and virtually dozens of "informed sources." It sets out to "help people to look Washington square in the face, on a level, with both eyes, and see inside it as it really is." Malcolm Cowley in the *New Republic* called it a "subdued and incomplete picture of Washington in wartime," but credited it with containing "more information about the national Capital and the national Government than any other single volume in existence—even the Writers' Project guide to Washington, the *Congressional Directory*, or the *United States Government Manual*." Other reviewers, in general, agreed with the New York *Times'* critic, who called it "an admirable, entertaining, important, and useful book." As described by Duncan Aikman, "it tells in detail how the White House, Congress, the Supreme Court, the Army, Navy, and State Departments, and more than a score of other outstanding government agencies function. It tells how Washington, the million-strong community, works, lives, and amuses itself in its various social and bureaucratic stratifications. There are deft thumbnail sketches of fifty-five figures in the governmental scene, and a chapter of literally invaluable short-paragraph descriptions of the jobs which about 200 outstanding bureaus and agencies are up to."

W. M. KIPLINGER

Willard Monroe Kiplinger was born in Bellefontaine, Ohio on January 8, 1891, the son of Clarence E. and Cora (Miller) Kiplinger. He has more than thirty years of journalistic experience behind him. Having received his B. A. degree from Ohio State University in 1912, he became a reporter on the Ohio *State Journal* that same year. By 1914 he was a reporter and editor for the Associated Press in Columbus, and he ended up in the nation's capital two years later as a financial writer and editor, covering war financing. In 1920, at a time when newsletters were in their infancy, he left the Associated Press to become a free-lance business and financial writer, and in 1923 established the *Kiplinger Washington Letters*, the second such service to be established in Washington. He has been its editor ever since.

The Kiplinger Washington Letters are today a highly successful business enterprise. They cost their subscribers $18 a year, and reach hundreds of thousands of people a week, more than any other Washington letter service. The New York *Times* comments on Kiplinger's gift of "saying much in a few words," his "agile objectivity," and his "enviable ability to tell bad news or make unpalatable predictions cheerfully." According to Clifton Fadiman '41, "he is neither New nor Old Deal, but he has a certain natural bias in favor of his clients, who are largely businessmen." For these businessmen Kiplinger performs the service of letting them know what they may expect in the way of legislation that affects them; what the economic trends are; which way the Washington wind is blowing. The people on his staff never attend press conferences in Washington, but get their information by talking to government officials, and often people come to them with information they want made known. As Quincy Howe '40 puts it, the editor of this type of newsletter can speak quite frankly but can't afford to make too many mistakes—and apparently Kiplinger's subscribers are well satisfied.

In addition to editing the *Washington Letters*, Kiplinger has contributed many articles to magazines like *New Outlook, Forum, Scribner's*, and *Reader's Digest*. The titles of a few of these, written between 1932 and 1935, will indicate with what issues he was most concerned during the first years of the New Deal: "Indirect Relief: What Is Its Relation to the Breadline?"; "Our National Relief Policy"; "Capitol Men"; "Why Business Men Fear Washington"; "Business, Roosevelt, and the New Congress." In the first of these articles he had shown his support for President Hoover's '43 policies, but there was never any vituperation in his criticism of Roosevelt '42. In 1936 he wrote, for example, that the President "has less than a year left to reorganize and establish some method and system within his far-flung Government. He may do it. If he lets it slide it is the thing which will lower his re-election chances dangerously close to the even-money line. Right now, I should say, those chances are five to four." And in that same year he was writing about labor with equal calmness, predicting that union membership would gain rapidly in the next two or three years, that labor would increase its economic and political strength, that a third party in which labor would be influential would be probable by 1940, and that the labor movement would continue essentially capitalistic, but that industrial unions would gain at the expense of craft unions. In *Washington Is Like That* he maintains the same equilibrium while predicting that the centralization of control over the national economy is here to stay, whether under the Democrats or the Republicans. In Lewis Gannett's '41 words, he is "an artist at skimming over thin ice."

Washington Is Like That was Kiplinger's first book, although in 1935 a pamphlet, *Inflation Ahead! What to Do about It*, written with his associate Frederick Shelton, appeared. In *Reader's Digest* for September 1942 a chapter from the book, "The Facts about Jews in Washington," was published in condensed form. It created some controversy because, although Kiplinger exploded the myth that the representation of Jews in the Government was greater than in the country as a whole, he did suggest that Jews "avoid an excessive loading of the Government with Jewish citizens" in order to "avoid muttering from citizens who resent any overrepresentation in government, or even in certain agencies, with the people of *any* one group." In criticism of his stand Pearl Buck wrote: "The truth is that America has nothing to do with percentages of race and sex and religion and national origins."

Kiplinger has been described as a "quiet-mannered, singularly modest" man who avoids the limelight as much as possible. He is a Unitarian and a member of Sigma Delta Chi and of Sigma Pi. His clubs are the University, the National Press, the Arts, and the Cosmos.

Who's Who in America 1942-43

KIPNIS, ALEXANDER (kip'ńiṡ) Feb. 1, 1891- Opera singer

Address: b. c/o W. Colston Leigh, Inc, 521 Fifth Ave, New York City; h. Berkley Rd, Westport, Conn.

Alexander Kipnis, the celebrated basso of the New York Metropolitan Opera, literally sang his way out of a concentration camp into the front ranks of the musical world. He has become as famous for the wide range of his operatic roles as for the artistry with which he sings *Lieder*. He is often referred to as "a second Chaliapin," for like the late Chaliapin, his musical interpretations depend not only on his vocal power but also on his understanding of dramatic action. It has been said that "he knows how to enrich an effect with a movement of the hand or body or with a facial expression." Olin Downes '43 of the New York *Times* sums it up by calling him "an artist to his fingertips."

The distinguished Russian basso was born in the small Ukrainian town of Zhitomir, near Kiev, February 1, 1891, the son of Isaiah and Machli Kipnis. As a boy he had a high soprano voice which he was frequently called upon to display at school. From the time of his childhood Kipnis had an intense love of music which, however, found few outlets for expression in his native town. For one thing, he rarely had enough money to attend the few concerts that were given at Zhitomir.

When Kipnis was about twelve years of age his imagination was fired by what then seemed to be the splendors of a light opera troupe which visited his town. Disregarding the outraged bourgeois respectability of his parents, young Kipnis ran off with the troupe; he was equipped only with the suit he was wearing and an extra shirt. For a while he earned ten rubles a week as a boy soprano in Bessarabia; then he returned home. Soon after his fourteenth birthday his father suggested that he enter the family cloth business. In protest, Kipnis again kicked up his heels, this time joining a vagabond troupe of players as bill-poster, scene painter, general factotum, and actor of bit parts. The performances of the company were hardly successful: in one town they were not only hissed from the stage but banned from the community.

Definite plans for a singing career had not yet been made by Kipnis, who was, nevertheless, beginning to discover the joys of a musical life. He states that as a child his one ambition was to march at the head of a troupe as a drum major, dressed in a smart uniform. To that end, he actually began the study of conducting, as well as the playing of the double bass and trombone, at the Conservatory at Warsaw. (Warsaw was a Russian city at that time.) He enrolled at that institution because he lacked the high school diploma required for entrance at the Moscow and Petrograd Conservatories.

Two factors were responsible for his decision to become a singer. One was the advice of an impresario who had heard him sing after his voice had shed its boyish treble and had become deep and strong. Another was his attendance at an operatic performance in which he heard the great Battistini sing. The die had been cast: Kipnis would devote himself entirely to singing. Upon his graduation from the Warsaw Conservatory in 1912 as a military conductor, Kipnis prepared to go abroad for further vocal study. According to a press story, although he had not the slightest idea of where to go, go he would. He found himself on a station platform with his suitcase and vocabulary book, but without a destination. When he learned that the next train due was bound for Germany, he quickly bought a ticket and traveled to Berlin.

Soon after his arrival at the latter city, he began to study with Max Lorenz and Lauritz Melchior '41. His vocal studies with Ernst Grenzebach were supplemented with additional music courses at the Klindworth-Scharwenka Conservatory. Then, as now, he loved to sing, and sang wherever he went. "People used to follow me on the street," he recalls. "I sang literally all day long, and often forgot that I was singing in full voice as I hurried to my classes."

In 1915 Kipnis was engaged by the Hamburg Opera Company after a successful audition. He sang there only once, in his debut in *Der Freischütz*. On the following day he was arrested by the police. Unfortunately, he had not been advised that anyone traveling in Germany on a Russian passport was liable to imprisonment as an enemy alien; he was put into a concentration camp for a year and a half. Had it not been for his voice he might have been held much longer. While in prison,

ALEXANDER KIPNIS

Kipnis spent most of his time singing; one day he was summoned to the office of the camp superintendent. Kipnis answered the summons, completely puzzled as to the reason. The superintendent asked him to sing, after which he explained that his brother, who was the director of the opera at Wiesbaden, needed a basso. Would it be agreeable to him, Kipnis was asked, to be released and transferred to the opera?

Thanks to the prison superintendent, Kipnis sang in the Wiesbaden Opera for the next five years. "It was a great satisfaction to me," he states, "to be out of prison, but a greater joy to be at work again. I learned many new roles; I became an experienced opera singer." In 1922 he accepted an offer to sing in Berlin, where he appeared as King Marke in *Tristan und Isolde,* as King Henry in *Lohengrin,* and in other roles as well.

Kipnis toured the United States for the first time in 1923 with a group known simply as the Wagnerian Festival Company. With the company were also Friedrich Schorr '42 and Editha Fleischer. The group performed in New York at the Lexington Theatre. (On February 12, 1923 Kipnis made an appearance at the Metropolitan Opera House in a revival of Wagner's *Die Meistersinger.*) Mary Garden and the late Samuel Insull, who were on a talent hunt for the Chicago Civic Opera Company, heard Kipnis sing there. They immediately secured him for their Company. From then until the depression of 1930 when the Company was suspended, the Russian basso sang with the Chicago Opera on his American visits.

He spent the decade from 1920 to 1930 singing in opera and recitals in the United States, in Europe, and in South America. He was a leading member of the Berlin State Opera until 1925, when he was released at his own request in order to sign a three-year contract with the Vienna State Opera. He arranged his schedule so that he sang seven months of the year in Vienna and the rest of the year elsewhere. He sang for six seasons at the Teatro Colón in Buenos Aires and eight seasons at Covent Garden; he participated in the opera festivals at Paris and Bayreuth. His Wagnerian roles were perfected at Salzburg under the direction of Toscanini '42 and the late Karl Muck '40.

It was mainly as a result of his sensational portrayal of Gurnemanz in *Parsifal* in European opera houses that Kipnis obtained a contract with the Metropolitan Opera Company. In January 1940 he made his Metropolitan debut in the role of Gurnemanz. The New York critics hailed him with extravagant praise. One reviewer stated that the Kipnis debut was "an event of major importance in local annals." Another wrote: "In describing his performance one could exhaust praising words for his musical approach in a voice of velvet artfully emitted and controlled."

It is difficult to find a single label with which to type Kipnis. He is not merely one of the greatest Wagnerian singers of our dav: his is a many-sided musical art which enables him to interpret operatic roles and *Lieder* with equal ease. As a rule, opera singers, especially heroic Wagnerian ones, are unable to cope with the intimate range of the *Lieder* form. Kipnis is the outstanding exception. He almost miraculously adjusts his powerful voice to the delicate tonal shadings demanded by the *Lieder* repertoire. Noel Straus of the New York *Times* has stated that "Mr. Kipnis is an almost unrivaled interpreter of this type of music." Still another reviewer has written: "As an interpreter [of *Lieder*], he is unsurpassed. He made every song a story, and yet there is no superfluous gesture, no theatricalism. Everything he does is the genuine result of a perfectly trained artist and so perfect that it seems surcharged with spontaneity."

Alexander Kipnis is a sturdily built, carefully groomed man whose graying hair lends an added note of distinction to his appearance. He could very easily be mistaken for a successful businessman. He humorously describes himself as "an incorrigible dreamer, walking through life with closed eyes and heading straight into a danger zone." In opera, he prefers to act drunkards, villains, and similar characters because he considers them more interesting; he also feels that they are easier to act since there is a keynote for dramatic action in their personalities. On the other hand, he believes that good men, with the exception of Gurnemanz, are colorless figures to portray. As one would expect, his favorite roles are the tyrant Boris Godunoff, the sensualist Baron Ochs, and, of course, Mephistopheles. The Kipnis Boris Godunoff has been hailed as a dramatic as well as a musical achievement. Singing in Russian (while the other players sing their roles in Italian), he brings, it is said, a deep and stirring national feeling to the role. Prompted by his love for Russia, Kipnis has devoted much time to popularizing Russian music for American audiences. In the fall of 1943 he took part in an all-Soviet concert, sponsored by the American-Russian Institute, and sang three songs by Dmitri Shostakovich '41, all of which were settings of translations of English verse—a Shakespeare sonnet, Robert Burns' *Comin' Thro' the Rye,* and the Mother Goose rhyme, *The King of France.*

Kipnis has to his credit the discovery of Kirsten Flagstad, a claim which the soprano admits. He had been called from Switzerland one day in 1932 to sing King Marke in a Norwegian performance of *Tristan und Isolde* in Oslo. He was so thrilled by her singing of Isolde that he forgot to return to his dressing room to put on his beard for the next act. On his return home he extolled her everywhere and was gratified to learn of her engagement at Bayreuth.

Several years ago, Kipnis became a naturalized citizen of the United States. He was married to Mildred Levy, daughter of a Chicago music professor, on April 7, 1925. The couple have a son, Igor. They live in a simple white house in Connecticut. There, surrounded by trees and shrubs, Kipnis works and studies. He is highly interested in color photography; while on tours he shoots hundreds of feet of kodachrome film which he himself develops and cuts when at home. His tastes are unsophisticated. As he has said, he "can be content with some nice walks and some good talking movies. Whenever we can get a good flat we prefer it to hotel apartments, so we can cook our own meals and I can tinker with the electric light fuses and other odd jobs. Also, on occasion, I like to cook—and if you haven't tasted Welsh rarebit or chicken livers as prepared by me, you haven't tasted them at all."

KLEIST, PAUL LUDWIG (EWALD) VON (klīst) Aug. 8, 1881- German Army officer

Address: b. c/o Ministry of War, 6 Vossstrasse, Berlin, Germany

One of the few "old-guard" generals still to find favor in Hitler's '42 eyes, for a while Colonel General Paul Ludwig Ewald von Kleist was mentioned as a very likely candidate for the post of supreme commander of the Army on the Eastern Front in case the Führer himself were to abandon this position. Von Kleist, an expert in mechanized warfare, has since 1941 had the command of the most southern flank of the German armed forces, and he led the 1942 summer drive toward the oil fields in the Caucasus. Since that time, however, he has enjoyed no more successes against the Russians than the rest of his countrymen.

Paul Ludwig Ewald von Kleist was born on August 8, 1881 in Braunfels, Germany, son of a privy councillor and a member of one of the oldest Prussian landowning families. He enjoyed the education usual for a son of a Junker family, attended the cadet school at Lichterfelde, and entered the Army in 1900 as standard bearer of the 3rd Artillery Regiment. Subsequently, he went to the military academy in the Dorotheenstrasse in Berlin, where he is said to have been one of the Kaiser's pets. In 1914, at the beginning of the last War, he was made captain of the "Death's Head" Hussars, one of the crack imperial regiments, in which capacity he distinguished himself on the Western Front

He emerged from the War in 1918 a General Staff officer of the 7th Corps. Later, in 1924, he went to study at the cavalry school at Hanover, and in 1930 he rose to chief of staff of the 3rd Military District (that of Berlin) The following year he became commander of the 9th Infantry Regiment at Potsdam. He was promoted again in 1932 to major general and commander of the 2nd Cavalry Division, and the year after he became commander of the 8th Division, that of Breslau. From 1935 on he served as commanding officer of the 8th Army Corps.

In 1938, during Hitler's purge of ranking generals, von Kleist was dismissed together with six other Army generals and six generals of the Air Force. This dismissal was the result of a clash between party leaders and high Army officers, a clash precipitated by General von Fritsch, who took Field Marshal von Blomberg's unfortunate marriage as an opportunity to force a showdown. The Army reportedly objected to various points prominent on the Nazi Party's program. It was against the support of the rebel forces in Spain, it had no sympathy for the race and anti-church propaganda to which the armed forces were being subjected, and it wanted to have the Luftwaffe under army control, not as a separate unit under Göring's '41 command. In his book, The *Self-Betrayed* (1942), Curt Riess contends that in this clash of ideologies von Kleist was not so strongly opposed to the Nazis as some of his colleagues, and that his dismissal was caused by the fact that he quarreled with the Führer because he did not want von Fritsch to be relieved of his post.

Whatever Hitler's feelings toward von Kleist may have been, the general was reinstated at the outbreak of the War. Under von Rundstedt '41 he commanded the southernmost army of the forces that effected the invasion and occupation of Holland, Belgium, and the northern part of France. Equipped with an entirely motorized army, consisting of a great number of tanks followed by motorized infantry, von Kleist managed to break through the Allied defenses by way of the gap between Montmédy, northern end of the French Maginot Line, and Namur, southern end of the Belgian Dyle Line.

COL. GEN. PAUL LUDWIG VON KLEIST

This gap was approximately fifty miles long and extended through the Ardennes Mountains. According to the French, the difficulties of terrain were almost insurmountable, so that they had not provided adequate defenses for this region. Undaunted by those difficulties, however, and considerably aided by the lack of Allied air activity overhead, von Kleist succeeded in his mission. On May 13, 1940 Germans appeared at several points north and south of Sedan, after they had crossed the Meuse; by May 15 the break-through was complete. Subsequently, the tank corps, led by a relatively unknown general named Erwin Rommel '42, turned north, in back of the Dyle Line. There they took Abbeville on May 21.

In the occupation of Yugoslavia, von Kleist again demonstrated his great ability in the field of mechanized warfare. Here the same pattern of attack was used as in Poland and France. After the Luftwaffe had taken its deathly toll the tanks went into action, seeking to break through the enemy front, followed by motorcycle troops and mechanized infantry, who spread fan-wise across the land. Again, as in France, von Kleist was undaunted by difficulties of terrain; his troops plowed swiftly ahead and achieved the occupation of Belgrade on the morning of April 13, 1941 by an attack from the south. A small Elite Guard group had already forced its way into the city from the north—over the Danube—the afternoon of the day before, and had hoisted the German flag on the German legation.

In the summer following the occupation of Yugoslavia, von Kleist was assigned to head the German Ukraine divisions under the leadership of von Rundstedt. Their troops were of great assistance at the fall of Kiev. "Under the most difficult circumstances" they crossed the Dnieper River on a seventy-five-mile front and then fought their way north. They met the forces of Fedor von Bock '42, who had managed to break through at Gomel, on September 13, 1941, at a point 125 miles east of Kiev. As a result of this action, several Russian armies found themselves encircled, so that Marshal Semyon M. Budenny '41, who commanded the left wing of the Red Army, found himself compelled to give up Kiev on September 20.

After the fall of Kiev the motorized German forces under von Rundstedt and von Kleist advanced. They forced the bend of the Dnieper, by-passed Odessa, and entered the Crimea, where they besieged Sevastopol. Then they drove on in the direction of Rostov. Pursuing the Russians on the Kerch Peninsula, the Germans reported the advent of another "Dunkerque" for their enemies. Meanwhile von Kleist's forces, attempting to spring upon staunchly defended Rostov from the flank, crossed the Don and poured onto the steppes toward the Caucasus. Supported by masses of tanks and artillery, the infantry pressed on and broke through the Russian defense lines. German losses were heavy, but the defenders of Rostov could not hold out against von Kleist's overwhelming superiority in men and equipment. The German communiqué of November 22 read: "Speedy troops of the Army . . . took the city of Rostov on the lower reaches of the Don. Thus this commercial and transportation center fell into our hands, which, for the further conduct of the War, is of essential importance."

A week later, however, the German communiqué was gloomier: "Occupation troops of Rostov, in compliance with orders, are evacuating the central district of the city." In those seven days the situation had changed considerably. Marshal Semyon Timoshenko '41, who had taken over the command in the south, rallied his forces with disastrous results for the German troops. Coordinating the action of guerrillas, cavalry troops, and the regular army, Timoshenko managed to cut off the German panzer divisions in Rostov. Von Kleist fled with his troops along the Sea of Azov, hotly pursued by his enemies. Tanks, lorries, and carts littered the road. With a great loss of men and equipment, von Kleist sped beyond Taganrog, forty miles west of Rostov, toward Mariupol. Other German troops were withdrawn from the Kerch Peninsula, in order to strengthen his greatly diminished forces. The defeat was colossal.

During the spring following his defeat von Kleist managed to hang on west of Taganrog. There he strengthened his position, until the summer of 1942 saw him ready for another attempt. His units of tanks and motorized infantry followed the customary pattern of attack and began to advance toward the Caucasus. Rostov was taken for the second time, whereupon von Kleist headed south for the rich and strategically important oil field region, while more toward the north other German armies, under the command of von Bock, crossed the Don and began the siege of Stalingrad. Von Kleist's troops captured Maikop and seriously menaced the Grozny oil fields.

During the hard fighting that resulted in the Caucasus the Russians reported that von Kleist had been killed in the Mozdok area. The Moscow newspaper *Izvestia* wrote on September 20, 1942: "The death sentence of German von Kleist has been put into effect.

A Soviet bullet shot him down, as has happened to millions of other Germans. All Fascist invaders, from private to field marshal, will suffer the same fate." This report was, however, vigorously denied by the Germans, and later information revealed that the "ace panzer tactician" was still alive.

In the winter of 1942 to 1943, von Kleist had to contend with bitter resistance. The valiant defense of Stalingrad proved a great obstacle for a successful drive into the oil fields. Then the Russians took the offensive again, and von Kleist had to flee once more toward the west. Around Rostov the fight raged violently; the unfortunate city changed hands several times and by the summer of 1943 was again in the Russians' possession. The Russian advance continued relentlessly.

Von Kleist, a stocky, gray-haired man, has the stiff carriage and mask-like facial expression customarily expected from a true Prussian general. Though opposed to some of the Nazi Party practices—he is said to have led the generals in a protest against the S. S. "mercy killings" of severely wounded soldiers —he still appears to be in Hitler's good graces. A recent German photograph, according to Nazi sources taken on March 17, 1943, shows von Kleist and the Führer "somewhere at the Front" in conference together.

KNATCHBULL-HUGESSEN, SIR HUGHE (MONTGOMERY) (noch'bu̇l-hū'gə-sən) Mar. 26, 1886- British diplomat

Address: b. British Embassy, Angora, Turkey

Britain's veteran Envoy who has played a quiet but skilled game of diplomatic chess leading to the success of the Anglo-Turkish conferences in February 1943 is Sir Hughe Knatchbull-Hugessen, the Ambassador to Turkey. The popular career diplomat is said to owe much of his success to his superb command of languages. Besides German and French, he speaks Persian, Arabian, and Russian fluently, and has an excellent knowledge of Chinese. Thirty-two years in the foreign service have made him an outstanding expert on empire strategy and on the new economic geography which the post-War period will bring. To him goes some of the credit for having drawn Turkey closer to the Allied orbit since his appointment in 1939 to his post as Envoy to that country.

SIR HUGHE KNATCHBULL-HUGESSEN

Sir Hughe Montgomery Knatchbull-Hugessen, born on March 26, 1886, is the son of the late Rev. R. B. and Rachel Mary (Montgomery) Knatchbull-Hugessen, and grandson of the late Sir Alexander Montgomery. He was educated at Eton and Oxford and soon after his graduation he entered the Foreign Office (1908). His first posts were in Belgium, France, Holland, and the Baltic States. His acquisition of knowledge on the involved Near East situation began in 1934 when he served as Minister to Iran.

In 1936 Sir Hughe became Envoy to China. For diplomatic purposes he had been "extremely friendly" with the Japanese, but in February of that year his sixteen-year-old daughter, Althea, was shot in the head by a random bullet, though not seriously wounded. When Sir Hughe was traveling by car from Nanking to Shanghai a few months later, the Embassy car was attacked by bombs and machine-gun bullets from Japanese planes. Although the Japanese said it was an accident and were "so sorry" it happened, Knatchbull-Hugessen was seriously wounded when struck by a bullet that caused temporary spinal paralysis. Sent home to recuperate, the British Envoy was voted £5,000 by the House of Commons—an almost unheard of gesture—to compensate him.

Because he had earned his reputation as a trouble shooter, on his recovery the tall, immaculately dressed Sir Hughe was assigned to what was one of Britain's most important diplomatic posts on February 25, 1939—that of the Turkish Embassy. Presenting his creden-

KNATCHBULL-HUGESSEN, SIR HUGHE—*Continued*

tials on March 1, Sir Hughe began his long duel there with the wily von Papen '41, German Minister to Ankara. The way had been well prepared for him by his predecessor, Sir Percy Loraine, who had become a great friend of the late Ataturk and had cemented the friendship between England and Turkey.

For a long time Sir Hughe and von Papen never met. British diplomats had been given very clear instructions on behavior toward an enemy Envoy on meeting: the proper attitude was to make a "correct, distant bow." Eventually, at a big ball attended by Sir Hughe and by von Papen, the crowd suddenly broke and the two men found themselves face to face. Both men simultaneously gave a solemn, correct, but distant bow. And both, it was reported, had the greatest difficulty in keeping their faces straight. Sir Hughe, at least, always disdained anything formal, particularly diplomatic pedantries. On one occasion, when he was holding a gathering with Balkan Ministers, he and his staff were officially reminded that the term "conference of ambassadors" was un-English; that "ambassadors' conference" should be used in reports. Sir Hughe replied that he would carry out this procedure, taking pains in his reply to refer to Britain's political leaders in "the Commons' House and the Lords' House."

On May 12, 1939 came the British-Turkish declaration of mutual assistance "in the event of an act of aggression leading to war in the Mediterranean," and on October 19, after the outbreak of the Second World War, came the definitive Anglo-French-Turkish mutual assistance treaty. During the first months of the War Turkish statesmen were kept busy repeating that their country (which, by the terms of the Balkan Entente, had also promised to go to the aid of Romania, Yugoslavia, and Greece if any one of those countries should be attacked) would abide by her obligations. But soon their tune changed, as the Nazis actually began to move into the Balkans. Yugoslavia fell, and Turkey remained neutral; Greece fell, and Turkey remained neutral; the Turks and the Nazis signed a non-aggression pact on the eve of Germany's attack on the Soviet Union. Other signs, too, seemed to point to a victory for von Papen; Turkey was apparently moving closer and closer to the Axis.

But the British Ambassador had not given up hope. Russian-Turkish relations were a delicate problem, and in August 1941 he assured the Turkish Foreign Minister, Sükrü Saracoglu '42, that Britain had not and would not enter into any undertaking with Moscow inimical to Turkey. At the same time German propaganda was busy in Turkey saying that Britain and America would stand aside and let Germany crush the Soviets, then arrange the peace. Sir Hughe took pains to outline to President Ismet Inönü '41 the accomplishments of the British war effort; von Papen called upon Inönü to present to him a small copy of a Turkish museum piece made by a German, and incidentally to impress upon him the weight of German influence.

Knatchbull-Hugessen scored two triumphs over von Papen in September and October 1941. When the Axis attempted to get Italian war ships into the Black Sea via the Turkish controlled Dardanelles, the Turks refused flatly to permit the passage of any war ships unless owned by "real neutrals." Shortly after this Saracoglu told von Papen that Turkey would deliver no chromium to Germany, which meant that the world's second largest source of this metal would be unavailable to the Reich. Further, Turkey determined to sell Germany no wheat, in view of the poor 1941 crop. The Turkish Minister received Knatchbull-Hugessen, to whom he gave oral assurances that Turkey would not breach the Anglo-Turkish-French chromium agreement.

Sir Hughe won probably the most important diplomatic victory of his career when he took a leading part in the Allied conferences in Moscow and gave, in January 1942, an extensive report to Minister Saracoglu on the results of his thirty-three-day trip to the Russian capital. He had previously confided his destination to Saracoglu, pledging that "nothing contrary to Turkish interests" would be discussed at Moscow. "He kept the secret," Sir Hughe said. "He knows how to keep a secret." He carried personal greetings from Saracoglu to Premier Stalin '42, the Ambassador disclosed. Making good use of his ability to converse in Russian, Sir Hughe discussed Turkish foreign policy in several talks with Soviet Commissar Molotov '40, and reportedly "stressed as the keynote of that policy Turkey's armed neutrality and resistance of any attempt to breach her allied engagements." Publicly he denied Axis allegations that Russia was to receive a free hand in post-War Europe, and charges that Britain and Russia planned to partition Iran. One of Sir Hughe's interests is music—he likes nothing better than to listen to a symphony concert—and it was natural for him to report of Soviet opinion: "The Russians, like most of the world, consider that the German Army is now under the direction of an orchestra leader rather than responsible generals and that he is likely to select scherzo, largo, andante, or allegro con molto—nobody knows which."

Besides his knowledge of Russian, Sir Hughe's genuine personal liking for Russia itself played a large part in welding cordial Soviet-Turkish relations. Once back in Ankara, he spent considerable time with the Soviet Ambassador, Sergi Vinogradov, playing host at the British Embassy to him and his friends, serving Russian caviar fresh from the Caspian Sea. At a dinner he praised the Red Army and the morale of the Soviet leaders and the Russian population. The story is told, too, that once when he saw the Soviet Envoy just about to get into his car, Sir Hughe slowed down his own car, leaned out, and offered the British ally's representative a ride. The Soviet Envoy dismissed his own red-flagged car and drove off with Sir Hughe—"doubtless giving him a chance to air his Russian."

The British Ambassador's report on Russia, it was understood, "created a profound impression in Turkish circles." The report came close on the heels of President Roosevelt's '42 speech (after his Washington conference with Churchill '42) forecasting tremendous production in the United States. This, plus Anthony

Eden's '40 speech stressing British production plans, led to an increasingly bitter German press campaign charging Britain with having agreed to hand over the Dardanelles to Russia—a charge promptly denied by Sir Hughe. There was increasing apprehension in Turkey, moreover, over reports from Bulgaria of new German Army concentrations in southern Romania and steadily increasing German air strength in Greece, where "invasion practice" was said to be going on.

During the difficult months in Turkey that followed, the quiet, efficient British Ambassador parried German rumors and Nazi intrigue with skill and another valuable asset—humor. Known as "Snatch" to his intimates, Sir Hughe has made himself popular in the diplomatic corps for his verses, which are said to be passed from mouth to mouth and from Embassy to Embassy, among an audience which takes "a keen delight at the audacity and racy topicality of these little offerings," which will probably never be presented to the world in book form.

Having played his chess game well, Knatchbull-Hugessen had the scene well prepared for the meeting of Prime Minister Churchill and President Ismet Inönü late in January 1943, following the conference between Roosevelt and Churchill in North Africa. The meeting was secretly prepared for with typical Knatchbull-Hugessen staging. It was a "shooting party" that foregathered in special trains in suburban Ankara: Sir Hughe actually took along shotguns and hipboots to further the deception. It was at Adana that the important Turkish officials greeted the Prime Minister and his party. Following the conference Sir Hughe received Laurence A. Steinhardt '41, the United States Ambassador to Turkey, and afterward conferred for some time with the Soviet Ambassador at the British Embassy. He paid warm tribute to Steinhardt, who also had worked tirelessly for the improvement of Turkish-Allied relations, and emphasized that Russia had been kept completely informed of the British-Turkish conference. Within a week the Soviet Ambassador gave a large formal dinner in honor of Sükrü Saracoglu, and very much present were Ambassadors Steinhardt and Sir Hughe Knatchbull-Hugessen. Not without personal triumph could Sir Hughe receive the report that Axis reaction to the Allied meeting and Ambassadorial dinner "appeared to be one of stupefaction followed by awful dismay."

The subject of Turkey coming into the War was not broached in any direct way until after the Moscow Conference in November 1942, when the Russians were at the height of their great offensive against Germany and the German position in the Balkans was steadily deteriorating. In that month the Turkish and British Foreign Secretaries conferred in Cairo, but no agreement was entered into. In December 1943, however, following the Teheran conference and sessions in Cairo in which Roosevelt, Churchill, and Ismet Inönü participated, it was announced that the United States, Great Britain, and Turkey were in "the closest unity" and that the friendship of the U.S.S.R. and Turkey had been "reaffirmed." Once more Sir Hughe, who was also present at the Cairo Conference, had good reason to congratulate himself.

KNIGHT, RUTH ADAMS Oct. 5, 1898- Radio writer; author

Address: h. 19 W. 55th St, New York City; Overwood, Redding Ridge, Conn.

Most professors who teach courses in how to write for radio and periodicals are not, alas, able to write successfully for those mediums. But Ruth Adams Knight not only writes books telling women how to become successful in radio and publishing positions, but she is herself an outstanding radio script writer and the author of several non-fiction books and a novel. Her experience as newspaperwoman, fiction writer, and radio script writer have enabled her to tell others how to meet the problems of the writing world.

Ruth Adams Knight was born in Defiance, Ohio on October 5, 1898, a few blocks from the historic spot which "Mad Anthony Wayne defied the English, the Indians, and all the devils in Hell" to take and which she says she sometimes suspects may have had something to do with her own hectic, rebellious career. She is a descendant of Samuel Adams, Phineas Upham, and Samuel Shead, and finds herself amused by her close resemblance to portraits of her stiff-necked ancestors. Her parents are John C. and Lucy Celeste Adams (Shead) Yingling. Her mother's family migrated to Ohio from New England, where they had been among the earliest settlers. Her paternal grandfather, second generation Holland Dutch, was a circuit rider, famous in the history of the Methodist Church in Pennsylvania.

Miss Knight comes by her interest in writing naturally, for her mother's family had always been "literary." At the age of six Ruth began writing for children's magazines; she had exhausted the juvenile shelves at the Defiance Public Library before she was ten; and she later won a series of school competitions. Her adoring family "never doubted that she was going to be the great American novelist."

The budding writer by 1915 was ready to enroll in Toledo University. She had begun to write feature stories during her first year in college. When the First World War swept editorial offices clean of the regular staff, she was one of a group of bright young writers recruited from the classrooms to work for the Toledo *Times* in 1918. That was during her junior year, and it brought her formal education to a close. "The

RUTH ADAMS KNIGHT

emergency," says Miss Knight, "gave me a wide and unique journalistic experience, never to have been gained under normal circumstances." Still in her teens, she covered a "commercial beat of the leading news sources of the city, gathering 'Page One' stories." In her spare time she wrote woman's page copy, music criticism, and obituaries, and even covered sporting events. (She was one of the few women reporters at the Dempsey-Willard fight.) With the War's end, she took over the position of dramatic and motion-picture editor.

Miss Knight's family, who had encouraged her in the literary life, regarded journalism with much less favor. A cloistered literary career was one thing, but a woman who took a "job," and a job which was closely associated with that "den of iniquity, the theatre," never ceased to embarrass them.

The young reporter did not let her family's sentiments stand in her way, but went ahead and for eight years was successful as dramatic editor. It was the time when "the road" still flourished, and vaudeville was in its heyday. She wrote a daily column and the lead story for the *Times'* eight-page Sunday drama section. For several years after 1922 she also acted as literary editor on the same paper, writing a weekly book section. She somehow managed to find time to write an extensive series of interviews and feature stories as well, frequently going to New York for this purpose. Her keen interest in people—the sign of a good reporter—resulted in the formation of many warm friendships, and her list of acquaintances soon circled the globe. Since she admits sadly that she never writes letters if she can avoid it she has developed a unique system of keeping in touch with her many friends by means of comedy annual reports, sent as Christmas cards, a practice which she still continues.

In addition to her newspaper work Miss Knight became active in social service promotional work and directed public relations for Community Chest drives in various parts of Ohio. She was a member of the board of the Ohio Newspaper Women's Association and won a number of prizes in state-wide journalistic contests.

By 1930 she had decided to leave Ohio and to try her luck in New York. For a time she continued as literary editor for the Toledo *Times,* and also wrote book reviews for the New York *Sun.* But she was gradually sidetracked into radio, for which she began writing comedy programs as well as dramatic sketches; and soon she became managing editor of the Beacon Syndicate, supervising their daily release of radio material. In 1937 she began writing network programs for Du Pont's *Cavalcade of America.* Since then she has written daily serial programs as well as half-hour and hour dramatic shows, and has been responsible for some of the most distinguished programs on the air. Outstanding was a documentary script for Columbia Broadcasting System commemorating America's entry into the First World War, a dramatization emphasizing the futility of war and the importance of avoiding another world conflict. In Max Wylie's '40 *Radio Writing* (1939) Miss Knight's *Cavalcade of America* script, "The Seeing Eye," is reprinted as an outstanding example of its kind of writing. Wylie says that the problem of writing about the Seeing Eye organization (which is philanthropy without charity or pity for the blind) was a very difficult one and that Miss Knight met it most successfully. In pointing out how carefully written the *Cavalcade* scripts must be Wylie said: "This series each week must be a presentation in which a committee of historians can find no flaw." In addition to receiving praise from both the public and radio professionals the production was called by officials of the Seeing Eye School "one of the most effective, most accurate, and most complete presentations of its work ever made to the public." In the collection *Cavalcade of America II* five of Miss Knight's scripts were chosen for inclusion.

In addition to working on *Cavalcade of America* (1937-39) Miss Knight began writing scripts for *Show Boat* (1938); *Aunt Jenny's Real Life Stories* (1938); *Death Valley Days* (1938-41); *Dr. Christian* (1938-42); and *Theatre of Today* (1941-43). She is still writing extensively for radio, although she has found time to write many short stories and five books and to act as co-author of another—*Lady Editor; Careers for Women in Publishing* (1941), with Muriel Fuller and Marjorie Shuler. Miss Knight is the author of *A Friend in the Dark; the Story of a Seeing Eye Dog* (1937); *Opera Cavalcade; the Story of the Metropolitan* (1938); and *Stand by for the Ladies; the Distaff Side of Radio* (1939). Her *Valiant Comrades; a Story of Our Dogs of War* was published by Doubleday Doran in October 1943.

Miss Knight's books have been well received. May Lamberton Becker '41 praised *A Friend in the Dark,* saying, "I trust that a great many children read the book." Walter Damrosch said of *Opera Cavalcade*: "It is a book which should have been written long before this. For those who like myself remember some of the performances since the opening of the Metropolitan Opera House fifty-five years ago it will serve as a reminder of wonderful experiences." "Soft on the sentimental side but with a hard under-current of practicability, the novel is readable and mildly historic," said Beatrice Sherman in the New York *Times* of *Women Must Weep,* a novel whose thesis is the conflict between a woman's choice of marriage or a career. Of it the Ohio *State Journal* said: "Miss Knight has built as keen an analysis of her own sex as ever we read. She tears the female brand of the emotion called love entirely apart and relentlessly demonstrates how it affects women who labor under its various phases. She's not too sympathetic, but we gathered that what she is driving at is that man creates woman's greatest happiness and her greatest misery. Women readers will applaud. It's a grand novel." "A readable and stimulating book and one that is itself a fine example of editorial skill," said another critic in describing *Lady Editor* in the *Journal of Home Economics,* while Harry Hansen '42 commented: "Well organized and exceedingly interesting to read, this book differs from conventional works of advice; it does not attempt to mislead the novice into thinking the paths are smooth, and it offers as examples the careers of well known women who are representative of those who do the world's work and not of those who pose before cameras."

Since the founding of the Writers War Board Miss Knight has been busy writing scripts released through them to various organizations. "I've been active," she says, "in the Authors League of America for a long time, was one of the founders of the Radio Writers Guild, serving constantly on the council until I left New York, and, with Henry Fiske Carlton, was a Guild representative effecting a consolidation between Hollywood and New York radio writers in the Guild in 1939. Basically I'm a non-joiner. The League and the Woman Pays Club are my only exceptions."

Miss Knight's marriage to Raymond Knight, well known radio writer and comedian, ended in divorce. She has two children, John Adams, a graduate of Pomona College, later associated with NBC in Hollywood, who is married and now in the Army, and Elizabeth Lou, a graduate of Finch Junior College in New York and Rollins College in Florida. Elizabeth Lou made her stage debut at the age of nine at the Metropolitan Opera in New York playing the boy, Gogo, in *Peter Ibbetson* with Lucretia Bori and Edward Johnson '43. It was a night to remember always as inspiration for a career—curtain calls with Miss Bori, a star dressing room filled with bushels of flowers, and the maestro kissing her hands! Like a fairy tale coming true, she describes it now. Elizabeth Lou is in 1943 already launched on a career in the theatre.

Looking at the slight, blonde, youthful, vivacious, and altogether feminine radio writer no one could possibly imagine her as the mother of two grown-up children. She admits that she finds her children the most interesting persons she knows. As a family they have always found life a series of exciting adventures, and while they sometimes say they would like a peaceful life for a change, they know in their hearts it would probably bore them.

In private life Miss Knight is now the wife of Dickson Jay Hartwell, writer and public relations counsel. She considers him the world's best editor. Before he joined the Army, Hartwell, who is a captain in the Air Corps, and his wife frequently worked together discussing and editing one another's scripts. In the summer of 1943 Miss Knight returned to New York after eight months of pioneer life with her husband on an Army air field in the wilds of Texas. In peace time their home is a 175-year-old farmhouse in Redding Ridge, Connecticut. Miss Knight says it is "the most heavenly place on earth, in spite of the fact that the windows and doors are all on the bias." It has a split rail fence and a turnstile gate, and was for years the home of Jeannette Gilder, editor of the famous literary magazine of the 1890's—*The Critic.* Miss Knight retains many of Miss Gilder's literary and theatrical photographs and first editions among her own heirlooms. In normal times she gets her exercise digging in her old-fashioned flower beds and pulling weeds out of the badminton court. She also enjoys making home-made bread and insists that hers is better than her grandmother's. In the summertime she does her writing in a log cabin studio on top of a hill, and in winter she lives in a New York apartment as close to theatres and radio studios as possible. In pre-War days she made frequent visits to Hollywood and spent a great deal of time touring the West in an open car in search of material. All the members of her family love traveling by car as much as she does, and before rationing a twelve-thousand-mile jaunt was their idea of a brief vacation!

It is significant that Miss Knight grew up at a time when the conflict between domestic and professional life was particularly keen. She solved that problem by choosing both of them. Though in her novel *Women Must Weep* she reveals the heartaches that may come with a choice of either, she maintains that her own life is a happy illustration of the possibilities of eating your cake and having it, too.

KNOPF, ALFRED A. (knupf) Sept. 12, 1892- Publisher

Address: b. 501 Madison Ave, New York City; h. Purchase, N. Y.

No literate person in America is unfamiliar with the Borzoi imprint. It seems hard to believe that less than thirty years ago the publishing house of Alfred A. Knopf, which now seems a traditional part of the American scene, was having its humble beginnings. The substantial success of the firm has been the result of the personal direction and ideas of the publisher, who permits no compromise with quality either in the content or the format of his books. "We haven't much money to spend here," he said early in his career, "but we'll take any amount of pains with a book."

Pach Bros.

ALFRED A. KNOPF

Alfred A. Knopf was born in New York City on September 12, 1892, the son of Jewish parents, Samuel and Ida (Jaffee) Knopf. After being graduated from the Mackenzie School in 1908 he attended Columbia, receiving his B. A. in 1912. He was made advertising manager of the *Columbia Monthly* during his senior year. His energetic and striking personality had already made him conspicuous, for Carl Van Doren (who became an instructor shortly before the boy left the University) says of him: "As a figure among the undergraduates he could not be overlooked; he was color on the campus."

An early interest in the writing men of Europe had probably been aroused at Columbia, for "Columbia was then the most 'advanced' of American colleges in its appreciation of continental letters. Its literary departments had been influenced by such professors as Peck, Boyesen, and Spingarn, all of whom had introduced their students to the work of Frenchmen, Russians, and Scandinavians." A European trip (1912) taken just after his graduation intensified this interest, and after meeting Granville Barker, Alfred Ollivant, and John Galsworthy, Knopf returned to America determined to obtain a position in the publishing business. In October 1912 he began working for Doubleday, Page & Company.

H. L. Mencken says, "It must have been in 1913 or thereabout that I first met him—a very tall, very slim young fellow, but lately out of college, with a faint and somewhat puzzling air of the exotic about him. I recall especially his mustache: so immensely black that it seemed beyond the poor talents of nature, and yet so slender, so struggling that it was palpably real. How he got into my office in Baltimore I don't remember: I was fat in those days, and lazy and very busy, and I did not see any visitors that I could avoid. No doubt he fetched me by raising the name of Joseph Conrad. He was, it appeared, in communication with Conrad; he had a Conrad letter in his pocket. Astounding and interesting! He unfolded a scheme to gather all the Conrad books together—they were printed, as I recall it, by eleven different publishers—and to re-issue them decently in one series. We were, of course, on good terms at once."

At this time (1912-14) Knopf was still working for Doubleday, Page & Company, and it was that concern which was backing him in the Conrad enterprise. (The manuscript of Conrad's *Chance* was in their hands.) Knopf says that "the trade in manuscripts was a buyer's market" in those days. "The old line, well-established firms were all after the same kinds of books; the tastes, the social and economic views of the men who directed the old firms were very similar. They made a united front. The writer whose work didn't please the long-established firms could go to Ben Huebsch or Mitchell Kennerley. If they hadn't room for him he could not obtain publication." It was significant of his publishing ideas that his next job was with Mitchell Kennerley, who was making some of the boldest publishing experiments of that time. Knopf "had a great many ideas, and was surely not backward about exposing them. One and all, they related to the single subject: the making of books. He believed that taste was improving in America: that good books would find a larger public year after year. He believed that Americans were beginning to notice books as works of art: the way they were printed, the paper in them, the binding, even the dust covers."

By the summer of 1915 all these ideas had become too pressing to resist, and the firm of Alfred A. Knopf was launched at a time when the World War was less than a year old and established business houses were worried about the storm clouds on the horizon; at a time when people were supposedly reading newspapers instead of books. The young publisher had very little money—his first "office" was a desk in his father's quarters on West Forty-Second Street. Very soon, however, he was able to afford his own suite—a single room with a tiny antechamber partitioned off which he rented for $45 a month. His first book was Barrett Clark's translation of four plays from the French of Émile Augier, with a trade edition of 1,500 copies. On his first list also were a volume of short stories by Andreyev; Gogol's novel of the Cossacks, *Taras Bulba*; Kropotkin's *Ideals and Realities in Russian Literature*; a volume of short stories by de Maupassant, with an introduction by Conrad; and a novel called *Homo Sapiens* by the Pole, Przybyszewski.

"The unusual thing about this list, obviously, is that it represented his determined effort to bring to the American public the works of the great Europeans, and more particularly the writers in languages which had always been considered rather esoteric here. In the nineteenth century American taste had become liberal enough to appreciate the German and the French. At the beginning of the twentieth century, under the influence of such critics as Huneker and Mencken, American taste was further broadened. In fact the whole character of American society was changing in the direction of cosmopolitanism. It may justly be said that Mr. Knopf represented that spirit and that movement in the world of publishing."

Knopf himself dismisses the innovations of his first year of publishing by saying: "When we started to publish in 1915, there was . . . Dreiser, who was having Comstock trouble. Cabell was writing but he hadn't come to *Jurgen.* The contemporary American literary scene was pretty poor pickings at that time. It was easier for a young publisher to get books from abroad. Not many translations were being published, and since the Allies were hard put to it to explain their Russian partner, except in terms of the Russian novel, the English publishers were doing their bit by publishing translations of Russian novels and shorter stories. Most of my earlier books were such translations from the Russian imported in sheets from London. It seemed easy in those days, and indeed I am sure it was easy. Six months' time to pay the English publisher—why, you had sold your edition and collected from the American bookseller before the bill came due."

Alfred Knopf was fortunate—or showed his publishing acumen—by deciding to publish W. H. Hudson's *Green Mansions* in 1916. The novel had been imported in sheets by Putnam as early as 1904, but had never been manufactured in the United States, and was therefore in the "Public Domain." Knopf asked and received permission of Major George Haven Putnam to publish the book, and did so with an introduction by John Galsworthy. The result was a vogue for Hudson which did much toward establishing the Borzoi imprint. During his first five years Knopf also published such volumes as Thomas Mann's '42 *Royal Highness,* Joseph Hergesheimer's *The Three Black Pennys,* H. L. Mencken's *A Book of Prefaces,* Max Beerbohm's *Seven Men,* Willa Cather's *Youth and the Bright Medusa,* Clarence Day's *This Simian World,* and T. S. Eliot's *Poems.* By 1920 the Borzoi imprint had become an important factor in the American publishing world. Knopf in 1921 paid his first visit to Germany as a publisher. Upon his return, says a commentator, he "carried around specimens of somewhat startling [book] novelties . . . chiefly out of Leipzig and Munich. He outlined projects for duplicating them, improving on them, going far ahead of them."

In the decade that followed, the firm of Alfred A. Knopf, Inc., more than lived up to the promise of its infancy. Such books as Gibran's *The Prophet,* Willa Cather's *A Lost Lady,* Deeping's *Sorrell and Son,* Floyd Dell's *Moon Calf,* Hamsun's *Growth of the Soil,* Katherine Mansfield's short stories, Thomas Mann's *The Magic Mountain,* and Sigrid Undset's '40 *Kristin Lavransdatter* have made American literary history and added to the luster of the Knopf name. Later years have seen the publication of Elinor Wylie's *Collected Poems,* I. J. Singer's *The Brothers Ashkenazi,* Oswald Spengler's *Decline of the West,* Thomas Mann's "Joseph" trilogy, Mikhail Sholokhov's '42 *The Silent Don.*

Since the War a number of important commentaries by Knopf authors have appeared, including the three written by the Berlin correspondents of the Columbia Broadcasting System—William L. Shirer's '41 *Berlin Diary,* Harry W. Flannery's '43 *Assignment to Berlin,* and Howard K. Smith's '43 *Last Train from Berlin.* Knopf has also published John Richard Hersey's *Into the Valley,* T. J. Hamilton's *Appeasement's Child,* and Boris Voyetkhov's *The Last Days of Sevastopol.* Voyetkhov's book was discovered by Ralph Parker, who translated it first into English and then into cablese, finally sending the whole manuscript by newspaper cable service. In New York the book was retranslated (from cablese back into English) by the cable editors of the New York *Times.*

That Knopf books often represent high sales is demonstrated by the frequency with which they appear on best-seller lists. More than good sales, however, the Borzoi imprint represents a high standard of literary achievement. Five Nobel Prize-winners have been published under it—Hamsun, Reymont, Undset, Mann, and Bunin. Knopf is obviously still willing to sponsor foreign writers, and he is the publisher of Gide, Ouspensky, Sholokhov, and Romains. Of late years he feels that the American literary scene has changed. "With Europe fading out, the publisher-editor is compelled to break down the country into regions and to look for regional novels." While the emphasis of Knopf's trade list is usually on belles-lettres, the firm is also interested in the social and physical sciences, philosophy, juveniles, and features books dealing with music and musicians. Knopf founded the *American Mercury* and edited it from 1924 to 1934, and through it kept in close touch with developments in American literature. It has been his policy to encourage and develop promising young American writers through the granting of literary and journalism fellowships. These consist of cash grants to authors to assist them in the completing of planned books, followed by publication on regular royalty terms.

Not content with the innovations that he was making in the types of books he published, Alfred Knopf set out to make each volume a work of art and succeeded so well that the Borzoi imprint is now almost synonymous with beautifully bound and printed books. Knopf credits Elmer Adler and his Pynson Printers for much of the beauty of the Borzoi books. He says: "We were probably the first trade-publisher customer of Pynson Printers, and Mr. Adler had considerable influence on me and thus on our books. And mention should be made of W. A. Dwiggins, whose help in designing Borzoi books for the past ten years cannot be overestimated."

From the very beginning Knopf devoted much time and thought to details of manufacturing such as the quality of paper, character of type, layout, and color of binding, each to be suited to the character of the book itself. His pioneering resulted in a general improvement in the quality of American books, most of them now being both attractive to the eye and easy to read. It was he who started the custom in this country of covering the book in a brilliantly colored jacket, a practice which is now almost universal. Nevertheless, the Borzoi books are still regarded as among the most beautiful and distinctive in the United States—perhaps

KNOPF, ALFRED A.—*Continued*

because Knopf continues to take pains with them. Through his entire career he has employed the same printers: "No printer can obtain any of our work on the basis of price; we never shop." Willa Cather relates: "When I picked up some samples of blue binding cloth which lay on his desk he told me he intended to use that material for a book of Chinese poems translated by Arthur Waley. He had gone to the Metropolitan Museum of Art to find exactly the right shade from among the Chinese blues." It is not surprising to find that one of Mr. Knopf's hobbies is to collect contemporary books, especially fine printing.

No history of Alfred A. Knopf or of the house of Knopf would be complete without a mention of Mrs. Knopf, the former Blanche Wolfe, who is vice-president of the firm and has been connected with it almost from its inception. In fact, while the publishing house was still a gleam in young Alfred Knopf's eye, Blanche Wolfe was encouraging the great adventure by her willingness to marry a struggling young publisher and by her great interest in books—not only in completed books, but in type, paper, and ink. (H. L. Mencken thought her much too young and charming for this to be true—but found himself mistaken.)

In the early days of the venture, Blanche Knopf often ran the "main office" while her husband roamed abroad visiting the trade. Later on it was she who roamed, visiting Europe every year in a quest for new talent until the War made that impossible. Since then she has confined herself to trips within the Americas, her most recent being a 16,000-mile scouting expedition covering Colombia, Peru, Chile, Argentina, Uruguay, and Brazil. She not only commissioned a number of books during her trip but also arranged with a correspondent in each of the countries to keep her informed on literary developments. Mrs. Knopf feels it is important for North Americans to know and appreciate the thinking and writing that is being done in South America and hopes that one result of her trip will be the introduction here of translations of many South American works. Her alertness, her knowledge of every branch of the publishing business, and her awareness of current trends have stood her in good stead on numerous occasions, and she has been able to make more than one important scoop for her firm. When, for example, a public revival of interest in Freud became apparent in the spring of 1938, many publishers became interested in the unfinished book upon which he was working in St. John's Wood, London, but it was Blanche Knopf who returned home with the contract for *Moses and Monotheism* in her pocket.

Knopf is dark complexioned, five feet ten and one-half inches tall, and he weighs 175 pounds. He is said to have "the impersonal looks of a banker, as if he had been born with sparse hair beginning to gray and a waxed mustache; but a banker whose green shirt, violet tie, and green stone tiepin mark still another personality, the publisher-editor as he likes to think of himself." In addition to his overwhelming interest in books, he is a phonograph addict and likes to listen to and talk about music. He is fond of golf, tennis, and skiing, the latter because it gets him off by himself in his favorite kind of weather. He also enjoys small week-end parties at his own place, where he broils his own steaks (when available) over an open fireplace for his literary guests. One of his outstanding characteristics is his ability to form friendships with the authors whose work he publishes. The esteem in which they hold him is witnessed by the volume prepared in recognition of his twenty-fifth anniversary in publishing. To this volume many authors who are notoriously unable to write pleasant things which they do not mean contributed. The Knopfs have one son, Alfred A. Knopf, Jr.

KOESTLER, ARTHUR (kœst'lẽr) Sept. 5, 1905- Author; journalist

Address: b. c/o Jonathan Cape, 30 Bedford Sq, London, W. C. 1, England; c/o Macmillan Co, 60 Fifth Ave, New York City

Arthur Koestler, journalist and "veteran of many of Europe's military and ideological battlefields, concentration camps, hospitals, prisons," is also the author of several books published since the beginning of the Second World War which have been highly praised by critics for their rare psychological insight: *Darkness at Noon* (1941); *Scum of the Earth* (1941); *Dialogue with Death* (1942); *Arrival and Departure* (1943).

Arthur Koestler was born in Budapest, Hungary on September 5, 1905, the son of Henry K. Koestler, a Hungarian. After attending the Polytechnic High School in Vienna and the University in the same city (1922-26), he spent two years tramping in the Near East—Egypt, Palestine, Syria, Iraq. He was a farmer in Palestine, a lemonade vendor in Haifa, the right-hand man to an Arabian architect, the editor of a short-lived weekly published in Cairo in German and Arabic—and at the age of twenty-one he became Middle East correspondent for the famous Ullstein chain of newspapers in Germany, among them the *Vossische Zeitung*. By 1929 he had become Ullstein's Paris correspondent, and soon afterward he was called to Berlin to become foreign editor. In the summer of 1931 he took part in the Arctic expedition of the *Graf Zeppelin*, the only journalist aboard the giant dirigible.

In 1930 or 1931 Koestler had joined the Communist Party, and in the middle '30's he traveled through Central Asia (Turkestan, Samarkand, and the Transcaucasian Republics) as a guest of the Soviet Union, spending a year in the U. S. S. R. He established his residence in France early in the '30's, but retained his Hungarian citizenship, and in 1935 he was married. (Koestler is loath to make public the names of either his wife or his mother, for they are both residing in occupied territory.) His reputation as a journalist already secure, he was busy writing his first novel when the Ethiopian affair broke. The novel was discarded. By July 1936 he was at a seaside resort on the Belgian coast, at work on a second novel. That, too, was destined to be shoved into a drawer. Only a few days after Franco's '42 revolt, he persuaded the London *News Chronicle* to send him to Spain.

In August 1936, visiting Portugal and rebel Spain for the *News Chronicle*, Koestler managed to get an interview with General Queipo de Llano. At the time, his "Red" connections were unknown, but the very day after the interview he was denounced as a Communist by a former acquaintance who happened to see him. He got out of insurgent Spain just an hour before a warrant for his arrest was issued. Evidence which he had obtained about the amount of German and Italian military support which was going to Franco was later printed in the *News Chronicle* and also in a book published in France and entitled *L'Espagne Ensanglantée* (1937), as was his quite unflattering character sketch of the insurgent general.

None of these journalistic feats did him any good a few months later. He visited Catalonia and Madrid as correspondent for the *News Chronicle*, returned to Paris, and then, on January 15, 1937, left again for the Andalusian Front. By February 7 the rebels were advancing on Málaga, where he was staying, and many of the Loyalist officers were leaving. He refused to go, and on February 9, when Málaga surrendered without even having put up a fight, he was arrested by the very man who had sworn to "shoot him like a mad dog" if the correspondent ever fell into his hands.

In *Spanish Testament*, published in England in 1937 (*Dialogue with Death*, later published in the United States in 1942, consists of excerpts from this book), Koestler tells about the three months which followed—months spent in prisons at Málaga and at Seville, never knowing whether he was to live or die, but expecting momentarily to be led out to meet a Fascist firing squad. It is a conscientious record "of his state of mind, of the psychological straws to which he clung, of his physical degradation." Charged with being a spy, at Seville he was first classed as *incommunicado*, and he was condemned to death by a military court without a hearing. But he was, after all, a British newspaperman, and intensive efforts were being made on his behalf. Gradually some of the restrictions were lifted, and he was allowed to mingle with those around him; eventually he was exchanged with a prisoner of the Valencia Government; and on May 14, 1937 he at last trod British soil as a free man. He reckons that today eighty per cent of his fellow prisoners, "the poor and the humble," have been murdered for the crime of having borne arms in defense of the Spanish Republic.

Koestler says that he left the Communist Party in disgust eighteen months before the non-aggression pact between Germany and Russia was signed. He was not only thoroughly disillusioned with Russia, but was also persuaded that "all the parties of the Left had outlived their time, and that one day a new movement would arise from the deluge, whose preachers would probably wear monks' cowls and walk barefoot on the roads of a Europe in ruins." His disillusionment had already been foreshadowed in *The Gladiators* (not published in English until 1939), which purported to deal with Spartacus and the Servile War but whose real subject, according to Malcolm Cowley, "was not one particular revolt against Roman landlords beginning in 73 B. C., but all the revolts in recorded history." It was "a fable for our own times" which managed to imply "that every revolution must be abortive or betrayed and that any revolutionary leader, after becoming a dictator by the logic of his position, must end by destroying those he is fighting to serve." Called by the London *Times Literary Supplement* "a finely tempered and often poetical piece of work," *The Gladiators* was also described by critics as an "Olympian book" which "looks down on humanity with age-old eyes and discovers with a kind of cynical joyousness that the man-eating pattern of history is a timeless design."

ARTHUR KOESTLER

In 1938 Koestler was in Paris editing a German-language weekly called *Zukunft* (Future) that was published by Willi Muesenberg and was both anti-Hitler '42 and anti-Soviet. Koestler had personally known and liked many of the men who had been shot or imprisoned in Russia not long before, and in October 1938, immediately after Munich, he began work on a novel dealing with the Moscow trials as he understood them. The novel was not yet finished when war was declared. In France, anti-Fascist refugees were soon being arrested, dragged at night from their beds, handcuffed, beaten up, and clapped into prison cells without explanation or interrogation. He himself was unable to

KOESTLER, ARTHUR—*Continued*

get a visa for England immediately, and, although he was a Christian and a citizen of a still-neutral country, in October his own turn came. He eventually was sent to Le Vernet, charged with no crime and offered no formal explanation.

In *Scum of the Earth* (1941) Koestler writes about life in that notorious "detention camp," and about his fellow prisoners, the majority of whom "had been through prisons and concentration camps in Germany, Italy, Eastern Europe, or Spain." "A few years ago we were called the martyrs of Fascist barbarism and defenders of liberty . . . now we had become the scum of the earth," he says bitterly. The men lived in huts ninety feet long and fifteen feet wide, without lights, heat, or any movable furniture, housing 200 men each. No blankets, clothes, soap, or eating utensils were provided. The prisoners did manual labor six hours a day; the sanitation was as bad as the food; many died, many committed suicide.

Out of the 2,000 inmates of Le Vernet, Koestler was one of the few to be released —and again through the intervention of British friends. Freed on January 17, 1940, he dispatched his book to his publishers on May 1 of the same year. But he was still unable to leave the country, and he was arrested again by the French police during the Nazi advance. This time he procured his own release through an alcoholically-inspired lie, and he promptly went to the recruiting office and enlisted in the Foreign Legion under a false name, hoping to escape from France that way. But it was too late. He did not succeed in getting out of France until many weeks later, and he was never to serve in the Foreign Legion. In the late autumn of 1940, after a complicated journey, he succeeded in reaching England. In England, too, he was locked up, and he spent another six weeks in Pentonville, alone in a dark cell during the air raids. Yet this imprisonment was different. As he put it: "For me and my like, 'safety' has only one meaning: to share the collective dangers of war and to be safe from individual persecution, torture, and the more humiliating forms of death." Later Koestler joined the British Army, and at last reports was working with the Ministry of Information in London.

Darkness at Noon (1941), Koestler's book about the Moscow trials, made his literary reputation almost immediately both in England and in the United States, where it was a choice of the Book-of-the-Month Club. It is the story of one of the last survivors of the original Central Committee of the Communist Party (a fictitious character), who, imprisoned by those whom Koestler calls the "Neanderthalers" (the present generation of Russian Communists), agrees under pressure to confess publicly to crimes of which he is not guilty. According to *Time* Magazine: "More plausibly than any other book yet written, fiction or non-fiction, it gives the answer to one of history's greatest riddles: Why do Russians confess?" *Darkness at Noon* was described as "a rare and beautifully executed novel", "done with a clever mind, fond of sophistry and intellectual subtlety," and its "masterly craftsmanship", "restrained power," and "profound drama" were particularly remarked. The New York *Times* even devoted an editorial to it in July 1941 as "a novel that deserves wider recognition than it has had." "Mr. Koestler describes the Communist fanatic, but his words apply as fully and incisively to the Nazi, because the two are conceived and nurtured in the same sort of environment and dedicated to the same kind of objective."

Malcolm Cowley was almost the only reviewer to dissent from the general opinion that the book was entirely convincing as an explanation of the trials and as a political document. "Though it deals with the Russian trials," Cowley also pointed out, "it obviously contains elements borrowed from Koestler's own story. . . The prison he describes so graphically is like no building that ever stood in Moscow; it actually resembles the Model Prison in Seville. The men who pass his hero's cell on the way to execution were condemned to death by Franco, not by Stalin '42. And Koestler was able to write his convincing account of a prisoner examined by the *Gaypayoo* because, at the moment of writing, he was himself being persecuted by the French political police. Throughout the book he is blaming Russia for the sins of her opponents. . ."

Koestler's next books, *Scum of the Earth* and *Dialogue with Death*, were also extremely well received, although they created much less stir outside literary circles. Paul Hutchinson in the *Christian Century* called *Scum of the Earth* "the most thought-provoking of the narratives of personal experience in the War I have read," and Leo Lania wrote in the *Saturday Review of Literature*: "The hand of a great artist is shown in the way in which he brings to life his fellow prisoners, the French officials, soldiers, officers, peasants, and bourgeois in dozens of portraits and many little scenes. As a psychologist he perceives what is in back of things and penetrates under the surface of events; and so this autobiographical report develops into a deeply moving analysis of our entire time." *Newsweek's* reviewer wrote of *Dialogue with Death*: "For lean, hard prose, honest introspection, and shrewd reporting, this diary has no parallel. It adds to Koestler's stature as a major writer of our times." And Clifton Fadiman '41, calling the same book "a personal rather than a mass record of suffering . . . a self-analysis by an extraordinary psychologist who happened to be placed in a situation few human beings ever encounter," announced: "There are passages here . . . that are worthy of Dostoevski and full of cool, bitter insight."

Arrival and Departure was published in November 1943. Described by Lewis Gannett '41 as probably an allegory of Koestler's own life, it is the story of Peter Slavek, a disenchanted ex-Communist who emerges from psychoanalysis with a knowledge of the neurotic basis of his devotion to The Cause which had led him to welcome martyrdom at the hands of the Nazis, but who cannot help remaining "a crusader in search of a cross." In outlook the book is completely hopeless except for those who believe, with Slavek, that "a new God is about to be born. . . Don't try to define his message or the form of his cult—this will be after our time."

The New York *Times* commented that *Arrival and Departure* was "more of an intellectual diagram than full-bodied fiction. The characters are abstractions, the pattern is geometrical, the whole business reads like an illustrated exercise in deductive logic." Clifton Fadiman, however was by no means alone in calling it a book of force and understanding which proves that Koestler, if he develops, may become "the great writer of our generation."

Early in 1943, asked by the New York *Times* to write an article "based on personal experience on what gives men faith to fight to the end for the democratic way," Koestler contributed an article to that newspaper's Sunday magazine section entitled "A Challenge to 'Knights in Rusty Armor'" that hardly complied with the assignment. His views inspired Max Lerner '42 to mourn over him as a typical "tired radical" in the columns of the newspaper *PM*. "One of the main curses Hitler has brought on us," Koestler said, sadly, "is that, by trying to unify Europe in the wrong way, he has brought forth such a recrudescence of nationalistic, chauvinistic feeling that the clock of European evolution has been put back for at least fifty years. Whether you like it or not, the wish-dream of the martyrized Continent is a super-Versailles, and 'national sovereignty' is the great slogan of the hour . . . the nearer victory comes in sight, the clearer the character of the War reveals itself as what the Tories always said that it was—a war for national survival, a war in defense of certain conservative nineteenth-century ideals, and not what I and my friends of the Left said that it was—a revolutionary civil war in Europe on the Spanish pattern. . . While we rejoice over the victory of our arms, let us recognize the defeats of our aims . . . this War is not the final cataclysm, not the ultimate showdown between the forces of darkness and light, but perhaps only the beginning of a new series of convulsions, spread over a much larger period of history than we originally thought, until the new world is born." The same idea is further developed in a November 1943 article, "We Need a Fraternity of Pessimists." Koestler anticipates an "interregnum" (period of transitory chaos) after the War which will probably last several decades and in which the most constructive thing men like himself can do is to "plant oases in the interregnum desert" and wait patiently for the first sign that the slope of history is no longer downward: "an irresistible global mood, a spiritual, springtide like early Christianity or the Renaissance."

KOLLONTAY, ALEXANDRA (MIKHAILOVNA) (kəl-län-tī' ä-lek-sän'drä mē'-khī-lôv'nä) Apr. 1872(?)- Diplomat

Address: Villagatan 17, Stockholm, Sweden

First woman in the world ever to have held the rank of a full Ambassador, Mme. Alexandra Kollontay, in 1943 Soviet Ambassador to Sweden, has had a long and distinguished political career. Along with Joseph Stalin '42 she is one of the last of the original Bolshevik leaders; yet Alexandra Mikhailovna Domontovich was born in St. Petersburg (now Leningrad) in about 1872 of an upper class family. Her father was General Mikhail Domontovich.

While still in her early teens Alexandra became active in "societies for popular enlightenment." At sixteen, however, she married her cousin, an engineer, and she left Russia to study at the celebrated University of Zurich in Switzerland. After spending three years in Zurich she returned to Russia and began organizing women workers. In 1908 she was exiled from Russia, not so much for her feminist work as for her attacks on czarist policies toward Finland. She continued her political activities abroad—in 1911 leading a strike in Paris and later lecturing at Bologna in Italy; in 1912 working among the coal miners at Borinage in Belgium.

Later in 1912 Mme. Kollontay joined the youth movement in Sweden, and, when war broke out in 1914, she followed the lead of Leon Trotsky and worked for peace in Scandinavia. After being jailed and subsequently released in 1916 she traveled to the United States, where she lectured on pacifism and socialism. "Later she visited every neutral civilized land in which anti-war Socialists held meetings—except Germany. There she was a public enemy."

The year 1917 found Mme. Kollontay in Norway. When the news of the Russian Revolution came she returned to her homeland with hundreds of other political exiles. Coming back to Russia after nine years of exile, she found herself promptly arrested by the temporary Kerensky Government. Soon, however, the Bolsheviks ousted Kerensky and not only freed her but elected her to the Central Committee of the Bolshevik Party. Shortly afterward she was appointed Russia's first people's commissar of Soviet welfare, the first woman to hold a Cabinet post. As commissar she helped to write many of the laws

N.Y. Times

ALEXANDRA KOLLANTAY

in the revolutionary Constitution which today regulate the status and welfare of women in the U. S. S. R.

Later known as the author of several books on relations between the sexes, written from a viewpoint more prevalent in the Soviet Union then than now, Mme. Kollontay believed in the widest possible sexual experience —apparently as bringing one into the widest possible relationship with the collective. In the early days of the Revolution, according to Walter Duranty '43, she herself "had a violent affair with Dybenko, the idol of the Red Fleet, who had brought the cruiser *Aurora* up the Neva from Kronstadt to Petrograd, at the time of the Revolution in November 1917, to fire on the Winter Palace which was then the headquarters of the Provisional Government. He and Kollontay were so absorbed in each other that they forgot about the Revolution, whose fate still hung in the balance, and rushed off to the Crimea for a honeymoon. This caused acrid comment among the Communist leaders, who were a puritanical lot, and finally the matter was brought up seriously in a meeting of the Central Committee. One speaker after another demanded the severest penalties against the erring couple for what they called 'desertion in face of the enemy.' It was soon clear that the meeting wanted to have them shot at least. Then Lenin intervened. 'I have listened, comrades,' he said solemnly, 'to your just and weighty remarks, with which I fully concur. No punishment can be too hard for this unworthy pair; death itself is inadequate. I therefore suggest that we vote upon the following resolution: "Sternly repudiating the behavior of Comrades Kollontay and Dybenko, the Central Committee of the Communist Party decides that they be punished in an exemplary manner, to wit, that they are jointly and severally condemned to be exclusively faithful to each other for the period of five years."' The motion was dropped in a gale of laughter, but . . . Kollontay never quite forgave Lenin for saving her life in that way."

When the Russian Government appointed Mme. Kollontay Minister and trade delegate to Norway in May 1923, her appointment caused much enthusiasm among the champions of women's rights all over the world. Not so enthusiastic, however, was the American State Department, which three years later refused to let her pass through the United States on the way to Mexico, where she had just been transferred, on the grounds that she was a revolutionary. Nor did the Mexican Government treat her with excessive politeness. "Her coming," according to Carleton Beals '42, "was preceded by fantastic propaganda about her past love-life and her great collection of Paris gowns and jewels, some of them said to be stolen Crown gems." The stories about the gowns and jewels, at least, turned out to be pure fable, for Beals "never saw her in more than two or three different dresses, usually black, and she used no jewelry at all." At that time she was a well-preserved woman of "about fifty," with "great charm and simplicity," and "she mingled with all classes of Mexican society and was well received everywhere." But "the altitude affected her badly and, having been subjected to numerous pointed discourtesies by the Mexican Government, she got a transfer to Norway" after a year. During a party given for her friends before she left, the police raided the Soviet Legation and arrested her guests, later explaining that they had heard singing and had thought an illegal religious reunion was being held. No apology was ever extended to Mme. Kollontay for this insult and breach of international law, and when she departed she was not even extended the customary protocol leave-taking.

In 1930 Mme. Kollontay became Soviet Minister to Sweden, the country which had put her in prison sixteen years before. Commenting upon this, she said: "When I was appointed by the Soviet Government Minister to Sweden, the Swedish order exiling me forever from Sweden was still in force. But the Swedish Government graciously revoked it."

It is said that, although her work was not greatly publicized, Mme. Kollontay had much to do with the Finnish-Russian peace of 1940. Since that time her activities in other fields have been the subject of frequent newspaper speculation—of the sort in which Stockholm specializes. One dispatch, in June 1943, had her engaged in negotiating a peace between Germany and Russia. Mme. Kollontay, of course, denied that any such negotiations had taken place, and "informed diplomats and political circles in the Swedish capital . . . treated [the report] as a post-dated April fool joke," the more incredible in that Mme. Kollontay was at the time seriously ill from a brain hemorrhage and in no physical condition to conduct negotiations of any kind. In September 1943, when Mme. Kollontay (still convalescing) was promoted to the rank of Ambassador, most sources also rejected the Stockholm *Aftonbladet's* speculation that this heralded a Stockholm conference on the subject of a Russo-Finnish separate peace. Mme. Kollontay's promotion, it was announced, was an honorary one in recognition of her past services. The Soviet Legation in Stockholm was not raised to an Embassy.

Mme. Kollontay has been described as small and well-dressed, with a "pale and slightly worn and weary countenance," a small, sharp nose, and gray hair which was formerly blond. She is quick-tongued, famous for her wit, proficient in languages, and good at remembering faces. Alma Olson, a visitor to Stockholm, was "fascinated by the clever way she has of keeping a ball of conversation pleasantly suspended in the air and knowing that you know that she is saying strictly nothing." She is "credited by diplomats with being one of the most brilliant practitioners of her craft of her age", "the diplomatic star of the Bolshevik world."

Mme. Kollontay's books have been published in Russian, French, and German—in Russian, *The Position of the Working Class in Finland* (1903), *Society and Maternity* (1916), *The Family and the Communist State* (1922), and others; in French, *La Femme Nouvelle et la Classe Ouvrière* (The New Woman and the Working Class) (1932); in German, a collection of stories, *Wege der Liebe* (The Way of Love) (1925). Available in English translation are *Red Love* (which greatly embarrassed Mme. Kollontay when it appeared without her sanction during her stay in Mexico in 1927) and *Free Love* (1932). The collection of stories called *Love of Working Bees* was severely criticized by the Soviet press.

On her seventieth birthday, after a quarter century of service in the Soviet Government, Mme. Kollontay received the Order of the Red Banner, one of the highest decorations conferred by the Russian Government. She also holds the order of Lenin for outstanding service to the Soviet State.

KONEV, IVAN S(TEPANOVICH)

(kō'nef) 1897- Soviet military leader

Address: Commissariat for Defense, Moscow, U. S. S. R.

Colonel General Ivan S. Konev, who in the summer of 1943 was in command of the Russian forces on the Kalinin Front, was one of the men chosen to command the hydra-headed Russian attack on Orel and Belgorod in August 1943 which broke the short-lived Nazi offensive and turned the battle into a Russian onslaught. Already holding the Orders of the Red Star and the Red Banner, later that month he was awarded the Order of Kutuzov, First Degree, "for skillful direction of military operations against the German Fascist invaders and for resulting successes"; and on August 26 he was promoted to the rank of full general. And more triumphs were to come. In October 1943 his 2nd Army was the first Soviet force to cross the Dnieper River in strength, entering the industrial citadel of Dnepropetrovsk shortly after the breakthrough. On December 14 came the fall of the last big German stronghold on the middle Dnieper River, the old Ukrainian city of Cherkassy.

Although he may not be so well known abroad as some of Russia's other military leaders, long before the Nazi invasion of June 1941 General Konev was a Soviet hero, remembered for his exploits during the Civil War, and a personal friend of Stalin's '42. Like many other Soviet heroes, he was born into a family of poor peasants. The year was 1897; the place was the village of Ladeino, in the Podosinovskaya District, the Archangel Region. Young Ivan went to the village school for a while, but from early boyhood he also helped his father on the farm, and he was only twelve when he went to work as a lumberjack. The year 1913 found him in Archangel, working as an unskilled laborer at the Amosov Lumber Yards; and for the next two years he again worked as a lumberjack in the village of Podosinovets, near the town of Veliky Ustyug.

In the spring of 1916 young Konev was called into the Czarist Army before the regular conscription time, and the next year he was sent to the Tarnopol Front. Siding with the Bolsheviks, during the February Revolution he was in Moscow participating in the liberation of the soldiers of his brigade who had been arrested, and putting gendarmes under arrest. The October Revolution found him a member of his battery committee, helping, with other soldiers, to organize the demonstration against the Ukrainian Rada in defense of the Bolsheviks arrested by the Rada. That same year his division was disarmed for its Bolshevik sympathies, and Konev was among those arrested and exiled from the Ukraine.

At the end of November 1917, Konev, who with other demobilized soldiers had broken up the Rural Council of his native district, helped to carry out the confiscation of the land of landowners and churches in that district and to put local merchants under arrest. He organized the first Congress of Soviets in the district and conducted an educational campaign, leading in agitational work. In February 1918 he participated in the Congress of the District of Nikolsk and was elected a member of its executive committee.

In 1918 the twenty-one-year-old peasant lad was also active in the suppression of the Kulak uprisings, and he became military commissar of his district and commander of a detachment. After taking a prominent part in setting up the Bolshevik organization he was elected chairman of the District Bolshevik Committee at its first conference. In May and June 1918 he served as a delegate to the 5th All-Union Congress of Soviets, participating in the suppression of the uprising of the Left Social-Revolutionaries in Moscow; and in 1919 he enlisted in the Red Army.

Konev was first sent to the Eastern Front as a private artillery man. There he was elected chairman of his Battery Party Group,

KONEV, IVAN S.—*Continued*

and he later became commissar of armored train No. 102, participating in operations against the Kolchak troops at many points. After the destruction of the Kolchak armies armored train No. 102 was transferred to the Far Eastern Republic, and Konev with it. In the Far Eastern Republic he took part in engagements against the Semenov bands and the Japanese, acting as commander of the armored train on many occasions. It was under his command that a Semenov-Japanese armored train was put out of commission.

In the Far East, Konev became first a brigade commissar, later commissar of the 2nd Verkhnii-Udinsk Division. He participated in operations at the Gongota Station and in battles for the liberation of Cheta from the Semenovites and of the entire Trans-Baikal from White Guard bands. In 1921 he was elected delegate to the 10th Congress of the Communist Party of the Soviet Union by the party organization of the People's Revolutionary Army of the Far Eastern Republic, and he and other delegates helped to suppress the Kronstadt Revolt.

In 1922 Konev became military commissar of the People's Revolutionary Army Staff. When Vladivostok was taken he was appointed military commissar of the 17th Primorsky Corps of the town of Voroshilovo; and in 1924 he worked in the Ukraine and with the Moscow Military District in the capacity of corps commissar. In 1925 and 1926 he attended courses in Moscow for the raising of the military qualifications of the higher commanding staff and, after graduation, was appointed commander and commissar of the 50th Rifle Regiment. He kept this post for five years, and then for three years served with the 17th Rifle Division. He was many times elected a member of the Regional Party and Soviet organizations; he served as a delegate to the tenth, thirteenth, and fourteenth Party conferences of the All-Union Communist Party; and from 1931 to 1934 he was a member of the highest elected governmental body, the All-Union Central Executive Committee.

In 1934 graduated from the Frunze Military Academy with highest honors, Konev was appointed commander and commissar of the 37th Rifle Division. He retained these posts for two years; then, in March 1937, he became commander of the 2nd Belorussian Rifle Division. That same year he was elected by the voters of the Pilkinsk election district to the post of deputy to the Supreme Soviet of the U. S. S. R.

In September 1938, by decree of the People's Commissar of Defense Marshal Klementii Voroshilov '41, Konev was put in command of the 2nd Separate Red Banner Army. That same year he was honored with the Order of the Red Star, and on the Anniversary of the Workers and Peasants Red Army he was awarded the Order of the Red Banner and a medal, "Twenty Years of the Workers and Peasants Red Army." Since 1939 he has also been an alternate member of the Central Committee of the Communist Party.

On June 5, 1940 Konev was raised to the rank of lieutenant general. With the Nazi invasion of the Soviet Union the next year he became one of Marshal Semyon Timoshenko's '41 most valued assistants, conducting the tank forces on the Moscow Front at Elnya, Tula, and Stalinogorsk against Nazi Colonel General Heinz Guderian. Timoshenko, supported by Konev and by General Dodonov, seized the initiative from the Germans during the latter half of August 1941, and by the end of September he had not only relieved some of the Nazi pressure elsewhere but had recaptured a series of settlements on the Gomel salient. It was not long afterward that Timoshenko turned over the central front to Konev (who had been made a colonel general on September 12) and then to Marshal Zhukov '42, for the situation elsewhere looked desperate. Konev's forces took an active part in the Russian offensive that winter, continuing to pound Guderian's lines; in the spring of 1942, in a two-day battle on the Kalinin Front, his army recaptured thirty-four towns and villages; and in August 1942, as the battle for Stalingrad raged, it was he and Zhukov who launched the Russian offensive on the front west of Moscow.

Marshal Zhukov once said of this Soviet general: "Let Konev play his own game under his own rules, and no German will ever get the better of him." What these rules were was revealed by Konev himself, "a hard-faced man with a leathery skin and a head as bare as a billiard ball," when he told his officers: "Make up your mind what the enemy expects you to do and then do the opposite." It was no doubt by such tactics that in the summer of 1943 his steppe armies reconquered Kharkov, Taganrog, Belgorod, Orel, and other strategic points from the Germans; and as his 2nd Ukrainian Army rolled on in December 1943 one could be sure that General Konev would continue to "play his own game under his own rules" for some time to come.

KORNGOLD, ERICH WOLFGANG May 29, 1897- Composer

Address: b. c/o Warner Brothers' Pictures, Inc, Burbank, Calif; h. 9936 Toluca Lake Ave, N. Hollywood, Calif.

Hailed at thirteen as the greatest musical prodigy of the twentieth century and as the modern Mozart, Erich Wolfgang Korngold, once the most promising of modern musicians, is since 1934 living permanently in Hollywood and composing music for the motion pictures. He has written scores for *Midsummer Night's Dream* (1935) (adaptation of Mendelssohn's work), *Green Pastures* (1936), Juarez (1939), *The Sea Wolf* (1941), *Kings Row* (1942), *The Constant Nymph* (1943), among many others, and he received an Academy Award for his work in *Anthony Adverse* (1936) and *The Adventures of Robin Hood* (1938). "Art is lonely today," Korngold declares. "The public is against great art. It wants something cheaper. Films and the radio suffice to entertain it, since the opera and the symphony orchestra are not sources of joy to it."

Erich Wolfgang Korngold was born in Brünn, Moravia, on May 29, 1897, the son of Dr. Julius Korngold, the music critic of Vienna's first newspaper, the *Neue Freie Presse*. The family moved to Vienna in 1901. According to his father, Erich showed a desire to direct whatever music was being played when he was only four years old. "The house," wrote Edwin Hughes, "was a musical one, Dr. Korngold being an excellent pianist and a thoroughly versed musician in the best sense of the word . . . so that young Erich was happily born into an atmosphere saturated with music. At five years he was able to play his part in four-hand music at the piano. His father saw that he was placed in proper hands for his further guidance, insisting on the study of harmony from the very first lesson which the boy received in piano playing at the age of six. His progress was startlingly rapid, as Erich took to musical theory as a duck to water, and at the age of seven he had already begun to write small compositions. When he was nine he had gone so far as to begin the composition of a dramatic cantata, to which a fellow schoolboy of like age furnished the text! . . He had already given evidence of a melodic and harmonic sureness in all that he attempted which was nothing short of astounding." When he was ten he wrote an "atonal" Fairy Tale Cantata (text by a schoolmate) which greatly interested Gustav Mahler.

The first of Korngold's compositions to receive a public hearing was *Der Schneeman (The Snowman)*, a pantomime written when the boy was eleven. That composition, the six piano pieces entitled *Don Quichotte* (*Don Quixote*), and his first piano sonata in D minor had already been privately printed and sent to various composers, who had all expressed their approval, Richard Strauss going so far as to remark, in effect, that it seemed useless for men like himself to make further effort when "that boy" could outstrip them all. The *wunderkind* already, therefore, had enough of a reputation for the wife of the Austrian Prime Minister, the Baroness Bienerth, to think of him when she was looking for "some distinct novelty for the entertainment of her guests" at a *soirée* which she had arranged. She had the eleven-year-old composer's pantomime *Der Schneeman* performed with him at the piano, and it was such an immense success that it was decided to give another performance for charitable purposes. "Seats were placed on sale at the enormous price of one hundred crowns ($20) each; but in spite of the fact, the roomy salon at Baron Bienerth's palace was completely sold out for the occasion."

Schuyler Crail

ERICH WOLFGANG KORNGOLD

Korngold's extraordinary talents then became the talk of musical circles everywhere. *Der Schneeman* was played on forty German opera stages; was still played in 1933 at the *Wiener Oper*. A trio composed one year after the pantomime was given its world première with Bruno Walter '42 at the piano. Korngold also wrote a second piano sonata, opus 2 in E major; *Maerchenbilder,* opus 3; overture (*A Winter's Tale*) for large orchestra; and opus 5 (sinfonietta for large orchestra with the motif of the *Joyful Heart*). All these compositions were widely performed. In his musical ideas Korngold was described as "the most modern of the moderns on the path cut by Richard Strauss and widened by Gustav Mahler and other lesser lights."

Such faults as must, of course, have appeared in his music were ascribed to the composer's extreme youth. He was interviewed by the press, which described him as a "sturdy young fellow, fond of his school companions . . . in fact, in everything apart from music . . . quite a normal boy." He did not go in for sports, and his favorite occupation, aside from music, was reading—he liked to read philosophical works. When he was punished by his father, they said, he was not allowed to play Richard Strauss scores on the piano, nor to read more than one book a day by Nietzsche.

"My son," said Dr. Korngold, "is a puzzle to me. . . While in the beginning I acted as a critical adviser to him, at present I am but an ordinary hearer and admirer, for, although somewhat erudite, I do not possess a twenty-thousandth part of my son's musical perception. . . Erich receives his inspiration anywhere. Often while walking he suddenly gets red in the face; a dreamy look comes into his eyes; he seems to have found solitude amidst the crowd. Then we know; we hurry home;

KORNGOLD, ERICH WOLFGANG—*Continued*

he sits himself down at the piano; he begins to improvise, and a new idea is born. . ."

There were critics, however, who were not so enthusiastic. Some asserted that there was "plenty of room for what one might term honest doubt as to the extent of his authorship, and much bitter controversy arose over how much his father edited his work." One critic remarked that "there is no doubt about young Korngold's being a genius of some sort, but I wish that the term were not falling into disrepute, as it seems to me that it is nowadays. . . It is too early to say anything about Erich Korngold's character in the future, but at the age of thirteen he has arrived at a sophistication so diabolical as to shake the foundations of being." The same critic noted, as had others, that Korngold's music bore the hallmark of Richard Strauss, and that there was not a "new or fresh word, or the faintest promise of one, in his melodies," although his harmonies and rhythms were comparatively original and daring.

Korngold's first opera was *Der Ring des Polycrates (The Ring of Polycrates)*, written when he was sixteen. *Violanta*, his second, was concerned with Violanta and her Freudian love for the man who had seduced and brought about the death of her younger sister. According to Olin Downes '43, Korngold composed it when he was seventeen, and "apparently no one had the discretion to keep him from publishing it."

The critics found this opera remarkable as the product of a boy of seventeen, and acknowledged that it had "merit of a sort," but were not overly enthusiastic as a whole Olin Downes commented that the music was "remarkable for its technical precocity and its lack of originality. Infant prodigies, like mushrooms," he said, "are best allowed to mature in the dark." *Violanta* was performed at the Metropolitan Opera House in New York and injudiciously coupled with *Hansel and Gretel*, which placed anxious parents in the dilemma of either denying their offspring the delights of Humperdinck's fairy tale or exposing them to Korngold's "spicy story." *The Nation* found it doubtful that the addition of *Violanta* to the Metropolitan repertoire would be of permanent value.

European critics, on the other hand, praised *Violanta*. Both it and *Der Ring des Polycrates* were played on nearly all German, Austrian, and Swiss stages. Korngold when not quite twenty conducted both operas at Vienna and Berlin. Bruno Walter also conducted them.

Korngold's next opera, and unquestionably his most important work, was *Die Tote Stadt* (*The Dead City*), in which Maria Jeritza made her debut at the Metropolitan Opera House in 1920. The plot of the opera deals with a man who is unable to forget his dead wife, Maria, and still lives with her in his thoughts. This opera was very well received. The critics agreed that, despite its lack of originality, it had many charms. Deems Taylor '40 wrote: "In general the faults of the score are those that would be expected of youth—lack of individuality, over-emphasis, bad taste, and emotional immaturity. Of Korngold's talent for composition there can be no question. *Die Tote Stadt* is an amazing performance for a boy of twenty-two." The opera had been given premières simultaneously at Cologne, Hamburg, and Vienna. In Hamburg twenty-five performances were given within four months; in Vienna it had sixty performances. It has been performed on more than seventy stages and translated into many languages.

In 1928 his next opera, *Das Wunder der Heliane* (*The Miracle of Heliane*), was produced with a lavishness accorded no other contemporary operatic composer save Richard Strauss. It was first performed in Hamburg and Vienna, with Lotte Lehmann '41 and Jan Kiepura '43 in the leading roles. The opera excited "little critical disagreement and strikingly little interest." The music was described as "conservative, almost conventional," although critics had called Korngold, some ten years previous, "an iconoclast whose harmonic daring makes even radicals gasp and who is suspected of never having written a pure consonance in his life except by accident."

In 1930 Korngold became a professor of the *Wiener Staats Akademie für Musik*. Several years later his latest folk-opera *Die Kathrin*, had its first performance in Sweden in October 1939. It aroused little critical comment. In 1936 he was hired by Warner Brothers to compose scores for their films, becoming head of the composing staff of their music department. He has not, however, wholly abandoned the opera. In the film *Give Us This Night* Korngold inserted a short opera based on Shakespeare's *Romeo and Juliet*, the first opera written exclusively for film production. "Apparently," remarked the *Musician*, "Korngold realizes that the composing of an opera for presentation in opera houses is a thankless task at best, and that the audience of the motion-picture world is the only one that is big enough to warrant the producing of new works on a large scale." According to Aaron Copland '40, he has still, however, to become expert in using the motion-picture idiom; he still tends "to get overcomplex in the development of a musical idea." In the fall of 1942 Korngold came to New York City in order to conduct the New Opera Company's production of Johann Strauss' *Die Fledermaus* which appeared under the title of *Rosalinda* and was an enormous success (more than 400 performances on Broadway). Korngold also adapted and had charge of the musical supervision of Offenbach's *Schoene Helena*. (These two productions were given in connection with Korngold's collaboration with the late Max Reinhardt, which began in 1929.)

"For the young composer," said Korngold, "there are now many dangers. . . He should close his eyes to the films and his ears to the radio. He should simply write serious music, as the masters did . . . for writing entertainment music is not composing . . . and those films . . . are dangerous, too, for they need so many musicians! They hire every composer they can find, with the result that many of them lose their best inspirations in pictures that will be scrapped tomorrow." "My main ambition," he said later, "is to unite music to fit the picture that will still be music without the picture."

Korngold is said to be wealthy in his own right. "If [the film producers] do not like what he writes, if his own work dissatisfies him, or if he does not like the picture, he stops work immediately." He never uses the method of writing for the piano and then orchestrating his work: if his composition is orchestral it is written in full score. He is said to work extremely hard and to be "his own worst critic."

Contemporary modernists, comments *Etude*, are wont to say that Korngold "came too early to the flowering of his genius, that he said what he had to say, and never grew." David Ewen remarks, however, that "it is yet too soon to write an obituary to his artistic career."

Aside from his operatic and cinematic works, Korngold has composed music for Shakespeare's *Much Ado about Nothing*, songs, chamber music, and orchestral works. He has studied under Robert Fuchs and Alexander von Zemlinsky. Korngold plans to remain in the United States permanently, for he took out his first papers for his wife and two sons in 1937. They all became citizens in February 1943. Since 1924 Korngold has been married to a granddaughter of Adolf von Sonnenthal, actor of the Hofburg in Vienna, who was also famous in the United States. Korngold is about five feet six inches tall, dark, and rather stout, carelessly dressed and with, according to *Etude*, "a certain boyishness inherent in great men."

KROCK, ARTHUR Nov. 16, 1886- Journalist

Address: b. Albee Bldg, Washington, D. C.; h. 1763 N St, N. W., Washington, D. C.

Twice winner of the Pulitzer Prize, Arthur Krock, head of the New York *Times* Bureau in Washington, and one of the half-dozen people who determine *Times'* policy, ranks high in the field of contemporary American journalism. A newspaperman for more than thirty-five years, Krock has spent much of his life as Washington correspondent for various newspapers. He is a staunch defender of State Department policies on the international front, and a consistent foe of the New Deal on the domestic front.

Arthur Krock was born in Glasgow, Kentucky, on November 16, 1886, the son of Joseph and Caroline (Morris) Krock. He was educated in the public schools of Kentucky and Illinois, and matriculated at Princeton University with the class of 1908, but was unable to continue his studies because of "a family recession," and he was not graduated. Twenty-nine years later President Dodds of Princeton conferred the degree of M. A., *honoris causa*, upon him with the remark that Krock was "at last a graduate of Princeton."

After he left Princeton young Krock made his way back to his native Kentucky, "broke and green." He decided that he would like to enter newspaper work, but, unfortunately for him, the "cub" system prevailed at that time, and "one worked for a while without pay in exchange for the journalistic grounding a city editor sourly gave." Krock could not afford to do this, so he applied at several newspaper offices and pretended that he was already an experienced newspaper reporter. In 1906 he finally got a job as police reporter on the Louisville *Herald* at $15 a week. The following year he became assistant, while still on the *Herald*, to the Kentucky correspondent of the Cincinnati *Enquirer*, and was taken by his chief to the national political convention at Chicago and Denver. "I returned," wrote Krock, "a traveled journalist, the envy of my police reporter associates."

Krock left the *Herald* in 1908 and, after a brief experience as chief deputy sheriff of Jefferson County (Kentucky), joined the Associated Press in Louisville as night editor. "A tour of duty from eight at night until five in the morning" proved too bleak for him, however, and he gratefully accepted the position of Washington correspondent for the Louisville *Times* in 1909. In 1911 he became Washington correspondent for the Louisville *Courier-Journal* as well, both papers being edited and partly owned by the same man. Krock returned to Louisville in 1915 as editorial manager on both papers, working under the Colonel Henry Watterson regime. The Peace Conference at Paris in 1918 and 1919 took Krock to France, and from there he contributed syndicated articles to various newspapers. He was one of the three American members of the Inter-Allied Press Committee of fourteen which induced the Peace Conference to open its sessions to the public.

In 1919 Krock became editor in chief of the Louisville *Times*, a position which he held until the fall of 1923, when he left for New York. In that year *The Editorials of Henry Watterson*, a book which Krock compiled, appeared. For a time Krock worked for Will H. Hays '43 (outside journalism for the first time in Krock's life); then he became assistant to Ralph Pulitzer, president of the New York *World*. Krock remained with the *World* until the spring of 1927, when he resigned his post in order to join the editorial staff of the New York *Times*, which he calls "the cleanest and best of markets" for his wares.. Upon the death of the *Times'* Washington correspondent, Richard Oulahan, in 1932, Krock succeeded to his position; and he has been the *Times'* correspondent in Washington ever since.

(Continued next page)

ARTHUR KROCK

When he first arrived in Washington as *Times* correspondent, Krock wrote, "I possessed a working knowledge of politics and politicians. It was soon necessary to fortify this with a smattering of economics, for news began to be money and statistics. . . But familiarity with the great national game of politics, which ever directs or attempts to direct the operation of economic laws, was a real asset—laboriously acquired over the long years."

Most of Krock's writing is now confined to a column, "In the Nation," on the *Times'* editorial page. "This," according to Quincy Howe '40, "is not a column in the usual sense. It is not syndicated and it expresses the *Times'* point of view." (Krock himself has said he does not always express that newspaper's point of view.) Leo C. Rosten '42 considers Krock's column "distinguished by a severe impersonality and a more objective approach than is found in other columns." Although primarily a columnist, Krock occasionally writes news dispatches on important events for the *Times*, too.

Krock won the Pulitzer Prize in 1935 and 1938 for "distinguished service as a foreign or Washington correspondent during the year, the test being clearness and terseness of style, preference being given to fair, judicious, well-balanced, and well-informed interpretative unity which shall make clear the significance of the subject covered in the correspondence or which shall promote international understanding and appreciation." The 1938 prize was awarded him for his interview with the President—the only exclusive interview Roosevelt '42 has given since he became Chief Executive. At his next press conference Roosevelt apologized for having given one newspaperman an exclusive story, and promised that it would not happen again.

Although a Democrat, Krock turned against the New Deal after 1936. "He had," wrote Howe, "several altercations with New Deal officials about quotations and interpretations that appeared in his column, and rarely did his critics get the last word." Krock has criticized Roosevelt as guilty of "more ruthlessness, intelligence, and subtlety in trying to suppress legitimate unfavorable comment than any other figure I have known." He considers Roosevelt, however, the greatest reader and critic of newspapers he has ever seen in the Presidential office and considers him qualified "as the chief of a great copy desk." Once, told that Krock was "ninety-five per cent for you," President Roosevelt replied: "But, oh, that other five per cent!"

Krock wrote one chapter, "Washington, D. C.," in *We Saw It Happen* (1938), edited by Hanson W. Baldwin '42 and Shepard Stone. In it he predicted that the New Dealers would eventually disappear and their leader [Roosevelt] and his methods, though not his ideas, be obscured. "Generally," Krock wrote, "the prophecy can be made that the Government will be taken over by some form of liberals or by a species of fascists."

Of the Presidential order limiting incomes to $25,000 a year, Krock wrote in the *Times*: "The New Deal campaign, founded in the Communist Party platform of 1928 and most lately sponsored by the C. I. O. and Mrs. Roosevelt '40, to limit all net incomes to $25,000 a year is proceeding according to plan. . . There is little doubt that, as in the instance of wartime prohibition, some New Deal advocates of the wartime regulation have permanent income controls in mind, not necessarily as high as $25,000, and world conditions in July 1944 [the date when the law expires] will probably still provide them with emergency conditions."

In his recent speeches and articles Krock has reproached the Government for its "lack of candor" in giving out information to the press. To the American men who are giving their lives to defend the nation, said Krock, "the Administration and Congress owe a solemn obligation: the truth. In wartime, for excellent reasons, it cannot always be the whole truth. But always it should be nothing but the truth." Previously Krock had alleged that the Administration was making efforts "to discredit and restrict American newspapers." He also commented that the New Deal had perfected a formula of press control based on the President's press conferences and comprising "official favors surreptitiously extended to syndicated columnists who are sympathetic" and government press agents working to "circulate every Federal act in favorable terms, to gloss over errors and conceal what is desired not to be known." This policy was conducted, Krock further declared, with "technical denials of essentially true news stories and steady implications that the press is unreliable and often venal." Krock has more than once attacked the Office of War Information on the grounds that it was putting out New Deal propaganda.

But he has even more important bones to pick with the Administration. The New Deal, he finds, is too full of "collectivist doctrinaires" and bureaucrats who are eager to put industry ("which has performed such miracles of war supply") in a bad light, quick to give in to pressures of any sort from organized labor, which has been guilty of so many "excesses." Furthermore, New Deal legislation is constantly endangering "States' rights." (In December 1943 Krock himself joined the "States' Rights" Republicans and Southern Democrats in opposing the Federal ballot for soldiers.)

Not that Democrats *per se* are anathema to Krock. Among his greatest heroes are Senator Byrd '42 and Secretary of State Hull '40. There is no act of the State Department—from its "appeasement" of Franco '42 Spain and Vichy France and its consistent snubbing of de Gaullists to the policy of "expediency" in North Africa and Italy that brought in Darlan '41 and Badoglio '40—that has not impressed Krock as great statesmanship. Robert Murphy '43 and Breckinridge Long '43 have come in for only a little less praise than Hull, the "great architect" of the Moscow Declaration. Sumner Welles '40, however, was always one of Krock's *bêtes noires*, and Walter Winchell '43 reports that when Welles finally resigned as Under Secretary of State and was offered a job on the *Times* he told Arthur Hays Sulzberger '43 that he would not work for the *Times* "so long as Arthur Krock worked for it."

Krock has not always been so admiring of the Administration's military strategy as of the State Department's political strategy, however. In May 1943 he gave extremely favorable publicity to Senator Chandler '43 and his "Beat Japan first" speeches. In October 1943 the criticisms of the Senators who had returned from a tour of the War fronts were repeated by Krock with approval, the testimony of Senator Lodge '43 being called "particularly cogent, informing, and thought-compelling."

Arthur Krock was assistant to the chairman of the Democratic National Committee of New York during the campaign of 1920. He is an officer of the French Légion d'Honneur and holds the Officer's Cross, *Polonia Restitua*. His clubs are the Metropolitan and the Gridiron in Washington.

On April 22, 1911 Krock married Marguerite Polleys, who died in 1938, leaving him one son, Thomas Polleys Krock. On June 14, 1939 Krock married Martha Granger Blair of Washington, D. C. They have no children.

Although Krock says he has no favorite recreation, sports, or hobbies, he "likes to sing Gilbert and Sullivan, to talk late, and to gnaw a chicken bone while he reads in bed. But he's not fond of Washington. The city, he says, is full of 'envious conflict.' He'd rather live in New York." Dark and bespectacled, Krock is five feet nine inches tall and weighs 155 pounds.

According to Quincy Howe, Krock likes to "hobnob with the mighty, to play the role of kingmaker." "Krock's social prestige," writes *Look* Magazine, "is as loftly as his professional standing. . . The Krocks' intimates include Alice Roosevelt Longworth '43, the Byrds of Virginia, and a list of State Department personages." Krock was also the only newspaperman among the guests at the first formal dinner given in Washington by the Vichy French Embassy early in 1942, before the Vichy Government severed relations with the United States. (Krock had known Gaston Henry-Haye '40, the host at that dinner, since the days when Henry-Haye came to Camp Zachary Taylor in Louisville with a French military mission as an instructor in the use of the bayonet.)

KROLL, LEON Dec. 6, 1884- Artist

Address: h. 1 W. 67th St, New York City; h. Mt. Kisco, N. Y.

A painter "in the great tradition," artist Leon Kroll scoffs at the idea that academic training kills talent, declaring that "any talent that can be killed by training deserves to die, because it probably has no vitality anyway." One of the most successful of contemporary American artists, a persistent prize winner, Kroll is noted for his "sound craftsmanship" and for his "deep sincerity." "Leon Kroll's painting," wrote Jeanne Adeney in the *Canadian Bookman*, "is modern, but not exaggerated. . . It is simplified to the essential gesture, the essential modeling and accent."

Leon Kroll was born on December 6, 1884 in New York City of music-loving parents, Marcus Nathaniel and Henrietta (Moss) Kroll. The boy's interest in art developed very early and, as a child, according to Peyton Boswell, "he used to haunt the old red brick and granite Metropolitan Museum." At the age of fifteen young Kroll chose to earn his own living, and he worked his way through the Art Students League, studying under John H. Twachtman. Kroll then left the League to study at the National Academy of Design, where he received the sound academic training so evident in his pictures. He became the Academy's "crack student," just as Eugene Speicher, with whom Kroll has sometimes been compared, was the "crack student" of the League.

From the Academy the young artist went to Paris to study under Jean Paul Laurens at the French Julian Academy, and within four months he had won the grand prize for painting the nude. This was not Kroll's first prize, since he had won all school honors for which he had competed. In Paris he studied the paintings of Cézanne and Renoir, but Poussin was his idol.

The young man returned to the United States in 1910 and "set to work eagerly painting the life and industry of New York." He became an instructor at the National Academy in 1911 and had his first one-man show there. His first picture was sold for $100. Kroll's show brought him many friends, among them the artists Glackens, Henri, Speicher, and Bellows (the "crack student" of the Henri school). The three young painters, Speicher, Bellows,

Paul Hansen

LEON KROLL

and Kroll, became a triumvirate which Bellows caricatured in one of his pictures. Two years after his first individual exhibition, invited by Arthur B. Davies to exhibit in the famous Armory Show (1913), Kroll sold eighteen pictures in one week, making $10,000, which he spent "with happy abandon" in a year. For the next two years he did not sell another painting.

Kroll's rapid garnering of the "most coveted awards and honors that can come to an American artist" soon began to bring him to the attention of the public. His pictures sold well, and in 1919 he was appointed visiting critic for the Maryland Institute of Arts. From 1924 to 1925 he served in the same capacity at the Art Institute of Chicago, in 1929 he became visiting critic for the Pennsylvania Academy of Fine Arts, and later he became visiting art critic at other schools, colleges, and institutions.

At the Carnegie International Exhibition in 1936 Kroll won the first prize. The Department of Justice in Washington immediately selected him as one of the eleven artists commissioned to decorate their recently completed building. That was Kroll's first mural commission. It was followed two years later (1938) by his appointment to the task of painting "one of the most ambitious murals ever executed" in the United States: the decoration of the Memorial Chamber of the Worcester (Massachusetts) War Memorial. The largest of the panels was thirty by fifty-seven feet. For an entire year Kroll worked on small-scale compositions and studies in a secluded studio in the country. These drawings were, he said, "presented to a full meeting of the Commission. . . The project was unanimously accepted." He then moved his household to Worcester so that "no time would be lost and the influence of my environment might have effect on the work," and he began to carry out his plans. Two young artists worked with him part of the time, but much of the time he worked alone. Since he considered fresco unsuitable for his purposes, Kroll decided to work in oil on canvas, and, as no canvas of the size he needed was available, he had to commission a huge piece direct from the manufacturers in London. A special loom was needed in order to fill the unusual order. The entire work on the mural took the artist three years; when it was completed in 1941 it was called a "notable achievement."

Upon the completion of the mural, the Krolls moved to Mount Kisco, New York. The artist divides his time between his country residence and his studio in New York City, because "although the rolling hills, furrowed fields, and the broad spaces of nature are the main source of his inspiration, he is not a man for isolation. The call of the city, with its motives, companionships, and activities, is one which cannot be denied for long."

Kroll is primarily a landscape and portrait artist. He paints his pictures after considerable preparatory study. The human figure is his chief interest, and he prefers to people his landscapes. The *American Artist* in commenting on Kroll's nudes describes them as "painted with a dignity which expressed his adoration and his good taste. They have a grace that testifies to his competent craftsmanship—a welcome contrast to the treatment of the figure by so many contemporary artists." On the other hand, Edward Alden Jewell comments that Kroll's forms "remain static, posed studio figures" and that his effects, although "brilliantly contrived," are "pedantic and artificial." Kroll has been called a "slick" painter, although some critics take exception to the term, calling him a romanticist who gives his pictures "an ingratiating charm" and "a kind of youthful bloom" which lend them a persuasive appeal. His paintings are, wrote the *American Artist*, "more than an escape from troubled contemplation of a world in travail: they restore our serenity and give us strength when we return to the grim tasks that await us."

All critics agree that Kroll is an excellent craftsman—he has a good sense of color, composition, and design. "When I speak of design in a canvas," said Kroll, "I mean a fine organization of areas and shapes, a just balance of round and straight forms, intelligent use of horizontal, vertical, and diagonal directions, a sense of the influence of three-dimensional form on two-dimensional pattern, all planned to include within allotted areas the forms of representation intended in the area." "Leon Kroll," wrote James Lane, "brings to us an art of sound discipline, a painting that is often grandly designed and always *soignée.*" "It is true," commented another critic, "Kroll does not, as one might wish, storm the heights of Olympus; he prefers to curb his creative intuition in order that his pictures may remain substantially descriptive. Yet there is a certain air of elevation to his style and his craftsmanship—always concise, solid, and intelligent—which is gracefully vigorous." Kroll is generally considered one of the soundest of American painters.

Leon Kroll is represented in most of the important museums of the United States, as well as in many private collections. He is fair, five feet five inches tall, and weighs 150 pounds. On October 18, 1923 he married Geneviève-Marie-Thérèse Doméc. The couple have one daughter, Marie-Claude.

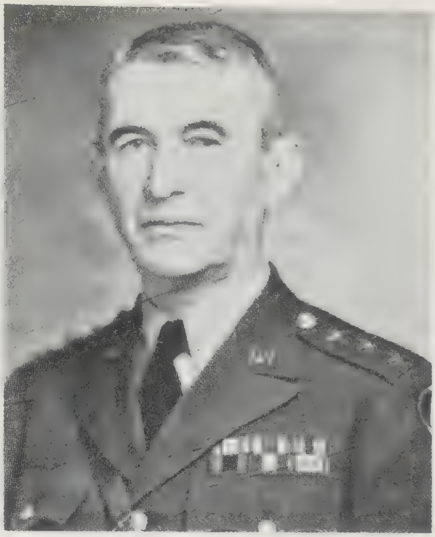
KRUEGER, WALTER (krü'gėr) Jan. 26, 1881- United States Army officer

Address: b. c/o War Department, Washington, D. C.

Prussian-born General Walter Krueger is regarded as one of the United States Army's most learned students of strategy and military history, and as a tactician of first rank. Next to General Lesley J. McNair '42, Krueger is also conceded to have had a greater influence on the training of the Army than any other single officer. Having risen from the ranks to win distinction in an overseas command during the First World War, Krueger continued in the service and advanced to the command of the 3rd Army in 1941. He was then ordered to Australia, at the request of General Douglas MacArthur '41, and placed in charge of the newly created (February 1943) 6th Army that includes most of the troops in Australia and New Guinea. If General MacArthur returns to the United States in 1944, Krueger is expected to take over his command.

Born in Flatow, West Prussia on January 26, 1881, the son of Julius O. H. and Anna (Hasse) Krueger, Walter Krueger was brought to the United States at the age of eight. He attended public schools in the Middle West, and was a student at the Technical High School, Cincinnati, Ohio when the Spanish American War broke out. At the age of seventeen (1898) he enlisted for war service from his home at Madison, Indiana, and he served as a non-commissioned officer in Cuba until mustered out of the volunteer service in 1899. In June of that year he re-enlisted as a private in the Regular Army and was sent to the Philippines. There, as corporal and sergeant, he was with the 12th Infantry until June 1901, during which time he took part in several engagements on the Island of Luzon during the Philippine Insurrection. He was commissioned a 2nd lieutenant of Infantry in the Regular Army in 1901. He next joined the 30th Infantry, with which he served until November 1903. He then accompanied his regiment back to the United States.

In 1904 Krueger was married to Grace Aileen Norvell, who "has followed with enthusiasm the Army wife's career," sharing her husband's interests, taking care of social obligations, and handling domestic problems.



U. S. Army Signal Corps

LIEUT. GEN. WALTER KRUEGER

The Kruegers have two sons, James Norvell and Walter, and a daughter, Dorothy Jane, who is married to an Army officer.

Following his marriage Krueger was on duty at Fort Crook, Nebraska until 1905, when he was ordered to Fort Leavenworth, Kansas to attend the Infantry-Cavalry School. Having completed the course he remained there as a student officer at the Staff College, from which he was graduated in 1907. His next service was with the 23rd Infantry at Camp John Smith and at Fort Ontario, New York, until January 1908.

Ordered back to the Philippines, Krueger was in charge of mapping the Islands and he served with the Military Information Division. On his return to the United States he was assigned to duty as instructor in the Department of Languages at the Army School at Fort Leavenworth until 1912. For the next two years he served with Infantry troops at Madison Barracks, New York, and he was then detailed as inspector-instructor of the Pennsylvania National Guard at Pittsburgh. In June 1917 he was transferred to Washington, D. C. to the Office of the Chief of the Militia Bureau. In August of the same year he went to Camp Taylor, Kentucky, first as assistant, then as acting chief of staff of the 8th National Army Division.

Sailing for France in February 1918, Krueger first attended the General Staff College at Langres. He was then appointed assistant chief of staff for operations, 26th Division, with which he served in the vicinity of Toul and Château Thierry until July 1918. He returned briefly to the United States to rejoin the 84th Division at Camp Sherman, and he accompanied that division to France. In October he was detailed chief of the Tank Corps, A. E. F. After the Armistice, until May 1919, he saw extensive overseas service at the Line School at Langres, and as chief of staff for various operations in France and in Germany.

(Continued next page)

KRUEGER, WALTER—*Continued*

Krueger, with the rank of colonel (temporary), was awarded the Distinguished Service Medal with the citation: "By his high professional attainments, superior zeal, loyal devotion to duty, soldierly character, and his dominant leadership, he has exercised a determining influence upon the commands with which he has served, and has contributed in a marked degree to the success of the military operations of our forces."

On his return to the United States, Krueger served until July 1920 at the Infantry School, Fort Benning, Georgia, and as commanding officer, 55th Infantry, at Camp Funston, Kansas. He then attended the Army War College in Washington, D. C., and was graduated in June 1921. He remained there for a year as instructor. He was then detailed to the War Plans Division of the General Staff, Washington, D. C., and he served in this capacity until 1925. After he was graduated from the Naval War College in Newport, Rhode Island in May 1926 he served with the 22nd Infantry at Fort McPherson, Georgia.

A year at the Air Corps Primary Flying School at Brooks Field, Texas was followed by service in Omaha, Nebraska as assistant National Guard officer until May 1928. Krueger was then ordered to the Naval War College for a four-year tour of duty as a member of the college staff. In 1932 he joined the 6th Infantry at Jefferson Barracks, Missouri, and he commanded that regiment for two years. He then returned to Washington for duty again with the War Plans Division of the War Department General Staff. In May 1936 he became assistant chief of staff for war plans. Two years later he assumed command of the 16th Infantry Brigade at Fort George Meade, Maryland. He was then ordered to Fort Sam Houston, Texas to command the 2nd Division; and in October 1940 he assumed command of the 8th Army Corps with headquarters at Fort Sam Houston.

It was in May 1941 that Krueger, with the rank of lieutenant general (temporary) was assigned to the command of the 3rd Army with headquarters at San Antonio, Texas. As a result of sound training plus skilled strategy, Krueger's 3rd Army administered a smarting defeat to the 2nd Army of General Ben Lear '42 during Army maneuvers in Louisiana. While in charge of the Southern Defense Command Krueger was also instrumental in fostering friendly relations between the United States and Mexico. As the guest of the Mexican Government during the celebration of the 32nd anniversary of the Mexican Revolution, he was given the Order of the Aztec Eagle, Mexico's highest decoration. President Roosevelt '42 nominated him for the rank of lieutenant general for the duration of the War.

By February 1943 American forces in the Southwest Pacific had grown to such size as to necessitate the formation by the War Department of the 6th Army. General Krueger, succeeded by General Courtney H. Hodges '41 in the 3rd Army Command, was placed in charge of the new army in Australia and New Guinea, thus relieving General MacArthur from tactical responsibility and giving him more time for the total campaign against the Japanese. The assignment of Krueger was the result of a specific request from MacArthur, who was well aware of the Krueger reputation as a tactician. A competent source has also said that every Army division now in action "has learned from Krueger, either because it served under his command, or because it got a first-hand knowledge of his methods by opposing him in maneuvers." By the end of December 1943 the 6th Army had not only wrested the island of New Britain from the Japanese, but were rapidly cleaning up all the Japanese in the Cape Gloucester area.

A stern disciplinarian, Krueger is admired as "a soldier's soldier." He reads widely, his principal reading outside the field of military writings being on general history. He has translated William Balck's *Infantry Tactics* (1911) and Friedrich Immanuel's *The Regimental War Game* (1907).

KÜCHLER, GEORG VON (küch'ler) 1881- German Army officer

Address: b. c/o Ministry of War, 6 Vossstrasse, Berlin, Germany

A specialist in artillery, Field Marshal Georg von Küchler is one of Hitler's '42 more successful "finds." A relatively unknown military professor, he was discovered by the Führer and put into the field with signal success. He took part in the invasion of Poland, commanded the assault on Holland, and led the final bitter attack on Dunkerque. Once he is reported even to have "doubled in brass as a diplomat" to "persuade" the Finns to forswear any thought of peace with Russia. He was in 1943 in the command of a large part of the left wing of the German armed forces in Russia—not a very happy position.

Georg von Küchler was born in 1881, the descendant of an old Prussian Junker family. He received a military education at the cadet school and entered the Army in 1901. Later he attended the military academy for further study. During the First World War he served as General Staff officer, seeing action at the Somme, Verdun, and Champagne. After the War he continued his military career; by 1936 he had become a lieutenant general and was serving as inspector of the Army academies when he came to Hitler's attention. He was placed in command of the 1st Army Corps, at Koenigsberg, in 1937. Grateful, he showed his loyalty to Hitler by giving him his full support during the conflict of army and party in the following year. He was one of the few ranking generals not dismissed after this conflict.

Von Küchler's first chance for action came early in 1939, at the occupation of Memel. Memel, a small strip of land along the Baltic Sea, had been detached from the Reich at Versailles and set up as a free port for the new Lithuanian Republic. While the region's status was still uncertain it was seized by Lithuanian troops. Ultimately a semi-autonomous government was created under League auspices. In March 1939 Germany finally put an end to this "intolerable" situation. With the ready assistance of the strong and active National Socialist Party under Dr. Ernst Neumann a crisis was precipitated, the question of "self-determination" was raised, pressure was brought to bear on the Lithuanian Republic, and on the morning of March 23, 1939 the Province of Memel was officially made part of the German Reich. While the Führer arrived off Memel on the pocket battleship *Deutschland*, the first German troops crossed the River Niemen at Tilsit, where Napoleon and Czar Alexander I of Russia had once met on a canopied raft to sign their famous treaty. These troops, under von Küchler's command, consisted of the 1st Company of Tilsit Infantry, followed by a battery of motorized artillery, armored cars, and motorcycle troops. Accompanied by Himmler '41 and by Erich Koch, provincial leader and supreme President of East Prussia, von Küchler's troops moved on toward the city of Memel. Hardly any resistance was encountered, and the occupation proved uneventful. Only a few soldiers participated, since the Marines who came by sea formed the official occupational force.

More eventful was von Küchler's next venture on the field of battle. At the time of the invasion of Poland, "in compliance with instructions issued by Colonel General von Brauchitsch '40, Commander in Chief of the Army, when the operations of the German forces began at 4:45 a. m., September 1, 1939," von Küchler found himself in command of the 3rd Army of the group of armies of the north, under Colonel General von Bock '42. The Poles believed that East Prussia could not be used effectively as a base for operation, but von Küchler proved that they were wrong. The operations in Poland were designed to "destroy as much as possible of the Polish Army in the territory west of the Vistula River" and, by advancing the exterior flanks, to "prevent any Polish attempts to establish a defensive line along the banks of the Vistula."

Von Küchler's next chance to distinguish himself came with the assault on the Low Countries and France in the spring of 1940. On this occasion he commanded the 18th German Army of the northern group of armies under von Bock. This was the northernmost army, placed opposite Holland. At the signal for the surprise attack on the morning of May 10, 1940, von Küchler led the swift advance into Holland. The Dutch armies withdrew from the frontier as the Germans landed thousands of parachute troops behind the lines. Von Küchler sent his motorized units inland with the greatest speed. Supported by aircraft, they broke through the Dutch fortifications of the Yssel and the Grebbe line and succeeded in bisecting the country by taking the important bridge at Moerbeke, main artery for motor and rail traffic between North and South Netherlands. On May 15 all Dutch resistance stopped, except in the province of Zeeland in the southwest, which was of vital importance to the defense of Antwerp. At that time only the area around Amsterdam and to the north was still held by defenders; the rest of the country had already been conquered. Proof of the unexpected swiftness of the assault was the fact that advance units of the 7th French Army under the command of General Giraud '42, which arrived according to plan, found themselves in a German pocket, even though they were fourteen hours ahead of schedule.

GEN. GEORG VON KÜCHLER

The conquest of Holland virtually completed, von Küchler's troops turned into Belgium. They occupied the city of Antwerp, which the Belgians had evacuated, on May 18, the day on which the last resistance in Zeeland was overcome. "With the power of a hydraulic press" they closed in on the Allies, crossing the Scheldt River under cover of the smoke of oil tanks which they had set afire. As the Allied troops were trapped in a pocket along the sea with the capture of Abbeville in the south, von Küchler "pushed on step by step against great resistance." With the surrender of the Belgians on May 28 von Küchler's army rushed forward into the coastal region which was now undefended. Then they started to close in on Dunkerque. Bad weather, flooded lands, and

KÜCHLER, GEORG VON—*Continued*

stubborn resistance held the Germans off for several days. On June 4 Dunkerque fell. Von Küchler then led his troops into France. He was in command of the forces that ultimately occupied Paris. As a result of his success in the field von Küchler was now elevated to the rank of field marshal.

The following year von Küchler was put at the head of one of the armies under the general command of von Rundstedt ['41], for the attack on Russia. Von Rundstedt's armies were to follow an ancient plan, advancing against Leningrad through Latvia, Lithuania, and Estonia. It was of vital importance to the success of this plan that the border states be conquered within the prescribed period. Von Küchler's main contribution was the "cleaning up" of Estonia. He captured Baltic Port and Tallinn, the former capital, after "terrific fighting," and stormed the Narva forts, to be stopped only by the heavy guns of the Soviet naval base at Oranienbaum. As a result von Rundstedt's forces reached Lake Peipus on August 15.

When von Rundstedt had been replaced by Field Marshal von Leeb, the oldest of all German generals, the assault on Leningrad really began. Before the Red Army had a chance to dig in the Germans sent 300,000 men against the city's outer defenses. They were repelled by Marshal Klementii Voroshilov ['41], whose forces included thousands of women and factory workers. Then, having failed to storm the city by force, the German Army tried to subdue it by attrition. Fifty-two infantry, four motorized and four tank divisions, some 6,000 heavy guns, thousands of machine guns, mortars, and planes hammered the city with unrelenting force. Yet the Russians held out. On September 17, 1941 the Germans claimed to be "in plain sight" of Leningrad's center; in April of the following year, when von Leeb was relieved of his command, the city was still undefeated.

With von Leeb out of the way—the "strain" was believed to be "too much for his health"—von Küchler took over the command at the Leningrad Front. All during the spring and summer of 1942 much praise was bestowed upon him by the German press for his achievements in "destroying" the Red Armies attempting to save the city. But the winter of that same year saw the siege of Leningrad brought to an end. The Russians, under General Kiril Meretzkov, regained enough strength to free the city. Despite his lack of success in capturing the city of Leningrad, von Küchler was then given the command of the army group of the north German forces in Russia.

Von Küchler, though "a thorough-going Prussian by birth and mentality, has adopted a curiously un-Prussian untidiness in his personal appearance." He does, however, wear a monocle. "Of medium height, he has the regulation ramrod carriage, a hard face, and thin hair." In German military circles he has won for himself the nickname of "Dunkerque," as a tribute to his achievements there, and von Küchler is reported to be proud of his nickname.

KUNG, H(SIANG) H(SI) (kung hshē-äng hshē) 1881- Chinese Government official; industrialist

Address: b. c/o Ministry of Finance, Chungking, China

H. H. Kung, China's Minister of Finance since 1933, is truly a member of China's ruling family. Married to Eling ("Pleasant") Soong, he is the brother-in-law of the father of the Chinese revolution, the late Dr. Sun Yat-sen, of Chiang Kai-shek ['40], and of Foreign Minister T. V. Soong ['41]. He himself is the successful owner of private firms, the promoter of several industrial enterprises, and his wife is wealthy in her own right, a representative of the powerful commercial class of China. "Over Dr. Kung's head," Robert Neville wrote in 1941, "has been raging for years a bitter controversy. One hears it charged that he represents the old and bad of China, all the backwardness that has made the country a paradise of unproductive middlemen. It is said that there is great jealousy between him and his brother-in-law, T. V. Soong, the arranger of loans. But Dr. Kung has his own partisans who will tell you that without him China could never have gained the support of its bankers. Certainly he has one intense partisan: Generalissimo Chiang Kai-shek." Freda Utley once claimed that although Kung "has been accused of venality, or of turning a blind eye to the venality of his close associates," his old-style Chinese methods of running the finances of China kept his Finance Ministry more completely under Chiang's control than if Western methods had been used. "Kung manages to finance the War by seeing to it that the squeezers are squeezed."

K'ung Hsiang-hsi (H. H. Kung is the English rendition of his name, which Dr. Kung prefers) was born in T'aiku, Shansi, a province which he calls the "Wall Street of China," in 1881. Member of a prominent family, in 1901, after the Boxer Rebellion, he was sent to America by Viceroy Li Hung-chang. He became a Christian, and received his B. A. degree from Oberlin in 1906 and his M. A. from Yale the following year. He then returned to Shansi, where he established the Oberlin Shansi Memorial College as an affiliated institute of his Alma Mater, and he was elected president of the college. (He remained its president until 1932, when he became honorary president.)

Himself on the directorate of many banks, young Kung participated in the revolution of 1911 as civil and military head of the Taikuhsien district in Shansi, and he kept that banking center in order. After the establishment of the Republic he served for years as adviser to General Yen Hsi-shan, then Governor of Shansi. He was particularly interested in education and in road construction. In June 1922 he served as a member of the Joint Sino-Japanese Commission to settle the details for the rendition of Shantung to China, and he was chief of the Industrial Department of the Shantung Rehabilitation Commission until its conclusion, when he was appointed resident director of the Sino-Russian negotiations.

When Sun Yat-sen set up a military government in Canton, H. H. Kung became finance commissioner of the Provincial Government of Kwantung, holding concurrently the office of Minister of Finance as well as that of Minister of Industry of the Nationalist Government. A member of the Kuomintang Right Wing, a successful dealer in coal and pig iron who was known as a friend of Britain and of America, when the Nationalist Government was formally inaugurated in Nanking he became its first Minister of Industry, Commerce, and Labor. He held this office until December 1930. During this time he put forward an industrial program for the New China which included: (1) the formulation and promulgation of industrial and commercial laws and regulations; (2) the compilation of commercial and industrial statistics; (3) the standardization of weights and measures; (4) the promotion of home industries; (5) the promotion of harmony between capital and labor; (6) the welfare of the laboring class; (7) foreign cooperation, or the employment of foreign capital and foreign ability. (In 1927 Chiang had made his peace with the foreign bankers, and had broken definitely with the Left.)

In December 1930 the Ministries of Industry, Commerce, Labor, Agriculture, and Mining were amalgamated into the Ministry of Industries, of which Dr. Kung was made head. In 1931 he became a member of the Kuomintang Central Executive Committee, and the following year he resigned as Minister of Industries to tour Europe and the United States as special industrial commissioner of the National Government, not returning to China until 1933. While in the United States he reportedly told Thomas W. Lamont '40 that if he ever had power in the Government he would do his best to settle all of China's outstanding foreign obligations.

On April 15, 1933, at a time when the breakdown of China's rural economy was the main problem, Kung assumed a new post as governor of the Central Bank of China, succeeding T. V. Soong. Soong having quarreled with Chiang and resigned, in November 1933 Kung succeeded him as Minister of Finance also. Commentators have speculated on the story behind Soong's resignation from this post and Kung's replacing him. Some connected Soong's resignation with the foreign policy of the Government, which at the time was one of appeasing Japan and carrying on civil war against the Communists. Others maintained that Soong's resignation was due mainly to his insistence on a balanced budget at a time when the Administration and military leaders felt that the anti-Communist campaigns were of primary importance to the nation.

Concurrently vice-president of the Executive Yuan, as Finance Minister Dr. Kung found many problems facing him. Most important, it seemed to him, were adjustment of tax rates, the institution of an income tax, the simplification of tax procedures, the opening up of revenue sources, the centralization of fiscal control. He consolidated domestic loans, and he kept his word to Lamont by settling foreign obligations such as the Tientsin-Pukow, Hukuang, and other railroad loans, and the Pacific Development Corporation loan. In 1935 he severed China's currency from the silver standard and announced the plan to have foreign banks give up their silver in exchange for bank notes.

DR. H. H. KUNG

Dr. Kung blamed Governmental expenditures in fighting "communist-bandits" in North China for China's financial difficulties. At the same time he found these expenditures necessary. Late in 1936, when Chiang Kai-shek was kidnapped by the "Young Marshal" at Sian in an attempt to force him to turn his fighting energies against the Japanese and when Kung became acting president of the Executive Yuan, he voiced the Government's determination to uphold "law and discipline in dealing with the rebels." At a time when the Japanese Foreign Minister was telling the Chinese Ambassador that in event of a compromise between Sian and Nanking the Japanese Government would not be able to maintain its "benevolent wait-and-see attitude," Kung not only promised his people that there would be no such compromise, but on December 17, 1936, speaking over the radio, announced that the Government had "given an order for a punitive expedition in order that the revolt may be nipped in the bud." The intervention of Madame Chiang Kai-shek '40 and of W. H. Donald forestalled this move, and the Sian incident resulted in a new policy on the part of the Generalissimo, marking the beginning of Chinese unity against Japan. As late as June 1937, on the eve of the Sino-Japanese War, Dr. Kung was, nevertheless, announcing that "during the past few months certain signs have foreshadowed an improved attitude toward China on the part of certain broadminded Japanese statesmen."

When he made this last statement Dr. Kung was outside the country. In May 1937 he had gone to England as China's delegate to the coronation of George VI '42, and he then swung through Germany, Austria, Switzerland, Czechoslovakia, Italy, France, and Belgium, in a three weeks' tour of Europe's capitals. He received a cordial reception everywhere, was honored and decorated by the Kings of Italy and Belgium and by the President of France,

KUNG, H. H.—*Continued*

and had a long conversation with Hitler '42, who persuaded several unnamed German industrialists to produce 100,000 reichsmarks for a fund to help Chinese students visit Germany. At a banquet given for Dr. Kung by Dr. Hjalmar Schacht the Chinese Minister of Finance announced that his journey to Germany was a special pleasure because he knew the extremely friendly feelings of the German people toward the Chinese, who were as determined to follow Sun Yat-sen's program as Germany was to follow the will of one man; indeed, China considered Germany her closest friend. Yet in spite of an honorary Doctor of Engineering Degree conferred on him by the Berlin Technical Academy and an autographed photo presented to him by Hitler himself, when the Führer hinted that Germany would like to export machinery and other goods to China if Kung would float another international loan to pay for them, the hardheaded Chinese Minister confided that China was interested only in commercial credits.

Late in June 1937 Dr. Kung arrived in New York, where he was entertained by his old friend Thomas Lamont. He received an honorary LL. D. from Yale University as a "leading statesman in his own country and one who has contributed to the establishment of peace and order in the sister republic of China" before going on to Washington, where on June 29 he was received by President Roosevelt '42. While in Washington he also had conferences with Henry Morgenthau '40, Jesse Jones '40, and other government officials. At the time one of China's chief financial problems was to finance the five-year plan of railway building inaugurated in 1938. China had only about 6,000 miles of line, and the inferiority of her transport systems was a major factor in retarding the nation's progress. The program sought to add 1,000 miles of line annually, but the growth of trackage caused a shortage of rolling stock. In Washington Dr. Kung made a bargain whereby China would get twenty American locomotives and equipment costing $1,500,000, the United States Export-Import Bank assuming half the credits. Later, arrangements were made for American silver purchases from China, and in December 1938 a $25,000,000 credit from the Export-Import Bank was extended. Great Britain also extended export credits to China as well as cooperating with Chinese banks in the creation of a joint Currency Stabilization Fund of ten million pounds.

It is not with foreign loans, but with the establishment of the Chinese cooperatives that Dr. Kung's name is most frequently associated, however. By 1938 much of China had been occupied by the Japanese. A plan for mobile, semi-mobile, and immobile industrial cooperatives to be built in China's interior was conceived by Rewi Alley '43 and some of his friends. Workers would be given needed financial help from relief funds and low-interest government loans, protected against corrupt political control, and allowed to buy over their own plants while learning to operate them democratically. The British Ambassador, Sir Archibald Clark Kerr '42, presented the plan to Generalissimo and Madame Chiang Kai-shek and to Dr. Kung, who agreed to try it out, and in July 1938 the Committee for Chinese Cooperatives was set up by the Chinese Government. The first loans for starting an industry were made from national relief funds earmarked for experiment by Kung as Finance Minister and chairman of the National Relief Commission, and "Indusco" was made responsible only to Kung, since it had refused to become a bureau under the Kuomintang. This made it possible to develop as a democratic movement, relatively independent of party patronage. Edgar Snow '41 says that only in the summer of 1940, when the closing of the Burma Road immobilized many Government schemes based on imports of foreign machinery and Japanese air raids wrecked much of the new industrial concentration near Chungking was the strategy of the Indusco plan—a constructive technique of "guerrilla industry"—fully vindicated.

In January 1941, when interviewed by *PM* correspondent Robert Neville, Dr. Kung showed himself definitely optimistic. The United States had recently lent China $100,000,000, half of it to bolster her skidding currency; Lauchlin Currie '41 had just been sent to study the problem of Chinese inflation; and Kung found inflation a natural war phenomenon, nothing to worry about—the coolie, he said, was actually getting his wages increased. What is more, he announced that China was financing about one-fourth of her war effort out of revenue, a good record when compared with that of other countries at war. By 1943, however, the problem was considerably more serious on the financial and economic front. The Government had let prices rise for revenue, then had set open-market ceilings which had little effect in many localities. During five years of war the cost of living index had skyrocketed, and black markets were flourishing everywhere. There were great shortages of food as well as of clothing and transportation, and despite widespread famine and near-starvation, China was not getting any food from the United Nations.

The *Literary Digest* in October 1934 described China's Minister of Finance as "one of the republic's supremely comfortable-looking men, broad-visaged, benevolent, suggesting, in his gold-mounted spectacles, a high-grade professor of the less coldly intellectual, the more human type. His hair is thinning slightly, and brownish, but the line of mustache covering half his lip is black." Robert Neville described him more recently as "a short, stocky man who looks less like a Chinese than any official I met. I could not help but compare his appearance to that of the Reverend Frank N. D. Buchman '40." Dr. Kung is said to be a direct descendant of Confucius. Quite unlike that ancient philosopher, however, he smokes Chesterfields, is a speaker and writer of classic English, and owns a luxurious summer home to the south of Chungking, a spacious house hidden away in the trees.

KUNITZ, STANLEY J(ASSPON) (kū'-nits) July 29, 1905- Poet; editor

Address: h. New Hope, Pa.

In September 1941 Rolfe Humphries, writing in *The Nation*, included Stanley Kunitz' name in a list of sixteen poets which he considered superior to the list of Pulitzer Prize winners during the years 1922 to 1941. Kunitz, who in 1941 was also the winner of *Poetry's* Oscar Blumenthal Prize for Poetry, was inducted into the United States Army as a private in January 1943. He writes:

"One is so anonymous and, in the beginning at least, so lost in this vast Army of the United States into the ranks of which I have just stepped as another private among millions that it seems somehow an act of supererogation for me at this moment to hang a personal history on to my identification tag. But it is not often that one has the opportunity to write one's own epitaph, to scrutinize as from a distance that life so painfully created, so dear and fiercely defended.

"I was born in Worcester, Massachusetts on July 29, 1905, only a few weeks after my father, Solomon Kunitz, a garment manufacturer, had committed suicide at thirty-eight, leaving the prosperous business established by him and my mother in bankruptcy as the result of an associate's peculations. Of my father I know almost nothing except that he was a freethinker and a Mason who left behind an extensive collection of good books, in which I soon began passionately to burrow.

"Almost immediately after my birth my mother, Yetta Helen (Jasspon) Kunitz, an intense, indomitable person of great vigor and natural untutored intelligence, who had come to this country from Russia as a young woman to work in the sweatshops of New York as a sewing-machine operator, opened a dry-goods store in Worcester . . . in order to support her three children and to pay off, year by year, the debts resulting from the failure of the Parisian Wrapper Company. Within a short time she had installed a sewing machine at the rear of the store, on which she made children's dresses, and soon was a manufacturer again on a small scale, employing half a dozen girls of the neighborhood. She had little time to give her children during these struggling years. When I was not in her charge at the store I was attended at home by my sisters, who were respectively three and six years older than I, and later by a polyglot succession of servants. Both my sisters have died in recent years. My mother, as energetic as ever in her late 70's, lives in Tarrytown, New York, where she is an active Red Cross worker.

"It may be worth noting that, according to tradition, my mother's maiden name—which is also my middle name—goes back to the time of the Spanish Inquisition when her forebears, having been dispersed into central Europe, would reply to queries on their origin, 'I-Spain'—hence 'Jasspon.' I sometimes toy with the notion that I am a reversion, in temperament and physique, to my Spanish ancestors, with an undeniable affinity for the sun and for the warm people of the south. As Couperus said, 'I have a tropic heart.'

"To get back to my story—when I was eight my mother married again. Of all the men I have known my stepfather, Mark Dine, was the gentlest. . . I felt instinctively, from the beginning of our relationship, that I was in spirit his true and only son—a sentiment that he reciprocated. I never knew him other than kind. When I want to think of a good man, I think of 'Mr. Dine,' and when I say his name it is with undying gratitude for the sweetness and the warmth he brought into my life during the six short years we were together. I was fourteen when he died suddenly of a heart attack.

George Whyte Scott

STANLEY J. KUNITZ

"Although I was the child of Russian-Jewish parents and heard a foreign accent and frequently a foreign language in my home and in my neighborhood, I early became enamored of 'the great and noble English tongue,' collecting words as other boys collected stamps and marbles, and resolving to make myself master of this beautiful instrument, to use it truly and purely. . . In the public schools and in the public library of Worcester—from which I regularly drew ten books a week—I began my education. At Classical High School I was editor of the school magazine and class valedictorian, won prizes in debating and declaiming, and was given the Faculty Award, a copy of *Bartlett's Quotations*, 'for scholarship, character, and power of leadership.' . . Although I was a delicate child, particularly subject to respiratory diseases, I had a keen competitive instinct—which I have retained—and was adept at games, becoming No. 1 man on the high school tennis team as well as public parks finalist, and playing shortstop on an un-

KUNITZ, STANLEY J.—*Continued*

defeated amateur baseball team. (I still play tennis—not in the Army, however—and in recent years have won championships in club tournaments. I also claim the Thursday-night championship in darts at Brad Ledger's Inn at Lambertville, New Jersey!)

"In my family it was taken for granted that I was the one to be given a higher education, and that Harvard was to be my college. Business was evidently not my dish, but my mother and most of my teachers had the curious and, I am sure, utterly mistaken notion that I would make a good lawyer. Medicine attracted me more, as it still does, but seemed out of the question from the financial standpoint. I entered Harvard in 1922 on a generous scholarship, which was renewed annually until the completion of my studies. There, majoring in English, I quietly immersed myself in my books and had little to do with campus life or the social activities of Cambridge and Boston. In my junior year I took a course in composition under visiting professor Robert Gay, to whom I one day submitted a short theme which elicited the comment, 'Intense. Vivid imagery. Why don't you write poetry?' Thereupon I did, and the needle of my life, trembling, pointed north.

"As a junior I was elected to Phi Beta Kappa, and the next year was awarded the Lloyd McKim Garrison Medal for Poetry. I was graduated (B. A. 1926) *summa cum laude*, with Highest Honors in English, and returned for a year of graduate study under Babbitt and Lowes (M. A. 1927).

"While I was at college my mother's over-expanded manufacturing business collapsed in the post-War depression, and . . . after working one summer as a butcher-boy—my first real job—I sent samples of my writing to the Worcester *Telegram* and was promptly offered a reporter's job by Captain Andrews, the editor. My subsequent summers on the *Telegram* I consider as part, and not the least useful part, of my Harvard education. After receiving my Master's Degree I returned to the *Telegram* as Sunday feature writer while completing a novel which, praise be, I heroically destroyed.

"The Sacco-Vanzetti case, on which I was given special assignments, proved another turning point in my life, arousing in me a passion for justice which remains inseparable from my private conscience. (The boys on the *Telegram* used to call me 'Sacco.') I saw a good deal of Judge Webster Thayer, and what I saw did not, in my estimation, elevate him or the law he represented. After the executions I came to New York to persuade some publisher to issue the letters written in prison by the two condemned men, but could find no publisher who wished or dared to touch them. (Some time later, when the conviction of a miscarriage of justice had become all but universal, the letters were finally printed, with Eugene Lyons as editor.)

"In New York in 1927 I went to work for The H. W. Wilson '41 Company, publishers to the library world, with whom I remained until my induction into the Army. As editor of the *Wilson Library Bulletin* I saw that publication grow from a small house organ, 'published now and then,' to its present position as the most widely read and quoted magazine of the profession. For The Wilson Company I edited, under the pseudonym 'Dilly Tante,' a volume of biographical sketches called *Living Authors* (1931)." Stanley Kunitz had adopted the pseudonym in January 1928, when his column 'Dilly Tante Observes' first appeared in *Wilson Bulletin*. In December 1933 the column was retitled 'The Roving Eye,' and signed with the initials. S. J. K. His Army activities prevented his continuing, as he had planned, this column on contemporary affairs and library news, which was followed with a great deal of interest by librarians all over the country. He is now editor of a weekly mimeographed Army news magazine, *Ten Minute Break*.

"Living Authors," Kunitz goes on to say, "achieved surprising popularity, and was followed by other books of the same order, primarily for use in libraries and schools, edited in association with Howard Haycraft '42, vice-president of The H. W. Wilson Company. These comprise: *Authors Today and Yesterday* (1933); *The Junior Book of Authors* (1934); *British Authors of the Nineteenth Century* (1936); *American Authors: 1600-1900* (1938); and *Twentieth Century Authors* (1942). This last volume, which appeared just before my induction and at the end of four years of cooperative effort—a tome containing sketches of some 1,850 modern world authors—is massive enough to serve as a monument to my Wilson career. If any bigger book is ever to be produced, I hope to be spared the pains.

"I have religiously refrained from becoming a New Yorker and have done most of my editorial work *in absentia* in the country. During the summer of 1929 I wrote poetry at Yaddo, Saratoga Springs; at the time of the crash and for several months thereafter (1929-30) I was in France and Italy; on my return to the United States in 1930 I married Helen Pearce and bought an old farm on Wormwood Hill, Mansfield Centre, Connecticut, and lived there five years. My first marriage ended in divorce in 1937, and in 1939 I married Eleanor Evans, a Californian, formerly of the stage, who has brought me more happiness than any mere mortal deserves. In peacetime we live in an early eighteenth-century stone house at the foot of Bowman's Hill Tower, below New Hope, Pennsylvania, to which I hope to return. My garden at New Hope has been a source of great labor and great joy to me.

"My primary interest is still in poetry and in the making of a world in which poetry and the other good things of life, including bread and butter, may be enjoyed in peace and freedom by everyone. When I am angry with myself, as I often am, for not having written more, I tend to appease my conscience by noting that most of my time has been occupied with earning a living and that I am not by nature one of those poets blessed with the fertility of wild mustard. On the contrary, I work slowly and carefully, believing that every poem must be loaded with a full charge of experience. But no explanation satisfies me, and I still wish that I had somehow managed my life a little differently so as to have had more undivided opportunity for the practice of my vocation. My object, as a poet, is to express myself at my deepest level of sympathy and at the widest range of my consciousness. A volume of my selected poems is now ready for publication.

"I am strongly anti-Fascist and anti-reactionary. I believe in man and in his works, and I construe progress as the emancipation of his imprisoned personality. I have faith that ultimately, out of this convulsion of war, and perhaps even after greater disorders, a free world society shall yet be born, imperfect but wonderfully desirable, toward which, through the long waste of souls and civilizations, the imagination of man perpetually strives."

Much of Stanley Kunitz' work, including criticism, has been published in *Poetry: a Magazine of Verse,* which, he says, "has always been good to me," and which in 1941 awarded him its Oscar Blumenthal Prize for lyric poetry. Other poems have appeared in *The Nation, Commonweal, New Republic, Saturday Review of Literature,* and *American Mercury.* His first volume of verse, *Intellectual Things,* was published in 1930 and was widely praised by critics. "Mr. Kunitz has been able to do what no one else has been able to do," wrote Genevieve Taggard, "and he has written with astonishing fullness and care. His poems embody something Mr. Eliot desired but could not attain all alone. They may be read, criticized, built into the mind, used, added to life." William Rose Benét called Kunitz a "poet born." "One can never mistake the accent that so rarely occurs," he commented. "Mr. Kunitz' is entirely his own, new and yet somehow as familiar as the whisper of our blood. It is a great accent, and his words sorcerize. One is in the presence of more than an unusual gift of expression and a passion for integral beauty. One is in the presence of a mind of remarkable subtlety, an imagination of remarkable range." And Ruth Benedict '41 wrote: "It is good to know that somewhere such poems as these are being written. It makes today seem a great affair to imagine it."

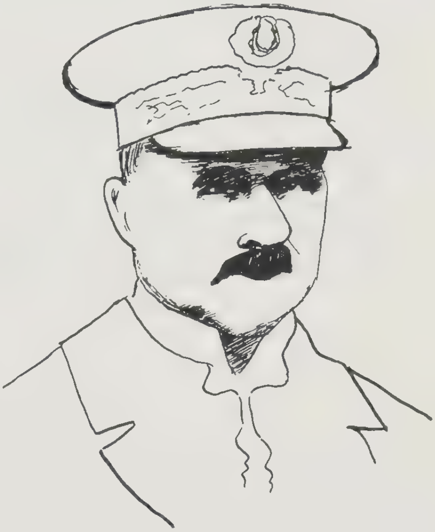
LA BORDE, JEAN (JOSEPH JULES NOEL) DE (lä bôrd zhän dė Nov. 29, 1878- French Naval Officer

Address: b. c/o Vichy Government, Vichy, France

When, late in 1942, Adolf Hitler '42 sent his troops to overrun all of France, he exempted one small corner of the country from the Nazi occupation. Toulon, where the French Fleet was stationed, remained free. This "generous impulse" on the part of Der Führer, according to the New York *Herald Tribune,* may indeed have sprung from his inherent magnanimity, but more probably "stemmed from the announcement by the French Fleet at Toulon that it would resist any aggression." About a fortnight later German troops swarmed into Toulon two hours before dawn. "Hitler had changed his mind. The French Fleet had not. A great explosion rocked the 26,000-ton battleship *Strasbourg,* and she keeled over on her side, a mass of smoke and flames. One by one, sixty-odd warships of the proud French Navy went to their deaths. With them went many of their officers and crew. There were three battleships, seven cruisers, a seaplane tender, twenty-five destroyers, and twenty-six submarines, sloops, and auxiliaries. Some vessels, slow in their suicide, fired on the Nazis to give themselves time for their own destruction. On shore, fuel and ammunition stores were blown up and coastal batteries were wrecked. It was the greatest mass scuttling since the Germans opened the sea cocks of their captured fleet in Scapa Flow in 1919." Hitler immediately placed Field Marshal Karl von Rundstedt '41 in charge of French territory and demobilized what remained of the French Army and Navy. "The last pretense of French freedom disappeared," continued the *Herald Tribune,* "but in the final hours the courage of France flamed up amid the wreckage of the fleet strewn over Toulon harbor."



Evelyn Smith
ADM. JEAN DE LA BORDE

It was later denied by certain sources that any members of the crews actually went down with their ships. Radio's Raymond Gram Swing '40 also doubted that the extent of the damage was as great as had been stated, and declared that "at least part of the Fleet was found by air reconnaissance to be afloat without signs of damage." According to *Time* Magazine, however, "most reliable sources in London said that, while a few vessels might have escaped, all available information showed that the battleship *Strasbourg* and the cruisers *Algérie, Dupleix,* and *Colbert* had been sunk, that most of the other fifty-eight warships in Toulon on that shattering dawn had at least been seriously damaged." Pertinax '40 questions Admiral de la Borde's failure to endeavor to

LA BORDE, JEAN DE—*Continued*

take his ships out to sea rather than scuttle them, and wonders whether it were "of his own accord that he made Toulon the graveyard of the French Navy." Other sources, however, maintain that the French Fleet was trapped in the harbor by German mines.

The man "who would scuttle his ships rather than let them fall to the Nazis," Admiral Jean de la Borde, was born on November 29, 1878. Educated in the French naval schools, he entered the naval service in 1895, before his seventeenth birthday. Three years later (October 5, 1898) he became a midshipman of the 1st class. In the fall of 1900 he was appointed an ensign, and in September 1908 a lieutenant. On duty in Thailand in 1912, de la Borde decided to learn to fly on his own initiative. From then on he became vitally interested in aviation in the French Navy and has stood out determinedly ever since for naval aviation as part of the Navy and not as a centralized military body.

When the First World War started in 1914 de la Borde was on duty at the French naval air station in Dunkerque, covering the coast down to the Spanish border. "With the outbreak of hostilities," according to the New York *Times*, "he carried out bombing raids as the Germans came through Belgium. The French then threw their Navy into stopping the Germans' Channel drive." De la Borde "knew the Germans, whom he referred to as Huns, and had no use for them." In 1917 de la Borde was promoted to the rank of captain of a frigate (*capitaine de frégate*). During the course of the War he was in naval aviation as commander, and, for his distinguished services, he was made a member of the Légion d'Honneur and received the Croix de Guerre and the Military Medal.

After the War de la Borde became a ship captain (*capitaine de vaisseau*) in 1923, and was appointed captain and head of French naval aviation; later he commanded the only French aircraft carrier. Subsequently he was sent to Africa as commandant of an air base there. In the summer of 1928 he was promoted to rear admiral, and four years later (October 4, 1932) he assumed the rank of vice-admiral.

"But for the dexterous handling of politicians by Admiral François Darlan '41," alleges Pertinax, "Admiral de la Borde would have become long ago the 'admiral of the fleet,' the supreme commander of the Navy." In charge of the Atlantic Fleet from 1937 to 1938, de la Borde participated in joint maneuvers with British squadrons, and he was held in high esteem by the British Admiralty. The French Yearbook for 1939, however, listed him as still a vice-admiral; and, shortly after the Munich Pact, Admiral Darlan hastened to bury him in "some bureaucratic post" and place Admiral Gensoul, "a second-rate general officer," in charge of the Atlantic Fleet, the fate of which he sealed at Mers-el-Kebir in July 1940. In 1941 Darlan again passed over de la Borde when he had to appoint a new commander in chief.

After the fall of France in 1940 de la Borde aligned himself with Marshal Pétain '40, entertained the Marshal at Toulon in the winter of that year, after the battle of Oran, in which many French naval units were destroyed by the British, and took part in a pledge of loyalty to the French Chief of State which he renewed after the British-American invasion of North Africa. De la Borde, however, also pledged that he would resist any attempt on the part of the Germans to capture the French Home Fleet at Toulon. Anticipating a possible German attack for months in advance, it is said that he made preparations for the mass fleet suicide and "inspected personally the setting of explosives and other arrangements aboard every major unit in the port, where some sixty-odd ships were anchored." The Admiral was to have retired on November 14, 1942, but retained his post at the express desire of Marshal Pétain.

The Allied landing in North Africa (in November 1942) put all French crew members on the alert. The Germans made a preliminary attempt to take the Fleet, but their numbers were comparatively small, and, at the refusal of the French to surrender, they retired and informed Berlin of the development. Berlin then issued a statement "congratulating" Admiral de la Borde on his decision to defend Toulon against aggression. Shortly afterward, however, a stronger German force occupied Toulon. When the troops approached the first line, two days before de la Borde's birthday, the Admiral sent a message ordering all ship captains to scuttle their craft.

"Smoke still rises from the wreckage in Toulon harbor," wrote a *Times* correspondent on November 30, "where the French Fleet was scuttled last Friday. German sentries prevent access to the quays. Spars and other debris float on oily waters, cranes stand as gaunt skeletons, gasoline tanks as black masses. Masts and fighting tops jutting above the surface of the water indicate the resting places of battleships and cruisers in this desolate cemetery of a proud Navy."

The Fleet was scuttled in an average of thirty-nine feet of water, but most of the ships keeled over upon reaching bottom. The superstructure of some of the larger ships still showed in the harbor, but experts said that it would take at least two years for the Germans to recondition them. Residents of Toulon agreed that there must have been relatively large casualties on both sides, because, among other factors, of the prolonged machine-gun fire from the French coast artillery, which in France is under the Navy instead of under the Army, and, consequently, was under the orders of Admiral de la Borde. It was also reported that a large number of officers and men went down with their ships, but other sources denied this. At first it was thought that de la Borde himself had gone to his death on either the *Dunkerque* or the *Strasbourg*, French battleships, but this report proved untrue. The fate of Admiral de la Borde, however, is not known. Later reports have it either that he is in a French internment camp as a civilian, or that he has been taken to Germany. Vichy announced that he had been released by the Germans at the request of the Vichy Government, which feared the effects of the arrest of such a popular hero upon the French people. Late in December 1942 the London radio reported that Marshal Pétain decorated de la Borde, but whether the Admiral was present at the ceremony, or whether the decoration was given him *in absentia*, was not stated. Certain sources found the fact that de la Borde was decorated by Marshal Pétain, who is an Axis prisoner, a suspicious circumstance.

A strict disciplinarian, de la Borde was noted for his courage. "Upon first meeting Admiral de la Borde," a friend of his said, "one was struck by his limp handshake which gave the impression that his wrist was broken, but in brief conversation the steel character of the man was paramount." De la Borde is over six feet tall, slim, and has blue eyes and blond coloring.

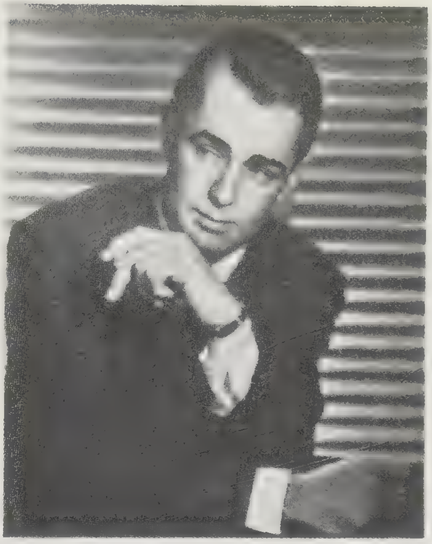
LADD, ALAN (WALBRIDGE) Sept. 3, 1913- Film actor

Address: c/o Paramount Pictures, Inc, 5451 Marathon St, Hollywood, Calif.



ALAN LADD

"He is," say his press agents, "cold . . . calm . . . and a killer. His eyes seem to pierce you, go right through you like two icicles. Sometimes he smiles, but it's not a gay smile—it's cold just as he is. And yet, there's something about him that is tremendously attractive to all . . . girls." "He" is Alan Ladd, "the hottest new actor to hit pictures since Clark Gable."

Young Mr. Ladd is no "brilliant discovery," snatched either from the Broadway stage or from behind a drugstore counter in Backwash, Tennessee (although he did actually work as a "soda jerk" for a short time). He is a child of Hollywood, and if any one discovered him it was himself, for, like most of the personable youth of the cinema city, his ambition was to get into films.

Alan Walbridge Ladd was born on September 3, 1913 in Hot Springs, Arkansas. When he was three, his father, Alan Ladd, an auditor, died, and his mother, Ina (Rawley) Ladd, married a house painter. They moved to California when Alan was seven, first living at Alhambra, then North Hollywood. The Ladds were not very prosperous, and the boy used to work after school—selling newspapers, picking apricots, jerking sodas, working as a lifeguard, selling adding machines. He attended North Hollywood High School, where "he set up some interscholastic swimming and high-diving records. In 1931 he was the diving champion of the West Coast. At the ceremonies incident upon his graduation from North Hollywood High School in 1933, Ladd played one of the major roles in the class production of the *Mikado*—Ko-ko, the Lord High Executioner, according to one source; Nanki-Poo, the romantic lead, according to another. In the light of Ladd's subsequent career as an actor, either would have been highly appropriate. The youth was immediately leaped upon with cries of joy by talent scouts from Universal Studios, and thrust into a group of "discoveries," from which the studio hoped, by proper training, "to siphon a brace of real actors." After two weeks Universal decided "to weed out its discoveries," and gardened so thoroughly that only three survived—Ladd, alas, not among them. Another young man named Tyrone Power also was dropped in the shuffle.

Ladd then worked for a time in the advertising department of the San Fernando Valley *Sun-Record*, but, after having risen by his industry and perseverance to be advertising manager of the paper, decided that journalism was not his real *métier*. Still desirous of being an actor, the young man decided to crash the studios "the hard way." For two years he worked as a "grip" (a laborer in the motion-picture industry), but no director paused to give him a fat contract, no feminine star swooned away in rapture and demanded him for her next leading man; no one, in short, noticed him. His "brilliant maneuver" had failed to work. Moreover, he lacked even the opportunity to observe motion-picture technique, for "they put me to work in the rafters, rigging up lights. I never did see much of what went on below!"

His head bloody but unbowed, Ladd retired from his manual labor, and entered the Bard Dramatic School with money enough to pay his tuition for only one term. At the school he was promptly "discovered" by "a lyric MGM official, who hailed him as 'out of this world.' He [Ladd] was practically in when a change in studio policies found the lyric one out in the cold. That same day an RKO rajah began to make enthusiastic noises in which the word 'contract' was clearly audible. Ladd was putting on his best tie when the telephone rang. A shake-up had hit RKO, and another sponsor was ex-officio."

By now Ladd not only seemed no nearer getting into pictures than he ever was, but he also appeared to have developed into something of a jinx. In addition, he was penniless. He tried radio, therefore, and after failing to make a dent in the larger networks, "wound up [in 1936] as a one-man variety show on KFWB, an aggressive little local station. He tarried there three years doing twenty shows a week. Once a sponsor turned up, promised Ladd the

LADD, ALAN—*Continued*

top spot on a program, changed his mind at the last minute, and gave the spot to Jim Ameche, Don's brother."

At a date verging upon ten years after Ladd's initial "discovery," an actor's agent and former actress who had been very popular in silent films, Sue Carol (her real name is Evelyn Lederer), was listening to the radio, and heard a play involving a sixty-year-old man and his son. Deciding that the two actors might possibly have screen potentialities, she telephoned the local station, and asked the switchboard operator to have the actors playing father and son call upon her at 10:00 the following morning.

"I'll be glad to, Miss Carol, only the same actor is playing both parts. His name is Alan Ladd."

"Better make that 9:00," Miss Carol replied.

Miss Carol had no idea whether the actor would prove to be the age of the father, the age of the son, or a happy medium. At 9:00 young Ladd appeared. "His eyes," she said later, "were deep and unfathomable—an actor's eyes." Describing her first impression more fully in *Photoplay* Magazine, she wrote: "He was wearing a long white trench coat. He was quite sunburned and his hair had been bleached blond by the sun. Yet his eyebrows and his eyelashes were pitch-black over level green eyes."

"I asked him," wrote Miss Carol, "if he would sign a contract with me. He said he didn't know whether he wanted to be in pictures. He had tried to get into pictures and finally decided that pictures were not good for him, that he should stick to radio. And Columbia Broadcasting Company had offered to sign him up. But then he said, 'May I let you know in ten days?' Ten days afterward he was back. He told me later that he sat down intending to say, 'I'm signing with Columbia,' and to explain why. But instead he said, 'Where's your contract?' I don't know what made him change his mind. Just impulse, I think. He is always impulsive."

Miss Carol "churned about the town, yipping about a new white hope named Alan Ladd." She finally persuaded Frank Lloyd to cast her protégé as the seasick voyager in *Rulers of the Sea* (1939). "It wasn't much, but Ladd made it shine like the North Star, and was cited by critics for the best incidental performance of the month." The actor, however, was unable to get any parts subsequently except in "B" pictures. "I tried for better roles over and over again. But they kept saying I was too young or too old or too slight or too blond," he said. "Or else my name lacked the prestige for the part. There was always something.

"Finally we heard of a role in RKO's *Joan of Paris*, an R. A. F. pilot with a Scottish accent and a nice death scene. I learned how to roll my 'r's'. They switched the flyer's native heath to Wales. I learned how the Welsh talk. Then they had him hail from Lancashire. Lancashire dialect is thick and tricky, but I took a deep breath and studied that, too. I started off for the test, prepared to die in a repertoire of lingos. But by the time I got there, all they wanted was a straight British accent. So I clipped my words and quietly passed away."

"Maybe," wrote John R. Franchey in the New York *Times*, "you remember the tearful scene in the Paris sewers where Ladd is dying and Thomas Mitchell is chanting 'The Lord is my Shepherd,' while the women in the audience dab fitfully at their eyes. . . After that it was a cinch." Paramount, with the part of the psychopathic killer in *This Gun for Hire* vacant, requested that Miss Carol "trundle her client over" for inspection. The director took one look at Ladd and said: "This is my man." After viewing the first day's rushes, the Paramount executives ran out in a body and signed Ladd to a contract. Shortly afterward, on March 15, 1942, the romantic story was brought to a climax when Miss Carol and Ladd were married in Mexico, with suitable mention in the press. Both had been married previously. Later Miss Carol sold a half-interest in her husband's contract to a rival agent for a reported $10,000. Her reason was, she says, that "I was very much embarrassed asking for anything for Alan. It was like asking for myself."

Ladd was a big success in *This Gun for Hire* (1942), for which his blond hair was dyed black—so big a success, in fact, that he has played a gangster ever since. "He seems to be a rather agreeable killer," the *New Yorker's* reviewer wrote, "his felt hat pulled down at a frivolous angle, his mouth only a trifle sullen. A different kind of mug, smooth and with even a parlor manner, he may start a vogue for a new species of melodrama—stories of nervous and gentle and sensitive gunmen, without a trace of human kindness anywhere about them."

In *The Glass Key* (1942), returning, with the approval of his admirers, to his original blond locks, Ladd played a gangster whose worst offense appeared to be talking out of the corner of his mouth, and who, consequently, redeemed himself with comparative ease, and was awarded Veronica Lake as a prize for good behavior. In *Lucky Jordan* (1943) he portrayed a slightly more criminal type of killer, but this gangster, seeing the evil of his ways in time, was pardoned by the Hays '43 Office, joined the Army, and lived to shovel dirt on his sergeant's feet. In *China* (1943) he was not exactly a killer, but a very, very "tough guy," so hardened indeed that he was able to wipe out his misdeeds only through a heroic death. In *Star-Spangled Rhythm* (1942) he had a tiny scene in which, true to type, he shot MacDonald Carey—with a bow and arrow.

Although Ladd's first success came from the expressive quivering of his mobile features in a lingering death agony (*Joan of Paris*, 1942), he has since barely been permitted to relax the muscles of his face into a cold smile, the "dead pan" being absolutely *comme il faut* for any self-respecting cinema gangster. Similarly, the voice which Miss Carol found "deep, rich, and full" has become the side-of-the-mouth monotone that, any motion-picture fan well knows, is the only modish speech for a killer. Although Ladd always combines romance with his criminal activities, he is customarily, as *Newsweek* puts it, in a "hard-to-get mood," and has to be wooed vigorously by such screen charmers as Veronica Lake, Helen Walker, and Loretta Young, before he succumbs to their blandishments. "Dames," said Ladd coyly in *Lucky Jordan*, "like me."

Bosley Crowther, cinema critic, indulging in the spring of 1943 (like the rest of the staff of the New York *Times*, which is too close to the Paramount Theatre) in much psychological speculation over the seemingly perverted theatrical tastes of modern youth, sought an explanation of Ladd's strange attraction for his fans. "Apparently it is his tight-lipped violence that his fans love—especially the kids—his neo-Chicago-gangster toughness combined with a touch of pathos. For the role which Mr. Ladd has been playing, beginning with *This Gun for Hire*, has been that of a youthful misfit—a sort of lost soul—who has to kill to live. In *This Gun for Hire* he was a killer because his childhood had been a nightmare; he even bore a scar on his noggin where his guardian had slugged him with an iron. And Paramount has carefully seen to it that he has borne that scar figuratively ever since.

"Now, we are not one to start looking for motes in the bright eyes of youth nor do we feel that evidence of a circumstantial nature proves a case. But there is this speculation about the strange popularity of Mr. Ladd: Is it that youngsters see in him some vague implication of themselves? That is—beyond the obvious romance attached to a handsome tough guy—do they see imaged in him their own insecurities, a sympathetic rebel against the problems and confusions of modern youth? And do they find vicarious pleasure in his recourse to violence? The old-fashioned gangster in movies has been passé for quite some time. But Mr. Ladd is a new sort of gangster—a moral gangster. There is despair in him."

Ladd's performance in *This Gun for Hire* was received with enthusiasm by the critics. "Alan Ladd," the *New Yorker*'s reviewer wrote, "has appeared in occasional parts hitherto, yet he can hardly be well known to many for so pathological and persuasive a performance as the one of the murdering mercenary he gives us here." *Commonweal's* critic, who had read the book on which the film was based, agreed for the most part, but was slightly disturbed by the fact that Ladd's prototype in the novel had a harelip, a deformity that had a great deal to do with his character, whereas Ladd's extreme good looks made the killer's "morbid loneliness" somewhat inexplicable. Ladd's performance in *The Glass Key* and *Lucky Jordan* were received with only a slight lessening of critical approbation (the latter picture was considered poor, but his performance was commended). By the time *China* appeared, however, critics were beginning to say that it was hard to tell whether Ladd was really a good actor or not, on the strength of one performance, four times repeated. Critical opinions were, moreover, divided. "Ladd, who seems to be the top glamour boy of the moment," wrote Howard Barnes in the New York *Herald Tribune*, "gives a solid and restrained performance." On the other hand, Bosley Crowther of the New York *Times* remarked that "Mr. Ladd consumes countless cigarets and gets into ludicrous postures in pretending to be a tough, dead-panned guy."

At home "the boyish specialist in mildly abnormal behavior" appears to be a model husband and father. He and Miss Carol have a baby girl, Alana Ladd, besides his son, Alan Ladd, Jr., and her daughter, both from previous marriages. In an article entitled "I Married a Killer," Miss Carol reveals the secret depths of her husband's character: "As a dancer Alan is wonderful. He has a swing in his dancing I've never seen before. But he will sit down to a rumba. He wants to dance the rumba, and strangely enough he can dance it, but he's not as good at a rumba as at other dances. And if Alan can't do something better than most people can, he won't do it at all when anyone's watching. If he likes to do something, he slaves at it till he's perfect. That's how he became such a magnificent diver and swimmer. He used to tie boards to his legs when he slept, to improve his diving form. He had a springboard under the garage and used to practice on that until he almost knocked down the building. . . He can play a fair game of golf or tennis, but if you were to ask him, 'Do you play golf?' or 'Do you play tennis?' he would say, 'No, I never play.' If he's only average at something, he won't admit that he can do it at all.

"He loves moving pictures. We go about five times a week. He likes double features and likes to sit through a program from beginning to end. Sometimes he'll see each picture twice, and he particularly enjoys cartoons. . . He reads every inch of the funny papers." Although "Blondie" and "Flash Gordon" are his favorites, he also likes "Superman."

His favorite sports are swimming and riding; his favorite recreation, dancing. He is a Christian Scientist. He is five feet ten inches tall and weighs 155 pounds.

Off-screen, Ladd seems to be rather different from the cold-voiced, "dead-pan" killer that he plays in the films. "You can always read Alan's emotions on his face," says his wife, "except when he is ribbing people. Then he has the deadest pan you ever saw in your life. . . He is awed when anyone of importance treats him, Alan Ladd, as if he were also important. . . He can't get used to the idea that he is now considered a celebrity. He gets a great thrill out of people's recognizing him and will stop to talk to anyone who tries to talk to him. He's flattered when people ask for his autograph."

In 1943 Ladd won a national poll as the most popular male star of that year. Matilda Trotter, the "renowned astrologist" of *Photoplay* Magazine, announced in March that Ladd was "definitely the man of the year. His popularity is not a fleeting thing. . . He is high-strung, intense, and inclined to drive himself beyond his endurance and must guard his health. . . During 1943 he is under splendid aspects for all creative work, particularly writing and acting." In January 1943, however, Ladd took a leave of absence from the screen when he was inducted into the Army Air Force. His only film appearance, while in the service, was a patriotic short, *Letter from a Friend*. Ladd received a med-

LADD, ALAN—*Continued*

ical discharge from the Army several months later and returned to the screen to play the lead in the picturization of the late Rachel Field's novel, *And Now Tomorrow.* He was also scheduled to appear in *The Rurales,* a story of the Obregon revolution in Mexico, and in *Two Years Before the Mast.*

LANG, FRITZ Dec. 5, 1890- Film director; producer

Address: h. Beverly-Wilshire Hotel, Beverly Hills, Calif.

The highest compliment one can bestow on a professional worker is to say that he is a novelist's novelist or a painter's painter. "Perhaps more than any other man in Hollywood today Lang is the director's director," wrote Lewis Jacobs in 1939 in *The Rise of the American Film.* By virtue of his first three films in Hollywood, Viennese-born director Fritz Lang "has become one of the country's most significant film makers." His motion pictures "are the work of an older craftsman who, despite his transplantation to a new country—or perhaps because of it—has reached out successfully for new powers of expression and social penetration. Lang has not only been steeped in the best traditions of the medium but contributed to those traditions himself even before his arrival on American shores," Jacobs went on to say. The late Douglas Fairbanks, Sr. '40, was so much impressed by the imaginative effects of Lang's first two films—*Destiny* and the *Nibelungen Saga*—that, in the early days of Hollywood, he attempted in some measure to copy them in *The Thief of Bagdad.* Other American directors and producers, impressed with the craftsmanship, technique, and architectural backgrounds of Lang's German-made films, have also used his work as a model.

Fritz Lang was born in Vienna on December 5, 1890, the son of an architect, Anton Lang, and of Paula (Schlesinger) Lang. His father wanted him to become an architect and sent him to the Volks-schule and later to a technical high school, the Realschule. Later Fritz studied at the Academy of Graphic Arts. The boy was not happy in the study of architecture and ran away from home, first to Munich to study art, then to Paris, and later he wandered practically all over the world—Asia Minor, the South Seas, Africa, China, Japan, Russia. During all this time he supported himself by painting post cards, selling little pictures, and drawing cartoons for newspapers. Caught in Paris in 1914 when the First World War broke out, he managed to escape by the last train to Vienna, where he became first a private and later a reserve officer in the Austrian Army. At the Front he saw hard fighting, was wounded three times, and was decorated four times.

Ill and discouraged, during the last year of the War he lay in a hospital bed and began writing short stories, screen plays, and ideas for screen plays. He sold some of them and he also appeared in a play put on by the Red Cross. Otis Ferguson, American film critic, puzzled by this early interest in motion pictures on Lang's part, says: "And here comes a factor that neither Lang nor any other of the old-line first-class men can explain... When the movies were just a clumsy, struggling art everywhere, there were men everywhere who knew somehow that this form was the work they wanted to do... So when the peace came and his last wound was healed up, when other intellectuals were spending their time being ... Bohemian, if nothing else, he went to where he could get his chance at making movies," Berlin, the film center of Germany. There the noted Erich Pommer, reorganizing the industry, discovered Lang's talent. He helped the young artist just as he had helped so many other German film workers who have since become notable in the industry.

Lang started at the bottom as a reader of motion-picture scripts, and progressed to scenario writer and director of films for the Decla Bioscop Company, which was later to affiliate with the German UFA. In 1920 he was married to Thea von Harbou, a well known German writer of sensational thrillers. She and Lang collaborated on planning and writing films, and she wrote novels based on a number of the films. Several of these works, notably *The Spy* and *The Girl in the Moon,* were translated into English.

As a director Lang used the camera to achieve remarkably fantastic and imaginative effects. "From the opening of his film career," says Paul Rotha, the British film (1931), "Lang has consistently associated himself with the flower of the technical accomplishment of German studios [one of his cameramen, Fritz Arno Wagner, was called the most skillful technician in Europe], and this policy has played a large part in his authority, in *Celluloid; the Film To-day* success. With the production of each of his films I have never failed to marvel at Lang's choice of theme, his flair for things on a big scale, and his remarkable fondness for ideas that, on account of their compelling imaginative qualities, are universal in appeal."

In 1921 Lang's first film, *Der Müde Tod* (The Weary Death), was produced and later shown in the United States as *Destiny*. At that period expressionism was a hallmark of the German film makers. Lang, as an expressionist, was not interested in man as an individual but only in man in general. Thus *Destiny* was woven around The Man; The Girl; Death, the Stranger; and The Prostitute. German film critics were not too kind to the film, but French critics praised it highly, finding in it the spirit of Dürer and Grünewald. This praise was re-echoed when, two years later, Lang produced the *Nibelungen Saga*, which was shown on two evenings, the first part titled *Siegfried* and the second *Kriemhild's Revenge*. (The whole film is also known as *Siegfried*.)

"Both *Destiny* and *Siegfried* were supreme examples of the German art film," says Rotha in 1930 in *The Film Till Now*. "They were entirely studio-made and in each the decorative values of the architecture was the binding force of the realization. . . For sheer pictorial beauty of structural architecture *Siegfried* has never been equalled, for no company could afford to spend money as did Decla-Bioscop in 1922 to 1923."

In between the romantic, slow, pageant-like *Destiny* and *Siegfried*, Fritz Lang made an entirely different kind of film, a quick-moving melodrama, *Dr. Mabuse, der Spieler*, or *Dr. Mabuse, the Gambler* (1922), which also ran two evenings. *Spione* (*The Spy*), an improved version of the earlier melodrama, was made in 1927 and 1928. *Dr. Mabuse* was a thriller involving "spies, gamblers, disguises, crooks, and police." Rotha found the film's use of psychoanalysis "ludicrous, but unfortunate as parts of this melodrama were, there is no doubt that Fritz Lang was feeling along the right lines." Lang says *Dr. Mabuse* grew out of the times. Germany in the post-War years was a place where every type of excess was encountered, and the film reflected the inflationary hysteria, the despair, and the vices of the times. The German public flocked to see the film as they did later to see *The Spy*, which was a tale of an international crook, complete with secret papers, a railway smash, complex disguises, and a street fight. Rotha called *The Spy* "splendid entertainment, superbly done," and spoke of the amazing technique of the film. For *The Spy* Lang had formed his own film company, after breaking with UFA.

Hal McAlpin

FRITZ LANG

In 1925, between *Dr. Mabuse* and *The Spy*, Lang came to the United States, stayed eight weeks in Hollywood, and then returned to Germany, saying that he was "unbelievably impressed" by American film making. While on the boat, waiting for the quarantine officers, he glimpsed the skyline and began to plan a film to be called *Metropolis*.

Metropolis (1926), a "vision of the future, combined the hugeness of *Siegfried* and *Destiny* with a modernism of outlook, but in spite of its collossal scale and courageous conception, it was not a proper outlet for Lang's creativeness," commented Rotha on the film. It was poorly cut for its British run and was not enthusiastically received in England, where H. G. Wells damned it as "quite the silliest film. . ." The French critics, Bardèche and Brasillach, in their *The History of Motion Pictures* (1938), felt, however, that the film had "an unbearable and terrifying vitality. Fundamentally *Metropolis* was the last gasp of expressionism, which is incorporated into a film not without beauty."

Frau im Mond (1928), which came after *The Spy*, ran in the United States as both *The Girl in the Moon* and *By Rocket to the Moon*. It was the last of the great silent films of Germany, for sound came in shortly after its appearance. French critics praised it highly; most British critics agreed with Rotha that the presentation was "truly wonderful and the material adequate for the making of a good film," but that the "actual rendering of this splendid material is quite uncinematic in texture."

The film which brought Lang to the attention of great numbers of Americans was *M* (1933), surely the shortest film title in history. It was the first German sound film. The title stands for murder, and the film had originally been announced as *Mörder unter Uns* (Murderers among Us). Lang, watching the growth of Hitler[’42] warily, was amazed to find that the mere mention of the title brought on a flood of anonymous and threatening letters from

LANG, FRITZ—*Continued*

Nazis. Later he found out that the Nazis, upon hearing the title, had felt that the "murderers" must refer to themselves. Lang was implored by Nazi party members not to make the film. Not until he explained that it had nothing to do with politics did the interference cease.

Lang, like so many Germans of the period, was a profound romanticist, fascinated by cruelty, fear, horror, and death. He had personally known and studied a number of murderers, including the notorious child murderer of Düsseldorf. *M,* based on this almost clinical interest, aroused comment all over the world and has been periodically revived. "The film is one which deserves to rank with the very best things in this field which have come out of Germany—with *Maedchen in Uniform, The Last Laugh, The Cabinet of Dr. Caligari,* and *Variety,*" said the *New Republic* critic. William Troy in *The Nation* found that "no subject could be more inherently horrible, more dangerously open to a facile sensationalism of treatment. Yet such are the tact and the genius with which Fritz Lang has handled it that the result is something at once more significant than either the horror story . . . or the so-called psychological 'document' of the type which Germany has sent us so often in the past." He called the film pure classical tragedy, and praised Lang for the social implications of the theme.

In the same year that *M* was shown, German exhibitors begged Lang to make another "Dr. Mabuse" film. The director was looking for some way in which he could show his distaste for the growing Nazi power and his hatred of Hitler, and he determined to make *Das Testament des Dr. Mabuse* (*The Last Will of Dr. Mabuse*), a story of a mad scientist in a German asylum. Into the mouth of the madman Lang placed Nazi philosophies. While the film was being cut, Lang received a visit from Herr Goebbels '41, head of the Propaganda Ministry and therefore in charge of films. Goebbels asked Lang to become the leader of the German film makers, and arranged a meeting for the next day. Lang listened respectfully—and left that night for Paris. Luckily his visa was in order because of the numerous trips he had been making to France and England. While many famous Jewish directors had had to flee Germany because of the "Aryan" work decrees, Lang, a Christian, fled only because he is a believer in democratic government. Lang left behind his whole fortune (film directing had made him a very rich man) and also his unique collection of primitive art and art objects gathered during his world tour.

Hearing in Paris that the Germans had suppressed *The Last Will of Dr. Mabuse,* Lang set to work to make a French version of the film. He has never seen the German version, and not until 1943 in New York did he see the French version. John T. McManus, critic for *PM,* wrote: "The best movie in Manhattan now, bar none, is *The Last Will of Dr. Mabuse,*" while the critic for the New York *Herald Tribune* called it "no shocker in the ordinary sense of the word. It resembles more a clinical report, with flashes of melodramatic action." In 1935 Lang also made Molnar's *Liliom,* with Charles Boyer '43 playing the leading role. The French critics Bardèche and Brasillach in commenting on the film said that "not until *Liliom* did Lang create a film of real worth." They were delighted with the hero's ascent to Heaven, which they called "as lovely as the best things in Méliès." But Otis Ferguson disagreed with them, calling the film "a pretty awful picture" which "got a lot of solemn attention because the director of *M, Metropolis, Mabuse,* etc., had made it." In 1933 Lang had been divorced from his wife. Some film authorities felt that she had been a harmful influence on his work.

Hollywood, having long admired the advanced craftsmanship of Lang, looked with eager interest at the director in Paris. David O. Selznick '41, then vice-president of Metro-Goldwyn-Mayer, visiting in Paris, signed Lang as a director. In Hollywood for a year Lang did nothing but study American film making. Not until he was offered the direction of *Fury,* with Spencer Tracy '43 and Sylvia Sydney in the leads, did he feel ready to work. Otis Ferguson, commenting on the impression the German director made at that time, says: "He was a Prussian with a monocle, and he had tantrums; he would fuss around until he had run up a month's expense for a week of actual footage; he only wanted to make what he wanted to make." Later Ferguson admitted that Lang, when better acquainted with the business angles of film making—the tremendous cost of even a day's shooting—learned to adapt himself to Hollywood standards of work, although he never discarded the amazingly careful preparation before undertaking a new film and the eighteen-hour working day during its filming.

When *Fury,* a bold indictment of lynch law and mob rule, was released in 1936 it was universally praised. Aside from its ending—"a concession to the box office for which Lang cannot be blamed"—most critics called it "memorable," the work of "a great director," a "compelling and terrifying document," and "one of the most praiseworthy films ever produced." *Fury* and Lang's later American films were also praised because, "paradoxical though it may seem, they had more American local color and a keener perception of national characteristics than films by Americans dealing with similar subject matter."

After *Fury* Lang left MGM and began to free-lance. *You Only Live Once* (1937) was a "harrowing study of terror," the tragedy of a young couple who were dogged by the police. Filmed as a challenge to society which condemns criminal offenders to ostracism, it was a picture "which in other hands would have degenerated into a raucous melodrama," says Lewis Jacobs, but Lang "turned it into an absorbing, tense, and tragic social document." The camera work in this film has been widely praised, as has the sound, which records "a heart beat, night noises, and the imaginings of the pursued couple. . . Lang used nature to build mood and individualize the scene—rain during the bank holdup, swirling fog for the prison break, night and the frog pond for the idyllic love scene, and the muddy embankment for the bloody ending."

Lang's next film, *You and Me* (1938), of which he was producer as well as director, again stressed the responsibility of society to prisoners and ex-convicts attempting to rehabilitate themselves. But it did not compare with *Fury* and *You Only Live Once*, having as its chief claim to fame "a bold attempt to break away from Hollywood formulas and to experiment with sound."

All this time Lang was studying American mores. Although a world traveler, he had found nothing in his travels to compare with the American West, and he made long trips through the Western deserts and lived for long stretches at a time on the Navaho Indian reservation. So it was not strange that when Darryl F. Zanuck '41 wanted someone to direct that most American of film subjects—the Western—he should select Fritz Lang for two typical Westerns, *The Return of Frank James* (1940) and *Western Union* (1941). *Time* Magazine said that the latter, which was "superbly filmed in Technicolor," had the "same swift pace and scenic beauty that distinguished John Ford's '41 *Stagecoach*."

Such escapism as Westerns afford could not keep the socially-conscious director from awareness of the world today. In 1941 he made *Man Hunt* and in 1943 *Hangmen Also Die*. *Man Hunt*, the story of a renowned English big-game hunter who goes out to kill his biggest game (Adolf Hitler), was called "a superb thriller, loaded with excitement, suspense, and terror," which had the "kind of wallop that Hollywood likes to talk about but not so often achieves." When Lang picked up a newspaper in May 1942 and read that Reinhard Heydrich '42 had been assassinated on the streets of Prague he immediately called in Bert Brecht, German author, and together they began writing *Hangmen Also Die*, for independent production. Lang says that he planned this picture not out of hatred for individuals but out of a determined belief that the facts of this war must be made known to everyone. "If I had felt intense hatred," Lang said, "I would have made the picture differently. As it is, I do not even show the attack on Heydrich. There are no atrocities shown in the picture. We filmed no torture scenes—just used the good old trick of letting the audience imagine for themselves. . . We did not make this like other war pictures. The love story, for instance, is incidental." Because it was an independent production and because it was difficult to cast and to get authentic sets representing Prague, Lang says this was the most difficult picture he ever made. He likes it better than *Man Hunt*, although he admits that *M* is his own favorite film. The critics were almost universally kind to the film. "It is a director's picture, indelibly marked by Lang's craftsmanship," said Joseph Pihodna in the New York *Herald Tribune*, while Ted Strauss in the New York *Times* found that Lang had returned to the "starkly melodramatic style that marked his finest films. If his new effort fails to stand among his best it is not for lack of a meticulous and often uncanny talent for accenting a frightful tale." "From the fierce passion of a man driven from his homeland Fritz Lang has drawn a monument of venom and hatred for the Nazi conquerors of Czechoslovakia. . . Audiences will emerge from the theatre at once more shaken and more stirred than by any other picture the War has produced," wrote Alton Cook in the New York *World-Telegram*. Lang and William Wellman, who directed *The Ox-Bow Incident*, were the runners up for the 1943 New York Film Critics award finally captured by George Stevens.

Lang's next assignment was Graham Greene's spy thriller, *Ministry of Fear* which he directed for Paramount. His plans for 1944 include a film on the construction of the pipeline which carries oil to the Eastern states and, possibly, another film to be based on the theme of post-War demobilization.

Lang is a rather heavy-set man, five feet six inches tall, with a prominent nose, quick, piercing brown eyes, a nervous, purposeful, and rather dramatic manner, and black hair brushed straight back and barely receding from a wide brow. The listener is amazed by his volubility and assimilation of English in its most racy and colloquial form, which is heightened in effect by his strong German accent and his continental charm of manner. After fatiguing days of work in the studio Lang retires to his bachelor quarters in the fashionable Beverly-Wilshire Hotel and finds relaxation in reading, swimming, tennis, horseback riding, and making 16mm motion pictures. Before gas rationing he also spent much time driving into the desert and through the snow-capped mountain trails.

He needs such relaxation after work for the screen. During the making of *Hangmen Also Die* Lang says he lost thirty pounds. As Lewis Jacobs describes him on the set, "He no longer carries himself with the formality of the Austrian officer he once was. That, as well as his renowned monocle, has been discarded. [During social visits to New York the monocle is still apparent, however.] Horn-rimmed glasses and an easy stride make him appear a less formidable figure, more native to the Hollywood scene. . . Every moment of production finds him moving about, dominating everything and everyone. From the moment he arrived in the morning until he dismissed the company at night, he never let up his drive. The man was all energy, roaming the set with a view finder, climbing chairs, or lying on the floor in search of a camera angle; conferring with his cameramen time and again about the tempo of a dolly shot; dashing to a corner to rehearse the players; rearranging lights and props so that they would function organically in the composition; suggesting business to an actor; studying every setup through the camera lens."

LAWRENCE, DAVID Dec. 25, 1888- Editor; author; journalist

Address: b. 2201 M St, N. W., Washington, D. C.; h. 3900 Nebraska Ave, N. W., Washington, D. C.

Writing from Washington for more than thirty years, David Lawrence ranks among the veteran interpreters and critics of the American political scene as reporter, correspondent, columnist, news commentator, and editor of the *United States News,* a weekly devoted to national affairs. Prior to the First World War he started his career as an admirer of Woodrow Wilson and his doctrines, and as a liberal of the "New Freedom" type; though still a Wilsonian, he has gradually emerged, according to Oswald Garrison Villard '40, as "one of the outstanding conservative correspondents at the Capital. . . What he is now most concerned about is the preservation of the Free Enterprise system. Those who worry him most, after Hitler '42, are the extremists in the New Deal." Fellow opponents of the Roosevelt '42 Administration have found Lawrence's attacks on the New Deal "engaging and ably presented." According to Quincy Howe '40, "No reporter in the national capital has a more detailed knowledge of how government functions and who does what and why." New Deal devotees, however, and critics of the progressive-liberal persuasion, have found Lawrence's proposals (to quote their politest words) "based upon an inadequate grasp of facts as well as a lack of acquaintance with the best economic opinion."

David Lawrence was born December 25, 1888, in Philadelphia, Pennsylvania, the son of Harris and Dora Lawrence. Shortly after his birth his family moved to Buffalo, New York, which is still his home town, although he has lived most of his life in Washington. Lawrence has been a newspaperman from the start, beginning his career, while still a high school student, on the Buffalo *Express* in 1903. With his earnings from the *Express* he was able to enter Princeton University, from which he was graduated with a B. A. degree in 1910.

While an undergraduate at Princeton, Lawrence had continued his work as a reporter, covering news of sports and college activities for several papers. This brought him to the attention of Woodrow Wilson, then president of Princeton. He also became acquainted with Grover Cleveland. Lawrence's first newspaper "scoop" was the story of Cleveland's death, and "his alacrity in reporting this so impressed the Associated Press that, upon his graduation, he was given a place on the Washington staff of that organization." For two years he covered White House affairs. Then in 1911, he was sent to Mexico to report the Madero revolution and, in 1912, the Orozco revolution. On his return to the United States he covered the McNamara (John Joseph and James Barnabas) trial growing out of labor disturbances in Los Angeles. Then came Woodrow Wilson's first Presidential campaign —a particularly congenial assignment to a devotee of Wilsonian policies. Actually Lawrence was to become one of Wilson's chief journalistic interpreters.

With the outbreak of the First World War Lawrence was placed in charge of the A. P.'s handling of war news as it related to Washington, especially as it bore on America's neutrality. Another famous scoop was scored by him at this time—the news of William Jennings Bryan's resignation as Secretary of State. Although the resignation had been rumored for some time, it was not confirmed until Lawrence buttonholed the Secretary of War, Lindley Miller Garrison, with the catch question: "What do you think of Bryan's resignation?" On receiving Garrison's comment, all that was necessary to release the news was a White House O. K.

In 1916 Lawrence left the Associated Press to become Washington correspondent for the New York *Evening Post.* Since that time Washington has been his headquarters, from which he has written "a daily dispatch that has known few interruptions." He was one of the first Washington correspondents to be syndicated nationally; and his six stories a week for newspapers all over the country have covered the history-making events of two world wars and the years between them. In 1919 Lawrence started a new departure in journalism—"news features." He organized the Consolidated Press Association to furnish a feature and financial news service to daily newspapers by leased wire.

The *United States Daily,* another innovation in journalism, was started by Lawrence in 1926. For this he gathered together "a group of public-spirited men and women of all shades of political opinion" to found a daily newspaper that would inform the public about its Government and what it was doing. In 1933 the newspaper evolved into a weekly, the *United States News.* The change from the old formula of presenting news and facts without comment was the addition of a weekly editorial by Lawrence and the condensing and interpreting of official information. The newspaper format itself was dropped in 1940, and the *United States News* appeared as a magazine. "It is still the one publication in the United States devoted entirely to national affairs."

According to Delbert Clark, both the *United States News* and Lawrence's information services "always adhere strictly to the uncolored facts, but his column is his own personal medium and has been found at times to be at rather wide variance with what his other services are saying." This, says Lawrence, is because he deals in interpretation of the facts while his reference services report official expression of opinion in rulings, etc. Clark says also: "In some ways Lawrence is the most skillful of all the Washington columnists: he has the ability to appear sweetly reasonable while making the most highly prejudiced statements of opinion, unlike those others who never attack any person or policy without advertising the fact."

Upon launching the *United States News,* Lawrence discontinued his radio broadcasts and lectures to devote himself entirely to writing. His first book—and probably his most highly praised—had appeared in 1924: *The True Story of Woodrow Wilson.* It had been favorably received by critics in general, praised for the "little minor revelations that are the very spice of history," and the graphic, illuminating pictures of Woodrow Wilson and his life at the White House. "It is journalism at its best," wrote Hamilton Holt.

In 1929 Lawrence published *The Other Side of Government,* a discussion of the spirit of governmental activities rather than their functions or technical aspects. When Franklin D. Roosevelt came to the White House, Lawrence's first critique of his Administration appeared—*Beyond the New Deal* (1934). Of it a reviewer in the *Commonweal* wrote: "The volume is not effectively written nor are the arguments effectively presented. The discourse is too diffuse; there is too much repetition; there is a lack of precision and definiteness, both in the critical and the constructive paragraphs." A reviewer in the New York *Times,* however, felt that "Mr. Lawrence offers trenchant criticism of various aspects of the New Deal and marshals impressively the figures of expenditures and prospective debt and taxes which the spending orgy shows."

Further attacks on the New Deal appeared in *Stumbling into Socialism* and in *The Future of Our Political Parties* (1935). In 1936 came *Nine Honest Men,* of which a critic in the New York *Herald Tribune* wrote: "Evidently a hastily written political tract not designed for the intelligent or critical reader. With all the froth that comes from hostility to the Supreme Court and our Constitutional system, it may be fair enough for friends to emulate foes. Yet one may suspect that from such friends as Mr. Lawrence the Supreme Court may well be asked to be saved." (Fanny Butcher in the Chicago *Daily Tribune* found the same book "the most illuminating brief exposition of the purpose, the methods, and the intricacies of the recent decisions of the Supreme Court that I have encountered.")

Who Were the Eleven Million? (1937) was a study of the Roosevelt majority in the election of 1936, in which Lawrence reached the conclusion that concentration of relief funds in certain large cities accounted for a large proportion of extra votes. In the same year he returned to the Supreme Court theme in *Supreme Court or Political Puppets,* a book which was described by a British reviewer as "a tract whose incoherence and inconsistency should have been beneath the talents of one of the most eminent American journalists," and which Norman Cousins '43, writing in *Current History,* called "energetic whitewash."

In connection with his writing during these depression years David Lawrence made several trips around the United States, reporting his findings in various magazines. In an article, "I Saw America" (*Saturday Evening Post,* December 5, 1936), he wrote that America was fast becoming a homogeneous people because of the welding together of foreign-born and native-born into a distinctive nation. He painted a bright picture of this country's smaller towns. In particular he spoke highly of service clubs, such as the Rotary and Kiwanis. "I find in them," he said, "the best instruments for the development of an awakened social responsibility that we have ever devised."

DAVID LAWRENCE

Lawrence's comments in his editorials in the *United States News* on both domestic and foreign affairs during 1940-42 were incorporated in another book, *Diary of a Washington Correspondent* (1942). In a review of this Oswald Garrison Villard commented that Lawrence "has often demonstrated the possession of a remarkable news sense, first-class newspaper intuition, and unusual interpretive and analytical powers. . . He saw before most people did that we were heading for war." Typical excerpts—indicative of both hits and misses in Lawrence's batting average—are as follows: "The paramount question of the next few years will be how to make democracy efficient, how to preserve national unity, how to tax reproductively [1940]." "Inflation—slowly but surely—is the inevitable consequence of Government policy today [September 25, 1941]." "Labor has demonstrated that it cannot discipline its rank and file. Anti-strike legislation is more than ever needed [December 11, 1941]."

A loyal admirer of American industry, in December 1942 Lawrence wrote that "the men whose genius is responsible for the marvelous production so far are those who get $25,000 a year or more," and angrily attacked President Roosevelt's proposal that Congress act to limit salaries to a wartime maximum of $25,000 annually. In August 1943 he defended the "aircraft industry" when the Truman '42 Committee began wondering why there had been such a sharp drop in the production of engines at the Curtiss-Wright Lockland plant since the Committee's sensational charges that the company had been turning out defective plane engines. According to Lawrence, the American synthetic rubber industry had been repeatedly discouraged by the American Government itself. Some time before this he had

LAWRENCE, DAVID—*Continued*

said in his syndicated column: "If class warfare is wanted by the President, plenty of people are willing to get into the fray." Commenting on this statement in *PM*, Kenneth G. Crawford wrote that such a "revolutionary" pronouncement should be investigated by the Dies '40 Committee, and himself volunteered to testify before the Committee "in support of a sensational plan to quell this revolution with squirt guns, cap pistols, and ten easy lessons in economic justice."

Concern with the kind of peace that will follow an Allied victory over the Nazis and the Japanese has recently overshadowed Lawrence's concern with New Deal persecution of industrialists. For some time he has been advocating that Congress ratify the Covenant of the League of Nations, or some revised version of it, committing itself irrevocably before any "cooling off" comes. In November 1943 he announced that "Republicans and Democrats are united in enthusiastic support of the declarations of Moscow," and began presenting arguments against the rule that necessitates a two-thirds vote of the Senate to ratify any peace treaty, a rule that gives a minority the opportunity "to defeat and frustrate the foreign policy actually desired by a majority of the elected representatives of the American people." According to Lawrence, "the future of civilization, indeed the peace of the world, must rest upon the spirit, if not the letter, of Woodrow Wilson's memorable pledges to mankind."

On February 14, 1943 the American Society of Newspaper Editors adopted resolutions calling for "a world guarantee of freedom of the press after the War," and opposed efforts to put any press association "under the power of Congress to regulate commerce." The Society closed its meeting by appointing three Washington editors as a liaison committee with the Government on problems arising from the War: David Lawrence of the *United States News*, Ben M. McKelway of the Washington *Star*, and Alexander F. Jones of the Washington *Post*.

Lawrence was married to Ellanor Campbell Hayes in 1918. There are two sons: David, Jr., and Mark; and a daughter, Nancy (Mrs. A. L. Hart, Jr.).

LAWSON, TED (W.) 1917- United States Army Air Force officer; author

Address: b. c/o Random House, 20 E. 57th St, New York City

A firsthand account of the Doolittle '42 raid over Tokyo, told in terms of the personal adventures of Captain Ted W. Lawson, who piloted one of the bombers, has been called "what may be for us the greatest individual story of the War." In *Thirty Seconds over Tokyo* (1943) Lawson reveals the planning, preparation, and meticulous training before the raid, the take-off from the carrier *Hornet*, the actual half-minute bombing over Tokyo itself, and the crash of his plane on a remote Chinese island. It describes the long, arduous journey to safety of the wounded crew (Lawson's leg had been amputated), a journey made possible only by the valiant aid of Chinese peasants and guerrilla fighters. The "remarkable impact" of the simple, first-person narration has been termed the more effective for the "intimate, human touches" concerning the flyer and his young wife. Critics have agreed, also, that the book owes much to the sympathetic job of "editing" done by the newspaperman Robert Considine, columnist for INS and foreign correspondent.

The book itself, in frank, sometimes painfully honest words, tells just about all there is to know about Ted Lawson, "a typical American boy" who "took a gamble in a daring and hazardous war operation and barely managed to escape with his life." Lawson himself says: "There are a million like me in the Air Force this minute." He was born in 1917 in Los Angeles, grew up and went to school there. From high school he entered the Los Angeles Junior College. In *Thirty Seconds over Tokyo* he tells about this, and about meeting his wife Ellen. "She's twenty-two, three years younger than I am. Ellen was never very far from my mind during this whole thing. I would have drowned right after the crash if the memory of her had not made me struggle out of the seat I was strapped to. And I guess I would have given up later if Ellen hadn't been so swell about my leg and face. I didn't know Ellen's name for a long time after I met her. She was the librarian of the Los Angeles College. She used to let me sleep in the library. I was always sleepy. I worked at the Douglas aircraft plant eight hours during the day. Ellen would let me sleep for ten or fifteen minutes between classes, wake me up and I'd go out to class, stretching. That was 1937 and 1938, when I was studying aeronautical engineering."

Shortly after this young Lawson gave up both schooling and a $36-a-week job to join the Army as a flying cadet. "My mother raised Cain when I did that . . . but I wanted experience. I wanted to get my fingers into different kinds of planes and see how they worked. The Army had those planes, and Ellen saw it my way, even after Douglas said they'd give me a good raise if I stayed. You see, we wanted to get married. Now we'd have to wait at least until after I had gotten my wings." Following training on Randolph and Kelly Fields, Lawson received his wings in November 1940. By February 1941 he was a first pilot. In September he and Ellen were married by a justice of the peace in Coeur d'Alene, Idaho. Two days later Lawson was off on squadron practice maneuvers—and it wasn't until December 6 that he got back to the West Coast and Ellen. The next day, when the news about Pearl Harbor came, "I had to get to March Field as quickly as I could. I was in the War."

It was in January that his squadron commander asked for volunteers for a special mission. "It's dangerous, important, and interesting. And it'll take you out of the country for maybe two or three months." That's all any of them knew about it; but "we all volunteered." In Columbia, South Carolina, Lieutenant Lawson took on his crew—the men who were to share his adventures on the bombing trip. They were ordered to Eglin Field at Pensacola, Florida. There they met Doolittle, who told the flyers the importance of keeping secret all details of the venture. "If you've guessed where we're going, don't even talk about your guess." They didn't. But in their plane, the "Ruptured Duck"—the B-25 for which Lawson felt so much personal affection—they underwent intensive training, specializing in quick take-offs and low-altitude bombing practice. Then, toward the end of March, they were ordered to Sacramento. There was the carrier *Hornet*—and a chosen sixteen of the B-25s were taken on her deck.

The next morning Doolittle told the flyers they were going to bomb Japan—and that arrangements had been made with the Chinese Government to land on small Chinese fields not far inland. "Again he gave us a chance to back out, but of course nobody did." The *Hornet* had planned to run the flyers to within 400 miles of the Japanese coast. But on April 18 they sighted a Japanese ship, and although the *Hornet* sank her, they believed her radio might have flashed a warning about them. So they had to take off 800 miles from the coast, and in daylight, not at night as had been planned.

They left the *Hornet* in heavy weather, reached Tokyo without mishap, dropped their bombs on the planned objectives. But bad storms prevented their reaching the Chinese airport at Choo Chow Lishui, and Lawson was making a forced landing on a small island when the plane's motors suddenly stopped. After the terrific crash all were washed up on the beach alive—but all severely wounded and suffering from shock. Lawson didn't know at first that his left leg was cut open from thigh to knee; but he knew he couldn't talk. "My upper teeth were bent in. I reached into my mouth with both of my thumbs and put my thumbs behind the teeth and tried to push them out straight again. They bent out straight, then broke off in my hands. I did the same with the bottom teeth and they broke off too, bringing with them pieces of my lower gum." Finally a group of friendly Chinese guerrillas found and helped them to shelter. Since there was no medical care to be had within miles of them, the guerrillas brought coolies to carry the Americans to a doctor. Constantly beset by searching Japanese patrols over a vast stretch of China, they finally reached a temporary haven where there was a young Chinese doctor. There the crew of another downed B-25 joined them. One of that crew was Flight Surgeon Dr. White, who saved Lawson's life by giving him blood transfusions and amputating his leg. Under spinal anesthetic, Lawson writes, "I could hear the different sounds of the saw as Doc's elbow bent and straightened, bent and straightened, and the teeth went through thicker and thinner sections. Then there was an almost musical twink, and deep, deep silence inside me as Doc laid aside the saw. The Chinese nurses let go of my wrists. The nurse on the right walked around to the left side of the table. She picked up the leg by the ankle. The other nurse picked up the other, thicker end. I watched the two nurses carry it out the door."

CAPT. TED LAWSON

Of this second half of the book, which describes the men's adventures in China, Bennett Cerf '41 writes: "[It] will do more to cement friendship between the Chinese and the American people than anything I have ever read. Hundreds of starving and impoverished Chinese peasants learned, by some mysterious manner, every detail of the Tokyo raid within twenty-four hours of its occurrence. The lengths to which these people went to save the American pilots and to deliver them to safety beggar description."

But the flyers had to move on—the Japanese were drawing close. The Lishui airport had been blown up; going on to Nanching, the suffering men found that the field there also had been destroyed. It was not until June 3 that they were rescued by one of their own Air Corps planes. Soon, headed for home, they were discussing with other crew members the take-off from "Shangri-La" and subsequent individual adventures. Lawson couldn't find the heart to write to Ellen, who was at home awaiting the birth of their baby; he didn't want her to know what had happened until he had learned to use his artificial leg after a final operation in Walter Reed Hospital. But Ellen knew; Doolittle had written to her. She wrote to Lawson at once, before she came on to Washington: "There is no reason in the world why we can't lead a perfectly normal life and do the things we've planned. When I do see you I'll do my best to control my tears. But, should there be any, please don't misinterpret them. Because they'll be tears of happiness and joy." The Lawson's small daughter Ann was born in Washington, September 25, 1942.

It was their neighbor, Joe Arth, a printer on the Washington *Herald*, who wrote to his friend Robert Considine: "I'm living next to one of the flyers, Captain Ted Lawson, who

LAWSON, TED—*Continued*

bombed Tokyo. Lawson lost his leg on the trip and is trying to do the story of the flight. Somehow he just can't seem to get it down on paper. Do you think you might help him?" So Considine went to see Lawson, who told him the story. Considine, fascinated and absorbed, typed up his notes and rushed with them to the editor of *Collier's*. That magazine offered Lawson $12,000 for first serial rights. Random House, New York publishers, gave Lawson and Considine an advance of $7,500 for the book. Metro-Goldwyn-Mayer got wind of it and bought the motion-picture rights "for a larger sum than has ever been paid for a book of this kind." But all of them realized that the manuscript could not even be announced until the War Department "gave the green light." The release came in May 1943, a year after the raid. "All told, *Thirty Seconds over Tokyo* is expected to earn for its authors around a quarter of a million dollars."

Author Lawson, however, was much more impressed with the fact that the Walter Reed Hospital had equipped him with a leg "almost as good as the one he lost," so good that he could go out rumba-dancing with his wife to celebrate the news that his book was a Book-of-the-Month Club choice. He and his co-pilot Captain Dean Davenport received permission from the War Department to work as technical advisers with Dalton Trumbo '41, screen writer, on the forthcoming production in Hollywood of his *Thirty Seconds over Tokyo*. There, according to report, he was awed by the sum he would receive, but "more interested by far in proving that his daughter was the most exceptional baby in the world. His shattering experience and loss of his leg have not dimmed his enthusiasm or infectious good humor."

What Lawson had always wanted to be, he writes, is an aeronautical engineer; and when his job as technical adviser on the film in Hollywood was over he was assigned to Santiago, Chile as air attaché.

LEE, CLARK (GOULD) Jan. 31, 1907- Foreign correspondent

Address: b. c/o International News Service, 235 E. 45th St, New York City

From Manila, Bataan, Corregidor, and points south A. P. correspondent Clark Lee tapped out the story of the bravery, the beefing, and the suffering of the United States forces in the Pacific area. Mentioned briefly in William L. White's '43 *They Were Expendable*, Lee in *They Call It Pacific* (1943) gave his own version of how it felt to go hunting with Lieutenant Bulkeley and his PT boats. The winter of 1943 found Lee on a new beat —covering the advance of the Allies in Italy.

Clark Gould Lee was born in Oakland, California, January 31, 1907, the son of Clayton D. Lee, one of the founders and the first president of the United Press, and the former Etta Gould, who was also journalistically inclined. In 1929 Lee had to his credit a B. A. in journalism from Rutgers University and a promising job with the Newark, New Jersey bureau of the Associated Press. Two years later he was transferred to the Latin-American desk in New York. In August 1933 he was appointed chief of the A. P. bureau at Mexico City, and the next month he covered the tropical hurricane in Tampico. In June 1936 Lee turned up as chief of the bureau at Honolulu, where he helped found a local of the American Newspaper Guild. In 1938 he married a Hawaiian princess, Liliuokalani Kawananakoa. (By a former marriage, Lee has two daughters, Jane and Virginia.)

Lee knows the Japanese Army from extensive personal experience. In August 1938 he had been transferred to the Tokyo staff, where he worked until April 1939; he was then transferred to Shanghai. He plodded through China and Japan for more than two years, traveling thousands of miles with the Japanese forces. He flew with their pilots and witnessed the bombing of helpless Chinese villages. Long before war broke out between Japan and the United States, Japanese generals discussed the coming conflict with Lee. They spoke confidently—and in concrete terms; they named dates and places, determined to prove that "Japan is the logical nation to govern the Orient." Japanese Army officers did not care for his hard-hitting news stories, but apparently liked him well enough to warn him to get out of Shanghai three weeks before Pearl Harbor.

Lee was en route home for a vacation when the Pacific war caught up with him. He got as far as Manila. With the situation becoming increasingly critical, he was ordered to remain there pending developments. On December 25 Lee, mud-covered and dog-tired, staggered into the Manila A. P. bureau and wrote the first eyewitness account of the Japanese invasion along the Lingayen Gulf. With two companions, he had started for the front on December 21 and had run into action. Japanese planes had roared over their automobile; they had dodged a Japanese column in the mountains; they had forded a river sixteen times. Upon finally reaching Manila, Lee produced what has been described as "one of the most dramatic stories of the warfare in the Philippines." It was, however, also "the biggest whopperoo of the War," for he wrote: "The Japanese Army rushing toward Manila from the Lingayen Gulf area is an ill-uniformed, untrained mass of young boys between fifteen and eighteen years old, equipped with small caliber guns."

For days after the fall of Manila, Lee's whereabouts were a mystery. Then, on January 9, he sent a 150-word dispatch from Fort Mills, on the fortress island of Corregidor, the first to be sent out by an American newsman since December 31. He followed up with a series of dispatches that have made journalistic history. Next to dodging bullets, his hardest job was getting permission to send his stories, which have been rated by the *Infantry Journal,* a semi-official publication edited by United States officers, as "the best this War has produced on any front." They were compiled in a brochure, *Bataan Bylines, the Story of a Gallant Defense,* published by the Associated Press in 1942 as a testimonial to all of their men on all fronts.

Lee left before Corregidor's fall, "to save my neck." He had heard that Don Bell, an American radio commentator, had been tortured and killed by the Japanese in Manila, and assumed that he would meet the same fate. He also hoped that he and *Time*'s Melville Jacoby, who was later killed in Australia, might be able to persuade Washington that the Philippines could be saved with some prompt assistance.

Lee packed his adventures and observations into the 365 pages of *They Call It Pacific,* which Viking Press published in March 1943. In this vivid narrative, Lee described the sail down the Chinese coast from Shanghai to Manila two weeks before Pearl Harbor, the Japanese bombing of Clark Field outside Manila, Cavite's destruction, and the Bataan campaign from the beginning almost to its very end—he got out at about the time MacArthur '41 did, landed on Guadalcanal in August 1942, and watched the Japanese torpedo planes put a "fish" into the heart of his airplane carrier.

Lee's book contains a wealth of previously untold or half-told facts of the Pacific war. He tells how, right up to the end, the boys on Bataan and Corregidor hoped for help from the United States—help that never reached them. "They did not know and would not have believed that no help was going to be sent," Lee wrote. "Someone thought it couldn't be done." Clearly Lee thinks it could have been done, *Newsweek* surmises. The bombing raid that MacArthur arranged after he reached Australia, Lee wrote, "was really a salute to the dead of Bataan who still would be living if the United States had not decided that the Pacific was a secondary front."

Lee concludes with the hope that some day he will roll into Nanking with Generalissimo Chiang Kai-shek '40, into Manila with General Douglas MacArthur, and down the main street of Tokyo with Admiral William F. Halsey, Jr. '42 and his sailors, and Lieutenant General Alexander A. Vandergrift '43 and his Marines, under a blanket of United States planes "so thick that they hide the rising sun."

Newsweek describes the book as "by far the best reporting of America's own war in the vastnesses on the west. Almost reluctantly, it overrules the A. P.'s traditional objectivity and becomes an angry, faithful record of America's breach of promise to the Philippines. That is ninety-five per cent of the book. The rest is a provocative indictment of United States unpreparedness, naval timidity, and United States Navy-Army warfare, which, it is broadly intimated, is far from finished right now." According to Lewis Gannett '41, *They Call It Pacific* is more sober and more critical than many another book about the Pacific area. "It may not be as widely read," he continues, "but thoughtful Americans will find more meat in it than in any of the others."

CLARK LEE

In March 1943 Lee was invited to New Mexico by Governor John J. Dempsey of that state for a series of meetings held during the last week of the month in honor of the men killed or captured in the Philippines. (The 200th National Guard, a New Mexico unit, was the largest single group defending Bataan and Corregidor, and Lee knew personally many of the men now dead or missing.)

In May 1943 Hearst's International News Service lured Lee away from the A. P., for which Lee had traveled 40,000 miles over land and sea in the preceding ten months. By this transfer, Lee gained a handsome contract and the rare prerogatives of a roving correspondent. INS President Joseph V. Connolly was frankly rapturous, according to a *Newsweek* report. "I'm going to make another Richard Harding Davis out of you," he said. "For the first time in our history, we've got a good-looking correspondent, one who looks like Joel McCrea [star of *Foreign Correspondent*]." In the A. P. there was keen regret.

Lee has been described by *Newsweek* as "a dark, handsome, and sleepy-eyed fellow who probably will win this year's Pulitzer Prize." It is his ambition to bring his news coverage up to Berlin.

LEE, GYPSY ROSE Feb. 9, 1914- Actress; author

Address: h. 153 E. 63rd St, New York City

Burlesque some years ago was not one of the more dignified occupations with which a lady could be identified. Today all that has been changed, for at the top of the burlesque profession stands a young lady who has not only distinguished herself in the art of the "strip tease," but in literature and painting as well. She is Gypsy Rose Lee, who, however, has recently confined herself to the better legitimate theatres. She has also appeared in motion pictures, although because of a man named Will Hays [43] she was allowed to strip only once—and that time very decorously. She is an actress, too; and the fact that she can remain clothed and still attract an audience is a tribute to her talent. It has been suggested that her profession was lifted to the plane of respectability by the causes for which she has stripped—the Newspaper Guild, the Spanish Loyalists, Army camps, servicemen's clubs, the War Bond Drive, the Red Cross.

GYPSY ROSE LEE

Gypsy Rose Lee was born Rose Louise Hovick somewhere on the West Coast of the United States on February 9, 1914. Her father, John Hovick, was a reporter on a Los Angeles newspaper. One or both of Gypsy's parents must have been of Scandinavian descent, as she mentions her own Scandinavian origin in one of her books. When Gypsy's sister June (now June Havoc of the stage and screen) was two and one-half years old and Gypsy was older—how much older she does not say—their parents were divorced. The two little girls had been going to dancing school for six months prior to the divorce. When they went to live with their mother's father in Seattle, he objected to their looking forward to a theatrical career. He thought it much more proper for Gypsy and June to be trained to earn "a decent livelihood ... like schoolteaching."

Mrs. Hovick, however, continued her offsprings' theatrical training. They made their "kiddie-act" debut at a Knights of Pythias celebration—their grandfather was one of the Knights, and it would have been a shame to waste a golden opportunity. They were a success, especially June. At that time Gypsy lacked the pulchritude which she displays today. "'Plug' was my nickname," she writes, "and I lived up to it. I was big for my age and more than just chubby. My hair was cut short in a Dutch bob, with bangs, and my teeth came to a peculiar point in front. They were going to be straightened when I was nine years old. That was the plan, and Grandpa put away a little money each month to pay the dentist. But by the time I was nine we had been in show business off and on for five years, and there was no longer any time for teeth straightening. Besides, Mother had spent the dentist money."

The family lived on the meager earnings of the two little girls, supplemented by the alimony the mother collected from her three ex-husbands. The girls began by playing in all seven of the lodges to which their grandfather belonged. Early in her children's career Mrs. Hovick discovered the ruthlessness of show business. "When we played on the same bill with another kiddie act," writes Gypsy, "things always seemed to go wrong—for them. Pieces of their wardrobe would be missing. A toe shoe would get burned. A blond wig would disappear. The act's music would be lost. Mother was always very sympathetic when these misfortunes happened and would join in the search for the missing articles, and sometimes she was the one to find them—always too late."

By the time June was eight and her sister a few years older, schooling for the two began to be a problem. "Every time we opened in a city, stern-faced policewomen would come backstage and question my sister and me." The answers were invariably unsatisfactory. Finally Mrs. Hovick hired a young normal-school graduate to instruct the little thespians. For publicity purposes the young tutor was equipped with flat-heeled shoes and horn-rimmed glasses, and wore her hair straight. Then, after the reporters and photographers had gone, she was permitted to take on a more attractive appearance.

At the height of their careers as child actors Gypsy and her sister made as much as $1,250 a week. They toured the country during an era when all female performers, whether they were six or sixty, were required to wear full-length opera hose while on the stage. Gypsy escaped the stocking imposition, however, because at that time she played the part of a boy.

When the two sisters were grown they no longer appeared together. Gypsy worked under various names until she finally settled upon Gypsy Rose Lee as her permanent cognomen. Rose actually is her first name; the rest is a flight of imagination. So, as Gypsy Rose Lee, she had become perhaps the best known stripper in burlesque by the '30's. The well known critic, H. L. Mencken, tried to coin a more dignified term for the profession and proposed the word "ecdysiast"—a form combining the Greek *ekdysis*, which means "getting out," and the zoological term *ecdysis*, which means "the act of molting." Miss Lee rewarded him for his pains by remarking that he had been "reading books."

In 1937 Miss Lee was married in a water-taxi off the coast of California to Arnold R. Mizzy, a New York dental-supply manufacturer. She continued her career as "ecdysiast," however, gracing the "runways of Broadway's most luxurious burlesque houses." In 1940 she was stripping in the *Streets of Paris* show at the New York World's Fair, in which she wore a $2,500 costume especially designed for her by the famous artist Pavel Tchelitchew '43.

While she was at the World's Fair, Gypsy was asked by Walter Winchell '43 to write a guest column for him. She did and, according to her publishers, thought it was fun—hence her decision to write a mystery novel. "From January through July [of 1941]," continue her publishers (Simon '41 & Schuster '41), "Gypsy toured the country, writing the first draft of her book in crowded dressing rooms, in planes, in the tub." Meanwhile, she divorced her husband in Chicago. Her attorney announced after the divorce that Miss Lee "would remain single awhile to please her public."

Gypsy's book was published as *The G-String Murders* in the fall of 1941, and it became a best seller—as much because Gypsy had written it as because of any literary merit. The next year, however, Miss Lee was sued by Dorothy Wheelock, the associate editor of *Harper's Bazaar*, who alleged that she had collaborated with the burlesque queen on the book and had received no share of the profits. Miss Lee admitted that she had planned to write the book with Miss Wheelock, but denied that there had been actual collaboration.

After her literary success Miss Lee appeared at "pink teas," bookish radio programs, publishers' meetings, and other gatherings of the literati. She traveled much, autographing her book, and decided that she liked being a woman of letters. Now plunging wholeheartedly into her new profession, Gypsy wrote articles for *Harper's Bazaar*, the *New Yorker*, the *American Mercury*, *Collier's*, *Variety*, and numerous other periodicals, including an "unidentified pulp magazine." She also wrote another mystery novel, *Mother Finds a Body* (1942). At the same time that she was writing Gypsy was continuing her theatrical activities. When New York's burlesque houses were closed by order of Mayor La Guardia '40, Gypsy appeared in a Broadway show, *Star and Garter* (1942), which gave her scope for her various talents. She also exhibited some of her paintings at the Guggenheim Galleries in New York.

Miss Lee owns a farm near Highland Mills, New York, a village replete with "clannish bluebloods" who, before 1942, acknowledged her residence only in the tax reports. At that time, however, they had organized a Red Cross War Drive and found themselves $600 short of their $800 quota. Miss Lee immediately took over the drive and organized a show at the town hall, over the protests of the committeewomen. Her own specialty, naturally, was the feature of the performance. The drive was a great success, and now, according to *Variety*, some of the Highland Mills tycoons are suggesting she accept a directorship in the local bank.

In the summer of 1942 Gypsy was married to Alexander Kirkland, a prominent Broadway actor. The following year the thoroughly laundered motion-picture version of *The G-String Murders*, titled *Lady of Burlesque*, opened and was promptly banned by the National Legion of Decency. The Legion later rescinded its ban, but not before the film had received much free publicity.

In 1943 Miss Lee's unproduced comedy, *Ghost in the Woodpile*, a tale about a burlesque queen who had had a book ghosted, was brought out for revision. Originally started late in 1941, it was worked over strenuously during the summer of 1943 and, as *The Naked Genius*, was finally presented on a financially successful tryout tour. The critics tore the play to pieces, however; so again the script was rehashed and rehearsed. Then, despite the objections of playwright and director George S. Kaufman '41, producer Michael Todd brought the show to Broadway October 21—even using the objections as an advertising point, apparently with much success. (Gypsy reportedly attended an auction the opening night, and Kaufman left the state.) *The Naked Genius*, according to Ward Morehouse '40, had received "more advance commotion" than anything he could recall since *The Pearl of Great Price* (1926). Consequently a "big, eager, Broadway-wise audience fairly hurtled into the theatre on opening night to see what the astute Todd, with an eye on his investment, had advertised was guaranteed not to win the Pulitzer Prize. The next morning the newspapers revealed that the critics had found the play an appalling conglomeration of "everything except a play." Gypsy herself announced in *Variety* after the bad press reception that, "for the sake of the legitimate theatre," she had just tossed her typewriter out of the window. Nevertheless, contrary to all expectations, the box-office receipts for the first few weeks rivaled those of the hit plays in New York. This phenomenon apparently depressed everyone except those directly financially concerned; and they were pleased with good reason. The film rights to the script had been sold in the rehearsal stage to Twentieth Century-Fox, according to *Variety*, for $150,000, plus ten per cent of the gross on the road and fifteen per cent in New York. The sale is reported to mark the first time Hollywood had acquired film rights while a play was still in rehearsal. Despite the box-office success, however, Todd closed the show on November 20 after his share in the "film rights money was assured," announcing that a poll of the audiences showed the majority had not liked the play.

In addition to making her debut as a playwright, Gypsy appeared during the year in the motion picture *Stage Door Canteen*, featuring a satire on the strip tease. She also did a number of radio programs and benefits, was elected sweetheart of eighteen regiments, and played camp shows. She was to return to Hollywood

LEE, GYPSY ROSE—*Continued*

early in 1944 to start in her next picture *Belle of the Yukon.*

The prosperity which her work in many fields of endeavor brought her enabled Gypsy to buy a twenty-four room white stucco house on New York's fashionable East 63rd Street. The house originally cost $300,000 to build, but the burlesque queen reportedly paid only five figures for it. "It's all in eighteenth-century French," said Miss Lee of her new residence, "with gold plumbing. Not just faucets, but faucets in the shape of dolphins, if you please."

Miss Lee is tall, gray-eyed, and handsome. Her hobbies are not really hobbies any more, for she has made all of them pay. She "adores" decorating houses and writing. The latter is apparently her chief occupation at present. "I never had any education," she says, "but my editors say I have natural, instinctive punctuation and paragraphing."

LÉGER, FERNAND (lā-zhā' fer-nän') Feb. (?), 1881- Artist

Address: h. 80 W. 40th St, New York City

Among the many European artists forced to seek refuge in the United States from Nazi oppression, Fernand Léger is one of the most eminent. A pioneer in Cubism, Léger has lived to see his work influence not only modern European painting, but poster art and typography as well.

Fernand Léger was born on his father's farm at Argertar near Liseaux in Normandy in February 1881, the son of Henri and Adèle (Daunou) Léger. His father was a prosperous cattle grazer, stemming from a line of "Norman ancestors, long rooted in the soil." Léger himself was a farmer as well as an artist, until the Nazis took possession of his farm in 1940.

In 1901, when Léger was twenty, he entered the École des Beaux-Arts at Paris, where he studied, as a free student, under Gérôme and Gabriel Ferrier from 1902 to 1905. He was trained as an architectural draftsman, and, wrote Bulliet, "for a time, after going to Paris, practiced that profession, attracting attention by the geometrical precision of his drawings, almost works of art in themselves. Mathematics and mechanics were among his passions. His art impulses further expressed themselves in professional retouching of photographs." Meanwhile, however, he was painting—trying to formulate and explain the impression made on his temperament by the work of Seurat, the Douanier Rousseau, and Cézanne. In 1910 Léger exhibited his pictures with the Independents and became an active member of that group, joining the ranks of Cubism, founded by Braque and Picasso '43, in revolt against representational art, especially that of the Impressionists. The object of Cubism is to convey ideas through abstract forms based upon architecture and three-dimensional geometry. Springing directly from Cézanne, it forced his architectural procedures in the direction of their logical conclusion. By this time Léger's pictures had already begun to sell. He classifies the years from 1911 to 1914 as the first important period in his art, that of "Contrasts of Forms."

When the War broke out Léger enlisted as an artillery engineer in the French Army. This brought him in contact with the big guns, which, according to Bulliet, "interested him more as magnificent machines than as instruments for killing men in uniform like himself." The War had a distinct influence upon his art, for, upon its conclusion in 1919, Léger, wrote Wilenski, "began to use forms derived casually from his war experience (portions of war-machines, traffic signals, and so forth) in flat pattern semi-Cubist pictures." The result of this was Léger's second artistic period, extending from 1919 to 1923, which he calls the period of "Mechanical Elements" in his painting.

After the War Léger accepted the position of instructor in an academy founded by a wealthy Russian woman painter, Marie Wassiliev, "who had been a pupil of Matisse, but had turned Cubist." (Later she was arrested and prosecuted for harboring Leon Trotsky.) In 1921, while he was teaching there, he married Jean Lohy. In 1923 he designed *La Création du Monde* for Diaghilev's Russian Ballet. Léger's next period, that of "Compositions with the Human Body (Statics)," lasted from 1923 to 1927. During that time (1925) "in association with Ozenfant he organized an *atelier* school of his own, and the two veteran Cubists . . . gathered around them a throng of young art students, chiefly from America." The school, which was in Paris, flourished until the Nazi invasion of France in 1940.

From 1927 to 1940 Léger experimented with "Objects in Space." In 1931 the big red-haired artist took a large collection of his pictures to New York to be exhibited at the John Becker Galleries. He encountered trouble at the Customs Office when the Customs inspectors contended that his paintings were commercial art and, therefore, dutiable. It took the officials of the gallery and "a crew of artists" finally to persuade the "obdurate appraisers that the pictures were *bona fide* works of art."

In 1935 Léger exhibited in New York again, this time at the Museum of Modern Art. He went to New York for the exhibition but returned to France soon after. In 1937, in collaboration with other artists, he produced panels for the Palais de la Decouverte and Delaunay panels for the Palais des Chemins de Fer at the Paris Exposition. In 1939 he visited America again in order to paint some murals for Nelson Rockefeller's '41 apartment. At this time he gave a series of lectures at Yale University. He returned to Paris, but was forced to flee to the United States, where he arrived in December 1940. Except for 25,000 francs which he was allowed to bring with him, he turned his money over to his wife, who remained on their farm in the south of France. He plans to remain in New York indefinitely. Since his arrival in New

York his painting has reached its fifth period, that of "Human Bodies in Space."

Léger has illustrated several books and written a book himself on contemporary painting. He has lectured on the philosophy of art at the Sorbonne, as well as at Yale. He is a Chevalier of the Légion d'Honneur.

Léger's training as an architect causes his work to retain, according to the *Art Digest*, "a draughtsmanlike precision and an interest in geometrical forms." *Fortune* described his procedure as taking "recognizable objects, towers and girders, cogwheels and steel rivets," and using "their basic designs and patterns in beautifully balanced compositions. His colors are the harsh reds and blacks and steel grays of machinery. Today Léger is so well understood that his pictures appear in important industrial advertising in the United States." Léger differs from most Cubists, wrote another critic, "in his predilection for bright, decorative color combinations and in his preference for mechanical and urban subjects." He is the first complete city painter. The utility of anything, in Léger's opinion, does not necessarily detract from its beauty. His aim, according to *Coronet*, is "to convey impressions not by direct representation, as is obvious, but by the dynamic juxtaposition of solids and colors. It is a violent quest for expression, entailing the outright disassembly of the material world and its rearrangement into arbitrary forms."

There has been much adverse criticism of Léger. Thomas Craven said: "By no stretch of the imagination can his paintings be accepted as substitutes for pictures, and they are too loose in structure to serve as designs for linoleums and print cloths." Other "non-sympathizers criticize Léger for persisting in what they term 'artificial stylization,' although even they admit that he still remains an artist." His influence on contemporary art is undeniable. It may be recognized in the "neoplasticism of Holland, the constructivism of Russia, the abstractionism of Germany, and the movements of objectivism and purism." Léger, wrote Maurice Raynal, "is one of the few whose influence will be valuable in directing the development, if not of art, at all events of painting—and that, after all, is all that he is trying to do. For that result he is working with all the strength of a temperament incapable of flattery, a temperament which acts on our sensibilities, not with the charm that wins but does not hold, but through a force of persuasion that begins by disturbing, proceeds by convincing, and ends by subduing and holding us enduringly."

Léger's success is financial as well as artistic, for his art commands a higher price than that of most other modern painters. According to *Time* Magazine, the French art dealers have a method of figuring the value of pictures by artists of established reputations. They measure the canvases and divide the area into the resulting number of *numéros*, a *numéro* being a space five inches square. The highest priced of all French painters, Pablo Picasso, gets about 7,000 francs a *numéro* for his canvases. Léger, ranking as the third or fourth highest paid, gets 1,000 francs a *numéro*, and most of his canvases are large.

FERNAND LÉGER

Léger has "superb indifference for his pictures." In his Paris studio he piled them carelessly on the floor, where dust softened the sharp outlines of the painted planes. In *Discs*, a variegated grouping of machinery, the artist left a permanent mark. Léger inadvertently stepped on it as it lay on the floor.

Léger begins to paint about 6:30 every morning and works until noon. "He generally gets up at 6:00 and can't understand that this practice is not universal. He sometimes rings up acquaintances at this hour, and in this way he has lost, or at least annoyed, a number of friends." In an interview in the *Art Digest* in 1935, Léger is quoted as having said that America has no painters. He "considers Fourteenth Street the most beautiful thoroughfare in New York. The window displays north of Thirty-Fourth Street he regards as pseudo-Parisian and too Surrealist for his taste. He is a geometric painter and he likes geometrically-minded stores, like Hearn's [department store] and Woolworth's."

Léger "likes pictures of women in any pose, with or without clothes. He cuts them out of books, magazines, or newspapers, and pins them up wherever he can find wall space." In the Paris suburb where he used to live he liked to grow watermelons and watch the trains go by. He likes "shooting galleries, marionette shows, and photomicroscopic enlargements of tiny undersea animals in the Museum of National History [New York], which he has used in some of his paintings." His hobby is cooking.

From the long line of farmers from which he springs, Léger has inherited "the powerful physique that differentiates him from so many of the exotic personages of the studios." The *New Yorker* described him as "rugged, ruddy, gentle, and full of curiosity," and usually wearing a dark blue shirt. He is good-natured and has a sense of humor. Léger is five feet seven inches tall, weighs 172 pounds, and has a

LÉGER, FERNAND—*Continued*

fair complexion. His religion is Catholic. He has no children.

LEHMAN, HERBERT H(ENRY) (lē'man) Mar. 28, 1878- Director general of the United Nations Relief and Rehabilitation Administration

Address: b. State Department Building, Washington, D. C.; h. 820 Park Ave, New York City

Politician and philanthropist, Herbert H. Lehman, as United States director general of the United Nations Relief and Rehabilitation Administration holds a post in which he may take a part in reshaping the economy of the entire world. Although a pillar of the Democratic Party, Lehman, according to *The Nation*, has "steadfastly refused to play politics, and has continued to devote a considerable portion of his private means to furthering public-spirited enterprises." What is more, according to the New York *Times*, Lehman "unites the practical experience of a sound businessman with the vision of a proved statesman. He is deeply sympathetic with the problems of oppressed minorities everywhere. He has always had the instinct of philanthropy, and in a difficult period practiced it on a broad scale. There is nothing in his career he will have to unlearn."

Herbert Henry Lehman was born in New York City on March 28, 1878, the son of Mayer and Babette (Newgass) Lehman. His father had come to the United States from Germany in 1848, settled in Montgomery, Alabama, entered the cotton business, and prospered. After the Civil War the elder Lehman went to New York and founded the Cotton Exchange and the banking firm of Lehman Brothers. Herbert Lehman was the youngest of his parents' eight children—five sons and three daughters. After receiving his preparatory education at Dr. Sach's Collegiate Institute, young Lehman attended Williams College, from which he received his B. A. degree in 1899. He then began the welfare work which later gave him fame as a philanthropist, and he taught three nights a week at the Henry Street Settlement.

Lehman's first position was with the J. Spencer Turner Company, a firm of textile manufacturers, in whose employ he had advanced to vice-president and treasurer by 1906. Two years later he became a partner in the banking house of Lehman Brothers.

When the First World War broke out Lehman became associated with the Jewish Joint Distribution Committee, "and as treasurer and vice-chairman directed the collection and distribution of $75,000,000 for the relief of war sufferers." Although ten years over draft age, he immediately volunteered for service when America entered the War. "He served first as assistant to Franklin D. Roosevelt '42 in the Navy Department, but in August 1917 he was commissioned a captain in the Army and assigned to the General Staff, where he assisted General George W. Goethals. Advancing to the rank of colonel in the quartermaster service of the General Staff, Lehman took charge of procuring, shipping, storing, and distributing supplies for the American Expeditionary Forces. In the post-War period Lehman was appointed a special assistant to the Secretary of War, a member of the Board of Contract Adjustment, and a member of the War Department Claims Board. For his direction of the return and storage of supplies that had been sent abroad, he received the Distinguished Service Medal in 1919.

After his war and post-War work had terminated, Lehman returned to his duties as "a modest but wealthy and influential partner" in his banking firm, as well as director of half a dozen large corporations and banks. He became chairman of the Finance Committee of the Democratic National Committee for the campaign of 1928, and was placed upon the state Democratic ticket as nominee for Lieutenant Governor that same year. "Alfred E. Smith," remarked the *Review of Reviews*, "headed the national ticket that year, having been nominated by Franklin Roosevelt in the famous 'Happy Warrior' convention speech. Mr. Smith returned the compliment by so arranging the state ticket as to make Roosevelt the candidate for Governor, with Lehman next in line. It was not a lucky year for Al Smith himself, who lost his own state along with a number of states of the so-called Solid South. But, although the Hoover '43 electors carried the State of New York by a plurality of 103,000, the Democrats elected their state ticket by a slim margin." Lehman himself was elected Lieutenant Governor by a plurality of 14,000. "It is asserted," according to the *Review*, "probably with good reason, that it was Lehman's popularity (in a city that has many more than half a million Jewish voters) that carried the State tickets for the Democrats while they lost the Presidential ticket." Lehman at that time was known as a businessman and philanthropist without experience in politics.

"Before moving to Albany," said Lehman, "I, like many other businessmen, thought that government and business were things entirely apart. I believed that the cleavage between government administration and business administration was a very sharp one, and that at times the two were almost antagonistic. I have found that point of view by no means accurate." Lehman, however, severed all of his business connections before entering politics.

Lehman was re-elected Lieutenant Governor of New York State in 1930 by a plurality which had increased to 565,000. Two years later he was nominated by the Democratic Party as its candidate for Governor of New York. His nomination, according to Oswald Garrison Villard '40 of *The Nation*, was forced upon a reluctant Tammany by Franklin D. Roosevelt (who called Lehman his "good right arm") and Alfred E. Smith, acting in conjunction. "If," wrote Villard, "we have got to have elections for state officers in New York State along party lines, Mr. Lehman is a good man for the machine to offer us. The very fact that the boss of Tammany Hall opposed him as he did is proof of that. . . As for Lieutenant Governor Lehman," he commented, "he has undoubtedly been a high-minded public servant. . ."

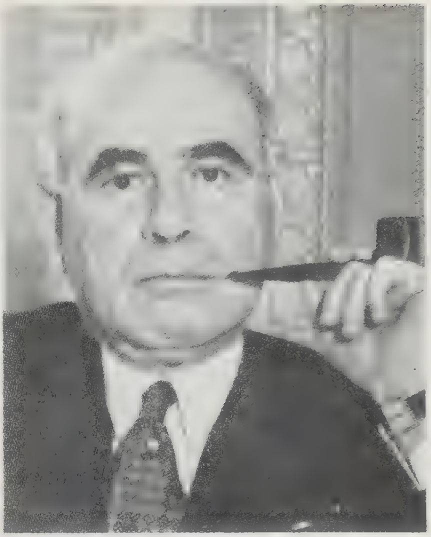
Lehman was elected forty-seventh Governor of New York State in 1932 by a plurality of 849,000. He was re-elected to a second two-year term in 1934 by a plurality of 808,089, but by 1936 "he was ready to step out of politics." Although he announced that he did not want a third term, he was persuaded by Roosevelt and other Democratic leaders "who wanted a strong supporter of New Deal politics in Albany to run again." Again Lehman and his chief were victorious together, "the former with a plurality which had dropped to 520,491."

Once more Lehman yielded to party politics in 1938 and ran for the state's first four-year gubernatorial term against Thomas E. Dewey '40, although he had previously expressed a desire to run for the Senate. "It was one of the closest elections in modern state history, Mr. Lehman winning with a plurality of only 64,394, and, during the campaign, the coolness engendered between the President and Governor by the Supreme Court plan vanished in the heat of the contest." Lehman won through American Labor Party and Communist as well as Democratic support—support that was to be lacking for the Democratic nominee in 1942.

The *Literary Digest* once attributed Lehman's political drawing power over a period of years first of all to his winning personality. Furthermore, he possesses "a liberal social-conscious philosophy that appealed to ten million workingmen voters," and finally he has "a solid conservative banker's background reassuring to the nation's financial capital."

Lehman, according to Oswald Garrison Villard, is "one of that public-spirted and high-minded group of Jewish bankers who are ever ready to give of their means and their time for philanthropy and for public and semi-public enterprises." He has furthered much legislation against racial and religious discrimination; he has averted strikes by his tactful handling of strained labor situations; according to the New York *Herald Tribune*, "his administration has been marked by broad social and labor legislation, following the pattern of the New Deal, and including unemployment insurance, old-age security, minimum wage legislation, and other measures implementing the Federal program."

When President Roosevelt campaigned for a third term, Governor Lehman, keynoter for the Democratic State Convention, called for the continuation of the New Deal in a speech on his Chief's behalf. He declared that nothing could happen in the United States that would give Hitler '42, Mussolini '42, and Emperor Hirohito '42 more satisfaction than the defeat of the President. With respect to the national crisis caused by the Second World War, Lehman, from the first strongly pro-British, advocated a "wholehearted support of the President of the United States in his vigorous and courageous foreign policy." "To do otherwise," he said, "would be to sacrifice our security and to betray a sacred obligation to preserve American liberties for ourselves and for the generations who will come after us." "We must not," he wrote elsewhere, "seek to gain from the national defense program selfish advantages for any state we may represent. We must be willing to sacrifice the temporary benefits of a few for the lasting benefit of all. In this great national program, we must act as a united people. . . The time has come for us to demonstrate to ourselves and to the rest of the world that democracy can function promptly and successfully in its own defense and in the defense of its beliefs."



HERBERT H. LEHMAN

In 1942 Lehman, after having served ten years as Governor of New York State, declined renomination and resigned his office in order to become head of the Office of Foreign Relief and Rehabilitation Operations to which he had been appointed by President Roosevelt. For the month that would elapse before Lehman's term expired, his place was taken by Lieutenant Governor Charles Poletti '43, who had failed of re-election in the November general election. In January 1942 Poletti stepped down in favor of Thomas E. Dewey, the new Governor and the first Republican elected to the office in twenty years.

Lehman, according to the New York *Herald Tribune*, has served longer than any other Governor of New York except the first and the fifth. He is the fourth Governor to have resigned in order to take office in the Federal

LEHMAN, HERBERT H.—*Continued*

Government. The others were Martin Van Buren, Grover Cleveland, and Charles Evans Hughes '41. The first two later became Presidents of the United States, the last, Chief Justice of the Supreme Court.

The bald, black-browed ex-Governor expressed regret at leaving Albany, but looked forward to the opportunity of undertaking "a job which will affect the future of nations all over the world." Asked if he intended to run for Governor of New York again, or for some other political office, Lehman replied: "I certainly don't expect to. I expect to devote myself to this job for quite some time."

Lehman had converted the $100,000,000 deficit he had inherited upon taking office into a surplus estimated as over $75,000,000, and achieved this simultaneously with a cut of $90,000,000 a year in taxes. "Gratified as I am with the financial condition of the state and its municipalities," he nevertheless told the people of New York State in his valedictory address, "my greatest satisfaction has come through the part which I have been privileged to play in enacting enlightened and beneficial social and labor legislation. New York State has been a leader in social progress. Our code of social and labor legislation in its humane and practical aspects has, I believe, no superior anywhere in this country... I am more strongly convinced today than ever before that wise, sound, and workable social legislation is in the interest of all of the people of a community. Thinking people must realize that the interests of all groups—worker and management, farmer and city dweller, the rich and the poor, the strong and the weak—are today interdependent. If the chain of our social and economic life is to be strong, we cannot afford to have any weak links."

Lehman summed up his philosophy of government by saying: "I believe with all my heart that government is for the people. It must be clean, honest, and efficient, but it must be more than merely an administrative machine. It must ever concern itself with the solution of human as well as material problems. It must satisfy the needs and aspirations of its people and, in order to satisfy those needs and aspirations, it must be flexible enough to meet the changing conditions of the world today."

Lehman's position as head of OFRRO was considered to be somewhat similar to the relief post which Herbert Hoover held during the last War. "Establishment of the relief organization by the President," according to the New York *Herald Tribune*, "just at the time American forces are taking over North Africa is expected to serve as an effective psychological weapon for the cause of the United Nations. The hope of food undoubtedly will prove a big factor in the impending military campaign against starving Nazi-dominated countries." Lehman, said S. J. Woolf in the New York *Times*, would be called upon to act as diplomat, dietitian, expressman, banker, farmer, distributor, and builder as well as social worker. It was estimated that from 375,000,000 to 400,000,000 persons in Europe, outside of Russia, would require assistance. The agency was a unit of the State Department, and cooperated with "the War and Navy Departments, the Board of Economic Warfare, the Lend-Lease administration, the Department of Agriculture, the President's Commission on Relief, and other agencies of the Government." Lehman maintained his own office in the State Department, but his staff, which consisted at first of six assistants, was housed in the building of the United States Chamber of Commerce.

The new director tackled his job with characteristic thoroughness. Understanding that OFRRO was beginning the work that a United Nations organization would later take over, he began immediately to study plans for combined action on the part of the Allies in feeding and rehabilitating the devastated areas. Food, Lehman insisted, is a weapon and as vital a part of victory as actual military conquest. His was the somewhat delicate task of convincing the American people that they should be willing to sacrifice extra steaks and butter, even after the War has ended, in order to insure world-wide economic stability and thus prevent a third world war. Ordinarily retiring and quick to shun publicity, Lehman made speeches, wrote articles, and took his first airplane trip for the cause. That trip, made to England in April 1943, was an attempt to survey the specific needs of the countries that were to receive relief. Lehman made it clear that his was only an administrative job, a fact-finding mission, and that the executive details would be left to the State Department.

The "battle of the bureaus" had already begun, however. The first test for OFRRO and its powers was North Africa. There some 600,000 starving natives whose land had been pillaged by retreating Nazi and Italian divisions had to be fed, clothed, protected from disease, and provided with materials with which to rebuild and restore their land. Lehman's staff there waited month after month for the Army's permission to begin relief operations, with a sheaf of requisitions unfilled. Lehman was disappointed, but he remained hopeful that the proposed United Nations organization would solve the tangled situation, and he continued working on plans for it. In general "gift relief" was to be discouraged, he believed. The aim, he emphasized, should be "to help the liberated countries help themselves," and the fundamental principle should be the shortening of the War. Often the people in plundered areas still had money, but lacked material for which they might exchange their money. If healthy and well-fed they could prove an important asset to the Allied armies and could play their role in the establishment of peace. "Freedom from want," Lehman has said, "is a basic component of any enduring peace." If, to insure that freedom, it should become necessary for the United States to make "outright gifts," Lehman felt that the country should do so in the interests of humanity and peace.

In the summer of 1943 when Washington was filled with reports of internal disagreement and strife in the State Department there were persistent rumors of a feud between President Roosevelt and Lehman due to the appointment of Dean Acheson '41 of the State Department as head of a new Office of Foreign Economic Coordination. Further trouble developed when Lehman and Edward Stettinius '40, then lend-lease administrator, disagreed over jurisdictional matters. By September it was expected that Lehman would resign from his post. But a few weeks later the plans for joint United Nations relief activity which he had begun to formulate early in the year were brought closer to realization when Secretary of State Hull '40 announced a revised plan "by which the resources of forty-four United Nations will be channeled through a United Nations Relief and Rehabilitation Administration." Part of the formal organization of this new agency included the appointment of a director, and Lehman was "virtually certain to be the nominee of the American Government for the post." On November 9 representatives of the forty-four nations met in the East Room of the White House to sign this United Relief pact, and shortly afterward Lehman was elected director general. Dean Acheson was named by the State Department as United States spokesman to the UNRRA Conference to be held in Atlantic City later in November, however, and the documents which Lehman's OFRRO had prepared for the use of delegates were pretty much ignored. The State Department had its own plans and its own documents, worked out in collaboration with the British.

And the British-American combination had things very much their own way at the Conference, which did not adjourn until December, and which was attended by delegates of forty-four nations. It was agreed that UNRRA was not to undertake to do anything that could be done by an agency of any member government. Countries that wanted to buy supplies were to go directly to the supplying countries and make their purchases, informing UNRRA, which could protest to the Anglo-American Boards if one country seemed to be getting more than its share. UNRRA itself would ask the Boards for supplies when it needed them for relief, and would also ask the permission of a country's government before purchasing supplies in that country. Lehman won the right to allocate materials to countries most in need, regardless of their ability or inability to pay, but enemy nations were to be required to pay for the relief they get as well as to disgorge their loot, and famine-ridden India was not classed as a recipient of UNRRA aid at all. The cost of the program was to be something over two billion dollars, paid for by contributions from each country (if possible) of one per cent of its national income. (UNRRA was to spend these funds only with the prior approval of the donor country.) The total estimated cost to the United States—from one to one and one half billions—would be approximately one half what United States citizens had paid out in relief through Herbert Hoover's '43 committee after the First World War.

Lehman (at the time technically UNRRA's sole employee, at an annual salary of $15,000) now had the task not only of choosing a key staff of men from most of the nations concerned, but also of building up stockpiles of food in time to feed the liberated peoples in the coming Second Front invasion of Western Europe. Although he had presented a detailed schedule of purchases to the War Food Administration months before as head of OFRRO, no food had yet been purchased or definite allocations made because of military hostility to "civilian interference." His, it was generally agreed, is a tremendous task and a tremendous responsibility.

Although according to Woolf, "Lehman knows how to delegate power, he believes that there are many duties which he cannot leave to others. Hence the chances are that he will spend a part of his time traveling to far-off places to see conditions for himself. The real work, as he sees it, will come when the occupied countries are liberated." Lehman is also interested in the preservation of European culture and is a member of a commission established to protect and salvage artistic and historic works.

On April 28, 1910 Lehman married Edith Louise Altschul of San Francisco, California. They have three children: two sons, Peter G. and John R., both in the armed forces, and one daughter, Hilda Jane, who is serving with the WAC in North Africa.

LESUEUR, LARRY (EDWARD) (lə-sėr') June 10, 1909- Radio commentator; journalist; author

Address: b. c/o Columbia Broadcasting System, 485 Madison Ave, New York City

Larry Lesueur, who returned in December 1942 from "a year and a day" in Russia as the Columbia Broadcasting System's Moscow correspondent, has followed the book-writing example set by William L. Shirer '41, Leland Stowe '40, and other noted war correspondents. His first book on Russia (published in the summer of 1943), *Twelve Months That Changed the World* (the title is significantly reminiscent of John Reed's *Ten Days That Shook the World*), is a record of all phases of life in Russia "from the first counter-

LARRY LESUEUR

attacks in the Moscow area in the autumn of 1941 to the heroically successful defense of Stalingrad." The book contains also much material which Lesueur could not report direct from Russia either by broadcasting or otherwise, and which he believes to be completely new to Americans generally. On May 26, 1943 *Variety* reported that the first few thousand copies of the book had been recalled by the publisher because the author's name had been misspelled on the cover. The name was spelled LeSueur, one of several ways it is frequently misspelled.

As a radio correspondent reporting first from London, then from Moscow, Larry Lesueur's trenchant and dynamic, humorous and intimate accounts of happenings in those wartime centers have been heard by many listeners. Born in New York City on June 10, 1909, Laurence Edward Lesueur, the son of Wallace and Rose Vivian (Black) Lesueur (of French descent), is among the youngest of the "veteran" correspondents. He is, however, the third successive generation of his family to take up journalism. His grandfather published two newspapers in Iowa, and his father, Wallace Lesueur, was at one time a foreign correspondent for the New York *Tribune*.

Soon after his graduation with a B. A. degree from New York University in 1931, Larry Lesueur went into newspaper work in the New York office of the United Press. Before that he was a floor-walker at Macy's and a reporter on *Women's Wear Daily*. In 1939, after six years with the United Press, he went to Europe and joined the staff of the Columbia Broadcasting System. He covered the R. A. F. and the British Army in France during the first year of the War. After the fall of France he was transferred to the CBS news bureau in London. There, in the early months of 1941, he commented not only on specific military and political events, but gave eyewitness accounts of the work of R. A. F. planes and human interest stories about the everyday life of the British people. He told how the defenders of British night skies were guided by radio spotters, but that "the last moment's success of night flying still depends on eyesight." And eyesight does not depend on eating raw carrots, he confided. "Just drink more milk," says the most successful of all the night pilots. Lesueur also reported the plight of the prominent Britisher who, because of laundry difficulties and rationing, was down to his next to last suit of underwear.

In the autumn of 1941 Lesueur got his Russian assignment. Before his departure he developed a working Russian vocabulary of some 400 words. He entered the Soviet Union via convoy to Archangel, and once there spent all the time he could visiting various parts of Russia. He crisscrossed the country many times, saw the great new industrial cities east of the Urals, and commuted for months between Moscow and Kuibyshev. He saw the fighting fronts at Mozhaisk, Klin, Rzhev, Borodino, the upper Volga, and other points; visited factories, schools, hospitals, collective farms, Red Army encampments, camps for prisoners, theatres, motion pictures, public gatherings, and ordinary Russian homes. In one broadcast he described the inside of one such home, an apartment shared by two families. "There'll be pictures of relatives on the walls and fresh flowers on the table. There'll be a loudspeaker turned on all the time, giving news, music, and speeches, from 6:00 in the morning until 11:00 at night. There'll be electric heaters around and they'll be lighting their cigarets on them because of the match shortage. Above all, every one will be talking because Russians love conversation. They're looking forward to a tough winter, sometimes without heat and with the gas and lights turned off. But they think they can take it." It was a tough winter—and a very cold one. One morning when Lesueur started to shave he reported that his shaving brush was frozen stiff, and that he was contemplating growing a beard.

With a collection of "German trophies" for the folks back home in the CBS room, Lesueur left Russia by plane through Persia—the "Burma Road" of Russia—and Egypt, the Sudan, French Equatorial Africa, and Brazil. His observations on these countries, as well as on the Soviet Union, were set down in his book, which he began to write on his arrival in the United States in December 1942. His first urgent duty on arriving home, however, was to report to his local draft board.

On his return Lesueur, in several interviews, gave further conclusions on the Russian situation. He also began a weekly radio series, *An American in Russia*, drawing on his observations and experiences during his year's assignment there, the script being directed by Norman Corwin '40. "I feel that Russia is in a very good position militarily, but not in such a good position economically," said Lesueur. "Russia needs a short war." In speaking of the migration of factories, he said that the Germans have brought about through war what the Russians have always wanted—decentralization of industry. He cited one instance in which he saw a factory operating just one month after its removal from another section of the country, though assembly presented a serious problem. He said that the Russian claims on the number of enemies slain or taken prisoner and on booty captured, although they sometimes appeared fantastic, were based on actual fact. He made certain checkups on his own which substantiated the claims.

According to Lesueur, when Russian troops retreat they never leave any equipment intact. "To do so is a shooting offense. Red soldiers cannot just get out of a tank and walk away when the enemy is overwhelming. They must blow up the tank." As for tanks, a group of British officers once arrived to open a tank school for the instruction of Russian soldiers. "But the Red soldiers needed this equipment so badly they quickly unloaded the tanks, got in and drove them away to the nearest rail head, and sent them on to Moscow. The British never did open that tank school." When they got the big lend-lease tanks from America, Lesueur said further, they just climbed aboard, asked, "Where's the clutch?" and rumbled off to the Front.

All food in Russia is rationed, Lesueur said, and prices are very high. He had seen potatoes selling for $7 for two pounds; onions for $1 a pound. The rate is twelve rubles to the American dollar, and the average monthly wage in factories is 500 or 600 rubles. The Russians must pay almost a month's wages for two pounds of butter. He saw American lard and sugar distributed by Moscow markets, and American canned meat sent to the Red Army. He said that his own liquor ration. as a foreign correspondent, was four bottles of wine or vodka a month. He was allowed one bar of soap monthly.

He reported that the Russians found the Finns to be even crueler enemies than the Germans in their methods of fighting and their treatment of the wounded and prisoners. And he found among Russians a very bitter hatred for the Japs, whom they call "the monkey race." There were revealing ideas among school children about Russia's allies, according to a questionnaire which Lesueur sent around to them. Some believed Churchill '42 was "a friend of Stalin's '42" and that President Roosevelt '42 was "the American Ambassador."

With a sense of humor that has enlivened his own broadcasts and reports, Larry Lesueur has on occasion had the tables turned on him—and he can take it. He got plenty of "ribbing" from his colleagues for a slip of the tongue made in a CBS news program in March 1943. Discussing Admiral Standley's '42 statement about lend-lease materials sent to Russia, he said the statement had "created a teapest tempot that went far beyond the importance of his utterances." From the London news office Edward R. Murrow '42 cabled Paul W. White '40, CBS director of public affairs: "Please purchase suitably inscribed, old-fashioned, enameled, single-handled teapest tempot and present to Lesueur on behalf of his admirers in Columbia's London office." It was Paul W. White, who takes special pride in selecting titles-that-will-never-be-used for the books planned by returning foreign correspondents, who chose for Lesueur's book (keeping in mind the Russian independence of formal religion) *Pass the Lord and Praise the Ammunition.*

Praise for the ammunition occupies no small part of *Twelve Months That Shook the World.* But it was something more than ammunition, as Lesueur in his year there observed it, that changed the entire course of the War for Russia and her allies. With the completion of his book, Larry Lesueur asked to be sent abroad again: he wanted to be on the spot when the Second Front is opened. His wish was granted, and he was sent to London on June 16, 1943, just one day after his marriage in New York to Joan Phelps. His book was published the next month. Reviewers agreed that although it was not a deep, serious study of the Soviet Union, the book was "appealing" and "honest." According to John Chamberlain '40, Lesueur "makes you hear, feel, see, and smell wartime Russia." Vincent McHugh found that his "may well be the best book we've had so far about the people of the Soviet Union in the War."

In his spare time Lesueur is an ardent fisherman, and his one real regret about his Russian experiences is that he lost all his fishing tackle on his way into that country, so he never had the opportunity to give "the proper sort of personal attention" to the rushing streams of the Urals and the Caucasus.

He is also fond of shooting and golf. Lesueur is almost six feet tall, weighs 160 pounds, and has brown hair and brown eyes.

LEVI, JULIAN (EDWIN) (lē'vē) June 20, 1900- Artist

Address: h. 282 W. 4th St, New York City

"Every artist," said Julian Levi, "finds some subdivision of nature or experience more congenial to his temperament than any other. To me it has been the sea. . . As a secondary interest, I cherish the human physiognomy. I believe an artist's choice of subject matter is channeled by the compulsion to find an objective vehicle for inward plastic images."

Though his deep and thoughtful love for the sea characterizes the majority and finest of his paintings, Julian Edwin Levi was brought up in a city deviating much in character from the fishing area he spends most of his time depicting. He was born in metropolitan New York on June 20, 1900, the son of Jewish parents, Morris J. and Rachel (Hirschkind) Levi. At the age of fifteen he and his family moved to Philadelphia, where he remained until he went abroad to pursue his studies. When he was seventeen he entered the Pennsylvania Academy of Fine Arts. Younger than the other students, he as yet had had no opportunity to think deeply on the conflict then raging between exponents of the academic and modern schools of thought. He was insufficiently acquainted with techniques and slightly mystified by all the hullabaloo, but he finally allied himself on the side of the moderns. Though the choice at that time was made primarily because he found partisans of the modern school more sympathetic as

Lances

JULIAN LEVI

human beings, it proved to be the right one for him: on further study Julian himself developed into a modern, for in the work of the moderns he found "a vigorous and progressive attitude toward life and, paradoxically, a truer feeling for tradition."

When Levi was graduated from the Academy he was awarded a Cresson Traveling Fellowship by the school and he sailed for Italy in the summer of 1920. Post-War Italy was shakily and unsuccessfully attempting to recover from the chaos in which participation in the First World War had left it, and the embryonic Fascisti were preparing for their historic march on Rome. The disintegrating country seethed with unrest, but the artist had little time to worry over political matters, so engrossed was he with his study of the Masters. He found to his amazement that, although he had studied art for four years, he was unfamiliar with the names of all but a handful of the greatest Old Masters. He had never heard of Masaccio, one of his major enthusiasms today.

The roaring '20's was an era of prosperity in the United States: money was god and art was pure "tosh." The artist seemed to have no place in the country, and few defenders except crusaders like Sinclair Lewis and H. L. Mencken. As a result, the warm and human Paris which held out a sympathizing welcome was the mecca of all American artistic aspirants. Levi, like the others, heeded the call and made the famed city his next stopping point. He says of his lack of desire to return to the United States: "At that time the resistance our country offered to the creative spirit seemed overwhelming. The compulsion to escape, consequently, was absolute."

In Paris Levi grew the traditional mustache and beard and defiantly paraded these badges of his Bohemianism. He became a connoisseur of foods and vintages like all the other young artists; and he occasionally experienced the aching homesickness which so frequently overtook the most avid of the painting Francophiles. During this period his finances were in a somewhat haphazard state. He had started out with the Fellowship and had later received a subsidy in connection with an American expatriate publication called *Gargoyle*. His family also aided him with remittances; although they could ill afford the money, they were as convinced as he that a proper education could not be acquired in any other way.

A frequenter of the Louvre and galleries, Levi was vastly stimulated by the contagious exuberance and experimental attitude of contemporary French painting, and he found it "thrilling" when he himself was accepted for exhibition in the Salon d'Automne of 1921 and 1922. He became fluent in the French language, and he spent his leisure in cafes where he struck up acquaintances with friendly French artists. He became most intimate with Jules Pascin, and the two of them spent long evenings together going from place to place, carrying their sketchbooks along. Occasionally the evenings degenerated into mildly riotous times, but it was seldom that at least a few sketches were not made.

After more than four years in France, Levi returned to Philadelphia almost as alien as the greenest immigrant. The commercially inclined Quaker city was unreceptive to all but the most conservative art, and the young modernist found the place a cold and unfriendly one to his talent. "Modern artists at that period," he wrote, "were scandalous pariahs, and much of our energy at that time was devoted to justifying our existence."

The modernists in the city, however, banded together in a group called "31" and in 1924 arranged for an exhibition in one of the office buildings. The group included such artists as George Biddle '42, Charles Demuth, Hugh Breckenridge, Arthur Carles, Earl Horter, Henry McCarter, and Franklin Watkins. The first exhibition to show the work of the modern Philadelphia artists, it was ridiculed by both the press and the local art hierarchy. The movement acquired a few friends, however, and some of the pictures were even sold.

The one really bright spot of this period, Levi said, was the occasional opportunity to visit the superb modernist collection of Dr. Albert Barnes. Barnes' Cézannes, Seurats, Renoirs, and Picassos '43 were not for public observation; the art patron had early found that the average person at that time was insufficiently educated to the new technique to be able to appreciate it. He did, however, permit the artists to study his collection, and Levi took frequent advantage of this.

In 1932 Levi returned to his birthplace, New York City. This, Elizabeth McCausland commented in a monograph on Levi, marked the beginning of his "coming of age." She wrote: "With his exhibition at the Crillon Gallery, Philadelphia, in 1932, he ended the phase of flower studies and abstractions. With his joining of the American Group, Inc. (a small band of artists in New York) in 1933, he embarked on a new period, that of social awareness. Certainly Levi is not a social artist in a hackneyed sense. But he is a social artist in so far as he consciously associates himself with other painters and as he seeks to make the content of his canvases human instead of non-human."

Levi has said of his experience in banding together with his colleagues that he found it tremendously stimulating to work with fellow artists. He believes that the groups have "functioned usefully in bringing about a dignified participation of the artist in the life of our times, a participation which brought about the final farewell to Bohemia." The artificiality of the "Bohemian tendency" Levi considers induced by unfriendliness and lack of acceptance on the part of the public.

These earliest years of the artist in New York were during the height of the depression, and he was hard put to make a living. From February 1936 to March 1939, however, he was a member of the easel division of the New York City Federal Art Project, and he is everlastingly grateful to the project which gave him employment. He says that physically he could probably have survived the period, but the security of his work enabled him to do more than survive physically: it gave him the opportunity to develop his technique and artistry. Half the work he did for the project was selected by the national office in Washington for exhibition and allocation, half left in New York City for exhibition. In 1940 critics were surprised to discover that Levi's exhibition at the Downtown Gallery was, despite his widespread reputation, his first one-man show.

Almost invariably, criticisms of Levi's work are very much in his favor. Edward Alden Jewell wrote in the New York *Times* (concerning a 1940 exhibition) that Levi's pictures "are wont to be immersed in a haunting atmosphere, which, while it belongs to the particular scene, illuminates in still larger degree the artist's own mood, sensitiveness of his response, quality of his feeling and thought." *Art News* said of the same exhibition: "The solid qualities of a painter whose chief absorption is in the esthetic aspect of his material and not in its literary or moral considerations is apparent in the fifteen canvases being shown."

Of a more recent exhibition, *Art Digest* said: "Imaginative and yet authentic, with a surrealistic slant, Levi is also a conscientious workman. . . What tourist can take away the glory of *Lowtide, 8:20 A. M.*, so poetically observed by Levi, with its almost uncanny effect of morning mist and dispelling sun? And what vacationist would dare disrupt the eerie quiet of *Cape Cemetery,* so suggestive of an early American mourning picture?"

"I am seeking an integration," says the artist, "between what I feel and what I have learned by objective criteria; an integration between the tired experienced eye and the childlike simple perception; but above all I hope to resolve the polarity which exists between an essentially emotional view of nature and a classical, austere sense of design."

A slow and conscientious worker, Levi first makes drawings, then carefully planned sketches for composition before attempting a completed picture. Among the best known of his paintings are *Shrimp Scow on Barnegat Bay* (Metropolitan Museum of Art); *Shipbottom Fishery* (Whitney Museum); *Driftwood* (Toledo Museum); *Boots on The Beach* (Springfield Museum of Art); *Beached* (University of Nebraska); *Wellfleet Harbor* (winner of the Kohnstamm Prize, Art Institute of Chicago); and *Margaret Boni Plays the Recorder* (Albright Museum of Buffalo). Recently Levi was one of the artists selected to do canvases for a series of magazine advertisements for the Capehart radios.

Levi divides his painting time between Cape Cod, Massachusetts and Barnegat, New Jersey, "feeling an almost nostalgic closeness for harbor mists and gray days. Boats, ruins, and sensitive faces are favorite subjects with this visionary artist, who seems to walk alone when very few people are about." He sails an eleven-foot dinghy himself, drinks with the fishermen, and fraternizes with them. In addition to studying the people themselves, he has familiarized himself with their fishing gear, their boats and assorted paraphernalia, and also has made a study of the techniques of professional fishing. The realism of his work is a reflection of this study. His favorite artist is Winslow Homer, but he feels a stronger sense of kinship to Albert Ryder.

In 1938 the artist married Jean Laurent. She is one of his "most willing sitters" and she submits to the arduous modeling with "incredible stoicism." A quiet, slight, dark man, Levi is five feet six and one-half inches in height and weighs 130 pounds. His favorite recreations are typography, sailing (which he maintains he does poorly), tennis, and cooking. It is in this last capacity that he painted his self-portrait labeled *The Chef*.

LEYBURN, JAMES G(RAHAM) (lā'bėrn) Jan. 17, 1902- Sociologist; author

Address: b. 1406 Yale Station, New Haven, Conn.

Author of the prize-winning scholarly work on racial problems, *The Haitian People* (1941), sociologist James Graham Leyburn

DR. JAMES G. LEYBURN

was born in Hedgesville, West Virginia on January 17, 1902. His parents were Edward Ridley and Nancy Granville (Harlan) Leyburn. The young man received his B. A. degree from Trinity College, Duke University (Durham, North Carolina), in 1920, his M. A. from Duke University in 1921, his M. A. from Princeton in 1922, and his Ph. D. from Yale in 1927.

Leyburn has led, as he says, "an uneventful academic life." He has never married. His first position was as an instructor in economics and in sociology at Hollins College in Hollins, Virginia in 1922. In 1924 he became an instructor of economics and social institutions at Princeton University. This post lasted until 1925. From 1925 until 1927 there was a pause in his pedagogical career, which he resumed in 1927 as an instructor in sociology at Yale University. From then on he remained at Yale. He was promoted to the position of assistant professor in 1929, and to associate professor in 1937.

Professor Leyburn has written three books, as well as a number of articles in various periodicals. He also contributed to *The Field and Problems of Sociology* (1933) and to *Essays in the Science of Society* (1937). His first book, which appeared in 1931, was *A Handbook of Ethnography,* a kind of dictionary for the use of ethnologists, anthropologists, archeologists, sociologists, political scientists, and the like. It includes, in alphabetical listing, the names of more than 12,000 tribes, language groups, nations, clans, and other social divisions, as well as the names of geographical and political divisions of the world. "It is not to be assumed," wrote Leyburn in the preface, "that accuracy or completeness has been attained herein. Such virtues in the realm of handbook compilation are achieved only by specialists who have at their disposal infinite time and resources. Neither has a scrupulous consistency in names or locations been desired or attained. But if this *Handbook of Ethnography* serves as a beginning, to be added to, corrected, and built upon, and, more especially, if it aids the layman in his serious reading, it will have served its purpose."

His next book was *Frontier Folkways,* published in 1935. This was an attempt to answer the question, "What happens to men's customs and social institutions when they go to the frontier?" After studying the life among various types of settlers and colonizers in a number of places and times, the author draws certain conclusions from his case histories as to the effects of the frontier on civilization. The book received mixed reviews. Some critics considered his studies admirable; others found them disappointing.

In 1941 Professor Leyburn's *The Haitian People,* a comprehensive study of the second smallest of the United States' numerous Latin-American neighbors, appeared. He wrote, in the introduction: "The true affection I feel for the Haitian people whose institutions I have here described cannot be measured in printed words."

Most critics felt that this "serious and superior social analysis of the Haitian people" was a highly important contribution to a field in which most of the literature written was of the superficial "thriller" type, designed to shock rather than to inform. Leyburn's book is divided into five parts. "The larger parts are 100 pages of historical survey of the rise of class and caste, followed by seventy-eight pages on religion. Two parts of forty to fifty pages treat political and economic matters and modern Haiti, while a third short part treats sex relations and home life." What Leyburn emphasizes is that "two centuries ago nine-tenths of the Negro ancestors of the modern Haitians were still in Africa, living under the mores of their own localities, and for the most part entirely unacquainted with the mores of the Western World. First transplanted as slaves to the Caribbean island, then gaining their freedom after some mixture of blood with the white French, the Haitians have built up not only a state but a Haitian culture."

Dr. Leyburn's chapter on vodun (voodoo), which he considers a "true religion" and not a set of superstitions, was found unusually interesting by most reviewers, although it presented a restatement of familiar material. His special contribution to Haitiana was his "analysis of unique modern social institutions . . . in terms of their historical causes." Many critics found notable omissions in the bibliography; otherwise they considered the book "the best informed and the most comprehensive treatise on Haiti to appear in English." The *Yale Review* considered that "the great charm and value of Professor Leyburn's book is that all the points of view, all the facts, have been fairly discussed; and, while some of us may criticize the emphasis, we cannot for a moment fail to appreciate the spirit back of the book, the labor that has gone into it, and the inspiration it must give to future scholars."

In February 1942 Professor Leyburn received a John Anisfield Award of $1,000. The awards were granted for those books published in 1941 that were held to have contributed most to the literature and scholarship of racial relations. The judges described *The Haitian People* as "a comprehensive, penetrating, and well-documented study that will remain for years a standard authority."

Although he lives in Connecticut, Leyburn spends his summers on the family farm in the Shenandoah Valley, near Martinsburg, West Virginia. Squash rackets is his favorite sport; music his favorite recreation. He is a member of the executive committee of the New Haven Orchestra Association. A loyal Savoyard, Leyburn disputed George Bernard Shaw's remark that "Sullivan has been gaining ground and Gilbert losing it since they died," in an article in a 1943 number of the Yale University *Library Gazette.* "Deriving little consolation from the operas written without the collaboration of Sullivan," wrote Philip Brooks in the New York *Times,* Leyburn "falls back upon the familiar verdict that in their independent creative efforts Gilbert and Sullivan were less than brilliant, while only in their partnership were they inspired." Leyburn cited as examples material in a W. S. Gilbert collection bestowed upon the Yale library by Wilmarth S. Lewis. Brooks felt that none of the material referred to by Leyburn refuted Shaw's assertion, however.

Professor Leyburn is five feet ten inches tall, weighs 162 pounds, and has blue eyes and dark brown hair. He is a member of the American Geographical Society, the American Anthropological Association, the American Sociological Society, Phi Beta Kappa, and Sigma Xi. At Yale he is executive fellow of Pierson College, and his club is the Elizabethan. He is Presbyterian in religion, "independent" in politics.

LINDLEY, ERNEST K(IDDER) July 14, 1899- Journalist; author

Address: b. National Press Bldg, Washington, D. C.; h. 2207 Massachusetts Ave, N. W., Washington, D. C.

Distinguished Washington newspaper correspondent and news analyst Ernest Kidder Lindley was born in Richmond, Indiana, the son of Ernest Hiram Lindley, now chancellor emeritus of the University of Kansas, and the former Elisabeth Kidder. Young Lindley attended the University of Kansas and then studied at the University of Indiana from 1916 until 1917, but his education was interrupted by the First World War, during which he served as a 2nd lieutenant in the United States Army. At the end of the War he entered the University of Idaho and received his B. A. degree in 1920. During his college years he had won his Phi Beta Kappa key and had shown such ability that he was given a Rhodes Scholarship upon his graduation. He spent the next three years at Oxford, therefore, specializing in economics and modern history. In 1923 he received his English B. A. with honors.

ERNEST K. LINDLEY

The following year the young man began his newspaper career on the staff of the Wichita (Kansas) *Beacon.* Later that same year he left the *Beacon* to join the staff of the New York *World.* During the Presidential campaign of 1928 Lindley toured with both Alfred E. Smith and Herbert Hoover '43. In 1929, however, told to go to Washington to cover the inauguration of Herbert Hoover, Lindley is supposed to have said to his editor: "Go to Washington? I'll quit first!" His reason for not going was that he considered another event scheduled to occur at the same time as of far greater significance. He covered that event for another newspaper. It was the inauguration of a new Governor of New York State, Franklin Delano Roosevelt '42. "Where other men," according to *Newsweek,* Lindley's present employer, "saw only the Governor of a state, Lindley's political acumen showed him a man destined to occupy the White House." When Roosevelt assumed office Lindley was sent to Albany by the *World.* In 1931, a short time before Roosevelt was to open his Presidential campaign, Lindley wrote his first book, *Franklin D. Roosevelt; a Career in Progressive Democracy.* It was the first and only full-sized biography of Roosevelt ever written. Critics received it favorably upon the whole and considered that, for a campaign document, it was intelligent and effective, and "accurate enough to guide future and more critical biographers."

From February 1931, when the *World* went out of existence, until December 1937, Lindley

LINDLEY, ERNEST K.—*Continued*

was on the political staff of the New York *Herald Tribune.* Although the *Tribune* was a Republican paper Lindley retained his pro-Roosevelt sympathies. When Roosevelt was elected to the Presidency Lindley's stature as a reporter naturally increased, and he was sent to Washington as, *Newsweek* avers, "reporter-confidante extraordinary of a new Administration." His next book, which appeared in 1933, was *The Roosevelt Revolution: First Phase*, an account of the first four to six months of Roosevelt's Administration, and described by critics as an excellent piece of journalistic reporting. In 1936 Roosevelt ran again for President, and Lindley, although he traveled with Alfred M. Landon, the rival candidate, wrote another book, *Half Way with Roosevelt*, a review of the first three years of the Roosevelt Administration. It was found to be comparatively unbiased and impersonal in the light of Lindley's obvious liking for the President. "There have been many books on the Roosevelt Administration," one reviewer wrote, "but none which quite meets the requirements of a campaign document so nicely as Mr. Lindley's. It is up-to-date and comprehensive; it is readable; it is aboveboard. Readers may disagree with the author's economic theory or with his interpretation of policy, but they must confess that he has not hidden his likes and dislikes behind a screen of platitudes and generalities."

In 1937 Lindley became Washington correspondent for *Newsweek* and that same year he was promoted to be chief of the Washington Bureau, because, says *Newsweek*, he "knows innumerable important personalities intimately. They include every shade of political belief, but they all welcome Lindley. They know that he writes with malice toward none and accuracy for all. He has their confidence." His first articles for *Newsweek* showed, according to Walter Lippmann '40, a decidedly isolationist trend, but in 1940, a few days after the Nazi invasion of Western Europe, he swung around and favored assistance to the Allies.

A New Deal for Youth, a study of the National Youth Administration (an agency for the reclamation of the unemployed youth of the United States, created in 1935 by executive order of President Roosevelt), written by Lindley in conjunction with his wife, Betty Grimes Lindley, appeared in 1938. After an exhaustive survey of the projects of the NYA during a four months' firsthand observation of its projects in many of the states, the authors concluded that the movement was making fine progress and doing an infinite amount of good. For the most part their book met with critical approval. One reviewer objected to its haphazard construction; others objected to it on the ground of its being propaganda. The New York *Times* reviewer found it a "thorough-going, if slightly rosy, analysis."

In 1942 "How War Came," an article in two parts written by Lindley in collaboration with Forrest Davis, was published in the *Ladies' Home Journal.* The article told the inside story of how war came to the United States, and angered other Washington journalists, who resented the fact that Davis and Lindley were "favored with such a juicy, exclusive, privately profitable, official handout." Arthur Krock '43, former White House favorite himself, remarked: "An administration which is operating under the most democratic form of government in the world has once again told its story through official spokesmen instead of telling the story itself."

The article was published that same year in book form, under the same title, as "an independent venture, critical, unofficial, and bearing no imprimatur." Critics called it "a thrilling documentary film", "a corking good tale which deserves wide reading," and one with "plenty of revelations"; but it was also described as "in effect an apologia for our diplomacy," a book that "comes very close to representing the most elaborate and adequate justification thus far put forward by the State Department in defense of its record." Our policies toward Vichy and toward Japan were vigorously defended by the authors, and very little was said about our Spanish policy, our handling of the refugee problem, or American neutrality legislation. According to F. L. Schuman, "Messrs. Davis and Lindley, and the officials for whom they speak, understand Washington. They do not understand Hitler '42 and Hirohito '42."

In articles in *Newsweek* Lindley attempts to answer the critics of the American State Department and to defend its policies. In "Facts About Our Spanish Policy," for example, appearing in *Newsweek* for March 15, 1943, he insisted that we were discouraging Spain from cooperating actively with the Axis by trying to convince Franco '42 that he had nothing to fear from a victory of the United Nations, and by providing Spain with a "modicum" of economic aid. Actually, he pointed out, we were buying more from Spain than we were selling to Spain. Moreover, Lindley has shown a distinctly sympathetic attitude toward the State Department in its icy relations with the French Committee of National Liberation. Describing de Gaulle '40 as politically ambitious, Lindley insists that the leader of the Free French and the men around him "have not been elected by the French people," and that the real trustees of France are the American and British Governments.

Lindley, Malcolm Muir, publisher of *Newsweek*, writes, "is a rare combination of ferret and owl, of lively intellectual curiosity and extraordinary intellectual detachment. As his colleagues will tell you, he is closest of them all to the key political figures of the Administration. Yet, there has never been a suggestion that this personal proximity interferes with his clear, candid, often shrewd estimate of government personalities and actions, or with his job of reporting the facts to the nation." He quotes Representative Foster Stearns of New Hampshire as having said: "I may not always agree with Mr. Lindley's views, but I believe him to be one of the most conscientious and reliable Washington correspondents"; and Representative Jerry Voorhis '41 of California: "I feel that Mr. Lindley is one of the outstanding commentators on national events at the present time."

Lindley writes his own syndicated column on national affairs which appears in the Washington *Post* and other newspapers. He has lectured on national affairs before many groups and has also analyzed news events on the radio. Lindley is over six feet tall and slim; with dark brown hair, eyes, and mustache. On October 5, 1929 he was married to Betty Grimes. They have three children, Jonathan, Christopher, and Mark.

LODGE, HENRY CABOT, JR. July 5, 1902- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; h. 275 Hale St, Beverly, Mass.

After the First World War the man who played the largest part in the United States Senate in defeating President Wilson's plans for American membership in the League of Nations was the late Senator Henry Cabot Lodge. In the fall of 1943 his grandson, a member of the powerful Senate Finance and Military Affairs Committee, the seventh and certainly the youngest of his family to win a seat in the upper house, was making statements which indicated to some commentators that he was "panting to play in this peace the part his grandfather played in the last." Lodge himself says, however: "I have no ambition to imitate anyone. I do not think that the coming peace will be in any way comparable to the last. My ambition is to meet the issues of the times in which I live as intelligently and as honorably as possible. I am strongly in favor of effective international cooperation and have so shown by voice—and by vote—at every opportunity."

HENRY CABOT LODGE, JR.

Henry Cabot Lodge, Jr., was born in Nahant, on a little peninsula jutting out into Massachusetts Bay, on July 5, 1902. His father, George Cabot Lodge (married to Mathilda Elizabeth Frelinghuysen Davis), died when he was a youngster, and his grandfather became a second father to him. Brought up in an atmosphere of cigar smoke and "inside" talk on politics, accustomed to sit on the knees of men like Theodore Roosevelt and William Howard Taft, it was not surprising that he chose a political career for himself. What was surprising was that he delayed the decision for so long. After graduation in 1920 from Middlesex School in Concord, Massachusetts, he matriculated at Harvard University, where he became known not only as an athlete (he rowed as captain of his class), but as a cub reporter for the Boston *Evening Transcript*, for which he worked in the summer of 1923. He was once sent, in the absence of a regular reporter, to cover the City Hall and the daily press conference with Mayor James Michael Curley, who was then involved in a controversy with Senator Lodge about getting more work for the local navy yard. With many chuckling asides, Curley read aloud a private letter from Lodge. It was not until the next day that he learned that the Senator's grandson had been present. Thirteen years later the younger Lodge was to defeat him for the United States Senate.

Graduated with honors from Harvard in 1924, young Lodge immediately found a position with the Republican New York *Herald Tribune*. For three years he was with the *Tribune's* Washington bureau, his first big assignment that of covering President Coolidge's vacation. It was during this Washington period, on July 1, 1926, that he was married to Emily Sears. The *Tribune* later sent him to cover the London Naval Conference, to interview Mussolini '42, and to write about government problems in the Philippines, British Malaya, the Dutch East Indies, Mexico, and Nicaragua (during the so-called "bandit trouble" there). Then for two years he wrote editorials for the paper.

(Continued next page)

LODGE, HENRY CABOT, JR.—*Continued*

What Lodge wrote on foreign affairs even at this time would not have displeased his grandfather (who had died in 1924). In January 1928, writing on "The Meaning of the Kellogg Treaty," the young newspaperman criticized the treaty not only for giving "its signatories the unqualified right to declare war on their own unsupported assertions that it is war of self-defense," but also for giving Europeans the false impression that the United States intended to join in any League of Nations action against an aggressor nation or at least to respect League sanctions. "It cannot be repeated too often that the position of the United States in world affairs," he wrote, "is wholly different from that of the individual European state... our influence in the affairs of others should not be fettered and predetermined . . . do we want to give other nations a right to say what size our Navy should be?"

In January 1930, writing on "Our Failure in the Philippines," Lodge charged that the Jones Act of 1916 "seems to justify the statement that while the Spaniards killed the Filipinos with cruelty, we are reducing them to nothingness with kindness," neither governing them effectually nor really preparing them for the independence which we had promised them. He suggested that the colonial policy of the Dutch in Java, or the white man's treatment of natives in Batavia and Singapore, were models that it would have been better to follow. ("When Northern man, with his taste for doing and overcoming," he explained, "comes into contact with the tropical man, with his taste for submitting and enduring, the tropical man always submits. To rail against this purely natural phenomenon and to talk about right and wrong in connection with it is as fruitless as to rail against the changes in the seasons. . . Many Orientals, responding to an immemorial tradition, regard tyranny as an essential attribute of government.") What is more, the islands were beneficial to us only in insignificant ways. We were actually in a weaker military position with than without them, since they were indefensible against attack by a neighboring power and thus might involve us in a disastrous war waged for sentimental reasons. Lodge's own advice, if we did not plan to start really governing the Philippines, was to sell them to Germany.

In 1932 Lodge took a leave of absence from the New York *Herald Tribune* to write a book of political essays dealing with "the really fundamental problem of creating a set of professional politicians of the highest quality." The book, *Cult of Weakness*, was published that same year and presented "a plea for a return of governmental principles which will recognize the rights and welfare of the strong against the weak and will follow the mandates of the majority rather than those of small but interested and articulate minorities." Four out of the five chapters told how "pacifist groups" had hampered American foreign policy since the First World War, and made out a strong case for a big Navy. Because the defeat of American militarists had weakened America abroad, "those who are strong" and have been "either silent or sleeping" throughout this "'softie' era" must become noisy and alert at home, he announced. As one of "those who desire primarily the encouragement of self-reliance," he criticized the Farm Board and similar Federal agencies, calling them "causes of weakness in greater or less degree" and concluding that "violence is being done to the American dream." (This was, oddly enough, *before* the advent of Franklin D. Roosevelt '42 and the New Deal.)

Critical reaction was about as could be expected. The conservative New York *Times* reviewer called Lodge's thinking "incisive, vigorous, sometimes audacious, and almost always provocative," and decided that "he has the precious gift of clear, virile, and interesting expression." Quincy Howe '40, writing in the less conservative *New Republic*, lamented: "In the city of Boston there is a thoroughfare called State Street, which connotes locally what Wall Street connotes nationally. Young Mr. Lodge belongs to State Street by birth, by temperament, and by choice. When, therefore, he speaks of 'America as we have learned to know and love it,' the first person plural is editorial and royal, not universal. . . State Street has unfailingly violated the American dream by preserving the American nightmare." Lodge himself points out that he does not belong to State Street by birth and that he has never worked there, and asserts that many of his activities "have elicited something less than favor from those quarters."

Lodge was still on leave of absence in Beverly, Massachusetts when he had an opportunity to carry his ideas into practice. There came a vacancy in the Massachusetts General Court for his district, and a friend urged him to run. Promptly accepting the challenge, he worked day and night, rang doorbells like any old-time politico, made hundreds of speeches—and was elected. In the Legislature he was soon made chairman of the Committee on Labor and Industry and in that capacity, according to one commentator, brought industry and labor leaders together "in an attitude of reasonable negotiation that had not been achieved before in Massachusetts." But this was not enough to make him an obvious choice for the Republican Senatorial nomination in 1936; and Lodge was determined to get it. In October 1935 he therefore announced his own candidacy and started his Senatorial campaign, traveling all over the state, making at least one or two speeches a day, acquiring friends in every town, building up a huge personal organization and a huge mailing list. The next summer at the Republican State Convention the old-line Republican leaders came prepared to swing the nomination to another man, but Lodge already knew about 600 of the 700 delegates by name, and he carried the day by a close vote. The Democrats nominated James M. Curley (former United States Congressman and Massachusetts Governor as well as Mayor of Boston) to run against him.

During the 1936 campaign Lodge traveled 43,000 miles, speaking on national issues as a "Practical Progressive." "Give business a chance," he begged. "Give Massachusetts workingmen proper tariff protection." "Stop taking money out of Massachusetts." Curley hinted, "Don't send a boy to do a man's job," and spoke of his opponent as "Little Boy Blue" and "my puny opponent"—but Lodge never mentioned Curley's name. And, although Lodge showed no particular talent as a prophet when in August 1936 he announced that Landon would carry all New England, he won his own Senate seat by a plurality of 142,302. Wrote Raymond Clapper '40: "The best provincial political drama of the year . . . a drama of flesh and blue blood." Some said, "Curley beat himself. Lodge was just lucky enough to be around at the time." But Republicans appreciated the fact that their young, rich, and handsome candidate, a beginner in politics, had trounced the powerful Curley machine. They called him the "White Hope of the Republican Party," a "Young Man of Destiny," and prophesied: "He'll be the Republican candidate for President one of these days." In 1938 and 1939 he was actually to enjoy a brief boom for the Republican Presidential nomination; in the fall of 1943 a committee was to be formed to boom General Douglas MacArthur and Senator Henry Cabot Lodge for the party's Presidential and Vice-Presidential nominations.

When in January 1937 Lodge came to Washington he took a house in Georgetown and proceeded to conduct himself as a Senate freshman should. This, however, did not mean complete silence. That same year he offered a bill for an unemployment census by postal employees; he opposed Roosevelt's Supreme Court proposal; he opposed the Pittman neutrality bill on the grounds that the cash-and-carry provision was not really neutral, but automatically put us on the side of the biggest navy. Through national self-sufficiency we could better encourage peace, he said. He opposed the helium export bill, asked for an inquiry into the reciprocal trade pacts, and argued again that America should get out of the Philippines and stop assuming responsibility for the protection of the islands. That his views on international cooperation or collective security were still those of his grandfather was evident. In May 1937 he wrote in the *Saturday Evening Post*: "Soon after the War some of the groups who give especial attention to the question of peace believed that the United States could best remain at peace by joining with foreign nations in punishing any nation which went to war. This theory of starting a war to stop a war manifested itself in the desire for American membership in the League of Nations and its Court. Fortunately, I believe, the suicidal character of this method became apparent and, for the time being anyway, it was dropped."

Lodge's position on domestic issues was sometimes confusing to fellow Republicans, for he was sympathetic with certain New Deal aims. In 1938, for example, he offered an amendment that would have killed the PWA section of the recovery bill but would have increased WPA funds. He promised to make good on Republican promises to the Townsendites, and in 1939 sought to amend the Social Security Act to increase old age assistance payments. In 1940 he introduced a bill to provide a health insurance program for jobless workers as part of the social security system, although this was a move of opposition to another bill which would have authorized expenditures of $10,000,000 for the construction of hospitals. He also voted in favor of the Wage and Hour Bill.

But his position on foreign affairs was less confusing than it appeared. He was an isolationist, but also a militarist and a nationalist. With the outbreak of the Second World War he urged that the United States remain neutral, but he himself became most bitter about the Russo-Finnish War a little later. (In February 1940 he accused the United States of having helped the U.S.S.R. to finance the war against Finland and tried to get the appropriation for an Ambassador to the Soviet Union dropped.) In April 1940 he proposed that we keep plane sales to foreign purchasers from interfering with Navy deliveries; in May he opposed aid to Britain; but at the same time he urged expansion of the American Army and defense programs and universal military service as a long-range plan, distinct from the draft. That summer, as a captain of Cavalry (mechanized) in the United States Army Reserve Corps who had served for the past eleven years in the Regular Army maneuvers, he himself took part in the maneuvers in Louisiana and the Carolinas. In July he offered a bill for the compulsory military registration of males between the ages of twenty-one and twenty-five, but the next month voted to limit their service to the Western Hemisphere. According to the New York *Times*, he also planned a radio speech on the aims of the National Committee of America First. In October he accompanied Wendell Willkie '40 on his tour of four states.

Although in February 1941 Lodge denounced the Lend-Lease bill as a move toward dictatorship and sought to substitute a two billion dollar loan, when his substitute bill was blocked he voted for the original bill, and he was to vote for the second Lend-Lease bill in October. In November he voted against changing the Neutrality Act so that American merchant ships might be armed and traverse combat areas to carry supplies to belligerent ports, but in December 1941 he voted to declare war on Germany, Italy, and Japan and in February 1942, with the rank of major, he left Washington to join an Army combat unit for a tour of duty. At first assigned to Fort Benning, Georgia, with the 2nd Armored Division, he heard that a detachment of tankmen were going to Libya as observers and to gain actual combat experience to pass along to other tankmen. He therefore put in his name and a few days later was told he had been chosen to make the trip. In the middle of May 1942 he picked up the other volunteers at Fort Knox, Kentucky. From there they took the train to Miami and then climbed into a huge airliner. Six days later they landed at Cairo.

In Libya, the first United States Senator to see action with the American armed forces since the Civil War, Lodge observed the first United States armed forces make actual contact with the Germans on land. Then on July 5, the military mission completed, he ar-

LODGE, HENRY CABOT, JR.—*Continued*

rived back at his Washington office reporting that he had undergone "many amazing experiences," and was ready to begin his campaign for re-election. Secretary of War Stimson '40 had written him a letter showing that the War Department had ordered him back to the Senate against his wishes after Roosevelt's directive that one could not be both a member of Congress and a member of the Army or Navy, and this proved useful. In November 1942, running against New Dealer Congressman Joseph Edward Casey, Lodge was re-elected.

Lodge is not a member of the farm bloc in the Senate which has been largely responsible for inflation. In 1943 he voted for the O'Mahoney bill to limit farmer deferments to essential crops and against the Bankhead '43 bill to defer farm labor from the draft; he voted to permit subsidies to encourage the production of some crops; and he voted with the Administration on including farm labor costs in parity. (He also, however, voted against continuing the loan powers of the Federal Security Administration, against $100,000,000 for soil conservation, and against an appropriation for crop insurance.) On other issues in 1943 he voted with the Administration for money for the National Youth Administration, successfully sought to have the domestic branch of the Office of War Information continued after it had been eliminated entirely in the House, voted for the full amount for the foreign activities of OWI, and introduced legislation to increase the amount of the Government's contribution to dependents of enlisted men entitled to family allowances.

But he has voted against the Administration on almost everything else: for overriding the President's veto of the Smith '41-Connally '41 anti-strike bill; for the Ruml '43 plan; for a "crippling" amendment to the reciprocal trade agreements act; for reducing OWI appropriations for film production; against money for the National Resources Planning Board; for dismissing Watson, Dodd, and Lovett '43. (He was opposed to the dismissals, but voted for the conference report because if the appropriation bill in question had not been passed a large number of federal employees would not have been paid.) In April 1943 he also had inserted in the *Congressional Record* a Hearst editorial which, Administration supporters said, misrepresented the war security bill to plug loop-holes in the laws against spies and saboteurs.

By this time Lodge had emerged, according to his old enemy Quincy Howe, as one of the chief Senate promoters of a policy of "American Nationalism" to supplant the "internationalist" foreign policy of the President. On June 18, 1943 he called on the Senate to act in order to prevent the United States from becoming a "have not" nation when the peace comes. Britain had already made it clear that she was fighting to preserve her empire, said Lodge, while Russia obviously meant to become the dominant power in Eastern Europe; we should therefore formulate a foreign policy which would establish our own claims in the post-War world. We were facing the prospect of an America materially depleted of some of its magnificent natural resources, he claimed, and we would have to go outside our borders for them. It was, therefore, "an open question whether we should not at the end of this War seek to acquire in a just and peaceful manner some things which we might lack." In any case, we should define our needs and try to make treaties which would assure us our "proper" supplies of oil and tin and our "fair share" of shipping and communications rights. Furthermore, in the post-War world we should have a military force ready to function at any moment; so we should plan for the rapid expansion of our Army and Navy after the War and for limited compulsory military training. Lodge frankly opposed what he called the "cosmic approach" to the question of American foreign relations. ("Globaloney" was the word used by one of his fellow Nationalists.)

On June 30, 1943 five Senators, Richard B. Russell, James M. Mead. Ralph O. Brewster, Albert B. Chandler '43, and Henry Cabot Lodge, Jr., received their official clearance from the Senate for a trip around the globe in an Army bomber to visit American fighting forces in battle zones (England, Africa, the Middle East, China, the Far East) and to inspect their equipment. It was not until late September that they all returned, having talked with generals, privates, Government officials, and labor leaders all over the world; and on September 30 Senator Lodge made a speech which created something of a sensation. In it he insisted on parity of cable communications with the British; he insisted that a disproportionate amount of American oil was being used to run the War; he attacked OWI propaganda in foreign countries as a "very dubious undertaking"; he spoke for obtaining permanent rights to the air bases constructed throughout the world by American money and labor. But his most sensational statement was that "the whole character of the Pacific war would change if the United States had access to the Pacific coastal areas of Russia. For reasons of security I shall not say how many American lives would be spared if we receive this aid. I can say that it is a major factor in the whole Pacific picture. It is one of the biggest military facts staring us in the face." On October 7, when the Senate sat in secret session to hear the details of the pilgrimage, the Senator reportedly did say how many American lives would be spared; and the inevitable "leaks" which followed revealed the number: 1,000,000.

Arthur Krock '43 called Lodge's testimony "particularly cogent, informing, and thought-compelling." But President Roosevelt promptly brushed off most of the Senator's contentions. He said that apparently Lodge would have advocated the use of oil with regard to ownership and not to getting it to the proper place with the least risk, and he particularly questioned the desirability of getting Russia involved in a war with Japan at this time, which was what use of the Siberian bases would obviously mean. On this last question other commentators joined in, more than one, including Major de Seversky '41 and Walter Lippmann '40, pointing out that the Siberian bases were virtually surrounded by Japanese-held territory; that the undefeated Japanese

Navy would prevent the United States from putting an army or navy or even a large air force into Siberia; that most of the traffic would move against the bases until they were firmly established and plentifully munitioned; that fog and bad weather set up serious obstacles on the northern road to Tokyo; and that "the Russian Army and the Russian Air Force would have to defend the bases against the Japanese Army in Manchuria, and Russia would have to supply the oil and the materials to support our bombers over 5,000 miles of railroad." One of the four Senators who had accompanied Lodge stated that none of the "military information" on which he appeared to base his suggestion had come to him or any of the others; another asserted that the information he himself had received on the use of the Siberian bases had actually been "negative"; and a third reported that General Marshall ['40] himself had requested that the Senators make no mention of the bases.

Apparently Lodge took heed, for on October 16, speaking at a session of the Foreign Policy Association's all-day forum, he avoided any further criticism of the British or Russians or other controversial subjects and announced that he hoped for "effective international cooperation when the War is over." (On October 2 he had stated: "It would be all right to pledge this country to post-War cooperation, but we should go no further than that, because we can't write a peace before the War is won.") The rest of his speech was devoted to praise of American men, leadership, weapons, food, medical care, and general equipment. Later he told reporters that he had actually told the Senate that the United States should not seek Siberian bases from Russia until after the defeat of Germany. And on November 5 he voted for the revised Connally post-War resolution.

In December 1943 Lodge opposed the McKellar rider to the appropriation bill designed to loosen the Budget Bureau's grip on funds and recapture unexpended balances in Army and Navy appropriations on the grounds that it not only would hamstring the Army and Navy in the war effort, but actually would bring about no economy.

The youthful Senator from Massachusetts is more than six feet tall, erect, with the "build of an oarsman or a cavalry officer." He has a ready smile and usually looks as if he had just left a tailor shop. He has two sons, George Cabot and Henry Sears. His younger brother, John Davis Lodge, entered the movies in the same year that he himself entered the political arena, and November 1943 found Lodge in Hollywood, too, conferring with film producers on a motion picture in which his grandfather's fight against the League of Nations was to be featured.

LOMBARD, HELEN Oct. 25, 1905- Author; journalist

Address: b. Star Newspaper Co, Washington, D. C.; h. 3006-32 St, N. W., Washington, D. C.

"In a dozen years or so," Ralph Thompson wrote in the New York *Times*, "Mrs. Lombard has seen more Ambassadors Extraordinary and Ministers Plenipotentiary at close range than most of us will see in the combined span of our natural lives." As the wife of an attaché of the French Legation, Mrs. Lombard has been familiar with Washington diplomatic society from the days of Paul Claudel to those of Gaston Henry-Haye ['40]. In 1941 her *Washington Waltz* appeared, a "gossipy, lively, sub-libelous, and highly interesting report" of Washington international society.

Mrs. Lombard was born Helen Carusi in Washington, D. C. on October 25, 1905. Her father, Charles Francis Carusi, an attorney, was president of the Washington Board of Education; her mother, Marie Abernathy (Cassin) Carusi, was a granddaughter of Commodore Stephen Cassin, hero of the battle of Ticonderoga in the War of 1812. (Mrs. Lombard counts the founder of the United States Marine Band also among her ancestors.)

Helen Carusi was educated by private tutors and at the Holton Arms Finishing School in Washington, D. C. She has also studied at the National University in Washington, D. C. and at Grenoble University in Grenoble, France. She traveled a great deal on the Continent until she settled down in Washington in 1930 as the wife of Emmanuel E. Lombard, French military attaché. She had been married on May 14, 1927, and her son, François Charles Emmanuel, was born in Grenoble, France, in 1930. (Lieutenant Colonel Lombard resigned from his post when Gaston Henry-Haye became Vichy Ambassador to the United States. In 1943 he was in London on the staff of General de Gaulle ['40].)

Helen Lombard began her journalistic career writing feature articles for the McClure Syndicate, under a pseudonym in 1937. After the War broke out she began a column under her own name, "Wartime Washington," for the Bell Syndicate. Syndicated in more than fifty newspapers, her column is a chatty, behind-the-scenes picture of diplomatic circles in Washington.

When Mrs. Lombard's first book, *Washington Waltz*, appeared in 1941, critics predicted that there would be "some excited buzzing in and around the Chevy Chase Country Club and from one end to the other of Pennsylvania Avenue." The book has been described as "a strictly unofficial report upon certain recent or current official phenomena in Washington. It deals, to be exact, with diplomatic personalities and diplomatic intrigues: Sir Ronald

HELEN LOMBARD

Lindsay, Alexander Troyanovsky, Hjalmar Procopé '40, Hans Dieckhoff, a mysterious steel vault in the Japanese Embassy, Mr. Garner's conspicuous absence from a dinner in the British Embassy, and other matters of the kind."

Most of the accounts are narration of first-hand experiences. Most of the figures portrayed in the book are severely criticized or at best "get negative compliments." The only ones she has really kind words for are Constantin Fotitch of Yugoslavia and Hu Shih '42 of China. It is said that the Latin American diplomats were grateful for not having been mentioned at all.

Washington Waltz received almost unqualified critical acclaim. Joseph Driscoll, writing in the New York *Herald Tribune Books* called it "one of the wittiest, most malicious books ever written about that very malicious, not so witty world capital, Washington. Only a woman could have done this neat job of carving up a capital's stuffed shirts to make a reader's holiday—only a woman like Helen Lombard, American-born, member of an old Washington family, married to a French diplomat, and disillusioned with Vichy and all that."

Besides her syndicated columns, Mrs. Lombard has written articles for *Japan* Magazine and she conducted for a time a column called "A Woman in Washington Writes" for the newspaper *PM*. (The compliments she paid Trujillo '41, the Dominican dictator, in one of those columns shocked some of that newspaper's readers considerably.) She has christened two United States naval destroyers, both named for her great-grandfather, Commodore Cassin.

Mrs. Lombard has been one of the most prominent hostesses in Washington diplomatic and political circles—not alone in her own home, but in the French Embassy as well, for when it has happened that the French Ambassador was a bachelor, she has acted as the Embassy hostess. Mrs. Lombard is one of the belles of the Washington diplomatic corps. She is of medium height (five feet five and one-half inches tall), weighs 126 pounds, and is fair-complexioned. Her hobbies are swimming, riding, motoring, interior decorating, and travel. Before the War she and Colonel Lombard maintained a summer home at Soissons, France.

LONG, BRECKINRIDGE May 16, 1881- United States Government official; diplomat; lawyer

Address: b. United States State Department, Washington, D. C.; h. Montpelier Manor, Laurel, Md.

A specialist in international law and a former American Ambassador to Rome, until the post went to Edward R. Stettinius, Jr. '40, Assistant Secretary of State Breckinridge Long was one of those whose names were most frequently mentioned in connection with the Under-Secretaryship of State left vacant by the resignation of Sumner Welles '40 in the summer of 1943.

Long is, according to Robert Bendiner, "a Democrat of the old school, a politician of pure and simple lines who strayed into the State Department by chance instead of going to Congress by way of the Missouri State Legislature." He was born in St. Louis, Missouri on May 16, 1881, the son of William Strudwick and Margaret M. (Breckinridge) Long. His mother's family was from Kentucky, his father's from Virginia, and for generations both Breckinridges and Longs had followed law and legislating careers, becoming State senators, judges, or advocates. (John Breckinridge had been attorney general under President Jefferson.) Long's own career was therefore more or less predetermined, and after receiving his B. A. from Princeton in 1904 and completing a round-the-world voyage during which he gathered material for a later Master's thesis on Far Eastern politics, he took his law degree from the St. Louis Law School (Washington University) in 1906. Admitted to the Missouri Bar that same year, he hung out his shingle in St. Louis. He received his M. A. from Princeton in 1909, and three years later he was married to Christine Alexander Graham, a granddaughter of the General Blair who had held Missouri in line for the Union and a daughter of the wealthy paper-manufacturing Graham family. A daughter, Christine Wilcox, was born to them.

Long had been a pupil of Woodrow Wilson at Princeton, and out of his wife's ample fortune he contributed generously to Wilson's campaign fund in 1916. On January 22, 1917 President Wilson rewarded him by appointing him third Assistant Secretary of State. The day Long took the oath of office Count von Bernstorff, German Ambassador to the United States, handed to the United States his fateful note on submarines; "a week later, the untried secretary found that his first job was to escort the departing envoy to New York and put him on the boat to Germany." It was the first of many such jobs, carried out from his "office in the French neoclassic rookery on Pennsylvania Avenue that was known in those days as the State, War, and Navy Building." An article by Long published in *The Independent* in February 1920, entitled "Stories of State," tells about the work of the American State Department during the period ending with the signing of the Treaty of Peace. It was during this period that Long became attached to Cordell Hull '40, and, as a Wilson-House man, it was also during this period that he became friendly with Franklin Delano Roosevelt '42.

A champion of the League of Nations in 1920 (though during the Second World War he was to oppose successfully the transfer of the League's International Labor Office to the United States), in that year Long received the Democratic Senatorial nomination from Missouri, but he was defeated in the Republican landslide. That same year Washington University gave him an LL. M. Having left the State Department on June 7, 1920, he bought a racing stable and a magnificent country estate in Maryland and in 1921 opened law offices in Washington. There he not only practiced international law, handling many cases that had grown out of the War, but also became a leader in the ultrafashionable social set of the capital. He remained active in Democratic politics, too. In 1922 he sought the Democratic Senatorial nomination again, running against Senator James A. Reed, but he was defeated despite the backing of President Wilson. In 1928 he was a delegate to the Democratic National Convention and a member of the committee on platform resolutions. In 1932 he was floor manager of the Convention that nominated Franklin Delano Roosevelt for the Presidency, backing Roosevelt against the opposition of the group headed by Newton D. Baker; and once again he contributed sizably to the Democratic campaign fund.

With Roosevelt's election this wealthy Missouri lawyer, who had "waited patiently and covetously for some such fruit of Democratic success at the polls," was rewarded by the Ambassadorship to Mussolini's '42 Italy. He re-entered the State Department as Hull's man, and in Italy, it is reported, he cut quite a swath, giving swank parties that were attended "by the fanciest members of Italian society." At the time of the Italo-Ethiopian War he also burned up the cables with messages to the State Department insisting that an embargo on oil would mean a European war. Since the United States was one of the largest oil exporters, her attitude toward sanctions would be decisive: if one country continued to supply Italy with oil, all would. Long's counsel prevailed, and on the day the idea of oil sanctions was definitely shelved he told Louis Fischer '40 that "he was very happy because he had helped to avert a European war."

In 1936 Long was recalled from Rome, supposedly for reasons of health, although some newspapers hinted that it was really because of such indiscretions as speaking of the Ethiopian victory as the "fruitful harvest of Mussolini's enterprise." From 1936 to 1939 he worked at "odd jobs in private life," including, according to *PM*, an unsuccessful lobbying campaign to lift the Spanish embargo, "undertaken at the behest of pro-Loyalist organizations at a handsome fee." In 1938 he was sent as Ambassador on Special Missions to Brazil, Argentina, and Uruguay; in 1939 he was the American member of a Commission, under the treaty with Italy, for the advancement of peace.

BRECKINRIDGE LONG

The lack of success of this last-named Commission could hardly be blamed on Long, and at the beginning of the Second World War he was made an adviser on international trade and war emergency matters, in the State Department's Special Division on War Problems. Finally, in January 1940, he succeeded George S. Messersmith '42 as Assistant Secretary of State. As the New York *Times* Magazine put it, he has "the job of watching policies formulated in the Department's various branches and of trying to keep them in conformity with a general pattern. He is also the Department's liaison man with Congress. He supervises, along with everything else, the Visa Division, the Special Division, which has to worry about Americans abroad, and the Office of Philippine Affairs." Until the spring of 1941 he was also chairman of the Board of Foreign Service Personnel.

At the time of the collapse of France the President's Advisory Committee on Political Refugees was designated by the State Department as a semi-official body to function as a clearing house for visa applications from refugees in immediate danger from the Nazi terror. The Committee then began sending its recommendations to the State Department, represented by Long and the chief of the Visa Division, Avra Warren. But apparently the Committee was not too happy about what happened to its recommendations. According to *PM*, "Mr. Long and Mr. Warren so effectively frustrated every effort to grant visas to persons in special danger that only a negligible number of visas were issued in the few months after the collapse of France, when the refugee problem was most acute and

LONG, BRECKINRIDGE—*Continued*

tragic. Mr. Long, who incidentally also had tried to block the entry of British refugee children, took the stand that the whole problem was one for individual consuls to decide, knowing that the consuls would not issue special visitors' visas to refugees without direct instructions from Washington." Although what Long said he feared most was the entry of Nazi agents in the guise of refugees, it was charged that well known Fascists and anti-Semites had no difficulty in obtaining visas, while "Long and his department made every effort to obstruct the admission of anti-Fascist refugees." Long also opposed any Congressional change in quotas for the sake of handling the emergency.

By the fall of 1940 the President's Advisory Committee was reportedly threatening to resign, but when the Committee's protests reached Sumner Welles and other high officials the situation improved somewhat. Then Long, without the knowledge of Secretary of State Hull, issued a State Department official release stating that only a dozen visa applications submitted by the refugee committees had been rejected, that the State Department had authorized the issue of approximately 2,000 visas, and that there had been no delays in making decisions. The Department of Justice, whose Immigration Division passes on visa applications, promptly threatened to publish a counterrelease stating the true facts unless the State Department revised its methods of administering the problem; and the President's Advisory Committee was dissuaded from withdrawing entirely from its agreement with the State Department only through the intervention of Sumner Welles and President Roosevelt himself.

Long's handling of the refugee problem did not astonish liberals, who remembered with distaste his stand on the Ethiopian War and on many other questions. They pointed out that Long had assured everyone that Mussolini was too smart to be drawn into the War. They pointed out that Long and James Dunn '43 had pushed the plan in the State Department to give Franco '42 a credit of $100,000,000 payable in American food supplies, principally wheat. (Exposed in the press, the plan had been temporarily withdrawn, but had finally been worked out secretly, with Argentina used as an intermediary.) Finally they quoted Long's comments on one of President Roosevelt's fireside chats to the nation as proof of his "appeasement" tendencies. Listening to the President's speech in a Washington club, the Assistant Secretary of State had kept telling his companion: "He must not say that. This is terrible. This will get us into war." This attitude was quite consistent with the position Long took four months before Pearl Harbor, when the Lend-Lease Administration attempted to raise the load line on tankers carrying oil to Britain, which needed oil desperately. When Green H. Hackworth announced that it could not be done under the terms of an international convention signed at London as a safety-at-sea measure eleven years before, his decision was taken with Long's backing.

Not that the Assistant Secretary of State made apologies for Hitler '42, whose campaigns, he said, had "horrified all respectable peoples." On October 19, 1941, in a speech at Detroit made a few days after the return of Ambassador Phillips '40 from Italy, Long warned the Italians that if Germany were given the million soldiers which she had asked Italy to send into Russia, France, and Yugoslavia, the Nazis would then start an attack on Italy itself. And it was in the name of the struggle against Hitler that he asked the Senate Foreign Relations Committee in January 1942 to believe that Franco's and Pétain's '40 "resistance" to Germany had been strengthened by America's entry into the War. A year later Long told a delegation protesting the American shipment of supplies to Franco that the "final say" on the United States' policy toward Spain rested with the President, and that the State Department was merely acting in accordance with Roosevelt's wishes. On this question, however, there was no doubt that Long agreed with the State Department's policy.

In the summer of 1943 Long became the head of two new committees set up in the State Department: a new interdepartmental committee on post-War telecommunications, which was to consider plans for consolidating the privately owned facilities in the United States for international communication; and an international shipping committee, which was to consider the international aspects of the fact that the United States would end the War with a fleet larger than that of any other country. But it was not until the resignation of Sumner Welles as Under-Secretary of State that Long's name really began to appear in the news. When it was understood that he was favored by Hull as Welles' successor, every commentator immediately found something to say on the question. Some were approving. It was pointed out that the Assistant Secretary of State was very popular on Capitol Hill and that the President, "whether or not he regards Long highly as a statesman, retains a personal fondness for him as an old friend and supporter and as a convivial fellow"; and Arthur Krock '43 wrote:

"[While Long] has drawn the fire of the critics who monopolize the term 'liberal,' because of his course toward immigration, as an example, he is a New Dealer, an unquestioning follower of the President personally, and a disappointment to his friends of the Wilsonian days who never believed he would accept—much less champion—this Administration's domestic record. If Mr. Long is chosen it will be because both the President and Mr. Hull trust him implicitly, because he is a career diplomat of long experience, with a brilliant record in the Embassy at Rome, and because, unlike Mr. Welles, the Senate would gladly confirm him."

The "critics who monopolize the term 'liberal'" continued firing away at Long. Lisa Sergio announced that if he received the post it would be a grave blow to the people of Europe, who were looking for progressive, liberal leadership from the United States. Drew Pearson '41 on his radio program attacked Long as one of the men in the State Department who, along with Hull, A. A.

Berle '40, and James Dunn '43, "actually would like to see Russia bled white." Even *Time* commented in passing that he had "won no distinction by his opposition to Fascism," and the New York *Herald Tribune* called him "unimpressive." Undoubtedly the appointment of Edward R. Stettinius not very long afterward was a cause for rejoicing in many circles

Long remained a target for liberals, however. In October 1943 he was accused by representatives of the Emergency Conference to Save the Jewish People of Europe of deliberately holding up plans for a rescue mission via Turkey that had been approved by Hull himself two months before. In December, Long was severely criticized when it was revealed that his testimony before the House Foreign Affairs Committee on November 26 had apparently swung the Committee into opposing two bills providing for the executive creation of a commission "to effectuate the rescue of the Jewish people of Europe." In his testimony Long said that the United States had admitted about 580,000 victims of persecution by the Hitler regime since it began in 1933, the majority of them Jews. Both his figures and facts were refuted by official sources. It was pointed out by commentators that only 243,420 out of the 580,000 immigrants he mentioned had been from countries now dominated by the Axis powers, and that by no means all of these had been refugees. According to official figures, the total number of Jews admitted to the United States under national quotas in this ten-year period had been only 166,843; on emergency visas, 43,089. For the entire ten years the number of immigrants admitted from Germany and Austro-Germany had been less than one half the allowable quota.

"Small, lean, long-faced, iron-gray-haired," Long is known as "Breck" among his intimates. He is a Presbyterian, and his Washington clubs are the Metropolitan and the Burning Tree. From 1937 to 1941 he served as a trustee of Princeton University, and he is the author of *Genesis of the Constitution of the United States* (1926).

LONGWORTH, ALICE LEE *See* Longworth, A. R.

LONGWORTH, ALICE ROOSEVELT
1884- Social leader

Address: h. 2414 Grandin Ave, Cincinnati, Ohio

ALICE ROOSEVELT LONGWORTH

A brilliant, vehement personality, with a shrewd eye and caustic wit—plus name, wealth, and influential connections—have kept Alice Lee Roosevelt Longworth for many years well in the foreground of Washington's social-political activities, particularly those with an anti-Administration slant. To the generation of the "Gay Nineties" she was "Princess Alice," romantic daughter of a popular President; to the generation that came of age during the first term of another Roosevelt '42, she was a name prominent among arch-Republican and arch-reactionary social lobbyists. Mrs. Longworth again made national news when in 1941 pre-Pearl Harbor days she was charged with strong isolationist sympathies and called an outstanding member of the American "Cliveden" set.

"I was a shy, uncomfortable child," she writes in describing her early years. But apparently the young daughter of "T. R." had her moments, for a contemporary recalls: "At a big reception Alice's aunt gave, somebody had brought Alice a toy pistol with dynamite caps, and right there at the reception she began firing. The women screamed, and the servants actually dropped the lemonade glasses." Her later success as a socialite may have been given impetus and direction by this early social tour de force.

Alice Roosevelt was born in 1884, the daughter of Theodore and Alice Hathaway (Lee) Roosevelt. Her mother died when she was born; she was three when her father remarried. While she was a baby her father's sister Anna, "Auntie Bye," took care of her; and it is Auntie Bye who figured most affectionately in her early childhood. Sagamore Hill, the Roosevelt home at Oyster Bay, Long Island, was the real background of those years. There Alice and her four brothers played, and when their father was home with them they were taken by him on hikes, picnics, and swimming parties. "At an early age I was the potentially effete member of my strenuous family," Alice Longworth writes. She could not enjoy violent exercise as the other children did, since she was an orthopedic case and had to wear braces on each leg from ankle to knee. The children were fond of small toy animals, which their father used to brand for them, with a hot wire, with his ranch brands. During the winters Alice

LONGWORTH, ALICE ROOSEVELT
—Continued

usually spent some time with her grandparents in Boston, where "I was spoiled and made much of to my heart's content."

When she was six the Roosevelt family moved to Washington, to the atmosphere of politics and politicians. There for a time she was sent to public schools; but she "ran wild" and so went again to live with "Auntie Bye." She recalls happily, however, the parties given by Aunt Corinne Robinson—delightful companion to her own children and others. Her earliest recollection of a Presidential campaign was that of the Free Silver fight of 1896.

It was not until her father's nomination for Vice-President in 1900 that political activity, and its social side, began to impress her. She recalls how she and her step-mother listened in, at that time, to his speech of acceptance in her mother's sitting room. Publicity for members of a politician's family was not, in those days, considered nice.

Life as "Princess Alice" began when she was eighteen: Theodore Roosevelt became President at McKinley's death, and went to the White House. There the younger children would take tin trays from the pantry and slide down the staircase that led to the private rooms. But Alice was growing up and beginning to have social responsibilities. At her first dinner party she sat between Uncle Joe Cannon and General Grosvenor: she had been told to wangle from these two the promise of a hardwood floor for the East Room. Her coming-out dance was at the White House in January. "I enjoyed myself moderately. The crash in the East Room I considered personally humiliating, and the fact that punch was provided instead of champagne was a horrid blow to my pride." Princess Alice liked better the official White House parties—particularly entertaining the handsome Prince Henry of Prussia.

"I was the daughter of an enormously popular President, and the first girl in the White House since the days of Nellie Grant, and I looked upon the world as my oyster." She had a pet green snake named Emily Spinach; she was also bold enough to motor, alone, with another girl, "all the way from Newport, Rhode Island without a chaperone." It made fine publicity; but Father didn't like it. He also abhorred women smoking—and "soon after I came out I began to smoke whenever an opportunity presented itself." She says that she now smokes much less than she used to.

Following the inauguration of 1905 Alice Roosevelt went with William H. Taft, Secretary of War, on an inspection trip of the Philippines. She took so many clothes with her that her maid had a nervous breakdown. She also learned to dance the Hula—expurgated version. Significantly, Representative Nicholas Longworth was a member of the party. They crossed the Pacific to visit Japan, where she had an audience with the Emperor. In Japan, as in other countries visited, Princess Alice was given costumes, jewelry, souvenirs of all sorts—her "loot," as her father called it. At Peking she became intoxicated on rose wine. The party went to Korea, and sailed home from Yokohama.

On their return, Alice Roosevelt and Representative Nicholas Longworth of Cincinnati, Ohio, announced their engagement. They were married on February 17, 1906, and the wedding was a stupendous social event. According to one attendant: "It was one of the high social marks. It beat all its predecessors. Her presents were superb. They came from every king, every potentate in the world and were so numerous and of such enormous value that [the late] President Roosevelt finally issued his decree that no more gifts from foreign countries could be received." The present the bride considered most handsome was a string of pearls from Cuba. She enjoyed the wedding—so did her father, of whom she was quoted as saying that he "always wanted to be the corpse at every funeral, the bride at every wedding, and the baby at every christening." The young couple went to Cuba for their honeymoon, then returned to live in Washington "amid a constant round of parties."

Alice Longworth made her first trip to Europe the summer following her marriage, where she was received and entertained in the manner of a diplomat. In London she attended a dinner for King Edward VII; she dined with the Kaiser in Germany; she stayed at the Embassy in Paris, and talked with Clemenceau. On her return she attended the political convention of 1908 in Chicago. She recalls her father's delight when Taft won the nomination—for Taft promised to continue Roosevelt's policies. Taft, however, was not the forceful personality T. R. had been; he yielded to pressure, changed his mind, and the break between the two began. Four years later came the formation of the Progressive Party; Roosevelt lost the Republican nomination and the Democrats came in victorious with Wilson.

The Roosevelts were out—and so was Princess Alice. A new era was beginning, one that saw the outbreak of the First World War. Throughout this time Alice Roosevelt Longworth's sympathies and beliefs reflected those of her father. Both of them violently opposed President Wilson's reluctance to enter the War, and led in the anti-Administration attacks. Following the War they were particularly bitter in their opposition to Wilson's League of Nation plans. At the time Alice Longworth said of Hearst: "His stand on the League of Nations would make me cheer for him were he the devil himself." When Wilson returned from his trip to Europe on behalf of the League, she stood while he passed, "with fingers crossed, making the sign of the evil eye, and saying 'a murrain on him.'"

It was not that Wilson was a Democrat; Alice Longworth has been professionally anti-Administration since the time her father sat in the White House. "The daughter of T. R. has never regarded any of his successors as other than a White House usurper. To her Harding was 'just a slob,' Coolidge 'looked as if he had been weaned on a pickle,' and distant cousin F. D. R. was 'one-third sap and two-thirds Eleanor.' After leaving the White House 'Princess Alice' entertained her coterie of admirers by doing funny imitations of Mrs. William Howard Taft, as she now does bitter parodies of Mrs. Roosevelt '40."

Robert S. Allen '41 and Drew Pearson '41, in *Washington Merry-Go-Round* (1931), described Alice Longworth as "one of those rare women who are really absorbed in politics. . . She not only attends the outstanding Senate debates and committee hearings, but behind the scenes she pulls the wires, as far as she is able, against such pet hates as the World Court, the League of Nations, and the London Naval Treaty." They also described her as dominating "Washington's ultra-fashionable official group more completely than any other whip-cracker in the capital" at this time through "the prestige of her position and the vitriol of her tongue." During the '20's she and her husband, then Speaker of the House, often turned up at entirely different parties. (When, however, his wife's social position was challenged in her war with Dolly Gann over precedence, the Speaker considered her war his war.)

Nicholas Longworth died in April 1931. The widow and her daughter Paulina were left to carry on. Alice Longworth continued to take an active part in political life: in 1932 she was a member of the board of counsellors of the Women's Division of the Republican National Committee, in 1936 a delegate from Ohio to the Republican National Convention. In 1940 she came forth as an ardent supporter of Robert Taft '40 for the Presidency. This she herself commented upon as strange, in view of the bitter enmity that had existed between her father and William Howard Taft.

Writing, also, occupied much of Alice Longworth's time in the early '30's. *Crowded Hours*, a book recording her youth and years in the White House, was published in 1933, after having appeared serially in the *Ladies' Home Journal*. Mrs. Longworth also wrote several articles for various women's magazines attacking New Deal policies. She declared she would like to see all opponents of the New Deal unite for "a return to the checks and balances of the Federal Government as provided under the Constitution, and to a belief in the capacity of the people to govern themselves . . . instead of being ruled, regulated, and regimented by a Federal bureaucracy." In 1937 Alice Longworth and her brother Theodore Roosevelt collaborated in editing the *Desk Drawer Anthology* of poetry. The verses were compiled with the aid of Alexander Woollcott '41, who asked his radio audience to send in verses they had cut out and were keeping. Of the 40,000 poems submitted, preferences were given to good poems by little known Americans.

Though less active as a writer after this, Mrs. Longworth continued in her role as head of the anti-Administration social lobby in Washington. In 1940 she became a member of Herbert Hoover's '43 National Committee on Food for the Five Small Democracies—a committee working to get American food past the British blockade of nations conquered and dominated by Hitler '42. In 1941 it was reported that Mrs. Longworth's salon, "to which invitations are highly prized by Congressional wives from the provinces, has . . . taken on a strongly isolationist tinge." Alice Longworth had "taken up" both Mrs. Burton K. Wheeler and Mrs. Bennett Champ Clark, the latter chairman of the Washington chapter of the America First Committee. It was further reported that, on the night when word came that Laval '40 had been ousted from the Vichy Government by Pétain '40, one of Mrs. Longworth's guests was so disturbed by the news that he retired to an upstairs room to recover his composure. He was young Count René de Chambrun, son-in-law of Laval, and son of Mrs. Longworth's sister-in-law.

Whether she has or has not modified her isolationist sympathies since America's entry into the War, Alice Roosevelt Longworth has not abandoned her opposition to the Franklin D. Roosevelt Administration in general. And, with another Presidential campaign in the offing, a wit and vigor whetted to the "fourth term" issue may be counted on to see the daughter of T. R. brilliantly through another Washington social season.

LOVEMAN, AMY May 16, 1881- Editor; author

Address: b. c/o Saturday Review of Literature, 25 W. 45th St, New York City; c/o Book-of-the-Month Club, 385 Madison Ave, New York City; h. 210 E. 73rd St, New York City

Distinguished associate editor of the *Saturday Review of Literature* and of the *Book-of-the-Month Club News*, Amy Loveman is one of the few celebrated residents of New York who are actually native to that city. She was born in New York City on May 16, 1881, the daughter of Adolph P. and Adassa (Heilprin) Loveman. All her schooling was received in New York: after completing her secondary education at the Horace Mann High School she entered Barnard College of Columbia University, being graduated in 1901 with a B. A. degree and a Phi Beta Kappa key. Although she was interested in literature she took no literature courses in college, convinced that her love of books would always inspire her to read, and feeling that her time in school should be spent in other fields with which she was less well acquainted. Her studies in history proved valuable later in life when she became a book reviewer, as did "the family discussions of an intellectual nature" in which she had participated from childhood.

"My first literary work," Miss Loveman writes "was as assistant to an uncle who was revising *The New International Encyclopaedia* and *Lippincott's Pronouncing Gazetteer of the World*. I read proof for him (frequently stretched out at ease in a steamer chair),

Arni

AMY LOVEMAN

checked on articles, and on the gazetteer wrote a number myself." Later she worked in the office of the New York *Post* for several months, checking files for her uncle for a special anniversary issue of *The Nation*. When that work was finished she was asked to remain on the *Post* to write book reviews. Five years later she had risen to be associate editor of the *Post's Literary Review*, and she held that position until 1924, when the editorial staff of the *Literary Review*, which included Henry Seidel Canby '42, Christopher Morley, and William Rose Benét, formed a new magazine, a literary weekly which called itself the *Saturday Review of Literature*. Canby became editor in chief of the new magazine, while Miss Loveman was made an associate editor and for a long while headed the "Clearing House," a department of the magazine which answered literary questions (it went out of existence sometime in 1937). Although Canby has had several successors, according to Bennett Cerf '41 "the *sine qua non, ne plus ultra,* and power behind the throne" has always been Amy Loveman.

In 1936 Miss Loveman wrote *I'm Looking for a Book*, in answer to many of the questions addressed from all over the country to the "Clearing House." The book gives reading lists on many subjects, ranging from recommended reading for an invalid to books dealing with "the more vulgar games of chance." The New York *Times* found this a "well-arranged and helpful volume. . . Miss Loveman's aggregate of literary fact and suggestion is not only informative, but often valuable in its cultural judgment." "Anyone dealing with books will find this collection of information well nigh indispensable," said Herschel Brickell in the *Review of Reviews*, and Isabel Paterson agreed. "'Books to be tasted, books to be chewed and digested,' books for young and old, books for everybody—and this book comes under the last classification," she wrote in *Herald Tribune Books*.

For some years Miss Loveman had been a member of the preliminary reading committee of the Book-of-the-Month Club, which was a natural extension of the literary aims of the *Saturday Review of Literature*, and is intimately connected with that magazine. In 1939 she became head of the editorial department, in charge of the staff of twenty-five readers who go through approximately 300 books a month. Miss Loveman has continued to work for both the *Saturday Review of Literature* and the Book-of-the-Month Club. Although the "Clearing House" is a thing of the past, she frequently writes the *Saturday Review of Literature* editorials, her topics ranging from soldiers' reading to the importance of American history and the role of the educator in the post-War world. In addition to all her other literary activities, she is a member of the "Imperative" Committee of the Council on Books in Wartime. The function of this Committee is to select those new books dealing with the War or related subjects which its members feel should be especially recommended to the reading public.

Miss Loveman feels that the War has profoundly affected the American novelist of today. "He cannot, any more than his English fellow, escape the conviction on the one hand that the tragic reality dwarfs any attempt of the creative imagination to depict its drama, or, on the other, forget the insignificance to which the woes and joys of the individual have sunk in a world of universal agony. To write of the conflict is to convey but a fragment of that vast pageant of tragedy which the newspapers are every day depicting in its far-flung aspects; to write of the emotion and reaction of little men and women is to run the risk of making personalities and motives appear either trivial or egregious against the backdrop of actuality." Miss Loveman feels, however, that "as the chaos of war commenced itself to take on pattern," the writer "began to recover courage and started to write again in the hope that he, perhaps more than most of his fellows, was in a position to keep alive those values which, in a world of crashing standards, were likely to fall into complete confusion."

Miss Loveman advises secretarial training for those young women aspiring to enter the editorial field. "She believes," according to Ruth Adams Knight '43, "that the editorial field is one in which women experience the minimum handicap, in which they are relatively well paid, and in which, given ability and patience, they may confidently look for success, not necessarily a quick success, but eventual recognition."

Miss Loveman is five feet four inches tall, weighs 128 pounds, and is brunette in coloring, with graying hair. Among her favorite recreations are reading (Jane Austen is read and re-read), talking, and "friends." Those same friends call her "consistently dependable," but so "sweet, modest, and retiring" that not many people appreciate how much work she really does on the *Reviews*, which (when editor Norman Cousins '43 is away), she puts to bed on Monday night, and for the Book-of-the-Month Club. In order to help remedy this situation, a dinner was given in her honor at the Ambassador Hotel on June 15, 1942. Present were Elmer Davis '40, Christopher Morley, Henry Seidel Canby, Oswald Garrison Villard '40, Thomas Lamont '40, Dorothy Canfield Fisher, Simeon Strunsky, Harry Scherman '43, Bennett Cerf, Norman Cousins, and William Rose Benét, nearly all vying with one another in their sincere and spontaneous tributes to her. Benét recalled the imaginary epitaph that had hung over her desk for years:

Here lies Amy Loveman, the best of her sex,
Who never objected to cashing small checks.

Norman Cousins kissed her and presented her with a gold medallion which bore on one side the *Review* symbol, a Phoenix rising from the ashes, on the other, the inscription:

TO
AMY LOVEMAN
A COURAGEOUS
CHAMPION OF LITERATURE
FROM HER DEVOTED FRIENDS
JUNE 15, 1942

LOVETT, ROBERT MORSS Dec. 25, 1870- Government official; author; professor; critic

Address: b. and h. Charlotte Amalie, St. Thomas, Virgin Islands

Few of the millions of American schoolboys who have plowed their way conscientiously through Moody and Lovett's *History of English Literature* are aware that it is the same Robert Morss Lovett, author and long-time college professor, who has been attacked as "subversive" by the Dies '40 and Kerr Congressional Committees, and as such, unfit to hold his position as government secretary of the Virgin Islands. An outspoken and aggressive liberal for more than half a century, Lovett is quite accustomed to having storms break around his head—and to weathering them.

Robert Morss Lovett was born Christmas Day 1870 in Boston, Massachusetts, the son of Augustus Sidney and Elizabeth (Russell) Lovett. True to the Boston tradition, after his graduation from the English High School he matriculated at Harvard in 1888, receiving both his Phi Beta Kappa key and his B. A. *summa cum laude* in 1892. His brilliant scholastic career resulted in his being asked to teach at Harvard while he was also taking graduate work there, and he was made an assistant in English in 1892 and an instructor in 1893. Later in 1893 he made his first connection with the University of Chicago, with which institution he was to be connected for forty-three years, first as instructor of rhetoric (1893-96), then as assistant professor of English (1896-1904), associate professor (1904-09), and finally full professor (1909-36). From 1903 to 1920 he also carried administrative duties at the University in his position as dean of junior colleges. (He was married to Ida Mott Smith of Boston on June 4, 1895 and has two daughters and three grandchildren.)

DR. ROBERT MORSS LOVETT

When in 1936 his retirement at the age of sixty-six was announced, *School and Society* rejoiced along with alumni and friends of the University of Chicago at knowing that his participation in the intellectual life of the campus would not cease with his relinquishment of the title of active professor, for he was still to do research work and conduct graduate courses as professor emeritus. "That he will go on standing up for civil liberties and the rights of teachers goes without saying. The constitutional guaranties of human freedom have had his vigorous support all these years—in the classroom, on the public platform, on the printed page... For Robert Morss Lovett the right of the teacher to speak freely without fear of intimidation from the outside comes first."

This was in spite of the fact that in 1935 a state Senate committee investigating radical influences on the part of certain members of the faculty of the University of Chicago, while finding the University on the whole blameless, had recommended the dismissal of Professor Robert Morss Lovett. No evidence was produced to support the charge that he was a Communist, but "exhibits offered in evidence disclosing Professor Lovett's activities in Communistic or unpatriotic organizations and associations with Communistic speakers, regardless of their reputation, prove that Professor Lovett cannot be an asset to any forward-looking American institution." Furthermore, the Committee charged that he mingled with ex-convicts and soapbox orators, was opposed to war, and attended anti-war meetings, including many at which the Oxford pledge was given to students. Most serious of all, in a private letter he had said he did not care whether a certain book "reflects on the Russian Government or the United States Government or any other; all, in my opinion, being rotten."

(Continued next page)

LOVETT, ROBERT MORSS—*Continued*

The partisans of Professor Lovett replied to all these varied charges by stating that he had lived at Hull House for years and was "happy to consort with the unwashed or the disinherited or the disreputable, if so be he can understand their human problems and contribute something to their lives." The professor justified his pacifism by explaining that in his eyes taking the Oxford pledge simply gave an individual interpretation of the Kellogg Peace Pact and put the outlawry of war on a personal basis. "As he understands it, when the Government sets its name to an agreement that the settlement of international disputes of whatever nature shall never be sought by other than pacific means, it released every citizen from the duty to participate in settling such disputes by an appeal to arms." The *Christian Century* pointed out that it was not only Dr. Lovett who had characterized his government as "rotten": that the most conservative newspapers of the day had published cartoons demonstrating the disasters into which the New Deal was supposedly heading our country and our world, for which a mild verbal summary would be "rotten government." (The significance of his inclusion of the Russian Government among the "rottens" was apparently not noted.)

Moreover, the *Christian Century* goes on, "the 'communistic and unpatriotic organizations' with which Professor Lovett is connected turn out to be no other than the American Civil Liberties Union and the American League Against War and Fascism. Both of these contain Communist members. The latter is perhaps dominated by them. Both have purposes which are in no sense Communistic. The Civil Liberties Union concerns itself with the defense of the civil rights of persons, who, by reason of local prejudice or passion, are denied the equal protection of the laws. Because Communists are frequently the victims of such attacks—for, believe it or not, Communists are not outlaws in this country, but have some civil rights—some Communists are active in the League. But there are also many non-Communists in it, men whose conception of Americanism is that every act of injustice against anybody, Communist or not, is a blot upon the honor of the country."

Professor Lovett's career has not always been so stormy. During his many years at the University of Chicago he became widely known as an authority on English fiction, a literary critic, and author. His *History of English Literature* (with William Vaughn Moody), published in 1902 and known widely in schools and colleges as "Moody and Lovett," has become a standard text. Among his other works are two novels now forgotten, *Richard Gresham* (1904) and *A Winged Victory* (1907); *A First View of English Literature* (with Moody, 1905); a celebrated monograph on *Edith Wharton* in the Modern American Writers series (1925); A *Preface to Fiction* (1931); and *History of the Novel in England* (with H. S. Hughes, 1932). In addition he was one of the compilers of *British Poetry and Prose* (1928) and *The College Reader* (1936), and editor of *The Selected Poems of William Vaughn Moody* (1931), and numerous other volumes of poetry and prose. In 1919 he edited the *Dial*, and in 1921 he became an associate editor of the *New Republic*. He remained on the editorial board for twenty years until his residence in the Virgin Islands made it impracticable for him to hold the position.

During this period he contributed numerous articles to periodicals, many purely literary in content, others interpreting the social implications of the books reviewed or authors discussed, and many concerned entirely with political, economic, and social reform. All of these discussions are characterized by scholarly approach, by a sure background of facts presented with ease and clarity, and by a complete absence of emotionalism or hysteria. Lovett's articles are almost always fairly long, for he usually sketches the complete history of his subject, and always worries the situation under discussion until the reader is aware of all aspects and all implications. The preliminary presentation is for the most part unbiased, Lovett's viewpoint emerging toward the end of the article, frequently through irony which, though gentle in tone, is devastating in effect.

Robert Morss Lovett reveals his opinions and ideals in his literary reviews as well as purely political writings. His praise of Sherwood Anderson highlights the qualities he most admires: he describes the late novelist as having been "a friend to all humanity, simple, unpretentious, sincere: modest in his claims on his public, generous to his contemporaries in the field." The corruption and ignorance of the local Chicago hirelings is often under attack as in his review of Harriet Monroe's autobiography, *A Poet's Life* (1938): "The city in which one judge forbade Coquelin and Mansfield to play *Cyrano de Bergerac* on the ground that Rostand had stolen the plot from the production of a local real estate dealer, and another judge pronounced Bacon to be the author of Shakespeare's dramas, has cause indeed to thank the gods who gave it Harriet Monroe and *Poetry*." In a review of *Ambassador Dodd's Diary* (1941) he said: "The final significance of Ambassador Dodd's ['40] diary is as a warning. 'It can happen here.' Hitler ['42] at the outset was no more credible than Coughlin ['40] or Hearst. The statesmen of France and England who kept the ring while Italy and Germany pounded to death the Spanish Republic had their counterparts in high places in the United States..." His review of Nehru's ['41] *Toward Freedom* (1941) serves also as a vehicle for an attack on British government of India: "The treatment of India by Churchill ['42], Amery ['42], Linlithgow ['42], is the one great obstacle for America to taking at face value their pledged devotion to democracy. They ignore the great opportunity to give effect to their professions, and Jawaharlal Nehru remains in prison to testify against them before the public opinion of the world." (In April 1931 he had spoken of the savagery of treatment reserved for Indians and had concluded: "We do not know whether India is fit to govern itself; we know that Great Britain at least, is not fit to govern it; and that her attempt to do so is a source of danger and corruption to herself and other peoples.")

Lovett was under attack for his antiwar statements before the entrance of the United States into the Second World War. (His only son, Robert Morss Lovett, Jr., was killed at Belleau Wood, France in the last War.) In 1924 he commented on the censorship of certain "obscene words" in *What Price Glory*: "It is worthy of note that the censorship directed against this play by the Secretary of the Navy was concerned with these words only. Apparently he did not fear the weakening of the people's will to war from a representation of that function far more disillusioning than in *Arms and the Man,* while he recognized the danger to his appropriations should the public become aware that the Marines habitually invoked the name of Jesus Christ in conversation, or alluded to comrades in terms denoting illegitimate or canine birth." Again, in a review of the *Life and Letters of Walter H. Page* (Ambassador to Britain under Wilson), published in 1925, he commented on the naïveté of the author, Burton J. Hendrick, in apparently never suspecting that "an Ambassador who uses his position to draw his country into war is in any way comparable to the general who betrays his country to defeat. . ."

Through the long years his pen has provoked other controversies by advocating such changes as the throwing open of Alaska for the resettlement of refugees, a point of view opposed on the grounds that it would be impossible to do with private capital, that Alaska would not be self-sustaining. To this argument Lovett replied: "The prospect of making immediately so large a contribution to the solution of the refugee problem would offer a powerful inducement to government and individuals who have already expended vast sums in futile efforts to solve it. The report is doubtless correct in stating that the development of Alaska must be by private capital, but such capital need not be limited by the profit incentive, nor need it lay its dead hand mercilessly on the settlers, as in the Middle West. It is possible to learn something by experience." When he viewed the Century of Progress in Chicago he was struck by the fact that to the sponsors of the Fair progress meant "hundreds of appliances for household comfort, all of them beyond the means of the poor," and recreation and entertainment vulgar in the extreme.

Socialized medicine interested him, for in an article written in 1929 he commented that "the high cost of medical care must be someone's affair, and the medical profession must either cooperate in solving the problem, or must expect to have the matter taken from its hands." In an article on the formation of Equity (1924) he favored the closed shop for "whatever may be said of the right of the individual to work without reference to his fellow workers, history shows clearly that industrial organization is incompatible with its exercise. If the organization is necessary, and no one will be bold enough to deny the necessity in this case, individual rights must be withheld." Under the title "A G. M. Stockholder Visits Flint" (1937) he reported his own personal investigation of the Flint sit-down strike, and his resulting sympathies with the grievances of the workers, which were ignored by both the company and the Government. "Legal title is not the final answer to the question of possession. Who has the better human and natural right to call the Fisher plant his—I, whose connection with General Motors is determined by the price recorded on the New York Stock Exchange, or the worker whose life and livelihood are bound up in the operation of making cars? I bought my shares at long odds and probably have already collected the purchase price in dividends. When I place a winning bet in a horse race I do not claim a share in ownership of the horse. I know from my political economy that my position is the result of labor and sacrifice. Whose? Not mine. Obviously the enormous mass of wealth represented by the capitalization of General Motors, repeatedly enlarged by split-ups and stock dividends, is the surplus resulting from the toil of millions of workers over many years. Obviously they have not shared fairly in the wealth they have produced." (Lovett is fond of quoting Ruskin: "No man can become largely rich by his personal toil—it is only by the discovery of some method of taxing the labor of others that he can become opulent.")

The ire of conservatives has been directed against Lovett's philosophy from time to time, and he has often been branded a Communist. As a matter of fact, far from being a member of the Communist Party, he has described himself (1938) as a "third-party hack" because ever since the Committee of Forty-Eight in 1920 he has been active in every attempt to start a liberal, progressive, farmer-labor party, and as late as 1938, at the launching of the National Progressives of America at Madison, Wisconsin, he wondered whether Philip La Follette was able to inspire the enthusiasm to overcome the "mountains of selfishness and indifference" standing in the way of a "nationwide movement toward reintegration and reform." In 1924 he questioned in print whether or not the affiliation of the Communists was possible with progressive groups (in connection with the Farmer-Labor-Communist convention then being held at St. Paul), particularly with farmer-labor parties, and pointed out that "if the Farmer-Labor interests are united enough and clever enough to use the Communists as the Communists will certainly use them, a working agreement is possible," but "the idea that the Communists can be induced to put their talent for organization at the disposal of a progressive movement without sharing its control . . . is absurd." He predicted that "if the Party dies it will die of that political malady the germs of which the Communists, in spite of their own robust immunity, seem like Typhoid Mary to carry among their associates."

He has always been a great admirer of Norman Thomas and of socialist principles, maintaining that "it is becoming clear that the support of a social order which will maintain for its members standards of life and of living, of elementary comfort, security, education, and recreation, which no one will

LOVETT, ROBERT MORSS—*Continued*

assert are excessive, will prove too expensive for an economy subject to the waste of management for profit under the capitalist state... In a time of changing social order great catastrophes may occur. The fear will not be exorcised that capitalism may in its desperation turn again to universal war, and in its ruin involve the whole fabric of Western civilization." And in 1937 he was in agreement with the decision of the American League for Peace and Democracy to accept the withdrawal of the Communist Party from affiliation, saying that "the Communists have given invaluable aid to the League in promoting peace and democracy, and will doubtless continue, as individuals, to do so even when the program of the League in respect to the main objectives differs in detail from that of their party."

The chief reasons why the label of Communist has been attached to Lovett is that he has been associated with various liberal movements, some of which have also had wide support among Communists, such as the Sacco-Vanzetti National League, the American Civil Liberties Union, the League for Independent Political Action, the American Peace Mobilization, the League of American Writers, the National Committee for People's Rights, the National Federation for Constitutional Liberties, the International Labor Defense, and others. As Secretary Ickes '41 pointed out to the Senate, some of the same organizations could be used to brand as "Communist" Wendell Willkie '40, Thomas E. Dewey '40, Frank Murphy '40, Robert H. Jackson '40, Cordell Hull '40, James Farley, and Ickes himself. Moreover, the League for Industrial Democracy, a Socialist organization of which Lovett was president, was bitterly attacked for years by the Communists.

It was on July 25, 1939 that President Roosevelt '42 appointed Lovett to the $5,800 a year post as government secretary of the Virgin Islands. It was considered a "New Deal" appointment, criticized in conservative quarters as such, and rejoiced in by the liberals. As a matter of fact, Lovett was not a New Dealer, but had outspokenly criticized the tactics which got the "boy scout from Albany" the nomination in 1932 and the subsequent "inconsistent" campaign promises which gave each section what it wanted; in 1936 Lovett voted for Norman Thomas and explained why in the *New Republic,* characterizing the Roosevelt 1932-36 regime as "four years of muddling" and advocating a change in social order desirable to anyone "not blinded by greed or prejudice." He also said that though "the Communist Party stands in general for the same type of change in social order as that represented by Norman Thomas . . . personally I feel that the Socialist Party is nearer to American ideology. . ."

Why the President chose Lovett for the job is uncertain, but certainly Lovett was familiar with the peculiar problems of the Virgin Islands as indicated by his long, fact-studded article in the *New Republic* of March 3, 1937 entitled "The Virgins: Problem Children." It was believed at the time of his appointment that his knowledge of economic problems would be of invaluable assistance in the development of the industrial reforms already being attempted in the Islands, that his liberal career and personal warmth and sympathy would do much toward winning friendship in the delicate personal relationships involved in a population ninety-five per cent Negro, and that his personal acquaintance with his long-time friend and colleague, Robert Herrick, the former government-secretary, whose sudden death was regarded as an irreparable loss in the Islands, would make his task easier. That these suppositions were in the main true is indicated by the splendid tributes to him published by newspapers upon hearing of the Dies charges, as well as the cable urging his retention sent immediately by the St. Thomas Businessmen's Association to the President. Nevertheless, he was among the thirty-eight employees named by Dies in February 1943 as "subversive." Of the nine later reviewed by the Kerr Committee, six were cleared, but the Committee recommended the dismissal not only of Lovett but also of two employees of the Federal Communications Commission, Columbia psychology professor Dr. Goodwin Watson and Dr. William E. Dodd, Jr., son of the late Ambassador.

The conclusions of the Committee were reached at a secret session in which, according to the overwhelming comment of the press, neither the spirit nor the letter of ordinary American justice prevailed. Specifically, Lovett was denied knowledge of the charges until called to answer them, denied alike witnesses in his favor, counsel to speak for him, or even an observer to represent the department which employs him. He was questioned, judged, and convicted within the space of two hours. No transcript of the proceedings was ever made available either to the defendant or to the House of Representatives. Asked Representative O'Connor of Montana: "Is there anything in their [Lovett, Dodd, and Watson] record to show that they did not perform able public service? Have they done anything whatever to hinder prosecution of the War?" Replied Chairman Kerr: "We didn't go into those matters. It would have required the taking of even more evidence than we took." After permitting only twelve minutes of the two hours allocated for the debate to be used for the defense of the three men by Representative Hobbs and Marcantonio, the House voted to attach a rider to the $142,430,000 Urgent Deficiency Bill providing that none of the money be used to pay the salaries of these three named individuals. The reaction of the American press was immediate and overwhelming. Such headlines as "The House Disgraces Itself", "The Washington Inquisition," and "The House Has Struck a Foul Blow" were common in such diversified sources as *The Nation, Time,* the *Christian Century,* and the New York *Times.* The rider in fact if not in form was a bill of attainder, specifically forbidden by the Constitution, and public opinion flamed to the defense of Dr. Lovett. The comment of the New York *Times* was typical: "Those who know him well cannot think of any act in his life inconsistent with the purest patriotism. He has, indeed, been a lifelong liberal. As such he has been severely critical of the Dies Committee. . . One wonders what country this is in which such things can take place."

Secretary Ickes girded his loins and entered the fray in a speech to the Senate in which ostensibly he came to the defense of the employee of the Department of the Interior, Robert Morss Lovett, but in which he also took occasion to lay on with a will scathing and blistering remarks about the so-called justice and evidence on which these men had been convicted. Critics hailed his speech as one of the greatest in American history in defense of traditional American freedom of opinion and rights of individuals, and newspapers confined themselves to quoting him, feeling nothing more was to be said. Among his telling points was the fact that the chief accusations against Lovett rested on the testimony of Elizabeth Dilling, author of *The Red Network* (1934), now under Federal indictment for sedition, and Walter S. Steele, a known Fascist sympathizer. Moreover, a number of far from radical friends, including Thomas W. Lamont '40, chairman of J. P. Morgan & Company, took up the cudgels in Lovett's behalf.

The Senate, visibly impressed, refused to vote for the bill containing the rider, but the House remained adamant. After much wrangling by the two bodies through their respective committees (while the urgently needed funds were held up) a compromise was agreed upon requiring their appointment by the President and confirmation by the Senate by November 15, 1943, if they were to keep their jobs. The President, on July 14, 1943, attacked this rider as unconstitutional.

In his first message to the Congress which reconvened in September 1943, President Roosevelt once again assailed the Lovett rider as "an unwarranted encroachment upon the authority of both the executive and the judicial branches under our Constitution." He added, "It is not, in my judgment, binding upon them." Secretary Ickes was evidently of the same opinion, and in October, in a move calculated to make a final test of the issue he appointed Dr. Lovett executive assistant to the Governor of the Virgin Islands (his old post under a different title). House members were incensed. The House Insular Affairs Committee voted to call Ickes to explain and justify this appointment, which had been made in "apparent flagrant disregard of the law of Congress," and while on the mat Ickes replied that he was not obliged to respect "any act of Congress which violates the Constitution." He also made it clear that the job change had been made to give Lovett an opportunity to challenge the Congressional rider in the Supreme Court. After November 15 Lovett drew no salary, but he continued to report for work, as did Dodd and Watson. On December 3, 1943 all three of them therefore filed suit—ostensibly to recover the salary due them, actually to test the constitutionality of the Congressional action, which, they said, deprived them of liberty and property without due legal process, unconstitutionally invaded the executive powers of the President, and was both "arbitrary special legislation" and a bill of attainder.

LUCIONI, LUIGI (lü-chē-ō'nē lü-ē'gē) Nov. 4, 1900- Artist

Address: b. 64 Washington Sq. South, New York City; h. Manchester Depot, Vt.

Although an artist of Italian birth, Luigi Lucioni "has become so inseparably known as the painter of Vermont that Lucioni landscape and Vermont landscape are virtually synonymous." He made his first visit to Vermont in 1929; and the green, rolling hills and mountains of that state so reminded him of his home in northern Italy, among the foothills of the Alps, that he has since been devoted to Vermont, and has been called its "painter laureate." Lucioni is noted for his portraits and still lifes as well as for his landscapes. He has taken several important prizes in American art, and paintings by him have been acquired for the permanent collections of many leading museums.

Luigi Lucioni was born on November 4, 1900 in Malnate, Italy, the son of Angelo and Maria (Beati) Lucioni. He came to the

LUIGI LUCIONI

United States when he was eleven years old (he has been a naturalized American citizen since 1923) and went to the public schools in this country. He then studied at Cooper Union, New York from 1916 to 1920 and for the next five years he attended the National Academy of Design, from which he was graduated in 1925. His specialty was etching—it was as an etcher that he began his career in 1922, and he is now a member of the Society of American Etchers. He taught painting for one year (1931-32) at the Art Students League in New York.

Since 1929 Lucioni has been spending his summers in Vermont, painting various aspects of the Vermont scene in his characteristic, carefully exact style. It is said that "he once visited the Rockies, but couldn't stand them. They were too big, too rough for him. He hustled back to Vermont as quickly as he could." Since 1939 he has bought his own house and reconstructed an old barn into a fine studio in Manchester, Vermont, where he spends half of the year. Typical of his paintings of Vermont country are *Vermont Classic,* showing in its foreground "the barn of a frugal Vermonter who has given the ventilator a new coat of paint but has left weathered walls and tottering silo untouched"; and *Lake through the Locusts,* in which, beyond gigantic trunks of locust trees, is a view across a wheat field over Lake Champlain to the Adirondacks.

Early recognition of Lucioni's work came in 1928 and 1929, when he received, respectively, the Tiffany Medal and the Allied Artists Medal of Honor. By popular vote shortly after an important one-man exhibit in 1939 he won first prize at the Carnegie International Exhibition for a portrait of Ethel Waters '41. In that year also, again by popular vote, he won a prize for his study of an athlete, *Amateur Resting,* at the Corcoran Art Gallery in Washington. In 1941 Corcoran Gallery visitors voted Lucioni's "meticulously finished, superphotographic portrait of John La Farge" the most popular picture in the show.

In April 1943 Lucioni's first one-man show since 1939 opened at the Associated American Artists Galleries. The exhibition of thirty-eight landscapes, portraits and still-life paintings won high praise from art critics. Said Edward Allen Jewell, writing in the New York *Times*: "His craftsmanship is superb. It grows subtler, if not more meticulous, all the time. There are subtleties and overtones now that his earlier work, infinitely painstaking though that was, lacked. Lucioni is indeed a master craftsman, unexcelled within his own particular field." Jewell remarked that the distinguishing trait of his style "is a kind of superclarity, which drains from nature every vestige of those softening qualities that seem inherent in 'atmosphere.' . . This creates a sense of artificiality, as contrasted with nature, though it does not interfere in the slightest degree with the fine relationship of form established, places no impediment in the path of design, and is consistently and with manifest sincerity employed." Among the Vermont landscapes in the show were Lucioni's well known *Vermont Pastoral,* with its two foreground trees and valley and mountain background, and *The Birches,* a pattern of trunks that lead up to "the linear quality with which the mountain slopes beyond are defined—with the white church steeple of Manchester deftly lifted up between the two motives."

Comparing Lucioni's still lifes with his portraits ("He lays on his paint with microscopic realism like the fifteenth century Flemish Masters"), the art critic of the New York *Herald Tribune* wrote: "He is not so evenly triumphant in his still-life paintings, but when they are good they are very good. In them his aptitude for composition, so well shown in the landscape, falters from time to time. The *Flower Patterns* and *The Green Bottle* are cases in point. On the other hand, studies like the *Game* or *In the Wine Glass* or the *Variations in Blue* are altogether satisfying, even brilliant. They also are well drawn, and this is emphatically so once more in the matter of the artist's portraiture. A striking instance is the portrait of a boy, *Peter,* in which, by the way, there is a hint of the broader method for which I am always on the lookout in Mr. Lucioni's work. But, breadth or no breadth, he is wholly successful in the crisp profile, *Richard Hale,* in the agreeably designed *John La Farge,* in the strong bit of characterization, *My Father,* and in diverse other portraits."

Lucioni's paintings are represented in the collections of the Metropolitan and Whitney Museums, New York; the Pennsylvania Academy of Fine Arts; the Atlanta Museum; Kansas City Museum; Denver Museum; Dayton Art Institute; Seattle Museum; Williamstown Museum; Zanesville (Ohio) Museum; Hamilton College; and Dartmouth College. Several of his etchings have been acquired by the Library of Congress, The New York Public Library, the Metropolitan Museum, and the Victoria-Albert Museum, London. "Because he paints very slowly, his output is small; but because his work is popular both with public and critics, it finds a comfortably ready market." In 1941 the artist became a National Academician.

Described as "a careful, ordered man" who "keeps his temperament and his imagination well in bounds both in his life and on his canvas," Lucioni is of average height and stocky in build. "Singing and spaghetti are, next to painting, closest to Luigi Lucioni's heart." He thoroughly enjoys opera—and he is on the board of directors of the Metropolitan Opera Guild. His good friend Giovanni Martinelli once taught him whole acts of *La Traviata* and *Aïda.* "As he paints, Lucioni bellows his operatic repertoire at the top of his loud voice." His many musical friends like to go to his Washington Square studio, where Lucioni cooks for them great batches of spaghetti. Symphony music and the piano are other Lucioni hobbies; he also likes dogs, walking, and reading, "especially biographies, history, and poetry." While he enjoys the theatre, he has one ardent dislike—motion pictures.

LUPINO, IDA Feb. 4, 1918- Film actress
Address: b. c/o Warner Brothers' Pictures, Inc, Burbank, Calif.

IDA LUPINO

One of the few "theatre thoroughbreds" in Hollywood, Ida Lupino has been hailed as "our latest great American actress" after ten years of relative obscurity in the film colony. Cast in what she has called "syrupy ingenue parts," she made little impression upon either film audiences or Hollywood. But when she discarded glamour, mussed up her hair, put a sneer on her face, and portrayed a psychopathic and terrifying villainess, Miss Lupino proved that she was a first-class, full-fledged dramatic actress. As such, she carries on the tradition of the royal family of the English theatre, the Lupinos, who as traveling puppeteers first came to England in the seventeenth century. Since that time scarcely a generation has passed without seeing several Lupinos behind the footlights. "I became an actress," Ida Lupino says, "just to show my father I wouldn't let him—or the other Lupinos—down." Her father, Stanley Lupino, who died in 1942, was one of England's most popular and versatile comedians, having written both books and music for many of the musical comedies in which he starred. He married Connie Emerald, who came from another famous theatrical family and had been on the stage since childhood. His uncles, Mark and Harry Lupino, his brother Barry (who manages the Drury Lane Theatre), and his cousin, Lupino Lane, were all headliners on the stage.

Ida Lupino was born in London on February 4, 1918. She was stage-conscious from early childhood—with good reason, for the Lupino home was general headquarters for actors, producers, and anyone remotely connected with the theatre. Her parents were determined to give her a formal education, however, and so they sent Ida to the Clarence House School at Hove, where she stayed until she was eleven. Here she learned French, music, and dancing, but the lure of the theatre was powerful even at school. When she was seven she wrote and produced a play called *Mademoiselle* for her classmates. Meanwhile she privately improvised scenes and acted them out with her younger sister, Rita. At ten Ida persuaded her father to build a miniature theatre for them. It proved to be an elaborate structure, seating one hundred people and boasting a call board, a pit, and complete electrical equipment. Ida's repertoire included Juliet, Hamlet, and Camille. She scorned youthful roles and at the age of eleven, in an evening dress and high heels, portrayed a tragic role before an invited audience.

Two years later Ida announced to her parents that she was ready to begin her professional career. From then until the time she was fifteen she prepared for that career in earnest, studying at the Royal Academy of Dramatic Art. Her first real opportunity came when she met Allan Dwan, an American, who was in England producing a film called *Her First Affair* (1932). Dwan gave the fifteen-year-old girl the lead in the picture. She promptly bleached her hair, penciled her eyebrows, and appeared in a series of sultry roles, billed as "the English Jean Harlow." It was *Money for Speed* (1932), in which Miss Lupino played a dual role, that of a tough gold digger and that of a sweet and innocent young girl, which first brought her to Hollywood's attention. Paramount was at that time looking for an actress to play Alice in their production of *Alice in Wonderland*, and the dewy-eyed Miss Lupino seemed a likely candidate. She was offered a tempting contract, and in 1933, accompanied by her mother, she left England for America.

(Continued next page)

LUPINO, IDA—*Continued*

When Miss Lupino reached Hollywood and was screen-tested, Paramount realized they had signed up "a potential Clara Bow." They gave her a role in *Search for Beauty* (1933), and the part of Alice went to someone else. Miss Lupino was not disappointed at losing the part and commented, "I could never, no matter how hard I tried, *feel* Alice, because I have never really been Alice's age." She settled down in Hollywood and adapted herself to life there by renting a house with a swimming pool, giving fabulously expensive parties, and appearing in night clubs with numerous handsome leading men. Her professional career was limited to playing minor roles and to posing for publicity photos in bathing suits. She appeared as a stage-struck girl in *Ready for Love* (1934); as a romantic young lady contemplating suicide in *Paris in the Spring* (1935); as an unsympathetic vixen in *Peter Ibbetson* (1935); as a comedienne in *Anything Goes* (1936); as a girl from the New York East Side in *Yours for the Asking* (1936); as an ice-skating instructress in *One Rainy Afternoon* (1936); as an adventuress in *The Gay Desperado* (1936); as a shopgirl in *Artists and Models* (1937); and as an heiress in *Let's Get Married* (1937).

In spite of Miss Lupino's protest against ingenue roles and her assertion, "I don't care a fig about being pretty-pretty on the screen," studios continued to cast her as "the sweet young thing." In desperation she retired for a year to study acting. She announced that she was waiting for the right role, let her dyed hair grow back to its natural auburn, and prepared for a serious dramatic career.

"The right role" took a long time coming, but Miss Lupino recognized it in Bessie, the Cockney girl in *The Light That Failed* (1939). She convinced producer William Wellman that she was the girl for the part, and the critics agreed with her. She made Bessie a thoroughly detestable character, winning for herself the title of "the girl you love to hate." Success was not assured, however, until she appeared as Lena Carlson in *They Drive by Night* (1940), "a robust and exciting melodrama of long-haul truck drivers on the West Coast." Ida Lupino's exciting portrayal of a woman whose unrequited love for a truck driver leads her to murder and ultimate insanity was promptly hailed as one of the dramatic sensations of the year. *Newsweek* declared that Ida Lupino's "arresting performance . . . stole the show. . . Every so often Hollywood discovers Ida Lupino. . . This time she will undoubtedly stay discovered. . . They are convinced that they have another Bette Davis '41 and are hurriedly searching for screen stories to prove it." *PM* was much impressed (as was everyone else) by the witness stand scene in which she went stark mad right in front of the camera, and describes the producer, Mark Hellinger, and Jack Warner as going slightly wild themselves when they saw the rushes. "Everybody seemed a little surprised that Ida Lupino, the puck-cheeked fun girl, should be able to do this sort of Ophelia stuff."

Warner Brothers immediately signed her to a long-term contract and began a search for suitable dramatic roles for their new star. In 1941 she appeared in *High Sierra, The Sea Wolf,* and *Out of the Fog,* the film version of Irwin Shaw's '42 play, *The Gentle People* (1939). Of her work in the last-named picture, Howard Barnes wrote in the New York *Herald Tribune,* "Ida Lupino, as I have said so many times in the past, is one of the great actresses of the screen, and she does not fall down in this instance."

In *Ladies in Retirement,* also 1941, she returned to psychopathic characterization, portraying a housekeeper who murders her employer so that she may use her home as a refuge for her two insane sisters. This remains Miss Lupino's favorite role, although she was handicapped by her youth and by the inevitable comparisons that were made between her performance and Flora Robson's original interpretation of the role on the New York stage. Critics agreed, however, that she did everything she could to overcome these difficulties, and that she succeeded to an amazing degree.

Miss Lupino works hard over every character she creates, but gives a general impression of ease when she acts. "She works with an economy of effort, a sense of just exactly the right gesture and intonation, so right you hardly realize the affair must have had careful planning behind it." Insisting that she is not a born actress, she says, "I study and work hard. I take a script and mull over it and underline the bits I want to emphasize. When I go on the set I know exactly what I want to do and how I want to do it."

In 1942 she returned to sentimental drama briefly for a role in *Life Begins at Eight-Thirty,* a screen adaptation of Emlyn Williams' '41 play, *Yesterday's Magic.* Although the picture was not highly praised, it was generally conceded that Miss Lupino played the crippled daughter of a selfish, once-famous actor with deep understanding, "compassion, and simplicity." She took a small role in the all-star *Forever and a Day* (1943), made by members of Hollywood's British-born colony, but was soon back in unsympathetic roles, playing the lead in *The Hard Way* (1943). As a "female Svengali" who ruthlessly pushes her sister into stardom by ruining the lives of all who stand in her way, Miss Lupino gives a performance that is "etched in venom." *The Hard Way* was her first major starring vehicle, and her characterization alone, according to the New York *World-Telegram,* made it "an outstandingly good picture. . . Miss Lupino joins Ruth Chatterton and Bette Davis in the right to be a Great American Actress. . . Even if you don't care much for [the] general idea and story, you will stay . . . to marvel at the depth of feeling Miss Lupino can summon to make tawdry lines vivid and live. And you probably will carry away some impatience about getting to Miss Lupino's next picture." The New York *Herald Tribune,* after complaining of the simplicity and triteness of the plot, stretched to unreasonable lengths by the director, states: "The chief asset of the film is the acting of Ida Lupino as the ambitious sister. . . Her portrayal is grim and bitter. She relentlessly holds to the characterization of being a single-minded witch. Without her, *The Hard Way* would be a tough row to hoe, indeed. She is a comfort in all of her scenes." The New York *Times'* Bosley Crowther was almost alone in finding her performance "stiff and heavily stylized." Miss Lupino received the New York Film Critics award as the best actress of 1943 for her work in this film, outranking Katina Paxinou '43 on the final ballot by a vote of eleven to six.

In private life Ida Lupino is the wife of the actor Louis Hayward, with whom she appeared in *Ladies in Retirement.* Hayward is now on active duty as a lieutenant in the Marine Corps, and Miss Lupino lives with her mother and sister in their country home near Santa Monica, California. Although she claims she is "no raving beauty," she fits Hollywood standards comfortably. She has auburn hair and violet eyes, is five feet two inches tall, weighs one hundred pounds, and, with true Lupino versatility, dances, sings, writes short stories, and composes music. Her *Aladdin Suite* has been performed by the Los Angeles Philharmonic, and several of her popular songs have been played over the air. She prefers music to acting and hopes some day to be able to devote all of her time to it.

For the present, at least, Miss Lupino has no thought of giving up the screen. In the summer of 1943 she starred in *In Our Time* with Paul Henreid '43, in which she takes the part of an English girl deprived of her memory during the German Blitz of London in 1940; she also appeared in a mad burlesque scene for Warner's super-musical, *Thank Your Lucky Stars.* Miss Lupino was then lent to Twentieth Century-Fox for the leading role in *The House of Chedworth,* the film version of Hugh Walpole's novel *Blindman's House.* She was later to appear in *Meet My Friend,* a comedy by Dalton Trumbo '41. She was also hard at work on a musical comedy, *Make Up Your Mind,* for which she did the book, lyrics, and music, and which she plans to produce herself. Her greatest worry about her career is that she may become typed in grim, tragic roles. She enjoys playing comedy parts and confesses, "Personally I'm sick of seeing Lupino suffering." Judging from the success of *The Hard Way* the public does not agree with her.

McCAIN, JOHN S(IDNEY) Aug. 9, 1884- United States Naval officer

Address: b. c/o United States Navy Department, Washington, D. C.; h. Carrollton, Miss.

Recognition of the growing importance of naval aviation has been signalized by President Roosevelt's '42 establishment, on August 18, 1943, of a new office in the Navy Department—deputy chief of naval operations for air. Appointed to this office, with the rank of vice-admiral, was Rear Admiral John S. McCain, who had been serving as chief of the Naval Bureau of Aeronautics. Prior to this Admiral McCain had earned a distinguished service record through aviation commands in the South Pacific.

John Sidney McCain was born in Teoc, Mississippi on August 9, 1884, the son of John Sidney and Elizabeth (Young) McCain. He is a nephew of the late Major General Henry P. McCain, who was awarded the Distinguished Service Medal for his services as adjutant general of the Army during the early part of the First World War. Admiral McCain's brother is Brigadier General William A. McCain, retired, of the United States Army.

After attending high school in Carrollton, Mississippi, McCain went to the University of Mississippi, and he was appointed to the Naval Academy from Mississippi in 1902. Upon his graduation in February 1906 he was assigned to the Asiatic Station and served on the U. S. S. *Ohio* and *Baltimore.* In 1908 he joined the *Connecticut,* flagship of Rear Admiral C. S. Sperry, at Manila; and on her he returned to the United States by way of the Suez Canal. In April 1909 he joined the *Pennsylvania* in San Francisco harbor, and in the fall of that year he was transferred to the cruiser *Washington.*

McCain was married to Katherine Daisy Vaulx of Fayetteville, Arkansas at Colorado Springs on August 9, 1909. They have three children: John S., Jr., James Gordon, and Catherine Vaulx. The elder son, Lieutenant Commander John S. McCain, has already begun a distinguished career in the Navy.

After serving on the cruiser *Washington,* McCain in 1912 became officer in charge of the Machinist's Mates' School in the Charleston Navy Yard. In May 1914 he joined the *Colorado* and served as her executive officer until September 1915, when he was ordered to the *San Diego* as engineer officer. During the First World War he served on this cruiser on escort duty. In June 1918 he was ordered to the Bureau of Navigation of the Navy Department, and in August of that year was given additional duty as a member of the Board of Awards and Medals. Two years later he was appointed member of a board to formulate rules for fixing the precedence of temporary and reserve officers transferred to the regular Navy. In July 1921 he was ordered to Newport News, where the

VICE-ADM. JOHN S. McCAIN

U. S. S. *Maryland* was fitting out, and he went on board as navigator when she was commissioned.

Another tour of duty in the Bureau of Navigation, in the Officer Personnel Division, extended from 1923 to 1926; then McCain assumed command of the *Sirius*. Later in that year he was transferred to the *New Mexico*, and he served as her executive officer until June 1928. After instruction at the Naval War College at Newport, Rhode Island from June 1928 to 1929 he reported to the Enlisted Personnel Division, Recruiting Section, Bureau of Navigation. He was commanding officer of the *Nitro* from 1931 to 1933, and for two years thereafter was officer in charge in the planning division of the Bureau of Navigation.

Since 1926 Admiral McCain has been "air-minded," studying naval aeronautics and trying to get into that service branch because he had seen its growing importance. "I was stubborn about it," he says. But it was not until 1935 that he got his chance at flight training at the Naval Air Station at Pensacola, Florida. McCain was then fifty-one and the course required that he learn to fly every type of "boat." But he stuck to it, "won out, loved it, and still does." He became a naval aviator in September 1936, and he was assigned to duty as commander of the Fleet Air Base, Coco Colo, in the Canal Zone. In May 1937 he assumed command of the U. S. S. carrier *Ranger*. He was in charge of the Naval Air Station at San Diego until June 1941, when he became commander, Aircraft Scouting Force.

For six months, May to September 1942, McCain commanded all land-based aircraft in the South Pacific. In September he made two trips to the Solomon Islands, flying in a B-17 which led in large numbers of marine fighter planes, "slipping them in at dusk when the Japs couldn't see. And staying, too, under gunfire and bombing." It is said that "he was all over the island, seeking firsthand knowledge, questioning all who had fighting experience; his ruddy, freckled face alight with a puckish grin, bright eyes twinkling and snapping, gray hair rumpled, fighter's jaw outthrust. He ran himself ragged, lost five pounds from his short, spare frame."

The story is told that once, when bombs fell on Guadalcanal with huge, roaring blasts, two sailors cramped in a dugout cursed the Japanese manfully. Then a young lieutenant said: "Stop that profanity! Don't you know there's an admiral present?" In the dead silence that followed, the Admiral—who is known as one of the Navy's best plain-and-fancy cussers—chuckled. On October 31, 1942, Admiral McCain was awarded a Distinguished Service Medal for "exceptionally meritorious service" in the South Pacific and the Solomons campaign. "His tireless energy and extraordinary skill," said the citation, "contributed greatly to occupation of the Guadalcanal-Tulagi area by our forces and to the destruction and serious damaging of numerous aircraft and vessels of the enemy Japanese Navy."

When McCain was appointed new chief of the Bureau of Naval Aeronautics in September 1942, to succeed Rear Admiral J. H. Towers '41, there was some complaint in air circles because of the Navy's failure to replace Towers "with an officer to whom air warfare was a primary rather than a secondary interest." His promotion was said to be typical of the "seniority" formula. But McCain didn't become a "swivel-chair" admiral. He couldn't sit still long enough for that, but was "darting and sweeping through the rambling Navy Department Building like a little fighter plane trying to get out and at the enemy." He lost a few more pounds, until he weighed no more than 140 "in his shiny blue uniform with frayed braid and ribbons—working clothes for a working air-sailor."

From his active service, McCain knew what planes were needed, and why. He knew what it meant to have too few planes, with too few men to man them properly: he had seen men fighting in the air almost around the clock. His one great resolution was to have "enough planes for the United States Navy, and enough pilots to fly them." McCain wanted a crew and a half, or two crews, for every plane the Navy has—and he set about getting them. He spoke of the importance of new production, in 1942, of Wildcats and Avengers. "These fighters and torpedo bombers prevented the invasion of Australia," he said. "They stopped the enemy at Guadalcanal and destroyed his airplanes at the ratio of several to one. They helped to drive him off at Midway and thus prevented the invasion of the Hawaiian Islands. These same airplanes covered the recent occupation of North Africa, clearing the skies of all opposition and covering the landing of our troops." He further praised the new air-cooled Corsair, a fighter plane for the Navy, capable of more than 400 miles an hour.

Apparently "likeable, leathery 'Slutzie' McCain" fulfilled his duties as chief of the Bureau of Naval Aeronautics ably enough to suit Secretary Knox '40. And President Roosevelt gave his approval to the appointment of the hard-working admiral to the office of deputy chief of naval operations for air. Admiral McCain's duties would be to correlate and coordinate all military aspects of naval aviation within the Navy Department, while the Bureau of Aeronautics (with Rear Admiral D. C. Ramsey serving as McCain's successor) would continue to deal with the design, procurement, and upkeep of aircraft and aircraft equipment.

However, "airmen point out that McCain was fifty-one and [for] thirty years a Navy man before he won his wings, and that he has held air commands only since 1936. Not even the appointment as new chief of the Bureau of Aeronautics of Rear Admiral deWitt C. (Duke) Ramsey, an oldtime pilot commanding a task force in the South Pacific, eased the disappointment of Navy zealots."

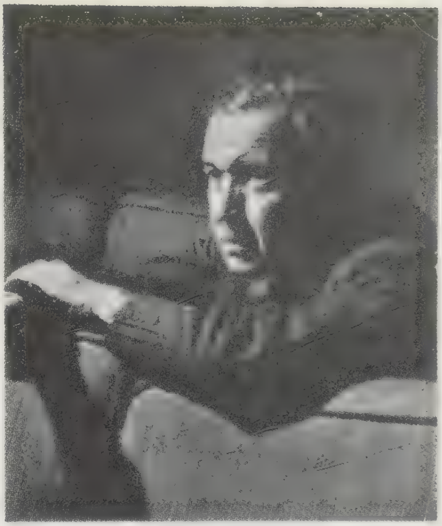
McCLINTIC, GUTHRIE Aug. 6, 1893- Producer; director; actor

Address: b. 1270 Sixth Ave, Rockefeller Center, New York City; h. 23 Beekman Pl, New York City

One of the most distinguished producers and directors in the American theatre, Guthrie McClintic has the unmatched record of having staged sixty-six plays in twenty years, twenty-nine of which were his own productions. Although his productions include a Pulitzer Prize winner, *The Old Maid*, and a Critics' Circle prize winner, *Winterset*, and although he is responsible for the introduction to the American stage of such illustrious actors as Maurice Evans '40, Brian Aherne, and Emlyn Williams '41, he is probably best known as the director of the plays in which his wife, Katharine Cornell '41, has appeared.

Guthrie McClintic was born of the marriage of third cousins, Ella F. and Edgar Daggs McClintic, on August 6, 1893, in Seattle, Washington. His interest in the theatre began at the age of eight when he was given a toy theatre. When he was eleven years old he was a regular patron of the local stock company at Saturday matinees. However, it was not long before the "stagestruck" youth, discontented with his gallery seat, made his way to the backstage of the theatre to watch rehearsals. He was still in high school when he ran away from home to join a repertory company playing one-night stands. After ten days the company was stranded in Walla Walla, Washington, and young Guthrie was brought home by his parents.



Graphic House
GUTHRIE McCLINTIC

Not discouraged by this first experience in the vagaries of life in the theatre, McClintic forced the consent of his parents to his chosen career by refusing to attend school. He was sent to New York City's Academy of Dramatic Art with the promise that if he received a diploma from that school he might go on the stage. "The idea of a diploma," explains McClintic, "apparently took the curse off the stage for my father and mother." The diploma having been won, the nineteen-year-old McClintic joined a road company of *Oliver Twist* which played one-night stands in Canada. Brief engagements in stock and in vaudeville followed.

A table-jumping séance was the turning point in his career. After his inconspicuous trouping as an actor in the hinterlands, McClintic returned to New York—broke and jobless. While living in a Morningside Heights rooming house he heard of an opening in the office of the late Winthrop Ames, who at that time was one of the most successful and aristocratic producers on Broadway. Calling at the office, McClintic was told by an assistant to Ames that there were no openings. Moreover, the assistant's manner was "most supercilious." Angered to the point of nervousness over the rebuff, McClintic accidentally upset a bottle of ink in the lap of the haughty one. Infuriated, the assistant ordered "the young ass" out of the office.

Returning to his hall-bedroom he wrote Winthrop Ames a letter denouncing him for "employing snobs, for producing English plays, for refusing young men a chance." In conclusion he informed the producer that he, Guthrie McClintic, was a better director than anybody on Broadway. The letter

McCLINTIC, GUTHRIE—*Continued*

finished, his anger subsided—and he decided not to mail it. Three weeks later his landlady invited him to a spiritualist séance. "The room was darkened; the table began to jump." And a message came for McClintic, advising him to mail that letter at once. The letter was mailed, and two days later he received an answer from the producer. "Come in," it said, "I think we have a place for you."

The place was that of assistant stage manager in Winthrop Ames' production of *Her Own Money*. The year was 1913, and McClintic's association with the producer continued for ten years. From assistant stage manager he rose to the position of production assistant, then casting director and talent scout. In 1920 Winthrop Ames, as a reward for McClintic's good work, offered to back him in a play. Not finding a play he thought worthy of so great an opportunity, McClintic joined Jessie Bonstelle's stock company in Detroit as a director. This engagement proved to be another turning point in his career—for Katharine Cornell had been engaged as the leading lady.

McClintic had seen Katharine Cornell in a play produced by the Washington Square Players in 1917, and as a talent scout he had made the notation beside her name: "Interesting—monotonous—watch." But he had never met her until now. In an article in the *American Magazine* McClintic describes his reaction to their first meeting: "I'm pretty much of a psychic, or mystic. I mean I have hunches. And that day, when Kit Cornell walked in to sign up for the stock season, I had one. . . In that instant I knew that we would be married some day. I was not in love with her. And yet I had a tranquil, deep, and perfectly natural conviction that Kit and I would be married." Seventeen weeks of association in the stock company followed. "Before the next summer was over, we were sitting together on park benches after the theatre, talking, dreaming, talking. We have been talking and dreaming ever since. We still do most of our living after the theatre and most of our talking."

On his return to New York from the stock engagement he "had a hand" in the production of *The Green Goddess* (1921) by William Archer in which George Arliss was starred, a highly successful melodrama which ran for more than a year on Broadway. A year had passed since Winthrop Ames had offered to back him in a play—a year of searching for the "perfect script." One day after a picnic luncheon with Katharine Cornell he read *A Bill of Divorcement*, which had been produced in London by Allan Pollock. It had everything he had been looking for in the way of a play, and, almost as important, the leading ingenue part was ideally suited to Miss Cornell's talents.

The play met with the approval of Ames, but later it was learned that Pollock planned to do the New York production himself. McClintic's disappointment over the loss of the "perfect script" was alleviated when Katharine Cornell was cast in the leading role. During her rehearsal with *A Bill of Divorcement* they were married (September 8, 1921). McClintic was, "in a manner of speaking, down to his last fifteen cents," and to some of their friends there seemed to be little hope of a more prosperous future for him. Their one-day honeymoon was spent on a little island off the coast of Connecticut, "swimming, boating, and rehearsing difficult passages of *A Bill of Divorcement*,"—rehearsals for which began the following day.

"Dazzling" press notices for Katharine Cornell made an auspicious beginning for their marriage. Not long afterward, on December 21, 1921, McClintic made his bow as both producer and director when he presented A. A. Milne's *The Dover Road* to Broadway. The play ran for thirty-five weeks and it was ranked among the ten best plays of the season. The couple had set up housekeeping on one floor of a five-story old-fashioned house at 23 Beekman Place. The profits from *The Dover Road* enabled McClintic to buy the house, and it has been their New York residence ever since. The house is given its share of credit for their continued happiness during twenty-one years of married life. "It enables us to get four stories apart when necessary," they say.

They each have a firm belief in the other's talent. Without equivocation, McClintic states that "Katharine Cornell is one of the greatest actresses in the world today." "I think Guthrie is an amazing director," she says in her turn. "He has the most marvelous gift of never frustrating anybody; always builds you up—never destroys anything you may be groping toward. He just talks to an actor quietly and then lets him try to work it out himself."

In speaking of his work as a director McClintic says he is not conscious of any method, and he scorns those "highbrow theories" such as "how to break up stage movement into geometric patterns expressing love and other emotions." On reading a play he visualizes it in his imagination; every good director, he believes, must have a good visual sense. With him, this visualization almost always projects the play in terms of color, design, and costume, as well as of stage movement. Consultation with the designer of the scenery is the first step toward production; together they work out a pattern.

Sometimes there are problems. An illustration of McClintic's artistic sense and conscientious regard for detail in the staging of a play was shown in his work on Maxwell Anderson's '42 *Winterset*. In that play Maxwell Anderson's stage directions called for a scene looking at the water front from the river side. McClintic could not visualize the play that way. He saw the water in the background, "the bridge towering over the set, stretching lace-like out into a distant haze. He searched the water front, and, finally, at the Brooklyn base of Brooklyn Bridge, found 'his set.' He took Anderson and Jo Mielziner, the designer, to see it, persuaded Anderson it was best to shift the set bodily around." When the play was presented, the beauty and appropriateness of the water front set won high praise from the reviewers and contributed its share toward winning the Critics' Circle Prize for the play.

In casting a play, McClintic says, "I try to find the best available actors and then I try to get these actors to return to me what the play gave me when I read it." His one infallible rule in directing is the "eight-day period," during which he keeps the actors seated around a table reading parts. He is convinced that if an actor can read right sitting down, "he can do the rest of his job." During the "eight-day period" McClintic attempts to establish the tempo, rhythm, and timing of the play.

"Before he lets the actors get on their feet, McClintic maps out and completely routines the action of the play. By the time he starts rehearsing on the stage, every solitary bit of the set is ready. It may not be actually set up, though it often is, especially when it plays an important part in the action." With the cast on their feet, no "business is too small to be neglected—the tip of a head, the swing of an arm." In every production, McClintic says, "There is a moment when the director must put his fingers on the spine of the play, find the dislocation, and snap it into place—like a chiropractor. When that is over, the play that limped gets up and walks."

Twenty-nine of the sixty-five plays McClintic has staged have been his own productions or plays chosen by him because he felt in sympathy with them, and although they have not all been hits, in only four instances has he regretted his choice. When asked to name the productions which had given him the greatest satisfaction, McClintic mentioned *The Barretts of Wimpole Street* (1931) first and *Romeo and Juliet* (1934) next. There were also Sydney Howard's *Alien Corn* (1933); *Winterset* (1935); *Saint Joan* and *Hamlet* (1936); *Candida* and *High Tor* (1937); and S. N. Behrman's '43 *No Time for Comedy* (1939). He remembers with almost equal pleasure two melodramas, staged shortly after his debut as a Broadway director. One was the highly successful *The Shanghai Gesture* (1926), in which Mrs. Leslie Carter was starred, and the other the lesser known *In the Next Room* (1923).

Some of the plays he is proudest of were failures. One of these was *Glory Hallelujah* (1926), which dealt with human beings confronted by imminent death, a theme he is now convinced the public wishes to avoid. Another favorite production of his which proved unpopular with the public though it was highly praised by the critics was Sidney Howard's *Yellow Jack* (1934). In speaking of this play, McClintic says: "It was drama; it was absorbingly interesting. Even on the closing night I said, 'This is so good that I wonder if I really did it.'" One of the reasons given for the play's failure with the public was the fact that it was staged without an intermission, an innovation in the theatre. But McClintic points out that the public sat in the dark for four hours without an intermission in the film version of *Gone with the Wind*.

During the same season (1934) McClintic staged *Romeo and Juliet* (his first Shakespearean production) with one intermission. He explains: "The division of the play into two swift series of scenes was done for practical reasons—to save time and to allow us to give the entire text." The production was highly successful with the press and with the public. In casting it McClintic made a trip to England in search of a Romeo. His importation of Maurice Evans (unknown to the American stage at the time) for the part is evidence of his gift for discovering histrionic talent.

The second time in which a seemingly astral message brought good fortune to McClintic occurred when *The Barretts of Wimpole Street* was under consideration as a starring vehicle for Katharine Cornell. Though they had been most enthusiastic about the play when first read, later so many production problems turned up that they considered giving up the option on the play. A few minutes after they arrived at this decision in their Beekman Place house the telephone rang. When the butler answered an unknown woman's voice said: "Tell them they must produce that play." That was all —no name or any other identification. The McClintics are not superstitious but, astral or not, the message was good advice. *The Barretts of Wimpole Street* proved to be an important cornerstone in their stage-partnership. The Cornell-McClintic Corporation was formed for its production, and the play was so successful financially that the original investment was paid back almost immediately.

Though McClintic has done his most important work as a director and producer he has occasionally returned to the stage as an actor. In 1914 in Winthrop Ames' revival of *The Truth* he served in the triple capacity of stage manager, casting director, and actor. In 1915, by arrangement with Ames, McClintic acted as stage manager and appeared in small roles with Grace George in William A. Brady's production of a series of plays which included *The New York Idea, The Liars, Major Barbara, The Earth,* and *Captain Brassbound's Conversion.* The heaviest role (since it was a two-role play) of his career was that of the husband opposite Fay Bainter in *Jealousy.* John Halliday was cast in the part when he resigned to direct Katharine Cornell in Gilbert Miller's production of *The Age of Innocence* (1928).

Anton Chekhov's *The Three Sisters* with Katharine Cornell, Judith Anderson '41, and Ruth Gordon '43 cast in the leading roles was the 1942 to 1943 production of the Cornell-McClintic Company. In reviewing McClintic's work in staging the play, Burton Rascoe, New York *World-Telegram* critic, said: "Not even the Moscow Art Theatre's presentation of it in New York in the early '20's, with Madame Chekhov and Maria Ouspenkaya in the cast, was as brilliant and satisfying an achievement. The cast was such as producers and directors must dream about, and the settings and costumes were so unobstrusively right that you were hardly aware that they were costumes and settings." The play was scheduled for a short run but continued to play to capacity audiences through March 1943, when it went on tour. During the New York engagement McClintic again turned actor, playing the role of Dr. Chebutykin for twenty-eight perform-

McCLINTIC, GUTHRIE—*Continued*

ances when illness kept Edmund Gwenn '43 out of the cast.

For the 1943-44 season McClintic staged *Lovers and Friends* by Dodie Smith, which Katharine Cornell co-produced with John C. Wilson. Raymond Massey had the leading role opposite Miss Cornell. In the fall of 1943 McClintic also began a series of lectures on "The Director's Problems in Playwriting, Acting, Staging and Production" at the Yale School of Acting, for which he was appointed honorary lecturer. In the meanwhile *Lovers and Friends* was being hailed as a probable box-office success, but as a rather mediocre vehicle for La Cornell.

McClintic is five feet ten, weighs 158 pounds, and has dark hair. S. J. Woolf, the artist-writer, describes him as an informal person. "The theatre has left little mark on his manner or his appearance. Yet in speaking about his work his manner at times becomes taut—he acts the incident he is recalling, accompanying his words with gestures, expressive and frequent." When rehearsing a play he is a chain smoker and is far from serene if anything goes wrong with the sets or lighting in those trying hours of final dress rehearsal. He likes parties and new people, but must go alone to all large affairs because "Kit shrinks from them with a shyness left over from her ugly duckling childhood." They play golf together when they are in their summer home, Chip Chop, at Martha's Vineyard. However, Miss Cornell's game is far better than his rather indifferent one. Books, music, and travel are his favorite recreations.

McCORMACK, JOHN W. Dec. 21, 1891- United States Congressman

Address: b. United States House of Representatives, Washington, D. C.; Post Office Bldg, Boston, Mass; h. 726 Columbia Rd, Boston, Mass.

John W. McCormack, Democratic floor leader in the United States House of Representatives, has, according to the *United States News*, "the gift of gab. He is ready in debate, has a keen wit and a penetrating sarcasm which he can turn loose at will and does when partisanship becomes rampant in House debate." He is also known as an effective conciliator either by the use of logic on the House floor or by practical arguments in the cloakroom. All these are important assets for the Administration, for in the House it is Speaker Sam Rayburn '40 and Majority Leader McCormack who bear most of the responsibility for pushing through Administration legislation. Along with Senate leaders, they have frequent conferences with President Roosevelt '42, most of them on Monday mornings.

John W. McCormack was born in South Boston, Massachusetts on December 21, 1891, the son of Joseph H. and Mary E. (O'Brien) McCormack. His grandparents on both sides of the family had come to the United States from Ireland in the late 1840's. When he was thirteen his father, a contractor, died, and he quit school to help support his widowed mother and to pay his way through night-school. In 1913, after selling newspapers, shining shoes, and working in law offices as a messenger and as an auditor, he was admitted to the Massachusetts Bar. He began his law practice in Boston, where he became a member of the firm of McCormack and Hardy.

A good Irishman and consequently a good Democrat, young McCormack had participated in torchlight political parades in South Boston ever since he could walk. In 1917 he himself was elected a member of the Massachusetts Constitutional Convention of 1917 to 1918, and there he successfully sponsored an amendment providing for the public initiative and referendum in the adoption of state laws. As soon as the adoption of his amendment was assured he resigned from the Convention and enlisted in the Army. He attended an officers' training camp, but never served abroad.

It was not long after this that McCormack met his future wife. While spending his vacation at Nantasket Beach, Harriet Joyce and her mother paid a visit to the family with which he was staying. It began to rain, and so Miss Joyce enlisted his help in putting up the Joyce car's collapsible canvas top. That night the helpful young stranger drove her and her mother back as far as Quincy, then caught a train back to the beach. In 1920 John McCormack and Harriet Joyce were married.

In 1920, too, John McCormack became a member of the Massachusetts House of Representatives, where he served for two years. From 1923 to 1926 he was a member of the State Senate, during his last two years in the Senate, floor leader for the Democratic majority. In 1929 he was elected to the United States House of Representatives from the 12th Massachusetts District to fill the vacancy caused by the death of Representative James L. Gallivan. At that time he had eight opponents for the Democratic nomination. After his election he found jobs for the most important among his rivals, and since then there have been no primary fights. He has been re-elected at every succeeding election.

John McCormack first came to national prominence in April 1934, when he was named chairman of a Special Committee Investigating Un-American Activities, a forerunner of the Dies '40 Committee which differed mainly from its successor in that it paid as much attention to Nazi as to Communist activities. A strong Catholic and a fervent anti-Communist, on many issues McCormack has been found in the camp of the extreme conservatives. Early in 1935 he introduced a Military Disobedience Bill in the House which was opposed by organizations ranging from the American Civil Liberties Union to the National Association of Book Publishers as a threat to freedom of speech. In 1936 an article by him advocating the illegalization of the Communist Party and the deportation of alien Communists appeared in the violently anti-New Deal *National Republic*. In March 1937 he criticized Secretary of Labor Perkins' '40 leniency toward sit-down strikes. In May 1938 he sought a study of the enlistments for the Loyalists in Spain, and in January 1939 he urged Secretary of State Hull '40 to recognize the government of General Franco '42. Before the entrance of the Soviet Union into the Second World War he was also extremely hostile to the Soviet Government, in November 1939 demanding Ambassador Steinhardt's '41 recall as a protest against a speech by Premier Molotov '40 and in February 1940 moving to eliminate the U. S. S. R. Embassy funds from the State Department budget. He has consistently supported the Dies Committee.

This did not mean, however, that he was an opponent of the Administration. He voted to override Roosevelt's veto of the soldier bonus bill when the President first came into the White House and in 1940 he voted to delay peacetime selective service until a voluntary enlistment program was tried out; but, on the other hand, he voted for the revised Neutrality Act of 1939 which repealed the arms embargo, for the Reciprocal Tariff Act, the Social Security Law, the "pump-priming" bill of 1938, the "tax-the-wealth" plan of 1935, the wage-hour law, the Wagner '41 Housing Act, the regulation of stock exchanges, and the Administration's silver bill. In 1940 he was a J. A. Farley-pledged delegate-at-large to the Democratic National Convention at Chicago and, as director of the Democratic Presidential campaign Speakers' Bureau, he was afterward in the forefront of the campaign for a third term for Roosevelt.

Up to the fall of 1940 McCormack's only committee assignment had been to the House Ways and Means Committee, where he was the fourth-ranking member. But he had served for two years as chairman of the Democratic caucus, and in September 1940, when Sam Rayburn of Texas became Speaker of the House following the death of William B. Bankhead '40, he was the President's choice for majority floor leader to succeed Rayburn. He received 141 votes against sixty-seven for Representative Clifford A. Woodrum of Virginia, thus becoming the first Northerner to win that post since a Southerner took it over in 1935. "I'm very grateful for this honor. Naturally, I appreciate it profoundly," said McCormack at that time, "but I realize it is a trust to be exercised in the best interest of the country."

Since that time McCormack's responsibilities have been heavy. In 1941, aside from helping to drive through the Lend-Lease bill, his greatest problem was to pacify those members of the House who were stirred up about strikes in the defense industries and eager to push through drastic anti-labor legislation. Although he himself has voted with the "anti-labor" bloc more than once, he constantly cautioned his colleagues to be "temperate." Early in November Representatives Eugene Cox '43 and Howard W. Smith '41 attempted to obtain from him the promise of a date on which anti-strike legislation would be considered, threatening to block future Administration legislation unless House leaders permitted it to be brought to the floor. Finally, on November 24, 1941, after a bipartisan conference with the President, McCormack announced that it was the "consensus" that anti-strike legislation providing for a "reasonable" waiting period in advance of walkouts in defense industries should be enacted in Congress. (In June 1943, however, he led the drive for amendment of the Smith-Connally '41 anti-strike bill, warning against "legislation to punish 100 per cent of the workers for those one and a half per cent who are at fault.")

JOHN W. McCORMACK

With added Republican strength in the House in 1943 as the result of the November 1942 elections, McCormack's job became more difficult than ever. More than once he has had to answer sharp attacks on the President or on the conduct of the War. On January 14, in reply to a question from Representative Lambertson (later criticized because his own son asked for deferment on religious grounds) as to whether two of Roosevelt's sons had been "jerked" from the battlefronts by the Commander in Chief, he said: "Outside of the House one making any such statement I would say tells a deliberate lie." The next month he called "a deliberate falsehood" a statement by the Republican National Committee accusing Roosevelt of "commandeering" radio time for talks on Lincoln's and Washington's birthdays. He also criticized the Hoover '43 statement that "time runs in our favor" in the War, calling it "honest but mis-

McCORMACK, JOHN W.—*Continued*

guided" advice leading down "the road to defeat." If the ex-President's judgment had been followed to date, he pointed out, "it would be the road to defeat, and would lead to a stalemate in the War, a wave of appeasement sentiment, and a negotiated peace." On April 13 he issued a statement charging the chairman of the Republican National Committee, who had offered to agree to a short Presidential campaign in 1944 if Roosevelt would state that he would not be a candidate, with "playing bitter partisan politics." "Mr. Spangler knows," he said, "that if President Roosevelt were to announce he was not a candidate the result would be to impair his position in Congress and elsewhere as our war leader. He knows, or ought to know, that the worst thing in war that could happen in our country would be for the President to make an announcement in relation to 1944."

Known as an expert on taxation matters who had sponsored some of the changes in early New Deal taxation laws which are now a part of the statutes, the aggressive Massachusetts Representative also took an active part in the battle over a "pay-as-you-go" income tax plan in the spring of 1943. He voted with the majority against the Ruml '43-Carlson bill, but suggested that members of the Ways and Means Committee favoring partial forgiveness should agree quickly on a compromise "that will prevent the making of war millionaires, which the Ruml plan did." His vote on the Federal income tax bill was against the Administration, but this was unusual. In 1943 MacCormack voted to continue the Dies Committee and to dismiss Watson, Dodd, and Lovett '43, and although when Eugene Cox '43 resigned as head of the Committee investigating the Federal Communications Commission he lauded him for his "high courage and unselfishness," his "high and noble character." (Cox had been accused of receiving a $2,500 fee from a radio station for representing it before the FCC and then attempting to smear the FCC in an effort to prevent his own prosecution.) But in general he has been found with the New Deal bloc. He fought particularly hard for subsidies in the fall of 1943 and for the Federal ballot for soldiers in December.

McCormack's ideas on the post-War world have been expressed more than once. "An important element in our future outlook is to so adjust, regulate, or channel our system of private enterprise that mass insecurity will be minimized as much as possible," he has said. He also believes that some "international machinery" must be "devised and established to assure to the future world permanent peace." On March 11 his comment on Roosevelt's blueprint for a new social order was: "When the War is ended we must have a speedy way of readjusting business and industry to peacetime ways. This is one of the most important issues that we have to face." Later that same month, in a reply to a British Member of Parliament who had urged upon Congress the necessity for planning now for a permanent peace, he expressed his confidence that the legislative representatives of the United Nations would get together in the future to exchange war and peace views. He openly criticized Churchill's '42 failure to mention China in a speech made at about the same time, serving notice that China "will occupy its place at the peace table and in the councils of the nations of the world, not as a 'rescued child,' but in its rightful place in cooperation with the United States, Great Britain, and Russia."

"It will be a tough fight, but I am hopeful that we can establish a workable system after this War," McCormack says. "I'm not looking five or ten generations ahead. I just want to find an answer for one generation. The experience of that will provide for the future." McCormack hailed the Moscow Conference as a "realistic approach to a permanent peace." Asserting that "the peace of the world is an objective that transcends partisan politics," he urged Republicans to "come into the ranks of the Democratic Party" to "accomplish this great effort" and "prevent a repetition of the 'do-nothing policy' of twenty-odd years ago." He is convinced that Roosevelt, "the preserver of democracy," will be ranked universally as one of the three greatest figures of American history along with George Washington, the father of his country, and Abraham Lincoln, the savior of the union.

Bushy-haired, with a pale complexion and deep-set eyes under shell-rimmed glasses, McCormack is known as "the Fighting Irishman from South Boston." He is just above the average in height, "big-boned but slender," and "has a voice which requires no public address system to carry throughout the House chamber." He is a conservative dresser, usually wearing black shoes, white shirts, dark gray suits that often look unpressed, and nondescript ties that seldom hang quite straight.

He is a "horse for work." He and Mrs. McCormack (they are childless) live at the centrally-situated Hotel Washington, where they breakfast around 8:00 a. m. Then, unless he has a morning appointment at the White House or at one of the departments, the Massachusetts Congressman is usually found at his paper-littered desk in the Capitol by 9:15 or 9:30. He usually remains at his office until 7 or 8 p. m., then goes back to his hotel for dinner, and after dinner enjoys a one- or two-mile walk with his wife, during which he smokes a cigar. Back at the hotel, he gets out a briefcase in which he has deposited a good part of his incoming mail (his constituents write him about 300 letters a day) and he often manages to answer thirty or forty of them in the couple of hours before midnight. He writes with two fingers on a "typewriter so old it clatters like a stick on a picket fence," and the type also has an unfortunate habit of piling up in places, but this adds a decidedly personal touch to his correspondence. He then reads or studies until 1 or 2 a. m.—usually books on history or government. His favorite historical characters are Abraham Lincoln and St. Thomas Aquinas.

The McCormacks participate very little in Washington's social life; once every two or three weeks they drop into a movie, and occasionally the House majority leader takes a night off for poker. (His close cronies are Representatives Cox of Georgia, Magnuson of Washington, James Wadsworth and John Delaney of New York, and Senators Lucas of Illinois and Wallgren of Washington.) In the old days in Boston, McCormack was a first-rate bowler, but now he bowls only occasionally, on his trips back to Boston. He is "neither rich enough nor lazy enough for golf." He used to play baseball, though, and he is still an ardent Red Sox fan. He is also something of a "joiner," and is a member of the South Boston Citizens Association, the American Legion, the Knights of Columbus, the Catholic Order of Foresters, and the Ancient Order of Hibernians, as well as an Elk and a Moose.

McCORMICK, JAY (WILLIAM) Oct. 1, 1919- Author

Address: h. 1055 Philip Ave, Detroit, Mich.

JAY McCORMICK

"Again the Hopwood Awards at the University of Michigan have produced a new and authentic novelist," Walter Havighurst wrote in March 1943 in his review of Jay McCormick's first novel, *November Storm* (1943). Agreeing that the novelist was blithe, confident, and youthful in his approach to the novel, the book critics found his book competently written and full of promise for a bright literary career ahead.

Jay William McCormick was born in Harbor Beach, Michigan, the son of Jay Cooke and Alice Lucille (Ryan) McCormick. "My father is captain of a lake freighter," McCormick writes us, "which provided much of the detail in *November Storm*. I tried my best to keep the book out of the local color class, but I probably will be known, if at all, as the sweet singer of the Great Lakes until I get my next book done on dry land. I played tenor sax and clarinet in dance bands for awhile, as well as heavier stuff on clarinet. I acted kid parts for five or six years at WWJ in Detroit until I started in at U. of M."

At the University of Michigan McCormick was active in journalistic and literary circles. He was staff columnist and senior editor of the Michigan *Daily*, the University of Michigan newspaper, and editor of *Perspectives*, the literary magazine. He won Avery Hopwood Awards in creative writing in 1938, 1940, 1941, and 1942. The last was for the novel published the following year as *November Storm*. In 1942 he was graduated with a B. A. degree.

November Storm is "a sound and searching story of the men in a Great Lakes freighter." In a pattern which has been compared to the one which served Conrad for *Typhoon* and Richard Hughes for *In Hazard*, McCormick has told the story of a group of men who "are linked together only by the accident of their common service aboard the *Blackfoot*, a big, rugged, almost beautifully utilitarian coal boat plying the Great Lakes. Their individual destinies come to something like resolution because a late autumn hurricane sweeping across Lake Michigan confronts them suddenly with the issue of life and death." Margaret Wallace, writing in the New York *Times*, found that "his writing scarcely equals the breathtaking precocity of Maritta Wolff '41, the most surely memorable of the Hopwood prize winners to date," although she found "something youthful and muscular and resilient in its very violence." The quality of McCormick's characterization Miss Wallace considered uneven, and his literary powers, so far, seemed to her mainly descriptive. But, she concluded, "Jay McCormick writes earnestly and with passion of the disaster which brings a moment of dramatic significance into these separate and disjointed lives. The power of his writing, while he has not yet brought it under full control, is undeniable. *November Storm* is a brilliant beginning. It is a fair venture that he will do something much more remarkable one of these days." Writing in the *Saturday Review of Literature*, Walter Havighurst agreed that McCormick "has feeling, discernment, vitality, and a command of terse and living language. There will be other good books from his hand."

McCormick has worked as a junior inspector for Continental Motors, Detroit, Michigan. He was employed as a reporter on the staff of the Detroit *News* until October 1943, when he left to work full time on another novel, which Doubleday, Doran expects to publish. *November Storm* is his first novel, but stories by him have appeared in *Perspectives*, and articles have appeared in *Motive Magazine*, a Nashville (Tennessee) publication.

"Like friend Maritta Wolff who was at Michigan when I was there," McCormick writes, "my favorite recreation until rationing was sitting around drinking too much coffee. I have a bad stomach as a result of this and other sins." He informs us that he has had a "lot more experiences," but "they don't sound very vivid on questionnaires." Mc-

McCORMICK, JAY—*Continued*

Cormick collects Mark Twain first editions, sails a boat, and plays tennis. He describes himself as five feet eleven inches tall, 150 pounds in weight, and the possessor of dark hair and "lovely eyes." He was married to Elizabeth McNeill on June 20, 1942.

MacDONALD, DUNCAN BLACK, REV. 1863(?)—Sept. 6, 1943 Scholar and author; former professor of Semitic languages at the Hartford Theological Seminary; in 1908 discovered a previously unknown Arabic manuscript of *Ali Baba and the Forty Thieves* and began a collection of Arabian Nights tales; contributed articles to encyclopedias and other scholarly journals.

MacFARLANE, F(RANK) N(OEL) MASON Oct. 23, 1889- British Army officer

Address: b. c/o Ministry of War, London, England

Head of the Allied military mission operating in the present "capital" of Italy is Lieutenant General F. N. Mason MacFarlane, Governor of Gibraltar. Chief of the 1941 British mission to Moscow, MacFarlane is rated the greatest British authority on German military tactics. The Allied military mission's support of Badoglio '40 and Victor Emmanuel '43 has been frequently criticized, both by Italians and by British and American liberals; but MacFarlane believes that its actions should be judged first by the immediate necessity of driving the Germans out of Italy.

Frank Noel Mason MacFarlane, an able, unobtrusive Scotsman called "Quiet Mason Mac" by his friends in the British command, was born on October 23, 1889, the son of Colonel David Mason MacFarlane of the Seaforth Highlanders and of Turin House, Angus, Scotland. He was educated at Rugby and at Freiburg University, Germany. His military career began when he was graduated from the Staff College at Quetta and the Imperial Defence College at Woolwich, and was commissioned in the Royal Artillery. He served in South Africa, Afghanistan, France, and Mesopotamia, and was decorated and mentioned in dispatches. He then held several staff appointments in India.

Early in his career (1918) MacFarlane married Islay Pitman, daughter of F. I. Pitman, an ex-Stock-Exchange broker. There is a son, now a gunner in the British Army, and a daughter.

In 1931 MacFarlane was attached, as brevet lieutenant colonel, to the legations at Budapest, Berne, and Vienna, and he acquired valuable insight into the complex central European political tangle. When driving from Budapest to Vienna in 1934, however, an automobile accident in which Mrs. MacFarlane was thrown clear of the car and emerged unhurt sent him to the hospital, then home to England.

After two years in England commanding a mechanized field artillery brigade, MacFarlane was appointed military attaché to the British Legation in Copenhagen and to the British Embassy in Berlin. It was in those early years of war preparation and of Hitler's '42 moves toward increasing power that MacFarlane quietly discovered enough "to provide a thrilling novel of diplomatic intrigue and military ambition." He got to know well the rising Nazi leaders, particularly Rudolph Hess '41. It has been suggested that possibly Hess meant to see MacFarlane when he made his flight to Scotland in 1941.

At any rate, MacFarlane was present at the Anhalter Station in Berlin in 1938 when a delegation from the British Legion, under the over-sanguine Sir Ian Hamilton (who still hoped for an Anglo-German rapprochement through the war veterans of both nations), was welcomed on their visit to Germany. The Nazi Services' Band played the British national anthem, and Hamilton made an appropriate speech to the commanding German officer, who replied, in turn, that such visits were important contributions to European peace. Later the same year MacFarlane attended the maneuvers of the 1st German Army Corps in East Prussia. It is not reported whether the Scottish officer had anything to say concerning Germany's political moves. But as a military man he was impressed then with the potentialities of the German tanks, which "representatives of other powers" dismissed as impracticable. At the time his reports and warnings to the British command went unheeded. Later, however, when these huge machines thundered through Flanders in the German advance which stopped just short of Dunkerque, Lord Gort '40 "congratulated" MacFarlane on the accuracy of his earlier observations and predictions.

When the Nazi plot grew and came unmistakably to a head, it was MacFarlane's task to convey to Prague Hitler's final terms for the "peaceful settlement" of the Munich crisis. Subsequently he witnessed Hitler's first act of open aggression, the march into Austria. After attending the Nuremberg Rally, where he was further impressed and alarmed by Germany's military might, MacFarlane was appointed (December 1938) brigadier commanding the Royal Artillery at Aldershot. A year later he was the officer responsible for the King's safety on His Majesty's visit to France.

MacFarlane was in France when Hitler's attack on that country came. He is said to have won the complete confidence of the international newspaper correspondents to whom he lucidly outlined the strategic situation, but with such personal unobtrusiveness that he was given the nickname of "The Invisible Man." He was also capable of strategic action. His ability to improvise in emergency was demonstrated when at a few hours' notice he created a mixed force near Arras to fill the gap caused by a French retreat. This was the famous "Mac Force," composed of an infantry brigade, a tank brigade, a horse artillery regiment, and a miscellaneous assemblage of non-combatants. After nine days of battle against heavy odds, attempting to defend Arras and at the same time covering a rapidly expanding front, it was disbanded. But MacFarlane received the D. S. O. for his services, and in 1940 he was promoted to the rank of major general. In August of that year he was appointed second in command at Gibraltar, but he returned later to England as a division commander.

In June 1941 General MacFarlane, accompanying British Ambassador Sir Stafford Cripps '40, headed a four-man mission to Moscow whose purpose was to coordinate the joint war efforts of England and Russia. On his trip MacFarlane wore "unassuming battle-dress, only his medal ribbons advertising his exceptional qualities." It was reported that MacFarlane, as an expert on German military tactics, was taken immediately to the Eastern Front to advise and consult with Soviet generals. From his recorded observations, however, it is evident MacFarlane was convinced the Soviet generals were doing all right on their own. He visited the Smolensk sector and witnessed a Red Army division go into action there against the Nazis. The cooperation he saw between the Russian Air Force and ground troops was "particularly excellent," he reported. He was also impressed by the speed with which the Russians cleared up the battle field after the action, and with the way the Soviet rear organizations were running, including transport, field kitchens, and supplies. "The men looked very fit," he said. "There were good relations all around. . . They are full of fight and are fighting well."

According to Alice-Leone Moats '43, what MacFarlane told foreign correspondents "was usually 'off the rocker,' as he put it, but he provided us with invaluable background material and partially filled in the big gaps left by the newspapers."

MacFarlane was present when Stalin '42 and Cripps signed the Anglo-Russian agreement in Molotov's '40 office in the Kremlin—a pact signed at the same table at which Ribbentrop '41 had signed Germany's non-aggression treaty with Russia in 1939. The ceremony with the attendant high-ranking personalities was filmed, and "toasts were drunk in sweet Russian champagne." In March 1942 MacFarlane returned to Russia with Beaverbrook '40 to settle cooperative details between the two countries. It was he who handed the Distinguished Flying Cross to the first four Soviet pilots winning this honor. Writing in the Soviet paper *Izvestia*, MacFarlane expressed the conviction that the Red Army had utterly frustrated Hitler's hope of a lightning victory, adding that "in the Russian winter, one winter-equipped Russian is the match for five shivering Germans." On May 30, 1942 the Colonial Office announced General MacFarlane's selection as Governor and commander in chief of Gibraltar, to succeed Viscount Gort, who had been appointed Governor and commander in chief of Malta. In 1943 he was selected to head the Allied military mission in Italy.

British Official Photo

LT. GEN. F. N. MASON MACFARLANE

General "Mac" MacFarlane is described as "tall and burly, though his stooping shoulders, like those of a boxer about to deliver a punch, detract from his real height. With his straight nose, decided chin, and firm, neatly-mustached mouth, he presents a picture of confidence." His speech discloses his Scottish ancestry. The military tactician is versatile enough to have written plays performed at the Garrison Theatre in Gibraltar when he was first stationed there in 1940. He is also a keen sportsman, angler, and yachtsman.

McLEAN, EVALYN WALSH Aug. 1, 1886- Washington hostess

Address: h. Friendship, Washington, D. C.

"The one continuing problem in my life has always had the shape of just one question: What amusing thing can I do next?" "I like to be fantastic. It is only when the thing I buy creates a show for those around me that I get my money's worth. We live but once, and of all things in this world I hate boredom most." "My own preference, generally, is for show." "No matter how many, many years I live I'm not the kind ever to forget that as a child I was kept warm in red flannel underdrawers. But that's no reason for wearing them now. Why, the sheets I sleep on are pink satin, soft as something for a fairy princess and the lace around their edges is woven out of (I fancy) spider frowns. I paid $4,000 for them and got a bargain because, as any woman knows, forgetful, restful sleep will take out wrinkles."

EVALYN WALSH McLEAN

These are excerpts from the autobiography of Evalyn Walsh McLean, the mistress of Friendship, the vast McLean estate on the northwest edge of Washington, D. C. where "Senators, New Dealers, Old Dealers, Supreme Court Justices, newsmen, lobbyists, lords, ladies, Elsa Maxwell '43, and such diverse characters as Joseph Hergesheimer and John L. Lewis '42" are frequent dinner guests. The owner of the Hope Diamond has had a life as fantastic and showy as one of her own dinner parties.

Evalyn Walsh was born in Denver, Colorado on August 1, 1886, the daughter of Thomas F. Walsh and of the former Carrie Belle Reed. She lived in many places when she was a little girl, for her father, an Irish immigrant, was afflicted with "mining fever" and made a practice of buying up abandoned mines and undeveloped claims. At one time he also ran the store in Deadwood, Colorado, and he owned Leadville's most respectable hotel during the boom there. Evalyn, a tomboy who "wore boy's pants, flannel shirts, and sweater," was ten before Tom Walsh finally "struck it rich": he found a gold-bearing quartz vein in the abandoned Camp Bird mine. But from that time on every whim of Tom Walsh's family was to be gratified.

The fabulously wealthy Walshes promptly moved to Washington, D. C., where they as promptly became a part of Washington society. Evalyn attended the fashionable Mount Vernon Seminary, went to dancing school; and after a trip to Europe her father hired a French governess for her and her brother Vinson. Yet all her family's attempts to make her into a "lady" were for some reason doomed to failure. The governess lasted only a short time, and when they all returned to Paris (President McKinley had appointed Tom Walsh a commissioner to the Paris Exposition) she shocked her family by innocently imitating the behavior of certain Parisian ladies of the street. While the Walshes were occupying nearly the whole second floor of the Élysée Palace Hotel and Tom Walsh's banquets there and at the Ritz were making him the talk of Paris, poor Evalyn was temporarily incarcerated in a convent.

In 1902 there was another European trip, including a visit to King Leopold of Belgium, with whom Tom Walsh had already made friends. Back in Washington, a new mansion, 2020, was built. It cost $835,000 complete, and, since King Leopold planned to visit the Walshes the next year, a special apartment for him was provided on the third floor. After a brief, miserable stay at the Misses Masters' School at Dobbs Ferry, Evalyn spent the next few years shuttling between 2020 and Europe. In 1904, happily armed with a $10,000 letter of credit, she went to Paris to study music, French, and other ladylike subjects; she ended by having her hair dyed a coppery red, spending the money on clothes much too sophisticated for her age, and driving all over Paris in a dashing yellow Fiat, another Parisian purchase. The next year she returned to Europe with her parents, who were afraid that she would marry Edward McLean. There "the Walsh heiress" was pursued by two romantically mercenary Princes, but finally settled for a red Mercedes. "Sure you don't want this Prince?" asked her indulgent father. "Cross my heart! I'd far rather have the car."

Tragedy first entered her life shortly afterward. At Newport in 1905 her younger brother Vinson was killed in an automobile accident, and her own leg was seriously injured. An unskillful doctor failed to match the two broken ends of bone in her thigh, and she was later given the choice of being crippled for life or of undergoing an operation in which she was given a fifty-fifty chance to live. She chose the operation, and it was successful, although she lost an inch and a half from one leg and ever since has had a support built in her shoes to compensate for its shortness.

For years she had been quarreling with unstable "Ned" McLean, son of the owner of the Cincinnati *Enquirer* and the Washington *Post*—quarreling and making up again. In

1908 they finally decided to make up for the last time, and they were officially and publicly engaged when they eloped that same year. Ned's parents and the Walshes (their combined fortunes were estimated at $200,000,000) each gave the newlyweds $100,000 as a wedding present, and they immediately set sail for a honeymoon abroad. There the money was quickly spent, but this did not prevent jewel-loving Evalyn from buying the Star of the East for $120,000 and smuggling it into the United States. While in Paris Pierre Cartier had also shown her the fabulous Hope Diamond, which had a reputation for bringing misfortune upon its owner, and upon her return to the United States she also bought that for $154,000. She had it blessed by a priest, and persuaded herself that the curse had been removed.

Perhaps it had; but life was far from placid afterward. Tom Walsh bought the young couple a summer place at Bar Harbor, and Ned's father gave him an allowance of $1,000 a month, yet there were continual worries about money. Tom Walsh had to give Ned large sums before his death in 1910, and Evalyn had to come to the rescue whenever her husband grew so deeply in debt that he was threatened with bankruptcy. He was drinking more heavily than ever, and for a while Evalyn herself was a morphine addict, she says. But her love for her first son, born in December 1909 and named after her dead brother Vinson, compensated for much. Vinson was called "the $100,000,000 baby" in newspaper headlines, and he could boast that a King had given him a golden crib as a gift. Vinson was to die in his childhood, but two more sons and one daughter were born to the McLeans: John R. ("Jock"), Edward Beale, Jr.; and Emily Beale (her name was later legally changed to Evalyn Washington).

In 1916 the McLeans took the first steps to exercise control over the person and derelict estate of Ned's father, whose mind had grown unsound, and the two newspapers were taken from him. The elder McLean died shortly afterward; in his will it was provided that the net income of his estate should go to Ned and afterward to his children, but that the principal should not be distributed until twenty years after the death of the youngest child. As owners of the Washington *Post*, the McLeans now began to exercise an increasing political as well as social influence in Washington. Ned McLean was particularly close to Warren G. Harding, and although the *Enquirer* had always been Democratic during his father's lifetime, his papers would print nothing detrimental to Harding. In 1931, apparently under the impression that the McLean glory had faded forever, Drew Pearson '41 and Robert Allen '41 were writing: "There was a day when two bands imported from New York jazzed alternately at the opposite ends of the McLean ballroom, when several hundred bottles of champagne were opened in an evening, when the most select of social Washington uncertainly danced the New Year into the dawn. There was also a day when Ned McLean dined regularly at the White House, and on such days as he didn't, Warren Gamaliel Harding dined or cocktailed with him at the Little Green House on K Street. There was a day when the Washington *Post* influenced Administration policy and brought both Evalyn and Ned power and prestige. . . Together they were a power in Washington. Diplomats, the State Department, even the White House, feared them."

Of Friendship in its heyday Mrs. McLean says: "A mad place, truly!—with a monkey in my bathroom, a llama on the lawn, and our corridors shrill with the curses of our parrot (learned from a diplomat)." Once Senator Borah '40 stood in her ballroom surveying the guests, servants, and furnishings, and commented: "This sort of thing is what brings on a revolution." He was never invited again.

In 1924 the McLean way of living became first-page news. "Hot on the trail of bribery and graft in connection with the leases upon the Naval Oil Reserves in a wilderness called Teapot Dome, the United States Senate's Committee on Public Lands and Surveys ran Ned to earth as a minor accessory after the fact": he had lied in order to help Albert Fall. After that Ned McLean was seen at the White House more and more rarely, and after the McLeans were separated Mrs. McLean's social star seemed to have sunk. In 1927 she suddenly broke up her home, walked out of "three beautiful places," gave back the private Pullman car to her husband, and, she says, started life "over again" in an attempt "to save my three lovely children." She wanted to train her children "to become useful members of society rather than leisured playmates of society." When her oldest son was arrested for speeding she took away his car; when the younger, then in preparatory school, stayed out too late, she induced a detective to scare him with a gun. Jock at eighteen went to work in Cincinnati in the counting room of the *Enquirer* at $15 a week until he was promoted, and Evalyn was never formally presented to Washington society. In 1933 their father was confined to a mental institution in Maryland, where he died in July 1941.

During the depression Mrs. McLean continued to make headlines. She gave Gaston B. Means $100,000 to try to find the Lindbergh '41 baby. When she heard about people starving and freezing in parks she went out in a blizzard in order to find some. When in June 1932 the Bonus Army moved into Washington she wished for the power to turn off the Capitol's lights "and use the money thereby saved to feed the hungry." She and Jock rode among the hungry, ragged Bonus Marchers for a while, then Mrs. McLean ordered a thousand sandwiches and packs of cigarets from Child's, fed all the hungry in sight, provided a big tent for Bonus Army headquarters, and sent books, radios, army cots, and clothing to the marchers. She was, she says, furious, when she later saw a newsreel which showed them being driven out of Washington. "They could not be allowed to stay, of course; but even so I felt myself one of them." In the preface to her autobiography, *Father Struck It Rich*, published in 1936, Mrs. McLean writes: "The one outstanding lesson I have learned and the one father always taught me

McLEAN, EVALYN WALSH—*Continued*

was, 'Think of the other fellow first.' Human nature is such a wonderful thing; people are so fine and real when you least expect them to be. You see, I really love people, all people and every class of people. Another thing I was taught is, 'Give part of yourself.' "

A typical comment on *Father Struck It Rich* was that of the Chicago *Daily Tribune*'s Fanny Butcher: "The book is at the same time a fabulous, fantastic true story and a subtle satire on that story. . . Both her literary and mental style Mr. Sparkes [Mrs. McLean's collaborator] preserves intact. What makes *Father Struck It Rich* unique in its field is that the reader sees the heroine at the same time as she wishes herself seen and as prejudiced or, shall we say, more intelligent and sophisticated others see her." Mrs. McLean announced, while autographing books, that this would be her last literary flight. "I can't write. I can't even spell." She also announced that she might get a position on a newspaper, and that if she proved a failure at journalism she would probably work for the Salvation Army.

Aside from writing a daily column for the Washington *Post* in 1938, she actually did neither. Friendship was soon seeing as brilliant company as ever before, and today, in wartime Washington, it is said to have the largest private electric bill in the Capital. Mrs. McLean's "small" weekly dinner parties (for about 100 guests) make her "reigning queen of political society and No. 1 beat for Washington society reporters." At her home the Finnish Minister may chat amiably with Lord Halifax '40, isolationist Senators with Army generals, old-guard Republicans with New Dealers, and even John L. Lewis occasionally "clowns and cavorts."

Mrs. McLean's daughter is married to Senator Robert Rice Reynolds '40, boss of the "American Nationalist" movement, and Mrs. McLean's own politics are on the conservative side, although she is neither a Republican nor a Democrat. The one man she has said she would not have in her house was Maxim Litvinov '41, who, Drew Pearson quoted her as saying, had been trying to wangle an invitation for years. (Litvinov, according to Pearson, "seldom dined out, shunned Washington society.") She is, nevertheless, still famous for such socially-minded gestures as the provision of garden benches, paper cups, water cooler, and attendant for the weary bus riders who await transportation in front of her home; and in March 1943 she donated her family's old coach house, complete with juke box, as a social center for war workers.

Mrs. McLean is five feet four, weighs 112 pounds, and has blue eyes and dark hair that has at one time or another been almost every shade of the rainbow. She wears huge, horn-rimmed spectacles which give her an expression that is half astonished, half inquisitive. She is seldom seen without jewels—as a matter of fact, she says, when she loses interest in wearing them it is a sure sign that she is ill. Her religion is Episcopalian.

American Women 1939-40
McLean, E. W. Father Struck It Rich 1938

MACMILLAN, HAROLD 1894(?)- Diplomat; author; economist; publisher

Address: b. c/o British Ministry, London, England; h. Birch Grove House, Cheldward Gate, Haywards Heath, Sussex, England

Author, economist, and diplomat, Harold Macmillan, one of the "publishing" Macmillans, was appointed British Resident Minister to North Africa on December 30, 1942. His duties consisted of acting as political adviser in conjunction with Robert D. Murphy '43 (the American Minister to North Africa) to General Dwight D. Eisenhower '42, Allied commander in chief of the area. Both Macmillan and Murphy were unaccredited at that time, thus emphasizing the refusal of both the British and American Governments to recognize the French Provisional Government. A Conservative member of Parliament, Macmillan previously had been serving as Parliamentary Undersecretary for the Colonies. Washington observers considered his appointment "a smart move by Britain to have a good man on the spot in troubled North Africa," and described Macmillan as "among the shrewdest of diplomats, though without actual diplomatic status." By August, however, with the recognition of the French Committee of National Liberation by the Allies, Macmillan was no longer without diplomatic status in North Africa; and soon he was also playing a large part in the Italian political situation. In September he was appointed a member of the Allied Mediterranean Commission; in November he was named British representative on the Italian Advisory Council. At the same time he retained his post as Resident Minister at Allied Headquarters in North Africa, with the title of United Kingdom Commissioner.

The tall diplomat is a commoner, but is allied by marriage to the Dukes of Devonshire, who "trace back to literary James the First." Maurice Harold Macmillan, the son of the late Maurice Crawford Macmillan and his wife, an American from Kentucky, was born some forty-eight years before his appointment as Minister to North Africa. He was educated at Eton and at Balliol College, Oxford, where he won First Class Honors in Moderations (the second examination for the degree of B. A. in classics or mathematics) in 1919. During the First World War he served in the Special Reserve Grenadier Guards and was wounded three times. In 1919 he was appointed aide-de-camp to the Governor General of Canada and served until 1920, when he returned to England. That year he married Dorothy Evelyn, a daughter of the ninth Duke of Devonshire. They have four children: one son and three daughters.

In 1923 young Macmillan successfully contested Stockton-on-Tees and took his seat in Parliament in 1924. He remained in Parliament until 1929. For two years he was out of active political life; then he resumed his seat in 1931, and he has retained it ever since. During his Parliamentary career Macmillan wrote several books on economics: *Reconstruction: a Plea for a National Policy* (1933); *The Middle Way* (1938); *and Economic Aspects of Defense* (1939), the last a pamphlet. In 1927, *Industry and the State,* a volume on which he collaborated, appeared.

In *The Middle Way,* "a study of the problem of economic and social progress in a free and democratic society," Macmillan stated: "The fate of Democracy is linked up with the problem of economic progress. It is in greater danger from internal decay than from external attack. . . If it ceases to serve the cause of progress; if it is unable to make full use of the productive possibilities of the economic system for the enrichment of life; it will be divided by internal conflicts and become the prey of unscrupulous men who know not the meaning of tolerance and the virtue of moderation.

"Without tolerance there is no freedom. In the absence of freedom every form of cultural progress is stultified, distorted, and destroyed. The defence of Democracy is not merely for the preservation of political liberty; it is for the preservation of the conditions of freedom in which alone the highly individualistic efforts of men in the intellectual and cultural sphere are made possible. There is thus a relationship not only between *economic* progress and the defence of Democracy, but between the preservation of Democracy and the possibilities of progress in every branch of science, art, and learning. . . Democracy is being revealed as much more than a political system; it is a way of life. Upon its preservation depends the future of civilization as we have been taught to regard it. We owe it to ourselves and to posterity, as our contribution to the history of human progress, so to strengthen, enlarge, and reconstruct the very groundwork of this way of life as to enable it to endure unshaken the inner strains and external perils of the anxious days that seem to lie ahead."

The *Middle Way* (a middle way between capitalism and socialism for the solution of Great Britain's economic problems) was, on the whole, favorably received by the critics. The *Manchester Guardian* found it "remarkable alike in its analysis of the modern business situation and in its search for reasonable remedies for admitted evils." *Nature* called the book "thought-compelling." The *New Statesman and Nation* considered it "well written, full of useful information, and remarkably good value for the money."

While he was serving in Parliament, Macmillan also acted as director of the Macmillan Publishing Company in London. Upon his appointment to the post of Parliamentary Secretary, Ministry of Supply in 1940, however, he resigned his publishing position in order to devote himself to his political duties. As Undersecretary for the Colonies (he was appointed to that position on February 4, 1942), he endeavored to increase production and shipping from the colonies Britain still held, in order to offset her losses to the Japanese. At the same time, he said, the requirements of the colonies themselves must be considered. Their people wanted commodities, not money, he declared, and "Englishmen must do without shirts in order that Africans may have cotton piece goods."

HAROLD MACMILLAN

Where the manpower of colonies had been conscripted or treated roughly, David Anderson wrote, Macmillan defended the policy differing from normal administration as necessary because of the "overwhelming, insatiable, devouring demands of war." Macmillan, according to the New York *Times,* "foresaw tightening bonds of the empire after the War since, in his opinion, the future of the world was in large organizations, not in breaking up further into small countries." "We want no distressed areas in our colonial empire," Macmillan said, "and we have made a start in the West Indies, where many proposals are being carried out even in war time." At the moment, Macmillan concluded, there were two primary objectives of British colonial administration: "The first . . . to provide the people of the colonies with increasing opportunities to fill posts in their own public life, and the second . . . to create a mobile force of experts in government, medicine, agriculture, and finance, who would be available for service wherever they were most needed in the empire."

Macmillan's appointment as Minister to North Africa was announced from Downing Street on December 30, 1942. Several days later Macmillan arrived in Africa. "His post," wrote Raymond Daniell of the New York *Times,* "is political rather than diplomatic, for, as far as this country [England] is concerned, there is only a *de facto* regime in North Africa now, with no prospect of the early constitution of a *de jure* government. The post carries Cabinet rank, but not War Cabinet membership. . . Mr. Macmillan, who is well versed in the Government's views, is to serve as a transmitting link between Mr. Churchill '42 and General Eisenhower with the aim of preventing misunderstandings from arising out of an imperfect knowledge by either of the other's views on military

MACMILLAN, HAROLD—*Continued*

necessity and political expediency. The ultimate authority, however, for political as well as military decisions, still rests with General Eisenhower."

Rumors were current in Washington and in London that Macmillan disagreed with many of the policies of General Giraud's '42 administration. "The French regime's attitude toward Jews must be changed and the Hitlerite taint removed," Macmillan had declared in reference to North Africa's anti-Jewish laws, passed in the summer of 1940 (and repealed in 1943). "He made it clear," according to Drew Middleton '43, "that he expected the French Government to assist the Allies in the release of interned refugees and de Gaullist liberals." It was also rumored that the British Government distrusted United States policies, but this was officially refuted when Macmillan put the British on record as supporting the political and military decisions of General Dwight Eisenhower. Macmillan further "put in a word for United States expediency—a policy which the British hitherto had not warmly approved in North Africa. Political administration and policy had to be secondary to military need." In explaining the continued dealings with Vichyites, Macmillan said: "There is lots of difference between a traitor and one of the weaker brethren who chose the path of least resistance." He made no comment upon the appointment of Marcel Peyrouton '43 to the Governor Generalship of Algeria, which was approved by both Eisenhower and Murphy.

Macmillan was one of the "key men" at the Casablanca Conference for unconditional surrender early in 1943. During the spring and summer of that year, while the French Committee of National Liberation was being formed, he and Murphy were assiduous in their efforts to save General Giraud in his struggle for power with de Gaulle, but were unsuccessful. In August 1943 the two diplomats delivered the parallel texts of their Governments' recognition of the French Committee, in which de Gaullists were by this time dominant, and that same month Macmillan was appointed British representative to the French Committee with the rank of Minister.

In July 1943 Macmillan had reportedly been on hand in order to work in conjunction with Eisenhower and to coordinate any negotiations the latter might undertake in regard to getting Italy out of the War with the American State Department and the British Foreign Office. In September appointed the British member of the three-power Allied Mediterranean Commission, designed to meet the political problems involved in the Italian situation, he continued to play an important role in Italy. He was present at the Allied conferences with Badoglio '40 and conferred frequently with Italian leaders such as Benedetto Croce and Count Sforza '42, shuttling between Algiers and Italy. On November 22 he was named Britain's representative on the Italian Advisory Council, while Alfred Duff Cooper '40 was named Britain's representative with the French Committee of National Liberation. It was announced, however, that Macmillan was to retain his post as Resident Minister at Allied headquarters in North Africa, with the title of United Kingdom Commissioner.

At the time when this last announcement was made Macmillan was already in Cairo, at the conference between Roosevelt '42, Churchill, and Chiang Kai-shek '40. Later he went on to Teheran, then returned to Algiers, and on December 15 met with René Massigli, Foreign Commissioner of the French Committee of National Liberation, "to tackle the fundamental problems of Italy's political, social, and economic future." By this time the problems were manifold, and attacks on British and American policy toward Italy at least as frequent as criticisms of the "Darlan" policy in North Africa.

Macmillan is almost six feet tall, slim, and dark. "Concise, fluent, and mustached," he reportedly "looks something like Teddy Roosevelt as a young man." His clubs are the Carlton, Turf, Pratt's, and Beefsteak—all of London.

MACMILLAN, MAURICE HAROLD *See* Macmillan, H.

McWILLIAMS, CAREY Dec. 13, 1905- Author; attorney

Address: b. 902 Spring Arcade Bldg, Los Angeles, Calif; h. 3633 Carnation Ave, Los Angeles, Calif.

Concurrent with the high acceleration of war production in the United States in 1943 were also marked evidences of racial conflict. The Mexican "zoot-suit" riots in California, the severe clash between Negroes and whites in Detroit, and the more recent disturbances in New York's Harlem, with their underlying race-conflict motif, were indications of increasing tension. One of the leading authorities in this country on the history of racial minorities in the United States, the causes of race conflict, and what kind of a program is necessary to end racial discrimination, is Carey McWilliams, a young California attorney who was head of the California Division of Immigration and Housing, 1939 to 1943. Following two earlier, much discussed books on migratory workers, McWilliams' *Brothers Under the Skin*, a "timely and pertinent study" of the various colored minority groups in the United States, appeared in April 1943. "No other question so seriously threatens American unity as that of racism," writes McWilliams, "and the same issue threatens the solidarity of the United Nations. Race prejudice is Hitler's '42 weapon; it is our danger."

Scholarly, but vigorous and outspoken, Carey McWilliams was born in Steamboat Springs, Colorado on December 13, 1905, the son of Jerry and Harriet (Casley) McWilliams. After attending Colorado schools he entered the University of Southern California, where he was graduated with the degree of LL. B. in 1927. In that year he began his career as an attorney in California.

McWilliams soon became interested in the problems of labor, agriculture, and land policy in California. It was not long before he enraged the big growers by advocating "collective ownership as the answer to California's farm problems." He was an organizer of the John Steinbeck '40 Committee, bitter enemy of California's Associated Farmers. A Democrat, he was appointed in 1939 California Commissioner of Immigration and Housing by the newly elected Governor, Culbert L. Olson.

John Steinbeck's novel, *The Grapes of Wrath* (1939), closely followed by Carey McWilliams' carefully documented study of migratory workers, *Factories in the Field* (1939), focused the attention of the nation on labor conditions in California. But even before this, powerful interests in California politics had been "sharpening knives to get Mr. McWilliams" because of his "outspoken liberalism, his writings criticizing the Associated Farmers, his friendliness to C. I. O. unions, his enforcement of state laws affecting big growers."

In 1940 McWilliams became president of the Committee for the Protection of the Foreign Born, formed for the purpose of preventing passage of the numerous anti-labor and anti-alien bills pending in Congress. He continued to defend labor, and to campaign against the Republican nominee for Governor of California, Earl Warren. In 1941 his division had to handle an increasing load of work that included the sanitation of the scores of trailer camps in which thousands of California defense workers and their families lived. And in that year, also, McWilliams won the Guggenheim Award for a projected study of agricultural land ownership in Hawaii.

"Because of his books and articles, his debate on the *Town Meeting of the Air* against Philip Bancroft of the Associated Farmers, his winning of the Guggenheim Award, and his years of service to the cause of better living and labor conditions for migrants in California, McWilliams had become an important figure, beyond the scope of his state position." But the forces behind the Associated Farmers were at work to upset Governor Olson's liberal social legislation. They were "determined to abolish the Division of Immigration and Housing, transferring its functions to the State Department of Health." Then, in the fall elections of 1942, Earl Warren, strongly supported by the Associated Farmers, won the Governorship. He called in the press in January 1943 and "announced that his first official act would be the dismissal of Commissioner McWilliams."

The dismissal served to enable Carey McWilliams to devote full time to his writing. His first published work had been a biography, *Ambrose Bierce* (1929), and in 1935 he had written *Louis Adamic and Shadow America*, a study of the "new regionalism" in American literature. His first work to gain nationwide attention was *Factories in the Field*, a factual survey of the migratory field workers in California. It was called "the data that gives the terrible migration of the Joad family historical and economic meaning, not only for the immediate present but also for the larger canvas of American rural life at the end of a long, rich cycle." Steinbeck and McWilliams did not know each other, and "Mr. McWilliams to this day has never seen Steinbeck." Yet each was preoccupied with the same theme—one in fiction, the other through facts and figures.

CAREY McWILLIAMS

In 1942 came *Ill Fares the Land*, in which McWilliams discussed the changes taking place in our agriculture: the shift toward large-scale industrialized farming and the dislocation of "an increasing number of Joads" all over the country. It was the California scene "on a stage as wide as the United States." It was the story of migrant workers in every section of America, whose condition "was just about as low as it is possible to imagine." As one reviewer saw them, these workers "are comparable in a way to the victims of the early phases of the industrial revolution." The expansion of the war effort has relieved the situation temporarily, but after the War "we may expect this problem to reappear in perhaps even more exaggerated form. Then it will have to be dealt with."

With a global war now demonstrating that the world is not "a white man's world," and with our present talk about "democracy and freedom" for all peoples, Carey McWilliams in *Brothers Under the Skin* (1943) says that how we treat the colored minorities in America is a factor in the winning of the War. We cannot "blandly ignore discriminations practiced at home" against twelve to thirteen million Negroes, three million Mexicans, half a million Orientals, and a third of a million Indians. Their problems, as McWilliams sees them, are closely linked with each other, for we cannot isolate any of our racial problems—and they are problems that are closely related to world politics also. "There is no

McWILLIAMS, CAREY—*Continued*

doubt whatever that the white peoples are a minority in the new world that is emerging from the War."

The Indian, according to McWilliams, far from becoming extinct, is "our most rapidly growing minority." He decries our former policy of breaking down the Indian's tribal and cultural life, but commends the new Indian policy that has, since 1933, given him economic rehabilitation and encouraged the development of cultural freedom and opportunity. He writes that in California, long Southern-dominated, the Chinese problem is directly related to the Negro problem. The Chinese have had a "caste system" imposed upon them; since Pearl Harbor, however, "the War has brought the Chinese out of Chinatown and we should lock the doors behind them." As for the Japanese, the problem is how to treat the second generation, or *Nisei*, of whom eighty to eighty-five per cent are loyal to the United States. Our South American "Good Neighbor" policy is ironic, says McWilliams, when we consider the treatment of Mexicans in the United States. He documents the history of Negroes in America, underscoring the Jim Crowism that has extended to current discrimination against Negroes in the Navy, the Army, medical service, nursing, and war industries.

The book's final chapter is an "outline for action" to solve minority problems. After enforcing the Bill of Rights, says McWilliams, the Federal Government should enact a "new Federal civil rights statute." There should be a Fair Racial Practices Law, national in scope, and enforcement of Congressional power to reduce the representation in Congress of those states which discriminate against minorities. McWilliams calls for the creation of an "Institute of Ethnic Affairs" within the Interior Department for public educational purposes. As for immigration, "all nationalities should be placed on a basis of absolute equality." Concludes McWilliams: "It is not only the color of America that has changed; the color of the world has changed."

Brothers Under the Skin met with a mixed reception. While various sectional groups, on the West Coast in particular, denounced it, reviewers generally agreed that it was "a readable, well-documented study." Certain liberal critics hinted that McWilliams might have gone farther in his condemnation of racial inequality in the United States. But more cautious R. L. Duffus wrote in the New York *Times*: "Mr. McWilliams is not a practical politician, nor is he willing to go ahead by compromise, broadening down from precedent to precedent. His resentments sometimes seem even stronger than his sympathies. He will convince the converted, but he may annoy some of the hesitating heathen. Yet his book is courageous, honest, and to the point. We do have to face this question and dispose of it justly and democratically—or we won't have a democracy."

Shortly after the publication of *Brothers Under the Skin* came the riots against Mexicans in California, called by the press the "zoot-suit" demonstrations. A resident of Los Angeles, Carey McWilliams was on hand for eyewitness reports of these riots. Writing in *PM* he said: "No one should be confused by the utterly misleading attempt of the Los Angeles press to describe these riots as demonstrations against 'zoot-suit gangsters.' The mob of 1,000 service men and civilians who, with the police giving their tacit approval, raided virtually every downtown motion-picture theatre on June 7 and hauled Mexicans into the streets where they were beaten and, in several cases, stripped naked and left lying unconscious on the pavements, were looking for Mexicans; but they did settle, in a few cases, for a Negro." The riots, he said, were the result of long accumulating conditions, such as the increasing influx of Mexicans to California, with the pressure of segregation, poverty, family disorganization, etc. The major responsibility for stirring up white resentment against Mexicans, according to McWilliams, rested on "the press of Los Angeles, particularly the Hearst newspapers," who had made out a case for a "Mexican crime wave" and insisted on "wholesale raids on Mexican quarters."

In conclusion, McWilliams wrote: "Underlying all of the factors I have mentioned is one important consideration: the realization by powerful social groups in the community that the War has stirred the hopes and aspirations of every disadvantaged group and that these groups must somehow be kept in line; otherwise, a genuine democracy might develop. . . Their methods of coping with the problem, as they see it, are characteristically fascist. There is a deadly parallel between the pictures of naked Mexican boys lying on the streets of Los Angeles in pools of blood, and the pictures one began to see a few years ago of Jews being made to clean the streets of Vienna."

Carey McWilliams has it in mind to write some day a study of the sociology of religion in the United States, "comparing the growth, present status, and possible future of United States churches." But currently, he writes us, he is preparing "a study of the Japanese relocation program" for the Institute of Pacific Relations. He is also writing a book about Southern California in the *American Folkways* series edited by Erskine Caldwell '40. Most of his articles appear in the *New Republic*. The large, fair, "owlish, and bespectacled" Californian, between writing books and practicing law, has little time for sports or recreation. He was married in 1941 and is the father of two sons, Jerry Ross McWilliams and (by a previous marriage) Wilson Carey McWilliams.

MAGEE, JAMES C(ARRE) (mə-gē') Jan. 23, 1883- United States Army officer

Address: h. 1740 Poplar Lane, N. W., Washington, D. C.

The surgeon general of the United States Army, writes J. D. Ratcliff in the New York *Herald Tribune*, is, in a sense, "a kind of super-family-physician, with soldier patients scattered over the globe. He carries a medical burden unmatched in history. He must watch yellow fever along Africa's torrid Gold Coast and plague in New Guinea. He must keep a sharp eye on mumps in Alabama and cholera in India; flu in Indiana and malaria in Brazil." This post was held by Dr. James C. Magee from June 1939 until his retirement on June 1, 1943. (He was succeeded by Dr. Norman T. Kirk.)

James Carre Magee, was born in Ireland on January 23, 1883, the son of Edward Carre and Elizabeth (Armstrong) Magee. The date of his emigration from Ireland is unavailable, but it must have been at a fairly early age, for he studied at the Jefferson Medical College in Philadelphia, Pennsylvania, and he received his medical degree in 1905, when he was only twenty-three. Immediately after graduation he joined the United States Army as a physician, advancing to contract surgeon in 1907, and holding that position until 1908, the year of his marriage to Irene Mackay (on July 22). The following year he was commissioned a 1st lieutenant in the Medical Corps, and he was still holding that rank when the United States entered the First World War. In May 1917 he was sent to France, where he served as regimental surgeon and attending surgeon with the A. E. F., rose to the rank of captain, and, by the end of the War, was chief surgeon of the A. E. F.

After the War was over Magee remained in the Army, steadily progressing in rank. From 1935 to 1939 he served as executive officer of the Walter Reed General Hospital in Washington, D. C., relinquishing his post when, on June 1, 1939, he was commissioned surgeon general of the United States Army, a rank equivalent to that of major general. The surgeon general is head of the Medical Corps and is in charge of all of the medical activities of the Army. When Magee received his appointment in 1939, he had a corps of 1,200 doctors under him. In December 1941 the United States entered the War and, by the end of 1942 he was in charge of 30,000 doctors as well as 20,000 nurses. "They represent," wrote Ratcliff, "the best-trained, best-equipped medical corps that ever accompanied troops to war."

General James C. Magee sees great differences between the medical conditions of the First World War and those of the Second. In 1918, Ratcliff reports, soldiers got vaccines to protect them from typhoid fever, paratyphoid fever, and smallpox. This time, in addition to these, they get anti-tetanus and yellow fever injections, and extra protection against typhus, if they are going to North Africa, or vaccines for plague and cholera, if they are going to India. Moreover, the Army has plans to combat any other disease that might spread among the soldiers: it has organized eight commissions, each working on a specific disease problem. Surgery, especially brain surgery, has advanced considerably since the last war—the discovery of the sulfa drugs has done much to increase surgical safety. In addition, "besides enlisting the country's finest research brains and providing the best doctors, General Magee has seen to it that the Army has outstanding equipment. The new mobile surgical units, for example, consist of fourteen trucks each. Seven of these are ideally designed operating rooms. Surgeons near the Front have facilities usually found only in the best hospitals. Other trucks carry supplies, sterilizing and X-Ray equipment. These high-speed outfits can roll with the mechanized divisions, ready to wheel into action anywhere. The Army is also building hospital trains—thirty-two-bed ward cars, diet-kitchen cars, personnel, and record cars." General Magee had not modernized the Medical Corps to an extent sufficient to allow the admission of women doctors until April 1943, however, when a bill was passed permitting women to be commissioned in the Army as medical officers. He has even handed over the job of recruiting Army nurses to the Red Cross, because, he says, of the "efficiency" with which it has functioned in this respect.

U. S. Army Signal Corps

DR. JAMES C. MAGEE

The main medical problems that the Army finds overseas, Magee declares, are malaria and venereal diseases. Malaria, he states, has been almost wiped out, but venereal diseases cause more trouble because "some parts of the world just refuse to regard venereal diseases as a problem." "For that reason," he says, "we don't get the support from the public that we do at home, and it throws a much greater burden on the medical officers. About all we can do is to instruct the soldier to the fullest possible extent, warn him of the dangers, make available those facilities that we know are helpful, and work with professional groups and the socially minded groups of citizens to bring pressure to bear on the local authorities." Venereal disease, however, Magee discovered, was not only an overseas problem, but one which also flourished in the United States. "The United States Army," writes Francis Sill Wickware, "fought two wars from 1917 to 1918: one against Germany, the other against venereal disease. The war against Germany it won. The war against venereal

MAGEE, JAMES C.—*Continued*

disease it waged with every resource of medicine and morality, but in the end, it lost. . . The American Army came out of the First World War with a far higher syphilis rate than it had when it went in. The ex-soldiers went home to spread syphilis through communities where it had never existed before and thus to create a graver health problem for the entire nation."

Otherwise Magee finds the health of American troops excellent. North Africa, where he went for a tour of inspection, he declared to be "not a well-sanitated place. For instance, within one small walled native town we found plague, leprosy, smallpox, typhoid, typhus, two or three kinds of dysentery, and just about all the skin diseases known. But in spite of these conditions, in spite of long, hard-working days, dampness, and mud, Army sickness rate in Africa is only one per cent." "The Army has accomplished this," *Time* Magazine reveals, "by several means. It keeps the troops out of native quarters. It keeps malaria satisfactorily at bay with atabrine and quinine. Typhus is avoided by systematic delousing of men. (Details of the Army's latest clothing decontamination method—treatment with methyl bromide in the active states—are a Medical Corps secret.)"

General Magee has served in San Francisco, the Philippine Islands, Kansas, and the Mexican border, and he was decorated with the Purple Heart. He is a member of various medical committees, a director of the Columbia Hospital for Women in Washington, D. C., a fellow of the American College of Physicians, and an honorary fellow of numerous other associations. He holds an honorary Sc. D. Degree from Jefferson Medical College.

Six feet tall and fair in coloring, Magee is "florid, plumpish, and could pass for a family physician anywhere." His favorite sports are golf and fishing. The Magees have two sons, Mervyn M. Magee, a major in the United States Field Artillery, and James C. Magee, Jr., a captain in the United States Marine Corps.

MANGIONE, JERRE (man-jyō'nē je'ri) Mar. 20, 1909- Author

Address: b. c/o Immigration and Naturalization Service, Philadelphia, Pa; h. 1940 Delancey Pl, Philadelphia, Pa.

In the Italian section of Rochester, New York, where his Sicilian-born parents and relatives lived, young Jerre Mangione grew up, ambitious to become a "real American." So, away at college, in the New York publishing field, and in various Federal positions in Washington, Jerre Mangione entered the American world and learned American ways. But more and more he thought about his family's own world: the way they lived, what they thought, and how, living in America, they were a part of—yet apart from—Americans.

Accordingly, he decided to write a book about them—these warmhearted, gregarious people who developed a real talent for living in that neighborhood nicknamed "Mount Allegro." "They seemed so much gayer and more exciting than the people I met in the world outside their world," Mangione says. "Also, I was tired of sociological books about the foreign-born and of novels about them that strove for dramatic effects at the expense of everything else." *Mount Allegro* (January 1943), written with an affectionately informal, autobiographical touch, is not fiction but (as Louis Adamic '40 notes) "a combination of folklore, sociology, portraiture, and drama all rolled into one." It is Mangione's first book, published by the firm to which it was first submitted. Critics without exception have joined in calling it a frank, witty, sensitive, finely written study of a people and their background —"a book in which you'll learn more about the making of an American than in most solemn or fictional volumes that purport to tell you all about the subject." Of it the author writes: "I hope that my book will not only contribute to a better understanding of Sicilians and, to some degree, of Italians, but will also serve as an impetus to those creative writers who are familiar with similar material about other minority groups."

The book tells, of course, much about the growing up of Jerre Mangione himself: he appears as Gerlando Amoroso, the boy who was half "Americano." He was born in Rochester, New York on March 20, 1909, the first of four children. His parents, who came to Rochester from the province of Girgenti in Sicily, had lived in towns less than five miles apart but had never met until they arrived in Rochester. His father, Gaspare Mangione, a gentle and law-abiding man with ambitions for his sons to become good Americans, was an excellent maker of pastry, as well as a believer in "Destino"; he had learned only enough English to be able to tell his first *bosso*, a noisy Irishman, what he thought of him. His mother, Josephine (Polizzi) Mangione, spoke less: at the tailor shop where she worked part time her companions were Italian, and so were the neighborhood storekeepers. She expected the children to speak Sicilian at home, English outside the house. But the Sicilian Jerre learned was so full of Americanisms that, when he later visited Sicily, he had difficulty in being understood. Native Sicilians could not understand *storo* for store, or *barra* for bar.

The Rochester "Mount Allegro" knew the stench of factory smoke, making the sky "like a smouldering ceiling of sulphur. Underneath it my relatives sang and played guitars and, if they noticed the sky at all, they were reminded of the lemon groves of Sicily. They were stubborn poets." Jerre and his brother Joe had to fight rival gangs who cast slurs on Sicilians. But when they sought revenge on a neighborhood boy with a kitchen knife, their father was horrified: this was living up to the opinion people always had about Sicilians. When the boys confessed they had got the idea from the movies, Saturday afternoon movies were thenceforth forbidden. Jerre earned his first money by writing for amorous Uncle Luigi a love letter to a rich American widow. The widow never replied. "What did you say in that letter, squash-head?" roared Uncle Luigi, who had to begin a new campaign for the heart of another widow.

The elder Mangiones got on very well with God without going to church, though Uncle Luigi made religion his hobby, going to all the denominations, except Catholic, he could find. The children were sent to a church where the Irish priest loudly upbraided them at confessions. Because of the presence of a young lady with fat blond curls (Mangione still admits a preference for blondes) Jerre did some fancy sin-juggling at confession, thereby getting into trouble with both his conscience and higher mathematics. In school he had a hard time because his teachers expected him to "show signs of becoming another Verdi or another da Vinci." He was whipped for not being able to paint a landscape when the teacher said he must. Neither did he take to music, in spite of his mother's best efforts via piano, violin, and guitar. But when he got to high school his writing ambitions flourished. "I fell in with a precocious group of five high school intellectuals who called themselves the Conceit Club and were certain they would all be hailed as literary geniuses by the time they reached the ripe old age of twenty-one. . . I became editor of the *Clarion,* the East High School weekly, which we ruthlessly used to print our three-syllabled effusions on Life and Letters."

Mangione had a hard time convincing his family that he should study to be a newspaperman—not a doctor or a lawyer—at college. Only Uncle Nino, worshipper of Dante, supported his desire to be a writer. "I worked my way through Syracuse University, where I founded and edited the *Chap Book,* a literary magazine whose chief claim to fame was the publication of a short story by Stephen Crane (another Syracuse University student) which I accidentally found in the files of the university library. In my senior year I wrote a daily column for the college paper titled 'Musings.' I was graduated from Syracuse University in 1931 with a B. A. degree and a job on *Time* Magazine. Henry Luce '41 assigned me to write articles for the Business and Finance page on the grounds that since I knew nothing about the subject I would be able to treat it interestingly. By that criterion, I was the best writer *Time* Magazine ever had." He was soon demoted to the "Milestones" department, then fired because he didn't know what *September Morn* was.

In 1934 Mangione joined the editorial staff of Robert M. McBride and Company, publishers. Busy being "an American," he seldom got back to Rochester except for vacations. "I learned to see my relatives more objectively and, although I still retained my childhood resentment for some of their habits and attitudes, for the first time in my life I began to appreciate their warmth and their talent for living." He became interested in their origin, and he read books about Sicily. Then he decided—in spite of Fascism—to visit Italy and to see what his parents' land was like. Accordingly, after saving some money and obtaining commissions to write articles about his trip, he left for Sicily in 1936. His family proudly gave him a big send-off, his relatives pelting him with messages to friends back home. "Keep your mouth shut and avoid all trouble with Fascists," warned his father.

JERRE MANGIONE

Once in Sicily, Mangione was shocked at the conditions in that stony land. "I might never have realized that human beings could live in such poverty and still preserve their dignity." At Girgenti, his father's birthplace, he was entertained by poverty-stricken uncles and cousins who gave him their best, eating little themselves. They blamed their condition on "the Government," not on Mussolini '42. While a few were ardent nationalists, most were plainly skeptical of Fascist ballyhoo. Those who had been to America and had returned wanted nothing so much as to get back. So did Mangione: Sicily was a blighted land. And, when he left Girgenti, it was on a train "that was a half hour late."

Mangione has done considerable free-lance writing since leaving college, reviewing books for the *New Republic,* the New York *Sun,* the New York *Herald Tribune Books,* and the New York *Post.* He has also contributed articles and stories to *The Nation, Travel, Harper's Bazaar, Literary Digest, Globe,* and Broun's *Nutmeg,* "which awarded me a first prize for a short story called 'Water Girl.'" He went to Washington early in 1937 as associate information specialist with the Resettlement Administration, and later he became national coordinating editor of the Federal Writers' Project. In this connection he initiated and helped compile several "American Stuff" collections. "I held this job from March 1937 to September 1939, when the Federal control of the Writers' Project was abol-

MANGIONE, JERRE—*Continued*

ished. I then went to Yaddo, Saratoga Springs, and began writing my rough draft for *Mount Allegro*." In October 1939 Mangione became public relations specialist with the Census Bureau of the Department of Commerce, handling the magazine publicity for the 1940 census. He then worked for two months on the World's Fair exhibit of the Federal Works Agency.

"In June 1940 the Department of Justice offered me the job of information specialist. My job was to help publicize the alien registration of 1940. In February of 1941 I joined the Public Relations Staff of the Department of Justice and worked there until July of 1942, when I was appointed special assistant to the United States commissioner of Immigration and Naturalization Service, which had been 'decentralized' from Washington to Philadelphia."

Slim, dark-haired, brown-eyed, Jerre Mangione is an expert punster, willing to take on all comers in that verbal art. He says that his favorite hobbies are "reading and ballroom dancing. I would rather dance than write. When I was a kid of seventeen I got a job one summer with a Rochester stock company. I was an extra in several plays, and in a revival of *Sally* I was actually a chorus boy. This consisted chiefly of helping to lift Miriam Hopkins off the stage at various intervals during her dancing. Louis Calhern was the leading man and George Cukor '43 the director. All this was before the three became nationally known. Cukor, incidentally, heard that I was trying to be a writer and that I had written a one-act play. He asked to see it and said that my plot 'stank' but my dialogue was good and that I had been reading *March Hares,* a play I had never heard about. He urged me to get more education, read more books, and then get in touch with him again. Don't know why I never have."

MAO TSE-TUNG (mou tse-dûng) 1893-
Chinese political leader

Address: b. c/o 8th Route Army Headquarters, Yenan, China

Lieutenant General Carlson '43 remembers Mao Tse-tung as an "humble, kindly, lonely genius, striving here in the darkness of the night to find a peaceful and an equitable way of life for his people." Known to many as the "Chinese Lenin," Mao, the "cool-headed political leader of the Chinese Communists," has had long experience in leadership and in revolution.

Mao Tse-tung was born in the village of Shao Shan in Hsiang T'an County of Hunan Province in 1893. His father was a poor peasant who had joined the Army to avoid oppressive debts. After years as a soldier he managed to return to his native village and buy back his land. By careful saving and by denying his family all but the barest necessities, Mao's father was able to buy more and more land until he attained the status of a "rich peasant." Mao began his schooling in a local primary school where, from the ages of eight to thirteen, he read the Confucian "Analects" and the "Four Classics" and endured harsh treatment both at home and in school. At the age of ten he ran away from school and wandered in circles for three days until he was found by his family. To his surprise, Mao told Edgar Snow '41, "My father was slightly more considerate and the teacher was inclined to moderation. The result of my act of protest impressed me very much. It was my first successful 'strike.'"

Mao told his autobiography to the American correspondent in terms of civil war. His father who wanted his son to learn to use the abacus and keep his books, who kept his family on short rations and disapproved of charity, was the ruthless capitalist against whom Mao, his brothers, and their mother formed a united front of opposition. Mao's father wanted him to study the classics so that the boy could help him win lawsuits, but Mao disliked the classics. He enjoyed the romances of old China, especially the stories of rebellions, and modern novels, which he read under cover of his schoolbooks. At thirteen he began to work long hours on the farm, until his thirst for knowledge and his dislike of his father led him to run away from home to live with a friend who was a law student.

Despairing of ever being able to control his son, Mao's father decided to apprentice him to a rice merchant in the city, but Mao wanted to go to Hsiang to study in a progressive school which his mother's cousin attended. He managed to convince his father that an advanced education would improve his earning capacity and at the age of sixteen he entered the school at Hsiang where he studied science and modern subjects as well as the classics. When he was graduated from this school he went to the middle school at Changsha, capital of Hunan Province.

At Changsha Mao was caught up in the "anti-foreign capital" movement which was also anti-Manchu. As a symbol of their sentiments Mao and his friends clipped off their pigtails. In 1911 Mao decided to join Sun Yat-sen's revolutionary army. A student army had been formed, but Mao considered it too confused and he joined the Regular Army. While there Mao read pamphlets on Socialism and as much Marxist literature as had then been translated into Chinese. When the Nanking Government was dissolved Mao resigned from the Army and decided to resume his education.

Before making up his mind upon what career to embark, Mao consulted the newspaper advertisements. He decided in turn upon a police school, a soap-making school, a law school, and a commercial school. In each he paid his dollar registration fee and then reconsidered. His father agreed to pay for the commercial course for practical reasons, but Mao left that school after one month's attendance because all the courses were given in

English, but English itself was not taught. After the commercial school Mao studied six months in the First Provincial Middle School and then he left to read alone in the Hunan Provincial Library. There he read Darwin, Adam Smith, Rousseau, and Spencer as well as poetry and fiction.

By this time Mao's father decided that he was utterly shiftless and refused to support him any longer unless he prepared to earn a living. He entered the Hunan Normal School to become a teacher and after five years of study (1912-18) he took his degree. While there he built up a group of serious minded friends who in 1917 became the New Peoples' Study Society. Many of these original members became famous Communists. Of his own thinking, Mao says: "At this time my mind was a curious mixture of ideas of liberalism, democratic reformism, and Utopian Socialism. I had somewhat vague passions about 'nineteenth-century democracy,' Utopianism, and old-fashioned liberalism, and I was definitely anti-militarist and anti-imperialist."

When Mao was in his last year at the normal school his mother died and he resolved not to return home. He helped organize the "work and learn" groups to study French in Peking preliminary to study in France and he earned his living as an assistant librarian in the Peking University Library. He joined a philosophy and journalism society and attended lectures in the University. Here he met Yang Kai-hui, to whom he was married in 1920. (Mao had been married when he was fourteen to a girl of twenty. They never lived together, and Mao when he grew up never considered it a marriage.)

In 1919 Mao went to Shanghai with his French study group. There his comrades embarked for France. Mao had insufficient funds to accompany them and he was not particularly interested in going to Europe. He was interested chiefly in Chinese student political activities and on his return to his province he edited the *Hsiang Chiang Review* and helped found the Culture Book Society. He represented the New Peoples' Study Society in Peking and became head of a news agency to promote the work against a "vicious" Hunan official. At this time he met Hu Shih '42, whose support he tried to enlist for the Hunanese students' struggle.

In 1920 Mao attended the meeting in Shanghai at which the Chinese Communist Party was founded, then he returned to help organize a provincial branch in Hunan. The Work and Study students in France, Germany, Russia, and Japan, formed units at the same time. By 1922 Mao, as secretary of the Hunan Branch, had already organized more than twenty trade unions, among miners, railway workers, municipal employees, and the like. At this time very little work was done among the peasants.

At the third conference of the Communist Party held in Canton in 1923 the historic decision was made to enter the Kuomintang and cooperate with it in a united front against the northern militarists. Mao worked in the Central Committee of his Party and in 1924 attended the Kuomintang Congress. In March of that year he returned to Shanghai and combined work in the executive bureau of the Communist Party with membership in the executive bureau of the Shanghai Kuomintang. The following year, after the Hunan peasantry became restive under a particularly oppressive administration, the Communist Party began a rural campaign and Mao organized more than twenty peasant unions. The Governor of the province sent troops to arrest him, and Mao fled to Canton. There he became editor of a Left-Wing political weekly which later tried to discredit the Kuomintang's Right Wing. He was placed in charge of training organizers for the peasant movement, and was made chief of the Agitprop (propaganda) Department of the local Kuomintang. As such he wrote numerous pamphlets on peasant organization.

MAO TSE-TUNG

After the reconciliation of Left- and Right-Wing Kuomintang and the reaffirmation of Kuomintang-Communist solidarity, Mao returned to Shanghai, where he directed the peasant department of the Communist Party until sent to Hunan as inspector of the peasant movement. He recommended a widespread redistribution of land, but his proposal was rejected by the Central Committee of his Party. In April 1927 Chiang Kai-shek '40 broke with the Communists, and the massacre of Communists in Shanghai was followed by similar measures in Nanking and Canton. The "Left" Kuomintang at Wuhan also annulled its agreement with the Communists and expelled them from the Kuomintang and from the short-lived Wuhan Coalition Government. The Communists were of two opinions at that time; one group, known as the "right opportunists," favored stringing along with the Kuomintang; the others wanted a more aggressive policy. In August a new line was adopted by the Party, and Mao and others, without the sanction of the Central Committee, began to form a revolutionary army, known at the time as the Peasants and Workers Army. In September 1927 Mao led the "Autumn Crop Uprising" in Hunan and with his "First Peasants' and Workers' Army, composed of

MAO, TSE-TUNG—*Continued*

peasants, miners, and insurrectionary soldiers, he climbed the mountain Chingkanshan which he held until 1928." In the meanwhile he had been dismissed from the Politburo and the Party Front Committee, and Party harmony was not restored until the winter of 1928.

In May 1928 Chu Teh '42 went to Mao Tse-tung in Chingkanshan and the two joined forces as the 4th Red Army with Chu Teh as commander and Mao Tse-tung as political commissar. (The first Chinese Soviet had been established in November 1927 as Tsalin, Hunan. In 1928 the Hunan-Hupeh Soviet was formed in an area of more than one million population, and by 1929 the Chinese Soviet Government was controlling a population of more than two million.) In 1931 the Red Army defeated three campaigns led against it by Chiang Kai-shek. In December 1931 the first All-China Congress of Soviets which formed the Soviet Republic of China was called, and Mao Tse-tung was elected chairman.

From 1931 to 1933 the Red Army continued to organize Soviets and to defeat campaigns by Chiang Kai-shek's Army. The Red forces were augmented on several occasions by divisions of the Kuomintang's Army, notably after the Ningtu Uprising, when the entire 26th Route Army became the 5th Red Army Corps. In October 1933 the Fifth Extermination Campaign against the Reds began. In January 1934 the second All-China Soviet Congress was held in Juikin, Kiangsi, at which Mao gave a long report on the state of Soviet China and a Central Soviet Government was set up. Soon after the Japanese invaded Manchuria the Chinese Communists began calling for an end to civil war and a united front against the Japanese, and the Soviet Government as soon as it was organized declared war against Japan. It could not proceed against its enemy because Chiang's forces stood between them, and the Generalissimo was still bent on removing the Reds. After a year of almost constant fighting and tremendous losses on both sides, the Communists decided to move their entire "nation," and the epic Long March to the North began in October 1934 in Kiangsi and ended a year later in Yenan.

No observer of China during this period has failed to be impressed by the epic Long March to the North made by the Red Army. Stories of heroism and endurance of the soldiers, men and women, are legion, and most of them are eyewitness accounts. Except for a few weeks, when he was ill, Mao walked the 6,000 miles with the rank and file of his army. (As Gunther '41 pointed out, the trek is comparable to a European march from Constantinople to Stockholm by way of Sicily and Spain.) Edgar Snow describes the mass migration as "the biggest armed propaganda tour in history. The Reds passed through twelve provinces populated by more than 200,000,000 people. [They carried their radio, printing press, and archives.] Between battles and skirmishes, in every town occupied, they called great mass meetings, gave theatrical performances, heavily 'taxed' the rich, freed many slaves (some of whom joined the Red Army), preached 'liberty, equality, democracy,' confiscated the property of the 'traitors' (officials, wealthy landlords, and tax collectors) and distributed their goods among the poor. . . The Reds explained the aims of agrarian revolution and their anti-Japanese policy. They armed thousands of peasants, and left cadres behind to train the Red partisans. . . Many thousands dropped out on the long and heartbreaking march, but thousands of others —farmers, apprentices, slaves, deserters from the Kuomintang ranks, workers, all the disinherited—joined in and filled the ranks." The Army averaged fifteen miles a day. They had fifteen major battles en route, and 300 skirmishes. Mao, although an active participant, was never wounded, and there are some among his followers who believe he is protected by supernatural powers.

In October 1935 Mao Tse-tung's 1st Front Red Army reached Shensi where it was joined in June by the 4th Front Red Army and in November by the 2nd Front Red Army. In October 1936 all the Red Armies met together for the first time in Hui-ning Kansu. In August 1935, however, the Chinese Communist Party had begun to agitate for cooperation in a democratic anti-Japanese United Front in exchange for giving up the Soviets. Although this was accomplished after the Sian "kidnapping" of 1936, the fact that a peaceful settlement was enforced and all the Communists and the Red Army were brought into line with a United Front policy is attributed to Mao's first-rate political statesmanship. Throughout the crucial period between 1935 and the outbreak of war with Japan in 1937, Party splits threatened and cooperation with the Kuomintang seemed impossible. Mao, however, maintained throughout that the anti-Japanese problem came first and that war with Japan was imminent. From July to October 1937 democratic elections were held in the former Soviet regions, which formally gave up the Soviet form of government. The Provisional Soviet Republic of China was dissolved to make way for the Shensi-Kansu-Ninghsia Frontier Government, and in August 1937 the Communist armies moved into Shansi to fight the Japanese. In September a United Front manifesto was published which announced the reorganization of the Red armies as the 8th Route Army under command of Chu Teh. Since that time civil war has nevertheless seemed imminent more than once.

Late in 1942, with a half-million Kuomintang troops blockading the areas in which the Communist guerrillas operate, Mao Tse-tung spoke about the economic and political steps taken in the northwest under their leadership. "Such a policy is one of democracy, not of one-party rule," he said. "It is a policy that fits in with Chinese national conditions, and we hope that it will be realized not only within the various anti-Japanese bases behind the enemy's lines but also throughout the whole country." On August 11, 1943 the Nationalist Government at Chungking, categorically denying charges made by a Moscow publication, declared that it had no intention of taking military action against the 8th Route Army. Chiang Kai-shek, however, accused the Communists of "assaulting national government troops" and "forcefully occupying our national territory," and reiterated Chungking's demands for disbandment of the 8th Route Army and the dissolution of Communist organizations, without offering any concessions to the opposition's demand for an immediate guaranty of rights for minority parties. The blockade also continued, keeping the Communists from getting even medical supplies sent to China by Britain and the United States and forcing them to exist on what they had, plus captured weapons. According to a New York *Times* dispatch of December 1943, the Communist guerrillas nevertheless remained more active and effective against Japan than the Central Government.

When Major Carlson met Mao Tse-tung and questioned him about his political and economic ideas the American officer found the Chinese Communist's plans for the post-War period not very radical. "We hope to perpetuate the present entente with the Kuomintang," Mao told him, "looking to the establishment of a real democracy with a two-party government. We believe that the state should own the banks, mines, and communications. The producers' and consumers' cooperatives should be developed, and we favor the encouragement of private enterprise. Finally, we feel that cordial relations should be established and maintained between China and those nations which are willing to meet us on a basis of equality." According to Johannes Steel '41, before the dissolution of the Comintern the Chinese Communist Party was the only independent member of the Communist International, "the only one that pursues a national policy without dictation from Moscow." Gunther found no Russians with the Chinese Army either as officials or advisers. In 1923 and 1924 when Bluecher and Borodin worked in the Party in China, he points out, Russian influence dominated.

Mao Tse-tung's wife, Yang Kai-hui, was executed by Ho Chi'en in Hunan at the beginning of the Red Army movement, reputedly by order of Chiang Kai-shek. Mao has written a poem in her memory. He was remarried in 1929 to Ho Tzu-chien, a former schoolteacher. She entered the Communist Party in 1927 and joined Mao Tse-tung's 1st Army as a propagandist. Nym Wales (Mrs. Edgar Snow) describes her as a small, delicate woman "with a pretty face and a shy, modest manner." She bore, it is said, five children in seven years, all of whom she was forced to present to peasants en route, for Mrs. Mao marched with the Red Army. During the Long March she received sixteen shrapnel wounds from an air bomb.

Carlson described Mao as a "tall man whose leonine head dominated a well built body. Crowning the massive head was a mane of jet black hair, parted in the center and thrown back carelessly. Kindly eyes regarded me thoughtfully from a face that suggested the dreamer." A sharp sense of humor and a mastery of epigram combined with a happy facility in winning arguments is one of Mao's secrets of successful leadership. Edgar Snow found him well read and an accomplished dialectician in debate. "He likes people and their laughter and is at home in any group." Agnes Smedley, however, described him as stubborn, proud, and determined, with a humor that is often sardonic and grim—symptom of an incurable "spiritual isolation." His singing voice is a monotone, and he is a bad linguist.

Like most educated Chinese, Mao is a poet. He is also master of a lucid prose style, the author of books and pamphlets which place him among the great revolutionary pamphleteers of all time. (They include *Protracted Warfare, The New Stage in the War,* and *New Democracy.*) He is entirely Chinese in thought and temperament, and in his lectures he constantly refers to Chinese life and history rather than to Marx, Lenin, and the Russian Revolution. Although Mao is the leader of the Communists, Snow found him to be so only by common consent, in no sense a dictator. The position of *Tsung-tai,* which Chiang Kai-shek holds in the Kuomintang has no counterpart in the Communist Party, and Mao exercises his influence chiefly through his position in the party Politburo and on the military committee. He holds no official posts in the Border Government, although everybody calls him Chu-Hsi or chairman, the title he had when he was elected head of the Soviet Government back in the days of Kiangsi.

MARCH, FREDRIC Aug. 31, 1897- Actor
ELDRIDGE, FLORENCE Sept. 5, 1901- Actress

Address: b. c/o Players Club, 16 Gramercy Park, New York City; c/o Myron Selznick & Co, Inc, Beverly Hills, Calif; h. 9336 Washington Blvd, Culver City, Calif.

One of the most famous theatrical couples, Fredric March and Florence Eldridge are top stars of both stage and screen. Mrs. March has always been of the stage, and she has made a few films on the side only to be near her husband, to whose career she subordinates her own, taking "only such engagements as would fit in with her husband's." Mr. March, however, is primarily of the screen, having made his great success on the stage only upon his return to the legitimate theatre after ten years of film work. "It has been my experience," March says, "that work on the screen clarifies stage portrayals and vice versa." He believes that it is a good thing to be able to change from one medium to the other. "You learn to make your face express more in making movies," he said. "And in working for the theatre you have a sense of greater freedom."

Frederick McIntyre Bickel, under which name Fredric March came into the world, was

FREDRIC MARCH

born in Racine, Wisconsin on August 31, 1897, the son of John F. and Cora (McIntyre) Bickel. He attended the Racine public high school and the University of Wisconsin, from which he received his B. A. degree in economics in 1920. According to a press release he was graduated with honors and received a scholarship in banking which took him to the National City Bank in New York. For five years Bickel (as he then called himself) is supposed to have led the life of a bank clerk. Then, in 1925, he was stricken with acute appendicitis while at work. "Stretched out on the floor of the National City Bank . . . squirming in agony," he let his fancy wander to distract his mind from the coming operation. As he went under the anesthetic, he visioned himself a great actor. Later he decided to leave banking for the stage. He had no real idea of what actors did to become actors, but he had a vague idea that they made photographs of themselves, and that they left them with agents. Accordingly he had a number of inexpensive portraits made in what he considered striking poses. He took them to agents and waited and waited, but with no response.

According to the press release, for a long time Bickel disdained the "commerce" of the motion pictures, preferring Shakespearean roles. Unable to get a job on the legitimate stage, however, he finally became an extra in a picture called *Playing the Piper*, produced at the old Paramount Studio in New York City. His respect for the motion pictures grew when he got his pay check that evening and found he had earned $7. He figured in the mob scenes of various other pictures, supplementing his income by posing for such commercial artists as Dean Cornwall, Howard Chandler Christy, and Neysa McMein '41, and helping to immortalize shoes, cravats, and shaving cream. All this time, of course, he was still striving by various methods to get a job on the stage. He had heard that David Belasco was going to produce *Deburau*, had applied for the job of "super," and had been rejected. He applied again, this time was given a small speaking part, and he made his stage debut at Ford's Theatre in Baltimore, under his own name, Fred Bickel. Later that month the play moved to New York, and Bickel with it. During the run of the show he was promoted to the rank of assistant stage manager, and he became understudy for five or six of the major players.

All this is according to the press release, but the greater part of it seems to be, at best, apocryphal, for records show that March's debut in *Deburau* occurred on December 7, 1920, the alleged year of his graduation from college. It seems evident also that March had thought of becoming an actor in his undergraduate days, for he had been "the leading thespian of the Haresfoot Theatrical Club" at the University. In *Deburau* March played a variety of roles, ranging in one evening from the prompter to Victor Hugo.

When *Deburau* closed March got a part in the George Ade's show *County Chairman*, in which he had appeared in college. He then played the second juvenile lead in a road company of *Shavings*, and came back to New York for a part in Al Jolson's '40 production of *Lei Aloha*. His first big part was in a William A. Brady production, *The Law Breaker* (1922); then he appeared in stock in Dayton, Ohio; and, upon returning to New York, he was engaged by John Cromwell to play the juvenile lead in *The Melody Man* (1924). It was then that, at Cromwell's suggestion, Frederick McIntyre Bickel changed his name to the more euphonious "Fredric March." He toured Europe next and came back to stock in the summer of 1926. He played with a stock company at the Elitch Gardens Theatre in Denver, Colorado. The leading lady of that company was Florence Eldridge.

Florence Eldridge was born Florence McKechnie in Brooklyn on September 5, 1901, the daughter of James and Clara Eugenie McKechnie. Upon her graduation from Girls' High School of that borough Florence decided to become an actress and applied to Broadway producers for a part, but without success. Finally she made her debut in stock, appearing as the parson's daughter in *Seven Days Love*. Her first Broadway assignment was in the chorus of Jerome Kern's musical comedy, *Rock-a-Bye Baby* (1918). "She rushed to the front so rapidly that within three years she was a darling of the Theatre Guild" in *Ambush* (1921), for which she was acclaimed as "one of the brightest chapters in the season's theatrical history." Following her triumph in *Ambush*, she steadily increased her stature by her performances in various hit plays, among which were *The Cat and the Canary* (1922) and *Six Characters in Search of an Author* (1922). When she played the role of Daisy Fay in F. Scott Fitzgerald's *The Great Gatsby* (1926), she was on the threshold of stardom. It was then that she met Fredric March, with whom she played for the first time in Molnar's *The Swan*. The following spring (1927) they went to Mexico and were married on May 30.

The marriage cost Miss Eldridge her position as leading lady that summer, for the management thought it unromantic to have a man and wife head their company. Miss Eldridge, therefore, stepped into the background, "believing that the man's career should come first," and March headed the troupe.

Later in 1927 the Theatre Guild sent out its first traveling repertory company, which was headed by Mr. and Mrs. March. "It was brutal," said March of the tour. "We played everywhere but in theatres. We innocently got in wrong with all the Chambers of Commerce and spread ill will like crazy. But we loved it. I wish we'd kept a diary." The March tour, according to the New York *Post*, was not managed with the precision of Guild affairs today. "The repertory company was booked into an outlandish series of places by an independent agent who didn't care a hang whether the troupe played in beer halls, schoolhouses, barns, or gymnasiums, so long as it played somewhere." In one particular "theatre," March recalls, the dressing rooms were converted horse stalls.

After a few more seasons in Denver, in 1928 the Marches traveled to Los Angeles, where March had secured the lead in *The Royal Family* at the El Capitan Theatre on Hollywood Boulevard. At that time sound had just come into motion pictures, and the industry had discovered to its horror that many of its handsome young men could not talk, at least not well enough for the microphones. There was a "crying need" for good looking actors with trained voices. March was promptly signed by Paramount Studios, and his first picture role was in *The Dummy* (1928). After roles in a half-dozen pictures he was made a star when he played in *The Royal Family of Broadway* (1931). He was a success, and for ten years he remained in Hollywood, making no effort to return to his first love, the stage. He appeared in a large number of pictures, among which were *Dr. Jekyll and Mr. Hyde* (1932), for which he received the Academy Award; *Design for Living* (1933); *Death takes a Holiday* (1934); *Les Miserables, The Barretts of Wimpole Street,* and *Anna Karenina* (1935); *Anthony Adverse* (1936); *A Star Is Born* (1937); and *Susan and God* (1940).

Meanwhile Miss Eldridge had also started on a cinematic career. She made her debut in *The Studio Murder Case* with her husband, and continued with him in such pictures as *Les Miserables* (1935) and *Mary of Scotland* (1936). She also appeared in some pictures without March and received excellent reviews. After several years, however, she decided to limit herself to one picture a year, in order to have some home life, and she returned to the stage for several solo ventures.

In 1938 March returned to the legitimate stage as Richard Steele in *Yr. Obedient Husband,* co-starring with his wife. The play was a failure, closing in a week; the reviews "shredded" the Marches' souls. Setting something of a precedent, they apologetically inserted a small advertisement in the theatrical columns. It showed a sketch of two trapeze artists missing each other's grip in mid-air. The legend underneath read: "Oops, sorry!"

Since then March has alternated between the stage and the screen. He appeared with his wife in the plays *The American Way* (1939); *Hope for a Harvest* (1941); and *The Skin of Our Teeth* (1943). The last was enthusiastically received by the critics as a "vital and wonderful piece of theatre," and the Marches' performances were commended. "The casting of this production," one reviewer remarked, "was nothing short of inspired. . . March plays . . . with immense power, and Miss Eldridge is right behind him in giving a parable of human sympathy and warmth." March also appeared in the films *So Ends Our Night* and *One Foot in Heaven* (1941); and *Bedtime Story* and *I Married a Witch* (1942). March has been mentioned for the role of the American humorist in *The Adventures of Mark Twain* which Jesse Lasky hopes to produce. In the fall of 1943 he set out on a 33,000-mile tour of Army camps abroad as a U. S. O. entertainer.

Vandamm
FLORENCE ELDRIDGE

Look Magazine wrote: "An honest survey of acting talent in Hollywood reveals Fredric March as a nonpareil among the leading men. Gifted to begin with, he has never succumbed to the Hollywood process of type casting, but has remained versatile and enterprising. Each of his performances has been new and provocative. He has a fine dramatic talent and a choice sense of comedy." An actor who has contrived "not only to flutter feminine hearts, but to maintain himself high in masculine esteem," March, according to other critics, usually turns in an excellent performance. "He has," wrote the New York *Times'* critic, "a natural talent for character parts, but he also has the imagination, the strength, and the skill to illumine ideas and to pull a play together." March usually plays character parts on the stage, romantic leads on the screen.

Miss Eldridge has been admired for her beauty as well as for her histrionic ability. One critic remarked of her appearance in *The Love Habit* (1923) that she "affords more than the customary excuses for two actors to be mad about her." She always has been considered an "effective actress" who fills her roles with "unusual excellence."

Six feet tall, Fredric March weighs 170 pounds, has dark brown hair and brown eyes.

(Continued next page)

MARCH, FREDERIC, and ELDRIDGE, FLORENCE—*Continued*

Although, according to Charlotte Hughes of the New York *Times,* "he speaks slowly and thoughtfully, without nervous mannerisms and with none of the theatrical gestures so many play folk seem to have . . . his deep, resonant voice, his tall and splendid figure and extreme good looks remind you that it is a famous actor speaking." His favorite sports are tennis, riding, and swimming. Photography is his hobby, and he maintains his own darkroom at home where he experiments with sixteen millimeter films in color. Mr. and Mrs. March live in a quiet apartment on East End Avenue in New York City. They stay there every winter so that their two adopted children, Penelope and Anthony, can go to the same school and have the same friends year after year. They also have a farmhouse in Connecticut and a home in Hollywood. March has been "using his talent for the benefit of the country," taking part in volunteer radio shows for various departments of the United States Government as well as entertaining in Army camps.

When the Treasury Department made public the top salaries in the country for 1937, March was fifth on the national list, following William Randolph Hearst's $500,000 with $484,687. "Nobody in his right mind sneers at a job that pays in six figures like that," remarked the New York *Times*' Miss Hughes, and March does not sneer at Hollywood. "I'd feel very badly," he said, "if I thought I couldn't get back to Hollywood to make pictures again, just as I'd feel badly if I thought I couldn't play on the stage in New York."

When the Dies['40] Committee accused Hollywood of being a hotbed of radicalism, March denied the accusation in an article in *Liberty* which appeared on May 4, 1940. His defense of the film city was that "there are men of intelligence and good will everywhere. Perhaps Hollywood has a few more than her share. . . It may be that some of us more gullible, 'highly overpaid' pariahs made a great mistake several years ago in joining an organization that set itself up to fight Nazism—and did fight it. It may be that its officers are in the pay of Moscow and get their orders directly from the Kremlin. Until proved 100 per cent wrong, I shall stand by my conviction that that is complete and utter bunk. . . Perhaps after studying the records of the Mooney case for two solid months, and sitting in on some of the hearings in San Francisco, it was wrong to come to the conclusion that a great miscarriage of justice had been done."

"All in all," March concluded, "it's a pretty sick and sorry world at the moment. But thank God there are a few of us dim-witted liberals who continue to put our necks out for what we hope will prove to be the Right—the side that the Men of Good Will are on." Later Representative Dies retracted his former allegations and said there was no evidence that March ever had been connected with Communist activities. He declared, however, that March, "apparently out of humanitarian impulses," had contributed to and permitted use of his name by organizations that the committee investigating un-American activities "has unanimously found to be among those in which Communists are in leadership."

MARCHAL, LÉON (mar-zhal') June 8, 1900- Diplomat; author

Address: b. c/o Free French Delegation, 625 Fifth Ave, New York City

Léon Marchal recently attracted the public eye because of the suddenness with which he broke with the Vichy Government after having served it for two years. A notable figure in French diplomatic affairs, Marchal was connected with the Canadian Consular Offices until 1933. When the Nazis occupied France, Marchal continued to serve under Weygand['40] and was instrumental in getting supplies through the blockade to North Africa. He resigned his post as Counsellor at the French Embassy in Washington in protest at Laval's['40] return to power. His book, *Vichy, Two Years of Deception*, gives an account of the rise and fall of the Pétain['40] regime as seen from the standpoint of a seasoned statesman. Marchal is now general secretary of the French Protectorate in Morocco with the rank of Plenipotentiary Minister.

Marchal was born in Badonviller in the old province of Lorraine, France on June 8, 1900, the son of Charles and Marie (Cronel) Marchal. At the age of seventeen he fought in the First World War as a volunteer in the French Army. On his return from the battlefront he devoted some years to the study of philosophy, contemporary history, and economics at Strasbourg and at Paris.

The political career of Marchal dates from 1923 when he was for several months attached to the financial services of the Interallied Control Commission for the Ruhr Territory. He spent the years between 1925 and 1929 in the Baltic States as French adviser to the Estonian Ministry of Foreign Affairs, after which he entered the French Foreign Service, exercising consular functions in Canada until 1933. In 1934, the year of the execution of the S. A. chiefs, the assassination of Dollfuss, and the death of Hindenburg, Marchal was stationed in Munich as secretary at the French Legation. The following year he was commissioned to Morocco in the capacity of chief of the Trade and Industry Department, a post which he held for six years. While in the latter office he was charged with frequent foreign missions which took him to London, Berlin, Berne, and Washington.

In 1940, after the fall of France, Marchal was still stationed at Morocco. Despite the fact that he found himself in the employ of the Vichy Government, Marchal claims that he was opposed to the French armistice with Germany and to the breaking of the Anglo-French alliance. He states that, like many of the Frenchmen in North Africa, he "refused to concede that a capitulation manifestly contrary to the will of the French people could put an end to the state of war between France and Germany." It was for this reason that in 1940 he held the secret conferences in Madrid, Lisbon, and Tangier which led to the first negotiations for the sending of supplies to North Africa: his purpose was to erect a barrier against German penetration in the French Empire by "maintaining economic relations with the free world." By this procedure he hoped to prepare the way for the French overseas territories to break with Vichy and to re-enter the War.

Marchal arrived in Washington in April 1941 to serve as Counsellor under Gaston Henry-Haye '40 at the French Embassy. His functions were connected only with matters pertaining to North Africa; he did not participate in any other activity of the Vichy representation. Throughout the entire year which he spent in Washington, Marchal pursued a policy which he hoped would "reasonably counteract the development of Franco-German collaboration and maintain the spirit of resistance in North Africa."

The return of Pierre Laval to power on April 21, 1942 caused Marchal to realize that his efforts were hopeless. With what was regarded as considerable courage at the time, Marchal resigned his post and openly joined General de Gaulle '40.

Marchal's break with Vichy brought a suggestion from the Macmillan Company of New York that he write an account of the Vichy regime "and the fatal evolution which led to it, from concession to concession, to the last stage of enslavement." The resulting book by Marchal, entitled *Vichy, Two Years of Deception,* was published early in 1943. In it Marchal patiently reviews the history of the Vichy Government, sketches the main figures comprising the Vichy outfit, and gives an account of his own efforts in attempting to counteract German influence in North Africa. An interesting aspect of the book is the characterization of Pétain as a deluded old man who naïvely believed that the Nazis could be dealt with according to the rules of fair play.

The book was received with divided critical opinion. Walter Millis of the New York *Herald Tribune* thought that M. Marchal had brought the known facts about France into a "useful perspective," thereby clarifying some aspects of the scene in France. On the other hand, the *Times* reviewer, John Chamberlain '40, rendered a less sympathetic judgment. He wrote: "M. Marchal's book will aid and comfort those who like to indulge in the sort of armchair analysis and social therapy that can solve the Indian question in a New York bar, or the African question in a New York skyscraper. As such it will do no good." Still another critic stated that Marchal's intimate knowledge of the French political and economic background qualified him "to recite this somber page of French history with a fair approximation to accuracy. . . He knows the atmosphere of Vichy from first-hand observation, and he is able to throw interesting light on Pétain's breach with Laval in December 1940."

LÉON MARCHAL

In January 1943, after serving on the diplomatic staff of the Free French National Committee for a short time, Marchal was promoted to the rank of "consul de première classe." Later he achieved the rank of general consul second class, and on June 19 he was taken out of the consulary class altogether and appointed general secretary of the French Protectorate in Morocco with the rank of Plenipotentiary Minister.

On June 7, 1927 Marchal was married to Manon Siéger. They have five children—Genevieve, Jeanne, Bernadette, Henri, and François. Marchal is a Roman Catholic.

MARKOVA, ALICIA (mär'kōvə əli'zhiə) Dec. 1, 1910- Ballerina

Address: b. c/o Hurok Artists, Inc, 711 Fifth Ave, New York City; h. 11 Marble Arch, London, W. 1, England

Called the greatest classic ballerina of her day, Alicia Markova has been compared to the famous Anna Pavlova, not only for her dancing, but for her physical appearance as well. Markova's dancing has been received with almost unanimous enthusiasm by critics all over the world. "She has brought her

ALICIA MARKOVA

art," writes John Martin, dance critic of the New York *Times*, "to that point beyond technique where the medium itself becomes her natural means of expression. What a torment she must be to the shades of all the nineteenth century ballet masters who bent every effort to devising movements that would seem difficult. There is no virtuoso trick that she does not deacrobatize, make simple, poetic, and elegant. On the basis of this magnificent command of movement she is free to devote herself to the dramatic and stylistic verities of the story and its manner of telling."

Despite her "Russian" name, Alicia Markova is an Englishwoman, born Lilian Alicia Marks, on December 1, 1910, in a suburb of London. Her father, Arthur Marks, was an English engineer; her mother, the former Eileen Barry, hailed from the south of Ireland; there are also Spanish and Polish-Jewish strains far back in her ancestry. As a child Lilian Alicia was sickly, the result of a series of prolonged battles with chicken pox, German measles, scarlet fever, whooping cough, and diphtheria. Her appearance when she was nine years old seems to have been rather appalling, for she has been variously described at that age as having been "pallid", "undersized", "scrawny", "knock-kneed", "flat-footed," and "spindle-legged." Her mother took her to a doctor to see what could be done. The particular medical man Mrs. Marks happened to hit upon had been reading a book on the ballet in his spare time. He suggested, therefore, that, instead of the iron brace customarily used in such cases, she might try ballet dancing on the little girl to see if it would strengthen her muscles.

Lilian Alicia was promptly enrolled at Miss Thorne's Dancing Academy in London, and, not only did the treatment do all the doctor had hoped for, but, within two years she had risen to the title of "the child Pavlova," and had appeared on the professional stage in the pantomime *Dick Whittington* with conspicuous success. Her name appeared on the program as Alicia Marks—she had dropped the Lilian in the first of the transformations which her name was to undergo. At that time the first Russian ballet dancer to open a school in London was Princess Seraphine Astafieva, a former pupil of the Imperial Schools and for a time a principal in the Diaghilev Ballet. One day, during one of the morning classes, a young woman, accompanied by a very small and very timid little girl, appeared in the doorway and presented Mme. Astafieva with a visiting card bearing the words: "THE MINIATURE PAVLOVA." She was opening her mouth to expand upon the artistic merits of her little Alicia when Astafieva exploded and nearly terrified the miniature Pavlova into a fit. Exactly what the ballet teacher said has been lost to posterity, for every source quotes her differently, but it was something to the effect that there was only one Pavlova, that there could never be another, and that all mothers were alike—they thought that just because their offspring could "stand on one toe and wobble" they were all Pavlovas. Then she slammed the door in their faces.

The mother and daughter, after returning home, discussed the situation, destroyed the offending cards, and induced Mme. Astafieva to watch Alicia dance. When Astafieva saw her perform she herself made the comparison to Pavlova, and accepted the little girl into her class, which included a boy named Patrick Healy-Kay who was later to become a shining light of the ballet world under the Russian name of Anton Dolin. "Alicia and I worked side by side at Astafieva's school," he wrote in his memoirs, "[she] annoying me as much as she did the other pupils with her unbelievable ease of being able to do anything without any apparent worry or trouble. I remember her then as a thin, too thin child, with a face much too old for her frail little body." The little girl, friends relate, was "impossibly good"—the only misdeed she had ever committed in all of her childhood was to wipe the floor with a face flannel, and she shuddered whenever that horrible act was related to others. Her contemporaries called her "Sphinx" and it was not intended as a compliment.

The famous Sergei Diaghilev of the *Ballet Russe* had seen the child dance and toyed with the idea of having her dance in his *Sleeping Princess,* but difficulties in getting a labor permit caused him to give up his plan. Furthermore he hated children and, unlike other impresarios, never had had one in his company. When Alice was thirteen or fourteen, however, her father died, and, in order to help support the impoverished family, it was decided that she was to go into vaudeville—a horrible fate, for it would, it is said, have completely ruined her future as a ballet dancer. For the sake of art Diaghilev overcame his prejudices and took her into the *Ballet Russe*, providing her with the governess and all other cultural and educational advantages required by the law and his own theories. Her family, traditionally considering the stage highly improper, was extremely shocked. Her grandfather never forgave "this unpardonable affront to the family name and reputation," and has refused to hold communication with his granddaughter ever since.

The first important decision that confronted the young dancer upon her entrance into the *Ballet Russe* in 1925 was that of a suitable name for herself. Naturally an English name was out of the question, for, as everyone well knew, only the Russians were noted for their dancing. "After a heated discussion and references to Tolstoi and Dostoevsky," wrote the ballet commentator Arnold Haskell, "we settled on the obvious 'Markova,' and then watched this English girl gradually growing acclimatized, even to the extent of wrestling with her hair, which had then to be worn in a severe, well-defined manner."

"It is very necessary for sound training," says Markova, "to work forward from the last row. Gradually, if you improve, you earn a small position, then you are in the front row, and if you still improve you are given small parts, then solos. That's how ballerinas should be made." Accordingly Markova began in the last row of the corps de ballet and worked her way into small roles, being carefully prepared for the chance as prima ballerina that would have been hers had Diaghilev lived. In the very last interview he gave to the press he said: "Watch my little English girl." In 1929, when she was nineteen, Diaghilev died, just at the beginning of the season in which she was to play a principal role for the first time. For a while she remained at Monte Carlo, and then returned to England, where she danced for a living in the "commercial" theatre, hurrying, with her make-up still on, over to the struggling Ballet Club, founded by Marie Rambert, "to dance again for art's sake." With and without Dolin she danced in music halls and cinema houses, often dancing as many as four times a day, and, says Dolin, "to the dismay of the highbrows, we were an enormous success." Markova danced with the Camargo Society and then, rediscovered by Frederick Ashton, became in 1932 the star dancer of the Vic-Wells Company, the pioneers of English ballet. At first "one performance in three weeks was all it could muster an audience for, and then you could count the house on your fingers."

Eventually the Vic-Wells Company prospered, but, when she was twenty-five Markova left it in order to form her own company with Dolin. From 1935 until 1937 the exclusively English Markova-Dolin Company toured the British Isles. London by that time had become the ballet capital of the world and Markova "its undisputed queen." "Markova," writes Dolin, "owes a great deal to me and would herself be the first to admit this. Not only was I the first person to proclaim her as a great dancer, with both the spoken and the written word, but I was able to help her in no small way to show her talents to greater advantage when I partnered her than she had been able to do in other hands and other conditions. Long before the press called Markova a ballerina I had said she was that publicly, and more than once."

Early in 1938, however, Markova left the Markova-Dolin Company in order to join Massine's '40 newly created *Ballet Russe*. Dolin placed the blame for her departure on "the anxieties of managership", "the atmosphere of the theatre and its petty disagreements," and an accident that she had suffered at that time. With the *Ballet Russe* Markova became involved in difficulties with a Russian male dancer who had been accustomed to receiving all the plaudits himself. When, at the London première, audiences called for Markova and not for him, he became exceedingly irritated. At the New York première in the Metropolitan Opera House the two were to disport themselves in *Giselle*, in which heart-rending tale Markova was supposed to return as a ghost and dance on the flowers her grief-stricken lover had strewn on her grave. Since real (and slippery) lilies would be a decided traffic hazard, paper property lilies are always used. That night, however, the lover, played by the jealous Russian, decided that a touch of realism would enhance the proceedings, so he scattered real lilies over the stage. Markova rose from her grave bathed in a lurid green spotlight and "found herself hopping over squashed lilies." Despite the "mangled vegetation" oozing all over the stage, Markova scored a personal triumph. The next night an unsigned note awaited her at the theatre. "Do not dare to dance tonight!" it said.

Still not realizing that these sinister occurrences were not mere coincidences, but formed part of an evil plot, Markova went on. Trustfully floating out from her grave into the waiting arms of her dastardly partner, she received a rude shock when she was set down hard on one foot. A searing pain shot up from her ankle, and the injury was so severe that she could not dance for the next three weeks. Unfortunately records do not show with what end the villain met.

After the outbreak of the War the *Ballet Russe* remained for the most part in the United States and in South America. In 1941 Markova and Dolin joined a new company, the Ballet Theatre, which otherwise is almost all-American in cast and management. Since then she has toured the United States with the company, in which she is the leading dancer.

In the summer of 1941 Markova and Dolin directed a ballet school and International Dance Festival in the Berkshires. There the two ballet dancers together with a number of dancers from the Ballet Theatre took up residence. Guest stars also gave performances and lectures. The afternoon performances were preceded (Markova and Dolin are both English) by four o'clock tea.

Critical reception of Miss Markova in the United States has been uniformly enthusiastic. The harshest criticism that seems ever to have been made of her was that one of her roles was beautifully danced and beautifully played —"if one demands more, it is only because perfection is Miss Markova's own standard." Otherwise, reviewers say: "I can only splutter my admiration, not only for her incredible precision and style, but for an economy of motion that I have never seen the like of" (*PM*); "She is the miracle that never fails" (New York *Times*); "The art of this ballerina passed beyond the limits of personal achievement and took its place among the few benevolent abstractions in a world at war" (New York *Herald Tribune*); "She is queen of the kind of ethereal light and vir-

MARKOVA, ALICIA—*Continued*

tuoso strength that audiences most associate with ballet" (*Time* Magazine); "Markova is the only ballerina I have seen who actually is what the ballet technique ideally aims to achieve. Her timing, elevation, and legato are unique. It is as though the air were her element, as though no effort were involved in the most difficult of technical feats" (*Nation*); "Looking at her in despair of analyzing [her art], one can only say what Shaw said of Duse, that she 'has been helped to her supremacy by the fortunate sternness of nature in giving her nothing but her genius'" (*Theatre Arts*).

Although primarily a classic dancer, Markova, according to Robert Lawrence, is "as superb in modern dance as in the classic style." The same critic was moved to add later that Markova was "not only the greatest dancer of her time, but also the greatest actress. The ladies of the spoken drama might profit by her simplicity and directness, the complete immersion of herself in the part." Although she is English, her Russified name is appropriate, for she is a Russian dancer. She has been trained in the Russian school, dances in the Russian manner, and has made her greatest success in Russian works, among which are included *Giselle* (her favorite, and probably her greatest, role), *Swan Lake*, *Princess Aurora*, and *Les Sylphides*.

Although she is not one of the glamorous beauties of the ballet, Miss Markova is a nice-looking English girl with a "soft-spoken, almost baby-like voice." Still underweight, however, she requires eight hours' sleep plus a short afternoon nap, four cups of tea daily, and plenty of food to keep her up to her ninety-eight pounds (she is five feet two inches tall). The *Christian Science Monitor* described her onstage as an "airy, drifting creature, light as ether, white as moonlight. This is Markova—luminant, beautiful, spirituelle." As to Markova's similarity to Pavlova, Margaret Lloyd writes: "There is some physical resemblance, in the heart-shaped face, the sleek dark hair, the luminous dark eyes, the delicacy of form. There is some artistic resemblance in the style of dancing, the style of the winged creature, inhabitant of air and of the spirit. But Markova is not a copy of another great artist. She is a great artist herself—communicant of beauty and poetry—with an ineffable quality of her own."

Miss Markova's family still remains in Britain—her mother and three sisters have been obliged to live in the north of England since they were bombed out of their London flat. She herself resides at present in the United States. In the fall of 1943 Miss Markova was recovering from an operation made necessary by complication of an old injury. She rejoined the Ballet Theatre troupe in December. An engagement at the Radio City Music Hall was to follow with Anton Dolin as her partner.

Markova makes all her own flowered headdresses and designs some of her costumes. She cleans all her ballet shoes—size four—herself. She wears out on the average of two pairs a week and gives her old ones away to fans as souvenirs. During almost all her waking hours she dances. She also likes to attend concerts for, she says, "I adore music." In the spare moments left to her she likes to play gin rummy and usually wins.

MARTEL, GIFFARD LE QUESNE Oct. 10, 1889- British Army officer

Address: b. c/o Ministry of War, London, England

Great Britain's outstanding tank expert, Lieutenant General Giffard Le Quesne Martel, commander of the Royal Armored Corps, has been made chief of the British Military Mission to Moscow. Since his arrival in Russia (April 1943) he has been conferring with the Red Army's Marshal A. M. Vasilevsky '43 on current war problems.

Called "a man with a punch," General Martel has been a champion British Army boxer. In his boxing days he was known as the Slosher, since he habitually ended a story of his adventures with: "So I sloshed him one!" Spirited and vigorous at fifty-odd, Martel is still a good slosher, whether with the gloves on, in a tank at the Front, or battling for increased Army mechanization.

General Martel's father was also a distinguished soldier, Brigadier General Sir Charles Martel, who was chief superintendent of ordnance factories, a professor of artillery, and principal experimental officer at Woolwich. The son inherited the father's technical skill. Born on October 10, 1889, Giffard Le Quesne Martel was educated at Wellington, which has produced a number of great soldiers. Because of his interest in machinery he specialized in mechanical science as it applied to Britain's Army, and studied for a degree as a member of the Institute of Mechanical Engineers. At twenty he obtained his commission in the Royal Engineers.

Not long afterward the First World War began, and Martel served with distinction in France and in Belgium. He was with the tank forces from the beginning. He became a brigade major in the newly formed tank corps; and when the British tank drive was shaping up at Cambrai in 1917, Martel disguised himself so that no hint of the surprise attack might leak out when he went to reconnoiter the ground. Wearing a bowler hat and false whiskers, he announced that he was a Member of Parliament inspecting the Front.

Having returned from service with a D. S. O. and several mentions in dispatches, Martel really went to work on tanks. He didn't like the "big Willies," the first British tanks of the War, which were too clumsy and too conspicuous as targets. Around 1925 he invented the "one-man tank." With no blueprints to aid him, he raided automobile junk piles, got an engine from a Maxwell, a rear axle from a Ford truck, and other odds and ends, which he pieced together into a manageable, fast little tank. He went to a factory for a caterpillar tread, and the job cost him $1,600. Martel's tank got him the attention of the War Office, and started him on the way to becoming a tank expert. He later designed a tank in which the soldier lies flat on his stomach and fires a machine gun as he drives.

In the post-War years Martel fought for better tanks and more efficient Army mechanization. He wrote a book, *In the Wake of the Tanks* (1931), a vehement appeal for mechanized preparedness, said to have been "one of the most widely discussed military books ever written." Other British officers who battled for modern mechanization got into trouble with the high command for being "too zealous," but Martel somehow came through without censure. He continued his military service, both in Britain and in India, in commands and in various staff appointments. For a time he was an instructor at the Staff College in India. During the four years immediately preceding the outbreak of the Second World War, he was assistant and deputy to the director of mechanization at Britain's War Office.

Early in 1939 General Martel took command of the 50th Infantry Division, which he commanded in France and during the evacuation at Dunkerque. He was with this division at Arras in May 1940 and, through his ingenious and brilliant generalship, they succeeded in breaking eight miles into enemy territory. This is said to be the first occasion on which a German Panzer advance was routed. Martel and his men took 600 prisoners and left dozens of new German tanks blazing in the field.

On his return to England Martel was appointed commander of the Royal Armored Corps, chief bulwark of Britain's defense when and if invasion comes. It contains as "big and diversified a herd of hell-buggies" as anyone, even Martel, could want. He has also been employed, since 1941, on special "secret work" for the Army. Martel, who long ago declared that "mechanization will go on until every battalion is backed by machines of transport and attack," and whose ability as a military engineer is outstanding, went well qualified to Russia as head of the 1943 British Military Mission. He was, of course, present at the Cairo and Teheran Conferences.

British Official Photo

LT. GEN. GIFFARD LE QUESNE MARTEL

General Martel is said to have "an almost shy smile and a quiet manner of speaking. He has a small mustache and the high-domed forehead of the traditional man of learning." He is, however, "hard as nails, and has a bold protruding chin that has invited many a punch in the ring." It was in London's East End that he took most of his boxing training in his early Army days, to become the British Army officer's boxing champion in the light-heavyweight class. He still is fond of boxing, and "likes nothing better than to visit some club in London's East End with a parcel of boxing gloves under his arm in order to have a few rounds with some of his old friends."

MARTIN, GLENN L(UTHER) Jan. 17, 1886- Aircraft manufacturer

Address: b. Glenn L. Martin Co, Baltimore, Md; h. 3703 Greenway, Baltimore, Md.

In a half century Glenn L. Martin has progressed from improvising kites in a corner of his family's living room floor to the presidency of the nation's largest airplane manufacturing company, whose plants occupy over 5,000,000 square feet of floor space. The outline of this fabulous career in the 1942 *Who's Who in America* runs into sixty-seven lines and is one of the longest entries in the volume.

Martin's story would be incomplete without proper emphasis on the part his mother played in helping and inspiring him. Martin once told newspaper interviewers that what influenced him most in his long career was "my mother who encouraged me to believe

GLENN L. MARTIN

in myself." She had sufficient confidence in his pioneering inventions to fly with him in his airplanes when they were little more than motorized kites. In 1943, in her late 70's, she is still actively interested in airplanes and is regarded as the "Grand Old Lady of Aviation."

Glenn Luther Martin was born in Macksburg, Iowa on January 17, 1886, the son of Clarence Y. Arminta (DeLong) Martin. All who have written about him have agreed that he was an unusual child. Stories are told of his dismantling a cultivator when three years old, of his shooting rabbits at six, and driving a team across the prairie from Liberal to Springfield at eight. The Martins had moved to Liberal, Kansas in 1888. There had been a land boom in that state, and Glenn's father, "an opinionated and cheerfully intense little hardware dealer," followed the wheat-hungry army with his carload of plows and farming implements and opened a store on Liberal's Main Street.

Air propulsion interested Martin as a child. At an early age he rigged up a sail, first for an express wagon, later for a tricycle. Kite flying was a favorite sport in Liberal, and it was kite flying which gave Martin his earliest practical experience in aerodynamics. Discovering that the traditional tail dragged the kite downward, Martin dispensed with it and, after a few additional innovations, built a box, biplane-shaped kite that flew almost vertically. When his kite won a local contest he received orders to make similar ones at twenty-five cents apiece. According to Alva Johnston of the *New Yorker,* Martin combined his talent for aerodynamics with a sound business talent. The kites were sold on the installment plan and in his living room factory he turned out three a day.

A few years later the family moved to Salina, Kansas. The little town offered few avenues for amusement for its younger generation. Young Glenn occupied his time making his own toys, analyzing the flight of ducks and prairie chickens, taking apart clocks, and tinkering with machinery. His mother fostered his mechanical bent and would frequently read him magazine accounts about the flight experiments of Chanute and Lilienthal. Seeing a newspaper photograph of one of the early biplanes, Glenn promised his mother that some day he was going to make one and fly it. His mother saw no reason why he could not. She always felt certain that her son could do anything anyone else's son did and do it much better. Glenn's father, however, was the skeptic of the family. To him all this business of flying was so much foolishness, and he frowned on his son's waste of time and money. As Glenn devoted more and more of his energies to aviation, the alarmed father feared that the boy had taken leave of his senses. It was many years later that the elder Martin (who died in 1935) finally conceded that his son "possibly had something."

While attending high school in Salina, Glenn worked in his spare time at a local bicycle shop. After graduation he enrolled for a business course at Kansas Wesleyan University, but his heart was more in biplanes than in bookkeeping and within a year he quit the school. When the first automobile business opened in town he got himself a job as a garage hand and soon became an expert on motors. In 1905 his family moved again, this time to Santa Ana, California. There, after working a few months as a repairman, Glenn opened his own garage. At about this time news reached him of the success of the Wright Brothers at Kitty Hawk, North Carolina. He built himself biplane gliders and pusher-type airplanes and for many months practiced gliding from hills near Santa Ana. By 1908 he was ready for his great experiment—the construction of a motored biplane. All he needed now was a place large enough to build it in. He ultimately found the kind of building he wanted, an abandoned Southern Methodist Church which he rented for $12 a month. He painted the windows of the church and kept its doors locked. He worked only evenings, with the patient assistance of his mother, who held the coal-oil lamp for him while Glenn climbed about his contraption. In the daytime he continued in his automobile business, making money which he needed for his invention and learning the intricacies of internal-combustion engines.

After several hundred nights of work and an expenditure of over $2,000 Glenn Martin's first biplane was completed. He equipped it with a whittled propeller and mounted in the plane a Ford Model V, fifteen horsepower automobile motor. "I don't know where all the fifteen horses were," he told Roger Burlingame years later. "I never seemed to be able to get them all into the engines at one time." A more serious problem was getting the flying crate out of the church. He finally solved it by knocking out a wall of the building. To placate the horrified owner Martin spent a few more evenings in rebuilding the wrecked church.

In its final stage the first Martin aerial creation was highly reminiscent of the box-kites he had flown in the Kansas wheat fields.

But in it he learned to fly. Glenn Martin was, in fact, the third man in the United States to teach himself to fly in a self-made ship. In August 1909 he made his first flight, covering 100 feet at a two-foot altitude. Looking back after thirty-three years, Martin says that this two-foot altitude gave him the greatest sensation of his life. Several months thereafter he designed and built a second plane, doubling the horsepower. With the money he earned as a persuasive salesman of Ford and Maxwell cars he was able to establish in 1909 an airplane factory—one of the first in this country—employing three assistants. Charles Day, who is at present supervisor of aircraft production for the Canadian Government, was one of Martin's mechanics at the time. "Glenn used to neglect the auto business terribly," Day says. "When Friday came around I used to remind him of our payroll. Glenn would go through his pockets, shake his head, frown, and spend the afternoon selling cars. He always came back with our pay."

By the summer of 1910 Glenn Martin felt that he could fly as well as the Wrights. To be sure, he still had numerous mishaps, but they had never resulted in anything more serious than an occasional torn ligament. "The test of a pilot in those days," Martin recalls, "was whether he could walk away after an accident." Glenn Martin always could. Pictures of his "winged, crack-brained contraption" began to appear in the press with cautious statements that "allegedly" it could fly. Even his skeptical Santa Ana neighbors were willing to admit that the local boy had made good, but they doubted very much that he would live. Mrs. Martin still treasures a note sent her by their family physician, Dr. H. H. Sutherland, in which he wrote: "For Heaven's sake, if you have any influence with that wild-eyed, hallucinated, visionary young man, call him off before he is killed. Have him devote his energies to substantial, feasible, and profitable pursuits, leaving dreams to professional dreamers."

For the next two years, Glenn Martin was involved in a "daredevil" showman's career. The newspapers were full of his hairbreadth exploits. Towns started bidding for his services at Fourth of July celebrations and county fairs; he was considered one of the leading exhibition flyers in the country. Flying was rapidly becoming one of the most popular sports, and there were many races and tournaments offering cash prizes. He went barnstorming all over the West. In those rough and tumble days of aviation Glenn Martin was an oddity. He always looked solemn and dressed in black with a tall white collar like a preacher, and his colleagues called him "The Dude." What is more, among the pilots competing for prizes, he was the only "manufacturer"—already a leader in the industry, in fact. Not only did he fly his own manufactured plane but his trademark was also on most of the contesting machines. Every penny he earned in the exhibitions went into the factory, which he had moved in 1912 to Los Angeles. Because the name Martin was associated with Martin planes, he indulged in various publicity stunts. He tossed baseballs from the air, took aerial pictures, and once—though it was against his monastic code—carried a woman parachute jumper attired in red tights.

Despite his recklessness in the air, Glenn Martin was the quietest of youths on land. He had promised his mother never to smoke, drink, or swear, and this pledge he has kept to this day. In contrast to his pilot companions, he was extremely girl-shy and feared women more than engine trouble. One of his early passengers was Mary Pickford, for whom he played the villain in a motion-picture melodrama called *The Girl of Yesterday.* For piloting his plane and for his acting Martin received $700 a day. His most embarrassing experience occurred several months later. Valeska Surratt, a popular vaudeville star, hired him for a tour over Los Angeles. When they landed the actress planted three explosive kisses on his cheek. Blushing, Martin ran away. But it was too late. Photographers had already recorded the scene, which was featured in the next edition of the press. It created a national sensation which Martin found hard to live down. Spectacular public embraces were unknown in those days, and he feared that the "scandal" might hurt his financial standing as a reputable manufacturer of planes.

On January 12, 1912 he blazed the path for future air mail. With official permission from the United States Post Office, he flew a sack of mail from Dominguez to Compton, California, dropping it for a waiting mail cart. A few weeks later, he flew copies of a newspaper, the Fresno *Republican,* twenty-four miles to Madeira in twenty-five minutes with the ink still wet. On May 10 of the same year Glenn Martin attracted world-wide attention when he winged thirty-eight miles from Newport Bay, near Los Angeles, to Catalina Island and back in the first "extended" over-ocean flight. He accomplished the epoch-making trip in a "seaplane" of his own manufacture—a "gassed-up, fragile looking pontoon-equipped" craft with an inflated tire-tube on the fuselage as a "life preserver." (Twenty-five years later to the day —on May 10, 1937—Martin re-enacted his flight to Catalina, this time aboard the China Clipper, built at his own plant and regarded then as the world's best plane.)

Years before the First World War, Glenn Martin foresaw military possibilities in aviation and advocated flying reconnaissance and observation. He also anticipated present-day bombers. Together with Lincoln Beachey and Howard Gill, famous flyers of the day, he staged a "bombing" exhibition on the outskirts of Los Angeles. They flew over a stage-scenery fort and dropped "bombs" consisting of bags of flour. As each bag landed a charge of blasting powder was set off on the ground. Newspaper reporters apparently did not catch on and wrote enthusiastically about the "incredible precision" with which the flyers hit the targets. The show, however, attracted the attention of Army authorities.

A few days before the First World War broke out, on August 6, 1914, Martin stated in an interview: "The airplane will practically decide the War in Europe. Veritable

MARTIN, GLENN L.—*Continued*

flying death will smash armies, wreck mammoth battleships, and bring the whole world to a vivid realization of the awful possibilities of a few men and a few swift demons. For the old-time war tactics are no more. The generals who realize this quickest and fight first with flying death will win." With good humor he now admits that he was one war too soon.

The same year saw the upswing of Martin production. The results were the first armored planes and the famous model TT, a training plane built especially for the Army. From 1914 to 1916 Martin produced several additional models for the United States armed services and twenty-four machines for The Netherlands Government. By that time he was already employing 150 workers. In 1917 he merged his interests with those of the Wright Company under the name of the Wright-Martin Aircraft Corp., of New York but he withdrew from the corporation in the fall of the same year. In 1918 he reorganized the Glenn L. Martin Company at Cleveland, Ohio for the purpose of constructing an airplane wholly of American design and one that would add strength to the American war effort in France. Within seven months Martin built the factory and the new machine, which he called the Martin Bomber. It was a biplane equipped with two 400 horsepower Liberty motors, carrying a bomb load of 1,500 pounds —the prototype of most Army bombers through the middle '20's. Built too late to get into the War, the pioneer bomber went to the Air Service. In 1921 the same type bomber sank a battleship, a cruiser, a destroyer, and several submarines in General William Mitchell's experiment off the Virginia Capes.

In succeeding years Martin turned out better and better models. From the Cleveland plant came many "firsts"—the first plane built specifically for mail service, the first American metal monoplane (of which the Navy bought thirty-six), the first bomber with an alloy steel fuselage (of which the Navy bought 103). By this time his factory occupied 72,000 square feet of floor space and employed 500 men. Gradually Glenn L. Martin withdrew from designing and devoted himself exclusively to administering his enterprise. He exchanged little information with other manufacturers and became known as "a sombre lone wolf." (He remained a "lone wolf" until April 1943, when he became head of the new East Coast Aircraft War Production Council, which joined with the West Coast Council to form the National Aircraft War Production Council.)

From 1925 to 1929 the firm switched over to designing seaplanes. This necessitated a factory located on ice-free water. Martin was also determined to have plenty of room. The ideal factory site was found by Martin himself—at Middle River on the Chesapeake, near Baltimore. From unsuspecting holders of tidewater property, options were cautiously obtained by agents who represented themselves as acting for a New York sportsmen's club. He thus acquired forty parcels of ground comprising 1,234 acres.

Out of this factory in 1932 came Martin's greatest engineering achievement—the famous B-10 bomber, the first of the big twin-engined, all metal monoplanes. It had a range of 1,800 miles, a bomb load of 2,400 pounds and, what is most important, raised the speed of bombing planes from 130 to more than 200 miles an hour. The B-10 earned Martin the 1932 Collier Trophy, which was presented to him by President Roosevelt '42 in 1933. What is more, it earned for him an order from the United States Army for more than 150 ships. Glenn L. Martin is also the creator of the B-26 bomber of which the Office of War Information reported in October 1942: "No nation but the United States, so far as is known, has so efficient a plane in its class." His crowning success to date is the world-famous giant Mars, an outgrowth of the big clippers Martin built for over-ocean travel. It is the largest seaplane in the world, weighing 140,000 pounds and having a wingspread of 200 feet. More recently Martin completed designs for a 250,000-pound flying boat able to carry 100 passengers to London in thirteen hours, and he is ready to start a 500,000 pounder! His orders from the United Nations are said to run into billions of dollars. Early in 1942 his plants occupied a total floor space of 5,192,000 square feet, employing tens of thousands of workers and establishing the Glenn L. Martin Company as the largest airplane manufacturing firm in America. In September 1943 Martin announced the discovery of Marvinol, a new rubber substitute expected to revolutionize the production of automobile inner tubes.

Glenn L. Martin is a "tall, stoutish, pursemouthed" man. "With the exception of hunting," writes Alva Johnston, "the pleasures of life, as they are ordinarily known, have no part in his scheme of existence." A bachelor, he seldom goes out, dislikes social functions, and steers clear of parties. His suits always have a narrow ridge on cuff and lapel. He is fond of driving his seven-passenger, sixteen-cylinder Cadillac at breakneck speed. He also likes to joke about the ships of his competitors, and always prefaces his remarks with the words "not to cast any asparagus."

Mrs. Minta (she dropped the name Arminta in her early girlhood) Martin keeps house for her son in Baltimore and used to accompany him on his occasional pleasure jaunts to New York. On June 20, 1942, in tribute to his mother, Glenn Martin established the Minta Martin Aeronautical Endowment Fund valued at $450,000. "As my mother has for so many years been such a firm believer in the possibility of the airplane," he declared, "I hope that her expectation of even greater future developments will result from the uses made of this fund which bears her name."

MARTIN, HELEN *See* Rood, H. M.

MARTIN, JACKIE Apr. 1, 1903- Photographer; journalist
Address: b. P. O. Box 1907, Washington, D. C.

The first official photographer of the United States Women's Auxiliary Army Corps, now the Women's Army Corps, camera woman Jackie Martin was the first and only woman ever elected to membership in the White House Photographers' Association, the first and only woman to hold the position of art and photographic editor of a metropolitan newspaper, and the first women's sports editor in the country. Before joining the WAAC Miss Martin had been taking photographs in Washington for over seventeen years. At the request of the War Department in 1942 she was sworn in as an expert consultant to the Secretary of War and assigned to photograph the first three months of WAAC activities. Her task completed, Miss Martin returned to private life early in 1943.

Jackie Martin was born Cecilia Martin in East Pittsburgh, Pennsylvania, on April 1, 1903. After having been graduated from Eastern High School in Washington, D. C., she won a scholarship to Syracuse University. She stayed only one year, because she did not have money enough to continue, then entered newspaper work. In 1923 she became the country's first women's sports editor when she accepted a position with the old Washington (D. C.) *Times.* Miss Martin began making photographs when she was society editor of the Underwood and Underwood News Service in 1926. News photography was still in its flash-powder days, according to Mary Hornaday in the *Christian Science Monitor,* when the late Arthur Brisbane advised Miss Martin to accept an offer from Eleanor Patterson '40, editor of the Washington *Times-Herald,* that would mean making photography her career. There would be many women journalists in the country, Brisbane argued, but photography was a field where a woman could earn distinction after ten years. Miss Martin took his advice and rose to become picture editor of the *Times-Herald,* the first woman ever to reach such heights.

When in 1933 Mrs. Ruth Bryan Owen, a Delta Gamma sister and a friend of Miss Martin's, took over the post of Minister to Denmark, the photographer accompanied her, not only out of friendship, but in order to develop her art. She spent three months studying photography in Copenhagen, Paris, and London, "learning foreign methods and ideas and contributing something of her own, as her interest and ability were quickly honored." During her stay in London she was made an associate member of the Royal Photographic Society of Great Britain, one of the few women news photographers admitted to membership.

Steve Kellogg

JACKIE MARTIN

In August 1940 Miss Martin left the Washington *Times-Herald* in order to become picture editor of the Washington Bureau of the Chicago *Sun* as well as associate editor of the *Woman's Home Companion.* She was admitted to the White House Photographers' Association. She had been eligible for fifteen years, but, she says, "it had always been 'just the boys,' and I preferred leaving it that way (as long as I was the only girl photographer in Washington). I only applied for membership when I had to. That was because we were at war and it was impossible to get the shots I wanted unless I had some of the cards which the White House had authorized the Association to give out." Miss Martin considered her admission to the Association on an equal basis with the men a real achievement for one of her sex, since, she says, the problem of how to treat a sister in the craft has troubled many male photographers, even in Washington. At both the Washington *Times-Herald* and the Chicago *Sun* Miss Martin has had staffs of male photographers under her. "The news camera woman," she says, "must have a reporter's nose for news, plus an artist's eye for shade and balance."

In 1942 Miss Martin and another newspaperwoman, Alice Rogers Hager, flew to Brazil at the invitation of the Government in order to gather material for a book on Brazilian aviation. One of the "biggest thrills" of Miss Martin's career came when her pilot was forced by fog to set his plane down abruptly on a tiny football field. The two women flew 15,000 miles over Brazil. Miss Martin was the first person allowed to make aerial photographs in Brazil after war restrictions had been clamped down. Mrs. Hager's book, illustrated with photographs by Miss Martin, subsequently appeared under the title *Frontier by Air: Brazil Takes the Sky Road* (1942). Miss Martin's photographs are supposed to be the finest collection of Latin American pictures ever made. She was

MARTIN, JACKIE—*Continued*

the first woman whom Getulio Vargas['40], President of Brazil, would allow to photograph him. Mrs. Hager writes, incidentally, that one of the young men on Vargas' staff proposed marriage to Miss Martin—using Vargas himself as an intermediary.

In 1942 Miss Martin resigned her positions on the Chicago *Sun* and the *Woman's Home Companion* in order to become official photographer for the Women's Army Auxiliary Corps and expert consultant to the Secretary of War. At least fifty of the nation's camera women were seeking the WAAC position, but Miss Martin was chosen. She was stationed at the WAAC's training center at Des Moines, Iowa.

Miss Martin's collection of portraits of celebrities taken by herself is, writes Mary MacCracken Jones in the New York *Sun*, large and famous. "Her gift for catching action and character is backed by a thorough scientific knowledge of the possibilities of the camera and an instinctive feeling for composition that is rare. Caught and held forever in the unconscious action that reveals true personality are the concert artists, actors, dancers, and statesmen whose portraits make up this surprising gallery created by this surprising artist—Jackie Martin." Miss Martin had reason to feel proud that in the 1938 exhibition of the Royal Photographic Society two of her prints were included in the scant twenty-five chosen for display. One was a candid camera enlargement of the famous pianist Harold Bauer in action; the other was a study of light and shadow called *Footprints in the Sand*.

In addition to being one of the foremost women photographers of the United States, Miss Martin is an able news and feature writer. Youthful-looking, she is slight, dark-haired, and dark-eyed. She was awarded the Arentz Medal by Syracuse University in 1942, and was the first non-graduate to be so honored.

MATISSE, HENRI (ma-tēs' äɴ-rē') Dec. 31, 1869- French artist

Address: 132 Blvd. Montparnasse, Paris, France; 1 Place Charles Felix, Nice, A. M., France

One of the last "old masters of new painting," the venerable artist Henri Matisse has been considered by many critics the greatest of living painters, although some believe that he is surpassed by Pablo Picasso['43]. Versatile and intellectual, Matisse, although able to look at things through the eyes of other painters, sees them with his own eyes, too, and thus avoids falling into either academism or eclecticism. A brilliant technician, he is noted for his rich color and for his decorative, two-dimensional work. Some critics feel that his preoccupation with the decorative values of painting and the resultant plastic limitations of his art prevent him from achieving the very highest rank as an artist; others feel that painting is logically in two planes, and that three-dimensional representation should be for sculpture alone. Yet his admirers and his disparagers alike hail his unquestioned genius, his skill in design and color, and his undoubted significance as one of the founders of modern art.

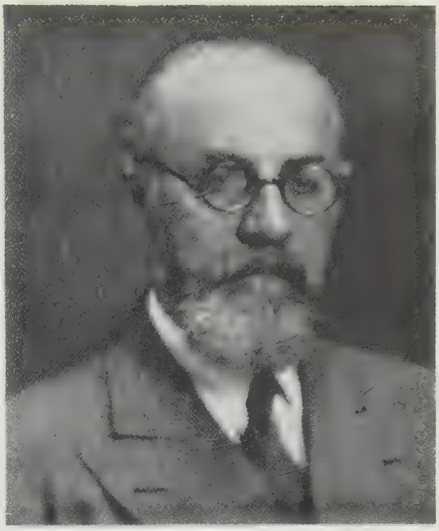
Henri Matisse was born in Le Cateau (Nord), a small town in Picardy near the cities of Cambrai and St. Quentin, on December 31, 1869, the first son of Emile Matisse, a grain merchant. There is a Flemish strain in the family which some biographers find significant in the light of Matisse's interest in genre painting. Originally the young man had been destined for the law by his father, and, after being graduated from the Lycée, he passed a year in the law faculty of the University at Paris. He then secured a position as clerk in the law office of a family friend at St. Quentin. A lengthy illness interrupted his work, however, and he took to art in 1890 in order to while away his long convalescence, enrolling at first in the evening classes of the La Tour Art School organized for textile workers. When his strength returned young Matisse decided that painting was more interesting than the law. Accordingly he went to Paris in 1892, despite parental objections, and entered the École des Beaux-Arts, paying for his tuition and subsisting on a small monthly sum allowed him by his father.

At the advice of one of his friends, who was also a friend of Bouguereau's, he first entered the class of that "arch-conservative" artist. Bouguereau taught from casts only, and, in Matisse's own words, "tired of reproducing faithfully the surfaces of arrangements in plaster," the young artist soon went to study with Gabriel Ferrier, also a conservative, but one who taught from the living model. The first female model Matisse had ever seen had, he said, a pretty hand. "I painted the hand first. The astonishment and indignation of my teacher were inconceivable! Painting the model's hand before painting her body! 'But, my poor friend,' he cried, 'you will not have finished your picture at the end of the week!' Since I had hardly sketched in the body, he figured that, as a result, I would never have time to finish the feet, and the feet had to be finished by Saturday, the day when the teacher was to criticize. I left his studio."

Matisse quit the École des Beaux-Arts entirely and went to Lille, where he spent a short time. At the advice of another friend he then returned to Paris and reentered the École, this time as a free student in Gustave Moreau's class.

In 1893 Matisse exhibited seven pictures at the Exposition of the Societé Nationale des Beaux-Arts. One of his pictures was bought by the French Government, and Matisse was made an associate member of the Society. The same year Gustave Moreau, Matisse's teacher, was favorably impressed by the young man's work and invited him to study with him in his own studio. Matisse accepted and worked with Moreau for the next four years. Moreau's studio, wrote Alexander Romm, a Russian critic, "was a hot house of new ideas in the very stronghold of reactionary academism. Almost all of the outstanding painters of the 'left' came from Moreau's studio. Rouault, Marquet, Manguin, Camoin studied together with Matisse. . . Moreau, distinguished by his breadth of view, did not hinder the experimental works of his students, but, on the contrary, gave them great freedom." "Don't be satisfied with working in the museum," Matisse quotes him as having said to his students. "Work in the street." Despite Moreau's liberal training in the study of the Old Masters, Matisse was, wrote Alfred H. Barr, left completely unaware of the more advanced art of his own time. Moreau, however, prophesied about the young Matisse: "You are going to simplify painting."

In 1897 the young artist married Amélie Noëllie Parayre, a Toulousaine, by whom he had two sons, Jean and Pierre. The latter is now proprietor of the Pierre Matisse Gallery in New York City. Matisse's daughter Marguerite also joined the household. Gertrude Stein described Mme. Matisse, who posed for many of Matisse's pictures, as "a very straight, dark woman with a long face and a firm, large, loosely hung mouth like a horse." During the years that he studied at the Beaux-Arts, Matisse spent his time drawing from the antique and copying Old Masters at the Louvre. He was considered an excellent draftsman, although some twenty years later critics were to accuse him of not being able to draw. For the ten years following his arrival in Paris his copies of Louvre masterpieces, bought by the Government for sale to provincial museums and private buyers, produced the greater part of his meager income. When the family was in the severest financial straits, Mme. Matisse opened a small millinery shop, and Matisse was forced to undertake ordinary plastering and painting. The Petit Palais in Paris still has plaster ceilings executed by Matisse and his fellow artist Marquet.



HENRI MATISSE

Matisse's first pictures were mostly small canvases that clearly showed the influence of the Old Masters—still lifes in the manner of Chardin and gray landscapes and interiors in the manner of Corot. The picture which the Government had bought, *Reader*, was, wrote Albert H. Barnes and Violette de Mazia, "a picture dark in color, and so completely dominated by the Old Masters that Matisse felt that in it he had acted merely as an amanuensis for the painters of the past. He became acutely conscious of the two worlds in which he lived, the museum world in which he had worked, and the living world as yet unreflected in his own painting. He was compelled to meet the problem of producing an expression of his own personal perception, and at the same time of overlooking nothing of value in the traditions." Legend, substantiated by Matisse himself, has it that his revulsion against academism culminated in the destruction of one of his works which would have been salable had he not decided that he would no longer traffic in such art.

Impressionism, Matisse's first step in his search after an individual method of pictorial expression, took him to Brittany together with the Impressionist painter Emile Véry in the summers of 1896 and 1897. In 1896 Matisse had sent four pictures to the Salon de la Nationale, and these works, in his earlier manner, influenced by Chardin and Corot, were well received. In 1898 Gustave Moreau died, and Matisse, forbidden the École because of his defiance of academism, acquired the habit of drawing at the Académie Carrière, a studio where there was no tuition, but always a model, and where artists dropped in as they pleased to draw and paint from the figure. In 1897 Matisse made the acquaintance of a number of artists, Bonnard, Vuillard, Sérusier, and Pissarro. At the last-named's suggestion, the young man went to London the following year to study Turner, MATISSE, HENRI—*Continued*

in whose works were supposed to be seen one of the foundations of Impressionism. Matisse was greatly disappointed by Turner, but, during his week in London, it is said, he heard of Whistler, whose study of Japanese prints interested the young French artist. Matisse returned to Paris, where he studied Japanese and Oriental art, particularly Persian pottery and carpets. Subsequently he went to Corsica and painted there for a year. In 1897 *La Desserte*, a large and finely executed table composition, was shown in the Salon-de-Moss, and proved that "had he wished he could have won success as a derivative performer in the Impressionist tradition."

In 1899 Matisse, in spite of his poverty, bought one of Cézanne's *Bathers* at the price of 1800 francs, which he paid on the installment plan. Today the picture is worth well over a million francs. The massive forms of this picture caused Matisse to turn exclusively to sculpture for a time. He soon returned to his painting, but he always continued to work in the three-dimensional form, and he insists upon his sculpture being taken as seriously as his painting. At that time he also discovered the work of Gauguin, Seurat, and Van Gogh. By the turn of the century Matisse had so far removed himself from academism that his paintings were refused at the annual Beaux-Arts salon. From 1900 until 1904 Matisse worked in Toulouse and Paris, assimilating the Impressionistic and Neo-Impressionistic trends, but still mindful of his training in the classical tradition. During this period of his life Matisse's artistic outlook began to take shape, and he produced still lifes in harmonious rose and blue tones, and studies of models executed in a broad, generalized, and already daring manner. In 1901 he painted *Carmelina* (also known as *Nude*), which combined the realism of Courbet, Manet, and Degas with the architectural art of Cézanne. "As a result," wrote the English critic R. H. Wilenski, "Matisse went beyond those masters. . . In painting *Carmelina* he discovered his personal esthetic. The color, it is true, is still somber—mainly browns and ochers; but the patterning is already personal; and we observe here also a dualism that we shall encounter in much of Matisse's later painting. . . *Carmelina* is a fine, very pure, and very fearless picture."

A show of Asiatic art in Munich in 1903 increased Matisse's interest in the possibilities of utilizing Oriental influences in Western art. That same year he and the group of artists later known as the Fauves exhibited together. The following year Ambroise Vollard, the art dealer who had befriended many of the struggling young moderns, gave Matisse a one-man show in which forty-six of his works were hung. In the work which appeared in this exhibition, the artist had also experimented with the Neo-Impressionist technique of Pointillism, a method which he soon abandoned. Matisse also contributed to all the exhibitions at the Salon des Indépendants. His pictures sold, but as he was still not a recognized artist, he received very little for them. *Phlox*, which he felt to be his first entirely characteristic painting, was sold for a mere 150 francs.

The year 1905 found Matisse working at Collioure with Derain and Signac; on their return they exhibited, in company with Marquet, Manguin, Vlaminck, Rouault, Camoin, Dufy, and Friesz, a number of pictures "with stridently bright colors and simplified, expressive forms." These pictures provoked hostile criticism in academic circles and earned for the group, of which Matisse was the acknowledged leader, the title of "Les Fauves" (Wild Beasts). The young painters, who later included Braque and Van Dongen in their number, were charged with "willful eccentricity, senseless disregard of nature, and a deliberate intent to scandalize the public and advertise themselves." At this time Matisse, heading the school of modern art in Paris, and "gifted with an esthetic, [sense]" wrote Wilenski, "which reacted above all to color, and with a truly miraculous instinct for pattern and scale . . . handled color with daring originality and went farther than his colleagues in liberating it from representational service. He realized, as Gauguin had realized before him, that modern art would lose the double battle against academic pedagogy and the camera, unless line, color, and pattern were used as esthetic agents with the freedom of primitive art on the one hand and the formal science of Near and Far Eastern art on the other; and to acquire this freedom and this science he studied in museums and availed himself of the increased range of art experience which was now being made available by photographic reproductions and facilities for travel."

With the exhibition of fifty-five of his paintings at the Galerie Druet (Paris) in 1906, Matisse began slowly to win recognition. Among his first important patrons were the Steins—Gertrude, Leo, and Michael. (Gertrude Stein gave an account of his personality in *The Autobiography of Alice B. Toklas,* and Matisse objected to what she said about him in the pamphlet entitled *Testimony against Gertrude Stein,* which was composed by a number of the people whom Miss Stein had mentioned in her book.)

The approval of discerning critics soon followed, and, at last, slowly increasing financial success. One firm offered him a contract to take all his work at a good price. In 1907 came what Barr considers the climax of his experiments of the Fauve period, *La Joie de Vivre* (Joy of Living). That same year he was able to open his own art school, the Académie Matisse, in a building that had formerly been a convent. He continued it intermittently for two winters, but although it attracted from sixty to a hundred students he finally discontinued it in 1909. Walter Pach called Matisse's students, with exceptions, "a bad lot, the wild-eyed type—largely non-Frenchmen who apparently looked on Matisse as crazy and who wanted to be the same way." Matisse closed the school because he was unable to make his students believe that good modern art rests upon a background of traditional painting. "It is useless," Matisse told an interviewer, "to tell you how my students felt cheated, in having a teacher, supposedly a revolutionary, repeat to them Courbet's words: 'I have desired to paint only with an entire recognition of tradition and of logical perception and independent of my own individuality.' . . The efforts that I made in order to penetrate the mind of each student tired me. . . I finally understood that it was necessary for me to choose between painting and teaching. I soon closed my school."

From 1907 on Matisse was the chief exponent of what Wilenski calls "Rhythmic Decoration"—that is, the type of abstract art "concerned to create a rhythmic arabesque animated and coordinated in an organic way; its aim is to create an organic pictorial architecture which appears to have grown as a plant grows or to flow as a stream flows—and its esthetic is the esthetic that dominates in Far Eastern art." He painted a number of pictures in which he abjured the use of illusionist chiaroscuro and perspective. It was about this time, many critics believe, that Matisse lost his brief leadership of the School of Paris by settling into his own personal groove, and, complained some of his erstwhile colleagues and disciples, ceasing to grow. "He wanted," they said, "to hold modernism to a single sort of decorativism." Matisse, therefore, "went his way, to become the greatest decorative painter of his time." "He asked no more," wrote Sheldon Cheney, "than an art of lovely sensuous fullness." The leadership of the school of Paris passed to a younger man, Matisse's personal rival, the Spaniard Picasso.

Matisse's first exhibition in America was held in 1908 at the Stieglitz '40 Galleries, and his first retrospective exhibition in 1910 at Paris. In that same year he made a visit to Moscow, where the Russian collector Shchukine commissioned the two famous decorations *La Danse* and *La Musique* for his palace. The following three years, from 1911 to 1913, found him wintering in Morocco and working new Oriental motifs into his painting. His work was included in both the First (1910-11) and the Second (1912) Post-Impressionist Exhibitions in London. The London *Times* called him an artist of great powers. By that time he was using almost exclusively pure color. He justified this method of simplifying his palette by the fact that the colors at the disposal of the painter could not compete in strength with the effects of color and light met with in nature; therefore, he said, it was necessary to take the strongest contrasts and to avoid half-tones. In 1913 he entered the phase in his art where his work was influenced by Cubism and by one of its sources, Negro masks. (Actually it was he who had interested Picasso in Negro sculpture some years before.) The then notorious, now famous, Armory Show occurred in 1913, and Matisse participated. His work excited such comment in the United States that Matisse begged a newspaperman: "Please do tell the American people that I am a normal man; that I am a devoted husband and father; that I have three fine children; that I go to the theatre, ride horseback, have a comfortable home, a fine garden that I love, flowers, etc., just like any man."

During the first years of the First World War Matisse worked in Paris, where he had had a studio on the Quai St. Michel, overlooking Notre Dame, for many years. In the winter months he painted at Nice; and he also worked part of the year at Clamart near Meudon, where he had a country house. During those years he painted with an austerity of style scarcely equalled at any other time in his career, and came closer to abstract design than he ever has before or since. He was influenced by the Cubists, but his own manner was never completely destroyed at this time. The color in his works of 1914 to 1916 is relatively somber. A geometric abstraction titled *Tête Blanche et Rose* is the most essentially Cubist of all his works. "In the second half of 1916 and the first half of 1917 Matisse," wrote Wilenski, "reverted to the freer more calligraphic drawing and the bold flat patterning of his pre-War painting."

In 1917 Matisse established himself permanently at Nice and he has lived there ever since. At Nice he developed a color-shape calligraphy which he combined with linear calligraphy in a very personal and original way. This method appears in *Intérieur à Nice*, *Jeune Femme en Chemise: Tapis Rouge*, and *Le Boudoir*. In 1918 he temporarily stopped painting genre interiors to paint several pictures of a girl in a plumed hat. The one best known in the United States is *Plumes Blanches*, in the Stephen C. Clark collection, New York.

In 1920 Matisse continued "the transformation of his genre manner to more decorative terms and began the long series of pictures titled *Odalisque*." At the same time he designed the curtain scenery and costumes for the ballet *Le Chant du Rossignol*, produced by Diaghilev with music by Stravinsky '40 and choregraphy by Massine '40. His greatest popularity, according to Roger Fry, is based upon his work of the years 1920 to 1925. Honors began to be heaped upon him, although by this time he was no longer in need of any official testimony to his standing. In 1921 the Luxemburg bought an *Odalisque*. In 1927 his *Fruit and Flowers* won first prize at the Carnegie International Exhibition, and the first retrospective exhibition of his work in America was held in New York. The following year the Luxemburg purchased a second picture. Some of his paintings were represented in a 1930 exhibition at the Museum of Modern Art. Matisse visited Tahiti in 1930 and later made three trips to the United States, during one of which he acted as judge in the Carnegie Exhibition. While in America he visited the Barnes foundation in Pennsylvania, and he accepted a commission from Dr. Barnes to paint some mural panels for the Foundation. He returned to Nice in 1931 to work on the panels and then came back to Pennsylvania once more to finish them. In the summer of 1933 he returned to Nice and produced "a series of nudes schematically treated in a manner recalling those decorations; but before 1936 was out he had returned to free calligraphic painting with bold patterning. . . In those years Matisse also produced a number of large outline pen-and-ink drawings and made etchings and drawings in illustration of Joyce's *Ulysses*, published in 1935 by the Limited

MATISSE, HENRI—*Continued*

Editions Club, New York." He has illustrated the works of Mallarmé as well.

Besides his painting Matisse has distinguished himself in sculpture and in graphic art. His output in the latter is large, comprising some 180 etchings and dry points, 120 lithographs, and several thousand drawings. His works are represented in almost all of the important museums and art collections of the world.

The subject matter of most of Matisse's paintings, particularly those of latter years, is very similar: "young women clothed or nude or semi-nude with interiors as background, or interiors with incidental young women clothed or nude or semi-nude; and occasional landscapes and still lifes." His attitude, pictorially, is objective and detached; his paintings are serene; none are records of "psychological changes, of passionate or intellectual crises, or of convulsions of the spirit." The principal objection that many present-day critics have to his work is that "by centering his interest upon decoration he misses the supreme values of painting." They also believe that his effects seem weighed and measured, because "he lacks the impulsiveness that results in untrammeled spontaneous expression." A few have contended that Matisse's recent pictures are fundamentally the same and that Matisse is "complacently repeating . . . his own achievements." Wilenski denies this and states that "thanks to his perpetual exploration . . . his continual originality, his art has retained his variety and life and his latest pictures are as compelling and animated as any painted at any moment in his long career." "Matisse," Barnes and de Mazia have concluded, "is a very great artist, a man of keen sensitiveness, vigorous intelligence, and enormous erudition; he is intensely alive and adventurous; and from his fecund imagination have come a wealth of plastic achievements unequalled by those of any other painter of his generation. . . Matisse is far and away the foremost painter of the day."

Henri Matisse, in the days of his notoriety rather than fame, always disappointed visitors who came to see what a modern artist really looked like. His massive head, high forehead, large features, tawny (now white) hair and beard, and thick-lensed spectacles, added to his quiet and reserved manner, fully justified the nickname of "the German professor" given to him before the First World War. When he paints he usually changes his pictures drastically, after having developed his first idea on the canvas. Sometimes he discards canvas after canvas until the desired shape comes directly into being. For relaxation he used to play the violin and may still do so.

When the Second World War broke out Matisse was in Paris. He left it early in the summer of 1940 for Sibourg, a little Basque seaport. At the approach of the Germans, according to *Newsweek*, Matisse stopped sketching, hired a taxi, and rode until the meter registered 4,000 francs (about $92). By that time he was in St. Gaudens, where he took another cab to Carcassonne. He then traveled by train to Marseilles, where he tried to obtain a visa for his daughter to join her husband, George Duthuit, then lecturing in the United States. Matisse finally returned to his home at Nice. In March 1941 he was reported to be at a private hospital in Lyon, and Pierre Matisse said that his father had just undergone a serious operation. Varian Fry, of the United States Emergency Rescue Committee, tried to persuade Matisse to get out of France, but the old man replied: "If all the talented people left France, the country would be much poorer. I began an artist's life very poor, and I am not afraid to be poor again. I will lock myself up in Nice with my 200 birds and paint." "The War," the white-haired artist had said even before, "will make it possible for me to work as I never worked before. If I had Hitler '42 before me I could make him understand in short order that art has its value—that it is a search after truth and truth is all that counts." It is known that painting materials grew scarce, and that the birds eventually died of starvation, but since the total occupation of France there has been no news of Henri Matisse.

MATTHEWS, HERBERT L(IONEL)
Jan. 10, 1900- Journalist; author

Address: b. c/o New York Times, New York City; h. 4 E. 95th St, New York City

For twenty years Herbert L. Matthews, one of the New York *Times*' ablest correspondents, has followed the course of events in Italy largely from an eyewitness vantage point. From the time he first went to that country on a Columbia University Fellowship in 1923—a year that saw the beginnings of Mussolini's '42 career—to the current Allied victories in Italy following the Fascist leader's downfall, Matthews has learned more about modern Italy, its Government, and its people, than any other American journalist. As a war correspondent he covered (on the Italian side) the military occupation of Ethiopia in 1935. In 1936 he went to Spain to cover the war there, being assigned to the Loyalist troops. These experiences were recorded in two books: *Eyewitness in Abyssinia* (1937) and *Two Wars and More to Come* (1938). In the foreword to his *The Fruits of Fascism* (1943) Matthews has written: "I, too, was an enthusiastic admirer of Fascism once, but I saw, in the travail of Spain, under Italian bombs that brought misery and death to a brave and unoffending people, what Fascism meant to me and all of us. Three years in Italy as the New York *Times'* correspondent from 1939 to 1942 completed my lesson."

A "deadly serious, intellectual reporter who lives meticulously on a rigid schedule, looks like a State Department attaché, has a Phi Beta Kappa key, and writes with steadfast accuracy," Herbert Lionel Matthews is a native New Yorker. He was born in that city, January 10, 1900, the son of Samuel and Frances (Lewis) Matthews. From the public schools he entered Columbia University in 1918, but soon left to serve as a private in the Tank Corps of the A. E. F. He returned to be graduated from Columbia with high scholastic standing in 1922. Matthews immediately joined the staff of the New York *Times*, where he became cable editor.

Given a leave of absence to accept an Italian-American fellowship from Columbia, Matthews spent his first year in Rome (1923-24) learning to speak Italian, preparing a thesis on Dante, and observing also those events that were shaping under the rise of Mussolini. In 1925 he went with a group of other newspapermen to Japan and China at the expense of the Japanese Government, under an arrangement designed "to promote international amity." Six years later Matthews joined the Paris bureau of the New York *Times*, and he stayed in Paris until assigned to cover the Ethiopian campaign. It was in Paris (1931) that Matthews was married to a young Englishwoman, Edith Crosse of Massingham, referred to in his books as "Nancie." There are two children: Priscilla (Fifi) and Eric.

Matthews was the only foreign correspondent to serve throughout the Ethiopian campaign on the Italian side, and at the end he was awarded the war cross for "valor in the field" and cited by the Viceroy of Ethiopia. In *Eyewitness in Abyssinia* he told how he accompanied General Mariotti's flying column south from Massaua and up to the plateau of Azbi. Marshal Badoglio's '40 motorized drive from Dessye to Addis Ababa provided the other highlight of the African assignment.

The following year Matthews saw Italian participation in war in a less favorable light, when he covered the conflict in Spain. His book *Two Wars and More to Come* spanned the period from December 1936 to the offensive on the Aragon in 1937. Of it one reviewer wrote: "It must surely be ranked among the most forceful, most honest, and most thought-provoking books that have been written by war correspondents in the last three decades." The Catholic Press Association, however, did not approve of Matthews and his book. It informed the New York *Times* that it had "no confidence" in Matthews as a correspondent "in view of his alleged unfair reporting in Spain." The *Christian Century*, commenting on this, said: "The significant thing about Matthews' dispatches from Spain was that every now and then he indicated that Italy and Germany were participating rather heavily on the side of Franco '42. . . Even the managing editor of the *Times* cabled Matthews: 'Why do you continue to say Italians are fighting in Spain when Carney [the paper's correspondent with Franco] claims there are no Italians in Spain?'" One of Matthews' stories, the whole point of which was the fact of military intervention by Mussolini, ended: "These troops were Italians and nothing but Italians." It came out in the *Times*: "These troops were insurgents and nothing but insurgents."

HERBERT L. MATTHEWS

Early in 1940 Matthews went to Rome to be chief of the New York *Times* bureau. For some time he was busy sharply observing the course of Fascist affairs and cabling some censored reports to his paper. All went well until October 7 of that year, when the Rome bureau chief was privileged to report to the New York *Times*: "An expulsion order was issued against your correspondent by the Italian Government. In addition to the official notification, an announcement was made over the Italian radio, the first time this had ever been done in such a case. The Government's decision was understood to have been taken as a measure of foreign policy in view of the fact that President Roosevelt '42 cited a passage from this correspondent's dispatch of last Tuesday." Matthews had reported that nothing would please the Axis more than the defeat of President Roosevelt in the coming United States elections. The Italian Government indignantly denied having any interest in the forthcoming election, and disowned the idea

MATTHEWS, HERBERT L.—*Continued*

that Axis strategy would turn on the event of Roosevelt's re-election. This order for Matthews' expulsion was rescinded, but after Italy declared war on the United States there were no cables by Matthews from Rome to the New York *Times* for a very good reason: Matthews was "a prisoner of war" in jail in Rome, along with several other correspondents. Jail, however wasn't so bad. The correspondents were well treated, lodged in the best hotel, and allowed to spend their time visiting museums, churches, stores. Herbert Matthews and the A. P.'s Dick Manock sometimes bicycled as far as fifteen miles out of town. "In Italy," observed Matthews, "no laws are obeyed—least of all by Italians." He spent his leisure reading Gibbon's *Decline and Fall of the Roman Empire* and working on his book on Fascism. When, early in 1942, the correspondents were free to leave, their hotel presented them with six bottles of champagne.

Herbert Matthews returned to the United States in a diplomatic exchange of prisoners. He spoke of the "lack of enthusiasm in Italy for the War, especially for war with the United States." But he warned that any invasion of Italy would have to be preceded by the occupation of Libya and Tripoli. He also said that revolution in Italy would come only when Hitler '42 was defeated. Shortly after his return Matthews (for a change of scene) was sent by the *Times* to cover the situation in India, the only stipulation being to "tell Americans about the country." Of the results, after seven months, *Time* Magazine commented: "Matthews has done a body of work that amounts to a major triumph, a job in India that no other reporter has ever done. Reporting only infrequently on Indian politics, as confusing to him as to anyone, he has concentrated on a long series of enlightening feature pieces that amount to the first real United States contribution to understanding of a largely undiscovered nation." Matthews had written: "There is no doubt that the all-India Congress has lost much ground, and that the Moslem League has increased proportionately in strength." In a summary of his impressions after a year's stay in India he said: "I looked at India through Chinese eyes in Chungking and Afghan eyes in Kabul. I talked to peasants in remote villages from the North West Frontier to the Tamil district of Madras. I lived with maharajas, nawabs, British Governors, Indian and British civil servants and businessmen. I interviewed almost every important Indian politician out of jail, many of them quite often, and learned from them what those in jail stood for." Yet the whole political setup was far from clear-cut. "India's tragedy is only too clear. It lies in the inability of the Indians to get together, in the effort of the Congress to get totalitarian control, in communal politics, in the opprobrium cast upon those who walk the middle way. . . It is rare indeed to find an Indian who thinks of his country as we in the West think of ours."

In July 1943, when the Allies invaded Sicily, Herbert Matthews was re-assigned to Allied Headquarters in North Africa to cover the Sicilian campaign for the *Times*. He accompanied the Allied bombers in their precision-bombing raid on Rome. In a broadcast to Italians he said: "It was hard to have to bomb Rome, but war is like that. It is the Duce and the Führer whom you have to blame." A dispatch early in August described the fierce battle for Troina, which Matthews viewed from front-line action. A week later, on August 17, the Sicilian campaign ended when patrols of the American 3rd Division entered Messina. Matthews was with them. "The people were as joyous as ever at the sight of Americans. Many spoke to us in English, telling about their relatives or their own sojourns in the United States. Grapes, figs, nuts, and wine were offered in abundance. Often we were greeted with loud hand clapping. Once an impromptu band of drums and trumpets leading a noisy parade came toward us. . . There is little doubt that these Italians hate the Germans most heartily." Matthews said that fortunately most of the important art treasures of Sicily had escaped the devastation of war.

Remaining at Allied Headquarters in North Africa while the invasion of Italy was in preparation, Matthews appealed by radio to the Italians not to let the Germans fortify their towns on the mainland as they had in Sicily. He cabled reports of the air offensive directed at southern Italy. Writing of the possibility of the collapse of Italy as a whole, he said: "The Italian is an eminently sane, civilized, and intelligent individual. He does not take himself or anybody else seriously. He accepts everything with a philosophical shrug of his shoulders. . . Such a man does not crack even under such a terrific strain as he has been subjected to in the past few years."

Matthews moved with the American 5th Army when it established beachheads near Salerno, cabling firsthand detailed accounts of the action. He described the decisive defeat of the Germans on September 16, and went with the 5th Army along the Italian coast above Salerno. On the spot in front-line action is no safe place for a correspondent, and late in September Matthews witnessed the death of three British war correspondents from tank shellfire. He himself escaped only because, fortuitously, he had walked ahead a little down the road. On October 1 war correspondents were ordered by the Army to stop going ahead of combat troops.

When the 5th Army was about to close in on Naples, Matthews had further adventures. With a few other correspondents, he breezed ahead with advance troops. Italian civilians, he wrote, were eager to show the Americans where the Germans were. But even the danger of getting suddenly into the path of a German tank was scarcely more cause for alarm than the civilians themselves, who were "always getting under our feet, giving advice, tugging at our clothes, and waving their guns dangerously around like so many bothersome flies. Now and then some hysterical woman would weep loudly and some equally hysterical man would rush up and, before an unsuspecting individual knew what was happening, he would get some frantic kisses on both cheeks. I narrowly escaped once and kept a wary eye thereafter." The Italians continued their welcome when Naples fell: "I entered in the first journalistic jeep at 8:50," reported Matthews. "The hatred and the relief of the populace were truly touching." On October 7 he wrote of the heroic participation of Neopolitans, young and old, in the conflict against the Germans. "There can be no happier augury for the future of our campaign in Italy than this *risorgiménto* of the Italian patriotic spirit," he wrote. A few days later he was reporting from Capri a conversation of many hours with the famous philosopher, Benedetto Croce, among whose admirers Matthews is numbered. On October 24 Marshal Badoglio made a revealing remark when, reminded by Matthews that they had last met on the occasion of the Italian conquest of Addis Ababa, he replied: "Those were better times for Italy."

As the campaign in Italy dragged on, month after month, Matthews continued to provide some of the most vivid, yet sober, military reporting of the War. In December 1943, in an article published in the *New York Times Magazine* entitled "Road of Mud, Fatigue—and Glory," he explained why the conquest of Italy had been so difficult. One of the chief factors, apparently, was mud. "Every mountain is being conquered under the same conditions of danger, discomfort, and fatigue," he said, and American soldiers grow increasingly subject to combat fatigue as the War goes on.

In the meanwhile Matthews' book, *The Fruits of Fascism* (October 1943), had been published in America. Of the plan of the book Matthews wrote: "The premise is that Fascism is an impractical and evil way of life; the argument is twenty-three years of Fascist history; the conclusion is that Fascism has failed." It has failed mainly, according to the author, because of the character of the Italian people. "An Italian is a human being before he is a Fascist or even an Italian." Mussolini gave the Italians glamour, which they liked; but he never succeeded in giving them discipline, which was necessary: "he could not have had people less adaptable to discipline than Italians."

The book follows the history of Mussolini and the Corporate State from the war in Ethiopia to the current economic and military collapse. Of it Count Carlo Sforza '42 writes: "This is one of the most honest and complete books that has yet appeared on the Fascist adventure and on present Italy. The main reason for its exceptional merit is that the author has written as a historian—which means synthesis—but not forgetting that he is a journalist—which means direct, living evidence. It is rare that the two qualities go together. What is almost as rare is that the author has never forgotten to distinguish between a Fascism which he loathes and an Italy which he loves. It is only through love that one may understand a nation."

MATTHEWS, J(OSEPH) B(ROWN)

June 28, 1894- Author; research director

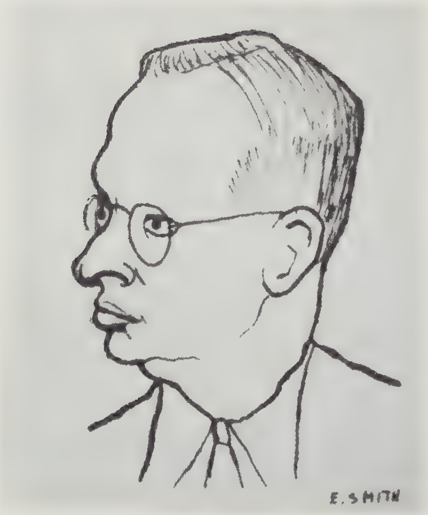
Address: h. Bowerstown, N. J.

"A demagogue, by whatever political name, who deliberately seeks to prejudice the public mind against business . . . is as dangerous as any Communist to the welfare of America," says J. B. Matthews in his autobiographical *Odyssey of a Fellow Traveler* (1938). Matthews, as research director of the House Committee Investigating Un-American Activities, is looked upon by many in Washington as "the hand and brain" of the Dies '40 Committee, and as the *alter ego* of Dies himself.

Joseph Brown Matthews was born in Hopkinsville, Kentucky on June 28, 1894, the third of seven children of Burrell Jones Matthews, a Singer sewing-machine salesman, and of Fanny Wellborn (Brown) Matthews, a former schoolteacher. Both were Republicans and Methodists. While majoring in Greek and Latin at Asbury College in Wilmore, Kentucky, Matthews embraced what he now calls his "first panacea." "My first real vision . . . was the evangelization of the world in this generation. . . I envisioned the whole world's becoming something very much like a Kentucky Methodist meeting house, with its resounding hallelujahs." When, after receiving his B. A. in 1915, he went to Batavia, Java to teach the Christian liberal gospel, arithmetic, and penmanship at a Chinese school and to do missionary work for the Methodist Church this vision began to grow a little dim, however. The young missionary plunged into a study of Java's culture and languages, and three and a half months after his arrival he made his first public address in the Malay language. By the time he left the country in 1921 he had completed the work of editing a Methodist hymnal in Malay, including 102 of his own translations, and had become the author of twenty-one volumes in the language.

In Java Matthews had married Grace Ison, a Kentucky girl who had gone to the East Indies to join him, and three children had been born there. (A fourth, a daughter, was born after their return to the United States.) In spite of his family responsibilities he continued his studies in America, intending to devote his full time to the study and teaching of antiquities. At Columbia University he took his M. A. degree under A. V. Williams Jackson, the great orientalist. At Drew University, a Methodist school in New Jersey, he received his Bachelor of Divinity Degree, and at Union Theological Seminary in New York he became a Master of Sacred Theology.

It was a time when "the leading theological seminaries had abandoned religion and taken up the social gospel instead." Along with his study of Arabic, Hebrew, Aramaic, Sanskrit, and Persian, Matthews had again, he says, embraced the nearest "panacea." The dominant features of his brand of the social gospel being interracialism and pacifism, his idealism was to prove inconvenient after he was appointed instructor at Scarritt College, a Methodist institution in Nashville, Tennessee, in 1924. Lining up Tennessee



J. B. MATTHEWS

votes for the La Follette-Wheeler ticket that year did not result in his dismissal, but his extensive "interracial activities" finally forced him to resign in 1927. In the meanwhile he had withdrawn as a member of the Methodist Board of Missionaries and had severed his connection with the Church.

Matthews had already served on the faculties of many summer and short-term training schools other than Scarritt, and for two years he continued his teaching career at first one institution, then another. He also continued his work for interracialism and pacifism, and his addresses on these subjects were published under the title *Christianity the Way* in 1929. In June 1929 he received a telegram offering him the post of executive secretary of the Fellowship of Reconciliation, a New York pacifist group, at a salary of $300 a month. He had already accepted the post when he received a second telegram offering him the chair of Hebrew at Drew University. Much later he was to regret the order in which these telegrams were received.

Five months after starting to work for the Fellowship of Reconciliation, on November 6, 1929, Matthews joined the Socialist Party in Manhattan. "I joined the Party for no other reason than that most of my pacifist associates belonged," he says, "and I shared with them the viewpoint which I expressed in [an] article in the *World Tomorrow*": i. e., that war would be ended "only with the establishment of a commonwealth of socialist nations which have organized their economic life around the principle of production for use instead of for profit."

By the winter of 1932 Matthews was not only a Socialist but a self-confessed "Marxist." He was also convinced of the necessity for a united front of all Left-wing parties. "I had friends and set out to make more among all Leftist groups—Socialists, Stalinists, Lovestonites, Musteites, Trotskyists, and even the I. W. W. and the Socialist Labor Party," he says. He wrote for the *New Leader, America for All, World Tomorrow, Fight, Soviet Russia Today* (he had made five trips to Russia before his conversion to Marxism), *Daily Worker, New Masses, Revolutionary Age, Labor Age, Labor Action,* and *Revolt.* Some of his activities got him into trouble with his own Party: for having made a speech under the united front auspices of the Communist Party at its first large anti-Nazi rally in Madison Square Garden, for example, he was reprimanded in April 1933. There was no reprimand, however, when two months later, because of his "impressive united front record," he became chairman of the national organizing committee for the first United States Congress against War. This organization Matthews calls "one of the Communist Party's united fronts," but he had the authorization of the Fellowship of Reconciliation for his participation in it, and Norman Thomas was also participating in the Congress at the time. In the fall of that same year, when the Congress founded the American League against War and Fascism, Matthews was elected national chairman of the new organization.

In December Matthews lost his position with the Fellowship of Reconciliation because he took the position that in the event of a hypothetical "class war" pacifists should support the working class, and at about the same time the Socialist Party suspended him for a year. He had been charged, among other things, with speaking at a dinner of the Lovestonites (a splinter group expelled from the Communist Party) and with allowing his name to be used as a sponsor for a conference of the Friends of the Soviet Union. For some time Matthews remained on good terms with Thomas, however. The day after his suspension Thomas invited him to become a special lecturer for the League for Industrial Democracy, and although after his suspension Matthews also accepted the chairmanship of the newly-formed Revolutionary Policy Committee within the Socialist Party, he publicly denounced the Committee in 1934 when he decided it was working for an outright split in the Party.

In 1934 Matthews became a member of the board of directors and vice-president of Consumers' Research at a salary of approximately $4,000 a year. Early that same year he resigned the chairmanship of the American League against War and Fascism—in protest against the behavior of certain Communists at a Madison Square Garden meeting, he says. But his faith in the necessity for a united front did not waver until many months later. In an article published in June 1934, "Must America Go Fascist?," Matthews was accusing "American imitators of Hitler '42 and Mussolini '42 like William Dudley Pelley" of using "the word communist in a rather inclusive sense, taking in not only the Communist Party but also the Socialist Party, the League for Industrial Democracy, the American Civil Liberties Union, and even the pacifist organizations, which in its eyes are nothing more than 'the innocent fronts of Moscow.'" By 1938 he himself was writing that "conservatives who would oppose successfully the Left-wing illusions of our time must drop their divisive interpretations of what lies back of the Communist and Socialist movement." In 1934 he was criticizing Rexford Tugwell '41 for rejecting the Marxian concept of the class struggle; in 1938 Tugwell was still a target of criticism, but now as a dangerous reformer who wanted to "make America over." In 1934 Matthews listed among Fascist tactics the use of such slogans as "economic self-sufficiency" and organizing "to preserve the faith that was vibrant in the days of the frontier. It may hark back to the political philosophies of former times, even of former revolutions if there are any in the national tradition." By 1938 his own tactic was to talk in terms of "Americanism," to warn of "the stark tragedy for America" that "lurked in any crusade to salvage civilization in other parts of the world," and to pound away at "the imperative necessity for conserving on the economic side the gains of the industrial revolution and on the political side the achievements of the American Revolution."

In *Partners in Plunder* (1935), "another Consumers' Research book," written with Ruth E. Shallcross, Matthews was still belligerently "Marxian." According to the *Saturday Review of Literature*: "It is not the author's purpose merely to expose the shortcomings of modern business by giving illustrations of the ballyhoo of high-pressure salesmen, of the inanity and trickery of some forms of advertising, and of various other methods of exploiting the consumer. They maintain that these evils are only by-products of a greater evil—namely, the profit system." The *Christian Century* called this "a candid and convincing consumers' guide," but even *The Nation* and *New Republic* found the authors' voices over-shrill, and Benjamin Stolberg criticized their mixture of "undigested Marx, Veblen, and silly oversimplifications of the nature of communism, fascism, and other social theories, of which the authors are obviously innocent." He called them "a couple of liberals who consider themselves a couple of Bolsheviks."

In April 1935 Matthews had accepted an invitation to become again a member of the National Bureau of the American League Against War and Fascism. In the summer of that same year a strike which Matthews calls a "Communist conspiracy to capture effective control of Consumers' Research" began. Matthews, as vice-president of the organization, fought the strikers, but he says that in September 1935, when he resigned from the League's National Bureau, it was only in order not to embarrass the League. It is therefore difficult to say at exactly which point Matthews completely reversed his social and political views: possibly after the strike sympathy meeting, held at Town Hall and presided over by Heywood Broun, in which the vice-president of Consumers' Research was convicted at a mock trial. Consumers' Union was started by the dissidents as a rival organization.

By the time of the appearance of *Guinea Pigs No More* (1936), the "consumer" had completely taken the place of the "working class" in Matthews' affections. In this book, which contained further examples of the ways in which the public is cheated by sellers, advertisers, and manufacturers of foods, drugs, etc., he advocated a "consumers' society," proclaiming himself equally opposed to Big Business and to organized labor as fellow enemies of the "consumer." Liberals and radicals were "demi-reactionaries." The New Deal, too, came in for a raking, and Matthews called for the creation of a Department of the Consumer, headed by a Cabinet official—a proposal he had advanced as early as August 1935, in opposing the Copeland Food and Drugs Bill.

But this new and lonely position Matthews apparently found as untenable as did most of the reviewers of his book. At any rate, in December 1936, in an article on consumer cooperatives in the *Atlantic Monthly*, he showed that he had finally made his peace with Big Business. "On the record to date, private competitive enterprise, with all of its faults, appears to be the best available servant of consumers' interests," his article concluded. And by May 1937, in an article on the same subject in the *Rotarian*, the vice-president of Consumers' Research was speaking darkly of consumer cooperatives as "priceless adjuncts" to the revolutionary movement. (In the *Atlantic Monthly* article he had called a similar statement by the head of an American cooperative a "case of wishful thinking to be attributed to this individual cooperator's own bias toward the Left.")

The summer of 1938 found Matthews fully convinced of the falsity of his 1935 credo: "The 'Red network' of revolution in the United States is purely mythical, as everyone acquainted with the squabbles of the 'revolutionary' groups well knows; but the black network of reaction is the prime force in a threatened business society." On June 30, 1938 he severed his staff connections with Consumers' Research and in August went to Washington to testify before the Dies Committee. In his testimony he named a total of ninety-four Left-wing groups with which he had been associated over a period of seven years—something of a record. He announced that the American League for Peace and Democracy, the successor of the League against War and Fascism, was directly linked with Moscow, and named around twenty different "Communist front" organizations with which he said he had been associated in one way or another between 1932 and 1935. His revelations created a sensation. Congress upped its $25,000 appropriation for the Dies Committee to $100,000, and John Cecil, "who as head of the National Immigration Board," according to Richard Rovere, "spends his time trying to keep out anti-Nazi refugees on the grounds that they are all Jewish Communists," promptly published Matthews' autobiography.

Dedicated to Congressmen Dies, Thomas (New Jersey), Starnes, Mason, and Mosier, this "little brochure in which [Matthews] apologizes for his casual passion to change the world" received the official approval of George Sokolsky '41, who philosophized: "Matthews was apparently in a hurry—but the world was not. He had that to learn, and I think he has learned it." Since the fall of 1939 its author has been on the Dies Committee's payroll at a salary of $7,200 a year.

(Continued next page)

MATTHEWS, J. B.—*Continued*

For this sum, however, even his enemies admit that he "does more work than all the regular Committee members put together." He also occasionally bolsters his income by doing translations for the State Department.

"No one should entertain the slightest fear that Communism will ever triumph in the United States," Matthews wrote in his book. "If the time ever comes when we are confronted with the alternatives of Communism and Fascism, there can be no doubt of America's choice. He who would defend America from the emergence of a Fascist regime will do well to begin his work now by disseminating an understanding of the theory and practice of Communism." By his own definition Matthews' contributions toward defending America "from the emergence of a Fascist regime" have not been slight. Opponents of the Dies Committee have a different definition, however, as do, apparently, many of Matthews' admirers. Matthews has been billed as the principal speaker at a "Pro-American Forum" sponsored by the American Patriots, Inc., headed by Allen Zoll, Coughlin '40 sympathizer; articles by him have been featured in *Social Justice* and in *Anti-Komintern*, organ of the German Foreign Office; he has been quoted by William Dudley Pelley in *Liberation* as "an authority" on Communism; his *Odyssey of a Fellow Traveler* has been advertised by William Kullgren (now under indictment as a seditionist) as "Among the books you should read on Communism, the Jewish question, etc."; and his writings have been widely distributed at Christian Front and Bund meetings. Few of the men and women now under indictment for conspiracy to impair the morale of the armed forces have ever been questioned by Matthews.

In September 1942 Attorney General Biddle '41 informed Congress that only two of the 1,121 government employees branded by Dies as subversive had been found by the Federal Bureau of Investigation to deserve dismissal. Matthews, however, is of the opinion that a belief in "central planning by the state, of whatever form," makes one a dangerous character. Hostility to the course of Dies and his Committee is also enough to cast doubts on one's Americanism. "If the American people had spent ten times $25,000, they would still have learned inexpensively something that is of utmost importance about their present government," he wrote in 1938, referring to the "self-exposure of the Roosevelt '42 Administration in its unprecedented hostility to the work of the Committee." (In 1935 he had been condemning Roosevelt for another reason—because "his policies and those of the business world which he serves effectuate a poorer one for all but the small group of property owners at the top.")

Matthews has been described by unfriendly writers as a "tall, rangy man, domineering and endlessly argumentative." Children of his first marriage are Joseph Brown, Roy Earl, Margaret (Mrs. John Burd), and Grace Matthews. His second marriage, to Ruth Shallcross, took place on December 15, 1936. Her radicalism is apparently as much a thing of the past as his.

MAXON, LOU R(USSELL) July 28, 1900-

Industrialist

Address: b. 2761 E. Jefferson Ave, Detroit, Mich; h. 379 Lakeland Ave, Grosse Pointe, Mich.

As public relations director of the OPA, chief assistant to Food Administrator Prentiss M. Brown '43, Lou R. Maxon made many friends—and enemies, too. Business, in general, liked him, but New Dealers hated him, accusing him and his friends of trying to make America safe for "oppressed pickle packers, long-suffering landlords, and kept Congressmen," and of ignoring the hard pressed consumer. Maxon showed that he believed in attack as the best defense when on July 14, 1943 he resigned from the government agency, leaving behind a five-page statement in which he charged that the OPA was full of "confusion, indecision, compromise, miles of legalistic red tape, and the presence of theorists in policy-making positions." These "Left Wingers or New Thinkers or Tugwellists," according to the Detroit advertising man, were "using the War as a means of furthering their reform ideas," attempting to "force radical and dangerous concepts on the public under the excuse of wartime needs"; and what OPA needed was "a drastic reorganization, strong, clear, direction, and a liberal transfusion of common horse sense."

Born in Marietta, Ohio on July 28, 1900, Lou Russell Maxon is the son of Frank L. and Laura (Gilpin) Maxon. If today he is hostile toward "professors and theorists" it may be partly because of his own precocity as a businessman. At the age of fifteen he was publisher and editor of a weekly newspaper; at sixteen, advertising manager of R. H. Fyfe & Company, a shoe store in Detroit which bills itself as the world's largest. At some time inbetween he had been proprietor of a lunch wagon outside the Ford plant at Highland Park (where Henry Ford himself was one of his best pint-of-milk customers), and had even made a try at professional football with a pickup team of former Carlisle Indians.

After a year with R. H. Fyfe & Company, Maxon became assistant city editor of the old Detroit *Journal*. He was fired in 1918 for palming off a phony story on the city editor, but he promptly found a job in the advertising department of the J. L. Hudson Company. There he stayed two years, and then the twenty-year-old lad became publisher and editor of a community weekly newspaper. He had already had an enviably varied career for one of his age, and perhaps he thought it was finally time to settle down. In any case, he edited his newspaper for a full six years. His marriage in 1922 to Marjorie Dau probably exerted a stabilizing influence, too. There are two children: Lou Alin and Marjorie Beth.

Maxon's next position was in 1926, as salesman for the Localized Advertising Corporation, a small Detroit advertising agency. There he learned the tricks of direct-mail copy, and by 1927 he felt ready to start his own agency. Maxon, Incorporated began by soliciting direct mail advertising from important firms, but gradually acquired the rest of the advertising of many of its clients. Maxon's approach was rather refreshing. Once asked by a Pittsburgh Plate Glass executive what he would do first if he got the firm's account, he replied: "First thing I'd do would be to thank you profusely. Then I'd rush outside, throw my hat in the air, and yell. Beyond that I haven't any idea." The executive, apparently intrigued by such frankness, gave him the account.

In 1935 Maxon hired Theodore Kinget Quinn from General Electric and made him president of Maxon, Incorporated. Maxon himself, as chairman of the board, kept fifty-three per cent of the firm's stock, sold five per cent, and gave the rest to his old employees. By 1939 Maxon's agency was the biggest in the Middle West. It had a dozen accounts whose billing was about $9,000,000, among them General Electric, Heinz "57 varieties," Pittsburgh Plate Glass, and Gillette Safety Razor. The next year Maxon, Incorporated, which had done a direct-mail job for Henry Ford in 1935, took the $500,000-or-more-a-year Lincoln-Zephyr account away from Philadelphia's N. W. Ayer & Son. By the end of 1941 the assets of the firm totaled $1,051,000. Maxon, who wrote the institutional copy for his firm, making his executives write the advertising copy, drew a salary of $98,000 in 1939, and was fifty-third on the list of personal income-tax figures for the United States in that year.

Maxon met Prentiss Brown the day before Brown came to Washington to be price chief early in 1943. They got on so well that day that it was not long before Maxon was given the Office of Price Administration job of deputy administrator in charge of information—a job which made him OPA's No. 2 executive, charged with selling the price-and-rationing setup to Congress, business, and the public. Businessmen welcomed the appointment, for Maxon's entrance into the OPA marked a definite change in policy. Maxon and Brown promptly began firing New Dealers and replacing them with dollar-a-year men. Furthermore, according to *Business Week*, "Brown's whole relationship to government and the public [took] on the tone of ingratiating politeness." The Brown-Maxon program apparently meant "a milder, much smaller OPA in Washington, the end of the Phi Beta Kappa era, probably the end of price-control in the field of luxuries, and a definite bid for public support." There was more "good news," too. On March 8 Brown invited officials of the gasoline rationing section to attend a press conference he had scheduled, and there he read a release handed him by Maxon announcing that OPA would stop enforcing the ban on pleasure driving—would stop "harassing" motorists. Since this was two weeks before the then-current gas coupons were due to expire, the total increase in gas consumption for those two weeks was tremendous.

LOU R. MAXON

None of this made Maxon popular with New Dealers. But it was his antipathy to grade labeling—mandatory labels on stockings, canned goods, meat, etc., which would give information about the quality of the goods—which stirred up the greatest opposition to his policies on their part. In an off-the-record discussion Maxon has been quoted as having called grade labeling the "greatest current threat to democracy and business." "They'll label everything A, B, and C and so forth," he is supposed to have said. "Then they'll say brand names aren't necessary because a grade is a grade regardless of who puts it out. Then they'll settle grade prices once and for all, and that'll be the end of competition." These might have been Maxon's sentiments even if his advertising agency had not handled the business of H. J. Heinz, the mammoth food processor, but on March 31 the OPA Labor Policy Committee voted formally to demand his dismissal on the grounds that he was using his OPA position to further his "private interests and private views."

If members of the Committee hoped to bring about Maxon's resignation at that time, they were disappointed, however. When Maxon first went to Washington to work for OPA, according to Leonard Lyons, William M. Jeffers '42 had told him: "I'm going to propose you for membership in our club. There are only five members, and we have only one by-law." "Okay. What's the by-law?" Maxon had asked. "It's that you must agree not to quit here until you're fired."

Furthermore, Brown stood by his assistant, even increasing his authority in the OPA by the issuance of a memorandum stating: "Effective today all plans, orders, field instructions, questionnaires, enforcement regulations, and similar materials originating in the National Office which can in any way affect public opinion should be cleared through Lou R. Maxon. If Mr. Maxon feels that public relations will be endangered by the content or that

MAXON, LOU R.—*Continued*

the policy is contrary to the best interests of the public or to the future of the Office of Price Administration, he has authority to call for a discussion of the matter and the right to represent me in final policy decisions. I also am asking Mr. Maxon to review present regulations and procedures from the public relations viewpoint to eliminate points which have been, or might prove to be, the source of public resentment." And when in May 1943 OPA's Labor Policy Committee formally demanded Maxon's dismissal for the second time, a reorganization of OPA followed which resulted in the resignation not of Maxon, but of the rest of Maxon's chief opponents. At the same time Maxon hinted that he would be appointed general manager of OPA.

Although backing Brown on the subject of subsidies for farmers, Maxon was not only opposed to grade labeling but was on record as having suggested that price control be concentrated on those items "which affect the general cost of living" rather than on "dozens of non-essential commodities." Labor protests at his appointment as general manager of OPA were, therefore, violent. The C. I. O.'s Philip Murray '41 announced: "It is our opinion that Mr. Maxon's policies run counter to rollbacks and the proper stabilization of prices." The members of OPA's Labor Policy Committee predicted that if the advertising man were given the power to do so he would allow the farm lobby and Chester Davis '40, then Food Administrator, to dictate increases in food price ceilings, would yield to the "landlord lobby" and let rents increase, and would end all attempts to tie prices to quality in an attempt to prevent hidden price increases. And there were even suggestions that Brown's support of Maxon was due to the fact that Brown was building his political fences in Michigan in an attempt to win back his Senate seat.

To these charges were added the allegations of R. J. Thomas '42 that all was not well with the application which officials of Maxon, Incorporated had filed for food for Maxon's summer home, which, according to Maxon himself was used "almost exclusively" by his employees, but which, others reported, was mainly used to entertain his personal friends and officials of Maxon clients. This summer home, "The Cabin," is an estate of eleven buildings in Onaway, Michigan, with two tennis courts, stables, a large playhouse complete with a full-size soda fountain, a baseball diamond, a putting green, and a private beach with speed boats and sailboats. Here Maxon can bed and board as many as seventy-two guests at one time, and he has often fed more than 300 on a Sunday. A Detroit rationing board had not only given the lodge enough ration points to feed 100 persons three meals a day for the rest of the summer, but had failed to make deductions for the large amount of processed and canned goods already on hand, Thomas pointed out. After these charges were made the advertising company returned more than 7,000 points and filed an application in Sheboygan; and the Sheboygan board, with which the company's application should have been filed in the first place, made the proper deductions and allowed the lodge only enough points to feed fifty persons a day. Maxon, who was upheld by Brown, maintained that "two of the three members of the ration board who caused the trouble turned out to be C. I. O. officials and the whole matter was obviously a smear."

During all this controversy Maxon continued to be quoted in the newspapers as threatening to resign his OPA job unless he were given more power. Privately, however, he was said to have insisted that "what he really wanted to do was to clean out the reds and pinks and go back home and make some money." His resignation the next month apparently came in spite of his having been offered more power, for in his statement he announced: "I have decided that I cannot accept the position of general manager of OPA. . . There is nothing more I can do in OPA." Even away from OPA, however, his attacks on grade labeling and price control continued. In November 1943 he warned industry that unless all its branches joined the food trade's fight against grade labeling industrialists would run the risk of having their post-War products standardized by "the present crop of bright young men in Washington." At the same time he supported a "meat management plan" which would remove all wholesale and retail meat price ceilings and turn over control of distribution to a meat war board mainly composed of big packers.

Maxon has been described as a "big, genial, moonfaced, pug-nosed, tireless ball of fire." He is "stocky and sandy-haired," and "looks like a shortstop." (Actually he finances a six-team softball league in Onaway, of which he is the leading slugger.) "His bright blue bow tie goes excellently with his bright red face." His clubs include the Detroit Athletic, the Cloud, the Advertising Club of New York, the Lochmoor, and the Grosse Pointe Yacht Club, and in June 1943 he was elected a director of the Advertising Federation of America.

MAXWELL, ELSA May 24, 1883- Author; actress; lecturer

Address: b. Press Alliance, Inc, 235 E. 45th St, New York City; h. c/o Waldorf-Astoria Hotel, 50th St. and Park Ave, New York City

Are your parties dull affairs? Why not have someone enter the room suddenly while the dinner, dancing, or bridge is in progress, and address the hostess in a clear, cold voice: "Pardon, Mrs. Smith, but a dreadful thing has happened. Somebody has been murdered in the front bedroom upstairs."

"The hostess invites her guests upstairs to investigate. The victim, man or woman, lies across the bed. Perhaps the room is in disorder. A red-inked dagger or a pistol lies on the floor. In this room the hostess has placed every clue necessary to the solution of the mystery. There may be cigaret stubs of different brands, theatre seat checks, telegrams, letters, a will. When the guests crowd into the room, the hostess announces that she is the district attorney investigating the crime. The guests are deputized detectives. They may have fifteen minutes or half an hour to inspect the room, but nothing must be moved. The object is to solve the murder mystery. When the time is up, the hostess leads the detectives downstairs. Each is provided with a pencil and pad. Then the hostess, as district attorney, asks the assembly twenty-five questions, the answers to which each detective writes upon his pad. . . A prize should be given to the detective who solves the mystery." A real corpse is not specifically required.

This game is guaranteed to be a sure-fire hit. Yet, if your guests are not the "cerebral" type, perhaps they would prefer the Scavenger Hunt. "Each guest is given a list of twelve to twenty-four objects, each list alike, and requested to procure as many of the objects possible in an hour and a half. The one who brings back the most items wins the prize. All of the items must be difficult to obtain. One of our lists included such items as three red hairs, three needles threaded with blue, green, and yellow silk, a mauve comb, any live animal except a dog or a cat, and a complete stranger to all the guests. In the average town, the list might include a red lantern, three hairs from a black cat, a duck's egg, and what have you? It is inadvisable to include objects which can be procured only by violating the law."

These are some of the party rejuvenators concocted by world-famous professional party-thrower Elsa Maxwell. Miss Maxwell has written songs, organized a golf course, built night clubs, produced a review, acted on the screen and on the radio, written books and articles, and is the author of a daily column, yet her fame rests upon her reputation as (she says) "a party gal." "Now, the odd thing," declares Miss Maxwell, "is that parties—even though I enjoy them, and who does not?—have never meant anything to me." What she really wanted to be was a musician. "Yet my parties earned me that dreaded 'specialization' tag, while my music was never taken seriously at all."

"Ample, alert" Elsa Maxwell was born in an opera box in Keokuk, Iowa, on May 24, 1883, the daughter of James David Maxwell and of the former Laura Wyman, who was attending a performance of *Mignon* at the time. Elsa was reared in California, won a medal as California's most beautiful baby, and was sent to Miss West's private school in San Francisco. "I was a child prodigy," Miss Maxwell told an *Etude* interviewer, "and ruined what might have been a worthy artistic career. . . It was discovered, unfortunately, that I could play anything by ear on any instrument that came within my reach—I still can—and when I had nothing else to play I made up songs, sonatinas, operas, and even symphonies of my own—I still do. . . I was exhibited, exploited, told how too, too marvelous I was—and never once taken seriously. . . I never had a music lesson in my life, of any kind; yet I could always play, accompany, compose. If you play by instinct you can't go wrong. Only those who depend on rules can make mistakes. I once played *La Tosca* for Puccini. I had no idea what the score looks like, but I knew how it sounds. So I played it as it sounds; not just melody and accompaniment, but with strings, clarinets, oboes—orchestrally. Puccini asked me how I did it. I wish I knew!"

ELSA MAXWELL

"When, in my early teens," continued Miss Maxwell, "I had to make my own living, I turned naturally to music." She began by playing the piano in a motion-picture theatre. "For years I was a professional musician—at least, I made my living from music. As accompanist, I have played for Caruso, Melba, Alda. I wrote music, too. Kreisler, Melchior '41, Tibbett, Alda, and many more distinguished artists have included my compositions on their programs. I wrote scores for revues and musical comedies, and I have at least one major symphonic work to my credit."

Miss Maxwell continued her education at the University of California and at the Sorbonne in Paris. Subsequently she trouped with a Shakespeare company, composed risqué lyrics, played in South African music halls, and wrote operas for debutantes. Her song-writing career began in 1907; about eighty of her songs were published. She also began meeting people and giving her tremendously successful parties—in Venice, Cannes, Paris, London—everywhere the "smart set" congregated. By the beginning of the First World War she had established herself as the mistress of fashionable revels in Europe. Once she saved a party from death with a little game of her own devising, called "Corks." "In every conventional appearance it was a party," Miss Maxwell wrote. "Invitations had been sent, food, drink, and music provided, and the house decorated. But it wasn't a party. Ten corks, ten pieces of twine a foot and a

MAXWELL, ELSA—*Continued*

half long, and a saucepan made that party a party. The pieces of string were tied to the corks. The corks were placed in a pool in the center of a table, the guests sitting around it, each holding the end of the string attached to his cork. The banker, whose finances consisted of paper chips in lieu of anything else, held the saucepan by the handle. Suddenly, without warning, he brought the saucepan down with a bang to trap the ten corks. Ten players yanked their strings. Those who did not withdraw their corks in time were captive. They were required to pay the banker a sum in chips agreed upon before the game. Those who escaped with their corks were paid by him —doubly. A trifling game? Certainly. But it was new, exciting, original. The guests played it for hours." With such gay devices Miss Maxwell soon became the *"Führer* of cafe society." An *"entrepreneur extraordinaire,"* she had an enormous effect upon Europe. She postponed the continental dinner hour from eight until ten, because the moon was nicer then, launched night clubs in England (and America), and organized the golf course at the Lido, Venice. She also ran a night club on a barge in the Grand Canal, Venice. After having made the French Riviera a "joy for the smart set," in 1926 she was engaged by the Prince of Monaco to put a little life into Monte Carlo, and she organized and built the Monte Carlo Beach Club, the Casino Hotel, and the Piscine Restaurants. Once in Paris Miss Maxwell, dressed as Lloyd George, rode down the Champs Elysées in a barouche with Prince Murat, dressed as Clemenceau, while thousands cheered. She drew up a list for publication in the press of the "world's ten greatest gentlemen," the first qualification of a gentleman being that "he cannot support a family, because that is hard work, leaving no time for politeness."

"It is my job," said Miss Maxwell, "to entertain the rich." She was selective, however, inviting only those who had something besides their wealth to recommend them as guests. The "Great" flocked to her parties to "play, recite, act, appear, and theorize for nothing. . . At one of her soirées in London, for instance, Nijinsky danced *The Afternoon of a Faun* on the top of her piano. Of course the other nine-tenths of the world who are, to her way of thinking, born mentally half-dead" were carefully excluded.

After producing a revue, *Who's Who*, Miss Maxwell moved into Hollywood in 1938. There she stayed at the luxurious Beverly Hills house of Constance Bennett, and augmented her income by lecturing. She gave no parties in Hollywood for other people, only one for herself, in honor of her visiting friend, the Duchess of Westminster. "Hollywood was satisfied when, at a preliminary dinner for thirty intimate friends, Hostess Maxwell put at each lady's plate a live duckling, harnessed in blue and white ribbon." Miss Maxwell appeared in several motion pictures, principally shorts: *Elsa Maxwell's Hotel for Women* (1939); *Elsa Maxwell's Public Deb Number One* (1940); *Riding into Society* (1940); and *The Lady and the Lug* (1940). In December 1943 she also acted as technical adviser and consultant on *Week-End at the Waldorf*, a musical version of *Grand Hotel*.

Time Magazine commented on *Elsa Maxwell's Hotel for Women*: "Miss Maxwell plays herself, popping out brisk remarks, decanting an occasional drop of the Maxwellian philosophy, which undoubtedly seems headier after 2 a. m." It was suggested that Miss Maxwell might replace the late Marie Dressler in the *Tugboat Annie* series, but nothing came of the idea. In the pictures that she did make, Miss Maxwell turned "her past social exploits into profitable slapstick comedy." She will, she says, "do anything for a laugh—with me or at me." "Once," *Time* Magazine relates, "hard-pressed for a laugh, Elsa threw a banana peel on the stairs, laughed and laughed as she bounced black and blue to the bottom."

Miss Maxwell has written two books: *I Live by My Wits* (published serially in *Harper's Bazaar* in 1936) and *The Life of Barbara Hutton* (published serially in *Cosmopolitan* in 1938). She is writing her autobiography which will be called *My Last Fifty Years*.

In the beginning of 1942 Miss Maxwell inaugurated a radio program called *Elsa Maxwell's Party Line*, in which she tells the radio audiences weekly about her intimate friends, America's celebrities. In the beginning of the next year she was signed for personal appearances at a New York night club, where her stint consisted of "a song, a game, and a few jokes in the floor show." She herself admitted that her singing was terrible and that people came to see her because she was a Personality, and because she was not afraid of making herself ridiculous. Miss Maxwell also writes a syndicated gossip column, because, she says, of a laughter shortage in national defense. "It is a matter of morale," she asserts, "to be as happy as you can through it all." "In print, unfortunately," remarked *Time* Magazine, "Elsa is not so entertaining as when bubbling in her energetic flesh." Her column is syndicated in twenty papers with a circulation of three million—and pays her well. In many of her columns she casts aside her "play girl" characterization and writes seriously of world events. Her enthusiasms range rather wildly from Herbert Hoover '43 to Joseph Stalin '42, from a designer of concrete boats to a doctor of "metaphysics." On the political side Miss Maxwell is confessedly a liberal, and doesn't mind taking digs at some of her reactionary ex-friends of the international set; but when she does so she is still careful to call them by their pet names.

Miss Maxwell is unmarried. She has green eyes and brown hair. Uncompromisingly stout (she is five feet tall and weighs 196 pounds), she makes no effort to diet or, according to *PM*, to conceal the fact that she is not pretty. "She wears plain, dark-colored, boxlike garments and does her hair in a short, mannish cut." The New York *Post*, however, maintains that "she is fairly careful about her diet, eating only two meals a day." She likes to eat around with her friends. "You have to eat anyway," she says, "so you might as well eat with the great, the gracious, and the charming." Her favorite game is eight-pack bezique, which Winston Churchill '42 taught her in 1913.

She does not drink or smoke because she finds drinking and smoking "boring." Her own parties are her favorites because "frankly, they're the best." Miss Maxwell has given up parties for the time being, however. She feels that she will have no heart for them until the War is over, and that only such parties should be given as would benefit war causes.

Orson Welles '41 will be associated with Miss Maxwell in a repertory theatre which they plan to found in 1944. "We also plan to establish a school in connection with the company, and will offer prizes for new plays which we will produce."

"A lady of thoughtful temper and searching intellect," Miss Maxwell has, according to *Étude,* "a keen wit, and an instinct for reaching down to the root-causes of things and bringing up startling truth." She is, she says, actually a split personality. "One side of me is a gargantuan moth settling heavily on the earth with a twinkle in his eye, if a dinosaur can have a twinkle. . . The other side of me is interested in profound philosophy." She has "devoured" the works of Rousseau, Voltaire, Montaigne, Thoreau, Dostoevsky, Andreyev, Tolstoi, and has personally "been very much influenced by the sayings of the Fathers of Tao-ism and Lao-Tse.

MAYER, LOUIS B(URT) (mā'ĕr) July 4, 1885- Film producer

Address: b. Metro-Goldwyn-Mayer Studios, Culver City, Calif; h. 625 Ocean Front, Santa Monica, Calif.

Each time Louis B. Mayer files his Federal income tax Uncle Sam can afford to buy an additional Flying Fortress plus a couple of pursuit planes. For the past five years in succession the "cinemagnate" has retained top ranking as the highest-paid American, according to the Securities and Exchange Commission. In 1940 he earned $697,048, which was an increase of $8,677 over his 1939 total; and his income tax return for 1941, *PM* reported, was $949,765—"which will be pared down to $132,800 when the tax man gets through."

LOUIS B. MAYER

However, it is neither his impressive income nor his imposing title as executive in charge of production of the Metro-Goldwyn-Mayer Studios that indicates Mayer's actual powers. His spiritual prerogatives exceed even his material influence. He is generally recognized by both friends and enemies as the uncrowned and unchallenged "King of Hollywood," the outstanding figure in the motion-picture industry and its prime spokesman. *Fortune* calls him "perhaps the most feared man in Hollywood." All other "cine-moguls" bow to him in judgment. In dealings with the United States and with foreign governments, Mayer acts as ambassador plenipotentiary of the industry. For six years, from 1931 to 1936, he was the president of the Association of Motion Picture Producers. He still dictates to his fellow motion-picture barons their policies on such issues as wages, the length of dresses, and national politics. He also owns stock in other film companies.

If George Bernard Shaw or Albert Einstein '41 visits Hollywood it is Mayer who will entertain him, engage him in intellectual discussion, and introduce him to Mae West. It is reputedly within his power to make or break careers. When a new face smiles from the screen in an MGM film the chances are ten to one that Mayer put both the face and the smile there. Many of the top-notch box-office glamour girls owe their rise from obscurity to film fame to the talent-discerning abilities of MGM's vice-president. It was he who discovered Greta Garbo. While traveling in Europe he happened to see some photographs of her. Within the hour he signed a contract. Her face, he has since explained, "had something." Even Leo, the lion, which roars an introduction to every MGM film, is a Mayer "find." Some twenty years ago the producer took his daughters to the Los Angeles zoo. The children were attracted by the lion. Mayer, too, was impressed by its vocal powers and the photogenic qualities of its face. Years later he remembered the incident and decided to adopt the lion as the MGM trade-mark.

No screen epic ever produced by Mayer is as incredible as his own success story. Louis Burt Mayer was born in Minsk, Russia on July 4, 1885, the son of Jewish parents, Jacob and Sarah (Meltzer) Mayer. His parents emigrated to St. John, New Brunswick when he was three years old. The boy received a modest education in the public schools of St. John—the exact extent is unrecorded. A

MAYER, LOUIS B.—*Continued*

couple of generations later, in 1939, he was awarded an honorary LL. D. by the University of New Brunswick for his "cultural advancement of the motion pictures."

At the age of fourteen he was already at work. He began his colorful career, literally, from the bottom of the sea. His father was in the ship-salvaging business, and while still in his teens young Louis became the junior partner of J. Mayer & Son. It never became a prosperous enterprise because of the high costs involved in raising sunken vessels off the Canadian coast, but it offered a comfortable livelihood and was by no means a mere "junk business." The Mayer saga is filled with romantic tales of the youthful Mayer in a diving suit salvaging iron from old hulks at the bottom of the cold Atlantic. There are probably elements of truth in this version, for his father could not afford to employ too many divers.

As the lad grew older his father sent him on frequent trips to the United States to sell the salvaged scrap iron. He visited Boston and its environs and there became interested in the show business. Films were still in their pie-throwing infancy, but young Mayer already foresaw great financial possibilities in their development. By this time he had met Margaret Shenberg and married her on June 14, 1904. Three years later he came to the United States and settled in Massachusetts. For a down payment of $600 he acquired a superannuated theatre in Haverhill near Boston which had been used for burlesque shows. To remove the unsavory stigma of its predecessor, the playhouse was opened with the showing of a religious film, *From the Manger to the Cross,* which won for Mayer the support of the best families in town. He built up patronage by alternating films with stage attractions, which included the Boston Opera Company, Maude Adams in *Peter Pan,* and William Farnum in *The Littlest Rebel.* Soon thereafter he bought all the other five theatres in Haverhill.

A few years later Mayer went into partnership with Nat Gordon, another theatre-owner, and formed the Gordon-Mayer circuit which ultimately acquired control of the largest chain of theatres in New England. To insure a steady supply of films for his growing string of theatres, he organized his own distributing agency in Boston in 1914. At the time he heard from one of his scouts that D. W. Griffith had just completed a sure-fire hit, a picture to be called *The Birth of a Nation.* Without seeing it, Louis Mayer wired an offer of $25,000 to Griffith for exclusive New England rights. This was then the highest bid ever made for the exhibition of a single film. Griffith accepted, and Louis B. Mayer suddenly came into big money. The deal eventually netted him over $100,000.

Having tried his hand successfully in the exhibition and distribution of pictures, he next decided to venture into the production field. In 1918 he moved to Los Angeles and founded the Louis B. Mayer Pictures Corp. Although the public taste in those days was not highly developed and every kind of picture made some profit, his achievements as a producer were at first unspectacular. He had not entirely forsaken distribution, and he simultaneously operated his own booking agency, the Metro Pictures Corp. His fortunes improved somewhat when he succeeded in enlisting the services of the "boy genius," the late Irving Thalberg, as his production head. But his big break came in 1924 when the present Metro-Goldwyn-Mayer Corp. was organized. The new concern, fathered by Marcus Loew, theatre magnate and owner of Loew's, Inc., merged Mayer's two firms and the Goldwyn Pictures Corp., which had been founded by Samuel Goldwyn and the Selwyn brothers, into one corporate entity. The new setup controlled world-wide production, distribution, and exhibition interests. Thus Mayer's aspiration to coalesce the three activities of the motion-picture industry was at last realized. Today Loew's, Inc., which consists of well over a hundred subsidiary organizations in the amusement business, is unquestionably king of the Big Eight and of the motion-picture industry of America. In May 1943 Mayer was reportedly dickering for stock and stock rights in Loew's, Inc., as part of remuneration for his services in preference to continuing as America's No. 1 wage earner under his current straight salary and profits-percentage arrangement.

Under the terms of the consolidation in 1924 Louis B. Mayer became vice-president in charge of production, which office he still holds today. In this capacity he pioneered in the introduction of new techniques and was also instrumental in attracting a galaxy of new screen stars to his studio. His first big production under the aegis of MGM was *Ben Hur,* at the time the most expensive picture ever made. Later came *The Student Prince, The Big Parade, Trader Horn, Anna Christie,* and in more recent years *The Great Ziegfeld, The Thin Man, Mutiny on the Bounty, Fury, Boys' Town, Goodbye, Mr. Chips, Gone with the Wind, Mrs. Miniver, Random Harvest,* and *The Human Comedy.* Norma Shearer appeared in the first talking picture produced by him, *The Trial of Mary Dugan.*

According to *Fortune,* "Metro has created most of its own stars and has even recreated a few (William Powell, Wallace Beery) whom other studios had virtually given up." Among Metro luminaries are Myrna Loy, Hedy Lamarr, James Stewart [’41], Robert Taylor, Robert Montgomery, Katharine Hepburn [42], Jeanette MacDonald, Nelson Eddy [’43], Spencer Tracy [’43], Judy Garland [’41], Mickey Rooney [’42], Joan Crawford, Clark Gable, Lionel Barrymore, Melvyn Douglas [’42], Rosalind Russell [’43], Robert Young, Lana Turner [’43], Irene Dunne, Walter Pidgeon [’42], and Greer Garson [’42]. The box-office value of the Metro roster is greater than that of any other studio. (Sixty-four stars and featured players were shown in one photograph from an unprecedented sixteen pages in *Life* Magazine devoted, with lavish praise to MGM. This did not include seven stars in service and eight absent on camp tours.) Yet few of MGM's stars are ever invited to Mayer's home. He is said to prefer, for his friends, bankers, industrialists, politicians—any one, in fact, except people related to the cinema world. He is primarily a businessman.

As directing head of MGM, Mayer (known to his associates as "L. B.") is the absolute ruler of a vast, make-believe empire. His weekly payroll is considerably above $250,000. MGM is believed to be the largest motion-picture company in the world. Its lot covers more than seven acres, has twenty-five sound stages, and turns out on an average more than fifty full-length features a year, in addition to numerous shorts, comedies, newsreels, and cartoons. It is said that only Nicholas Schenck himself is able to gainsay Mayer in the MGM studio, although production is nominally under the control of an eight-man executive board.

Yet Mayer is said to have but a slight interest in motion pictures as an art. The general lines along which Metro pictures are constructed have not, according to *Fortune*, changed since the days when Mayer was a White House guest—in other words, since Hoover's '43 day. "He likes vast, glittering sets," says Henry F. Pringle, writing in the *New Yorker*. "He approves of gorgeous gowns, pretty girls, lingerie sequences, and expensive assignations. In brief, it is Mayer's influence which sends shop girls crowding into the theatre where MGM pictures are shown. He has his dislikes, too, and at the top of them is what he calls sophistication." In Leo C. Rosten's '42 words, Mayer "made the entire MGM organization revolve about the hub of Personalities. The stories and production of MGM's pictures are geared to the studio's stars and, more than in any other studio in Hollywood, are subordinated to the final goal of star-appeal." Controversial or newsy themes are regarded as sure poison in the Metro front office, says *Fortune*, and a producer seldom manages to slip a "hot topic," such as *Fury*, through. Sinclair Lewis' *It Can't Happen Here* was scheduled but never made. *The Forty Days of Musa Dagh* was abandoned out of deference to the present Turkish Government. "Mayer and his associates make no bones about the fact that they are conservative in their choice of subject matter. . . If Metro prefers one story to another, Cinderella is it."

A man with an overabundance of vitality, Mayer throws all his energy into his work. His day begins at 8:00 in the morning with telephone calls to his New York associates. Then he plays golf for an hour or more and leaves for his office about 11:00 a. m. He usually drives himself from his Santa Monica home to the studios in Culver City, a distance of more than ten miles. Not even the most obsequious yes-man ever volunteers to ride with him because of his erratic driving. Yet he seldom gets a ticket. Most of the California traffic cops are either movie aspirants themselves or fans.

At his office Mayer works until 9:30 every evening. The office itself is described to be as improbable-looking as a motion-picture set. It was designed by the MGM art director, Cedric Gibbons. The walls are said to be of rare Australian rosewood and all the furniture and lighting devices are streamlined and ultra-modernistic. The only homey things in the room are the exquisite miniatures of Mayer's grandchildren. Essentially, Mayer is very sentimental, particularly about family matters. He is a most devoted husband, father, and grandfather.

From the moment he arrives at his office Mayer works at a terrific pace, attending personally to a mass of details. He is constantly consulted on most trivial matters. The daily routine consists of an endless cycle of business conferences with producers, directors, and executives. Pressed as he is for time, he insists, nevertheless, on opening all his mail himself, even routine circulars. He seldom goes on a set but spends two hours a day viewing new films in his private projection room. Sometimes he even does a little informal acting: in an effort to induce Jeannette MacDonald to unfreeze for her songs in *Maytime*, for example, he called her to his office and sang *Eli Eli* to her without the slightest trace of self-consciousness. His histrionic abilities have earned him the nickname "Lionel Barrymore Mayer."

Despite reports to the contrary, Mayer is not given to efficiency hounding—or to excessive economizing. His production budgets are liberal, and he rarely upbraids his producers for extravagance. Although he frequently battles about salaries for performers with the Screen Actors Guild, to which the producers finally capitulated in June 1941 after five years of negotiations and acrimony, he is reported to be paying the highest wages in Hollywood for technicians and manual workers.

Mayer has many hobbies. He is a track enthusiast who owns one of the largest racing stables in America. He is a tireless pinochle player, and he indulges in rumba dancing as a cure for his insomnia. His chief hobby is politics, however. He has been an intimate friend of Herbert Hoover '43 and of William Randolph Hearst, and is credited with having effected a political reconciliation between the two. He was a delegate to the Republican National Convention in 1928 and again in 1932. He has also served as vice-chairman of the California Republican State Central Committee. In 1929 President Hoover offered the Ambassadorship to Turkey to him, but he declined it. His political prognostications occasionally misfire. In 1932, after Roosevelt's '42 nomination, Mayer predicted "a smashing victory for the Republicans." He is still believed to be a staunch Hoover Republican.

In August 1934, when Upton Sinclair won the Democratic Gubernatorial nomination in California with his EPIC (End Poverty in California) program, Mayer was summoned back from his travels in Europe by his alarmed fellow producers who feared the imposition of "socialistic" taxes if Governor Merriam were defeated. Mayer is credited by politicians with having helped swing the election against Sinclair, through the filming and distribution of supposed "newsreels" (actually all the roles were taken by actors) which depicted the Merriam supporters as home-loving, respectable citizens while the pro-Sinclairites were portrayed in a much less favorable light. An amusing epilogue to the campaign was that the amiable Merriam, once elected, proposed his own special taxes on the motion-picture industry. Again Mayer went to work and by threatening to move the entire

MAYER, LOUIS B.—*Continued*

industry to Florida succeeded in having an income tax substituted for the projected special levy on the film companies.

Mayer's friendship with Hearst has weathered at least two severe crises. Once Miss Marion Davies, "in whose pictures Mr. Hearst is interested financially," broke with MGM and moved her luxurious bungalow dressing-room from Culver City to the Warner Brothers' lot at Burbank. Miss Davies charged the studio with favoring Norma Shearer at her expense. The incident occurred, however, during Mayer's absence. The second crisis took place in 1941 when Orson Welles '41 produced for RKO *Citizen Kane,* a film allegedly based on Hearst's life. Friends of the publisher approached Mayer to use his good offices in having the picture throttled. His efforts proved unavailing: RKO was determined to exhibit the picture. There were even rumors at the time that the producer offered to compensate the company for the $800,000 it had spent on the filming of *Citizen Kane*. That did not help either.

Mayer has been the center of several front-page stories in recent years. In 1941 he figured in the trial of Willie Bioff, labor racketeer, testifying in the Federal Court in New York that for two years Loew's, Inc., had paid tribute of $50,000 to him. About a year later two men were arrested, charged with a conspiracy to extort $250,000 from Mayer under threats of death. In August 1943 Mayer was awarded the Aztec Eagle decoration by Mexican President Avila Comacho for his work in promoting harmony between Mexico and the United States. This is Mexico's highest award for service to the Republic.

The Mayers have two daughters, Irene (Mrs. David O. Selznick) and Edith (Mrs. William Goetz). Selznick '41 has his own motion-picture company, and Goetz helped organize and later became vice-president of Twentieth Century-Fox. Louis B. Mayer is described by H. F. Pringle as "dark haired, conservatively dressed, and as commonplace in appearance as any other executive." Pringle goes on to say that Mayer is easily aroused to anger. "His language has more than a trace of his waterfront days."

MAYNARD, JOHN A(LBERT) F(ONSEGRIVE), REV.

Feb. 7, 1884- Theologian; educator

Address: b. 109 E. 60th St, New York City

The French Church of the Holy Spirit in New York City is now the only one left of some fifteen Huguenot congregations in the United States which conducts its services in French, the others having become English-speaking through natural evolution. "Historically a witness to a great past, L'Église Française du Saint-Esprit is happy to have its heart in three tolerant democracies—France, Switzerland, and the United States—and to remember its historical connection with other royal democracies in England and The Netherlands, happily ruled by descendants of the great Coligny, who, beyond the sea, directed Jean Ribault, first founder in the United States." So writes the Reverend John A. F. Maynard, the eleventh pastor of the church since its founding in 1685.

John Albert Fonsegrive Maynard was born in Bergerac, in the Dordogne Valley, France, February 7, 1884, the son of Pierre Maynard, a non-commissioned Army officer, and Jeanne Fonsegrive (Giraudel) Maynard. At the age of ten he went with his parents to Paris, where he studied at the Collège Chaptal. Always a serious lad, he became deeply interested in the French Wesleyan Church of Les Ternes, Paris. When he was graduated from the Institut Colonial Agronomique in 1903, he volunteered to serve as a teacher in the mission school at Porto Novo, Dahomey, West Africa.

In 1905 Maynard returned to Paris with the idea of becoming a clergyman and studied for three years at the Maison d'Études at Neuilly, an institution for training the French Methodist ministry. In addition to his studies at the divinity school, he also took work at the Sorbonne and at the École des Langues Orientales Vivantes, specializing in Hebrew and classical Arabic. During this period his missionary activities were not neglected. He was affiliated with the MacAll Mission for two years. In 1906 he received the degree of Bachelier en Philosophie, and the next year went to his first pastoral charge, a small church in Le Havre, Seine-Inférieure. In those days it was necessary for the minister to serve several parishes, and Maynard had to preach in rotation at half-a-dozen outlying congregations. But his duties were not heavy enough to prevent him from continuing his studies. He registered at the Faculty of Theology in Paris, which gave him the degree of Bachelier en Théologie in 1909. His thesis, the first of many published works, was entitled *Les Tendances Apocalyptiques chez le Prophète Ézéchiel.*

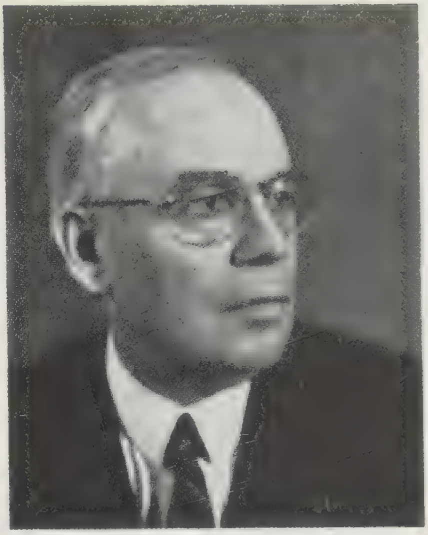
Soon after this Maynard was asked by the British and Foreign Bible Society to undertake missionary work in the vast region of the hinterland of West Africa where Islam was making so many converts. Although by this time he had become an able scholar, it was thought best for Maynard to spend a year in Algiers to acquire the colloquial Arabic necessary to carry out his duties and to learn the methods of the Society. When his year of preparation was over Maynard went to Senegal, the starting point for activities that were to take him to ten or more African countries. He had the distinction of being the first Protestant missionary to visit Djenné and Timbuctu, and in some districts of being the first white man to enter that particular part of Africa. At this time he began to work out the system of phonetics which he applied to various African dialects and which was to be so useful later in every language he wished to learn.

While in the Sudan Dr. Maynard had occasion to make a canoe trip with his native "boy" down the Niger River. There are many legends about this beautiful river, one being that "he who drinks water from the Niger will long to drink it again." If that is true Maynard is certainly yearning to return to Africa, for when the hundred loaves of bread which he had provided for the journey became dry, he dipped them into the river to soften them before eating. This is not so risky as it sounds, for, according to Dr. Maynard, the center of any stream is always pure, and, too, the hot African sunshine sterilizes the water.

In 1912 Maynard was received into the Church of England and was ordained a deacon. Toward the end of that year he made another African journey, this time from the north, traveling by camel with his native servant and two drivers. When the party reached the Sokoto River the camels refused to continue. It is a well known fact that camels do not like water: they are ill-tempered beasts and can be very stubborn. When Dr. Maynard urged his camel to go forward, it advanced a few feet into the water, and then, with a scream of rage, sank down into the river. Luckily it was not very deep, and Maynard was able to wade across to the other side. Since the camels could not be induced to follow him, he sent them back with their attendants and continued into Sokoto on foot. Thus it happened that he and his servant walked into the city, which is in the British territory of Nigeria, and did not come into contact with the authorities at once. It was not until later that Maynard discovered that the district was closed to mission work. When the British officials received a negative reply to the appeal sent to London on Maynard's behalf, they courteously requested him to leave the country. Discouraged, he returned to England and asked to be relieved of his duties.

Always interested in Oriental languages, Dr. Maynard now decided to concentrate on philology. He had accumulated the sum of $2,000 and was considering how and where he could pursue his research with so small a sum. It seemed providential that just at this time he should meet in London a young American who had acquired an education by working his way through college. When Maynard realized that this young man, who had tended the furnaces of faculty members for four years to help with his tuition, had not lost any prestige by these activities, he became very enthusiastic about America and its democratic institutions. He decided to go to the University of Chicago, noted as a center for Semitic studies.

In Chicago Maynard worked for his Ph. D. at the University and also lectured in Hebrew at the Western Theological Seminary. While there he was ordained to the priesthood of the Protestant Episcopal Church. Coming to New York in 1915 as a fellow of the General Theological Seminary (1915-16), he served at the same time as assistant rector at various churches, including Holy Trinity in the Parish of St. James (1918-21). "At the end of his fellowship he continued at Holy Trinity, where he spent four happy years in a large American parish with many activities."



Frank Elmer
REV. JOHN A. F. MAYNARD

Dr. Maynard's intensive research in philology, especially in the Assyro-Babylonian languages, had brought him considerable prestige, so it was not surprising that he should have been asked in 1919 to be the secretary of the project for making a complete Akkadian dictionary, sponsored by John D. Rockefeller, Jr. '41. Returning to Chicago, Maynard worked on the dictionary, and in addition served as associate professor of Old Testament literature at the Western Theological Seminary (1922-23). The study and teaching of Biblical literature has been one of Dr. Maynard's most rewarding experiences. His flair for languages has enabled him to read the Bible in many translations, each time extracting some new meaning from the text.

When the Seminary closed temporarily Dr. Maynard was invited in 1923 to take the chair of history of religion and of Semitic languages at Bryn Mawr College. The next three years were busy ones for him. Maynard lectured at the college, spent two or three months of the year on the Akkadian dictionary, and wrote several books and a large number of magazine articles. He was also editor of the *Oriental Research Series* and the associate editor of the Society of Oriental Research and of the *Anglican Theological Review.*

In *A Survey of Hebrew Education* (1924) Maynard stated that the quality of early Hebrew education had been equal to that of the ancient Grecian. He also maintained that a better knowledge of the Old Testament would have prevented the evolution of the doctrine of original sin, lessened the inhuman and false asceticism of the Middle Ages, and reduced the misunderstandings and hatreds aroused against the Church. "Our psychology would thereby have been spared much waste of time and would not perhaps have been led astray into verbal disquisitions." The next year appeared *The Living Religions of the World,* a study of comparative religion;

MAYNARD, JOHN A. F., REV.—*Cont.* and in 1926 *Russellism*, an exposé of the leader of a system of popular eschatological theology which flourished during the first quarter of the twentieth century.

Near the end of his third year at Bryn Mawr, Dr. Maynard was invited to preach at L'Église Française du Saint-Esprit in New York. Shortly afterward he became the pastor of the church (1925), taking care of the parish on week ends until he finished his contract with the college. At Saint-Esprit Maynard had a very difficult task. The congregation had fallen off, the church was in debt, and the location had become unsuitable. Under his direction the church moved to the auditorium of the French Institute, where it remained for over four years. But although the geographical situation was excellent, from the spiritual point of view it was felt that the Institute left something to be desired. Not only were ecclesiastical furnishings lacking, but the atmosphere was decidedly mundane, and "there were certain pictures there that had nothing to do with religion." In fact, as the rector said, "Saint-Esprit was a church without a church." This condition was remedied when, after trying several locations, the congregation moved in 1934 to a building in the East 60's. Here the surroundings had a devotional aspect, and there was a pipe organ which greatly improved the musical portion of the service. Dr. Maynard has adapted many of the Huguenot psalms to a metrical version to be sung with the ancient Huguenot melodies.

A man of great energy, Dr. Maynard has been able, in spite of the many demands of his parish, to find time to continue his writing. *Seven Years of Old Testament Study*, a critical bibliography of Old Testament research, was brought out in London in 1927; this was followed in 1928 by *The Birth of Judaism*, a study of Hebrew religion during the Exile. *The Huguenot Church of New York*, a history of Saint-Esprit from the time when New York was New Amsterdam and the French Church functioned under the auspices of the Dutch Reformed Church, appeared in 1938.

One week after the Germans invaded Poland, Dr. Maynard organized a war relief committee to give medical aid to the French wounded, in cooperation with the American Red Cross. Workrooms were opened in the parish house of Saint-Esprit, and soon rows of white-veiled heads were bent over long tables where surgical dressings were being prepared. Lovers of France from all walks of life—titled Frenchwomen, *vendeuses* from the exclusive dressmaking establishments, salesgirls from the Maison Coty, as well as many Americans and some women of Polish birth—came to the *ouvroir*. Dr. Maynard, as founder and director of the project, resigned his teaching post at the Biblical Institute in order to give all his spare time to relief work.

The fall of France was a great blow to Dr. Maynard, who blamed the selfishness and greed and cowardice of the *haute bourgeoisie* for much that happened. In a sermon soon afterward he said: "We have had more spinelessness than was good for us in religion, in education, in morals, and in social relationships." On the French national holiday following the defeat he conducted a funeral service at Saint-Esprit during which he referred to the occasion as "the saddest fourteenth of July in the history of France." The French flag, hung on the back wall of the church, was draped in black crape, and many in the congregation wore both tricolor and black armbands. In his sermon Dr. Maynard predicted that France would rise again, saying that "one blow cannot destroy all Frenchmen in whose minds liberty, equality, and fraternity are still strongly engraved."

In the controversy over whether food should or should not be sent to France after the occupation, Maynard took the affirmative, making a plea to Americans to help save European peoples from starvation. "I could never believe," he said, "that the time would come when Christian people could treat as folly the words of Christ, 'If thine enemy hunger, give him to eat,' and still less that they would also approve of erasing from the gospel of common kindness the less paradoxical version, 'If thy friend hunger, give him to eat.'"

The American-French War Relief Society, Incorporated, which had expanded very rapidly, moved to larger quarters in the spring of 1941, and Dr. Maynard ceased to be an active member of the committee. It was at that time that a crisis arose in the affairs of the church. The building which had seemed so promising in the beginning began to assume more and more the proportions of a white elephant. The size of the structure not only made adequate heating difficult, but it also made a small congregation seem minute.

Just as these trials crystallized the decision to find a more suitable building, the structure was sold and Dr. Maynard was faced with the task of quickly providing another place of worship for his flock. In the late summer of 1941 on the last Sunday before the demolition of the old sanctuary he celebrated a service for the dead, "declaring that the destruction of a church could be compared to the interment of a person." The next week he established his congregation in the present edifice on East 60th Street, which in addition to the chapel on the ground floor also houses the offices of the rector, the École Française du Saint-Esprit, and the Huguenot Museum. The Museum is a favorite project of the rector.

Once settled in the new building, Dr. Maynard again turned his attention to war work. Besides making occasional broadcasts to France for the OWI he is very active in the affairs of the Fighting French and is a member of the French section of the Russian War Relief Committee and a delegate of the Club Republican Français. He is also much interested in the École Libre of the New School for Social Research, especially the section on international affairs, and he belongs to the group which meets to study the history of the French Revolution. Currently occupied in the fall of 1943 with a book on anti-Semitism, Dr. Maynard still finds time to contribute to *La Bible du*

Centenaire, a translation of the Bible which is being brought out serially.

Dr. Maynard believes that the Church should be above politics, but nonetheless he has been very bitter in his denunciation of Vichy. "Never in the history of the French people has there been such a betrayal of the French sense of humanity which Victor Hugo so well depicts in *Les Misérables*," he declared on September 14, 1942, urging that the United States "warn the men of Vichy that they would be held responsible for their acts." An ardent supporter of de Gaulle '40 and the French National Committee, Maynard has compared General de Gaulle to General MacArthur '41, calling both of them Christian heroes.

Dr. Maynard is very liberal in his views. He has often "opened the pulpit" to noted Frenchmen who do not belong to the clergy. His congregation has thus had an opportunity to hear André Philip '43, the Fighting French political economist whose advice has been sought by Roosevelt '42, Maître Henry Torrès, celebrated lawyer who is a leader in the organization called France Forever, and many others. Maynard himself frequently participates in civic and clerical functions, both French and American.

Of medium height and weight, the white-haired rector of Saint-Esprit may often be seen taking an early morning stroll in Central Park. His favorite sport is fencing, not much indulged in by him since the War. He has always been interested in art, and he knows the great galleries here and abroad. Recently, at the sale of art objects belonging to William Randolph Hearst, Dr. Maynard was very much astonished to see the painting of *Christ on the Mountain*, by Debat-Ponsan, a photograph of which is in the possession of every French Protestant minister. Maynard bought the painting and plans to restore it, after the War, to the Huguenot Museum in Paris where, as an impressionable young lad, he first saw it and became inspired with the Christian ideal.

MEARS, HELEN Nov. 1, 1900- Author; lecturer

Address: h. 26 Locust St, Towanda, Pa.

The Year of the Wild Boar (1942), a personal record of Helen Mears' stay in Japan in 1935, is the first of a number of books on the Far East which the author has planned.

Miss Mears originally intended to spend a short time in Japan visiting an English friend. Fascinated by the unusual mores of the Japanese people, she remained to investigate them more closely and to supplement her information with firsthand experiences. Published after the War between the United States and Japan broke out, her description of the Japanese way of life, the critics pointed out, would help Americans to understand the civilization of their enemy.

Leja Gorska

HELEN MEARS

Helen Mears was born in New York City on November 1, 1900, the daughter of Henry and Elizabeth Salisbury (Owen) Mears. She was educated at Goucher College in Baltimore, Maryland, from which she was graduated in 1922 with a B. A. degree. While at school she worked on a weekly newspaper, writing a column in verse called "All the News Fit to Print."

"All my activities since my college days have been focused around the two jobs of earning my living and learning how to write," Miss Mears says. After a few editorial and reporting jobs in New York, she went to China with two college friends. "No pleasure trip this," her publisher writes. "She arrived at Peking with only $50, but fortunately she got a position as executive secretary to the Union Medical College. She remained in China for a year, keeping house with friends in a Chinese section of the city and spending her week ends traveling. She returned to the United States by way of Europe, taking several months for the journey. On the first leg of this homeward trek she traveled third class on the Trans-Siberian Railroad, a trip that was considered very daring then." In describing this adventure, Miss Mears writes: "I slept on a wooden bench, in an open car full of men, women, and children—Chinese, Russians, and Poles—buying food at stops, and making tea from hot water furnished in great tanks at the station." Miss Mears has also spent a month in Northern Africa and has "cruised through the Caribbean with brief stops at Curaçao and Venezuela." In 1927 she made a second visit to the Continent, and spent a month in England.

From 1929 to 1934 Miss Mears was with Survey Associates, publishers of the *Survey* and *Survey Graphic*, as assistant editor. In

MEARS, HELEN—*Continued*

1935 she left her position to concentrate on writing and to go back to the Far East. Her original plan was to visit a friend in Japan for a few months and then go on to India by way of China. "Japan, however," her publisher writes, "proved so unexpected and amazing that she stayed on. Her opportunities for meeting the Japanese informally and finding out how they live and how their minds work were unusual. Miss Mears traveled with a Japanese girl as companion in city and country. She talked to everyone on trains and farms, and in fishing villages and small shops. She attended lectures at two colleges of culture sponsored by such people as Prince Konoye '40, the Mitsuis, and the Government, and sat with the English conversation groups of university students." In all she spent eight months in Japan.

Miss Mears spent three months on the trip home from Japan. She traveled on slow freighters and made long stops in Javanese and Malayan ports and in the Philippines. In the summer of 1936 she was retained by *Fortune* Magazine as reader and commentator for its special Japan issue. She wrote articles for *Survey Graphic*, the *New Yorker*, *Nation's Business*, and the *Saturday Evening Post* and spent considerable time writing and rewriting her book about Japan which appeared in 1942 as *The Year of the Wild Boar.*

In *The Year of the Wild Boar* (which was the year 1935 according to Japanese chronology) Helen Mears describes Japanese life as "a vast complex bent on evading material facts and realities and substituting for them literary, mythological, symbolical, and customary responses, reactions, and habit." The first two Japanese words she learned were *mada mada* (later, some other time, or never) and *shukan* (customary procedure). Everything in Japan was regulated by centuries-old etiquette, and the Westernization which outsiders connect with Japan she found to be superficial as well as incongruous, like the Japanese men who wore kimonas and fedoras.

W. H. Chamberlin was refreshed by finding a book about Japan that had not been influenced by the bombing of Pearl Harbor and that gave, "without malice and without sentimentality, an excellent portrait of Japan and the Japanese." Nym Wales, however, felt that the book "underestimates the depth and extent of modern thinking in Japan, as do so many other recent books. . . Miss Mears is at her best dealing with women and their problems, and this has special significance in Japan." Most reviewers found *The Year of the Wild Boar* worthwhile and delightful reading and "a profitable guide to the mind of the average Japanese," although the reviewer of *Commonweal* magazine decided that Miss Mears was either ignorant of Christian mysticism or did not understand it or she would not have felt the mythmaking capacity of the Japanese so strange. She "frankly considers science the be-all and the end-all of our civilization," he pointed out, and although her point of view may have made her see clearly, it "makes the book a little naïve." Clifton Fadiman '41 commented that Miss Mears style was a "happy marriage of charm and intelligence."

The Year of the Wild Boar is being used as a text and as required reading in courses in a steadily growing number of colleges—among them Princeton, Dartmouth, Smith, and a number in the Midwest and West. An article by Miss Mears, "Japanese Riddle," appeared in the September 1943 issue of the *Atlantic Monthly.*

Medium in height and slim (she is five feet three and one-half inches tall and weighs 104 pounds), Miss Mears has dark hair and eyes. She is fond of travel, swimming, and walking. Besides her notes she keeps an extensive newspaper clipping file, and lists newspaper clipping as one of her hobbies. "I can make an excellent salad," she writes us, "and I have invented a superior breakfast dish of scrambled eggs on moistened and steamed shredded wheat. I am an expert at handling old-fashioned coal stoves and am at present custodian of three." Miss Mears was married in 1932 to Burton LeDoux, from whom she has been separated since 1935.

MIDDLETON, DREW Oct. 14, 1913- Journalist

Address: c/o New York Times, Savoy Hotel, London, England

The personal history of Drew Middleton, the husky, "raucous, sophomoric young New Yorker" of "cherubic countenance" who covered the North African theatre of action for the New York *Times* and who is now the *Times'* London correspondent, makes him the envy of many an older correspondent. In 1937, two years out of college, he bounced into the Associated Press office as a sports writer. Four months before the Second World War started he got a chance to try his hand at foreign correspondence in London, and by his twenty-sixth birthday he was "somewhere behind the Maginot Line" in France. In September 1942, after having covered the Allied commando raid on Dieppe for the Associated Press, he joined the staff of the venerable *Times*.

This "brisk, courageous" correspondent was born in New York City on October 14, 1913, and is of English-Irish and Scotch-Welsh descent. His father was the late E. Thomas Middleton, former American director of William Ewart and Son, Limited, of Belfast, Ireland; his mother, Jean (Drew) Middleton. After having attended elementary schools in New York and having been graduated from Columbia High School in South Orange, New Jersey in June 1931, he went on to Syracuse University's School of Journalism. At Syracuse he became sports editor of the *Daily Orange*, the college newspaper, and contributing editor of *The Syracusan*, and during his last two years he served as campus correspondent for the Syracuse *Herald*. Graduated *cum laude* in June 1935, he promptly joined the staff of the Poughkeepsie (New York) *Evening News*, where he served six months as sports editor. He had also served eight months as general news and sports editor of the Poughkeepsie *Evening Star* before marching into that Associated Press office on March 15, 1937.

It was Middleton's Associated Press sports colleagues who gave him the nickname "Junior," a nickname traditionally pinned on the newest man in the department. With Middleton the title stuck, but no slur on his reportorial abilities was intended. Three months after Middleton started work with the bureau Alan Gould, then general sports editor, wrote of him: "He is developing fast. . . He shows real talent as a writer." And in November 1938 the executive news editor, Byron Price '42, observed: "He shows steady progress and great promise. He has developed into an exceptionally good writer and should be encouraged."

N. Y. Times

DREW MIDDLETON

Middleton let it be known that he was interested in getting into the foreign service, writing that he had "set foreign correspondence as my goal." In April 1939 his goal was achieved—he joined the Associated Press London Bureau. At first he covered European sports for the most part, but soon his assignments were taking him to training camps, arms factories, flying fields, and proving grounds. The declaration of war by Neville Chamberlain on September 3, 1939 caught him in a South Kensington bathtub. He dressed and rushed to the office, determined to follow the action. He helped cover the declaration of war and "wrote some amusing man-in-the-pub stories," but there was little action to cover in London at that time. Finally, in October 1939, newsmen in London were allowed to join the Armies on the Western Front, and after much pleading, cajoling, and the use of a little pressure he got himself assigned to the British Expeditionary Forces. He was among the first correspondents to cross the Channel, attired in British officers' uniforms and scarlet and white press armbands. At first the newsmen had wondered if they should also carry swagger sticks, as bona fide British officers did. "I'll be damned if *I* will," Middleton had announced—and that had settled the matter.

In France during the first winter of the War, Middleton grew bored and went back to London. He did not return until the German Blitzkreig started in May 1940, but his dispatches on the fall of France earned him high praise, as did his coverage of the Battle of Britain that followed. "In London," writes *Newsweek*, "Middleton's college-boy ebullience sometimes approached a problem in British-American relations (especially his penchant for pretending to light cigars with £5 notes in front of awe-eyed R. A. F. pilots)." He was not permanently sobered even by his own frequent narrow escapes from death, although he admits—with refreshing frankness—that he finds it impossible to get used to bombing, or to find it ever anything but terrifying. One of his most startling experiences occurred on September 25, 1940, when he was stretched

MIDDLETON, DREW—*Continued*

out on a cot in the basement of the Associated Press London office building. Suddenly the whiz-z-z of a bomb falling and the heavy "wham" of an explosion were heard. "Fire flared in the street next to us," he wrote. "Flames were leaping and lighting up a crater eighteen feet across in one direction and thirty feet the other. The three-story tenement across the street was gone. . . I stumbled through streets littered with broken glass to another office. . . I went back to the office, dodging from building to building when anti-aircraft shells exploded overhead. . . A Cockney taxi driver who is an old friend of the A. P. staff said: 'They don't like you fellows either!' "

In September 1941 Middleton went to Iceland to report the activities of American troops there, returning to London in February 1942. It was shortly afterward that he wrote his unfortunate post-Singapore "think piece" predicting the downfall of the Churchill '42 regime midway in 1942. He redeemed himself, however, by winning the International News Service medal of honor for his coverage of the Dieppe commando raid in August 1942. At that time he was one of twenty-two war correspondents in London, seventeen Englishmen, and five Americans, chosen by lot to accompany the forces raiding the French Channel coast. No single engagement had been witnessed by so many war writers. He and Gault MacGowan of the New York *Sun*, both in British battle dress, got within a few hundred feet of the Dieppe shore. The motor launch they were aboard was filled with reserves and was continually bombed and strafed, and Middleton observed later: "It's no fun shooting back with a pencil when you look like any other Commando to the Germans." "The next time I go back to France," he added, "it's not going to be aboard any motor launch but on the battleship *Nelson* itself."

Raymond Daniell, chief of the *Times'* London Bureau, liked Middleton's Dieppe dispatch. Facing a shortage of hands, he invited the roly-poly correspondent to join the *Times*, and the invitation was cordially accepted in September 1942. On October 24, 1942 Middleton, along with other war correspondents, boarded a United States Navy transport at a British port. The first night out the colonel commanding the combat team aboard called the officers together and announced: "Gentlemen, the Allies are going to open a Second Front in Africa." Middleton will never forget the first day ashore after the invasion: "the long march in the half light toward the airfield at Maison Blanche, the feeble French resistance, the Spitfires circling the field, our troops cheering like madmen as a blond, youthful British pilot stepped out and said in a fair imitation of Brooklynese, 'Say, Buddy, you gotta cigaret?' "

Writing part of the time from the Front, part of the time from Algiers, the *Times'* North African correspondent soon acquired a reputation both as a coolheaded military strategist and as an acute political observer. One of his early pieces was particularly praised as being the first dispatch coming out of North Africa to "make sense" of the Giraud '42-de Gaulle '40 conflict. Much of his political reportage was critical. In January 1943, for example, just back in Algiers after a trip to Morocco, he wrote: "Profiteering, political apathy . . . distrust of the Americans and lack of faith in an ultimate United Nations victory are rife in French Morocco, where the political and economic situation parallels that of Algeria, but is intensified by the dictatorial character of Resident General Auguste Noguès' '43 regime. . . French Morocco is a confused, dizzy country where the American flag flies near concentration camps and French collaborationists form an inter-Allied club and mix freely with American officers. . . As in Algeria, a thorough shake-up of the Government appears necessary."

For a long time Middleton took a generally neutral stand on the Giraud-de Gaulle controversy. In a surprise move, however, early in July 1943, Middleton sent a dispatch openly favoring the Free French forces to the New York *Times*. He wrote: "This correspondent believes that, except in the highest ranks of the State Department's representation here, General de Gaulle—or rather the movement for which he stands—is far more popular than General Giraud and his followers."

Middleton's reports on the military situation were usually cautious. According to *Time* Magazine, he is an "expert in not writing up American patrol skirmishes as the 'biggest battle' of the War." In February 1943 he discounted prophecies of a crack-up in German morale and a German evacuation without a real fight. "There is very little cause for optimism," he wrote. "The end of the Germans in Africa is inevitable but it will be accompanied by a full measure of bloody, bitter fighting." At about the same time he pointed out that the Nazi offensive against the Americans represented, on the whole, an Allied setback. In March 1943 he warned: "There is a tendency, now that Allied patrols have pushed forward to their old line, to treat this operation as either an Allied victory or an affair of minor importance. It was not a victory; it was a severe tactical check involving heavy American casualties." When Axis resistance in North Africa collapsed completely in May 1943, however, Middleton was as jubilant as anyone else.

In the summer of 1943 Middleton was sent back to London. From there he has continued to concentrate on the political and military aspects of the War—from Russian military strategy, the Allied aerial offensive over Germany, and the battle of Italy to the Teheran Conference.

In contrast to Middleton's prankish personality is the soberness of some of his best reporting. Occasionally he grows poetic, as when he described the Tunisian battleground: "You can follow the path of those soldiers through the wheat as you could follow the path of Pickett's charge through the summer wheat at Gettysburg. . . History was made here only yesterday, but today only the wind blows over the rich grass and ruffles the wheat. . . And there is silence in the graveyards so far from home." More often he grows philosophical. "The average American soldier in the European and African theatres," he writes, in deep concern, "has a simple peace aim: to get home and to his job and his family and forget about the rest of the world and the War. The possibility that, in twenty years or so, some part of the rest of the world may follow him home has occurred to very few . . . only among our own people . . . does this reporter encounter the idea that the War is a tremendous football game, and that, somehow, after it is over and won, the soldiers can forget the War and the conditions which caused it. They want to go back to 'the same kind of world' they knew in 1939. Very few of them realize that it can never be the same kind of world again." Middleton himself, like Henry Luce '41, believes that America should "play the leading role in the post-War world."

When late in May 1943 the youthful *Times* correspondent was the recipient of an award by the National Headliners Club for the best exclusive foreign reporting from the North African theatre, most of his colleagues were pleased. And there was someone else who agreed that he deserved it. On March 31, 1942 Middleton was married to Winifred Estelle Mansel-Edwards, during a leave in London from the Tunisian battlefront. Mrs. Middleton, who is known to everyone as "Stevie," is the daughter of Captain and Mrs. Herbert Mansel-Edwards of Cardiff, Wales. Her father is chief of the Welsh Home Guard. Since the War she has been employed in the foreign affairs section of the British Ministry of Information, as private secretary to William Ridsdale, chief of the Foreign Office news division.

MOATS, ALICE-LEONE Mar. 12, 1911(?)- Foreign correspondent; author

Address: Hotel Lombardy, Park Ave. at 56th St, New York City

Alice-Leone Moats, foreign correspondent for *Collier's* Magazine, has been called (among many stronger terms) "snobbish, sophisticated, bad-tempered, saucy, brash, sublimely self-confident." In her book, *Blind Date with Mars* (1943), she describes "l'affaire Moats"—a bitter and long drawn-out quarrel with former American Ambassador Laurence A. Steinhardt '41 in Moscow. The climax of this historic quarrel found her shouting at him: "Oh, Laurence, don't give me that! Remember I was brought up in a household where an Ambassador is something you invite when you need a fourteenth for dinner."

Fernand Fonssagrives

ALICE-LEONE MOATS

If that was not precisely the type of household in which Miss Moats was brought up, it was near enough. She was born in Mexico City, the daughter of an American industrialist, Wallace Payne Moats, who was an important member of the American colony in Mexico, and of Leone (Blakemore) Moats, member of a wealthy and socially prominent American family. The Moats maintained three homes—one in Mexico City, one in New York City, and a 400,000-acre estate in the Mexican state of Michoacán.

Alice-Leone comes by her literary career naturally enough. Her mother's *Thunder in Their Veins; a Memoir of Mexico* was published in 1932. She begins it by saying: "Nineteen, the bride of a few days, I found myself on the threshold of Mexico, strangely alone with Wallace, my husband. All his inheritance money was invested in Mexico, so we had come here to live. At the time we placed five years as the limit of a sojourn which has lasted more than twenty years. . . . I offer it only as a coincidence, but the fact is, I have never on any of my journeys out of Mexico missed a revolution, and never have recrossed the border without being rewarded shortly after by another spectacle of civil disruption."

Mrs. Moats, a woman of great beauty and vivacity, was the toast of Mexico City's diplomatic and social sets. Alice-Leone led an exciting and travel-filled life. At one time when she was about five (and, according to a photograph, a very handsome blond child) mother and daughter, though laden with nu-

MOATS, ALICE-LEONE—*Continued*

merous trunks, were advised to flee to Vera Cruz. The United States Marines were landing, and Mexico was in a state of chaos. Mrs. Moats deposited her daughter with friends in Vera Cruz and went to send a cable home. She tried to return to her daughter but was stopped by gunfire in the street. Told that she must board one of the ships in the harbor, she quite naturally refused to leave without Alice-Leone. "I had a feeling," said Mrs. Moats, "that although she was only five years old, she, too, would refuse to leave until she knew that I was safe." Later a United States Army Colonel brought the child safely to her mother. She had been quite alone in the house with the servants after having refused to leave with the others. Bullets had rained in the patio, and one or two had crashed through the windows of the room in which she slept. The child described the dead men piled as high as a house in the Plaza. "Vera Cruz," Alice-Leone said, "was a river of blood."

Such training in courage and endurance was a good thing for the child who was later to make an eighteen months' journey around the world during wartime. She was educated by tutors and at the Convent of the Sacred Heart in Mexico City; later at the Brearley School in New York City; at the Convent of the Assumption in Rome, Italy; at the Convent of the Assumption in Paris; and at the Fermata School for Girls in Aiken, South Carolina. Having an ear for languages and residing, as she did, in so many countries, she became a fluent conversationalist in German, Spanish, French, and Italian, and has, she says, "a good working knowledge of Russian." In *Only the Stars are Neutral* Quentin Reynolds '41 refers to Miss Moats as "this smart-looking girl in the lovely fur coat who seemed to be able to drag any known language out of her throat at a given moment."

Neither Alice-Leone nor her mother was content to lead a completely idle life in social and diplomatic circles. They both wrote books. Of Mrs. Moats' *Thunder in Their Veins* (1932) one critic said: "We have, for the better part of the book, the crisp, well informed, and now and then pleasantly malicious gossip and reminiscence of a lady who evidently knew 'all the best people,' and chats of society, politics and affairs as these things are discussed at Embassy teas." Alice-Leone's *No Nice Girl Swears* (1933) is a volume on practical etiquette for the debutante, written in a "flippant and humor-flecked style." It was said that Miss Moats herself had forsaken Emily Post '41 at the age of ten. The book caused considerable eye-brow lifting in the conservative-manner school. "Miss Moats is a realist," remarked F. H. Britten. "No submerged hankering for the gracious gesture that used to be or that the usual practitioner of the art of etiquettry thinks ought to, divert Miss Moats for a moment from her shrewd and uniformly witty examination of things as they are." "It is complete though limited, very worldly and tolerant, and a little sad," commented the New York *Times'* critic. Nevertheless, it turned out to be a best seller, printed on pale yellow pages and bound in silver covers.

In 1935 both mother and daughter published a guide book called *Off to Mexico.* Most reviewers praised the book, the critic for the *Spectator* saying: "The prospective visitor to Mexico could not place himself in better hands." The Springfield *Republican* found "the text smartly written . . . not without touches of smart sophistication (a few of which might have been spared), but the information appears sensible and sound."

During the next few years Miss Moats wrote sporadic articles for the *Saturday Evening Post, Ladies' Home Journal,* and other magazines with such impudent titles as "If He Were the Last Man on Earth" and "I Like Men with Money." The last-named article, anonymously written, but later admitted, raised a storm of protest. "Who does she think she is, anyway—Queen Marie?" inquired one disgruntled gentleman in the *Saturday Evening Post's* letter column. She also wrote profiles of Lunt '41 and Fontanne '41 and other celebrities.

Blind Date with Mars records Miss Moats' efforts to get to Moscow and her efforts to stay there. *"Collier's,"* said Rose Feld in the New York *Herald Tribune,* "sowed its wild Moats in Russia by a fluke. The magazine apparently had difficulty in getting a writer into that country, and when Steinhardt amiably agreed in July 1940 to take Miss Moats to Russia as the guest of his wife and himself, she shrewdly capitalized on the situation."

"Looking back, I wonder who was crazier—[*Collier's*] for giving me the assignment or I for taking it," Miss Moats candidly admits. "A combination of the gambling spirit and ignorance made me a foreign correspondent. The gambling spirit belonged to the editors of *Collier's Weekly;* the ignorance was mine. There probably never was a reporter who set forth knowing less than I did when I started for the Soviet Union. I had never worked on a newspaper; my writing had consisted of one light, satirical book, many articles in the same vein, and five 'profiles' of well known personalities."

Obtaining a visa for Russia was a major job that took the indefatigable Miss Moats eight months. Although she was on a "first-name" basis with many influential government figures, she still had to move heaven and earth to achieve the visa. In the book she tells of the long wait for the visa while she stayed in Japan and China. She did not like Japan and came to the conclusion that the "famous glamour of the Orient" consisted largely of cheap servants. Japan's New Structure she labeled Strength *Without* Joy. From Tokyo she wrote her mother: "I am the belle of Tokyo, but honesty compels me to add that I am the only unattached woman in the town." She found much antagonism between American and Japanese and says she told one prominent Japanese: "We make you nervous because we are so big and white; you annoy us because you are so little and yellow." This, she records, was received in good faith.

From Tokyo, where she observed the night life, such as it was, she made her way to French Indo-China and then to Singapore.

The tragedy of Indo-China, as she saw it, was that Frenchmen went to the Colonies because they were failures or had disgraced themselves at home; in Singapore she quickly saw the reasons for its ultimate collapse. Everywhere she went she hastened to look up the members of the press and the diplomatic set; she gave parties for them and they, in turn, gave parties for her. When there were no hotels available she was always invited to share dwellings with newly-made friends. This she calls "the Moats' luck." So successful was she in brightening up foreign capitals that the Shanghai United Press correspondent wired his colleagues in Hanoï to watch for the girl who "had done more for Shanghai than Voronoff '41 could have done even if he had used mirrors."

In Singapore, which she reached on December 18, 1940, *Collier's* began sending the first of many cables: "As you don't seem to be getting to Russia return home immediately or send in final expense account." Nothing daunted, "Moatsie" or "Moats," as her friends called her, continued to placate the irate weekly and to move on to her goal. From Singapore she joined a convoy of trucks that finally reached China by way of the Burma Road after incredible hardships and inconveniences to the luxury-loving girl. Shanghai she "loved." In Chungking she had a happy time keeping house for three American men with the aid of ten Chinese servants, and says she devoted herself to "making fudge, chasing coolies from room to room, and arranging flowers." Chungking gave her her first taste of being bombed. It was there that in May 1941 the Soviet visa finally reached her "and she flew westward, skirting the great Gobi Desert of Mongolia, following the ancient route of silk and tea."

Most of *Blind Date with Mars* details her six months in Moscow during which she and Steinhardt struggled—he to get her out of the country and she to remain. She says that the Ambassador's verdict was that she had been "rotten spoiled by her parents." With him, taking his part, was practically the entire Russian Government. Her second war was with the Russian censor, who called her "the little woman who stamped her foot at me," and who refused to let her send out magazine stories to *Collier's* as she wrote them. She warred also with the head of the Russian Press Bureau, who, she says, refused to let her interview any Russians, get to the Front, or to continue her work, and she fought, too, with the Russian State Department, which kept up a losing battle to make her leave the country, and which for a time suspected her of being a spy. Additional troubles came with the German invasion, blackouts, and air raids. But through it all the Moats' brand of humor never left her.

Moscow appeared to Miss Moat's " a city entirely populated by people who look like panhandlers." She watched the long queues of hungry people waiting patiently in line for limited supplies of food; she described the incredible numbers of people who lived packed together in single rooms; she recorded the six weeks before the German invasion and the air raids after it; she expressed her unbounded admiration for the stoic Russians moving on to war. The Russian women she found amazing, but she disliked the country, its lack of sanitation, and its government. Once, upon being asked to get an Iranian visa by a Russian official in the Foreign Office, she told him the Iranian consul "hadn't the right to give visas." "That is perfectly ridiculous. Why can't he?" asked the Russian. "Monsieur," she replied, "you can scarcely expect me, an American, to explain bureaucracy to you, a Russian."

Food was very scarce but the diplomatic set and the press managed to eat well, and Miss Moats continued to give dinner parties which began with "vodka and martinis, pounds of fresh caviar, mushrooms cooked in sour cream, chicken cutlets, or a beef dish, salad, and ended with fresh strawberries and cream or a most delicious meringue cake." Such a dinner cost her more than $200 in the illegal black market exchange.

She was on a first-name basis with such distinguished visitors as Harry L. Hopkins '41 and W. Averell Harriman '41. When she heard that Harriman was coming to Moscow to discuss lend-lease, she cabled him: "Could you possibly bring me some stockings and a lipstick stop Would not ask such a favor except that am barefoot and whitelipped." The book is filled with amazingly candid observations about people (mainly women) whom she did not like. They include Margaret Bourke-White '40, Erskine Caldwell '40, Mrs. Haldane, wife of the British scientist, Alexander Werth '43, British correspondent, Mrs. Laurence Steinhardt, and Cyrus Sulzberger, correspondent of the New York *Times*, who retaliated, she says, by calling her "a biased woman with a nasty tongue."

When the Germans advanced Miss Moats and the other correspondents were evacuated to Kuibyshev on October 15, 1941. Living was very difficult. The long months of fighting with the Ambassador and with Russian officialdom and red tape wore down even her highly aggressive spirit. Finally she told the chief of the Russian Press Bureau: "Do you think I am crazy enough to stay on in a place where there isn't a bathtub, where bedbugs have bitten me . . . where everything smells awful!" She left by plane for Teheran, then stopped at Cairo, Iraq, and Nigeria before returning to New York.

Blind Date with Mars infuriated almost all the New York critics. Rose Feld in the New York *Herald Tribune* says that Miss Moats writes "with a breezy 'girlish' humor that is deeply accented by the erotic and functional. . . Miss Moats sees all, hears all, and tells all, and quotes herself with the fondness of a mother repeating the pert remarks of a precocious child." "A long book that seems twice as long as it is" was the verdict of Orville Prescott in the New York *Times*, who went on to say that "all her social life and witty repartee make about as good reading as the letters of a debutante you don't know gushing about her debut in a city you have never visited. . . Yet in spite of all that, the book does contain a lot of diligent reporting. . . Unfortunately, lack of judgment and lack of taste are pretty heavy handicaps." Emil Lengyel '42 in the *Saturday Review of*

MOATS, ALICE-LEONE—*Continued*

Literature was the only critic to compliment the book wholeheartedly.

Interviewed in New York, Miss Moats told Douglas Gilbert of the New York *World-Telegram* that "when and if she can get transportation" she would be off to Iraq and India, again for *Collier's*. "She had all her credentials and displayed them with obvious, and perhaps justified, pride. It took a battle royal to get them from the State Department." "I gave 'em a swell workout," Miss Moats admitted.

These plans apparently did not work out, but the spring of 1943 found Miss Moats in Madrid, sending back reports to the New York *Herald Tribune*. According to *Time* Magazine, her readers soon began "to wonder if she had not encountered charm in pushover doses." (I am a pushover for charm," she had confided in *Blind Date with Mars*.) She announced that food was plentiful, that the children in Andalusia looked "remarkably plump and healthy," and that even during her wanderings through the lower quarters and the suburbs of Madrid she saw "none of the horrible sights of starving children for which I had been prepared." Madrid was, at least outwardly, "active, prosperous, and well groomed." Later in June she wrote that in Spain fear of Communism "tips the scales of public opinion in favor of the Axis," although most Spaniards wanted the War over soon and cared little which side wins. "The frivolous want to get back to Maxim's in Paris and the golf club in Biarritz," she finished, making it clear that "public opinion" was to her synonymous with the very wealthy; "the serious minded want to get on with the reconstruction of Spain." In August, however, Miss Moats was permitted to communicate with CBS and to broadcast that the Spanish people believed that Italy's day was done and that Germany would fall after an intense fight. This was the first transmission from Madrid since the end of the Spanish Civil War.

Alice-Leone Moats is a very personable young lady, five feet six inches tall, and weighing 130 pounds. She is not married, and was probably speaking of herself in an article in which she wrote: "At eighteen or nineteen, before it has become an integral part of her life, [a girl] may be able to give up the admiration of armies of beaux, but, year by year, as she grows to depend on it, it becomes increasingly difficult [to marry] and forego all the flattery and flirtation that feed her vanity." She has, she says, "cold gray eyes" and "a bad temper," and she is admittedly "arrogant." She also has a strong sense of humor and much skill in repartee. While she is slightly built, her figure, she says, is not at its best in trousers, and consequently she is "the only female war correspondent who does not wear slacks." Her recreations are reading, theatres, movies, riding, swimming, and aquaplaning, and she admits that she "loves clothes, jewels, bath salts, furs, and perfumes." At Nikko in Japan the Buddhist priests followed her around their temples, stroking her blond hair and saying, "Beyooteful!"

MONAGHAN, FRANK Nov. 4, 1904- Historian; educator; United States Army officer

Address: b. Bureau of Public Relations, War Department, Washington, D. C.; h. 2844 Wisconsin Ave, N. W., Washington, D. C.

Historian, author, and former professor at Yale, Major Frank Monaghan knows how to wear his academic honors lightly. Nor are his scholarly accomplishments few in number or trivial in substance. A recent work, for example, a book entitled *This Was New York; the Nation's Capital in 1789* (1943), has met with uniformly commendatory reviews from scholars and critics alike. Charles A. Beard '41, the dean of American historians, pronounced it "unique," and added: "It measures up to all the canons of 'scientific' history and is a piece of literature that ought to be widely read and to endure for a long time." Howard Fast '43 called it "gossipy, charming, and malicious," including "all the many things histories usually omit."

The Major, who spells his name the "real" Irish way, was born in Uniontown, Pennsylvania, November 4, 1904, the son of Frank Charles and Anna May (Ryan) Monaghan. Too young to get into the First World War, while still attending grammar school he sold Liberty Bonds and raised food (by himself he cultivated a quarter of an acre of vegetables), and later he received two medals for his services. In 1919 he entered the senior high school in Uniontown, but during his freshman year his mother became ill and he was taken with her to Tucson, Arizona. There he saw a new part of life and of America, and "enjoyed it immensely."

Young Monaghan was graduated from the Uniontown High School in 1923, the second in his class rather than the first only because there had been some difficulty in exchanging the proper credits between schools. The principal of the school described him at this time as a boy with "explosive energy, omnivorous curiosity, and the ability to get the most difficult things done—plus an ability to inspire the ordinary person to do things of which he never thought himself capable." In 1923 he entered Cornell University, and two years later he was awarded one of the first of the Junior Year Abroad Fellowships. When he arrived at Manchester University in England he was thought to be a graduate student and so was placed in graduate courses, with which he tried to cope and eventually did to general satisfaction. It was, in fact, in one of these graduate courses that he wrote the basis of what later became his M. A. thesis at Cornell.

In 1926 Monaghan returned to Cornell to take his B. A. the following year, with election to Phi Beta Kappa and Phi Kappa Phi. In 1928 he received his M. A. from Cornell. "By this time," he says, "an old school friend of mine and I had written a new kind of mystery novel, *The Kindest Use a Knife.* It was too unusual and new for any publisher to accept, but I did introduce my old friend to Harper & Brothers and launched him on a writing career. He was John Dickson Carr, now one of the most successful of all mystery story writers. Some time, when I have two weeks of free time, I shall revise the script and send it to a publisher."

When he had completed his M. A., Monaghan was invited to take a job in Washington as an assistant editor of the *Dictionary of American Biography* (1928-29). There he formed a lasting friendship with the late Ernest Sutherland Bates '40. After the writing of some eighty sketches for the *Dictionary* and the revision of scores of manuscripts written by others he accepted the offer of a fellowship in history at the University of Paris.

He was married to Sylvia Harris before going to Paris for a "most exciting" year and a half. He studied at the Sorbonne and spent many hundreds of hours in the Bibliothèque Nationale working on a pioneer project he had conceived, the *Bibliography of French Travelers in the United States From 1765 On.* Before he returned to the United States to accept a teaching position he was also invited to conduct a tour of American educators around Europe—thirteen countries in five weeks.

From 1931 to 1933 Monaghan taught European history at New York University in the Washington Square College. In the summer of 1933 he eagerly accepted an invitation to go to Yale University as an instructor, and from 1933 until 1943 (when he entered upon active service with the chief of staff of the Army) he taught at Yale, first as an instructor and later as an assistant professor. In 1936 Yale awarded him a Ph. D. degree on the basis of *John Jay, Defender of Liberty* (1935), a book which he had done purely as a commercial publication and had never submitted as a thesis, but which was deemed so outstanding that the University, for the first time in its history, took this unusual action. Of the book H. S. Commager wrote, in the *Yale Review*: "Mr. Monaghan's biography of Jay is so good that it confounds criticism. It is based upon a scrupulous examination of a large body of manuscript material, much of it heretofore unavailable. Its scholarship is not only impressive but intelligent and discriminating. It is clear, well balanced, and well organized, it is judicious and impartial, except to poor Mr. Jefferson, for whom Mr. Monaghan has an inexplicable antipathy. . . It is a thoughtful, an urbane book, and the style is a constant delight."

George A. Douglas

MAJ. FRANK MONAGHAN

In 1936, while continuing to discharge full duties at Yale, Monaghan received the permission of Charles Seymour '41 (now president of the University; then the chairman of the History Department) to spend his free time with the New York World's Fair. He went to the Fair to establish a bureau of research and to gather the materials for an elaborate history of the Fair (to be published in four volumes) which was designed to be "a history of American progress in all of many significant fields as illustrated by the exhibits at the Fair." During the Fair itself he was director of research for the whole organization. He then was assigned to the writing and production of all the media which were designed "to lure the support of people who were really literate." He devised the various types of "the higher publicity," wrote the speeches that were delivered on "the higher purpose" of the Fair, and served as "the voice of the Fair" in educational and literary circles. He was also a member of the Promotional Council of the Fair—and all of this without neglecting any of his duties at Yale.

There was yet a third job that he had. He had already organized and become managing

MONAGHAN, FRANK—*Continued*

editor of the *Franco-American Review*, a scholarly bilingual quarterly publication issued by the Yale University Press which started publication in 1936 and ended in 1938 (the end of the trial period), when, he says, it became apparent to him that "France was, for various reasons, on the verge of collapse." It was his careful supervision of the finances of this publication which enabled him to return large sums to some of the sponsors, who were properly astonished.

"By summer," Monaghan says, "it was evident that the creative aspects of the Fair had vanished. There were only the operational aspects—the most dull and painfully unprofitable. . . I felt that my constructive services to the Fair were nearing an end. But before I submitted my resignation I was called upon for one last emergency duty. The Fair decided to send seven or eight of its most persuasive officials on a tour of the eastern United States and Canada to counteract adverse publicity and to announce the repudiation of policies that had long been ill-advised. I went on the Southern circuit. . . When this tour was over I cleaned up matters in my office and then resigned. . . By this time I was the chairman of the *Bibliography of American Travel* of the American Historical Association—pledged to write a four-volume definitive biography of Alexander Hamilton and to complete a two-volume edition of the unpublished letters of John Jay.

"I left the Fair in early September; I thought of really retiring to teaching and writing and little else. So I closed my apartment in New York and moved my furniture and my papers and books back to my apartment in New Haven. And then I settled down to that lovely existence of quiet days and actionless issues; and to the joy of research in a truly fine library among unpublished manuscripts—and to writing. That was splendid. But in November, Batten, Barton, Durstine and Osborn (of New York City) came to me with a proposition that was too intriguing and profitable to decline. They offered me the position as historical consultant on the *Cavalcade of America*, the coast-to-coast radio program based on American history and sponsored by the Du Pont Company. . . I hesitated about accepting the offer until they explained that I would have wide powers over the programs and that I would also appear on the broadcasts. As the historian of the *Cavalcade of America* . . . I presented ideas, checked scripts, helped revise scripts, wrote educational promotional materials, and lectured before many groups in various parts of the country. . .

"In the fall of 1941 I requested and obtained a leave of absence from my teaching duties in order to spend all my time in research writing. . . I had contracted with Random House (Bennett A. Cerf '41) to write a one-volume history of the United States for the Modern Library. I was doing well on this and on several other literary projects when, in April 1942, Mayor La Guardia '40 and Grover Whalen sought me out and drafted me to assist with the Mayor's Committee for Mobilization. This was the Committee which produced the 'New York at War' parade demonstration on June 13, 1942—which was unanimously declared to have been the most effective affair in the history of New York. I was the director of the plan, scope, and research and also one of the two administrative assistants to Mr. Whalen.

"Shortly thereafter there came an invitation from a Chicago publisher to write a popular history of the War. Here I saw the opportunity of telling the civilian public what the War was about and how it had developed since the time of Versailles. I was on full duty at Yale, but I established an office in New York and assembled a small editorial staff and went to work. The first volume of *World War II: an Illustrated History* contains almost two hundred thousand words of text and hundreds of illustrations; it covers the War up through December 1942. I planned it in a somewhat new fashion that ought to make it the best popular history that we have of a war in progress.

"In January 1943 the Army invited me to accept a commission as a major to execute an important and intriguing job. Regulations prevent my saying much, if anything, about it. After miles of red tape I was finally commissioned and reported for active duty with the chief of staff in April. I was assigned to the Bureau of Public Relations. I am still in the Bureau.

"*This Was New York* was published the day after I reported for active duty. It was written in collaboration with Marvin Lowenthal. . . Several other literary and historical projects were completed before I came to Washington. These include the publication of the hitherto unpublished letters exchanged between John Jay and the Lafayettes; the unpublished diary of John Jay as first Chief Justice of the United States; a supplement to *French Travellers in the United States, 1765-1932* (1932); and a long essay entitled 'George Washington Borrows a Book,' a study of the reading habits of New Yorkers in 1789."

Major Monaghan is five feet eleven and one-half inches tall, weighs 190 pounds, has blond hair and a fair complexion. He is a member of many learned and honorary societies, among which are the French Légion d'Honneur, the Society of American Historians, the New York Historical Society, and the American Historical Association. Politically, the Major describes himself as a liberal without formal affiliations. An earnest bibliophile, he likes to collect rare books and manuscripts and to design print; he also enjoys good conversation and chopping trees.

MOORE, SIR HENRY R(UTHVEN) Aug. 29, 1886- British Naval officer

Address: b. c/o British Admiralty, London, England; h. Almer Manor, near Blandford, Dorset, England

Early in 1943 high-ranking officers of the American, British, and Canadian fighting forces began a series of conferences on means of combatting the Axis submarine menace. Prominent among the participants in these discussions was Vice-Admiral Sir Henry R. Moore, who until March 23, 1943 was Lord Commissioner of the British Admiralty and Vice-Chief of the British Naval Staff.

With nearly a lifetime of service in the Royal Navy behind him, Sir Henry R. Moore was well equipped to map out an anti-U-boat campaign. He gained valuable combat experience during the First World War and he was honored by the D. S. O. in 1916. Long actively interested in international cooperation in times of peace and of war, Sir Henry's visit to Washington, in March 1943, to attend the anti-submarine conferences, was but one of many trips he had made as a delegate to such meetings.

Sir Henry Ruthven Moore, eldest son of the late Colonel Henry Moore of the King's Own Royal Regiment, was born on August 29, 1886. He received his early education at Sherborne and in 1902, when only sixteen, he entered the Royal Navy as a cadet, getting his training on the H. M. S. *Britannia.* One of his fellow students on the *Britannia* was Sir Bruce Fraser '43, now admiral in the Royal Navy and commander in chief of the Home Fleet. Promoted to the rank of lieutenant in 1908, Moore was married in the same year to Katherine Henley Joan Gillespie. They have two children, a son and a daughter. Moore was on duty throughout the First World War, in which he won the Distinguished Service Order. He was made a commander in 1919, and for the next two years was a staff member of the Royal Staff College.

Various government posts followed for Sir Henry. He served on the Committee of Imperial Defence as naval assistant secretary from 1921 to 1924. During this period he was sent, as assistant secretary to the British delegation, to the Washington Conference for Limitation of Armaments. This conference, in session from November 12, 1921 to February 6, 1922, resulted in the writing of the famous "five power" treaty by which the signers, Great Britain, the United States, Japan, France, and Italy, agreed to scrap a large percentage of their capital ships and to limit their future production of naval craft to a specified ratio.

When questions left unsettled by the Washington conference called for another meeting at Geneva in 1927, Sir Henry Moore was again present. Meanwhile his advance in the Navy was steady. In 1926 he was promoted to captain and worked directly for the Admiralty as deputy director of the Plans Division. He was made full director in 1932. Captain Moore then went to sea on the H. M. S. *Neptune,* serving aboard her for two years, from 1933 to 1935.

Returning to the Admiralty, Sir Henry was appointed commodore first class and chief of staff to the commander in chief of the Home Fleet. It was while he held this position, in 1937, that King George VI '42 made him Commander of the Victorian Order. This honor was followed in quick succession by his appointment as Companion of the Bath in 1939 and by his knighthood in 1942.

Just before the outbreak of the Second World War, Sir Henry Moore held executive positions as aide de camp to the King (1937 to 1938) and as chief of staff to the commander in chief in Portsmouth (1938 to 1939). With England's entry into the Second World War, Sir Henry was advanced to the rank of rear admiral and put in command of the 3rd Cruiser Squadron.

Many commentators on naval affairs have admitted that when this War began the Royal Navy was ready, but not very powerful as a striking force. Within a few weeks after the declaration of war, however, a huge program of expansion was launched. In 1940 Sir Henry R. Moore was appointed to one of the chief administrative positions in this program. He was named assistant chief of the Naval Staff. In the following year he was appointed a Lord Commissioner of the Admiralty and vice-chief of the Naval Staff. One of the major problems with which he had to cope was the German submarine menace. It has been estimated that during the first two years of the War German U-boats accounted for several million tons of British, Allied, and neutral shipping. To combat this menace, the Allied High Command instituted the widespread use of convoys, complete fleet and air coordination, and the delicate and secret listening apparatus which the British call "asdic" (Anti-Submarine Detection Investigation Committee).

On March 23, 1943 Sir Henry was appointed vice-admiral, 2nd Battle Squadron, and second-in-command, Home Fleet. In the same month he attended conferences in Washington between United States, British, and Canadian officers. Complete agreement was reached at these meetings "on the policy to be pursued in the protection of Allied shipping in the Atlantic." Since that time the U-boat menace has been considerably reduced.

Although he holds one of the major positions in the British fleet, Sir Henry receives very little publicity. Quiet and hard-working, when he is on land he spends most of his time in London, occasionally visiting his country home in Dorset.

MORROW, MRS. DWIGHT WHITNEY *See* Morrow, E. C.

MORROW, ELIZABETH CUTTER Author; educator

Address: b. Greater New York Service Organizations, New York City; h. Next Day Hill, Englewood, N. J.

Few among American women are better qualified to advise on new responsibilities for women than Mrs. Dwight W. Morrow. Able, attractive, liberal in viewpoint, courageously outspoken, Mrs. Morrow has successfully combined the role of marriage and motherhood with a career as writer and teacher, and as a leader in national organizations. Now chairman of Foods for Freedom, she was appointed chairman of the women's division of the Greater New York Service Organizations Joint War Appeal in April 1942. A year before this, however, Mrs. Morrow made headline news when she urged, in a significant radio address, immediate enactment of the aid-to-Britain bill. In doing this she took a stand directly opposed to that of her famous son-in-law, Charles A. Lindbergh ['41], who had just spoken before Congress against the Lend-Lease Bill, saying it was a mistake to aid the British, and urging a negotiated peace. Mrs. Morrow said that she was no political or military expert, but "for the sake of our national honor" she was for an "all-out" war if necessary.

The wife of the late Dwight Whitney Morrow, United States Senator and diplomat, Mrs. Morrow was born Elizabeth Reeve Cutter in Cleveland, Ohio. Her parents were Charles Long and Annie E. (Spencer) Cutter. She attended Smith College, Northampton, Massachusetts, and she was graduated in 1896 with a B. L. degree. It was during her Smith College days that she started writing. Two years of study followed her graduation: at the Sorbonne in Paris (1896-97), and in Florence, Italy (1897-98). On her return to the United States she taught English, French, and history for one year in a private school until her marriage on June 16, 1903 to Dwight W. Morrow, lawyer, and partner in the House of Morgan.

At their home in Englewood, New Jersey, Mrs. Morrow was busy for the next two decades rearing her family of four children. There were three daughters: Anne Spencer ['40], who became the wife of Charles A. Lindbergh and who has made her own career as a writer; the late Elisabeth Reeve, first wife of Aubrey Niel Morgan of Wales; Constance Cutter, now Mrs. Aubrey Niel Morgan; and a son, Dwight W. Morrow, Jr.

When her husband ran for United States Senator from New Jersey (1930), Mrs. Morrow took an active part in the campaign, addressing women's groups several times daily. In September 1927, when he was appointed by the late President Coolidge Ambassador Extraordinary to Mexico, she accompanied him. They made their home in Cuernavaca. Mrs. Morrow, who was charmed with Mexico and Mexican life, wrote a good many articles about their home and about the Mexican scene in general. Her friendly spirit and liking for the people doubtless did much to aid her husband's mission of establishing better relations between the two countries at the time, when controversies over oil properties had led to dispute and antagonism.

After Dwight Morrow's death in 1931 Mrs. Morrow devoted the next few years to her writing. She had begun with *The Painted Pig,* a story with a Mexican background for children, in 1930. A year later a book of verse, *Quatrains for My Daughter,* appeared. This was followed by *Beast, Bird and Fish* (1933), an animal alphabet in rhyme for children. Mrs. Morrow has written four other books for children: *A Pint of Judgment* (1939), a Christmas story of a little girl with a mistaken idea of a present; *The Rabbit's Nest* (1940), praised for its "humor and gaiety and fine relationship between children and grownups." *Shannon* (1941); and *My Favorite Age* (1943). In the spring of 1941 she was one of the judges of books for young children in the annual New York *Herald Tribune Books* contest. Several poems for adults by Mrs. Morrow, most of them descriptive nature lyrics, have appeared in various periodicals, but have not been collected in book form. She also wrote the preface to a series of letters from occupied France, *All Gaul Is Divided* (1941).

Mrs. Morrow was awarded an LL. D. degree by the New Jersey College for Women in 1935. She won additional honorary literary degrees from Amherst College in 1933, from Smith College in 1937, from Princeton University in 1940, from Lafayette College in 1940, from New York University in 1940, and from Colby College in 1942. In the fall of 1939 she was made acting president of Smith College after the retirement of Dr. William Allan Neilson, becoming the first woman to head that institution since it was founded in 1875. She has been a trustee of the college since 1920. (Mrs. Morrow has also been a trustee of the Union Theological Seminary of New York City, and a director of two private schools for children at Englewood, New Jersey.) Her year as acting president of Smith was recorded as a successful one; it was said of her that "she loves and understands girls . . . and seems to have the gift of establishing with girls something of the intimate, friendly mother and daughter comradeship one instinctively knows she must have maintained with her daughters."

Mrs. Morrow's chairmanship of the Greater New York Service Organizations is not her first acceptance of the responsibilities which fall upon women during war emergency. In the First World War she helped organize the first United States Women's Relief unit to go to France, and she went to France later to investigate its work. Other public activities include her membership on the Metropolitan Board of the YWCA for many years, and membership in the Association for Improving the Condition of the Poor. In 1933 she helped organize the Community Chest of Englewood, and she served as its chairman during 1933 and 1934 and thereafter for nine years upon its Board of Directors. For four years, also, she was a member of the Englewood, New Jersey, City Planning Commission. In 1939 she joined the Non-Partisan Committee for Peace through Revision of the Neutrality Law. In 1940 she was appointed a member of the advisory board of the Associated Willkie '40 Clubs of America.

As early as June 1940 Mrs. Morrow made her first public statement on behalf of immediate aid to the Allies. "I urge," she said, "the sending of munitions and supplies, food, money, airplanes, ships, and everything that could help them in this struggle against Germany. There are some things worse than war. There are some things supreme and noble that are worth fighting for." When the Lend-Lease Bill came up for adoption, she urged in a nationwide broadcast on March 8, 1941 its immediate passage "without weakening amendments or strangling clauses." She answered outspokenly the isolationist views of her famous son-in-law without, however, mentioning his name. "As I have listened to the arguments against this bill," she said, "I have said to myself, 'Is Hitler '42 hypnotizing this country?' " Her broadcast address was put in the *Congressional Record* by Senator Smathers of New Jersey, who called her one of that state's "most distinguished citizens." When Fight for Freedom, Inc. was organized Mrs. Morrow was named chairman of the women's division. At that organization's luncheon in New York in November 1941 she declared herself pleased that the Neutrality Act had been repealed, grateful that "its hypocrisy has been removed from our statute book." She said that we must frankly meet the risk of war, must face the "deepening danger to all that we believe in," for an all-out war might be necessary in order to prevent a Hitler victory. The address was broadcasted over the NBC network.

In April 1942 Mrs. Morrow accepted the chairmanship of the women's division of the Greater New York Service Organization's Joint War Appeal. The Greater New York War Fund drive was immediately launched under her direction. At a luncheon civilians were urged by Mrs. Morrow to make generous contributions for recreational units for four million men. Appealing to women, she characterized the U. S. O. clubhouse as "the last outpost of home," and said that "homemaking always has been a woman's job." In an interview she declared that there should be no encroachment upon the needs of other war service organizations in the U. S. O. campaign. "We must work side by side with cooperation and charity," she said, "if we hope to win a war."

ELIZABETH CUTTER MORROW

At the third session of the New York *Herald Tribune* Forum Mrs. Morrow spoke (November 21, 1942) on "Lasting Effects of Women's War Activities." She remarked that the potentialities of women are being recognized as never before in our history. She pointed out the services being rendered by women in the various auxiliary corps, calling attention to the qualifications being sought in candidates: training in such subjects as chemistry, economics, engineering, geology, metallurgy, higher mathematics—subjects that have not been stressed in women's colleges until recently. "As the clamor rises for more engineers, let us hope that women will be admitted freely to technical schools. Their national service is bound to bring about the removal of all restrictions in their education."

"The new place in industry for women today ought to bring about a wider acceptance of women's counsel in the future," Mrs. Morrow said. "Since the post-War period will be one of convalescence, and since it is the mother who takes care of the convalescent, women should have a full share in the spiritual reconstruction of the new world. A woman should sit at the peace table. . . Let us share the blame with you this time, brothers!" In other words, Mrs. Morrow concluded, "I plead for a wider distribution of responsibility . . . the great check upon theory, the final test of ideals."

Mrs. Morrow has been described as "a precious type, fragile and vivacious, like a character out of an Edith Wharton novel." "One of the dominant things about her is her

MORROW, ELIZABETH CUTTER—*Continued*

strength and vigor," a close friend comments, however, taking exception to the use of the word "fragile" in relation to Mrs. Morrow. She is short, with grayish-blue eyes and fluffy hair, once light brown, now gray.

MOSTEL, ZERO (mos-tel' zē'rō) Feb. 28, 1915- Actor

Address: b. c/o Ivan Black, 128 E. 58th St, New York City

From neighborhood cutup to entertainer of national fame has been the success story of Zero Mostel, comedian. A struggling New York painter in 1941, Mostel was discovered at a private party, made his professional debut as a "night club funny man," and was an overnight sensation. Since then he has gone on to conquer new fields—the stage, the screen, and the radio.

Zero was born Sam Mostel in the Brownsville section of Brooklyn, "a poor and crime-ridden neighborhood," on February 28, 1915. The following year his large family—which included five brothers and two sisters—moved to a farm in Moodus, Connecticut, where his parents, Israel and Celia (Druchs) Mostel, "tilled the soil" for almost ten years. Little Zero was continually getting lost in this rustic New England spot. Once, his agents report, the whole village was out looking for him, but he had been home safe all during the search. When, according to Mostel, an unyielding bank president with fierce mustache and long whip foreclosed the mortgage on the farm, the ten Mostels trekked back to New York and settled down on the Lower East Side of Manhattan, where the boy attended public school. The problem of Zero's future had to be settled. His father wanted him to be a rabbi, but his mother sympathized with his ambition to be an artist. According to Roger Butterfield, she made a practice of dressing the boy in a velvet suit and sending him to the Metropolitan Museum to copy masterpieces. "Zero had a favorite painting (John W. Alexander's *Study in Black and Green*) which he copied every day, to the delight of the gallery crowds. One afternoon, while a crowd was watching over his velvet-clad shoulder, he solemnly copied the whole painting upside down. This made people laugh—and they have been laughing at Zero ever since."

In junior high school young Mostel proved to be a bright student and was skipped to the rapid advancement class. At Seward Park High School, however, he slumped, and he was graduated near the bottom of his class in 1931. He maintains that no one there remembers him except the boys with whom he used to "shoot craps" on the fourth floor. In the fall of 1931 he entered the College of the City of New York, where he majored in fine arts and in English. There is a story, no doubt apocryphal, that since there was a limited number of art courses in the curriculum, he took the same ones over and over and received credit for all of them, thus enabling him to be graduated with little effort. He passed freshman art eight times. Mostel says that he was a good student; other sources say he was an unusual one. At City College he was on the swimming team and he also belonged to the R. O. T. C. The story goes that at the College's Charter Day exercises, the R. O. T. C. unit held a review in honor of the occasion. When he was commanded by the captain to stand at attention, the future comedian "started to crumple like an airless accordion." "Attention!" barked the officer, "not at ease." *"Mon capitaine,"* Zero replied, "it's not me at ease, it's my uniform." Legend also has it that the R. O. T. C. situation became so critical that on inspection days the staff officers tried to get the youth out of sight. They attempted to detail him on special duty.

"Private Mostel, would you be so good as to go to the gymnasium with a message for Corporal S.?" they would demand uneasily.

"I gotta drill," Zero, professing not to understand, is supposed to have said.

"But we excuse you from drill," pleaded the staff.

"I gotta drill," persisted Zero. "I gotta get hard. I gotta get strong. I gotta get ready to die for dear old City College."

Mostel was graduated from City College in 1935. For a while he studied at New York University toward an M. A. degree, but he finally quit his studies in 1936 and wandered off to Louisiana and Mexico, painting as he went. Upon his return there were good days and bad days. During the bad ones he took jobs all over: he worked in factories and as a longshoreman. (While taking part in a movement to reform the longshoremen's union, he was twice "knocked cold" by gangsters.) During the good ones he worked for the WPA. "Twenty-three dollars and eighty-six cents a week," remarked Mostel, "a very odd sum, but acceptable." For three years he taught children to paint and further developed his social conscience. Mostel has belonged to the Amalgamated Clothing Workers of America, the International Longshoremen's Association, the United Mine Workers of America, and the American Artists' Union. Later he said, in all seriousness, that he was the first radio comedian to demand a Second Front. On the WPA he lectured on art at various museums, including the Museum of Modern Art, the Frick Museum, and the Museum of Science and Industry. His chalk talks "became so popular that the supervisors looked into the matter. No such interest in the history of painting had ever before been discovered. They arrived at the lecture hall to find half the audience on the floor, rolling around in pain. They were laughing themselves to extinction." "If this," explains Crichton, "seems like the usual press-agent yarn, remember that the same stuff that convulsed the WPA audience is now being paid for in gold, running freely like molten lava."

All this time Mostel was still a painter, "with the easel, with the thumb—a painter," he says. His parents had moved to The Bronx, and he shared a bathless, heatless studio on West 28th Street with two other painters and a sculptor. In five years, the comedian calculated, he must have painted more than 500 pictures, but today he does not know where more than five or six of them are. Most of them he gave away to friends. "The few authentic Mostels that can be located today show that Zero, as a painter, preferred lusty human types—such as a fish peddler, his hands slithering with blood and fish scales; a thick-necked Negro coal miner; or a big-bellied bartender." "In those days," Roger Butterfield writes, "he used to stage a ritual called 'Chasing Pigeons' in the square behind The New York Public Library on 42nd Street, one of the most conspicuous places on Manhattan Island. He would rush in from Sixth Avenue and charge madly into a flock of complacent pigeons, shouting and waving his arms. The pigeons would take to the air, but always come wheeling back, for no pigeon can resist his curiosity about an erratic human being. Zero . . . would strike a pose and harangue them in double-talk for as long as fifteen minutes, until a crowd of perhaps a hundred persons gathered. Then he would suddenly turn up his collar and stalk off in pretended dudgeon, leaving his audience, including the pigeons, in a state of happy bewilderment. This broke up the day's monotony for everybody, and it also helped keep Zero warm when the stove in his studio was short of coal."

Meanwhile Zero entertained at neighborhood parties, sometimes for "$5 and sandwiches," more often for nothing. He was very popular as a means of raising money for "causes." It was at a function for China Relief that he was "discovered"—by whom it is not clear. Both the proprietor and the press agent of the night club, Cafe Society, lay claim to the achievement. Another story is that a radio producer brought him to the press agent to be auditioned. At any rate he was hired at $50 a week, and the press agent renamed him Zero, hoping that it would inspire the comment: "Here's a man who's made something of nothing." Mostel objected to the change, feeling that the name Sam was good enough for anybody. On February 16, 1942 the young comedian made his debut at Cafe Society Downtown. His impressions—such as the one of Charles Boyer '43 ("Let me run through your hair, Hedy—barefoot") and of the Honorable Polltax T. Pellagra, the Isolationist Senator, who ends his post-Pearl Harbor speech with the celebrated question: "What the hell was Hawaii doing in the Pacific Ocean anyway?"—brought him an unqualified success. Isolationist Hamilton Fish '41, it is said, watched Mostel do the latter and motioned the young man to his table afterward. "You were very good tonight," he told him. "Thanks," replied Zero, "I wish I could say the same of you."

Harold Stein

ZERO MOSTEL

Mostel writes all his own material. His technique in front of an audience "combines singing, dancing, acting, pantomime, straight monologue with gestures, gagging, double-talk performances on any handy musical instrument, plus many violent and double-jointed physical exertions that are peculiar to him alone. Although he sometimes looks like 'an elephant in pants,' he is an extremely agile and graceful dancer. His pantomime impression of 'a jitterbug in Roseland' has been called by professionals one of the finest interpretative dances of modern times." Music critics have not, however, commented on his impersonation of a percolator.

Within three weeks of his first night club appearance, Mostel was signed up for the radio program *The Chamber Music Society of Lower Basin Street.* Soon after, he was on Broadway with the *Keep 'Em Laughing* vaudeville show. The editor of *Variety* wrote that first nighters "rose nobly and generously to the occasion as they witnessed another new star being born." The comedian stopped the show at every performance. The Paramount Theatre subsequently hired him for two weeks at $1,250 each week. All this time he continued to work at Cafe Society, but he had been promoted to the uptown branch. In the summer of 1942 he went to Hollywood to play the dual role of Taliostro and Rami, the Swami, in MGM's *DuBarry Was a Lady.* Leonard Lyons remarked in the New York *Post* in March 1943 that

MOSTEL, ZERO—*Continued*

Mostel would see little of himself in that film. "Many of the scenes in which the talented comic appeared have been cut. For while he was making that movie, and while MGM was deciding on the renewal of its option on his services, Mostel signed a petition protesting against the release of *Tennessee Johnson*—an MGM movie." When the picture was released *Time* Magazine commented that "Cabaret Comedian Zero Mostel in his screen debut seems to need an intimate audience."

In the short time in which Mostel had been a professional actor, he had earned huge sums. "Here on the head, hit me," he sighed, when his money started coming in. "All the time I am with dreaming." When, however, he entered the Army as a private in March 1943, "after these mad months of quick fame and riches, with national publicity," reported Leonard Lyons in the New York *Post,* Mostel was left with but $4,000 in the bank—and owing twice that much for the year's income taxes. He was discharged from the Army late in 1943.

Before his induction into the Army, some of Mostel's friends were writing a stage dramatization for him of *The Good Soldier Schweik,* "the famous First World War story of a simple-minded Czech soldier who almost wrecked the Imperial Austrian Army by his stubborn innocence of all things military." Mostel himself has written a life of the famous French caricaturist, Honoré Daumier, and he hopes to see it published. He would also like to appear on Broadway "in the relatively sober role of Sir John Falstaff."

In appearance Mostel has been described as resembling "a boneless shad, a balloon, a whale, and Mayor La Guardia '40 of New York." It is almost impossible, however, one of his biographers feels, "to describe him definitively." A big man, Mostel is six feet tall. "He is not big," Crichton comments, "in an obscene and senile way; he is not even youthfully fat; he seems merely to be something loosely in burlap. His face is not only mobile but it has a faint trace of beauty." He is moonfaced, with lugubrious brown eyes, "which he can control with incredible precision, rolling them back into his head in opposite directions when he chooses." He also has a way of running his arms in and out of the sleeve of his coat to express fear, modesty, or chagrin, but he insists heatedly that he is not double-jointed, "just relaxed." In his own words, he is "perfectly abnormal." His clothes are baggy—when he began his career he owned one good suit, "a blue serge job that fitted him somewhat haphazardly like a tent." His enthusiastic followers considered this genius and warned him not to vary the pattern. However, there came a time when he had to get something else, the original triumph having turned a slaty-gray tinge from usage. He went to a tailor, and his friends trembled. One sight of the new brown model reassured them but made Zero unhappy. "I got it figured out now," he said morosely. "They can't fit me."

Mostel does not reserve his talents for the paying public, but gives generously of them to their less fortunate brethren. It is his custom to put on a show wherever he is—on the street, in the subway, in a department store or restaurant. Servility, it is said, is his worst obsession. Crichton tells of the occasion when Mostel dressed two of his adult friends as boys and led them into an elegant New York haberdashery.

"I want two dozen imported English shirts for these kids!" he announced loudly upon entering.

A clerk stepped forward, rubbing his hands obsequiously. "What size, please?" he asked.

"Eighteen in the neck and forty-eight in the sleeves," was Mostel's prompt reply.

Too polite to mention that no such sizes existed in children's wear, the clerk tried tact. "Would you mind if I measured the little fellows?" he requested.

"Measure them!" repeated Zero flourishing his cane. "I've *told* you what size they wanted!"

"Certainly, certainly," replied the clerk in hasty apology, "but if I could just measure them. . ."

"Take off your jackets, lads," ordered Zero, whereupon his friends jerked off their coats, and revealed that they had nothing on underneath. Carrying their jackets jauntily over their arms they stalked out of the shop.

"Am I in high dudgeon!" cried Mostel as he passed the manager on the way out. That worthy gentleman cowered behind the shirt counter, holding his breath until they were well away.

MURPHY, ROBERT D(ANIEL) Oct. 28, 1894- American diplomat

Address: b. c/o Department of State, Washington, D. C.

Termed a "Lawrence of North Africa" by the New York *Sun,* since November 1942 career diplomat Robert D. Murphy, one of the least known members of the United States Foreign Service before the Second World War, has earned fame—and a good deal of abuse—by his handling of the explosive North African situation. Many months before the Allied invasion Murphy had been hand-picked by Secretary of State Cordell Hull '40 as one of the cleverest, yet most inconspicuous, of his overseas men, one whose tours throughout North Africa, ostensibly to "inspect our consulates" and feed the hungry French, would arouse the least suspicion of his real purpose: to gather vital information and lay the political groundwork for the invasion. At the time he was often called an "appeaser" and a friend of Vichy France. And although honor after honor has been heaped on him since his true mission has been revealed, as American Minister to North Africa he remained a target for the attacks of those who found the American State Department's role there something less than admirable. As the United States member of the Advisory Council to the Allied Control Commission for Italy since November 1943 he has been subject to similar criticism.

Robert Daniel Murphy was born in Milwaukee, Wisconsin on October 28, 1894, the son of an Irish-American section hand, Francis Patrick Murphy, and Catherine Louise (Schmitz) Murphy, both devout Catholics. Young Murphy grew up in Milwaukee and attended the schools there, but was forced to leave school while still in his teens in order to go to work in the roundhouse of the Chicago, Milwaukee, and St. Paul Railroad. There, and in other jobs, however, he earned enough money to put himself through Marquette University, a Jesuit College in Milwaukee. In 1917 he entered the United States diplomatic service and became a clerk at Berne, Switzerland (1917-19). Later, while working as a government clerk in the Treasury Department, Washington, he studied evenings at George Washington University and received his LL. B. in 1920. (Eight years later he received his LL. M. degree from the same University. Marquette University also granted him an honorary LL. D. *in absentia* early in 1943.) He passed the "severely competitive examinations for our [the United States'] foreign service," which he entered in the year of his graduation. The following year he married Mildred Claire Taylor, of Kansas City, Missouri.

Appointed a vice-consul in 1920, Murphy was not sent abroad until April 1921, when he was assigned to Zurich, Switzerland. In the fall of the same year he was transferred to Munich, Germany, where he had an unfortunate experience. During the period that Murphy was in Munich the National Socialist Party was beginning to develop, and more than once "he personally witnessed its riotous demonstrations and had occasion to make reports concerning what he had observed." The Nazis were already suspicious that the young American vice-consul was learning altogether too much about their organization when, one morning in 1924, Mrs. Murphy happened to become involved in an altercation with a German shopkeeper.

As Demaree Bess '43 tells the story in a *Saturday Evening Post* article, a German woman had entered the shop and told the shopkeeper in German that she was in a hurry and that "this stupid American woman" wouldn't know the difference if he waited on her first. Mrs. Murphy protested, the shopkeeper became impertinent, and a dispute developed. The Nazis seized upon this incident, made Mrs. Murphy the butt of an anti-foreign political campaign, and, in short, raised such a clamor that the Foreign Office in Berlin finally requested the United States Government to remove Murphy from Germany. The United States promoted Murphy to the rank of foreign service officer and made him full consul at Seville, Spain, where he remained for several years.

ROBERT D. MURPHY

In the spring of 1930 Murphy became United States consul at Paris, France, and served in that capacity for many years. Demaree Bess says that "everyone in Paris loved Bob Murphy"; Varian Fry says that "his relations with the extreme right in French politics were warm and those he had with republicans correspondingly cool," and charges him with sympathies for "Laval '40 and the counterrevolutionaries" long before the Second World War. According to Edgar Ansel Mowrer '41, fear of Communism led Murphy to approve "the Munich surrender and the destruction of Czechoslovakia (accused of furthering Bolshevism)" and Murphy often inveighed in Mowrer's presence against the French Popular Front.

Murphy's duties, during all his years in the various consulates, had been of a routine nature: "issuing passports and marriage certificates for Americans; recording the births of their infants; granting visas to tourists and immigrants; making out trade licenses; filling out forms in triplicate; answering correspondence." Long known as a "quiet, cagey political explorer with a camera eye and a nose for inside news," Murphy himself did not seem to have been satisfied with this minor role, which required no "great skill in diplomacy or any deep knowledge of international politics," especially in view of the fact that he had, since the inception of his career in 1917, already performed many delicate scouting operations. He appealed many times to be transferred, but Ambassador Bullitt '40 (who arrived in France in 1939), as well as the two Ambassadors preceding him, apparently found Murphy's services much too valuable to be lost. Deciding finally, however, that Murphy's

MURPHY, ROBERT D.—*Continued*

talents were too great for them to be wasted in a minor position, Bullitt persuaded the State Department to relieve Murphy of his consular tasks and to appoint him counselor of embassy, a post second only to that of the Ambassador himself.

When France fell Murphy became chargé d'affaires at Vichy during the establishment of the Pétain Government. According to the New York *Herald Tribune*, he consulted with Marshal Pétain '40 and other Vichy officials both during the establishment of this Government and during their protracted negotiations with the Nazis over the question of "collaboration," and with Generalissimo Franco '42 after the Spanish dictator's conference with Mussolini '42. There seems to be little question that his relations with Vichy were friendly. A friend of Henry-Haye '40, Murphy insisted that Vichy's Ambassador to the United States was opposed to Hitler '42 and all he stood for.

According to *Newsweek*, in November 1940 a memorandum submitted to Secretary of State Hull by his advisers suggested among other things that "the United States should strengthen its position in North Africa against the day when it might be drawn into war. Then, should war come, this country would not only be in a position to exert a powerful influence in the Mediterranean zone, but might some day be able to use North Africa as a base for attacking the Axis from the south." Hull agreed, convinced President Roosevelt '42 and Secretaries Stimson '40 and Knox '40, and chose Robert Murphy, then visiting Washington, for the job of cultivating French and native good will in North Africa.

Murphy returned to Vichy in December 1940. In the spring of 1941 he was recalled to Washington in order to give the Secretary of State a first-person report on: "his estimate of reports that Spain would cooperate with the Axis powers in Morocco, Tangier, and Gibraltar in an attempt to bottle up the Mediterranean; the present attitude of Marshal Pétain, French Chief of State, and the Vichy Government toward Adolf Hitler's demand for closer 'collaboration' with Germany; Murphy's recent survey of political, economic, and military conditions in France's African possessions, especially the degree of Vichy's influence on General Maxime Weygand '40, who commands the French Army there."

Murphy had visited Weygand in Morocco just a short time before, but what he revealed at that time is not known. Weygand is, however, said to have once remarked to Murphy in discussing a possible American move on French Africa: "If you come with one division I'll fire on you. If you come with twenty, I'll embrace you." And Murphy once boasted, it is reported, that he accompanied Weygand to Mass every morning and "had him in his pocket." On the other hand, according to General Mast, the American mission headed by Murphy was virtually quarantined by Weygand, who ordered all the officers under his command to refrain from having any dealings whatever with American diplomatic or consular personnel, and those French officers who took the lead in conversations with Murphy and his associates were thrown into Vichy prisons at Weygand's orders.

Eventually the United States State Department worked out a North African agreement with Vichy. That agreement, according to Demaree Bess, not only permitted the distribution of American food and clothing supplies in North Africa but also "permitted us to send a group of twenty observers to North Africa as a counterbalance to the group of Germans who were stationed there as members of the armistice commission." As chief of this rival armistice commission, the State Department appointed Vichy Chargé d'Affaires Robert Murphy. Murphy first proceeded to Vichy, where he assembled his staff of technical experts, who had been "quietly selected from a large field of applicants," and, accompanied by this group, went to North Africa. "When he arrived in Algiers, Murphy began the sharpest and hardest diplomatic struggle of his career." Leaving his wife and three daughters, Catherine Claire, Rosemary, and Mildred Margaret, in Washington for the duration, he established his headquarters with Felix Cole, the regular American consul, in a Moorish house "just off one of the main palm-fringed squares of Algiers." "The trim, tanned American with the quick smile" made himself well known and a popular figure in the modern French section of Algiers, says Bess. He made it his business to mix with French officials and military and naval leaders. Himself an ardent Catholic, he continued to attend Mass with important French functionaries. He was, however, equally well known and respected in the Casbah, the native quarter, where he was bowed to as director of made-in-America supplies, says the same writer. Occasionally he left Algiers on "quiet, unexplained expeditions, shuttling to and fro in French commercial planes over the cork forests and olive orchards of North Africa from Casablanca to Tunis."

The group of experts who accompanied Murphy to North Africa had the rank of vice-consul, although most of them were wholly inexperienced in diplomacy. It is reported that one of these "amateur agents" believed in "direct diplomacy." Soon after his arrival, without consulting Murphy, he went to call upon a certain tribal chieftain. "I have unlimited funds for propaganda," he is supposed to have announced, "and I want you to tell me where I can hand out money to the best advantage." This particular native ruler happened to be in the pay of the Germans; but the incident "may have unconsciously contributed to our success, because they gave our German antagonists the impression that we were too clumsy to succeed in this game of intrigue."

From the first Murphy's activities aroused speculation. In May 1941, for example, Ben Robertson '42 wrote from London: "Murphy here in some quarters is believed pro-Vichy and is described as the kind of a man who is apt to say what he thinks people about him would like to hear." He said that Germans were constantly moving into Morocco and that Tangier was teeming with Germans, and suggested that Murphy had "fully misinterpreted or failed himself to understand the true picture and that he did not tell the French in Morocco about the extent of American aid to Britain." America's feeding of North Africa was also being called appeasement in the United States at about the same time that a violent denunciation of Murphy as a conspirator who had been working up a secret deal with the De Gaulle '40 forces appeared in the German-controlled Paris newspaper *Aujourd'hui.*

"By the exercise of infinite patience and tact," writes Bess, "Murphy finally created one of the ablest groups of intelligence agents ever assembled by Americans. The task of these men was not only to learn and report everything of importance which happened in North Africa but also to make those contacts which enabled them to swing to our side almost all the tribal headmen and a large proportion of French officers before our expeditionary forces under General Eisenhower '42 arrived." In Algiers, according to the London weekly *Tribune,* Murphy started talks with General Noguès '43, Governor General of Morocco, and with many other military and civil representatives of Vichy in North Africa. Germany heard of this, and a fierce campaign developed demanding Noguès' recall. Then Admiral Darlan '41 went on a tour to West Africa and made speeches emphasizing Vichy's determination to resist attack. Suddenly the Germans declared themselves satisfied with Noguès, and Darlan returned to Vichy. By this time the arrival of a vast convoy of warships in Gibraltar was public knowledge, as was its departure eastward, the *Tribune* goes on to say, implying that the Allied invasion of North Africa that followed in November 1942 was far from a surprise to Darlan or other men of Vichy.

Whatever the truth of the matter, the American Expeditionary Force apparently caught the Germans by surprise: their whole armistice commission in Algeria was captured. At the moment Murphy was in jail, placed there by the French commander, General Alphonse Juin '43, but all armistice negotiations were postponed until he was freed. Then he took his place beside Lieutenant General Dwight D. Eisenhower '42, commander in chief of the Allied forces in North Africa, in the conferences with French leaders. Murphy's was the primary responsibility in the negotiations that followed. Even earlier he had arranged the escape of General Giraud '42 from France to North Africa, and he probably had much to do with placing Darlan '41 in power after that gentleman, in Algiers by accident or design and taken prisoner by the Allies, ordered resistance to cease in the name of Marshal Pétain. This move, according to Varian Fry, made it inevitable that Murphy "should have earned the undying hatred of French democrats, who . . . felt that they had been shamelessly betrayed." According to General Mast, the groups of resistance he had organized in Algiers were the ones who took over the city and saw to it that the Anglo-American forces were able to organize the place almost without firing a shot—and these groups of resistance were made up of civilians who were almost all partisans of General de Gaulle '40. Murphy's dealings with Darlan and other men of Vichy were, however, explained by the fact that de Gaulle had few followers in North Africa.

But not everyone was so critical of Murphy's strategy. In December 1942, as President Roosevelt's '42 personal representative in North Africa, he was awarded the Distinguished Service Medal "for his negotiations with the French authorities before the occupation and for ending hostilities with the French." The medal was presented to him by General Eisenhower, and the citation was for "distinguished service to the United States," and "outstanding qualities of leadership and sound judgment." Several days later Murphy received the official rank of Minister to North Africa from President Roosevelt, but he continued to serve on General Eisenhower's staff, advising on political problems.

Soon after the assassination of Admiral Darlan, a communiqué issued by the office of the high commissioner announced that twelve prominent Frenchmen had been placed under preventive arrest. The commissioner, General Giraud, said that "the arrests had been made to forestall any attempts to assassinate him and Robert D. Murphy," the American Minister. The names of the persons who were arrested were not revealed, but Giraud did admit that they included "some of my best friends," and that at least two were United Nations sympathizers who had helped make possible the Allied landings in Africa.

At the same time liberals were beginning to ask what was going on in North Africa. Ernie Pyle '41 wrote in the New York *World-Telegram* on January 4, 1943: "We have left in office most of the small-fry officials put there by the Germans before we came. We are permitting Fascist societies to continue to exist. Actual sniping has been stopped, but there is still sabotage. The loyal French see this and wonder what manner of people we are. . . Our enemies see it, laugh, and call us soft." Few political prisoners had been released at this time, nor had the anti-Jewish laws yet been repealed, and there were many demands that Murphy be replaced by someone interested in the Four Freedoms. Varian Fry wrote that in an incipient civil war the United States had "spurned republicanism and chosen authoritarianism. . . It is difficult to avoid the conclusion that it has been dictated by officials who are consciously or unconsciously in sympathy with the thinking of Vichy. Chief among them is of course Robert Murphy."

Walter Lippmann '40 in the New York *Herald Tribune* charged that the deliberate "policy of totalitarian suppression . . . adopted by the State Department concerning political issues which cannot possibly come under the head of military secrecy and about which the Axis must certainly know everything by this time," led to the conclusion that "on the record, as it has so far been vouchsafed, Mr. Murphy appears to have bungled a delicate and difficult responsibility; that the political preparation for the North African expedition proved to be almost as bad as the military preparation was good; and that there has since been a misguided attempt to escape the consequences by a disastrous combination of censorship and inspired propaganda, which has only resulted in worsening the situation all around. . . Mr. Murphy may be a paragon among diplomats; but the effect of the course adopted has been to destroy American confidence in his activities, to create alarming doubts in Great Britain of American intentions, to throw the French into confusion and to spread distrust and dismay much farther through the ranks of the other victim peoples and their leaders." The *Herald Tribune* felt that "Mr. Murphy's usefulness is over; that he should be replaced by a diplomat on the scene of much greater authority and standing, and that the timorous attempt to conceal mistakes by the manipulation of the news should be promptly replaced by a policy of full and courageous frankness."

In reply to these criticisms, Secretary Cordell Hull said at a press conference that Murphy was well able to take care of himself and that this would prove true also of his record when it was made known. Officials and friends in Washington, according to the New York *Times*, regarded Murphy as "the man who sold the idea of cooperating with the United States to the French at a most critical time. In prevailing Administration opinion, he prepared the way for the American force of occupation and he did it by convincing all concerned of our sincerity and genuineness. It was not that the French people needed to have this sold to them; but he reminded them of the true attitude of the United States and he did it so convincingly that he produced the results."

This controversy was to continue for a long time. In January 1943 Murphy was blamed for the appointment of Marcel Peyrouton '43 (who had introduced concentration camps into France while a member of the Vichy Government) as Governor-General of Algeria. He was attacked for supporting Giraud in the struggle for power with de Gaulle, and criticized for helping to delay American recognition of the French Committee of National Liberation, of which the de Gaullists finally gained control. When in the fall of 1943 the French "purge" of ex-Vichyites began, he was even accused of attempting to prevent the punishment of such men as Peyrouton and General Boisson '43, who by this time were in jail on charges of treason.

That the State Department continued to have every confidence in Murphy's abilities was, however, obvious. He was a conspicuous member of the Presidential party during the Casablanca conference for "unconditional surrender" in January 1943, and he was to attend the Cairo and Teheran conferences later in the year. On November 22, 1943 he was appointed the United States member of the Advisory Council to the Allied Control Commission for Italy with the personal rank of Ambassador, also continuing on Eisenhower's staff as chief civil affairs adviser for Italian affairs. When in December he returned to Washington for consultations with officials and a leave of absence, it was his first real rest in nearly two years.

"A lanky, humorous man, with an erect carriage, and scarcely a gray hair in his well-groomed head," Murphy bears no resemblance to the "traditional concept of a diplomat." His favorite game is high-stake poker.

MURRAY, ARTHUR Apr. 4, 1895- Dance teacher

Address: b. 11 E. 43rd St, New York City; h. 820 Park Ave, New York City

"Wartime means jitters, and jitters mean more spirited dancing in this War as in the First World War," Arthur Murray, owner and director of the nationwide Arthur Murray Dance Studios, said recently. This leading exponent and teacher of good as well as "spirited" dancing has had "far more effect on the dancing habits and tastes of the American people" than any of the "glittering, graceful greats" in the dancing world. He has taught and still teaches the elite and the masses of the American people the proper way to dance—the waltz, the fox trot, rumba, tango, conga, samba, *et al.* The bashful, the bold, the young and old, men and women in uniform and in mufti—all beat a path to his studio doors, for Murray has a chain of dance studios located in forty-seven cities and approximately 110 seasonal resorts. He employs about 1,300 of the most "personable, intelligent, patient, and talented" dancing teachers (carefully selected by him) to teach "a war-wearied and escape-seeking public the spirited dance routines of the day."

This intrepid master and teacher of ballroom dancing, first known as Arthur Murray Teichman, was born in New York City on April 4, 1895, the son of Arthur and Sara (Shore) Teichman. As a "tall, gawky, and extremely shy young boy" Murray withstood as best he could the usual quips and queries about his height put to him by the tough East Side youngsters of the neighborhood. He suffered through the prescribed public school course, hindered by an acute case of self-consciousness attributed to his extreme sensitiveness about his height. Then Murray attended the Morris High School, but after only a few months there he decided to leave school altogether and to seek employment. As he himself says, "After some months at high school I could stand it no longer. I thought I was too old to be in the first year of high school, and of course my height was still a paramount evil. By this time, too, my bashfulness and diffidence had become pernicious habits." After an exceedingly unhappy period of six months in which he found and lost ten jobs, Murray, on the advice of his parents, returned to school. This time his excessive shyness did not manifest itself so often, for he had learned to dance. A classmate at school had been responsible for this feat, his own sister having despaired at the mere suggestion of taking on the task. "Finally a girl in my class took pity on me and offered to show me some steps. . . She had patience and in due time I could dance."

A well known sports commentator recently broadcasted a story to the effect that Murray Teichman was hired as sparring partner for Jack Dempsey during a vaudeville tour. Dempsey fired him after the first performance, because he "danced" out of the champion's reach. Vernon and Irene Castle, who were on the same bill, decided that such skillful footwork was just what a dancer needed, and hired young Teichman for their act.

Murray soon found that dancing "took him out of himself," and with frequent attendance at dances held outside his own immediate neighborhood he began acquiring poise and self-confidence as well as the ability to dance well. He soon won a prize for the best dancing at a settlement house ball, and it wasn't long before he could be found nightly in a dime-a-dance hall teaching dancing for $5 a week. For the major portion of his income he worked days in an architect's office. In order to further perfect his dancing technique and to get a position at Castle Hall, "the nation's first really elegant *salon de danse*," he eventually invested $200 in a course in teaching the Vernon Castle way. At Castle Hall he taught all the dances that were popular during the period of the First World War—the Maxixe, the Castle Walk, the One Step, the Bunny Hug, and the Turkey Trot.

Having won the approval of the Baroness de Cuddleston, a professional dancing teacher, Murray was next hired by her to teach dancing at a fashionable resort hotel in Asheville, North Carolina. According to Ben Crisler of the New York *Times,* at this time the Baroness advised Murray to drop his Austrian family name of Teichman. For business reasons Murray complied, and he has been known as Arthur Murray ever since.

Apparently Murray did not get along very well with the Baroness—"especially," says the *New Yorker,* "after he found she was charging Mrs. Vanderbilt, one of his pupils, $50 a lesson and giving him $5." When the Baroness left the scene Murray, who was then eighteen years old, became chief instructor at the resort hotel. He remained there for three years and then went to the Georgian Terrace Hotel, Atlanta, Georgia, where he established the first Arthur Murray studio. After another three years of teaching Southerners to dance well, Murray decided there wasn't much of a future for him in ballroom dancing. He gave up the studio and returned to the North, where he had a succession of positions—salesman for a printing firm, worker in an advertising agency, and reporter on the New Haven *Register.* Then he returned to Georgia and enrolled at the Georgia School of Technology, Atlanta, where he earned his tuition by teaching dancing. As soon as he had "soaked up all Georgia 'Tech' knew about the arts of salesmanship, psychology, and suggestion," he decided to make use of his newly acquired knowledge by starting the Arthur Murray Correspondence School of Dancing. Combining advertising copy that had great personal and psychological appeal with "a prepared booklet of lessons illustrated with dotted-line diagrams of all the fundamental dancing steps," his mail-order business had quick success.

ARTHUR MURRAY

In 1925 the volume of his mail-order business warranted Murray's moving to New York and hiring a clerical staff. Though he still gave private lessons (chiefly to celebrities and socialites), he spent most of his time establishing studios throughout the country and writing advertising copy for the mail-order business. One of the first national advertisers to use the "they-laughed-at-me approach," he spent thousands on this type of advertising. Numerous articles and much advertising copy written by Murray appeared in the popular American magazines of the period. Determined that his advertising should reach people in every class of society, he managed to insert advertisements in every type of magazine and newspaper—from *Weird Tales, Practical Electrics,* and *Girls of Today* to the Sunday New York *Times* magazine section.

As for radio—Murray did not neglect this important advertising medium either. Beginning in the early '20's, "when he first broadcasted dance instructions over station WOR," he used radio to popularize both the sale of his book *How to Become a Good Dancer* (1938) and the private individual lessons given in his studios. Advertisers of highly personal products like Fleischmann's Yeast, Bromo Seltzer, etc. were anxious to combine both their radio and magazine advertising campaigns with Murray's glamorous business of dancing because they sold more products in that way. According to an article in *PM,* Murray did not fare too well under these arrangements, however. People had to wait until they accumulated a certain number

MURRAY, ARTHUR—*Continued*

of box tops, wrappers and/or coupons before they could get the "skeletonized version" of his learn-dancing-by-mail book (for which Murray received only about $5,000). If one were very anxious to learn to dance in a limited amount of time, this would be a lengthy and not very economical procedure for obtaining the book, which ordinarily sold for a little under $2.

In recent years Murray has chiefly confined his business to private dancing instructions given in forty-seven cities in the United States. The main headquarters for the studios are located at 11 East 43rd Street in New York City. From there, in his "small red-paneled executive office" with Dorothy Draper '41 decorated, Murray manages his studios, often writes his own advertising copy, and observes dancing trends. The only dance lessons he still gives are now offered to his instructors, who usually get a three months' course on how to dance and teach by the Murray method. Besides teaching them the Murray method, Murray also imparts to them his code of social behavior with pupils, the infraction of which can cost them their jobs. Teachers must not lose their tempers no matter how hopeless, trying, or impossible a pupil appears. Instead they must flatter and reassure the pupil, convincing him that he is making progress—for Murray claims he can teach anyone with two good feet to dance. Teachers are not allowed to make or accept dates with their pupils no matter who the pupils are. One dancing teacher's strict adherence to the last rule is said to have irked a high foreign government official no end.

Outside his executive office in curtained, mirrored rooms, each about the size of a living room, every pupil registered for a course receives individual instruction from his or her dance instructor. Music for all types of dancing is piped to each room from a "juke box" which Murray had installed in a central location in the building. A back door and a private elevator were also installed in the New York studios (the other studio is located at 695 Fifth Avenue) for the "timid souls." Many a person who would rather not have it known that he took dancing lessons has sneaked in for his lessons via the back door.

For the convenience of his pupils and in line with the times Murray recently instituted a "keep fit" dance class which is given one hour weekly for a nominal sum. This class is designed for tired, weary workers who are in need of the exercise and the relaxation which an hour of ballroom dancing affords.

In addition to numerous magazine articles written by Murray, he has written a special article under "dancing" for the *Encyclopaedia Britannica.* From time to time he also publishes the *Murray-Go-Round*, "a whimsical little house organ . . . filled with polite quips and familiar items about well known pupils."

Murray, now as renowned as the most celebrated of his pupils, is five feet nine inches tall and weighs 150 pounds. He is bald headed, has brown eyes, an olive complexion, and a ready smile. His favorite recreations are tennis, photography, and reading characters by dancing traits. He is president of the National Institute of Social Dancing, and his clubs are the Lotos, Advertising, and Beachpoint (New York City).

Murray's wife, the former Kathryn Kohnfelder, whom he married on April 24, 1925, is in charge of personnel of the studios. There are twin daughters, Jane and Phyllis, who, of course, dance as well as their parents.

NAIDU, SAROJINI (nī'dü sä-rō-jē'nē) Feb. 13, 1879- Indian poet; politician

Address: h. The Golden Threshold, Hyderabad, Deccan, India

India's leading woman Nationalist is Mrs. Sarojini Naidu, a poet, political writer, and speaker. In 1938 Dr. Henry N. MacCracken '40, president of Vassar College named her as one of the five most intelligent women in the world. For nearly forty years she has worked for reform in India, most of the time within the Indian National Congress. Incarcerated several times, she was jailed during Gandhi's fast in 1943, but has subsequently been released. Gandhi, whom she calls "my little old man," once said he saw no reason why Mrs. Naidu shouldn't be appointed viceroy when India received self-government.

Before the War she was the first hostess of India, and her salon in the Taj Mahal Hotel has been called "the hub of Bombay." The foreign correspondent who was touring India for a month or two to write a book, a fellow-Indian reports, found Mrs. Naidu's salon a godsend. "Here he learns more about Indian leaders and the party's inner politics in an evening" one observer related, "than he otherwise would in a month of arduous travel and interviews. And it takes all kinds to make a party at Mrs. Naidu's. Hindus and Mohammedans, Parsis and Christians, Congress leaders and liberals, writers and industrialists, Indian musicians and American novelists, all gravitate there sooner or later."

Mrs. Naidu was born Sarojini Chattopadhyay at Hyderabad, the capital of the State of that name, on February 13, 1879, the eldest daughter of Dr. Aghorenath and Shrimati Sundari (Devi) Chattopadhyay. Dr. Chattopadhyay was a Bengali Brahmin descended from an ancient family of Chattorajes Brahmins who were known throughout Bengal for their patronage of literature and art. He had studied at the University of Edinburgh, where he took the degree of Doctor of Science in 1877, and at the University of Bonn. On his return to India he established the Nizam College at Hyderabad and remained there as principal.

Mrs. Naidu has described her father as "a dreamer . . . a great magnificent man whose life has been a magnificent failure. . . He has a great white beard and the profile of Homer, and a laugh that brings the roof down. He has wasted all his money on two great objects: on helping others and on alchemy." In a letter to Arthur Symons, Mrs. Naidu wrote about the early influences of her childhood: "I don't think I had any special hankering to write poetry as a little child, though I was of a very fanciful and dreamy nature. My training under my father's eye was of a sternly scientific character. He was determined that I should be a great mathematician or a scientist, but the poetic instinct, which I inherited from him and also from my mother (who wrote some lovely Bengali lyrics in her youth), proved stronger. One day when I was eleven, I was sighing over a sum of algebra: it wouldn't come right; but instead a whole poem came to me suddenly. I wrote it down. . . From that day my poetic career began."

At the age of twelve Sarojini matriculated at the University of Madras. Her work there was brilliant, and upon graduation she was given a Nizam scholarship for study in England. It has been reported that her family sent her abroad to forget Dr. Naidu, a Rajput (lower caste than Brahmin) in Nizam College. In England she studied at King's College, London, and at Girton College, Cambridge.

English society made much of the young Indian scholar. They found her intellectually mature, talented in literature, and brave in setting aside Brahmin tradition in pursuing an English education. In the circles where Sarojini moved she met Thomas Hardy, Henry James, Richard Le Gallienne, Aubrey Beardsley, and other luminaries of the time. Arthur Symons is said to have compared her eyes to pools and Oscar Wilde to have made epigrams about her. Edmund Gosse, the poet and anthologist, became interested in her writing but was very much disappointed in her verse, which he found "totally without individuality." In his preface to her second volume of poems, he relates his first reaction to some verse she showed him. "They were Western in feeling and in imagery; they were founded on reminiscences of Tennyson and Shelley; I am not sure that they did not even breathe an atmosphere of Christian resignation. I laid them down in despair; this was but the note of the mocking bird with a vengeance." Gosse did not wish to discourage her, but he advised her to throw everything in this "falsely English vein" into the wastebasket and write "not a mere *réchauffé* of Anglo-Saxon sentiment in an Anglo-Saxon setting, but some revelation of the heart of India, some sincere penetrating analysis of native passion, of the principles of antique religion, and of such mysterious intimations as stirred the soul of the East long before the West had begun to dream that it had a soul." As a result Sarojini wrote no more Western poetry and used Indian subjects and backgrounds almost exclusively. In 1898 Sarojini's health broke down. She returned to India and "shattered caste barriers by marrying Dr. Naidu although he was of lower caste than she." During the following years she devoted herself to the careful rearing of four children, to the enlightenment of the "veiled and tradition-fettered Hindu and Moslem women," and to writing lyric verse.

SAROJINI NAIDU

Arthur Symons praised Sarojini for her "Indianness" in his introduction to her first volume of verse, *The Golden Threshold* (first printed in 1905 and reprinted in London in 1916). Her poems, he wrote, "hint in a delicately evasive way at a rare temperament, the temperament of a woman of the East." In his introduction to Sarojini's second book of verse, *The Bird of Time* (published in England in 1913 and in the United States in 1916), Edmund Gosse wrote that her poems "spring from the very soil of India, her spirit, although it employs the English language as its vehicle, has no other ties with the West." Her emotions, he pointed out, are tropical and primitive, and he felt that "if the poems of Sarojini Naidu were carefully studied they would be found as luminous in lighting up the dark places of the East as any contribution of savant or historian."

(Continued next page)

NAIDU, SAROJINI—*Continued*

The Broken Wing, Sarojini's third volume of verse, appeared in 1917. One of the most frequently admired lyrics is the *Indian Weavers:*

Weavers weaving at break of day
Why do you weave a garment so gay?
Blue as the wing of a halcyon wild
We weave the robes of a new-born child.
Weavers weaving at fall of night
Why do you weave a garment so bright?
Like the plumes of a peacock, purple and green
We weave the marriage-veils of a queen.
Weavers weaving solemn and still
Why do you weave in the moonlight chill?
White as a feather and white as a cloud
We weave a dead man's funeral shroud.

Although Sarojini employed a Western language and a western prosody, most of the Indian and English critics felt that her work was Indian poetry in the Hindu tradition of Ghalat, Zok, Mir, Hali, and Iqpal. The Boston *Transcript* reviewer, however, felt as if she were a Western poet singing of Eastern life, and expressing exotic rather than natural moods. Other critics in America found her verse "exquisite in verbal beauty and eloquent with spiritual comprehension" and "delicately beautiful."

Mrs. Naidu's career in politics and social leadership began in 1905 when she addressed the All-India Social Conference in Calcutta. Although she lectured in the larger Indian cities and worked unceasingly for reform on social, educational, and political questions, she was regarded as a moderate until 1919 when she became a disciple of Gandhi ['42]. She has followed him ever since. In 1924 she toured South Africa to agitate for improvement of the conditions of the Indian settlers there, and the following year Cawnpore, "the land which during untold centuries has shown incredible cruelty to its women," chose her to preside over the province's National Congress meetings.

At the 1925 session of the Indian National Congress a serious cleavage occurred between the followers of Gandhi's *Satyagraha* policy (non-violence, non-cooperation) and the "younger, more impetuous chiefs of the Nationalist and Swarajist Parties, who advocated office-holding under the British and an attempt to weaken the British administration from within." The following year, although the Swaraj Party was in control of a large number of seats, Mrs. Naidu was elected president of the Congress. She opened the Congress in English with a speech in which she emphasized her womanhood and her motherhood: "I who have rocked the cradle, I who have sung soft lullabies, I, the emblem of our Mother India, am now to kindle the flame of liberty. In electing me to be the chief among you, through a period fraught with grave issues and fateful decisions, you have reverted to an old tradition and restored to the Indian woman the classic position she once held in a happier epoch of our country's history."

The 1926 Congress, according to one commentator, became "not a voice of the people, but a body of politicians burdened with grievances of their own." The sessions often lasted for eight hours or longer. Gandhi was the only one who sat on a chair; all the others were seated on the floor. Mrs. Naidu, by this time no longer the slim girl of her youth, found it hard to rise gracefully. She often rose only to her knees in order to recognize a speaker. If a serious disturbance threatened, however, it is said, "she was instantly on her feet." A vigorous executive, and a firm-handed one, Mrs. Naidu worked hard to bring the Congress to both her and Gandhi's position. "How shall I kindle the flame which shall waken you men from slavery?" she challenged the opposition in one of her speeches. "We are a people disorganized, divided. We are traitors because we are afraid; cowards by compulsion. We are exploited by the white race, the yellow, and the brown. You men, what are you but cheap imitations of models from the West? You have run after false gods that slay you, devour your honor, and the honor of your race." Keeping a religious note pervasive through her exhortations, she summoned India to "crescent honors, splendors, victories vast."

According to Charlotte Vial Wiser, Mrs. Naidu during her term as president showed "dramatic qualities, poetic talent, and personal charm, but she depends on those around her for direction." This policy led to confusion. "In committee meetings youthful patriots hotly addressing the chair found her absorbed in consultation with some adviser," usually Gandhi or Nehru ['41].

In 1928 Mrs. Naidu visited England and the United States, speaking to various groups on the Indian question and criticizing the impression of India given in Katherine Mayo's *Mother India.* Although in India she had been accustomed to wear plain homespun, in the United States Mrs. Naidu wore her colorful native robes and the red spot of the Brahmin caste on her forehead. (In trains she was often mistaken for a gypsy and asked to tell fortunes.)

In England that same year Mrs. Naidu criticized the feminist movement, although before the First World War she had campaigned for woman suffrage in England. "I'd be ashamed to belong to such a movement," she is quoted. "It is a confession of women's inferiority." It is said that she prefers the Indian social system to the British, because in India a woman does not have to work unless she wishes to so long as any male member of her family is alive.

Before the 1930 salt march Gandhi named Mrs. Naidu to the succession of leadership of the Congress Party in case of his imprisonment and that of Abbas Tyabji, a former Moslem judge, who was next in command. Gandhi and Tyabji were arrested, but the part of the march led by Mrs. Naidu was blocked by the police, and she remained free to carry on Congress work. She assumed command, saying: "We ask no quarter and we shall give none. . . In making the most of this heaven-sent opportunity, neither jail nor death shall hold any terrors for me."

Typical of this same attitude, according to De Witt Mackenzie, "was her defiance of a high government official some years ago when she declared her intention of holding the annual convention of the All-India Congress despite the fact that the Government had forbidden the meeting. 'Come and imprison me,' said Mrs. Naidu. 'The Congress must be kept alive, and you could pay no greater tribute to the vitality and influence of the organization than to forbid its meeting. But we will not obey your command. You can arrest tens of thousands of our people but you cannot deprive us of our right of free speech.'"

Mrs. Naidu has been arrested almost as often as Gandhi, although her terms have usually been shorter. In illustration of her dominant individuality John Gunther ['41] relates a story of how "on one occasion the police were terrified by having to arrest her, and she visited police station after police station demanding to be jailed. The police, once they had her, dutifully took her advice on what to do next." She was arrested in the winter of 1940 and again in the summer of 1942 for nationalist activities, but was released because of ill health. A Reuter dispatch, dated September 1941, almost a year after one of Mrs. Naidu's arrests, credited her with "unstinted admiration for the British people, from Mr. Churchill ['42] down to the youngest child in the country, 'who have not hesitated to stake their lives to let England be free.'" "The English," she is quoted, "were practicing the noble virtue of not indulging in preaching, while the Indians were only preaching and not practicing in the matter of fighting for freedom." In an address at the Calcutta Women's College, about the same time, Mrs. Naidu condemned the type of nationalism which motivated the activities of Germany, Italy, or Japan. "Their nationalism," she said, "was the kind of greedy spirit which said that the world existed only for them."

Mrs. Naidu has been twice honored by the British. She was decorated by Edward VII for organizing flood relief in Hyderabad and she has been made a Fellow of the Royal Society of Literature in England. (Her brother Harindra is well known in England and in India as an actor and dramatist. Another brother lived in Berlin and was the "intellectual mentor of many radical Indians who had made their homes somewhere in Europe." At the outbreak of the Second War he disappeared.)

Mrs. Naidu feels as she imagines Joan of Arc must have felt. She looks for the day "when the finest Untouchables will be ruling me, a Brahmin." Stout and slow in her movements now, according to Shridharani ['42], she is reported to have been very beautiful in her youth. She gave up writing verse a long time ago to devote herself to the cause of Indian nationalism, and now that her children are grown she has assumed no interests or responsibilities outside her cause. "I was born a rebel, have lived a rebel, and expect to die a rebel unless I free India.

NEWMAN, ALFRED Mar. 17, 1901- Film composer and conductor

Address: b. c/o Twentieth Century-Fox Film Corp, Beverly Hills, Calif.

"Music in or for the films is as old as the movies. In the beginning—half a century ago and for years afterward—music was added more to cover up the noise of the projection machine than to provide emphasis of tempo, rhythm, or emotion. Original music is an endeavor hardly exceeding the last ten years. Among those studio staff composers who car-

NEWMAN, ALFRED—*Continued*

ried the torch of music during many a musical dark night in Hollywood, foremost mention goes to . . . Alfred Newman, now at Twentieth Century-Fox. Thanks to men like him, film music commenced to come of age about five years ago." Bruno David Ussher's praise of Alfred Newman is just one indication of the fact that at last the obscurity of the motion-picture musician is about to be dispelled, and the composer, along with the actor and director, will be granted the public recognition which he deserves for his contribution to the success of the film industry.

One of Hollywood's most versatile and gifted composers, Alfred Newman was born on March 17, 1901 in New Haven, Connecticut. He started to study the piano at the age of seven, and made his first public appearance at eight, playing among other things the *Waldstein Sonata* by Beethoven. In 1911 he moved to New York, where he later studied piano with Sigismond Stojowski and Paderewski, and composition with Stojowski, Rubin Goldmark, and George Wedge. The child prodigy gave recitals in New York, Boston, and Philadelphia and was piano soloist on two occasions with the New Haven Symphony Orchestra under Horatio Parker, playing the Rubinstein *D Minor Concerto* on one occasion and the Schumann *A Minor Concerto* on the other. The Fonanda Conservatory awarded him two gold medals, one for piano and the other for composition, among the judges being Dr. Karl Muck '40, Paderewski, and Busoni. Newman also studied "piano-vaudeville" with La Rue and Bordoni.

When he was only sixteen he became musical director of the first George White *Scandals*, and before going to Hollywood he conducted all the Gershwin shows. He is not inexperienced as a symphonic conductor, having been guest conductor on several occasions with the Cincinnati Symphony Orchestra, the Los Angeles Philharmonic Orchestra, the Hollywood Bowl Orchestra, and the American Orchestral Society of New York. Newman has composed a piano quintet, a piano sonata, orchestral suites, and "lithographs." After having been associated with United Artists and Samuel Goldwyn, since 1939, he has been devoting himself to his work as musical director of Twentieth Century-Fox, with which studio he has a long-term contract.

Although Newman has referred to himself as a "hack-musician," his colleagues in the film industry place him in the vanguard of the industry's composers and conductors. During his nine years with the Goldwyn Studios it is said that Sam Goldwyn valued him as he did his stars. Newman has composed the scores for such outstanding films as *City Lights* (1932); *Dark Angel* (1935); *Dodsworth* and *Stella Dallas* (1937); *The Adventures of Marco Polo* (1938); and *How Green Was My Valley* (1942). Newman and Vidor working together achieved some remarkable effects in *Street Scene* (1931), for example, after the murder, a series of close-ups each presented with a dissonant chord. In *Hurricane* (1937), Newman had a chance to show what he could do in the way of heightening drama on long stretches of sound track "uncontaminated by dialogue." He tried to bring out something of what he believes to be the elemental quality of the New York slums in *Dead End* (1937)—a quality distinct from the sordidness, for which the only word he can think of is "nobility." Other scores which won praise were those for *The Hunchback of Notre Dame* (1939); *Gunga Din* (1939); *They Shall Have Music* (with Heifetz, 1939); and *The Blue Bird* (1940). No small part of the emotional impact of *Wuthering Heights* (1939), its mystery and suspense, was the result of the successful integration of Newman's score with the photography and acting.

One of Newman's most difficult assignments was the directing of the musical score of *Modern Times* (1936) for Charlie Chaplin '40. According to Oscar Levant '40, orchestrator David Raksin "came to Hollywood primarily to take down Chaplin's whistling of his own score for *Modern Times*. Since the whistling method of composing is a rather tenuous thing, and in any case Chaplin's whistling is at best pretty derivative, the difficulties of such a collaboration may be imagined. It was arduous enough for Raksin to sit all day waiting for Chaplin to whistle, without the further complications of that artist's temperament. The inevitable thing happened, but Newman patched up the argument and Raksin went back to taking down Chaplin's whistling. . . Newman—who is the best conductor by far in Hollywood—had a tremendous argument with Chaplin. . . Being independent as well as able, Newman walked out on the job, and Eddie Powell was called in to direct the last reel. Apparently Newman found that the whistling type of composer is more trying by far than Stravinsky '40 and Schoenberg '42 together."

Oscar Levant also states that the influence of Alfred Newman (along with Max Steiner '43) on film music has been such that several years ago Louis Silvers, who was then in charge of musical affairs at Twentieth Century-Fox, and who confined himself to conducting and supervising rather than composing, was so disturbed by the newer trends in film music that he "fortified himself by securing the services of the fine Austrian modernist, Ernst Toch. Silvers never actually utilized his talents to write a film but kept him as a kind of Toch in the hole, in case Steiner or Newman put over something revolutionary in one of their pictures."

One of Alfred Newman's pet grievances is that critics never mention his contribution when reviewing a film—not even to say that it is bad. This attitude has been fostered by the producers, many of whom feel that a score that attracts comment of any kind is detracting from their costly Beverly Hills stars on whom they wish to see all attention centered. More than that, various producers are still proudly, belligerently ignorant of the fundamentals of music or, even worse, not at all aware that a little knowledge is a dangerous thing. Levant recalls the plight of one producer "whose social prestige decreed his presence at a certain Hollywood Bowl concert. It chanced that the important work of the evening was the C Minor Symphony of Beethoven, which he suffered in silence until the coda of the final movement. This has, as you will recall, what could be described as an 1805 Roxy finish, with the tonic and dominant chords repeated a dozen times, with flourishes. At each insistent recurrence of the tonic he half rose from his chair to facilitate his exit . . . also because he was bored. When the third series of tonic and dominant chords still left him short of the actual end of the movement he turned and muttered, 'The rat fooled me again!' On this same program was a two-piano concerto by Mozart, which he dismissed with the terse comment: 'It never got anywhere.'"

Under the circumstances, it is not strange that motion-picture publicity releases have not stressed the talents of even the greatest of film musicians. Though well known in Hollywood, to the motion-picture public they are merely names on a credit line. The public is not entirely indifferent, however, as is attested by the fan mail which the music of a film frequently attracts—"not the vulgar kind, requesting autographs, but a high-class, impersonal, even rather learned kind, requesting information or entire scores, or perhaps merely conveying compliments." Sometimes it is difficult to know to just which individuals credit and compliments are due, since under the Hollywood mass production and division of labor system the composing, arranging, and orchestrating of any one score may be the work of half-a-dozen men.

Perhaps this situation accounts for the reluctance of the most scholarly of Hollywood organizations, the Academy of Motion Picture Arts and Sciences, to consider music as "one of the categories of work and talent contributing to the value or success of a film." Annual awards have been presented by the Academy since 1928, but only since 1934 has music been considered for one of these awards. Even after that no distinction was made for several years between compiled scores containing large excerpts from the classics and completely original scores written by one composer. In 1938 the Academy gave two musical awards—one for the best original score (called Best Score) and one for the best adaptation (called Best Scoring). The latter was won by Alfred Newman for his work on *Alexander's Ragtime Band* (1938). Newman won the Best Scoring Award again in 1940 for *Tin Pan Alley.* His admirers had an unusual opportunity to see him at work, too, when he took the part of screen "musical director" in the film *Music School,* which starred Jascha Heifetz.

Newman is the leading exponent in Hollywood of a theory known as the "over-all" or "mood" scoring technique. In contrast to Max Steiner's "Mickey-Mouse" background music which attempts to follow the screen action exactly, according to Oscar Levant the composer merely endeavors to "suggest the whole atmosphere of a sequence with just a few main motives. Thus, in a triangle picture, you have a 'spiritual love' theme, the 'other woman' theme, and probably a motive for 'conflict.' . . It has always impressed me, however, that the 'other woman' theme is generally more exciting, a good deal more enthusiastically written, than the one for the wife."

Newman is particularly opposed to the kind of crude background music which was one of the earliest methods and still exists to some extent in Hollywood—"whenever a man plunged through a manhole, movie music would follow him right down into the bass clef. Or, should a girl run upstairs, a light little upward run . . . would run up the flute with her." He does recognize, however, that his work is part of a whole and that he must always keep in mind the practical use to which his talents are being put. "If I want to write 'great music,'" he said on one occasion, "I've no right to be here. Good picture music must always be inspired by the picture of which it is a part, not be the desire of a composer to 'express himself.'"

Whether or not the symphonic scores written as background music are worthwhile in themselves is a debatable question. Bruno Ussher says that while the dance songs written for musicals are made into phonograph records, "many a worthwhile sequence from important background scores has remained in manuscript and lies dormant in the fireproof film track vaults of the different studios." He admits that some are only dramatically worthwhile, while others are musically worthwhile. Oscar Levant deplores the clichés, the devotion to formulas, the lush orchestration of Hollywood scores, but realizes that part of this situation is due to the necessity of composing for a predetermined space. There is "no nonsense of allowing an idea to develop," he says. He also divides the types of orchestration in general use in Hollywood into two main types, "generic" and "derivative." "'Generic' is something that sounds like something else. 'Derivative' ... is a term of stronger censure, implying that you have lifted the whole texture from some not-too-familiar source." Nevertheless he praises Newman as a fine orchestrator. "Much of the fine work these men do is conditioned by the characteristics of sound-track recording. A clarinet against six brasses is all right if the clarinet can walk up to the microphone and play his solo there. It is another problem to score for the concert hall, where such an effect would be lost completely." Newman is particularly interested in this technique, peculiar to film orchestration. He feels that certain effects are obtainable on the sound track that could never be achieved in an auditorium. He likes to experiment with the "microphonic valeurs," playing with what he calls "perspective" for solo instruments and the use of the human voice as an orchestral instrument.

Hollywood itself feels that it is painlessly inculcating musical taste in the American people—people who would never willingly or knowingly listen to symphonic music are unconsciously absorbing it on the average of once a week through their motion-picture theatres. Certainly quantitatively, both as to amount of music and number of listeners, Hollywood's musical taste is likely to have an enormous influence on the collective American eardrum. When one considers that music departments have become huge production units producing simultaneously background music and songs for as many as fifteen pictures at the same time, it is apparent that the "big-name" music department heads at the important studios have become administrators, relegating the actual

NEWMAN, ALFRED—*Continued*

writing and recording of music to subordinates. Alfred Newman, however, is among the few who are engaged regularly in composing scores while serving as executive division heads. He has been described as one of the most versatile composers, working on several scores at the same time, and is considered to be one of a small group of musical leaders in Hollywood who, in spite of the "steady burden and rush, have greatly advanced methods of production and standards of music," so that competent observers now believe that Hollywood is in the midst of a cycle characterized by musically more and more significant, as well as extensive, background scores.

One of Newman's outstanding contributions to modern music was not concerned with film scoring at all. Along with many other composers and orchestrators in Hollywood, Newman had been a pupil of Arnold Schoenberg '42, who, after a stormy European career, had settled in California and, without himself composing anything directly for the films, has had a very great influence on film music. Schoenberg was reasonably content in Hollywood, except for the fact that interpretative artists were more inclined to praise than to play his latest works in public. "He's a dear guy," said Newman, "and one day when he was complaining that nobody got the chance to hear his most recent compositions, I had a rash impulse. He told me the Kolisch Quartet was to play all four of the quartets at a festival at the university, and that he regretted the fact that none of the gramophone companies seemed interested in making records of these works. I said that if the Kolisches would give their services, I'd borrow the studio sound equipment to make a set of master disks. That promise made him happier than I've ever seen him. Of course, I had qualms when I remembered that it costs about $85 an hour to make records on that sound outfit, and that after all, I'd have to get Mr. Goldwyn's permission to use it, or pay for the whole business out of my own pocket. I had visions of selling the car and hocking the furniture, but Mr. Goldwyn came through like the swell fellow he is. . . We pressed twenty-five sets of the recordings, and friends of mine and Schoenberg's bought them at cost. We can't, under the sound-equipment franchise, make records commercially." Although these quartets were derided by the commercial recording companies as "cacophonies," many modern musicians have been deeply impressed by them. Newman is proud of the fact that Hollywood "made possible the recording of four important modern compositions. We had a chance to do something for music that the art for art's sake boys couldn't or wouldn't do, and we took it. Once in a while, you see, we can be unfaithful to the great god Profits."

Outside of the studio, Newman is the moving spirit of one of Hollywood's "toughest gangs." It is composed entirely of film musicians who once or twice a month sneak off to somebody's house, drink gallons of beer, and play Mozart, Bach, and Beethoven chamber music for hours.

NIEMOELLER, MARTIN (nē'mœl-ler) Jan. 14, 1892- German pastor

Of all the enemies that Hitler '42 has made, there is none whose courage is more universally respected than Pastor Martin Niemoeller, who since 1938 has languished in German concentration camps because of his bold opposition to the Nazification of the German Lutheran (Evangelical) Church. The name of this uncompromising fighter for religious freedom, famed as a U-boat commander during the First World War, is today honored by anti-Fascists of all colors both within Germany and without. Today it seems unimportant that Niemoeller, a nationalist and a believer in authoritarian government, is politically much closer to Hitler than to most of those who pay homage to his courage. It is only in the realm of narrowly defined ecclesiastical interests that Niemoeller has ever refused to recognize or obey the authority of the Third Reich, whose advent he welcomed in 1933 under the false impression that under Hitler the traditional cooperation between Church and State would be reinstated. But it is little wonder that German conservatives, who fear the outbreak of social revolution in Germany when Hitler is overthrown, place their hopes on Niemoeller and on men like him. Tomorrow Niemoeller's political views may not be so unimportant, as Countess Waldeck hints in *Meet Mr. Blank* (1943), whose *leitmotiv*, according to Lilian Mowrer '40, is "Better let the Nazis off lightly or you'll be sorry for it."

Martin Niemoeller was one of five children, the son of Heinrich Niemoeller, a Lutheran minister, who emerged from retirement when his son was imprisoned and who died in the midst of an active ministry in March 1941, and of Paula (Mueller) Niemoeller. He was born on January 14, 1892 in a parsonage at Lippstadt, the first town in Westphalia to embrace the Reformation. His family later moved to Elberfeld, a Rhineland city of 170,000 lying in Wuppertal. When he was eighteen he joined the German Navy and he was a sublieutenant in the High Seas Fleet when the First World War broke out.

Bored by port service with the high-seas fleet, young Niemoeller soon transferred to the young submarine service. From that time on practically all of his active war service was in the Adriatic and in the Mediterranean, although there was a short period of desk duty in the Berlin Admiralty. By 1916 he was commander of a ramshackle U-boat, the *U-73*. Under the French flag he sailed past British war boats guarding Gibraltar into the Mediterranean, and by the time he had sunk two Allied troopships and a British man-of-war he was known as the "Scourge of Malta." From that time on he flew the French flag whenever it suited his purposes. At one time, with Allied ships constantly in his wake, he returned to Germany and took enough time off to get married to Fraulein Bremer. He then sailed again as commander of the larger, modern *U-151*, in which he made a record of 55,000 tons of Allied shipping sent to the bottom in 115 days of steady cruising. Later, in the *UC-67*, he stole about outside Marseilles and sank so many French ships that the port was ordered temporarily closed. He finally cleared out when too many Allied subchasers were ordered to get him. During the closing months of the War, while standing on the bridge of the *UC-67*, just after completing the mine-laying operations in the course of which 17,000 tons of Allied shipping were sunk, he suddenly said to his second in command: "I will be a parson!" ("It was just a passing thought," he adds in his autobiographical *Vom U-Boot zur Kanzel* [From U-Boat to Pulpit], published in 1934, and later published as *From U-Boat to Concentration Camp* with his further story by the Dean of Chichester [1939].)

This German hero of the First World War wore his Iron Cross proudly. He did not believe that Germany could be defeated on the field of battle, and he blamed the treachery of "Marxist and pacifist elements" for his unvictorious home-coming. When he finally brought his U-boat into the harbor at Kiel in November 1918 he treated the new revolutionary government with contempt, and he refused to take his submarine to Scapa Flow and surrender it. Resigning his naval commission, he then went on the land as an agricultural laborer, hoping eventually to become an independent farmer. The inflation wrecked even these plans, and eventually the words spoken on the *UC-67* returned to him. He became a theological student at Muenster, working his way through the seminary as a common laborer, hoisting tracks in German State Railways until dismissed by trade union officials as a blackleg; working as a station agent; working as clerk in a local bank. By this time he had not only a wife but children to support. (There are now six children: Brigitte, Hans-Jochen, Heinz-Herm, Jan, Hertha, and Jutta.)

Even as a theological student he remained very much the soldier, however. In his own words, he played a "considerable part" in "those patriotic organizations" of which *Orgesch*, a mercenary troop from which Roehm drafted most of the early members of the S. A., became the most important. He helped to organize the Academic Defenders' League to help Kapp crush the Socialist Government in Berlin, and when the Kapp *Putsch* failed he offered his services to that same Government and in 1920 became commander of the 3rd Battalion of the League, which helped to suppress Spartacist (Communist) uprisings in the Ruhr and elsewhere. (The literary critic of the *Manchester Guardian*, reviewing his autobiography, says that he gave every evidence of having had the time of his life while putting down the Reds.)

PASTOR MARTIN NIEMOELLER

On June 29, 1924, after about two years of study at Muenster, Martin Niemoeller was ordained and appointed curate of the Church of the Redeemer in the same city. He next served as superintendent of the Lutheran Inner Mission in Westphalia, and in 1931 was called to the Jesus Christus Kirche in Dahlem, Berlin's wealthiest suburb. Most of the members of the church were of the old Prussian aristocracy, many of them men high in the councils of state; they were Junkers, diplomats, bankers. Like Niemoeller himself, most of them were strongly opposed to the Weimar Republic. Since 1924 Niemoeller had been voting for Hitler, and according to a few accounts was an enrolled member of the Nazi Party, as was his brother Wilhelm. Hitler had pretended an affection for churches as well as undying hatred for Marxism, and Niemoeller, often called Germany's Cotton Mather because of his exposition of the old hell-fire type of religion, saw Nazism as "an instrument approved by God for the revival of the German soul and as a bar to the further westward advance of a Godless communism." Like Hitler, too, he was "anti-democratic and anti-republican"; in Bella Fromm's words, he "opposed parliamentarianism, Pacifism, Marxism, and Judaism." And perhaps his World War service was not easily forgotten. As a writer describes him during this period: "Outside his church, dressed in his invariable blue suits . . . he swings along the street with the unmistakable gait of a sailor. His manner is bluff and hearty, and his face and hands still have that leathery color associated with seamen. His hair is cut military style—there are only a few streaks of gray in its darkness—and his eyes constantly snap, giving him a daredevilish ap-

NIEMOELLER, MARTIN—*Continued*

pearance. Lines and furrows in his face have softened rather than increased, and from his war service he shows only a hardly noticeable scar under his right eye."

Niemoeller greeted Hitler's assumption of office on January 30, 1933 with a heart full of thanks. "I am confident that Hitler will support collaboration between Church and State," he said. On the Sunday following the "Reichstag fire" election he spoke of the good prospects for "a government which protected and confirmed the alliance between the fate of the nation and the fate of the Church." But his disillusionment was a swift process. In the summer of that same year the Nazis began espousing the fusion of Nazi principles and racial dogmas with Christian faith. Niemoeller promptly signed a statement against the Reichsleitung committee of "German Christians," and helped to form an opposition organization, the Pastors' Emergency League, of which he became president. In November 1933 he was temporarily suspended from preaching because of his defiance of the Aryan paragraph to eliminate Christian pastors of Jewish ancestry, and in January 1934 his fulminations against the Nazi scheme to paganize Germany brought him a visit to the Gestapo. He did not go to jail, however: among his advocates were men like Dr. Hjalmar Schacht and Baron Constantin von Neurath, and he himself had formerly been hailed as a national hero after the Nazi pattern.

At the Synod of Barmen in May 1934 Dr. Niemoeller was one of the men who formulated the famous "Six Principles" over which the fight within German Protestantism has raged ever since. These "Six Principles" did not challenge the traditional Lutheran teaching regarding the obedience owed civil authorities—the ecclesiastical and the political were seen as two quite separate things—but they did maintain the right of the Church to choose and remove its own personnel and to conduct youth and other organizations, and they insisted that any doctrines contrary to Biblical teachings must be rejected, including the Nazi theory of "original human nobility" and Nazi racial theories. When in September 1934 a former Navy chaplain, Dr. Ludwig Mueller, was installed by Nazi pressure as the Reichsbishop of the German Evangelical Church, replacing the constitutionally elected Reichsbishop, from seven to nine thousand pastors refused allegiance and read from their pulpits a declaration in which Mueller and the Nazi civil administration of ecclesiastical affairs were said to have "withdrawn themselves from the Christian brotherhood" and to have "forfeited every right within the Church." Niemoeller called Mueller "the scourge of the Church of Christ."

By this time a new type of preaching had arisen, with pastors of Niemoeller's belief boldly reporting the state of the Church from their pulpits. Niemoeller himself traveled everywhere, reporting the facts, and he was the first to go to the aid of suspended pastors. Crowds flocked to his "open evenings" twice a month on Mondays for study of the Bible and the catechism; hundreds requested his services at weddings and funerals. In 1935 he read to his congregation the manifesto of the Confessional Synod's Brotherhood Council: "The State's power and sovereignty are solely a gift from God, who alone founded and preserves human authority. Whoever puts blood and race in the place of God, the Creator, destroys the State's foundation." The Nazis answered his challenge the following Sunday by arresting 500 pastors belonging to the Confessional Synod in Prussia, including Niemoeller himself, but once more he was released: apparently the Nazis still feared the consequences of jailing this man.

In one of Dr. Niemoeller's last sermons he spoke bitter words: "In principle our lives have reached the point where the Lord Caiaphas speaks the last word: 'It is better that one man—that this man—should die.' . . The confession of faith in Jesus Christ and the testimony to Him have at last been replaced by the question: 'What shall we do with regard to the inconveniences which arise for our peace as citizens, for the worldly prosperity of our children? How can we avoid trouble?' " His own answer was stated in another sermon: "God does not want us to await the end of His Church in silent resignation. It is thus that unbelief acts, which looks upon what is visible and fails when it finds nothing to which it can cling." On July 1, 1937 he was finally arrested and sent to Moabit prison, charged with seditious activity under a decree for protection of the State and the Nazi Party, with abuse of the pulpit, with inciting to disobedience of a State decree, and with actions contrary to the ministerial ordinance. His trial was set for August, but a demonstration of several thousand sympathizers in Dahlem early that month caused the Government to postpone it.

Dr. Niemoeller spent seven months in jail, seven months in which he had access to theological and legal tomes with which to prepare his defense. He did not learn the charges against him, however, until he finally reached the courtroom on February 7, 1938, bringing with him twelve thick volumes of notes and defense arguments that he had prepared. In March 1938, after a secret trial by a German "Special Court," the verdict came: he was to be fined $800 and sentenced to seven months' "honorary imprisonment" in a fortress. Since he had already spent seven months in prison, this should have meant freedom—but the Gestapo took him into "protective custody" as he left the courtroom. Even the Minister of Justice of the Third Reich protested against this flagrant flaunting of the law, but Hitler reportedly told Schacht, von Neurath, and others who appealed for the pastor's release: "It is Niemoeller or I." Offered his release if he would support the Nazi ideology in his future sermons, Niemoeller refused, and threats that his wife and children would be evicted from his old rectory did not move him. He was therefore sent to a concentration camp in Sachsenhausen, southwest of Berlin.

Protestants both in Germany and abroad took up the fight. Niemoeller's Dahlem congregation announced that it still considered him its "rightfully chosen minister," and in 1939 his substitute at Dahlem attacked the Evangelical Church Council president for threatening to deprive Pastor Niemoeller of pastorate, parsonage, and pay. On July 1 of the same year thousands of ministers of sects affiliated with the Federal Council of Churches of Christ in America devoted their Sunday sermons to him, and many German churches tolled their bells in commemoration of his arrest.

According to Dr. Karl Barth, at the beginning of the Second World War Dr. Niemoeller offered his services to the German Navy, withdrew the offer, and later on made it again. He received a "negative reply in rather a nasty spirit, from Admiral Raeder[’41]." Commented Barth: "He is capable of letting himself be put to death by Hitler in the cause of Christ, but he is capable of being an officer on the warship of that same Hitler."

In December 1939, so that Dr. Niemoeller could attend the golden wedding anniversary of his parents, 800 German naval officers and 800 prominent laymen offered themselves as hostages for his return to Sachsenhausen; they were refused. Since that time, news of the pastor has been received from many sources. Early in 1941 it was reported that he had joined, or was thinking of joining, the Catholic Church, but his friends said that the report had apparently started because he had been studying the Catholic dogma to try to bring about more effective Catholic-Protestant cooperation after his release. In March he himself authorized the announcement from Protestant pulpits that he did not intend to join the Catholic Church, and had never had any intentions of changing his faith.

In August 1941 it was reported that Niemoeller had been transferred to the Bavarian concentration camp at Dachau, where he was sharing a cell with two Catholic priests. The next month *Liberty* Magazine published an article entitled "What Hitler Told Me about Christianity, by Pastor Niemoeller" and signed by Dr. Leo Stein, the author of *I Was in Hell with Niemoeller* (1942). Friends of the pastor said that the direct quotations from Niemoeller's lips were spurious, however, and Stein later denied having written the article or having even seen any authorization for it.

At about the same time Peter S. Carbone, who spent several years in the concentration camp at Sachsenhausen, reportedly told Kurt D. Singer, author of *Niemoeller—Soldier of God,* that Pastor Niemoeller had become an old man in prison: his eyesight had grown very feeble and he was suffering from serious stomach disorders. At Sachsenhausen he was kept in strict isolation, although there were ways in which he could be met and talked with. Unlike other prisoners, he had not been forced to labor in the stone quarries except during his first few days in the camp, for the Nazis had learned that it was dangerous for them to let him mingle with other prisoners even at work. He was said to have told Carbone: "If I had been willing to take over command of a U-boat, as I did in the last war, they would have let me go. But I am no longer an officer, and I feel that I can never again be a soldier in any cause other than God's." This obviously contradicts other accounts of his willingness to serve in the Germany Navy.

"I am proud to be permitted to suffer in God's cause, as the prophets were once permitted to suffer," Niemoeller was also quoted by Carbone. "God has been closer to me in my cell than ever before." On another occasion he reportedly said: "Bishop Mueller thought that my internment would expedite the Nazification of our faith, but the churches are now more crowded than ever before, and the more the faith is persecuted, the stronger it will become. I received 400 post cards and letters on my birthday recently. Of course, I was not permitted to read them, but they told me I had not been forgotten by the outside world."

In May 1943 it was reported that Dachau had been transformed largely into a camp for the detention of "religious criminals," thousands of whom had died from their treatment. Niemoeller himself was said to be receiving much less severe treatment, although back in solitary confinement. He had even succeeded gradually in mitigating the plight of many of his fellow-prisoners, whose cause he has never failed to plead. At about the same time it was reported that the Nazis had drafted 9,000 ordained Lutheran pastors who, like Niemoeller, refused to cooperate with the "German Christians," and had sent them to the Russian Front, where nearly half of them had been killed.

NOGUCHI, ISAMU (nu-gü'chē ē'sə-mü)
Nov. 17, 1904- Sculptor

Address: h. 33 Macdougal Alley, New York City

One of the most eminent of Japanese-Americans, as well as one of the most prominent of modern American sculptors, Isamu Noguchi was born in Los Angeles, California on November 17, 1904. His father was the Japanese poet and authority on Japanese art Yone Noguchi; his mother was the American writer Leonie Gilmore. When Isamu was two years old his parents moved to Japan, where he remained for the next eleven years. Then his mother, feeling that an Occidental education would be best for him, arranged for him to

ISAMU NOGUCHI

travel alone back to the United States to study. She chose a school in Indiana, which, she had heard, employed advanced modern methods, and sent the thirteen-year-old boy there while they remained in Japan. He never returned to Japan except, years later, for a visit.

Young Noguchi went through high school in Indiana. Undecided whether to follow art or medicine, he chose first a job with the sculptor Gutzon Borglum. After several months of this he was advised by Borglum that he could never be an artist, and he entered Columbia University as a pre-medical student. It was a full two years before he could be induced to have anything to do with art. This came about through the kind attention of the director of an East Side settlement school, Onorio Ruotolo. Soon he was working on his own and within two years, at the age of twenty-two, he won the Guggenheim Award and went to Paris to work with Constantin Brancusi.

Noguchi exhibited twice in *Prix de Rome* competitions, but won only honorable mentions. He was again awarded traveling Guggenheim Fellowships in the year 1927 and 1928. Those two years he spent studying in Europe. In 1928 he had an exhibition of abstractions. Returning to New York, he was forced to make a living doing heads, and in 1929 he exhibited a collection of fifteen heads in bronze. This showing in New York City was so successful that during 1930 and 1931, with the money he earned from the sale of his works, he was able to travel around the world, spending much time in the Orient. He visited China and then Japan, where he saw his father.

The young sculptor became increasingly successful and had numerous showings of his work in New York City and elsewhere. His sculpture already was included in major museums and collections when in 1938 the Associated Press decided to enhance the entrance to its new building in Rockefeller Center with a large bronze plaque, and offered a prize of $1,000 for the best design. One hundred and eighty-eight sculptors from twenty-six states competed. Noguchi's small-scale plaster model depicting five symbolic figures—editor, reporter, photographer, and teletype and telephone operators—was the winner. He had submitted two designs, one of which had taken him two months to do, and one which he had dashed off in three days. It was the latter which was accepted. Instead of bronze, he induced the sponsors of the contest to have the plaque cast in stainless steel, a medium with which he had been working for some time and which, he felt, would do more justice to his design. Stainless steel, although costlier than bronze, requires no upkeep, for it "retains its pristine surface and color until doomsday."

For a year Noguchi worked at a full-scale plaster model from which the steel plaque was to be cast. He received $6,500 for his work on the model, which was so huge that it barely fitted into his studio. The casting taxed the ingenuity of foundry engineers, because the plaque was twenty times larger than any sculptural casting ever before made in stainless steel. Measuring eighteen by twenty-three feet, it weighed ten tons at completion, and had to be divided into nine sections before it could be cast at all.

Finally all the difficulties were overcome, and, fitted in its niche in the Associated Press Building's facade, the plaque was unveiled in 1940 with suitable ceremonies and speeches. "Artistically," *Art News* said, "the gigantic relief is conceived in the quasi-abstract style of this pupil of Brancusi—earlier training under Borglum must have familiarized him with techniques of large-scale sculpture—and the sculpture is a smooth-surfaced group, sweeping in rhythm, and an irregular diamond in outline." After it was all over the sculptor left for a three months' vacation in Hawaii, where he had received an N. W. Ayer commission from the Dole Pineapple Company.

In 1939 Noguchi had also received a commission for a fountain at the New York World's Fair. The fountain, which was installed in the Ford Exposition Building in that year, was "a strikingly modern abstraction depicting the feeling of power in an automobile."

Very much interested in industrial design, Noguchi won a modern Plastics Award for a design called *Radio Nurse.* In 1940, moreover, he designed playground equipment for the October 1940 design decade issue of the *Architectural Forum.*

Noguchi has been described as "muscular," "short," and "kewpie-faced." Examples of his work can be found in Mexico, Buffalo, Toronto, Honolulu, and New York City museums, including the Metropolitan Museum of Art. The subjects of his sculpture are, it has been said, "Occidental in exterior, but Asiatic in feeling."

When the United States, as a result of its war with Japan, interned all Japanese and Japanese-Americans living in the United States, the sculptor went voluntarily to a relocation center at Poston, Arizona. "His object in going was to help relocation by contributing his services as an artist in developing the area." Eventually, when évacués were permitted to leave the camps for private employment anywhere in the area between the

Alleghenies and the Rocky Mountains, Noguchi returned to New York City. He wrote an article for the *New Republic* entitled "Trouble among Japanese-Americans." In addition to the fact that practically all of the Japanese-Americans who are citizens of the United States are loyal, "it is estimated," he wrote, "that about fifty per cent of the non-citizens are now at least passively loyal to America. I think that this proportion could be increased and I think this effort, too, is worth making, if only for their influence on the children... The solution of the problem is ... to return the évacués to their normal civilian status both by getting them out of the centers and by making the centers themselves as much like other places in America as possible."

Who's Who in American Art 1940-41

NOGUÈS, AUGUSTE (PAUL) (nō-ges' ō-gyst') 1876- French Army officer

Likened by some to Chaucer's "parfait, gentil knight," and to the Chevalier Bayard "sans peur et sans reproche," called by others a "vile and treacherous felon," a Fascist and an anti-Semite, clever, astute Auguste Paul Noguès (also known as Auguste Charles) is one of the most disputed personalties to have come into the spotlight in the Second World War. Both the Allies and the Axis have regarded him with suspicion. Before he handed in his "long-overdue resignation" as resident general of Morocco in June 1943 many of the Fighting French believed him to be of dubious allegiance to the Allied cause. This attitude undoubtedly resulted from his "professional alliance with Vichy after his first eloquent stand against it," from his contempt for the French Popular Front, and from his opposition to the extension of trade rights to the North African natives. Noguès was also accused of having sold Moroccan wheat to Germany. The German radio, nevertheless, during the period of his adherence to Vichy, denounced him repeatedly as altogether too friendly to the United States.

General Noguès has had a varied and colorful career. He has shuttled back and forth between France and the colonies, alternating between active service and political duties. He was born in the Upper Pyrenees in 1876. When he was twenty-one he entered the Polytechnic School (*École Polytechnique*), where he specialized in artillery, receiving his commission as lieutenant and serving with the 17th Artillery Regiment at Vincennes. Upon graduation he entered the geographic service of the Army, where he commenced by surveying the region of Oudja. In 1908 he was stationed in Tunisia. The following three years he was under the personal orders of the general commanding the Oran (Algeria) division. In 1912 Noguès was called to Morocco by the famous General Lyautey, who needed a good cartographer in his Cabinet.

GEN. AUGUSTE NOGUÈS

When the First World War broke out, Noguès, then a captain, wanted to return to France to defend his country. Marshal Lyautey, however, objected, saying that Morocco as well as the mother country had to be defended and Noguès was too valuable a man for him to spare. Noguès was on leave in France at the time, and, instead of returning to Morocco, he dashed to Paris to ask the Minister of War, M. Messiny, to help him. Noguès had made a mistake in trusting the wily Minister. Messiny readily secured his release from Lyautey, but, knowing Captain Noguès' brilliant qualities, he immediately put him into his own Cabinet despite his vigorous protests. The captain remained in the War Cabinet for two months before he was finally permitted to go to the front. He was placed in charge, first, of a cavalry division in Belgium, and then of an artillery squadron.

In 1917 Noguès was recalled to the War Cabinet by General Lyautey, who had arrived in Paris, and, upon the departure of his former chief, was kept at headquarters for six months in order to continue acting as liaison officer between the colonies and the French Government. He resumed command of the artillery squadron in the fall of 1917, and, in January of the next year, was placed in charge of his old regiment, the 17th Artillery. During the War Noguès was wounded once.

In 1919 Noguès was called to the Cabinet of Alexandre Millerand, the high commissioner general of Alsace-Lorraine. The next year he returned to the Cabinet of the Minister of War and was made underchief. The year 1921 found Noguès a lieutenant colonel and member of the *maison militaire* of the new President of France, M. Millerand, who had not forgotten the brilliant subordinate who had served under him in Alsace-Lorraine. Noguès remained with the President until 1923, during which time he married Mlle. Del-

NOGUÈS, AUGUSTE—*Continued*

cassé, "whom he loved not only for her charm, but also for her great intelligence."

In the beginning of 1924 Noguès was promoted to the rank of colonel and resumed active service in the colonies. He was sent to North Fez in the French Protectorate of Morocco, where he took an important part in the campaigns against the Riff leader Abd-el-Krim, which lasted from 1924 until 1926, when Krim surrendered to the French and was exiled.

At the end of 1926 Noguès was chosen to be commander of the Artillery School at Fontainebleau, and once more returned to France. During his stay there he was appointed a brigadier general (1927). The year after his promotion he was sent back to Morocco as director general of the Military Cabinet and of native affairs. He was charged particularly with "pacifying the natives." In 1930, promoted to lieutenant general, he was again sent to France. There he commanded the 10th Infantry Division at Paris, and submitted it to such intensive training that he reportedly made of it one of the model divisions of France. He was then placed at the head of the 19th Army Corps of which he took charge in the spring of 1933.

In 1936 Noguès was named resident general of Morocco by the Popular Front Government of Léon Blum '40. Although Noguès was decidedly no supporter of the Popular Front Government, Blum appointed him, it was said, because angry French Rightists had protested when trade union rights were extended to Morocco's 7,500,000 Arab and Berber natives. "Morocco," according to Kenneth Crawford, "unlike Algeria, is governed as a protectorate of France and the resident general is all-powerful. He runs most of the country as an elaborate semi-military bureaucracy. Democracy in any form is non-existent. The Sultan, nominally an absolute temporal ruler as well as a religious potentate claiming direct line of descent from the Prophet, is in fact a near-puppet. The French resident general is not only military commander and civil governor but he is also the Sultan's foreign minister."

General Noguès was, however, given strict orders from Paris not to interfere with the dozens of trade union organizers who flocked to Morocco to rally the natives. "It was not," said *PM,* "until the Blum Government fell that Noguès went to work. Then he called out the Senegalese garrison to smash strikes, to wreck union offices, and to run the organizers out of Morocco. A strike of Arab mine owners was put down with the loss of 300 lives." This was not without its repercussions in Paris. To all objections, however, Noguès replied that the Government could "take it or leave it," and that he was ready to throw up his colonial duties and return to France on the next boat, if so desired. Undoubtedly the French Government would have liked to appoint another resident general, but that might have proved dangerous, for the pleasant, ever-smiling Noguès and his clever wife were reportedly very popular with the natives in Morocco. Knowing the natives' taste for display, Noguès kept a number of resplendent uniforms and put on a different one three times daily. He showed himself everywhere in Morocco, gave receptions, made tours of inspection, visited the schools, and, in short, proved to the Arabs and their rulers that "the French sultan" was a "truly admirable man." It was also said of him, however, that "he handled the Arab hierarchy masterfully not because the Arabs loved him, but because he was one of the few Europeans whose mind and methods were as devious as theirs. He is credited with the device of introducing French women into the Sultan's harem on the theory that they were more dependable reporters than the Arab women previously relied upon."

Upon the outbreak of War, Noguès was made commander in chief of all French forces in North Africa. He thereupon informed the Italian residents of French North Africa that they might face punishment without mercy if they acted against the Allied cause. Yet after France's collapse he himself, according to *PM,* after announcing that he would fight on against Germany, changed his loyalty to Vichy, and, consequently, to Germany. When a group of French parliamentarians arrived in Morocco hoping to carry on resistance to the Nazis from Africa he sent them back under guard to Vichy.

General Noguès "then called on North Africa to support Marshal Pétain '40. Later the same year he arrested French civil servants suspected of harboring Popular Front views... He set Vichy's anti-Semitic laws in motion in Morocco. He gave written instructions to his officials to 'watch the Jews who pray in their synagogues for victory for the Allies and contribute financially to their success.'" According to an anonymous correspondent of the *New Republic,* Noguès "has not hesitated to commit the vilest deeds to obtain the favor of the members of the German Armistice Commission."

"He has," alleged the anonymous writer, "all Moroccan Frenchmen suspected of being in sympathy with the Allies tortured and thrown into prison. Several of his victims died of sorrow and hardships. . . Noguès enforced every law of racial discrimination ordered by Vichy. He himself organized the Fascist Legion of the followers of Laval '40. He had British residents imprisoned. He denaturalized innumerable Frenchmen who left Morocco in order to escape his odious yoke, and then confiscated their property. He subjected the foreigners who, during the first days of the War, had joined the Foreign Legion, and the soldiers of Republican Spain who had taken refuge in Morocco, to labor worse than that of slaves, on the construction of the Trans-Saharan railroad. . ." For weeks before the American invasion, moreover, Noguès' Frenchmen were preparing for November 15, 1942 as a special day of celebration in which there was to be a general drive against Moroccan Jews. After that those who were still left alive were to wear the yellow Star of David—this in spite of the fact that Noguès' own wife is part Jewish.

Kenneth Crawford says, however, that Noguès was never a German collaborator, and that, considering it his task to circumvent the armistice commission, he had remnants of the metropolitan French Army reassembled in Morocco and kept native troops under arms in face of orders from the Germans to demobolize the bulk of the Moroccan Army. Surprise visits made by representatives of the armistice commission to remote garrisons showed them that the personnel had been drastically reduced; but that was because Arab soldiers had become inoffensive farmers in a few minutes.

When in November 1942 the Americans landed at Port Lyautey and on precarious beachheads up and down the Atlantic coast, Noguès was neither helpless nor surprised A tip by one of the French officers who had been taken into the Americans' confidence had given him time to mine the roads between Lyautey and Casablanca and to place his patrols strategically in order to resist the invasion. General Bethouart, who had helped plan the landings, had been placed under arrest; a guard had been placed around the American consulate; a messenger had been dispatched by air to Pétain notifying him of the situation and requesting instructions; the military authorities at Oran had been notified.

According to some sources, Pétain replied by ordering Darlan '41 to surrender command of all French forces in North Africa to Noguès and by asking for the continuation of resistance. Darlan nevertheless ordered that firing be ceased and telephoned Noguès, ordering him to drop resistance. Early on November 11 the Americans sent an ultimatum, too: if Noguès did not surrender unconditionally Casablanca would be bombarded at dawn. He finally gave in, but Kenneth Crawford says that months later he was still unrepentant about his resistance to the invasion, and still recognized Pétain's authority. "Noguès said . . . that . . . on November 12 he received a message from the Marshal approving all he had done."

When Darlan was assassinated it was thought possible that General Noguès might succeed him, because, unlike General Giraud '42, Noguès was an experienced administrator. "Were General Noguès to insist on coming into his own," suggested Pertinax '40, "he might perhaps outdo all rivals. But he is not a bold man. He may prefer to cling to his Moroccan Province and allow General Giraud to take command." The latter is what did occur, and General Noguès was relegated to the subordinate position of deputy high commissioner for French North Africa. He was to take charge in Giraud's place, but only if the high commissioner's military duties called him away for less than a month. Should he be away for more than a month, however, the French Imperial Council was to take over. No doubt there were many who agreed, at least in part, with the *New Republic's* reporter who advised the Allies that "nothing would be more dangerous than to accept the offers of this felon. A man who has repeatedly proved himself treacherous will betray as often as his own interest commands." Harold Callender suggested in the New York *Times* that the proposed "restoration to republican institutions in North Africa seemed likely to take the form of elimination of some of the officials there who have been conspicuously associated with the Vichy regime of collaboration with Germany. Hints from North Africa indicate that these might include . . . General Charles Noguès, Governor General at Morocco." In December 1942 there was an unsuccessful attempt to assassinate Noguès.

Noguès remained in power for several months, however. According to Kenneth Crawford, he "quite obviously would have played the same game with us that he played with the Germans if given half a chance," but American officials had a hard time finding an adequate successor for him. In April 1943 he was reportedly delaying the distribution of food brought in by the Americans, and at least 3,000 people still remained in labor camps in Morocco. Two months later, on June 5, he handed in his "long-overdue" resignation and was succeeded as Resident General of Morocco by a friend of de Gaulle's '40, Gabriel Puaux, former high commissioner of Syria. (General Giraud had requested Noguès' resignation.) Two weeks later he arrived in Lisbon, where he announced that he hoped to return to France at some unspecified date. It was reported early in July that he had been refused permission to return by Marshal Pétain, but Noguès himself denied that he had requested such permission.

A man of the world, distinguished and well-read, Noguès is always calm and always master of himself. His enemies are the first to admit his keen intelligence and his political acumen.

General and Mme. Noguès had one son of whom they were very fond. He died a number of years ago at Paris of infantile paralysis, and his death was a severe blow to his father, who is supposed never to have recovered fully from the shock of the tragedy. A "bulky, impressive personage, of distinguished bearing though of slight stature, and with graying hair and a closely clipped gray mustache," Noguès is a Grand Officer de la Légion d'Honneur and has received eleven citations for his services to the Government. Noguès has two passions, music and horses—he is a good musician and an excellent horseman. He has "a young man's ideas" and he likes to have young men about him.

NORTH, STERLING Nov. 4, 1906- Author; critic

Address: b. New York Post, 75 West St, New York City; h. Jockey Hollow Rd, Morristown, N. J.

"A critic," according to Sterling North, "needs, first of all, the talent for laying aside Christian Doctrine when he takes up his pen. A critic must forget that a good Christian 'loves the man though he may hate his work,' and must use the direct opposite of this as his basic premise." North is vehement in his belief that one must never allow personal prejudice of any nature to pervade an evaluation of another's creation; he has established this belief as the first principle of his work.

STERLING NORTH

Sterling North has "made a name for himself" in everything he has undertaken. The son of David Willard and Elizabeth (Nelson) North, he was born with the proverbial "silver spoon" in his mouth on November 4, 1906, in Edgerton, Wisconsin. Life began most uneventfully on a hill in southern Wisconsin on the shores of Lake Koshkonong, and remained an uneventful one until at the age of three he "reached for a gleaming doorknob, upset his highchair, and cut off the tip of his finger." Perhaps the most characteristic thing about Sterling North is that he has been reaching for gleaming doorknobs ever since.

His family, he says, was "literate," his mother being an accomplished linguist, his sister Jessica having her poems published regularly in the better magazines of the day. Sterling set out to keep pace with his family. He went to high school in Edgerton, Wisconsin, and then attended the University of Chicago. At college, young North kept himself busy both on the campus and off. He feels he was fortunate in having to work his way through school, and while he did not resort to selling magazines, he tried nearly everything else. He wrote lyric poetry for the *Dial, The Nation, Harper's,* and *Poetry* Magazine, and in this way accomplished the first of his many and varied aims. He also sprayed Duco on Fisher Bodies; clerked behind a cigar counter; kept books for a large sanitarium; ran a commercial truck garden. That was off the campus. On campus, he ran a little theatre, edited the literary magazine, *The Forge,* won many literary prizes, and acquired a "healthy disrespect for academicians."

He did not, however, get rich. By the time he was twenty, he had $4 to his name. His high school girl friend, Gladys Buchanan, was his age and of his financial status, and so, trusting to God and one of Sterling's "gleaming doorknobs," they pooled their money and settled down to connubial bliss on June 23, 1927. After almost seventeen years, Sterling North is still thankful that they didn't take time out to be sensible, for his marriage is the most successful, happy part of his life. Mr. and Mrs. North now have two children—David Sterling and Arielle—for whose entertainment their father has written many juveniles. With these books, as with the poetry he wrote in college, Sterling North has proved the range of his talents, for the books have all been well received by the public. *Midnight and Jeremiah,* a story of the Southern Highlands, was the Junior Literary Guild selection for the fall of 1943, running 25,000 copies in its first printing. North likes to refer to his children's books as "gentle juveniles" although they are said to possess all the gentleness of Swift's *Tale of a Tub.*

Of his published books his favorite novels for adults are three—*Plowing on Sunday* (1934); *Night Outlasts the Whippoorwill* (1936); and *Seven against the Years* (1939). The first of these, the story of a year in the life of a Wisconsin farmer twenty years before, was generally praised for its "warm earthiness," its "simple, lucid prose of dignity and beauty," although one critic felt that North had failed to make the characters themselves real or interesting. *Night Outlasts the Whippoorwill* also had Wisconsin as its locale, but most critics were somewhat less enthusiastic about this tale of small town life after the United States entered the First World War. *Seven Against the Years,* which followed the careers of seven members of the class of 1929 after their graduation from the University of Chicago, was described as full of "good humor and acid paradoxes," a "sense of drama" and an "engaging wit."

North does not feel that his poetry, his juveniles, his novels, and his critical writing exhibit distinct and separate talents, but adheres firmly to the belief that they are all manifestations of one talent. "A critic," says North, "is himself a creative writer. He has to be if he is to pass any sort of judgment on someone else's work and if he is to make any contribution of his own toward the understanding of literature. A critic must know something of the fever that goes into a work of art. To know, he must have endured it himself." North goes on to say that the only justifiable tenets on which to damn or praise an author's words are: "What is he trying to do; to what extent has he accomplished his purpose; was that purpose initially worthwhile?" These, added to the basic principle of divorcing the man from the writer, are the standards which permeate all of Sterling North's critical work.

Sterling North's newspaper career began on the Chicago *Daily News* in 1929, just before the stock-market crash. As a cub reporter, he led the weird kind of life known only to the newspaper man in the stage of initiation. He worked all sorts of hours, covering every type of assignment from "golden weddings to gang funerals. For two years I even played Toonerville Trolley," North says grimly. "All I ever did was meet the trains."

In 1932 he was made literary editor of the paper, and during the next ten years his fame as a critic steadily grew until he became one of the top men in the field. He is in 1943 literary editor of the New York *Post*, and his weekly review page is syndicated to the Chicago *Sun*. In recent years he has written a prodigious number of articles for magazines such as the *Atlantic Monthly*, the *Yale Review, Esquire*, the *Saturday Review of Literature,* and the *Reader's Digest*. With what little time he has for himself, he likes to "swim, fish, and converse far into the night." He likes to discuss literature and naturally has quite definite ideas on the subject. He believes, for example, that *Point Counter Point*, *The Grapes of Wrath*, and *For Whom the Bell Tolls* are the three outstanding novels of recent years, and he thinks that John Dos Passos '40 is a sloppy writer. Gerard Manley Hopkins is his favorite poet. North's political views are as definite as his literary. He hates Martin Dies '40 as much as he does Earl Browder, wishes that something violent would happen to several men in the State Department, has voted for Roosevelt '42 all three times but "recently is beginning to wonder." Like Clifton Fadiman '41, he belongs to the Vansittart '41 school of thought on what to do with Germany.

Farming is another of his undertakings and triumphs. The Norths are at present established on a seventeen-acre farm with trout streams and a lake south of Morristown, New Jersey. This is the third farm that they have owned, and while it is the smallest and the most unimaginatively named of the three (they call it "Primrose Brook Farm"), it has the most impressive history, dating back to Revolutionary days. The Norths' first two farms were in the Middle West and were dubbed "Alfalfa and Omega" and "Butterside Up." In all three cases, Sterling North has done a large part of the work himself and has made husbandry a paying venture. His secret, he says, is a simple one: butter and eggs are profitable, but articles for the *Reader's Digest* are infinitely more remunerative.

North's life, however, has not consistently been one of "sweetness and light." He has had his ups and downs, has become mildly embittered on several scores, has even had an anonymous death threat or two from pro-Fascists. But he has taken all this in his stride. North's list of "Hates" is headed by Colonel Robert R. McCormick '42 and Father Coughlin '40; it also includes India's Viceroy Amery '42, Robert Murphy '43, Ham Fish '41, Martin Dies, Westbrook Pegler '40, and Senator Walsh, and is climaxed by Superman and Little Orphan Annie. North is not being facetious when he refers to those outstanding protagonists of the comic strip. He feels that the comics have an insidious effect upon the children who read them, that they are evidence of a decadent culture, and that they exert a stultifying pressure on juvenile minds. One of the things of which North is proudest is a diatribe he once wrote in which he lashed out violently on this subject. This article was reprinted in forty-two newspapers and fourteen magazines, many of which carried comic strips. The effect was immediate and startling. Requests for copies poured in upon North at the rate of 5,000 a week, and it was republished in leaflet form. But there were other effects too. One of the big comic magazine publishers tried unsuccessfully to buy North off.

North is short, has brown hair which is always askew and clear brown eyes behind rimless glasses. He also has a charming, candid smile which leaves one totally unprepared for his caustic wit—a wit that is most caustic when he gets onto one of his phobias, such as women's clubs. "If I weren't continually forced to dodge women lecturers who want to 'know all about literature' in an hour and a half so that they may disseminate their knowledge at the next meeting of the home-town women's club," North says with the air of the defeated, "I could accomplish a lot more."

OECHSNER, FREDERICK C(ABLE) (ėrks'nėr) Nov. 26, 1902- Journalist; author

Address: b. c/o United Press, 220 E. 42nd St, New York City; h. 1739 Marengo St, New Orleans, La; Wardman Park Hotel, Washington, D. C.

"Among all the American correspondents in Berlin," wrote Wallace R. Deuel '42, "certainly one of the best was Fred Oechsner. He was outstanding in his ability and uncompromising in his integrity in a situation in which both capacities were put to the severest of tests." Author of the book *This Is the Enemy*, newspaperman Frederick Cable Oechsner was born in New Orleans, Louisiana on November 26, 1902, the son of John Frederick and Caroline Kinne (Cable) Oechsner. The boy attended Williston Academy at Easthampton, Massachusetts, and was graduated in 1920. Returning to New Orleans, he entered Tulane Academy, receiving both his B. A. and his LL. B. in 1925. That year he was admitted to the Louisiana Bar, but he never practiced law; instead, he joined the New Orleans *Item* as a reporter. From 1925 to 1927 he acted variously as rewrite man, assistant city editor, drama editor, and music editor. In the summer of 1927 he was sent to Guatemala in order to do a series of economic and political articles on Central America. From Guatemala he went to Italy as foreign correspondent, and then to Paris.

FREDERICK C. OECHSNER

In 1929 Oechsner returned to the United States and joined the local staff of the Washington (D. C.) *Evening Star*. Foreign service, however, interested him more, and in 1930 he became Central European correspondent for the New York Sun-Consolidated Press Foreign Service, with his headquarters at Berlin. In 1931 the young journalist had his first meeting with Adolf Hitler '42, at a small press conference for American and English correspondents at the Kaiserhof Hotel in Berlin. When the Sun's press service closed in 1932 Oechsner secured a position on the London staff of the United Press. During his residence in London he met and married (January 25, 1933) Dorothy Koepke, whom William L. Shirer '41 describes as "blonde, pretty, and ebullient, with a low, hoarse voice." The couple have no children.

On May 1, 1933, Oechsner was appointed Berlin manager of the United Press. In the course of his duties he covered the War in Berlin and on both Western and Eastern Fronts. Howard K. Smith '43 (another Tulane alumnus), when he arrived in Germany, found Oechsner "full of information and more than congenial," and regretted that he gave too little time to writing, his real interest, and too much to being "the best office boss in Berlin." Smith tells the story of the occasion when the Foreign Press Association found itself without a president. Popular sentiment among the Americans and the independent journalists was for Oechsner, but he refused to run because he had no time for the job and, furthermore, did not like the government officials with whom he would have to deal. The German Foreign Minister, von Ribbentrop '41, however, had not heard that he had declined the honor, and sent a representative to inform him that the German Government was opposed to his assuming the presidency of the Foreign Press Association, because it did not want to deal with the foreign press through an American national. Oechsner, "an unreconstructed Southern rebel," thereupon replied that he had already declined to run, but that, since von Ribbentrop had made such a point of the issue, he would withdraw his refusal, and would now stand for the office.

"On the morning of the elections," Smith relates, "Fred Oechsner, cocky as a little red rooster, marched into the Assembly Hall of the Esplanade Hotel, his flanks covered by a phalanx of American reporters, and took his seat in the audience. The independent correspondents from the independent nations, and even many from occupied lands, rubbed their hands in glee. The Italians . . . turned red with discomfort. They and their Axis brothers withdrew disconsolately from the election, and later rose as one man and marched out of the room, uttering oaths under their breath. . . The chairman, an Italian, uncomfortably called for nominations. Sigrid Schultz of the Chicago *Tribune* was on her feet, before he stopped speaking, to nominate Oechsner, and before she could sit down a Swede had seconded the nomination. The chairman called for the other nominations, but the Quislings were taken as if by storm. Their orders had not covered this unbelievable eventuality. The chairman called again for nominations, this time weakly, but there was no response from any quarter, so a Jap rose and moved that nominations be closed. Oechsner marched up to the rostrum to take over the gavel, grinning like a Cheshire cat, while Americans and friends applauded and a deep gloom settled over the Axis and its comrades."

"At a time when Americans were disappearing from their homes just for being Americans," Smith commented, "it required uncommon spunk to do something like this. Aside from the personal peril, Oechsner was also head of a large news agency in a totalitarian country; and the Propaganda Ministry, through which most news is bottlenecked, has a million different little methods of taking revenge on recalcitrants. But it is also true that in Germany, as nowhere else, the best way to fight fire is with fire. The Nazis do not understand kindness; their language is impudence, bluff, the strong arm tactic. By every calculation, save this one, Oechsner should have been discovered by the Gestapo to be a spy, and arrested; his agency ruined in Germany. . . But no German authority ever went near Oechsner after that. . ."

At this time Oechsner felt the need of a rest from the hectic pace of the Berlin Bureau, and returned to the United States for a "breathing spell." After a short vacation he was back in Berlin, and, on March 1, 1941, was promoted to the position of Central European manager of the United Press, given jurisdiction over the foreign correspondents in twelve countries and the occupied areas. On December 10 of that year, however, Germany declared war on the United States. Four days later Oechsner, his four colleagues on the United Press staff—Joseph W. Grigg, Jack M. Fleischer, Glen M. Stadler, and Clinton B. Conger—and the staff of the American Embassy were arrested, loaded on a bus, and then taken by rail to the German spa, Bad Nauheim, where they were interned until the following spring.

"Behind them in Berlin," wrote Percival R. Knauth, "their offices were occupied by the Gestapo. Their files were confiscated—those they had not destroyed or previously managed to smuggle out of the country. The doors of their houses were sealed, their personal belongings, books, and furniture abandoned. They carried with them to incarceration only the clothes on their backs and what they could stuff hastily into suitcases. But in their minds they carried something the Gestapo could not confiscate—the memory of years of work in Nazi Germany in the uneasy peace before September 1939, and in the War which followed."

The United Press staff decided that it might as well spend its time writing. "Five idle newspapermen itching to write," wrote Austin Stevens, "could have turned out five books, but when they considered that each man had more or less specialized in Hitler Germany and that five United Press books might be four too many, they decided to pool their information and opinions into one solid book." The five of them used to gather at the Grand Hotel, ostensibly for a poker game, but actually "hatching a book telling all they knew about Hitler Germany." "We used to meet in Oechsner's room about ten each morning," Grigg, one of the correspondents, said. "We'd sit around on the bed or on straight-back chairs and we'd thresh out what was running through our minds." All five, wrote Stevens, had covered the Third Reich long enough to know that the Gestapo would be "considerably put out to discover a book being written literally under its nose."

The five correspondents were released in May 1942, when they were exchanged along with the American Embassy staff for some German diplomats. Their book appeared in the United States in November 1942 under the title *This Is the Enemy.* The book is primarily Oechsner's, since he edited it and wrote approximately sixteen of the twenty-five chapters. The *New Republic's* critic felt, in fact, that it might have been a better book if he had written the whole of it himself.

The New York *Herald Tribune* called it "the best book yet published in this country about the Third Reich at war. It is full of new information. It is carefully and objectively written, yet it is simple, clear, colorful, and fast-moving. . . There is just enough humor of just the right kind. *This Is the Enemy* has the virtues of collaboration without its vices. Each of the five authors has written on subjects about which he is particularly well informed, but the reader will find it impossible to tell where one man's work ends and another's begins. The book sounds as if one man had written it all." Joseph C. Harsch of the *Christian Science Monitor,* a former colleague in Berlin of the men who wrote this book, considered *This Is the Enemy* "the product of meticulous and scrupulously honest work and . . . what they conclude can be accepted as representing the very best and soundest opinion available about the nature and the strength and the weakness of the enemy with whom our nation is locked in decisive war today."

Percival R. Knauth, on the other hand, found "something lacking" in the book. He felt that perhaps that was due to the unfortunate conditions in which it was written, the correspondents having done most of their work "under the terrible mental strain of imprisonment" and having been forced to write from memory because they had been deprived of all the notes and data painstakingly collected over a period of years." "It is unfortunately likewise true," Knauth wrote, "that the subject of Nazi Germany was very nearly exhausted by other writer-colleagues while these men were still prisoners in Bad Nauheim." "That is not to say," he concluded, "that there is nothing new or interesting in the book. Mr. Oechsner has dug deep into his memory and into the wealth of facts, stories, and rumors about Hitler, which only Germans know, to fill out the picture of the man. . . If anyone wants to know how it happens that Hitler can still remain in power over a nation which is tired of war and sick of Nazi excesses, he should read this to find out."

Since his return to the United States, Oechsner has been able to devote himself to his favorite occupation, writing: besides *This Is the Enemy* he has written a number of magazine articles on Hitler's character and background and on conditions in Germany for the *Saturday Evening Post, Collier's, Look,* the *American Magazine,* the *New Yorker,* and innumerable newspapers. He has also done some radio work on the same subjects. On leave of absence from the United Press at

OECHSNER, FREDERICK C.—*Continued*

present, he holds the position of special assistant to the director of the United States Office of Strategic Services.

Oechsner was described as "a quiet type but an able correspondent," by William L. Shirer, and as "a capable young man, getting bald, who was highly respected by the other correspondents for his integrity," by Harry W. Flannery '43. Five feet ten and one-half inches tall and weighing 172 pounds, Oechsner has brown hair and eyes and a ruddy complexion.

OTTLEY, ROI (VINCENT) Aug. 2, 1906- Author

Address: b. 1029 Vermont Ave, Washington, D. C.; h. 37 Morningside Ave, New York City

The Negro's position in wartime America is a subject of increasing significance. It has been called to public attention not only by reason of certain "race riots" in war-production centers and by the outbreaks in New York City's Harlem, but because of the Negro's role in the armed forces and in defense industries. Roi Ottley, a young Negro writer who grew up in Harlem, "the nerve center of advancing Black America," and was for several years a reporter and columnist for Harlem's *Amsterdam Star News,* as well as a social worker, has written in *New World A-Coming* (1943) a survey of Harlem's history. Harry Hansen '42 calls it "a book that might be classified as a social study, actually so entertaining that it reads like a novel."

Roi Vincent Ottley, the son of Jerome P. and Beatrice (Brisbane) Ottley, was born in Harlem, New York City, August 2, 1906. Roman Catholic in religious affiliation, he first attended, after the New York public schools, St. Bonaventure College (1926-27). He then studied for two years at the University of Michigan, after which he returned to New York to begin his career as a reporter (1930) on the *Amsterdam Star News.* On that paper, for the following seven years, he was reporter, columnist, and editor. During those years, too, he continued his studies both at Columbia University (1934-35) and New York University (1935-36). He also attended St. John's University School of Law in Brooklyn.

In the fall of 1943 Ottley was publicity director of the National C. I. O. War Relief Committee, a group which in 1942 collected over $20,000,000 for relief purposes and divided that sum among the members of the United Nations. In April 1941 he was married to Gladys Tarr, to whom he dedicated *New World A-Coming,* and he makes his home (when not on business in Washington, D. C.) in Harlem.

What is Harlem? In *New World A-Coming: Inside Black America,* Roi Ottley presents this city within a city and its one million people, packed sardine-fashion into some two square miles, as something more than "the capital of clowns, cults, and cabarets and the cultural hub of the Negro world." Since its beginnings around 1900 as a little community of "black aristocracy," Harlem's modern history began with the purchase, by Negroes, of thirteen large apartment houses on 135th Street. Now Harlem, woefully overcrowded, is infinitely subdivided and intermixed with all shades and varieties of color. There are about 2,000 native pure black Africans; 5,000 Moslems; as many more Jewish Negroes, descendants of the "lost Black Tribe" of Abyssinia. Among 125,000 others are French-speaking Haitians, Spanish-speaking Puerto Ricans and Cubans, pro-British East Indians. In Harlem also live some 2,000 Chinese.

This amazing intermixture has produced leading citizens in many fields of activity, and the author presents some profiles of famous Harlem leaders, not omitting Father Divine. They include the late Marcus Garvey, Harlem's first mass leader; Joe Louis '40, a hero to his people; A. Philip Randolph '40, organizer of the Pullman porters; Walter White '42, sophisticated leader of the National Association for the Advancement of Colored People. Ottley writes also of the singers Paul Robeson '41 and Marian Anderson '40; of Ted Poston, racial adviser to Elmer Davis '40; of Dr. Robert C. Weaver, the first Negro ever to earn a Ph. D. in economics from Harvard; of Chrystal Bird Fauset, adviser to James M. Landis '42 of the O. C. D.

Such leaders are carrying forward, says Roi Ottley, the Negro's fight for equality. The War is also carrying forward that fight. As John Chamberlain '40, writing in the New York *Times*, paraphrases it: "'This is a war for democracy,' says the anti-Hitler '42 white American. 'Brother,' says the Negro, 'I'm going to hold you to that.'" Ottley writes that the Axis can be decisively beaten only by men who are committed to an extension of democracy in the Black world. The Asiatic world is watching America, "quite aware of the fact that a nation which is unable to solve its color problems at home will never be able to take the lead in creating a free world everywhere." The Negro sees, after the War, his "new world a-coming," and feels that "the day for talking quietly has passed." He is on the march.

Chamberlain goes on to comment: "He [Ottley] writes a vigorous prose, mingling history, humor, irony, drama, and sober reflection in a work that explains the current status and the wholly reasonable demands of the Negroes as no other book does." Other reviewers agreed with Chamberlain's pronouncement on the book. Lewis Gannett '41 describes it as "a shrewd, lively, and often surprising interpretation of the present state of mind of Negro America," and Sam Halper of the New York *Post* wrote, "The way to start in to learn about the Negroes is to read Ottley's fine book." The book inspired a tone poem of the same name by Duke Ellington '41 which was performed for the first time at Ellington's Carnegie Hall concert in December 1943. In its various episodes it dwells on the contentment awaited by the Negro race in the democratic post-War world.

One thing which *New World A-Coming* did not stress was: when Harlem sits down to eat, what's on the table? Accordingly, a feature writer for the New York *Herald Tribune* put that question to Roi Ottley, "who knows Harlem cooking by ten years of eating anything, everything Harlem has to offer. He knows the lofty fare of Sugar Hill's penthouse tables. He has a love for hot pig's feet as sold by the street venders. He has rolled chitterlings on his tongue at a rent party. He has sinned on Saturday night and praised the Lord on Sunday, paying his 15¢ to eat chicken dinner at a Father Divine heaven." Ottley praises the Negro dishes, particularly the use of the hog "right down to the squeal." Deep fat frying, he adds, was introduced to us from Africa, not from France. Also the pit barbecue is a Negro invention. Ottley fancies himself "as something of a culinary expert," too—and okra is one thing he likes to cook. He makes a West Indian okra dish known as "cookoo"—okra with corn meal in mold—to serve with salt cod. He also likes to make rabbit casserole with okra, or a vegetable casserole with okra, carrots, and cucumbers.

ROI OTTLEY

But Roi Ottley will have little time, probably, for trying out his favorite recipes in the near future. The Rosenwald Foundation and Houghton Mifflin, publishers of *New World A-Coming*, are sponsoring a round-the-world tour for him, in which he will gather material for a book planned to be "a firsthand account of the colored peoples who are fighting on the world's battle fronts." He will also be on assignment for *Liberty* Magazine as the first Negro war correspondent for a national publication. Ottley will visit Africa, India, China, and Russia, and will spend some time with the Negro troops of the United States forces. "I'll be gone about eighteen months," he says. "I don't even want to try to see the glamour people, the folks who are running things. I couldn't add a thing, I believe, to what has been said about them. But I mean to find out what the working people expect, and what they are hoping for. I mean to dig in wherever I can and stay until I get to know some of the people real well so that I can find out not so much what they are talking about but what they really think and how they feel."

PATCH, ALEXANDER M(cCARRELL, JR.) Nov. 23, 1889- United States Army Officer

Address: b. c/o War Department, Washington, D. C.

To relieve General Vandegrift '43 and his Marines who had fought on Guadalcanal since August 7, 1942, the War Department sent one of its most experienced tacticians, Major General Alexander M. ("Sandy") Patch. Arriving at the Guadalcanal area in December, General Patch's job was to continue the offensive there until all Japanese resistance was eliminated. It was a job that called for "the kind of fighting for which he is prepared by appetite and experience"—the appetite marked by a taste for the initiative in swift, aggressive attack; the experience gained heading machine gun battalions in the First World War, and with United Nations forces in New Caledonia in 1942.

The son of Annie (Moore) Patch, and of Alexander McCarrell Patch, an Army officer, and the brother of another major general, Joseph, General Alexander McCarrell Patch, Jr., was born on November 23, 1889 at Fort Huachuca, Arizona. Since it was natural that he should follow the family precedent in choosing a military career, he was appointed to the Military Academy from Pennsylvania on March 1, 1909. At West Point he excelled in athletics, being a star pole vaulter and track performer. On his graduation in June 1913 he was commissioned a 2nd lieutenant of Infantry.

Lieutenant Patch joined the 18th Infantry on September 13, 1913, and until June 9, 1917 served with that regiment, successively, at Texas City, Texas; at Naco, Arizona; and at Douglas, Arizona. Then, with the rank of captain, he accompanied the 18th Infantry to France, serving with it until November 30, 1917 except for a brief period when he attended the British Machine Gun School in England. He then commanded the Machine Gun Battalion, 1st Division, until April 17, 1918, when he became director of the Army Machine Gun School in France for six months. As lieutenant colonel (temporary) he returned to the 18th Infantry, serving in France and Germany up to February 25, 1919, and participating in the Aisne-Marne, St. Mihiel, and Meuse-Argonne offensives. Two months with the Training Section, General Headquarters, A. E. F., followed.

On his return to the United States late in May 1919, Patch first served for short periods at Camp Benning, Georgia and with the Committee on Education and Special Training, Washington, D. C. He was then assigned to the Reserve Officers' Training Corps Section, adjutant general's office, until September 1, 1920, having been promoted to major. For the next four years he was assistant professor of military science and tactics at Staunton Military Academy. He then attended the Command and General Staff School, completing the course in June 1925 as a distinguished graduate.

After serving briefly at Fort Eustis, Virginia he returned to the Staunton Military Academy as professor of military science and tactics, and remained there until August 8, 1928. Some two years with the 12th Infantry at Fort Washington, Maryland, followed. After his graduation from the Army War College at Washington in June 1932 Patch returned again to teach at the Staunton Academy. In July 1936 he became a member of the Infantry Board at Fort Benning, and three years later became instructor of the Alabama National Guard at Montgomery, Alabama.

With military activity in the United States speeded up following the outbreak of the Second World War, Patch (with the rank of temporary colonel) was assigned to train raw rookies at Fort Bragg, North Carolina. Here he earned a reputation as one of the toughest of disciplinarians. It is said he thought nothing of sending his outfit on a

MAJ. GEN. ALEXANDER M. PATCH

twenty-four-mile hike under full pack in the hottest days of summer. Many of the men fell out along the way; but those who made the march found a keg of cold beer waiting for them.

Late in 1941 Patch had been assigned to command the Infantry Replacement Center at Camp Croft, South Carolina. Patch was made a temporary major general on March 10, 1942. When Allied Forces were being centered in the Pacific in the spring of 1942 General Patch was placed at the head of United States troops, cooperating with the Free French Forces, in the defense of the Pacific Island of New Caledonia. Holding the Island from Japanese seizure was a strategic point in Australian defense—a job which General Patch's forces, aided by United States fighter planes, ably performed.

On January 21, 1943 General Patch succeeded General Alexander Vandegrift of the Marine Corps in command of operations on Guadalcanal when the Marine forces, after five months' hard fighting, were given a rest. Since the operations at Guadalcanal were still the responsibility of the Navy, General Patch and the Army were officially under the command of Admiral William F. Halsey '42. General Patch's troops went into immediate action, and continued the offensive with the capture of Japanese headquarters at Kokumbona four days after their arrival. As an "outdoor man who has kept himself agile, keen-eyed, and steady of breath," General Patch personally led his troops up Mt. Oesten, a ridge dominating Henderson Field, and captured the Japanese position. In the five-day period from January 13 to 17, 1,032 of the enemy were killed. "The situation is in good hands," said General Vandegrift.

The drive against Japanese installations on Guadalcanal continued. Then, on February 9, 1943, came the official announcement from General Patch's headquarters that our forces had "eliminated Japanese resistance" on Guadalcanal. According to a Naval officer on the General's staff, the American conquest was "a complete rout and utter defeat of a Japanese Army which executed a non-orderly withdrawal." General Patch's report said that, in the closing twenty-five-day drive, 606 Japanese had been killed and 127 captured, together with a large number of machine guns, antiaircraft guns, and miscellaneous equipment.

On March 7, 1943 General Patch was awarded the Navy's Distinguished Service Medal, with a citation by Secretary of the Navy Frank Knox '40: "For exceptionally meritorious service in a duty of great responsibility as commanding general, Guadalcanal Area, during operations against enemy Japanese land, naval, and air forces from December 10, 1942 to February 9, 1943." In May 1943 General Patch returned to the United States to take command of the 4th Army Corps at Fort Lewis, Washington, exchanging assignments with Major General Oscar W. Griswold '43.

Major General Patch was married to Julia A. Lillell on November 20, 1916. The couple have two children, Julia Ann and Alexander McCarrell, III.

Who's Who in America 1942-43

PATTON, GEORGE S(MITH), JR. Nov 11, 1885- United States Army officer

Address: b. c/o War Department, Washington, D. C.; h. Hamilton, Mass.

Bestower of "the slap heard around the world" is "roaring, gimlet-eyed, two gun" Lieutenant General George S. Patton, commander of the American 7th Army in its successful Sicilian campaign.

Born on a ranch in San Gabriel, California, on November 11, 1885, George Smith Patton, Jr., went to day school in Pasadena and to the Virginia Military Institute (1903-04). He was a bad student but a good sailor, winning several sailing championships. He was also a great track athlete, and took part in the Olympics at Stockholm (1912). The day before the finals he set a new world's record in target shooting. He also took first or second place in racing, swimming, and horsemanship. He was appointed to the United States Military Academy from California in 1904. It is said that he was too cocksure to be popular, but he did become a class adjutant, one of the two highest undergraduate honors.

Upon his graduation (June 11, 1909) Patton was commissioned a 2nd lieutenant of Cavalry. He soon became known in the Service as a hell-for-leather cavalry man. He was first on duty at Fort Sheridan, Illinois, and in December 1911 transferred to Fort Myer, Virginia, where he was detailed to design a new cavalry saber. In 1913 he went to France to study the French saber methods, and upon his return to the United States served as Master of the Sword at the Mounted Service School, Fort Riley, Kansas. After serving with cavalry units in other Texas posts in 1915, he partici-

U. S. Army Signal Corps

LT. GEN. GEORGE S. PATTON, JR.

pated in the Punitive Expedition into Mexico as aide to General Pershing. There, the story is told, he became the hero of an expeditionary force sent to capture or kill a notorious Mexican bandit. Patton got the bandit, and brought him into the American camp strapped to the hood of an old Dodge car. "This was the first motorized action of the United States Army," he says.

It was as a member of Pershing's staff that Patton sailed for France in May 1917. He was detailed to the Tank Corps, attended the course at the French Tank School, and saw tank action at the battle of Cambrai, when tanks were first employed on a large scale by the British. He thereupon organized and directed the American Tank Center at Langres, also the 304th Brigade of the Tank Corps. He was in command of the latter in the St. Mihiel offensive in September 1918. Later that month, when transferred to the Meuse-Argonne Sector, he was under heavy fire and severely wounded. For "conspicuous courage, coolness, energy, and intelligence in directing the advance of his brigade" he was awarded the Distinguished Service Cross. He was also, after the War, awarded the Distinguished Service Medal with the following citation: "By his energy and sound judgment he rendered very valuable services in his organization and direction of the tank center at the Army Schools at Langres. In the employment of Tank Corps troops in combat he displayed high military attainments, zeal, and marked adaptability in a form of warfare comparatively new to the American Army."

That new form of warfare Patton made his special preserve after returning to the United States in 1919, when he commanded the 304th Tank Brigade at Camp Meade, Maryland. But for a few years thereafter he returned to his previous service with the Cavalry. At his old post at Fort Myer, Virginia, he commanded a squadron of the 3rd Cavalry until November 1922. He then spent a year at the Cavalry School, Fort Riley, Kansas, and a year at the Command and General Staff School at Fort Leavenworth, Kansas. For the next four years he served at the headquarters of the First Corps Area, Boston, Massachusetts, and in the Hawaiian Islands.

From 1928 to 1931 Patton served for four years in Washington, D. C., in the office of the chief of Cavalry. At this time he was aide to the visiting Prince of Wales (now Duke of Windsor). Patton told him that in this country all American socialites played a game called "craps," which he taught the Prince. "From that time on the Prince would shock his hosts with a desire to play the game called 'craps.'" Upon his graduation from the Army War College (1932), Patton was again ordered to Fort Myer, Virginia, where he remained on duty with the 3rd Cavalry until the spring of 1935. With the permanent rank of lieutenant colonel (1934), he served with the General Staff in the Hawaiian Islands for two years, afterward returning to assume command of the 5th Cavalry at Fort Clark, Texas until ordered to Fort Myer to command the 3rd Cavalry (December 1938).

When the Second World War stepped up military preparations in the United States, Patton was ordered in July 1940 to Fort Benning, Georgia, for duty with the 2nd Armored Division as brigade commander. When he arrived he found a vast confusion of red tape and old rusty tanks. Patton took over briskly, repaired the tanks, and bought some much-needed equipment from Sears, Roebuck and Company—"a new source of supply." Receiving promotion to brigadier general (temporary), he was assigned as commanding officer of the 2nd Armored Division, Fort Benning, in April 1941. Under him the 2nd Division "developed into the toughest, most feared outfit of the whole Army. Its men were proud to belong to it." When he became also commanding general of the 1st Armored Corps, Patton moved these armored divisions to Indio, California, to organize the Desert Training Center, where United States soldiers would learn to live and fight in temperatures hotter even than those prevailing in Africa. "Patton did not spare himself any discomforts. He got up at 5:00 in the morning, ate salt tablets and fruit juices with all his meals (to combat the heat) and on military problems used only one gallon of water a day for both drinking and washing. He encouraged rather than discouraged a spirit of camaraderie between officers and men which was closer than could be found anywhere else in the Army."

The plans for the American invasion of North Africa placed Major General Patton in charge, under General Eisenhower '42, of the Task Force troops. He knew what there was to be known about tank warfare, and he had been holding preparatory mechanized maneuvers under desert conditions. In a later report from Allied Headquarters in North Africa General Eisenhower, while commending Major General Patton for his successful assault on a 200-mile front, disclosed that Patton himself reached shore only through "the good fortunes of war." On November 8 the small landing boat which Patton was about to enter was demolished by a French gun. For the next couple of hours he watched a naval battle until the warship he was on could settle affairs with its opponents.

Thereafter, things went all right with the General. "His bald pate shining and his service revolvers swinging from both hips," he reported with gusto to Eisenhower the success of his Moroccan campaign. He said that American tanks had proved their worth in every instance, being far superior to anything encountered in French North Africa. He also told how a new American 105-millimeter self-propelled gun had blown a hole in a fort near Lyautey, Morocco, so that infantry could rush in with grenades and capture it. "It was a real nice fight," he said. He added that the Americans and French were getting along "damn friendly."

Patton's forces occupied all Morocco and remained in command there until the German break-through at Kasserine Gap in Tunisia in February 1943. After that reverse Patton relieved Major General Lloyd Fredendall as commander of the American 2nd Corps. He rallied this force and led it to victory at Maknassy, El Guettar, and Gafsa. These victories led to a junction of Americans with the British 8th Army between Gafsa and Gabes. The 2nd Corps was then shifted to Northern Tunisia for the final phase of that campaign. General Patton's deputy commander, then Major General and now Lieutenant General Omar Bradley '43, took command; Paton devoted himself to the final training of American soldiers who were to invade Sicily. He supervised the landing of the 7th Army in Sicily from a headquarters ship and then landed himself into that campaign. It is generally believed that Sicily would not have been conquered in thirty-eight days had it not been for his driving force.

Major General Patton earned in his Cavalry days the reputation of being one of America's "toughest" and sometimes most profane officers. It is said that his men call him "Flash Gordon" because of the helmet he wears and the grim face he sticks out of a turret as he bounces across country in his tank. He is also known as "Old-Blood-and-Guts," Georgie or the "Green Hornet," but mostly as "the Old Man." Looking some ten years younger than his age, "he stands more than six feet tall, with broad shoulders, narrow hips, and strong arms and legs. With his piercing eyes, he is capable of defeating any of his junior officers at sharpshooting." Besides being a tank expert, he is a great student of military tactics, possessing one of the world's greatest libraries of military volumes. "He knows the campaigns of Napoleon, Lee, Grant, and Frederick the Great by heart and will recite them at length." Most of his techniques, even his slogan, "grab 'em by the nose and kick 'em in the tail," have been derived from the Cavalry. He believes in the "personal approach" to the enemy. He once asked a private what he was shooting at during maneuvers. "A concealed machine gun, sir," said the private. "That's not a machine gun," roared Patton. "It's a dirty Nazi . . . "

It had long been known that Patton's army was under the strictest discipline in the American armed forces, and stories about Patton's outbursts of temperament were common. But the American public was shocked when in November 1943 news commentator Drew Pearson '41 announced that the General had been reprimanded by Eisenhower for having struck a shell-shocked soldier in a hospital. An official statement was at first issued denying that Patton had been reprimanded; then, on November 23, the whole matter was finally brought into the open, although the denial had been technically true: no "on-the-record" action against Patton had been taken.

It seems that on two separate occasions in August 1943, while visiting evacuation hospitals, Patton had sworn at and struck patients suffering from shell-shock, apparently under the illusion that they were malingering. When Eisenhower learned about the incidents he "took the hide off" Patton, and Patton subsequently went about Sicily apologizing to the patients, nurses, hospital staff, and witnesses involved, and to groups of officers and men in the divisions under his command. It was explained that he continued in his command only "because he was considered necessary and valuable" to Allied operations. He was credited with having shortened the Sicilian campaign—"and thereby saving lives—by his own methods." Patton himself told reporters after the episode had been brought out into the open: "I do a lot of human things people don't give me credit for and I'm not as big a . . . as a lot of people think. The commander of invading troops is under great tension and may do things he later regrets."

One of the results of this revelation was that the Senate Military Affairs Committee deferred action on the pending promotion of Patton and of thirteen others whose names had been sent to them by the President on October 1. (Patton had been nominated for promotion to the permanent rank of major general.) Eisenhower's headquarters also submitted a supplementary report on the incident to the Senate committee in which it was revealed that Patton had once spoken "threateningly and with undue harshness" to a soldier who failed to wear leggings while on combat duty because his ankles were swollen. It was known, too, that he had once ordered a mule belonging to a Sicilian peasant shot because it was on a military bridge, and that he had cursed an Army newspaper reporter for writing that American soldiers take to foxholes when under heavy fire. Drew Pearson also charged that members of the pro-Vichy social circle had mingled with Patton at his Casablanca villa, and that the British had finally arrested one member of this troupe who had been on intimate terms with the German armistice commission.

In spite of this campaign against him, including even some demands for his court martial, Patton remained commander of the 7th Army. In the early part of December he visited the Middle East and passed three days as the guest of General Sir Henry Maitland Wilson, going to various areas of that command, including Palestine. This visit was seen by some as heralding a Balkan drive. The 7th Army had not been heard of officially since Italy had been invaded. The great part of it had been absorbed in Lieutenant General Mark Clark's '42 5th Army, then heading toward Rome, and the remnants of it were still

PATTON, GEORGE S., JR.—*Continued*

in Sicily and North Africa, held in reserve for the time when the Allies would either span the Adriatic into Yugoslavia, invade the Balkans from another direction, or hit Southern France.

Surprisingly enough, in moments of relaxation between wars Patton composed poetry—two volumes of it—which, he says, will be published posthumously. "These verses have the same vividness that stamp his stories. They tell about soldiers in no man's land, of suffering and bitterness and final historical glory." Patton is convinced that all good soldiers have a desire for glory. During wartime Patton's literary efforts are confined to the speeches he regularly gives his troops. The soldiers are reported to look forward to these, wondering "what the Old Man will serve up today."

On May 26, 1910 Patton married Beatrice Ayer of Boston, whose family owns the American Woolen Company. The Pattons have a son, in 1942 at West Point, and two daughters, both married to Army men. Mrs. Patton is the author of a best-selling historical novel. *Blood of the Sharks* (1936). The Pattons own and sail together a sixty-foot schooner called the *When and If*. In this, which the General helped design, they hope some day to sail around the world. They have also a beautiful old farmhouse at Hamilton, Massachusetts, where they have spent brief leaves, and where Mrs. Patton lives while her husband conducts his African campaign. On the farm the General's favorite sports are riding, polo, skeet-shooting, and squash. A model Army wife, Mrs. Patton has learned to regard her husband with humor and tolerance, and how to live when he's off to the wars. "One of the hardest things women have to bear in wartime is waiting," she said, recalling the time her husband had been wounded in France, left for dead, then recovered to be decorated for heroism. "He was in fine shape, but I was not. I had practically lost my health." Her experiences have led her to draw up a ten-point code for other wives of men fighting overseas. The advice includes not to worry, not to listen to rumors, but to write cheerful letters, keep the family intact, and get a regular job of work. Since November 9, 1943 Mrs. Patton has also had the job of short-wave broadcasting to France for the OWI. Mrs. Patton has need of rules, since the General has often told her of his premonition that he would be killed in action. This suits his love of the dramatic—death will come during battle, and it will be glorious.

Who's Who in America 1942-43

PAXINOU, KATINA (păx'ĭ-nū) Motion-picture actress

Address: b. c/o Paramount Pictures, Inc, 5451 Marathon Ave, Los Angeles, Calif.

When Paramount's picturization of *For Whom the Bell Tolls*, Ernest Hemingway's best seller about the Spanish War, opened on Broadway in New York City in the late summer of 1943, the critics with one voice paid tribute to the casting of Gary Cooper '41 and Ingrid Bergman '40 as Robert and Maria and then proceeded to devote their daily ration of superlatives to Katina Paxinou for her characterization of Pilar. "The best performance in the picture," they said of her work, "a marvel of tenderness and violence, the Spanish peasant character in fluid mass"; an "almost epic interpretation"; "so vivid that she leaps from the screen." Katina Paxinou just missed receiving the 1943 New York Film Critics Award for the same performance by a vote of eleven to six, Ida Lupino '43 running away with the award as best actress of the year.

The Greek actress is not a complete stranger in this country. In 1930, as a member of the Cotopouli Repertory Company of Athens, she made a six months' tour of the United States. In 1942 she appeared as Hedda Gabler for a few weeks in New York. But the country became Paxinou-conscious when Paramount, rejecting Marjorie Rambeau, Aline MacMahon, and Pola Negri for the part, cast the vibrant Katina as Pilar, the squat, ugly woman guerrilla. As Pilar, Paxinou adds new laurels to those she has won not only in her native land but throughout Europe.

For her work in *For Whom the Bell Tolls*, Hollywood has called Madame Paxinou "its No. 1 scene-stealer" because audiences who saw the film came away with "the feeling that they had seen the famous Greek actress and not much else."

Katina Paxinou was born in Peiraievs, the port of Athens, Greece. (Like most actresses she refuses to divulge the date.) She was one of the seven children of Basil Constantopoulos, a wealthy grain broker and flour mill operator, and his wife Malandrinou. At thirteen Katina applied for an audition at the Conservatory of Geneva, Switzerland. She wanted to study singing, but she was refused the audition on the grounds that she was too young, and was told to come back in three years. Six months later, dressed in adult clothes, she returned and was received into the Conservatory. She studied there for three years, winning the Gold Medal, then for six years continued her studies in Berlin and Vienna. After that she sang opera in Athens under Dmitri Mitropoulos '41, now conductor of the Minneapolis Symphony Orchestra.

When Katina decided to go on the dramatic stage, her mother, disapproving, informed her that if she left the family home to enter the theatre she need not come back. The girl asked a friend of the family for permission to store her music library in his basement. He gave her the key, and for six months Katina lived in the basement, her nightly presence there unknown even to the master of the house.

The young actress joined the repertory company of Mme. Marika Cotopouli-Chilmi and played dramatic parts for two and one-half years. In December of 1930 the company opened a six months' tour of the United States with a production in New York of Sophocles' *Electra*. Paxinou played the role of Clytemnestra. As the late Percy Hammond noted, a company playing Greek drama in the original was bound to have a limited audience. The dean of American drama critics confessed amiably that the play was "all Greek" to him. What comment he made on the acting was reserved for Mme. Cotopouli-Chilmi, who played the title role of Electra.

On her return home after this tour Paxinou was married to Alexis Minotis, Greece's foremost actor. The husband and wife became the Lunt '41 and Fontanne '41 of the newly formed Royal Theatre of Athens. This theatre, subsidized by a government tax on race tracks and lotteries, became one of the most celebrated in Europe. It presented the plays of Aeschylus, Sophocles, and Euripides throughout Greece, not only in the large cities but in every mountain village where a theatre could be found. In Athens Minotis and Paxinou played in the ancient rebuilt theatre of Herodes Atticus at the foot of the Acropolis. At Epidauros they played in the two thousand-year-old amphitheatre which holds 40,000 spectators. Madame Paxinou soon won for herself the title, the "Bernhardt of Athens."

For some of the plays Paxinou herself wrote musical scores; Dmitri Mitropoulos wrote the scores for others. The company won brilliant acclaim on the continent and in England. Under the energetic Paxinou and her husband, the theatre widened its repertoire to include plays by Shakespeare, Ibsen, O'Neill, and other writers. The actress herself translated O'Neill's *Desire under the Elms* in the record time of four days. For their contribution to the theatre, Minotis and Paxinou were decorated by Greece's King George II '43.

In 1939 Madame Paxinou decided to take the entire company to the Royal Greek Theatre of England. A high German official warned the actress that "in three days England will be nothing but an unimportant island." Nevertheless she sailed.

Paxinou was playing Ibsen's *Ghosts* in London when France fell. The actress started for the United States to aid Greek War Relief. Her ship was torpedoed in the North Atlantic, and she spent eighteen hours in an open lifeboat before a British destroyer picked her up. During the next five days the destroyer was attacked repeatedly by dive-bombers and submarines. Finally it reached a Scottish port.

For almost a year after that, Paxinou experienced the daily bombardment of London while she helped nurse evacuated French sailors and did other relief work. "Those days were twenty-six hours long," she says. She had lost her eighteen trunks of theatrical costumes in the torpedoing of her boat. A bomb which struck her London hotel now relieved her of the rest of her possessions. Undaunted, she once more set out for America, this time by way of Lisbon and the Clipper.

KATINA PAXINOU

In January 1942 Paxinou revived Ibsen's *Hedda Gabler* in New York. Brooks Atkinson '42 admired her interpretation, found that she had the "incandescence of a real actress." Howard Barnes (later to be lavish in his praise of her as Pilar) thought her Hedda strong but unsubtle, too unrelievedly villainous. The majority of the critics agreed with Atkinson that Paxinou was a magnetic and forceful personality who knew how to dominate any stage she graced with her presence, but the play had a short run. The spring of 1942 was not a favorable time for reviving *Hedda:* people found it difficult to get excited about Ibsen's neurotic heroine in the days right after Pearl Harbor.

Friends in America urged Paxinou to try for the role of Pilar. She was enthusiastic about the part from the beginning. Physically, she bore little resemblance to the heavy masculine woman with thick legs and "a brown face like a model for a granite monument." But Paxinou *felt* the part. In an interview with Paramount executives she said that this was because her ancestors had been guerrillas, spilling their blood for liberty. She had read the novel six times "and virtually memorized it." Thus she was able to give whole pages of original dialogue which impressed the executives. She was also influenced by the fact that she is, like Pilar, violently anti-Fascist. At any rate, she made the part peculiarly her own. Her interpretation of Pilar is now motion-picture history.

Katina Paxinou's future in the United States is no longer—if ever it was—a matter for conjecture. Her success has been little short of electrifying. Critic after critic has leaped on the Paxinou band wagon. It is something to comment upon when moviegoers pass over the relatively young and

PAXINOU, KATINA—*Continued*

very glamorous Ingrid Bergman to rave over a woman no longer in the first flush of youth who hides every scrap of the glamour she possesses in real life to give a realistic portrayal of the grim fifty-year-old Pilar.

Besides appearing in *For Whom the Bell Tolls* Katina Paxinou has played in *Hostages*, the Paramount film based upon Stefan Heym's '43 novel about the Czechoslovakian underground movement, and in the fall of 1943 she is scheduled to appear in support of Ginger Rogers '41 in *Tender Comrade*, with Ray Milland and Maureen O'Hara in *Tomorrow's Harvest*, and in the Cecil B. de Mille '42 picture tentatively entitled *The Rurales*. In November she signed a contract with Paramount to appear in two pictures in 1944 besides the one for which she is already committed.

The day before the Nazis marched into Athens, Paxinou's husband, Alexis Minotis, escaped into Turkey disguised as a British merchant. The Turks turned him over to the Gestapo, and he was returned to Athens and ordered to play Goethe's *Faust* in the interests of *Kultur*. Disguised as a fisherman, Minotis escaped again. This attempt to elude the Nazis also failed, but in his third try Minotis reached Egypt and was flown from Cairo to Washington at the request of the King of Greece. In the fall of 1943 he was in Hollywood, writing. One article by him has been published in the *Saturday Evening Post*, and he is at work on a book about Greece under the Nazi yoke.

Katina Paxinou is five feet five, weighs about 135 pounds, is "alert, nervous, and muscular." (She was heavily padded for her role as Pilar.) She has thick dark hair and flashing dark eyes. (She thinks that films have it all over the stage in at least one respect: motion-picture actors can act with their eyes.) Her features are somewhat aquiline. She is "interesting" and "magnetic" rather than "beautiful" in the conventional sense of the word. She gesticulates freely, giving one the impression of having unlimited vitality. She enjoyed doing the mountain scenes in *For Whom the Bell Tolls*, for she likes exercise and is used to climbing the mountains of her native Greece.

Katina Paxinou is a patriot, and is delighted when people refer to her as "that Greek actress." She is also fiercely anti-Fascist, had no time for the "little Hitler" Metaxas '40 and despises appeasers of Greek or any other nationality. She lives for the day when the Nazis will be thrown out of Greece, and when she will be reunited with her seventeen-year-old daughter Illiana, her mother, her two brothers, and her four sisters, all of whom are in "protective custody" in Greece.

When the War is won Paxinou and her husband want to gather together as many members of their former troupe as have survived and with them form the nucleus of a company that will present Greek drama, both ancient and modern, in America. They visualize productions of the great Greek dramatists in the Hollywood Bowl. Paxinou does not believe in the star system. In their own theatre in Greece, Minotis and Paxinou never received top billing. "Often my husband and I did small parts, replacing ourselves in the main roles by others of the group. How else may a national theatre flourish if others are not given a chance?" she asks.

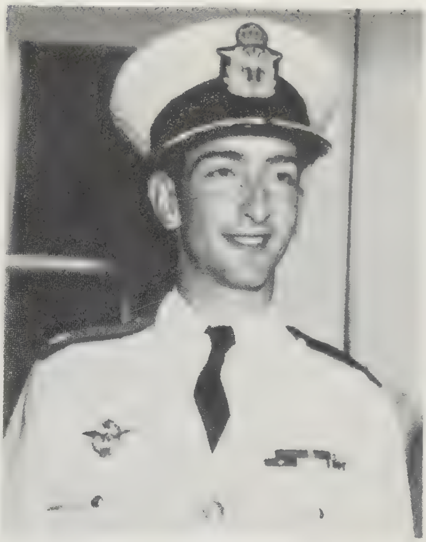
PETER II, KING OF YUGOSLAVIA
Sept. 6, 1923-

Address: Yugoslav Government-in-Exile, Cairo, Egypt

Peter II, the youthful King of Yugoslavia, has behind him, as John Gunther '41 puts it, "a couple of generations of the most turbulent Balkan genealogy imaginable." His family, the Karageorgeovitch dynasty, is descended from "Black George" (Peter's great-great-grandfather), the bandit chieftain who tried to free Serbia from the Turks in the early part of the nineteenth century. Members of a rival dynasty, the Obrenovitches, alternately replaced the Karageorgeovitches on the throne of Serbia until 1903, when the last Obrenovitch and his wife were murdered and Peter Karageorgeovitch, the father of Alexander I, ascended the throne. A thorough democrat, he ruled as Peter I until 1914 when, having yielded to pressure and returned his Premier, Nikola Pashitch, to power after his people had repudiated him, he abdicated. Alexander, who had been named Crown Prince in place of his popular older brother George when the latter killed a servant in a fit of temper and was sent abroad by Premier Pashitch to "take a cure," became Prince Regent. Pashitch and the ambitious Alexander had been working together for a long time.

Alexander was commander in chief of the Serbs during the First World War which added to the formerly independent Serbian and Montenegrin Kingdoms the former Hungarian Provinces of Croatia, Slovenia, and Voivodina, the Austrian Crown Land of Dalmatia, and the Austro-Hungarian "Empire Provinces" of Bosnia and Herzegovina. In 1921 he became ruler of "The Kingdom of the Serbs, Croats, and Slovenes," where, under the domination of the Serbs, were lumped together some dozen national strains, boasting almost as many tongues, religions, and traditions. Out of an estimated 15,000,000 population, from six to seven million were Serbs; from three to four million Croats; more than one million Slovenes; and there were also substantial Macedonian, German, and Albanian minorities. The Croats and Slovenes had wanted a federation of South Slav states with equal rights for each member, and when in the autumn of 1918 Alexander had proclaimed a South Slav Union within the boundaries of a centralized state under Serbian leadership, it had already been obvious that there was trouble ahead. This, however, became even more obvious when the non-Serbian nationalities refused to recognize the Vidovdan Constitution of 1921 which officially established the centralized state.

It was in the midst of these national struggles that Peter Karageorgeovitch was born on September 6, 1923, the eldest son of Alexander and of his new bride, Princess Marie of Romania, the daughter of the late King Ferdinand and Queen Marie of Romania. Christened with the mixed waters of the new kingdom's three rivers, the Sava, Drava, and Danube, it was hoped that the infant Prince would symbolize national unity; but one crisis followed another as the autonomists in Croatia and elsewhere fought the proponents of a "Greater Serbia." In 1928, after the assassination of their peasant leader, the Croat deputies withdrew entirely from Parliament. Finally, on January 6, 1929, Alexander took things in his own hands and set up a military dictatorship, abolishing the former constitution. On October 3, 1929 the title of "Kingdom of the Serbs, Croats, and Slovenes" was supplanted by "Kingdom of Yugoslavia"; and on September 3, 1931 Yugoslavia received a new authoritarian constitution by which the King was given unlimited powers. From now on, Alexander's ideas would be forced ruthlessly down the throats of the Yugoslav minorities if necessary.



PETER II, KING OF YUGOSLAVIA

Peter, growing up in Belgrade under the care of an austere British nurse, Miss Crowther, whom he called "funny Nanny," knew nothing of any of this. He has been described during this period by his grandmother, Queen Marie, as "a sweet, shrinking, bashful boy... somewhat backward in his studies." He was a lonely boy, too, although he had his two younger brothers, Tomislav and Andrey, to play with. "Good scholars of his own age without reference to their birth were... invited from the public schools of Belgrade to study and play with the heir to the throne at the royal palace of Dedinje. Although the teachers and children were urged to treat the heir to the throne like any other pupil, they could never get over a certain shyness and restraint in their attitude toward him." It was therefore decided when he was eleven that he should go to school in England, and in the fall of 1934, after a few days of London sightseeing, he entered the Sandroyd Preparatory School at Cobham, Surrey.

But he was not destined to have a British education. On October 9, 1934 Alexander was assassinated at Marseilles, together with the French Foreign Minister Louis Barthou, after

PETER II, KING OF YUGOSLAVIA—*Continued*

landing from a naval vessel en route to Paris on a mission of good will. The assassin was a Croatian terrorist, but it is generally believed that the murders were organized and subsidized by Mussolini '42, who had for some time been using the more disreputable elements among the discontented Yugoslav minorities for his own ends. Alexander, Mussolini well knew, would never permit the weakening of the eastern bloc of states consisting of the Little Entente and the Balkan Pact; Barthou had insisted that efficient collaboration with all the European Slavs was necessary for France's preservation.

Peter, summoned home, was not informed of his father's death until he reached his mother and grandmother in Paris. Then Queen Marie told him: "Peter, you know people will call you Majesty now." "Grandmamma, I am too young to be a king," Peter is supposed to have replied, bursting into tears. He was, however, tearless when he reached Belgrade on October 12. There he was greeted by Prince Paul '41, his father's cousin, who on the night of the assassination had produced a secret testament made by Alexander nine months before which designated him as one of three regents during Peter's minority. Peter was now King of Yugoslavia, but the coronation was scheduled for September 6, 1941—his eighteenth birthday. Many believe that Paul and his wife—particularly his wife—never intended to see that coronation take place.

Since the constitution of Yugoslavia insists that the King must remain in his own country and can leave it only for short periods, once again Peter returned to the palace of Dedinje, next to Paul's White Palace. Though he attended a few public functions with his mother, and his picture appeared on nearly all Yugoslavian stamps and was hung in most public buildings and peasant homes, he still had more to do with books than with Yugoslav politics. Prince Paul and his Premier, Milan Stoyadinovitch (appointed June 1935), were therefore without interference when they set about to undo Alexander's work in the international sphere, moving closer and closer into the German and Italian orbit, while modifying Alexander's authoritarian methods very little in their treatment of their own people. Paul did not, however, neglect Peter's education. Peter followed the educational plan laid down for all Yugoslavian schools, and was taught by selected Belgrade professors and an English tutor, C. C. Parrott. He learned the rudiments of the Yugoslavian constitution and law; he learned much about the history of his country and his family; he learned the first principles of military science. He studied languages: English (which is the secondary language of the Belgrade court), French, German, Russian. He spent many hours at gymnastics, several times a week being joined by a hand-picked group of boys from the Belgrade schools. He rode horseback, fished, skied, swam, rowed; and in the summers he went to Boy Scout camps or learned to make fires or build dams with other members of the Sokol organization.

It was mechanical science, however, which interested the young King most. His favorite toy had always been an electric automobile which the French Government had given him when he was eight; when Göring '41 had wanted to please him he had presented him with a tremendous toy train as a birthday gift; and Peter is said to have once repaired the palace electric-bell system before the electrician arrived. Some years ago a carpentry shop was installed in the annex of the palace after he had told his mother: "Mother, things can't continue in this way. I don't have enough money. I'm going to learn a trade." (The new instructor, a master carpenter, was promptly informed: "Sir, I am counting on you to teach me how to make beautiful things, which I shall be able to sell easily, in spite of the depression. I need some money.") And as Peter grew older, he grew as interested in building his own radio sets as in speeding recklessly in an open roadster on the bad roads of Yugoslavia.

In 1939, his classical education completed, Peter began his military training as a buck private. His father had been, above all, a soldier; but Peter seemed to resemble him very little. "Slim and girlish", "not exactly a 'he-man' or 'regular feller,'" he had been described by his grandmother as "a very pathetic figure" whose nature "so full of sensitiveness and diffidence makes him doubly so." There were few indications that he would at any time be capable of helping to lead a revolt, although the healthiness of his ideas is illustrated by at least one story. Peter had asked his great-aunt, the Infanta Beatrice of Spain, why there had been a revolution in that country. Told that it had been because the Spanish people were mad, he had replied: "It seems to me that there is something wrong with what you say. I think that if people drive away a king he must have done something he should not have done."

In early 1939 Premier Cvetkovitch and Foreign Minister Cincar-Markovitch took the place of the unpopular Stoyadinovitch. Yugoslavia only moved further and further into the Axis orbit, however; and in February 1941, as Hitler '42 poured troops into Bulgaria in preparation for a Nazi coup in Greece, the Premier and Foreign Minister sped to Austria to hold conversations with Hitler and Von Ribbentrop '41. On March 25, in Vienna, representatives of the Belgrade Government signed a protocol of adherence to the three-power pact identical with those signed previously by Hungary, Romania, Slovakia, and Bulgaria.

Back in Yugoslavia there were angry demonstrations against this surrender to the Nazis and mass resignations from the Cvetkovitch Cabinet. Peter was told by court officials that his people had turned against him and that unless he locked himself in his palace he would be assassinated, and so he took two pistols out of a cupboard and carried them about with him all that day. But some of the boys with whom he had been educated were in the habit of ringing him up in his palace on a private line and, a new private line having been installed without the knowledge of his entourage, he hoped to learn the truth from one of his friends. After waiting until noon in his room, not daring to make a call himself, he heard the phone ring. Peter asked if it was true that his people wanted to kill him and was told that it was a lie: that it was Paul and his Government that were hated, and that soon a revolutionary force would come to Peter's palace and set him free to rule over them in the moment of their rising against Germany. Peter, however, continued to carry his pistols, now knowing that those around him were his enemies; and when he was awakened the next morning to see General Simovitch, the leader of the conspiracy, the pistols were under his pillow. Simovitch's entry had taken place without incident, since Peter had given orders to the guards inside not to fire on the troops which surrounded the palace, while Simovitch had told the revolutionary troops not to fire on those inside.

On the morning of March 27, with the population of Belgrade cheering wildly, Peter proclaimed from the city palace:

"Serbs, Croats, Slovenes!

"In this moment so grave for our people I have decided to take the royal power into my hands. . . The Regents have resigned. . . I have charged General Simovitch with the formation of a new Government. . . The Army and Navy are at my orders. . ."

During the day a Cabinet was formed which included representatives of all three peoples, though dominated by pan-Serbians. The next day, at Dedinje, the oath of accession was administered to Peter, standing very tall and straight in the uniform of an Air Corps general. Actually Simovitch's Government was no more eager for war than Paul's. Assurance was given that Yugoslavia was willing to be neutral and favor none of the belligerent powers; and though a pact of non-aggression and friendship with the Soviet Union was signed a few days afterward, on April 7 representatives of the Belgrade Government were also scheduled to journey to the Italian and German capitals.

But Hitler did not wait more than a few days himself. At dawn on April 6, without a declaration of war, German planes raided Belgrade; and the next day the German Foreign Office announced that German troops had penetrated twenty miles over the Yugoslav frontier. At the very beginning of the air raids the Government sent Peter out of Belgrade to stay at the monastery of Ostrog, "a bleak pigeonhole in a Montenegrin cliff" only a few miles from an air field. When it became obvious that defeat for the ill-prepared Yugoslav Army was only a short time away the royal party went to the air field, where a plane was to take them to Ioannina, Greece. No plane arrived, however, and they were forced to board an Italian Marchetti which was already on the air field.

The flight to Greece was dramatic in more ways than one. As Rebecca West tells it: "As the plane came to Ioannina, a swarm of fighters rose up around it, and the pilot, in an effort to convey that this was not enemy craft, dropped some signals at random. It happened that the British authorities had sent them a message, which they had not received, telling them to declare their identity by dropping almost exactly the combination of signals which the pilot had picked by chance." From Greece, Peter flew to Jerusalem, after piloting the plane most of the way to Athens because his pilot was exhausted from three straight nights of aerial combat. In Jerusalem he was joined by Simovitch and some of his Ministers, and was able to release the proclamation he had made before he left, which had been held up by Greek censors: "Although I am obliged to abandon our national soil before superior enemy forces, I do not mean to abandon the struggle. I appeal to my dear people not to lose heart because of the present reverses but to maintain faith in the future. Following my great ancestors I shall, until my very last breath, hold high the banner of Yugoslavia. Convinced that God will defend our just cause, I declare, 'Long Live Yugoslavia and Her Freedom!' "

After going across Africa to Lisbon, Peter reached London. At that time it was reported that his dearest wish was to win an R. A. F. commission. His mother and brothers had left Yugoslavia for England several days before he did, and he celebrated his eighteenth birthday quietly with his family in September 1941, telling reporters only that he thought the time ripe for a British invasion of Italy. But there were many duties in connection with this business of being a King, for no Cabinet decision was valid without his signature. On January 15, 1942 he signed an agreement between Greece and Yugoslavia for the constitution of a Balkan Union, announcing that he hoped a Central European Union on the basis of a Czecho-Slovak-Polish agreement would be created as well. In June 1942 he was in the United States to propose a separate lend-lease agreement covering his country, where, the Yugoslav Government-in-Exile claimed, General Draja Mikhailovitch's '42 guerrillas were still fighting the Axis. According to *Newsweek*, "Next to Winston Churchill '42, Peter was more popular on Capitol Hill than anyone else in the recent procession of foreign notables."

In the fall of 1942 Peter began taking classes in economics and international law at Cambridge University in the mornings, but in the afternoons he continued to take care of "king business," and he continued to collect a salary amounting to a half million dollars a year. The personnel of the Yugoslav Government-in-Exile changed many times after Peter reached England. At all times, however, liberals and radicals charged, it represented chiefly the large landowners in the "Greater Serbia" movement who seek to keep the Croats and Slovenes subordinated. At all times, too, the Government supported General Mikhailovitch, who was accused of accepting Axis assistance in fighting Tito's '43 Partisans and of claiming credit for Partisan victories over the Axis while hoarding his own forces for an Allied invasion so that the Royalists could dominate the country when the moment came. On this question Peter followed the lead of his Ministers. On November 1, 1942 he commended the General publicly, saying: "Not only has his fight not ceased for a single day but it has, in spite of all assurances to the contrary, gained daily in strength and become more grievous to the enemy"; and early

PETER II, KING OF YUGOSLAVIA—*Continued*

in 1943 he warned the Yugoslavs against "premature" action and asked them to rally around Mikhailovitch. But there were other issues on which he and his Government differed—notably on his own marriage to Princess Alexandra of Greece, King George II's '43 niece, to whom Peter had been secretly engaged since at least May 1942. On July 31, 1943 the Yugoslav Premier finally announced Peter's engagement formally, but it was only after a great deal of controversy.

There were also many Cabinet crises arising from controversy between the Serb and Croat members of the Cabinet, particularly after it was decided in the summer of 1943 that Peter and his Cabinet should be transferred to Cairo. The Croats insisted on a post-War status based on an agreement made in the summer of 1940 between the leader of the Croatian Peasant Party and Cvetkovitch; the Serbs refused to recognize the constitutional status as binding for the present Government. Finally, on August 10, Peter dismissed the entire Cabinet, retaining only Mikhailovitch. By the end of September, Peter and a new Cabinet had left for Cairo in order to be closer to their own country, where the strong possibility of an early invasion was seen.

By this time the Germans were taking desperate measures to establish their defenses in the Adriatic, and their position on the Yugoslav coast was in jeopardy not only from the increasing activity of the Yugoslav Partisans, but also from the seizure of nearby Italian airfields and the occupation of the Aegean islands by the British Navy. The Partisans (who had been joined by many Italians after the Italian surrender) soon claimed more than one-third of the country in an offensive designed to establish beachheads and bases for an Allied invasion. Forced to recognize their strength, Peter announced from Cairo that he was making no distinction between the Partisans and the forces of Mikhailovitch. "The main thing," he said, "is to stop them from clashing and to achieve cooperation." Peter also told an American newspaper reporter that he had ordered Mikhailovitch to avoid conflict with the Partisans and to join them at once in a unified campaign. Reports of new battles being waged by Mikhailovitch against the Germans were soon being sent from Cairo, but, since in many cases Mikhailovitch and the Partisans again laid claim to the same towns, the actual situation remained the same. The Partisans continued to accuse Mikhailovitch of collaborating with the Nazis; Mikhailovitch's "radio station" charged the Partisans with fomenting "an unbelievably bloody revolution" in Yugoslavia; and Louis Adamic '40 hinted that Anglo-American liaison officers, aided by agents of the inner clique of the Yugoslav Government-in-Exile, might arrange a deal with the Serbian Quisling, Milan Neditch, whereby his forces would go under Mikhailovitch's command. On October 16 Peter changed his Government to include new Croat and Slovenian members, but by this time his Government was losing support even abroad.

Early in December the Partisans, who by this time were receiving considerable aid from the Allies, announced that the newly-formed Yugoslav National Committee of Liberation would henceforth be the sole government of Yugoslavia, and demanded that the Allies withdraw recognition of Peter's Government. On December 22 it was learned that the new provisional government, in a meeting on November 29, had ordered Peter's Government deprived of all rights and had forbidden him to return to his homeland until liberated. The Allied Governments nevertheless continued their futile efforts to reconcile Peter and the Partisans.

On the surface Peter ("Petrushka," his mother calls him) would seem to fit better into the American university scene than into the serious Balkan drama in which he hopes to play the leading role. He looks "very much like an eighteen-year-old undergraduate," and he has tastes to match. He likes "one-armed driving" with Alexandra, would prefer studying engineering to learning all about economics and international law, considers receptions stuffy, sprinkles his conversations liberally with American slang (much of it learned from Damon Runyon '42, his favorite author), dreams of a Hollywood honeymoon ("I always wanted to meet Bob Hope '41"), and would rather listen to Artie Shaw '41, Gene Krupa, Benny Goodman '42, and Tommy Dorsey '42 than to Bach, Beethoven, or Brahms. In Belgrade he played the drums in a jazz band of his own.

PEYROUTON, MARCEL (pā-rü-toN') 1888(?)- French politician

With the appointment of Marcel Peyrouton as Governor General of Algeria in January 1943 the controversy raging around American handling of the North African situation reached a climax. Defenders of the appointment said that since the ex-Vichyite had been Resident General of Tunisia at the time of the French Armistice, the French authorities in North Africa believed his knowledge of that region would be useful in the military campaign. They described him as an "energetic and experienced administrator," and some even interpreted the move to place him in power as an attempt to "liberalize" the North African regime. Critics of the State Department's policy of working with the men of Vichy insisted that there were other expert administrators available, particularly if they could be imported from as far away as Buenos Aires, and pointed to M. Peyrouton's record as illustrative of far-from-liberal tendencies. By December 1943, when Peyrouton's arrest was ordered by the French Committee of National Liberation, it was easy to see which arguments held most weight with the French. Peyrouton himself had resigned from his Algerian post months before.

Apparently M. Peyrouton was a person of slight importance before 1930, since there are no earlier biographical details available. It is known, however, that he is married to the daughter of M. Jean-Louis Malvy, Minister of the Interior during the First World War, who in 1917 had been arrested, indicted, and sentenced to banishment by the French Senate, sitting as a high court of justice, for "dealings with the enemy." After some years of exile in Spain, Malvy returned to France and his place in the French Parliament. It is said that his son-in-law, professionally a lawyer and politically a Radical Socialist, was thereafter considerably assisted in his career by Malvy's influence and relations with various Ministries as well as by his own membership in the Free Masons.

In 1930, in any case, Peyrouton became secretary general of the Government of Algeria, and in 1933 he was appointed resident general of Tunisia. There he formed the "Committee for Tunisian Reform," composed of French colonists and Tunisian natives, and he obtained a large loan for public works. In September 1934 he had all leaders of the nationalist Destour Party arrested, and their papers were suppressed. Peyrouton also acted against the French Socialist and Communist representatives who had attempted to organize trade unions in Tunisia, and when the French Left-wing press in Paris protested he interdicted *L'Humanité*, the Communist organ, *Le Populaire*, the Socialist organ, and *Le Peuple*, the paper of the French trade unions in the colony, and expelled many Left-wing leaders from the Protectorate. Concentration camps were established in the Southern Territory on the edge of the Sahara, where "agitators" were interned. Eventually even French colonists and industrialists, through the conservative Committee for Economic Defense, urged him to free the prisoners and to permit moderate public discussion of political issues.

MARCEL PEYROUTON

According to I. F. Stone, the financial corruption of Peyrouton's administration was also brought to the attention of French public opinion at this time during the course of an investigation which grew out of the prosecution of another newspaper, *Tunisie Socialiste.*

In April 1936, after a visit to Italo Bilbo in Libya where he paid tribute in a public address to "the creative spirit of Fascism," Marcel Peyrouton became Resident General in Morocco. One of his chief accomplishments during the few months in which he held that post was the establishment of a complete monopoly of all Moroccan transportation under M. Épinat. In August 1936 he was removed from his post by the Popular Front Government (the Left-wing parties in France reportedly considered him daring enough to undertake a *coup d'état* to overthrow the parliamentary regime) and he was sent to Buenos Aires as Ambassador to Argentina. He was in Argentina for nearly four years—but on June 3, 1940 Premier Paul Reynaud '40 made him Resident General of Tunisia for the second time.

Before June 1940, like all French public officials, Peyrouton had uttered brave words. "France is being sorely tried. France will be triumphant. Even if the enemy had reached Paris, even if he had reached London, I would cry: 'We shall conquer. . . Even if tomorrow our enemies should seem to triumph, we shall win the War!'" But now the enemy was nearing Paris. On June 9, 1940, the very day the French Government left the French capital, Peyrouton was elevated to the rank of Honorary Governor General of the Colonies with a special mission.

According to Pertinax '40, in the next few weeks Peyrouton prevented Algeria, Tunisia, and Morocco from rallying to the British cause. F. Charlesvaux, in a letter to the New York *Herald Tribune* in January 1943, gives details. He says that after Paris fell all French government messages to Beirut were relayed via Tunis and from Beirut sent to French diplomatic representatives in the Middle East. In the period between June 16, when

PEYROUTON, MARCEL—*Continued*

the Armistice was asked, and June 22, when it was signed, Peyrouton himself sent many such messages to the Middle East, most of them "explaining" what was "really" going on at Bordeaux and later at Vichy "with a view to preventing any concerted action which might solidify continuation of the struggle." His advice to French representatives was to refrain from making any moves and to await patiently Pétain's '40 decision. When the Armistice was finally announced he managed to delay the decision of most of them to continue the struggle by giving them the impression that Vichy was only trying to trick the Nazis and that secret accords were actually being negotiated with the British, meanwhile swinging General Noguès '43, his successor as Resident General in Morocco, to the side of Vichy. By the time Peyrouton and Noguès notified the French Near Eastern Command that they were giving up the struggle and joining in the Armistice, General Mittelhauser could do little else but follow.

On July 14, 1940 Peyrouton was rewarded for his services to Vichy with the post of secretary general of the administration of police, and in September of that same year he was promoted to the post of Minister of the Interior. He fired fifty-seven out of ninety-four prefects, 230 out of 261 sub-prefects, and replaced them with Army and Navy officers, many of them *Cagoulards*. He ordered the arrest of Reynaud and of former Minister of the Interior Georges Mandel '40. He signed the first Nazi decrees against the Jews. He denounced stateless refugees as "dangerous aliens." In his address of instructions he had declared that the defeat of France had been due to "rotten and decadent democracy," and his actions were consistent with this statement. He suppressed the municipal councils as possible centers of anti-Nazi resistance, replacing them with officials handpicked for their collaborationist tendencies; he established the first concentration camps in France proper; for the first time he introduced into French law the Nazi concept of "administrative internment" without formal trial or charges, and interned some 15,000 anti-Nazi Frenchmen.

In an interview given to representatives of "Transocean," the Nazi news and propaganda agency, Peyrouton could soon boast, with moderate accuracy: "I was the first Frenchman to introduce National Socialist methods in North Africa. I have put an end to the Jewish influence. I have thrown out of office the Free Masons who thought they could influence me [he himself had been expelled from the Masonic Order in 1934]. I have established a state police on the model of the German police." In November 1940, in a speech made during a visit to Paris, he announced: "A policy of collaboration with Germany is a necessity. This is the only policy which can assure the recovery of our country. I congratulate myself on having been able, thanks to the cooperation of the German authorities, to suppress communistic activities. All propaganda against the new order will be smashed with the same energy." Paul Winkler, writing in *The Nation*, says that the Vichy Minister of the Interior and Pierre-Étienne Flandin '41, who had belonged to the faction associated with the "Franco-German" heavy industry groups since long before the Second World War, were accessories in the transfer of large shares in French corporations to these same groups, and claims that the Allies supported Peyrouton in order to reassure these industrialists about the results of an Allied victory.

Peyrouton was, however, a bitter opponent of Pierre Laval's '40, a fact that has often been cited in his favor. According to the French underground, their quarrel was purely a matter of "rivalry and ambition" to see which could rise higher in the service of the Nazis. In December 1940 Laval, then Vice-Premier, quarrelled with Pétain and stalked out of a Cabinet meeting. Soon members of Peyrouton's *Groupe de Protection*, Pétain's own bodyguard, appeared on the streets of Vichy, wearing their leather helmets and arm bands. Soldiers then surrounded the Hôtel du Parc, where Laval was staying, and three officers of the Sûreté Nationale entered his hotel. They reappeared with Laval, who was placed in Peyrouton's own automobile, and soon Pétain was broadcasting Laval's removal from office. (Laval had allegedly plotted to get Pétain to go to Paris, where a new government would be set up under the thumb of the Nazis, with Laval as dictator. According to Waverley Root '43, in order to help preserve the myth of Vichy's independence the Germans themselves had handed the evidence of Laval's duplicity over to Flandin, who had passed it on to Peyrouton, but this cannot be proved.) Peyrouton, who had signed the decree for Laval's arrest, thus emerged as the "strong man of the weak men of France," according to *Time* Magazine. But he did not last long. The Nazis thought Laval still might be useful and refused to let him be jailed. Soon Peyrouton's *Groupe de Protection* was dissolved at the request of Otto Abetz '41, and in February 1941 the Minister of the Interior was forced to resign. Admiral Darlan '41 appointed him Vichy's Ambassador to Argentina that same month.

Peyrouton had been friendly with Robert D. Murphy '43, then United States Chargé d'Affaires, while in Vichy. In Buenos Aires he reportedly remained "on excellent terms" with the American Embassy, and the Embassy reported him "friendly and helpful to American interests on several occasions." He and the Free French remained implacable enemies, however. He was said to have spied on the French with pro-Allied sentiments and reported to Vichy on their activities, so that many of them lost their citizenship and property in France. In April 1941 he remarked that only "madmen believe in a British victory," and spoke of the Third Republic with contempt. "Sleeping in false security that was maintained by the lies of demagogues of every political hue . . . ignorant of her weakness, which had been hidden from her, France threw herself into the adventure [the War]. And the result was catastrophe. . . We have just seen the collapse of a regime decadent with verbalism, favoritism, and corruption." He called the French who had wanted to resist to the bitter end "cowards and traitors." There was a rumor that he also reorganized the French secret police in Argentina and placed them under control of the German Embassy.

In April 1942 Laval returned to power in France. De Gaullists sardonically advised Peyrouton to hurry and resign before he was removed from office, and that was what he did. He did not repudiate his Vichy attachments or disavow any of his past, including his allegiance to Pétain, but he remained in Buenos Aires. Early in December 1942, after the Allied invasion of North Africa, it was reported that he had offered his services to Darlan. On December 29 he left Buenos Aires for Rio de Janeiro, Brazil, intending to proceed from there to North Africa, since he had received clearance from the American authorities. He was held up in Rio until the second week in January, apparently while the suitability of his appointment was being debated, but on January 16 his arrival in North Africa and his appointment as Governor General of Algeria were finally announced.

The announcement brought a flood of criticism upon the American State Department. The *Daily Herald* (London) called the ex-Vichyite the "worst possible choice." The publisher of *La Voix de France* announced: "Going from Darlan to Peyrouton is like jumping out of the frying pan into the fire." Walter Lippmann '40 wrote in the New York *Herald Tribune* that Peyrouton was already "very well known and fiercely distrusted because of his past record by French Republicans of all parties and factions. . . Now, however expedient it may have been to deal with the Vichy French already in North Africa when we landed, the deliberate summoning of M. Peyrouton from the Argentine is a horse of a wholly different color." Hans Jacob, the radio commentator, commented that the appointment would "make the fight in Tunisia a very hard one, because the rear of the fighting forces is not guarded with a man like Peyrouton in command. The Frenchmen inside France will not understand why a man like Peyrouton has the honor to cooperate with the Allies. His place is a prison and a well-guarded one."

On the other hand, according to an Associated Press dispatch, "Peyrouton's selection appears based on a policy of picking the best available administrators regardless of past leanings. It is expected his elevation will be only the first of a series of appointments to clear up inefficiency and lack of enthusiasm for the Allies among office holders here." Raymond Gram Swing '40 commented that it would be better to reserve judgment "until the outcome of consultations between interested parties has been made public." Sydney Mosely announced that those who protested the appointment were "doing the work of the French Nazis in North Africa by adding to the political intrigue and confusion." Secretary of State Hull '40 told newspaper reporters that he wished people would pay more attention to the way the War was going and less to politics. And Hamilton Fish '41 staunchly defended the Secretary of State's point of view in Congress.

Hull had at first referred protests to the State Department to the War Department, giving the impression that General Giraud had insisted on bringing Peyrouton in and that the appointment had been approved by General Eisenhower '42 against the advice of the State Department, which had finally accepted it for military reasons. An Associated Press dispatch from North Africa dated January 27 and passed by Army censors announced, however, that Peyrouton had been "brought from South America principally by the State Department, and his biggest support has been Robert Murphy, United States Minister to French North Africa." The news of the Roosevelt '42-Churchill '42 "Unconditional Surrender" Conference at Casablanca, which had begun after Peyrouton left Rio de Janeiro but before his arrival in North Africa, permitted fresh speculation for a few days, but on February 2 Roosevelt told reporters that he and Churchill had had nothing to do with the appointment of Peyrouton except to give a little advice.

The President quoted approvingly from General Giraud, who had said of the appointment: "I need trained administrators. There are not so many trained men in North Africa available. . . Not all men who have held office under Vichy are, in the sense one uses the phrase, men of Vichy. . . Peyrouton knows this country. He is an able man . . . no man of Vichy in that sense. . ." The President also suggested that correspondents look up what Peyrouton, while a member of the French Cabinet, had done to Laval—a good story, he called it. On February 3 Anthony Eden '40, British Foreign Minister, followed Roosevelt's lead when he gave a polite "No" to a Labor plea for the ouster of Peyrouton and other pro-Vichy figures in North Africa. Eden called the occupied North African territory French territory under the French administration of Giraud.

On January 20 Peyrouton, who has been described as "thick-bodied, heavy jowled—a curious mixture of the diplomat and a section boss," had his first press conference and made his first public statement. According to Charles Collingwood '43, CBS correspondent in Algiers: "British and American war correspondents today saw Peyrouton. He is a fleshy man with a puffy face, and at his press conference he had nothing to say worth repeating." Questioned about the anti-Jewish laws and the liberation of political prisoners in Morocco, he replied that these were matters for the High Commissariat to decide. A few days later a story cabled through North African Army censors announced that he had established a one-party government in Algeria, failing to shake up the Vichyite officeholders; and on February 9 he established a Permanent Council of War Economy, its members, both European and Moslem, to be elected by various economic groups. The Council, it was said, would "recommend, advise, and initiate its own measures, which will be referred to Peyrouton for action." Thought by some to justify Robert Murphy's statement that Peyrouton would move "slowly but surely" toward a more representative form of government in North Africa, the Council was likened by others to the "syndicates" in Mussolini's '42 Italy, and Waverley Root called it a "smoke screen to conceal the real situation . . . befuddling the issues."

By this time members of the old French parties of the Right were more or less lined

PEYROUTON, MARCEL—*Continued*

up behind Peyrouton, including "many who were pro-Vichy until the Americans landed and a few who in the past have strongly favored close collaboration with Germany." A de Gaullist was chosen to head Peyrouton's Permanent Council of War Economy, easing the political situation somewhat; but demands for Peyrouton's removal from office continued. Although Peyrouton identified his regime with President Roosevelt's leadership in "the defense of human liberties," pledged himself to re-establish the Superior Council of Algeria and to improve the lot of Algeria's 7,000,000 Arabs, and appealed to Frenchmen to cease family quarrels," de Gaullists refused to agree with Randolph Churchill, who called him "one of the ablest, most just administrators France ever sent to North Africa." They also noted with distaste that Peyrouton was on the platform when Giraud spoke in Algiers in March 1943.

Finally, early in June 1943, Peyrouton apparently yielded to pressure and sent his resignation as governor general of Algeria to both de Gaulle and Giraud. The resignation addressed to de Gaulle was delivered first, and almost caused a major political crisis, inasmuch as Peyrouton had been appointed by Giraud, commander-in-chief of the French armies. At the time Peyrouton accepted from de Gaulle an Army commission as captain of Infantry, and he was stationed in Syria. But all was not forgiven. Members of the French underground particularly hated the man who as Vichy Minister of the Interior had been responsible for the arrest and death of so many patriots, and, pending investigation by the Purge Commission of the French Committee of National Liberation, which was ordered to probe his suspected collaboration with Vichy, Peyrouton was soon sent to the southern part of Algeria, where he lived under surveillance for some time. Then, on December 21, 1943, his arrest was ordered by the French Committee as a "preventive measure" so that he could not escape to some neutral country from which he might return to France.

International Who's Who 1942

PHELPS, WILLIAM LYON Jan. 2, 1865-Aug. 21, 1943 Former educator; author; lecturer

Bulletin: William Lyon Phelps died on August 21, 1943.

From January 1943 issue:

An American publisher, wrote John Bakeless in the *American Mercury*, would no more think of failing to send a review copy of a book to Professor William Lyon Phelps than he would think of neglecting the Register of Copyrights in Washington, D. C. "The Professor is a one man Book-of-the-Day Club, the oracle of the Printing Press, God's gift to the bookstore clerk, the publicity man's pride and joy, one of the greatest endorsers ever to spill adjectives on a flaming dust jacket." Eminent as a professor of English at Yale, Phelps has achieved a greater reputation as a literary oracle. For years he conducted the book department, called "As I Like It," in *Scribner's* Magazine, and later had similar departments in the *Rotarian* Magazine and *Esquire*.

"I was born," writes William Lyon Phelps in his autobiography, "at the southeast corner of Elm and Church Streets in New Haven, Connecticut, on Monday, the second of January, 1865." His parents were the Reverend Sylvanus Dryden Phelps, a Baptist minister, and a descendant of that William Phelps who settled at Windsor, Connecticut, in 1638, and Sophia Emila Lyon (Linsley) Phelps. "It took my parents six months after birth," observes Phelps, "to find for me a name satisfactory to them and the family, and for some time I was called Frank Mansfield." Finally, however, he was named for his great-grandfather, Colonel William Lyon, a revolutionary soldier.

Young Phelps was reared in an intensely religious household: he had to attend two church services every day and usually three on Sunday, as well as the weekly prayer meeting. On Sundays he was not allowed to play games or to indulge in any secular reading. "We were brought up to corporal punishment," wrote Phelps, "a good thing for us." His childhood, he says, was very happy. He entered a private school at the age of three and at the age of five was admitted to the regular Public District Grammar School, "the youngest and smallest boy in the establishment." Throughout his scholastic career his life was "poisoned" by mathematics, which he holds in the deepest abhorrence. When Phelps was four or five his promising career was nearly nipped in the bud through his eating some arsenic designed for the extermination of mice. His mistake was discovered in time and he survived.

Phelps' father had been pastor of the First Baptist Church in New Haven for nearly thirty years when, in 1874, he accepted a similar position with the Jefferson Street Baptist Church in Providence, Rhode Island. The family accordingly moved to Providence, where the boy was entered in the University Grammar School. There he was once again "the youngest and smallest boy in school." In 1876 his father baptized him by immersion. That same year the elder Phelps became editor and proprietor of the *Christian Secretary* in Hartford, Connecticut, and the family moved back to Connecticut.

When Phelps was eleven, he says: "I became a criminal, sought by the police and by detectives, and . . . for the first and last time a price was set on my head." He had been shooting with a friend and had shot three white ducks which he had supposed were wild. His better-informed schoolmate cried: "What have you done? Those are Mark Twain's prize ducks. If you are caught he will put you in jail. Run for your life!" "The next morning," wrote Phelps, "I read in the Hartford newspaper a prominently displayed notice from Mark Twain, offering a substantial financial reward for the apprehension of the miscreant who had killed his white ducks. . . Years later when I became acquainted with Mark Twain, I never dared to tell him of this particular episode; for, although he was the world's greatest living humorist, there were certain subjects to which his sense of humor did not extend."

In 1878 Phelps was graduated from the West District School at Hartford, Connecticut. In 1883 he entered Yale, from which he was graduated in 1887 with special honors in English and in philosophy, and with a Phi Beta Kappa key. He was honored as "Public Orator" of Yale. The following year he was offered a position at the Hill School at Pottstown, Pennsylvania, but he refused because his subject would have been, unfortunately, mathematics. He accepted, however, a position at the Westminster School for boys where he was allowed to teach the subjects he liked. After a year there he went to Harvard, where he became assistant to Barrett Wendell, reading 700 themes a week. Three weeks after he received his assistantship at Harvard, wrote Phelps, he received an offer from Yale. Harvard promptly raised him to the position of instructor at an equivalent salary. Taking his doctorate in English literature at Harvard, Phelps, according to Edgar Johnson in the *New Republic*, "refused to submit to the linguistic treadmill of Anglo-Saxon, Old Norse, and Gothic, and threatened to take the first train back to Yale." The great Professor Child surrendered, saying: "It is refreshing to find a graduate student who knows what he wants." Phelps received his M. A. from Yale and his Ph. D. from Harvard on the same day in 1891. He attended the ceremonies at Harvard because he had already seen those at Yale. That year he had an attack of nervous prostration.

In the autumn of 1892 Phelps became a regular full-time instructor in English at Yale. Of his first class Dr. Phelps says: "The intense affection between these undergraduates and their young teacher [himself] was refreshingly exceptional." On December 21, 1892 Phelps married Annabel Hubbard, his childhood sweetheart, and his class presented them with the complete works of James Russell Lowell. (His wife died in 1939.)

In 1895, according to Bakeless in the *Outlook*, Phelps "introduced the first college course in the modern novel—the results being an increase in the number of novelists until they now constitute almost the entire population of North America." The course attracted worldwide interest. *Punch* printed a sketch showing the probable results of such a course upon modern education. Phelps says that he was given to understand by the majority of the professors in his department that, unless he dropped the course at the end of his first year, he himself would be dropped from the faculty. He dropped the course at the time. Now such a course is included in the curriculum of almost all colleges and universities. Dr. Phelps also gave the first university course in the modern drama, and he has been commended for his pioneering efforts in introducing the Russian novelists to English readers.

Askar-Shain
DR. WILLIAM LYON PHELPS

In 1896 Phelps became an assistant professor; and in 1901 he was made Lampson professor, "remaining in that post," until he retired in 1933, "amid a blaze of glory and honorary degrees." President Angell of Yale said that Dr. Phelps retired only to a larger public and became an institution of even wider instruction—"Like an institution, he cannot retire." Among the citations that accompanied various honors awarded to Dr. Phelps were: "For distinguished social services rendered not only in behalf of the public as a lecturer and writer, but as one of the greatest present powers for social righteousness and for high standards of social conduct." "His following is recruited not only from undergraduate, alumni, and commencement groups, but from every walk of life, every class, type, and profession." "Through lectures, essays, and books the influence of Professor Phelps has been felt in every part of the country," said Governor Wilbur L. Cross of Connecticut when Yale University awarded Dr. Phelps the honorary degree of LL. D. in 1934. Phelps was appointed director of the Hall of Fame for Great Americans in 1941, succeeding John H. Finley '40, third director of the Hall of Fame, which had been founded in 1900. Dr. Phelps had for a long time previously been an elector of the Hall of Fame. Among his first official acts was the unveiling of a bust of Stephen Collins Foster.

Phelps' first book, *The Beginnings of the English Romantic Movement*, was published in 1893. Although, according to one critic, "it was by no means brilliant," it was "at least good, sound, scholarly stuff." In 1895 Phelps edited the plays of George Chapman for the Mermaid Series. Thereafter he practically abandoned work of a scholarly sort, except for his edition of Christopher Marlowe's works which appeared in 1912. "After the Chapman," said Bakeless, "there was a long pause in the

PHELPS, WILLIAM LYON—*Continued*

Phelpsian literary output. Then, in 1907, came a sudden burst of books, not so bad at the start, but growing hastier and more careless with the succeeding years." Phelps' books may be grouped roughly under three headings: those on literary subjects, such as *Essays on Modern Novelists* (1910) and the *Advance of the English Novel* (1916); those dealing with Biblical topics, such as *Reading the Bible* (1919) and *Human Nature in the Bible* (1922); and those of a more or less personal nature, such as *Adventures and Confessions* (1926) and *Essays on Things* (1930). His *Autobiography with Letters* appeared in 1939. In addition to his numerous books, Phelps' voluminous literary output includes a number of magazine articles on such diverse subjects as courage, the country versus the city, marriage, religion, politics, health, education, prohibition, literature, spiritualism, art, women, and the income tax.

Phelps' chief claim to fame rests upon his reputation as "one of the few really powerful literary despots in North America." According to his biographer, "a word, a nod, a wreathed smile from Professor William Lyon Phelps, a twinkle of the Phelpsian eye, a twirl of the Phelpsian pen, and the meanest author's reputation may be made overnight. . . The only serious competition the good Professor meets in the endorsing field comes from Alexander Woollcott '41, who has . . . risen to share the power and the glory of the New Hazlitt of New Haven. . ."

"When Billy the Booster speaks," says one critic, "best sellers are born. . . When he discovered that Thornton Wilder '43 had 'something akin' to genius and was a star of the first magnitude, the faithful descended on the bookstores in such numbers that for several weeks practically nothing was printed in the United States but the *Bridge of San Luis Rey* and the United States currency wherewith to buy it."

It has been said that the term "critic" is probably too select to be accurately applied to Billy Phelps. "He is an endorser, a persistent, impenitent, indefatigable, enthusiastic, and perpetual endorser. . . It was he who after half a century's study of English literature endorsed the swing of Edgar A. Guest's '41 verse as 'perfect.'" He believes that there are no greater English dramas of the twentieth century than Sir James Barrie's *The Admirable Crichton*, *Dear Brutus*, and *Peter Pan*.

Professor Phelps is occasionally a little careless in bestowing his enthusiasm: in one of his New York lectures he endorsed a book which, under cross-examination by his audience, he admitted he had not read through. On another occasion he endorsed the work of H. L. Mencken on the jacket of a volume of *Prejudices*, within the covers of which was a "stinging excoriation of himself and all his works." On the other hand he once condemned modern literature, which he described as the filthiest in history—"an extraordinary statement from the pen of a gentleman who has endorsed at least half the books written since 1910."

It has been estimated that if Phelps reads all the books he recommends he must average close to 5,000 pages a month. "And for a long time the good Professor was also doing full-time university teaching, lecturing all over the United States, preparing two regular monthly columns, grinding out additional magazine articles, syndicating newspaper stuff, and writing books, besides preaching the True Word on Sunday afternoons." His preaching is so popular at his summer home at Huron, Michigan, that "a country church, which originally seated but a hundred people, has had to be enlarged twice in order to accommodate the thousand ardent worshipers who come regularly to hear him on Sunday afternoons." Frequently Edgar Albert Guest passes the collection plate after services.

Phelps maintains that "compared to the seventeenth, eighteenth, and nineteenth centuries, we are living in the Dark Ages, in a relapse to barbarism undreamed of by the founders of our country." He voted for Willkie '40 in the 1940 Presidential election, because he felt that a third term for any President would be "extremely dangerous to American institutions of truly representative government." In 1940, too, he pressed for intervention in the War, declaring that he would rather lose the War with the Allies than win it with Hitler.

Professor Phelps has found daily existence often "thrilling" and remarks that apparently he has been and is much happier than most men and women. He has no doubt that the happiness he has found in "mere living" is largely due to his "ardent religious faith." He "prefers cats to dogs, plays golf, admires Schopenhauer above all other philosophers, has two dogs, three cats, and a parrot that speaks Portuguese." He likes "theatres, music, newspapers, and cultivated men and women." He enjoys Beethoven's symphonies, Wagner's operas, Gilbert and Sullivan, and brass bands. He relishes Shakespeare and a "good detective story."

Professor Phelps, however, is amused when he sees himself described as one who likes everything. As a matter of fact he dislikes, among other things: "musical comedies, overlong novels in the shape of trilogies, free verse when it is not poetry, all forms of simplified spelling, especially 'thru,' female legs in the daily news, personal items from Hollywood . . . books written by 'tough guys' . . . night clubs, Postum, buttermilk . . . paint on young faces . . . the pronunciation of Joan with two syllables. . ."

"All agree," Professor Bakeless finds, "that, though perhaps not a profound scholar, Professor Phelps is a likeable soul, swift in good-natured repartee, who has done something for God, a good deal for his country, and a lot for Yale." He has been "Billy" Phelps to generations of Yale students. Professor Phelps is rather distinguished-looking, tall, with iron gray hair, lean, stooped and sun-tanned, and "his beautifully resonant voice reaches every corner of the largest hall without the least effort."

PHILIP, ANDRÉ (fē'lēp äɴ'drā) June 28, 1902- Educator; political economist; member of French Committee of National Liberation

Address: French Committee of National Liberation, Algiers, French North Africa

Wrote Cecelia Ager in November 1942, while Admiral Darlan '41 still held sway in North Africa: "M. Philip's gift for rallying the spirit could be no more evident than it was the other day at Fighting French headquarters in Rockefeller Center. A visitor might have half-expected to find the people there plunged in gloom, in sulks, immobilized in despair as the result of Admiral Darlan's having snatched the ball from their own General de Gaulle '40, in one of his characteristic double-triple-double fake plays. Instead, they were alive with activity, sparkling eyes, swift dashings to and fro—most of them, it must be admitted, in and out of M. Philip's temporary office, as if to drink at his fountain of wisdom, to refresh themselves with some of his soft-spoken courage, to borrow from him a mite of his deep conviction that no matter what the immediate situation, France will belong to the French people again—because now at last the French people have roused themselves, they have learned that they themselves must fight and die to wrest it back."

André Philip was born on June 28, 1902 at Pont Saint-Esprit, in the Département du Gard. He is the son and grandson of French Protestant clergymen, and owes the anglicized spelling of his name to the fact that more than three centuries ago French Protestants were banned from their country. His ancestors thereupon went to Scotland, where they changed the spelling of their name to "Philip," and did not return to France until the eighteenth century, when they settled down in the south of the country.

Young Philip attended a lycée at Marseilles and then, when eighteen, went to Paris to study at the Faculty of Law and at the École des Sciences Politiques. A member of the Socialist Party, economic and labor problems were already his special province, and so it was natural that after studying in France he should go to London to study British labor problems on the scene, at the Maison de l'Institut, a French Endowment where generations before him had studied British institutions and literature. He returned to France with his first book, *Guild-Socialisme et Trade-Unionisme* (1923).

ANDRÉ PHILIP

In 1924, after having received his doctorate in law from the University of Paris, Philip left for the United States as a Fellow of the Rockefeller Institute. He spent two years studying at Columbia University and the University of Wisconsin—two years which were also spent traveling across the American continent and studying the life of the American worker at first hand by working in factories, lumber camps, and harvest fields. The result was a second book, *Le Problem Ouvrier aux États-Unis* (1927), which soon became a classic in France and which was later translated into English.

Back in France in 1926, Philip passed his *Agrégation de Droit*, a severe competitive examination which is a preliminary step toward a professorship, and was appointed professor of political economy at the Faculty of Law of the University of Lyons. He also became one of the leaders in France of the Christian Student Movement, and as a member of its executive committee he went to India in 1928. Remaining there until 1929, he became closely associated with Tagore, Gandhi '42, and other Indian Nationalist leaders, and he returned to France with a book on the British administration and native problems, *L'Inde Moderne* (1930), which in 1932 was published in England as *India: a Foreign View.* In the same capacity he visited Germany and the United States. In the United States in 1932 he lectured to college students under the auspices of the World Alliance for International Friendship through the Churches, and he was to return again more than once under the auspices of the Institute for International Education.

In 1935 and in 1936 two more books by Philip concerning conditions in the Anglo-American world appeared in France: *La Crise et l'Économie Dirigée* (1935) and *Trade Unionisme et Syndicalisme* (1936). In May of the latter year he entered the arena of active politics, standing for the first time as a Socialist candidate for the working-class district

PHILIP, ANDRÉ—*Continued*

of La Guillotière, at Lyons. In the Chamber of Deputies, under the Popular Front regime of Léon Blum '40, he was pushed ahead quickly in French political life, serving as chairman of the Subcommittee on North Africa of the Colonial Inquiry Commission and as a member of the Chamber Finance Committee, working on the special Committee for Social Reform. In 1936 he had also been elected president of the French Section of the Federation of Christian Socialists.

After Munich Philip "played an important part in rallying the majority of the French Socialist Party to the view that, from September 1938, all efforts should be concentrated on a single task, that of preparing to meet and answer the next German threat." In London late in 1938 he had an opportunity to put forward his point of view in a lecture, "Christianity and Peace." And in July 1939 an article by him, "The Shifting Status of French Labor," appeared in *Foreign Affairs.* More than a little overoptimistic, in this article he hopefully announced: "In the face of grave perils from abroad, all Frenchmen have realized the necessity for a solid national front... It may now be said that the essential features of the social laws of 1936 will probably endure."

In September 1939, with the declaration of war against Germany, Philip (the father of five) volunteered to serve as a liaison agent with the British Expeditionary Force. Early in 1940 he was sent on a mission to the United States, where he gave a number of lectures on French politics and economy, and he returned just in time to resume his duties with the B. E. F. He was with the British until the last detachment of British soldiers left French soil—at Brest, in June 1940. The armistice was an incredible shock. As late as April 1940 Philip had written, in *Foreign Affairs*: "In spite of the heritage of the World War and the depression, France enters this conflict in more favorable circumstances than prevailed in 1914. . . We can see that a wise policy of mobilizing our industrial and commercial potentialities will enable us to wage the War for a number of years and to hold out until the final military victory." Politically, Philip attributes the fall of France to the fact that too many members of the employer class "preferred a German victory to labor rights." "How many times did I hear, 'Rather Hitler '42 than Blum,'" he told an American reporter later. "I remember a relative of mine, married to a large industrialist, saying to me when she saw me after I was demobilized, saying to me almost with elation, 'This is our revenge for 1936!' Too many industrialists saw in the War a good opportunity for killing the Republic. They were afraid of labor's progress. They wanted to establish a dictatorship against labor—and they did it. They've got their wish!"

After the Armistice Philip resumed his lectures at Lyons University, living in a mountain village with his family of five children and going to Lyons three times a week to meet his students. His courses became tremendously popular—perhaps because of the topical subjects which he treated, and the way he approached them. One lecture, for instance, showed why any agricultural policy was impossible in France so long as the pillaging Germans occupied the country. His language may have been cautious, but his meaning was quite clear to everyone but the Gestapo. For a long time the Germans did not suspect him, although in addition to lecturing he was soon editing a clandestine newspaper, *Libération,* which by 1942 had a circulation of 50,000 (actually the circulation was ten or fifteen times that figure, since every copy was read by many people).

As a leader of the underground resistance movement in France, Philip noted that in the first year after the armistice resistance grew most rapidly in the Occupied Zone, for which the Vichy Government did not exist, while in the Unoccupied Zone the prestige of Pétain '40 had to be combatted. "When we began work," he said later, "most of us did not believe in the possibility of victory. . . We did resist because nothing else was possible if we wanted to be faithful to the eternal values of our civilization. We believed that freedom and liberty are the supreme reality, that nothing is greater than respect for human dignity and individual responsibility—that it was better to die than to deny this." If he managed to work unmolested for so long it was because this spirit was so universal, particularly among the working classes. A story he tells will illustrate this. "I was alone one evening in the dining room of a little inn in the country," he says. "I turned on the radio to listen to the BBC. The door opened and in strolled the head of the local police, followed by three gendarmes. I thought to myself, 'Now I am in a jam.' But the head of the police only said: 'Oh, you are listening to the English radio. You are a real Frenchman, sir.'"

Eventually, however, the Gestapo grew suspicious. Philip realized that he was being watched: the police had gone through his writings. Until Whitsun of 1942 he carried on his professorial duties, and then he spent two months in hiding, both in occupied and non-occupied France, before he succeeded in escaping to England to join de Gaulle. That was in July 1942. A few days after his arrival in London the French National Committee appointed him national commissioner for the interior and for labor, entrusted with the task of coordinating the underground organizations of resistance in France.

Philip had much to tell the outside world about conditions in France. "It is impossible to speak of France in terms of the old political divergences," he announced. "The French are certainly against the present regime. The past is past, and they would not return to it. But there will be a new France in the future." This "new France" would be "a renovated democracy in which the working class will have a large share, and in which modern technical methods will contribute to the eternal ideal of our country, as expressed in our national motto: 'Liberty, Equality, Fraternity.'" Philip also had some serious advice to give the Allies. Too much talk of possible Allied offensive action in Western Europe without the deeds to back it up was a great mistake, he said. "London has given advice in this and advice on that until the people don't know what to think. Too much talk and too little action is the weakness of the democracies." "Warnings such as were given recently that people move away from the French coast are playing with the nerves of the people," he added. "They wait each day, ready to help an invasion which never comes." In the meanwhile, the populace was terrified at the thought of facing another winter, with Laval '40 sending so much food to Germany that the people in the cities were already starving.

In November 1942, when the Allied invasion of North Africa came, Philip was in the United States on a mission for de Gaulle. His first reaction was one of complete enthusiasm. An immeasurable stiffening of French morale and determination to resist the Germans would result from the invasion, he announced, and he broadcasted by short wave to the French African colonies, calling on his listeners to cooperate with the American forces. On November 11, speaking at a meeting in New York arranged by France Forever, he told his audience that France had "re-entered the War," and that all the internal French resistance to Nazi rule would acknowledge de Gaulle as its leader.

The Darlan deal and subsequent events were extremely disillusioning to the Fighting French, however. Although at first Philip expressed the opinion that the Allies might be setting a trap for Darlan and other "traitors," he was quick to warn them that under no circumstances would the French people, either inside or outside France, accept Darlan or any other ex-collaborationist at the head or as a part of the administration of French Africa, and that it would have a "disastrous result" if it were thought that such an appointment had been made or countenanced by the United States. "Should the democracies adopt the tactics of the Fascists," he suggested in one interview, "should the democracies turn out now to be as if without honor, then where could the people of France look for integrity? For fidelity to an ideal? At Russia alone?" "We and we only have the right to speak for France and we know that France wants to have nothing more to do with the traitors of Bordeaux and Vichy who sold their country once and are now trying to sell it again to a higher bidder." Furthermore, General Giraud '42 would be acceptable to the Resistance Committee only as a military leader.

On November 20, 1942 President Roosevelt '42 discussed the French situation with Philip after the Fighting Frenchman had conferred with officials of the American State Department, but the de Gaullists disassociated themselves from North Africa after the Allies recognized Darlan as head of the French forces there: either they would have to abandon a legal and moral principle they considered essential to the welfare of their country or broadcast criticisms of countries in which they were sheltered. It was not until December 29, 1942, following the assassination of Darlan, that they resumed their broadcasts over BBC's French service. By this time Philip had been back in London for some time, and he made the first broadcast.

In 1943 Philip, like de Gaulle himself, remained insistent that any united French organization fighting the Germans must be devoted to republican principles, and as free from ex-Vichyites as from ideological remnants of the Vichy regime. Giraud objected originally to receiving him in North Africa (it is not clear whether this was because he was a Socialist or because he was considered a representative of the French underground). But on May 30, 1943, when the long-delayed meeting between de Gaulle and Giraud finally came about, the Fighting French general was accompanied by Philip as well as René Massigli —all of them armed, he said, "with the desire and the will to achieve the unity of the French Empire in this War." By June 3, 1943 the seven-man French Committee of National Liberation, of which de Gaulle and Giraud were made co-chairmen, had come into being to administer authority over the vast French Empire outside the German yoke. Philip, one of the Committee's members, was named commissioner of the interior and of action in France. On July 9 he left for London, where René Massigli, French Commissioner of Foreign Affairs, was conferring with members of the British Government. When the Committee was reorganized with General de Gaulle as chairman on November 6, Philip was appointed one of three Ministers of State without portfolio expected to serve as an "inner cabinet" of advisors to General de Gaulle.

André Philip's is a witty and challenging mind, and for that reason he has been almost as frequently quoted in the newspapers as de Gaulle himself. "There is nothing so permanent as something that starts with good intentions to be temporary," he said of the Darlan deal; and for an example he cited the tax on doors and windows established in 1789 to collect money to support the French Revolution—a measure that everyone agreed was temporary, but which was not abolished until 1918, long after French architecture had adapted itself to the tax and a whole new school of almost windowless houses had evolved. "It's dangerous to be with realists," he said again. "It's dangerous for representatives of idealism to take up with realists. It's dangerous for a fine young country, founded on democratic principles, bred on spiritual values, to go in for realism, for expediency, to try to match the corruption of Europe. Such a country is too young, too new at the game. If it wants to play the game of immorality, there are always those who are so much more immoral."

PHILLIPS, H(ARRY) I(RVING) Nov. 26, 1887- Newspaperman; columnist; author

Address: b. Associated Newspapers, 247 W. 43rd St, New York City; h. Gulf Rd, Milford, Conn.

N. Y. Sun

H. I. PHILLIPS

Spotlighted as a columnist on the New York *Sun* for a score of years and for the New York *Globe* before 1924, H. I. Phillips has managed to remain an obscure fellow even to those who should know him best. Of the long-time conductor of the "Sun Dial" and author of half a dozen books made up from his newspaper pieces his column neighbor on the *Sun* and golf partner, John Kieran '40, says in the introduction to Phillips' *Private Purkey in Love and War*: "The life of Private Purkey is now an open book—an open two books for that matter, but the life of "Hi" Phillips still remains to me a murky mystery."

This modern "Man in the Iron Mask," Harry Irving Phillips, was born in New Haven, Connecticut on November 26, 1887, the son of John R. and Charlotte Stannard (Johnson) Phillips. He was educated in the public schools there, and then began work at a series of odd jobs. He "has been a newspaperman ever since he can remember. After trying his hand at various jobs, including that of a hotel bellhop, a department store bundle boy, a candy wagon driver, a stock-taker in a hardware shop, a clerk in the stock room of a five-and-ten-cent store, and an undertaker's assistant (the last of which was the turning point) he got a job at $3 a week on the *Register,* covering bean suppers, 'obits,' and now and then a fire."

Checking up on the early days of Phillips among his newspaper friends is like trying to dig into those nebulous past days when "Bugs" McArthur was the light of Chicago. Everybody knows about him, but each knows different things. Kieran says: "All I can find out is that he was born in New Haven, Connecticut; that he once drove a horse for a Chapel Street undertaker; that he was in his youth an organ pumper; a candy salesman in the top gallery of the Grand Opera House in New Haven, Connecticut; a stock clerk in a Woolworth five-and-ten; a bellhop in Waterloo, Connecticut; a poet; a cartoonist; a wagon letterer; and (for one night in Brooklyn) a circus performer."

Reviewing *Private Purkey in Love and War,* John Chamberlain '40 applauds the information on Phillips given by John Kieran, "the only intellectual triple-threat man in existence," but claims there is "one item which the omnivorous Mr. Kieran has missed." Kieran, says Chamberlain, "informs us of all the details of Mr. Phillips' journalistic career, but he neglects to tell us how the conductor of the 'Sun Dial' got his first newspaper job." And Chamberlain forthwith supplies the omission. "Maybe the item has been forgotten by the great world. But up in New Haven, which is the Wild Man of Woodmont's native heath, they still laugh at the memory of Phillips, the job hunter. Years ago H. I. Phillips drove a grocery wagon. He disliked vegetables almost as much as Private Purkey dislikes potatoes. Driving past the offices of the New Haven *Register* one morning, he had a brain wave. So he tied his horse to a hitching post, climbed the stairs to his first city room, and asked to be made a cub reporter. Since the *Register* was short-handed, he was hired on the spot. 'When can you go to work?' the city editor asked. 'Right away,' said H. I. Phillips. A day or two later an irate greengrocer came looking for his horse; he found him where Phillips had left him, starving and thirsty."

With the memory of more unpleasant jobs fresh in his mind, Phillips found $3 a week on a newspaper fair pay. "He still treasures a letter from the boss at the end of six months saying, 'Your services to the paper have been of such a nature that we are glad to raise your salary to $5 a week.'" His service as a cub reporter continued from 1906 to 1908, but within five years of his first connection with the sheet he held the position of managing editor. "His first ambition in the newspaper business was to be a cartoonist, and throughout his days with the *Register* he did cartooning on the side. He was made managing editor of the paper at the age of twenty-three and "still thinks this largely due to a determination of the owner to keep him from drawing." Today Phillips says he "can illustrate [his] own stories and often does."

After becoming managing editor of the New Haven *Register*, Phillips ran the paper for about six years and then "decided to try his luck in a big city." The young newspaperman went to New York with full confidence. "I had a conviction that New York was calling me," he says. "And not as a cartoonist. And certainly not by any wild imagination as a columnist. I never had given the latter idea a thought. I figured that I could run a New York sheet with my eyes shut. And after a few weeks in the editorial room of the *Tribune* the bosses of that paper must have concluded this was exactly what I was doing."

Phillips wandered about the great city in a dismal mood, but "was lucky enough to wander into the old *Globe* office when it was hard up for help." He got a position reading copy at $40 a week, much less than he had been earning in New Haven, and he says, "it was all very galling to my pride. Suddenly one afternoon, noticing that the paper had no columnist, I decided to try filling the hole. I wrote a column kidding the news of the day and placed it on the desk of George T. Hughes, the city editor, where he would find it later on. I had only a vague hope he would do more than to toss it into the basket."

But that was the beginning of Phillips the columnist. When the *Globe* came out the next day "the column appeared on the editorial page. Oh, boy! It was suggested that I do one daily at space rates. I leaped at the opening, in fact, leap is not the verb." After a few months during which he did the column as a side issue to his job as a copy reader, he was hired as a full-time column conductor. Syndication followed. His progress to the *Sun* was the result of complications involved in the sale of the *Globe*. "Phillips went to the *World*, but an injunction suit stopped him, and it was held that under a contract his column must go to the New York *Sun* in which paper Phillips has been doing his stuff ever since."

Through the "Sun Dial," Phillips has gained a large following which looks upon his writing in friendly wonder. "There is no hint of the native Manhattanite about his style or philosophy. His Purkey witticisms lack Broadway's brittle quality; his humor is a gentle humor of situation." His forte is kidding the news. "In these troubled days more than ever does his humorous slant on world news have a wide appeal, and he keeps it up to the minute year in and year out."

Readers of the Republican *Sun* are particularly qualified to appreciate him, for there is no doubt as to Phillips' (or "Elmer Twitchell's") attitude toward the New Deal and all its works. The national debt, government questionnaires, income taxes, fireside chats, "reformers, agitators, and fix-it-alls" have been frequent butts of his humor; misunderstood and mistreated businessmen and industrial leaders are always gallantly defended. Sometimes Phillips has even dropped the role of humorist in his defense of what the N. A. M. calls the "American way." "I believe this country is not nearly as bad off as it thinks and that if the Government got off its neck prosperity would return so fast that it would be necessary to bank the curves," he has written; and he argues hotly for "a belief that all you have a right to demand from Congress are spring vegetable seeds" and for an attitude toward work which does not include "worrying over the salary, hours, or housing arrangements."

Phillips may stay in New York from time to time, but he gets out of the big city whenever he can. Always when other newspapermen are asked for information on Phillips they can go no further than knowing someone who knows—some fabulous character with whom he is known to consort at the races or at some special fishing location. Even his name is a doubtful quality. Readers of the newspaper syndicate which carries his column probably first met him through announcements which started out: "H. I. P. H. I. P. Hooray!" and then announced that the "H. I. P." was none other than Phillips of the *Sun*. His column is headed "H. I. Phillips," but the proper way to refer to him among the initiated is "Hi Phillips."

In addition to his columns Phillips has written radio sketches, skits for many Broadway musicals, and several books. Most of the material for his books has been reprinted from his columns. The first of these, *The Globe Trotter*, is the salvaged material from five years on the *Globe*. The *Foolish Question Book* (1927), *Calvin Coolidge* (1933), and *On White or Rye* (1941) followed. Phillips' latest spurt of book publication is the result of his infra dig comments on the inside of Army life. *Private Papers of Private Purkey*, published in 1941, was followed by *Private Purkey in Love and War* in 1942. Then Phillips moved over to the feminine side of the aisle to reprint his *All-Out Arlene* sketches, and Arlene appeared between covers in the summer of 1943. The pre-Pearl Harbor Purkey's military fervor was distinctly low ("Have we leased the War from England yet and what part of Europe am I going to be lent to?"), for at the time Phillips himself shared the views of Charles A. Lindbergh '41. Both WAC Arlene and the later Purkey, however, are as eager for action (particularly against the Japs) as they are full of information about life in the armed forces—information of the lively sort that doesn't get into official manuals. Wrote a New York *Times* reviewer: "Purkey—prototype of the seriocomic, lovable, and thoroughly honest-to-goodness American soldier—is a character of parts, and it is not unlikely that he will be remembered long after the present war is over." Both these characters continue to appear in Phillips' column.

Kieran approves of Phillips' ability to write about the military way of life, saying: "I know of no man better qualified to write on war than Hi Phillips. Having observed him on the golf links through many campaigns, I am in a position to testify to the fact that he has been in more fights than any man of my acquaintance."

Phillips and his wife, the former Cecilia Carney, live at Milford, Connecticut, and apparently the columnist leaves his home only for necessary work and fishing trips. The last supposition is borne out by information from his syndicate, Associated Newspapers, which says, "His hobby is boating, to which he devotes all his spare time except that taken up in trying out new hair tonics."

Who's Who in America 1942-43

PHILLIPS, IRNA July 1, 1903- Radio script writer

Address: b. c/o National Broadcasting Company, Chicago, Ill.

Irna Phillips, "Queen of the Soap Opera," author of three radio serials, each of which is presented five times weekly, is radio's "No. 1 author by volume." Phenomenal in output and income, she has been compared to Dumas, the "literary mill" of the last century.

Irna Phillips was born in Chicago, Illinois, the youngest of ten children, on July 1, 1903. Her father was a grocer who had migrated from Dayton, Ohio, and when he died in 1910 her mother, "with the sturdiness befitting a pioneer," kept the large family together.

IRNA PHILLIPS

Irna was graduated from Senn High School in Chicago after three years' study. She studied at the University of Illinois and, after receiving her Bachelor's Degree, taught school for a year at Fulton, Missouri. At the University of Wisconsin, where she next went for graduate study, she took courses in public speaking, dramatics, and psychology, and she received her Master's Degree.

From Wisconsin Miss Phillips went to the Normal School at Dayton, Ohio, where she taught English, public speaking, and dramatics. In Chicago for a vacation, she was given an audition as a radio actress (some say she applied for the audition; others, that she was mistaken for someone who had applied). The audition proved successful, but she returned to teaching, and it was not until some time later that she actually became a radio performer.

Miss Phillips began her radio career in 1930 as an actress, with no thought of writing as a career. According to one source, she was broadcasting a chatty program called *Thought for a Day* for station WGN, using only notes, when the "studio told her she was wasting her time acting" and fired her so that she could turn her attention to script writing. According to another, a program she was called upon to write for Memorial Day so impressed the studio executives that they advised her to forget about acting and to devote her time and talent to script writing. In any case, her first daytime serial, *Painted Dreams*, was bought by station WGN and ran until 1932 when, according to *Time* Magazine, "WGN refused an offer to sell it to a national network. In a huff, Irna quit the station, filed suit to reclaim her drama, went to work for NBC."

At NBC Miss Phillips collaborated with Walter Wicker on a daytime serial, *Today's Children*, based in part on her earlier *Painted Dreams*. (She also acted in the sketch for a time.) While writing *Today's Children*, a neighborly tale of American family life, she developed *The Guiding Light*, a serial based on the life and friends of a non-sectarian minister in a typically small town. The *Guiding Light* went on the air in 1937, and the following year a serial based on the experiences of a physician, *The Road of Life*, was added. In 1938, either because her mother's death left her without inspiration for the chief character in *Today's Children* or because, as she has explained, she reached "a saturation point of incident," Miss Phillips withdrew that serial ("over the bleeding body of her sponsor"—it had top Crossley rating for fifteen-minute daytime serials) and supplanted it with *Women in White*, a dramatization of the fortunes and misfortunes of nurses. The new serial quickly leaped to the popularity of its predecessor.

In 1939, feeling that the Kransky family, an incidental but popular group in the *Guiding Light* program, were interesting enough in themselves, Miss Phillips began the *Right to Happiness*, a serial about the Kranskys, each of whom is certain he has a "God-given right to happiness." In 1941, in recognition of new audience possibilities among the multitude of women whose husbands, brothers, and sweethearts were in the armed services, she created her *Women Alone* serial. It is reported that she went to New York to gather atmosphere and returned to Chicago after six months of intolerable loneliness with the conclusion that the career woman alone in a New York hotel might as well be in the middle of the Sahara Desert.

Miss Phillips offers four themes for successful daytime serials: they must appeal to the instinct of self-preservation, to sex, to the family instinct, or to some combination of the three. She uses a chart system to keep her five shows straight. "Each program is mapped on a huge piece of cardboard, with squares representing the daily episodes for a month or six weeks in advance. In a square a word or two will be jotted down as a reminder of the course of the story. The whole process works so smoothly that the author rarely has to make script changes."

For several years Miss Phillips wrote three daily scripts in their entirety plus a half-hour weekly show, dictating to two secretaries. "As she talks she swiftly acts out the roles of the sixty-odd characters and never gets them scrambled. She doesn't bother to use her character's names, instead merely changes her voice for an indicated man, woman, or child on the show." Five dailies, however, were too taxing, and she now has three assistant writers "who block in dialogue after she has laid down the story."

Among Miss Phillips' contributions to radio script technique are listed the provocative "tease" ending which keeps audiences "cliff-hanging" from day to day, and the use of organ music to furnish the proper mood and to bridge breaks in the narrative. (Bernice Yanacek is Miss Phillips' organist.) Carl Wester is the one who produces all Miss Phillips' shows. They are sold as "packages" to Procter and Gamble, "leading soap opera impresario," complete with actors and music, for "undisclosed amounts above a minimum of $2,500 a week for each story." Of this sum $1,000 a week per serial goes to Miss Phillips.

J. P. McEvoy writes that "Irna passes up advertising for herself on the air so that the characters can 'drop in' like neighbors, and their stories unfold as though the housewife were eavesdropping on the people next door." For this reason most of Miss Phillips listeners are completely unaware of her existence.

The slow, repetitious pace of the episodes in Miss Phillips' serials is deliberate. Miss Phillips "knows women answer the door, pick up the baby, vacuum the rugs, and watch the stove while they listen to her stories, and she spins them so artfully that women can go right on with their housework without missing a word, tear, or heartbreak." She seldom uses more than two characters in a scene, and "they talk with all the pauses, hesitation, mumblings, repetitions, and waste of time that people in difficult situations naturally indulge in." Miss Phillips maintains that "you can tell a radio audience only one thing in a fifteen-minute show" and that most radio writers use up too much material.

There are more than seventy daytime serials on national networks heard in the United States, and it is estimated that more than twenty million women listen to one or more of them. McEvoy believes that many housewives "listen to eight or ten stories a day and carry all these stories, plots, and subplots around in their heads. One Midwestern store in self-defense set aside a listening room so its shoppers could duck in and learn if Ma Doakes had survived that lovely operation. Numerous towns have listening clubs of women who agree not to phone each other while certain favorite stories are on the air."

It has been estimated that Miss Phillips writes more than two million words a year, an equivalent of forty full-length novels. Her listeners regard the characters as real and frequently write to them and send flowers to their funerals. (It is reported that once an actor who was playing a particularly beloved character demanded an increase in salary under the illusion that he was indispensable, and that Miss Phillips solved the situation by giving him a fatal disease and allowing him to die a tearful death. "Flowers were sent from all over the country by bereaved housewives, and the story is still going right on without him.") In *Guiding Light* the minister, Dr. Rutledge, "hauls off every so often and spends the show period giving a sermon." These sermons, published in book form, sold 290,000 copies.

Miss Phillips is very particular about the authenticity of her dialogue and the accuracy of her facts. She retains a lawyer and two doctors for technical advice in their fields in connection with her radio stories and she has not only gone out of her way to make conversation with policemen and icemen so that her reproduction of their speech may sound real, but she has cultivated a large circle of varied acquaintances who serve as models for many of her characters.

Variety of September 8, 1943 announced: "Irna Phillips will start her services as a staff writer in the Hollywood office of J. Walter Thompson [advertising agency], October 1. Her entourage from Chicago to the Coast will include her secretary, two adopted children, a sister, and the writers of her current daytime serials, *Guiding Light, Road of Life,* and *Lonely Women.*"

Until her mother's death a few years ago, Miss Phillips was her constant companion. She has never been married or engaged, nor has she ever owned a house, despite the fact that the bulk of her writing is concerned with the home and the family and the rearing of children. She has an adopted son and daughter. Most of her money she invests in annuities.

Miss Phillips has been described as "a dynamic, charming person . . . petite, brown-haired. . . She lives simply, dresses with quiet chic. Her deep-set blue eyes are her most attractive feature, and blue is her favorite color." For relaxation she "rides horseback, takes boat trips, collects dolls." In 1940 she was given a new Plymouth automobile by her employers in recognition of her tenth anniversary in radio. Miss Phillips describes herself as "part mechanic, part psychologist, and part dialogist." She still is not happy. "I'd give it all up," she told a *Time* reporter, "if the right man came along."

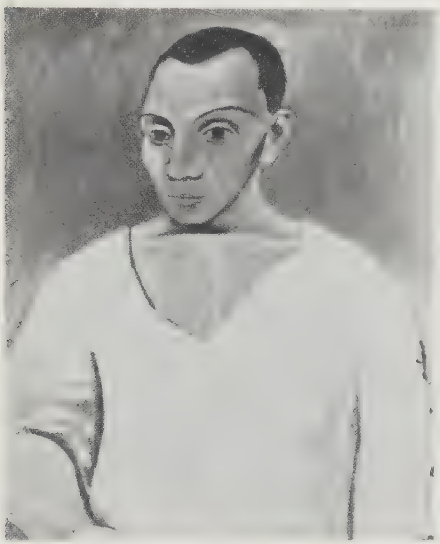
PICASSO, PABLO (pē-käs′sō) Oct. 25, 1881- Artist

Address: h. 7 Rue des Grands Augustins, Paris, France

"We all know that art is not truth," Picasso once said. "Art is a lie that makes us realize truth, at least the truth that is given us to understand. The artist must know the manner whereby to convince others of the truthfulness of his lies." Undoubtedly more controversy has raged over Picasso than over any other twentieth century artist. By now, of course, his importance, if not his greatness, is universally conceded. "Even his opponents," commented *Time* Magazine, "admit that Picasso has influenced the art of his time more than any of his contemporaries."



Self-portrait

PABLO PICASSO

Pablo Ruiz y Picasso was born in Malaga on the Mediterranean coast of Spain on October 25, 1881, the son of José Ruiz y Blasco, an art instructor at the Academy of Arts, and María (Picasso) Ruiz, who was of Italian origin. Although Picasso's family name is Ruiz, he preferred the greater euphony of Pablo Picasso, and, after 1901, dropped Ruiz entirely from his signature, retaining only his mother's name.

When Picasso was about fifteen his father was appointed professor at the Barcelona Academy of Fine Arts and the family moved to Barcelona. Picasso had drawn well ever since the age of eight or nine. According to Ramón Gómez de la Serra, his first exhibition was held in the door of an umbrella shop while he was still a boy. He passed the entrance tests for the Barcelona Academy in 1896, "taking," wrote Alfred H. Barr, "only one day for an examination so difficult that a whole month was ordinarily allowed for its completion. A few months later he repeated this prodigious performance at Madrid. But he soon grew so bored with the sterile atmosphere of the Madrid Academy that he returned to Barcelona to set himself up as an independent artist at the age of sixteen." At this time he decided that he would never use a model, and he abided by this self-imposed regulation until many years later. When he was seventeen years old one of his pictures won him a prize at a municipal art exhibition.

Although Picasso remained in Barcelona until 1900, he occasionally visited Madrid, where he fraternized with "Azorín, Baroja, Palomero, and nameless young men who sought taverns where some self-denying host provided unsurpassable food for almost no money." His companions were then, and always continued to be, literary, because, as Gertrude Stein said: "Why have painters for friends when he could paint as he could paint?" At this time he was painting, wrote Barr, "studies of beggars as Spanish in their intense realism as a Zurbarán or early Velázquez," and pictures not far removed from Renoir's late style. His art at that point was comparatively "academic and conventional." Throughout this period Picasso was filling notebooks with the sketches and caricatures and portrait studies that he was continually making.

In 1900, when Picasso was almost nineteen years old, he went to Paris. There he began to paint cabaret and street scenes, influenced by such painters as Steinlen and Toulouse-Lautrec. He sold a picture, according to R. H. Wilenski, to "a new Montmartre dealer, Mme. Weill, who was about to help and encourage creative talents." In the winter of 1901 he returned to Madrid, "where besides painting he published several issues of a magazine *Arte Joven* [Young Art]." By spring, however, he was back again in Paris, and he took up permanent residence there.

"Picasso came to Paris," said the *New Republic*, "a badly educated young painter, but infinitely clever and facile." There he studied the works of the moderns—Vuillard, Van Gogh, Toulouse-Lautrec, Denis, and Gauguin—and of the older men—Degas, Renoir, and the Impressionists—and he made friends of the poets Max Jacob, André Salmon, and Guillaume Apollinaire. In June of 1901 Picasso exhibited a group of canvases at Vollard's. "During much of 1901 he painted lustily with a rich palette and impressionist brushwork, suddenly but characteristically reversing his style in a series of flat, decorative figure pieces," such as the famous *Harlequin and Matches*.

Picasso went back again to Spain in 1902, and the result of that return was the painting known as his Blue Period. "The sadness of Spain," wrote Gertrude Stein, "and the monotony of the Spanish coloring, after the time spent in Paris, struck him forcibly upon his return there. . . The French influence which had made his first or Toulouse-Lautrec Period was over and he had returned to his real character, his Spanish character." The pervasive blue tone in Picasso's paintings was interpreted by Barr as "in harmony with the murky and sometimes heavy-handed pathos of his subject matter—poverty-stricken mothers, wan harlots with *femme fatale* masks, and blind beggars." Picasso himself explained the Blue Period by the fact that Prussian blue was the cheapest color to be had. He was indeed extremely poor at this time. Although Mme. Weill had exhibited fifteen of his 1901 paintings during his absence, the exhibition seemed to have fallen flat. "When he returned in the autumn he was so short of money that, unable to afford a studio, he shared a room with Max Jacob of the Hôtel Voltaire, sleeping by day when Jacob was out and painting by night when Jacob was asleep." Picasso's most important work of the Blue Period is *La Vie* (*Couple Nu et Femme avec Enfant*) of 1903, "in which he endows a salon 'problem' subject with serious statuesque dignity."

Early in 1904 the Blue Period came to an end; "but for a while," commented Barr, "thc rhetoric, the attenuated hands and mannered poses of 1903 grew even more exaggerated. . . Then gradually these mannerisms gave way to the more natural style and melancholy sweetness of the long series of *saltimbanques*, acrobats, and harlequins. . . Color, too, dispersed the blue gloom of 1903, but it was for the most part subdued and subtle, in harmony with a new delicacy both of drawing and of sentiment." He painted the *saltimbanque* pictures, without models, in his studio at night—for during this period Picasso continued to sleep most of the day and work by night. In 1905 Picasso passed some weeks at Gosol in the Andorra Valley of the Spanish Pyrenees. "During this time he left behind him the nostalgic introspective mood and the emaciated forms of the harlequins of the previous year," and began to paint pictures of a "chalky terra cotta pink tonality which seem to be inspired by Greek art." The tenderness, sensitivity, and charm of the *saltimbanque* and the succeeding neo-classic Rose Period are "very probably a reflection of Picasso's own improved circumstances, for during 1905 he began to have a moderate success . . . and discerning collectors such as the Americans Leo and Gertrude Stein and the Russian Shchukine began to buy his work."

Picasso painted Gertrude Stein's portrait during 1905. In the *Autobiography of Alice B. Toklas,* Miss Toklas is supposed to have murmured to Picasso that she liked his portrait of Gertrude Stein. "Yes," he said, "everybody says that she does not look like it, but that does not make any difference—she will."

Ambrose Vollard cast a series of bronzes modeled by Picasso in 1905. "Except for a few isolated, though important, experiments, Picasso was not to take up sculpture seriously again for over twenty years." In 1905 also, Picasso made a series of some sixteen dry points and etchings which "in their sensitive lyricism epitomize his work of that year." Picasso's visit to Holland in 1905 marked a further advance toward a more objective mood in his art and toward "forms of great weight and monumentality." In 1906 he reacted violently from his "Blue and Pink" pictures, which he later referred to as all sentiment, and he now "sought an attitude nearer to Gauguin's description of primitive art, an attitude in which sensuous experience and sentiment would retire to the rank of servants and not dominate the artist in his creation of form."

In 1906 the painting of Cézanne, pre-Christian Iberian sculpture from Spain and, somewhat later, African Negro sculpture strongly influenced Picasso. As a consequence he changed the "direction of his art and in so doing helped change to a remarkable extent the character of modern art as a whole. Cubism, the name subsequently given to this new direction (by Matisse) was not Picasso's singlehanded invention." The masterpiece of Picasso's Negro Period is the *Demoiselles d'Avignon* (1906-7) which, wrote Barr, "may be called the first Cubist picture, for the breaking up of natural forms, whether figures, still life, or drapery, into a semi-abstract allover pattern of tilting, shifting planes is already Cubism."

With a "series of greenish paintings," begun early in 1909 when he returned from another trip to Spain, "Picasso continued his progress toward a more developed and abstract form of Cubism, a progress which had been interrupted by the simplified brown paintings at the end of the Negro Period. "A term often applied to Picasso's work from 1900 to 1913 is "analytical Cubism"—Cubism which "analyzes, breaks up, takes apart natural forms." From 1911 on Picasso experimented with three Cubist innovations: "The introduction of letters, of pasted paper (*papier collé*), and of *trompe l'oeil* imitation textures." During 1915 Picasso began to return to realism in a series of portrait drawings, although he continued to work simultaneously at Cubism.

As a Spaniard, Picasso was not called upon for service in the First World War. He was in Provence when the War began. Soon afterward he returned to Paris and worked there through the greater part of 1915 and 1916. Gertrude Stein said that she remembered at the beginning of the War being with Picasso one evening on the Boulevard Raspail when the first camouflaged truck passed. They had heard of camouflage, but they had not yet seen it. Picasso, amazed, looked at it and then cried out: "Yes, it is we who made it—that is Cubism!"

Sometime during 1916 or 1917 Picasso's home in Montrouge (Paris) was robbed and his linen stolen. "It made me think of the days," wrote Gertrude Stein, "when all of them were unknown and when Picasso said that it would be marvelous if a real thief came and stole his pictures or his drawings. Friends, to be sure, took some of them, stole them if you like from time to time, pilfered if you like, but a real professional burglar, a burglar by profession, when Picasso was not completely unknown, came and preferred to take the linen."

Although Picasso had formerly held himself aloof from the Russian ballet as a snobbish luxury of the moneyed classes, in 1917 he went with Jean Cocteau to Rome and Florence to join the Diaghilev Ballet, for which he designed costumes and settings. That same year he married Olga Koklova, one of the "most beautiful ballet dancers," and Cocteau, Apollinaire, and Max Jacob were guests at his wedding. As far as is known, this was Picasso's first marriage, although Gertrude Stein speaks of Fernande Olivier as his "wife."

Picasso remained under the influence of the Russian ballet until 1925. His second classical

PICASSO, PABLO—*Continued*

period, begun in 1915 under the inspiration of Ingres, was stimulated by the ballet, which "aroused in him a renewed interest in the natural and esthetic beauty of the human body. . . For ten years this style was to run in a kind of rivalry with Cubism in Picasso's paintings and even down to the present time in prints and illustrated books." During this time he executed a number of "large, brilliantly colored still-life compositions" in the Cubist tradition. He did not usually paint in oils, but, like many of his contemporaries, used Ripolin paint.

About this time Picasso began to experiment with Surrealism in pictures and sculpture. At the same time he was doing a series of "flat pattern semi-Cubist" pictures. He became interested in paintings, "disintegrating the human forms and then recombining them, synthesized, as related shapes in a design." He also "had begun to concern himself with the esthetic of stained glass windows." In addition to these categories, he did a number of pen-and-wash drawings in a "baroque representational style (1933-37)."

In 1937 Pablo Picasso left his "Ivory Tower" and for the first time allowed a knowledge of events outside the *atelier* to penetrate his work. Indignant at General Franco's '42 proceedings in Spain he "produced a series of terrific symbolical etchings called *Songe et Mensonge de Franco* accompanied by a burning text . . . and in this mood, too," he painted *Guernica*, a huge picture entirely black and white (*grisaille*), "a passionate protest against Franco's savage bombing of Spanish towns and villages." The 250-foot square mural showed a "frieze of distorted figures, animal and human."

In 1940 Picasso fled Paris during the general evacuation and found safety for a time in Nazi-occupied territory at Royan near Bordeaux. He repeatedly declined offers from Ambassador Bullitt '40 and others to get him a passport to the United States, because, he declared, he hates travel and gets seasick.

Some time later Picasso evidently returned to Paris, for, in response to an allegation made in 1941, by a group of Mexican artists wishing to offer him a refuge in their country, that he was being held in a French concentration camp and that General Franco was seeking his deportation to Nationalist Spain, the authorities denied that he was interned and maintained that he was living unmolested at his studio in Paris. Marcel Duchamp, who reached the United States in August 1942, said that "Picasso works a great deal in his studio on the Rue des Grands Augustins, has no direct contact with the Germans, and sells his paintings to his usual admirers." No news of him has been received from France since that time.

Picasso has illustrated many books, among which are Ovid's *Metamorphoses*, Balzac's *Le Chef-d'Oeuvre Inconnu*, Aristophanes' *Lysistrata*, Gertrude Stein's *Dix Portraits*, and many other volumes by his friends. He has also collaborated in many ballets.

Gertrude Stein feels that, although Picasso is a French painter, his nature is fundamentally Spanish. "Cubism," she wrote, "is a part of the daily life of Spain, it is in Spanish architecture." Elliot Paul '40 maintains also that Picasso's "art is Spanish," although the painter had a studio in Paris and dealers sold his paintings "by the yard" in France. Stark Young observed that "Picasso was born in Malaga, and studied art in Madrid and Barcelona, so that the three provinces that compose the diversity of Spanish genius, Andalusia, Castille, and Catalonia, have all come into his range and quality." Another essential of his painting, commentators agree, is its literary quality. "Picasso . . . is a literary painter. Again and again his pictures express an emotion that did not come to him through the eyes alone."

The opinions that the critics hold of Picasso are many and diverse. Walter Pach wrote: "His line is of amazing sureness and freedom; he models his forms with economy and with great power; his color, while subsidiary, has fineness and a sense of reserve." Clive Bell called him "one of the most accomplished technicians alive." The *New Republic* said: "Picasso . . . is the paramount influence in modern painting—subject, of course to the supreme influence of Cézanne."

On the other hand, Leo Stein (Gertrude's brother) remarked that "Picasso was not a great painter or a great master of composition. . . The total output of intellect in his work is negligible." The famous art critic Elie Faure said that "Cubism is only an artificial stylization of form basing itself on a wrong understanding of the saying of Cézanne." F. W. Ruckstull declared one of Picasso's Cubistic paintings to be "an example of lecherous symbolism full of meaning for the initiates of the cult of symbolistic sadism in art, and fundamentally insane."

"Picasso, however," wrote J. C. Bulliet, "has a tough hide. He has proceeded calmly on his way, letting the curs bark at his heels to their hearts' content. Today . . . he is a 'best seller.' Tomorrow—he will be with Cézanne, and Manet, and Chardin, and El Greco, and Rembrandt—and the Ages."

Picasso in his youth was very handsome—many commentators agree in saying that he had the face of a Spanish troubadour. In 1913 one female interviewer went so far as to say: "How he can ever paint such ugly figures as he does, when he has only to look in a mirror, copy what he sees, and turn out something worth the trouble, I can't understand." She also observed that he looked "quite normal." Gertrude Stein described him as "small and robust with a vigorous body, dark-skinned" with "straight, not very fine, nearly black hair [now grizzled]." *Time* called him the "square, athletic type, with the face of a humorous, courteous Spaniard, and a frank expression that occasionally becomes intense. A loose, dangling lock of hair is his one mark of willfullness."

According to an article in the *New Republic*, Picasso had "qualities of a solitary, though he was very fond of having people about him, and had great personal charm. At his studio in the Rue Ravignan where many habitually gathered, for Picasso characteristically had people come to him rather than go out to other people, he spoke little and yet was obviously the dominant personality. His comment on persons and things was commonly humorous and satirical and he smoked his pipe and twinkled while others speculated and disputed. Occasionally he made caricatures and cartoons which were powerfully expressive as only a great caricaturist could make them. His dark brilliant eyes were the most absorptive that I have ever seen." Gertrude Stein speaks of Picasso as having a high, whinnying Spanish laugh.

In addition to his painting, Picasso also writes French poetry. He is fond of dogs and usually has one at his studio. He has one son—also named Pablo Picasso.

PIERLOT, HUBERT (pyer-lō′ ʏ-bãr′) Dec. 23, 1883- Belgian statesman

Address: 117 Eaton Sq, London, S. W. 1, England

In July 1942 when Pierlot visited the United States on his way to the Belgian Congo, the Senate took a ten minutes' recess to welcome the Premier of the Belgian Government-in-Exile and to pay tribute to that occupied nation. Senator Barkley '41 praised the Belgians as "one of the most heroic peoples in the world."

Hubert Pierlot was born in Cugnon, Belgium, on December 23, 1883. He was educated at the University of Louvair, from which he received his degree of Doctor of Law. He was admitted to the Bar and he rose rapidly until he was one of the most prominent members of Brussels' legal circles.

When Belgium was invaded during the First World War, Pierlot enlisted as a private. Before the War ended, he had received several rapid promotions and he was mustered out of the Army after the Armistice a captain in the Corps de Chasseurs Ardennais.

In 1919 Pierlot entered politics as a member of the Catholic Party, "a coalition group of democratic and conservative wings," and he received his first post from Prime Minister Delacroix, who chose the young barrister as his "Head of Cabinet." In 1926 Pierlot began his legislative career as Senator from the Province of Luxemburg.

HUBERT PIERLOT

In 1934 Pierlot received his first Cabinet post as Minister of the Interior in the de Broqueville Cabinet. In November of that year Theunis replaced de Broqueville as Prime Minister, but Pierlot continued to hold his post in the Cabinet until March 1935. In 1936 Pierlot was elected to the presidency of the Catholic Party and given a new post, that of Minister of Agriculture, which he held until 1938. In February 1939 he became Prime Minister. From April 1939 to January 1940 he held also the portfolio of Minister of Foreign Affairs.

In almost exact repetition of the events of the First World War, Germany invaded Belgium on May 10, 1940 without a declaration of war and "in defiance of solemn engagements which Germany took (1937) and which she renewed a few days before the invasion." On May 14 Pierlot declared that the Germans were waging war on a more savage scale than in 1914 and exhorted the Belgians to "guard intact your morale." In the fortified area of Liége the Belgian guns were inflicting tremendous losses on the attacking Germans. "The hour will come when the enemy must pay for this," he told the Belgians. The towns he named as bombed since the invasion began included Antwerp, Namur, Louvain, Aalst, and Thienen (Tirlemont). The Louvain Library, established in 1426, destroyed during the First World War and then rebuilt, was again destroyed. Trains carrying civilians and refugees were attacked and machine-gunned. The American Ambassador, the late John Cudahy, as well as the members of other Embassies, signified their intention of remaining in Brussels indefinitely.

On May 15 German radio stations began broadcasting a proclamation to the Belgian people, asking them to cease their "senseless

PIERLOT, HUBERT—*Continued*

resistance." "Belgians," the German radio proclaimed in two languages, Dutch and French, "if you want to save the lives of your men and the welfare of your nation, lay down your arms. All resistance is vain. Following the example of the Dutch, lay down your arms. Germany does not want to wage war against the Dutch and Belgian people and is only warding off a French and British attack. Save your nation; lay down your arms."

On May 28, 1940 King Leopold ordered the Belgians to surrender. Considering himself duty-bound as commander in chief of the Army to remain with his men, King Leopold stayed with the Army and he has been a prisoner of war in his palace of Laeken ever since. In a statement issued by Pierlot from France, to which he had fled on May 28, Pierlot announced that the Government would reassemble in Paris and would continue the War alongside the Allies.

Soon after the fall of France which followed swiftly upon the Belgian surrender, the Germans announced that Pierlot had capitulated and that German-Belgian talks had been started to secure the return to Belgium of soldiers and refugee civilians. Actually, however, the Belgian Government, chiefly consisting of Pierlot and his Foreign Minister Spaak, had escaped to Vichy, while the Minister of Colonies was instructed to represent the Government in the Congo and the Minister of Finance was sent to London in the same capacity.

Pierlot and his Foreign Minister left France in August 1940 after the Vichy Government announced that it had broken off relations with their exiled regime. Before being admitted to Spain they spent five days on the French side of the Spanish border. The day they were admitted, permission to travel in Spain was revoked, and the Belgian officials slept in a meadow between the two countries for three nights. Upon their second admission to Spain they managed to get to Gerona, where they were interned for several weeks in their hotel despite protests by the State Department of the United States and the British Foreign Office. On October 11, 1940 it was reported that Pierlot and Spaak had been arrested in Spain at the request of Nazi agents, but less than two weeks later they turned up in London after a dramatic escape from Spain to Portugal.

In London Pierlot and Spaak joined Albert de Vleeschauwer, Minister of Colonies, and Camille Gutt, Minister of Finance. The four Ministers set to work reconstructing the Belgian Government and preparing to have it direct Belgian participation in the War through the colonies. They had already been recognized by the British Government as the official Belgian Government and had pledged themselves to carry on the War on the side of Great Britain and other "shadow governments" allied with her until victory was won. They pointed out that there were still nearly a half million tons of Belgian merchant shipping afloat, and that the Belgian colonies and territories, with their European and native populations of more than thirteen millions, were rich in deposits of copper, tin, and oil.

In September 1941, broadcasting on the same program with King Haakon VII of Norway['40], Peter II of Yugoslavia, Premier Sikorski['40] of Poland, Jan Masaryk of Czechoslovakia, and heads of other exiled governments, on the occasion of the second anniversary of the outbreak of the War, Pierlot said that Belgium counted on assistance from the United States. "We are making war because we want peace, not the peace of submission and shame, but peace with independence and honor."

In July 1942 Pierlot visited the United States on his way to the Belgian Congo. This was his second visit to America; his first had been in 1910. He told Americans that most of the population of Belgium was still in favor of King Leopold and that the King had declined cooperation with the Nazis and had refused to form a fascist Belgian Government. He told the American press, too, that the Belgian resistance had been splendid despite privation and punishment. "More civilians have already been shot in Belgium by the Germans in this War," he reported, "than during the four years of the Kaiser's occupation."

Reporting on current Belgian participation in the War, Pierlot said that the Colonial Army in the Belgian Congo was completely mobilized and that Belgian air squadrons in England had "as many pilots as at the beginning of the War." In addition there are trained and equipped Belgian motorized and infantry units, merchant ships flying the Belgian flag, and small Belgian warships and mine sweepers in the British Navy. He told the American press that America was directly interested in the defense of the Congo not only because of its valuable raw materials, but also because it is a channel of communication for the United States Armies proceeding to the Middle and Far East.

After visiting the Congo, Pierlot returned to London, where in 1943 he is continuing to direct the exiled Belgian Government's share in the war effort. He is married to the former Mlle. Dekinder and has seven children.

PIERSON, LOUISE (JOHN) RANDALL 1890- Author

Address: b. c/o Simon & Schuster, Inc, 1230 Sixth Ave, Rockefeller Center, New York City; h. 932 Ocean Front, Santa Monica, Calif.

"Living with you and those kids," said Louise Randall Pierson's first husband, as he announced he was moving to the Yale Club, "is like living with Fannie Brice in a den of lions." His wife, who was "temperamentally a cross between a dynamo and a tornado," agreed. She got herself a new husband, Harold Pierson, a "Robin Hood in plus fours," whose specialty was a sword dance executed with his trousers rolled up to his knees. Life with Harold became something like "a pinwheel in a high wind."

Mrs. Pierson tells all about it in her autobiography, *Roughly Speaking* (June 1943). It is dedicated to her family, "who laughed when I sat down to the typewriter. They didn't know I was going to write a book."

Clifton Fadiman '41 has described it as "a highly spirited autobiographical failure story written as though it were the most important of success stories." Wrote John Chamberlain '40: "What it chiefly proves is that energy is attractive for its own sake. . . Mrs. Pierson also has punch, pep, zingo, adrenalin, and an excess of Vitamin B." Rose Feld called it "the story of social and economic changes in American affairs over a half century, and their effect on a New England 'native' who refused to take life lying down." Said *Time*, a little more gingerly: "The 332 pages of neat, small print, marred by an affected breeziness and curiously false conversational passages, nevertheless make up a lively, candid, sometimes exasperatingly interesting book."

As for the author herself, "when someone told her she had written 'the Case History of an Intuitive Extrovert,' she winced for a second and then boomed her approval." She has received a lot of fan mail since the book, a best seller, was published. "The letters she likes best are the long, challenging autobiographical outpourings from women readers. 'You think you've been through something,' they begin. 'Wait till you hear about *my* life. . .'"

The book really began through some correspondence in 1940 between Mrs. Pierson, an ardent Rooseveltian, and Arthur Krock '43 of the New York *Times*. Something conservative Krock had written "got up my nose," as Mrs. Pierson put it. So she sat down and dashed off a note to him. "It was definitely not a fan letter. It included a pen-portrait of Mr. Krock that was not calculated to make him vain. Mr. Krock replied, somewhat bitterly, with a request for a photograph of Mrs. Pierson with some suggestions of how well she had retained her own youth and charm." Then Louise Pierson really let go. "You are an honor, sir, to the old school tie," she wrote. "This is no time to sit on your *status quo*. Don't try to resurrect the dear dead past. Tell the truth if it cuts like a sword."

The author of *Roughly Speaking* put in some autobiographical truths of her own; Mr. Krock turned over her letters to Simon '41 & Schuster '41, who sent her a check and told her to write them a book—any book—at her own discretion. "I was born in 1890 on Adams Street, Quincy [Massachusetts] and went to the First Unitarian Church where I sat over the bodies of John Adams and John Quincy Adams." Her own ancestors were pretty good, too. Grandfather Randall was "lost climbing Mont Blanc," and Grandfather Manthano Pickering, of Spanish descent, was a graduate of Bowdoin. The Randalls were very well off. "Our house," her father said, "was our castle. 'And a pretty damned good one at that.'" The house had so many rooms it took five Finnish maids to keep it clean; there were stables, gardens, lavish food. "If there's anything I hate it's good plain cooking," said her father. When Louise was twelve he died, and after the estate was settled her mother was left with two girls to bring up on a yearly income of $600.

LOUISE RANDALL PIERSON

Louise Randall didn't mind the descent to the proletariat. As Fred, the hired man, said to her: "You're a tough nut. Anybody that tries to shove a curb bit between *your* teeth'll lose a finger." But when mother and daughters took an old farmhouse in Cohasset, Louise had to do the cooking and most of the other work, since her sister "had a habit of getting nervous when anybody asked her to shake a leg," and "took lessons in Repose." Mother's accounts were soon overdrawn—it took a lot of money to "do over" an old farmhouse—so they decided Louise should go to college because "an education was an investment."

Accordingly she entered Simmons College, Boston, where "I wanted to learn new and radical things, like business law and touch typewriting. I thought I was entering the front-line trenches in the glorious battle for the emancipation of women." The dean, however, disapproved of so ardent a pioneer spirit, and Louise had a good many chastening interviews in the dean's office. She was graduated from Simmons in 1910, and marched off to New Haven to begin life as a career woman. Her first job was that of research secretary to a Yale professor, but the professor's wife didn't like, among other things, the openwork yoke of her shirtwaist. So in 1911 she got a job as a stenographer at the Fore River Shipyard, at $15 a week. She also got to know quite a few of the Yale boys, among them one Rodney, "who was six feet two, tailored by Brooks Brothers, and had won six Latin prizes at Yale." In 1912 she followed him to New York, where he had a job in a bank, and they were married.

(Continued next page)

PIERSON, LOUISE RANDALL—*Cont.*

The young couple took a "modern" apartment uptown. There was "a field with three goats munching grass outside our bedroom window." But it was "the deadly, unbroken monotony of our life that got me." Later they found a house in Larchmont, New York, where her first child, Barbara, was born in 1913. During the next three years Louise Pierson had three more: John, Rodney, and Louise. She really wanted nine—but her husband's bank salary was small, and in order to help make ends meet she decided to write. Her first attempt, a satire on banking for *Banker's Magazine*, lost her husband his job. Then the War came, and Rodney got a job with another bank as their representative in Russia. When he returned they moved to Armonk, New York (1916), where the mother of "four bundles from heaven" really went to work to win the War. "I piled the kids in the back of the old Ford, sold $63,000 worth of Liberty Bonds, had the first war garden, took a census, turned up the supposedly safely interned crew of a German liner, and cast my vote for Charles Evans Hughes '41. I admired Wilson's mind but I couldn't stick those notes."

The children, however, were turning out to be "little savages" because of a free and easy upbringing, so it was decided to send them to a progressive school at Scarboro. There they proved to be "anti-social." The trouble was they were really "four little potential leaders." They reported that the most important thing they learned was: "You have to back out of the presence of kings." Soon after this they were stricken with infantile paralysis: the three oldest recovered completely, but young Louise had thereafter to walk with crutches. Upon recovery, the older boys were sent to old-fashioned private schools.

Mrs. Pierson's hair had turned white, but she entered Scarboro community activities with gusto. She joined the National League of Women Voters, after a fling at the "little theatre"; once Eleanor Roosevelt '40 came to tea. On learning that Mrs. Roosevelt had five children, besides doing a lot of other things, Mrs. Pierson was so envious that she told her husband she'd give up her activities and stay at home "if she could have another baby." But when she immediately took on more activities the long-suffering Rodney gave up, and they were divorced.

In 1924 she was married to Harold Pierson, whose motto was: "Let's go places and do things." She decided that "life with Harold would be fun, but complicated." It was. In 1925 her fifth child, Frankie, was born. For a while "money flowed like water." They bought several cars, a big greenhouse, even a yacht. Soon they were "overextended" on the greenhouse, but the children discovered they could make a bit of money selling things at a roadside stand. The stand developed into a real eating place, The Flower Tub, "so crazy" the customers liked it. The Piersons, however, soon lost greenhouse, Tub, and home simultaneously. Harold was versatile, and obtained an airport mechanic's job. Mrs. Pierson also went to work again—on the Bridgeport *Herald*. Then came the market crash of 1929, and the Piersons found themselves jobless and broke. They thought it would be romantic to take a little house on Cape Cod, where Harold knew of an ice cream parlor he could run. When the season opened they turned it into the Ship Ahoy Grill and Night Club. (According to the "natives," it was an "insane asylum.") Again they were penniless, and had to sell it and, after finding themselves mixed up with gangsters in a policy racket, they fled to New York.

The depression was at its worst. None of the Piersons could get work, and for five days they lived on onion sandwiches. Harold made a desperate effort to sell vacuum cleaners; then he got a WPA job. They bought a Stutz automobile; shortly afterward Harold got a pink slip. Then Mrs. Pierson tried her hand at job getting, and for a time managed a grill in a New York hotel; there were "spotters," and she lost the job. However, "I was tired of working just to get money. I wanted to do something that really counted," she says. So she went to work with the Women's Division of the Democratic National Headquarters. Mostly it was dull: she and her daughter Louise were the "only ones really for Roosevelt '42; all the rest were just Democrats." When Roosevelt was elected the Piersons were happy. The boys were both working their way through college and doing all right, too.

When Harold got a "supercolossal" job as superintendent of planting at the World's Fair the Piersons were on the way up again. They had a lot of fun making money on the side running an illegal parking ground. By the time that job was over the War broke out, and Harold (a Canadian veteran of the First World War) was ready to go over and sign up with England at once. But it seems he couldn't, and, after an interlude as a resort overseer in the Adirondacks, Harold went to work, in 1940, in the Bendix plant in Philadelphia.

Mrs. Pierson worked, too—for eight months as a reporter on the Philadelphia *Record*, doing human interest stories about the men and women in the local war industries. She was for fighting the Axis from the start: When Secretary of State Hull '40 referred to "the so-called Free French," she wrote addressing him as "the so-called Honorable Cordell Hull." It was about this time that she started her autobiography after a lengthy correspondence with Arthur Krock.

When *Roughly Speaking* was published Warner Brothers wired her an offer of $35,000 for the film rights. The telegram continued: "Will you also accept a contract as consultant at $300 a week, with ticket both ways and expenses?" Mrs. Pierson wired back: "Three hundred a week not enough. Need new toothbrush." She was a bit anxious for awhile. Warner Brothers wired back: "How about $500 then?" She answered: "O. K. That will do for toothbrush and new hair-do, too." The Piersons set off for Hollywood, Harold getting a transfer to the Bendix plant there. "He was really longing to play himself in the motion-picture version of *Roughly Speaking*," his wife said. Bette Davis '41 is to star as Mrs. Pierson in the film. Louise Pierson herself hoped they'd "let me play my mother." Her younger daughter, Louise, left her ticket-selling job in a Philadelphia railroad office to go to the Coast with them. Her eldest son, John, is a medical officer on a destroyer; the youngest, Frankie, is training to be a paratrooper.

"Handsome, white-haired, and dark-eyebrowed," Mrs. Pierson favors black for her dresses, and she "got her weight down to 128 while waiting for her book to be published." "Then I gave up and started eating again." When she left for Hollywood her sister Elinor asked, "You aren't going to take that suitcase you bought at the five-and-ten to Hollywood, are you?" The suitcase went; so did "a black evening dress with a few moth holes in it." Said Mrs. Pierson: "This is an occasion I've been saving up for these last twenty years!"

POLETTI, CHARLES July 2, 1903- United States Army officer; former Lieutenant Governor of New York

Address: b. c/o War Department, Washington, D. C.; h. 40 W. 77th St, New York City

The first son of Italian immigrants to have held office in an American state as Lieutenant Governor and Governor is young Charles Poletti, whose career exemplifies his own strong faith in American democracy. In April 1943 Poletti received a commission as a lieutenant colonel in the Army. He was assigned to the civil affairs division of the chief of staff section on military government of the occupied countries, and went to North Africa to serve on General Eisenhower's '42 staff. Thus the former Governor of New York started another career in the personnel of AMG, the Allied military government system for territories liberated from Axis control. Today, as senior civil affairs officer in Sicily, Poletti "has a directive to abolish Fascism. . . Since the Fascist structure permeates every phase of Italian life, that is tantamount to creating a new form of government." Poletti acts also as liaison officer between the military governor, General Sir Harold R. L. G. Alexander '42, and the Italian people.

LT. COL. CHARLES POLETTI

Having grown up in a small Vermont town where his father was a granite cutter in the stone sheds, Charles Poletti "learned at first hand in a tough school the problems of the poor and underprivileged." He was born on July 2, 1903, at Barre, Vermont, the son of Dino and Carolina (Gervasini) Poletti. His father came from Piedmont, Italy; his mother was a peasant girl from Lombardy. From these Italian-born parents "he learned personal integrity and honesty. He learned to have no fear of hard work. He acquired a zeal and joy for a job well done." Poletti himself has written that "my background is like that of innumerable other citizens who believe in America as the land of free opportunity for all. In our home near the stonecutting plants we had several workingmen as boarders. During my high-school days I was proud to share with them a common bond because I was working too—on a farm, in a bakery, and as a salesman for the cooperative grocery and produce store operated by the stonecutters."

Encouraged by his high-school principal, young Poletti decided to go to Harvard University. He was an exceptional student, winning scholarships that helped to pay his tuition. "I also sold newspapers, waited on tables, tutored, and in summers worked on cattle boats." He was graduated in 1924 with a B. A., POLETTI, CHARLES—*Continued*

summa cum laude, and was elected to Phi Beta Kappa, having majored in political economy, political science, and history. At Harvard he came under the influence of the late Professor Frank Taussig, an outstanding economist, who advised his brilliant student to take up law, with which foundation he could later pursue more theoretical studies in political economy. While still at college he was also deeply impressed by the writings of President Woodrow Wilson; he became, too, an admirer of Governor Al Smith, in whom he says he saw an object lesson in American democracy. "I liked his record as Governor," said Poletti. "I liked the way he was fighting for improvement of the conditions of the common man. It was Al Smith and Woodrow Wilson who made me a Democrat."

After receiving his B. A. Poletti won, in a nationwide competition, the Eleanora Duse Scholarship and went to the University of Rome (1924-25). In 1928 he studied at the University of Madrid, perfecting his Spanish as well as his Italian. He then returned to Harvard, this time enrolling at the Law School, where he continued to pay his way by tutoring and taking students on European trips in the summer. He won his LL. B. in 1928, and immediately found employment with the legal firm of Davis, Polk, Wardell, Gardiner & Reed, of which John W. Davis, Democratic candidate for President in 1924, was a member.

While serving with this firm Poletti was also the legal assistant of the St. Lawrence Power Development Commission (1930). Of this project he has more recently written: "The St. Lawrence seaway and power development is our greatest single asset. The danger to America from a world at war demands prompt action. Completion of the project would add tremendously to our ability to out-produce those to whom we stand opposed." As counsel to the Democratic National Committee in 1932, Poletti began his public career. This led to his becoming counsel (1933-37) to Herbert Lehman '43, Governor of New York.

In 1937 a vacancy occurred in the State Supreme Court, and Governor Lehman appointed Poletti to fill it. Six months later he was elected as the candidate of all parties for a full fourteen-year term. But Charles Poletti did not choose to be shelved in this assured position, with its $25,000 annual income. He stepped down to risk his chances at the polls for the office of Lieutenant Governor at $10,000 where, he said, he "could render more valuable service." While he served as Lieutenant Governor of New York during the ensuing three years, Poletti kept his eye alertly on national and international developments. He was outspoken in urging defense against Nazi and Fascist propaganda in the United States and called for a "campaign of education to stress what democracy really means. . . American citizens, be they first generation or descendants of the founders of our country, can have no divided allegiance."

Governor Lehman designated Poletti in July 1940 as coordinator of the various activities and plans of the State for national defense "to avoid conflict of authority" and speed the preparedness program. Shortly before this appointment Poletti announced that he had resigned from the National Lawyers Guild, because he understood that some members of the Guild "were more interested in Communism than anything else." In his 1940 Columbus Day address he said: "We must strengthen our democracy by preserving the ideals of liberty and justice and tolerance that are its very cornerstone. Each one of us, no matter of what racial strain, has a great responsibility to keep his thoughts and actions thoroughly American."

Early in 1941, as defense coordinator for the State, Poletti decried the fact that there were 150 idle plants in New York State which, he said, should be used for war work before the Federal Government invested money in new factories. He also urged manufacturers to cooperate in the State's program of vocational training of skilled workers and to "avoid racial discrimination in selecting their employees." In February 1941 Poletti, as special counsel to the New York firm of Diamond, Rabin, Botein, and Mackay, represented the American Society of Composers, Authors, and Publishers in a series of negotiations with the United States Department of Justice in Washington. At the time, he was under fire for accepting legal fees for work extraneous to his job as Lieutenant Governor, and a bill was introduced in the State Legislature prohibiting New York's four elected state officers from engaging "in private activities for pecuniary gain."

By the spring of 1942 the state defense coordinator was more optimistic over the progress of the war program. The State, he said, "is producing its quota of materials and soon will go over its quota along all lines of production for war." He declared, in a further address, that "obstructionists and defeatists" should not be elected or re-elected to public office. "It is to labor and all other liberal Americans that we must look for constant vigilance against the isolationists."

With the November elections of 1942 approaching, Governor Lehman spoke out strongly in favor of Lieutenant Governor Poletti as his successor. Lehman expressed confidence that Poletti "could win the endorsement of the American Labor Party without much difficulty." Poletti, in an interview, said that he had always been an enthusiastic New Dealer, and that he believed there should be a working agreement between the Democratic and American Labor Parties. In August 1942 James A. Farley, Democratic state chairman, appointed Poletti to draft the party platform of the state convention. "Political observers interpreted this to mean that Poletti would be renominated by the convention for re-election to his present office." He was. In the November election returns Poletti's opposing candidate, the late Thomas W. Wallace, who rode in on the victory of Thomas E. Dewey '40, the Republican gubernatorial candidate, defeated Poletti by only 20,000 votes.

However, upon Herbert Lehman's assumption of his new post as United States director of foreign relief, the defeated Lieutenant Governor became Governor of New York State—to hold the job for a month until Dewey's inauguration. And things were not dull in Albany during December 1942. "We must carry on and make decisions in the month of December as we would in the month of March," said the new Governor. To meet the growing food shortage he issued orders that all acres available, and all State farms, increase production of products so as to make State institutions "more nearly self-sufficient as to food supplies." Upholding his lifelong stand against race prejudice, he ordered a thorough investigation of the "desecration and destruction" of Jewish religious property at Lake Placid and Saranac Lake.

But Poletti soon found himself in difficulties with New York's conservative press. On December 19 he had paroled fifteen state convicts, twelve on the recommendation of the State Parole Board. The other three, however, were freed without the Board's recommendation—among them Alexander Hoffman, a C. I. O. official who had been sentenced to four to eight years on an attempted arson charge. Hearst's *Journal American* and the anti-New Deal *Daily News* "poured huge black headlines on Poletti." Westbrook Pegler '40 led the chorus: "Of late it seems that a card of membership in the traitorous organization known as the Communist Party or a record of affiliation with avowed traitors of this group is one absolutely safe certificate of immunity." In his defense Poletti said: "I was advised that Hoffman enjoyed an excellent reputation as an honorable citizen. . . I acted honestly and I believe courageously on the basis of the facts submitted to me." *Time* Magazine, however, commented that Poletti had "pulled a first-rate political boner."

In general Poletti's leadership during his few weeks as Governor won high praise. On his last day in office he presented a program of social legislation which was to be used as the Democratic Party policy in the future. "Some saw in Poletti's move an intention of putting himself forward as titular party leader with an eye to prospects in 1946." The program called for the creation of a "Beveridge '43 Commission" to recommend social security plans for post-War years. Among the agenda items were: state health insurance; extension of benefits for unemployment insurance; funds for construction of low-rent housing projects; ten million dollars for financing the care of children in war-caused emergencies; prohibition by law of any discriminatory advertising for hiring; development of the St. Lawrence water power resources under state ownership; lowering the voting age in New York State to eighteen years.

After Dewey's inauguration Poletti was jobless for three days. On January 4, 1943 he reported for a new job as "special assistant" to War Secretary Stimson '40. The exact nature of his duties was "confidential." However, since Poletti had only a few days previously broadcasted an appeal to the Italian people to throw off the yoke of Mussolini '42, commentators predicted that he was "being kept in readiness for the collapse of Italy in the War." On April 18 it was revealed that he had received a commission as a lieutenant colonel, and had been assigned to the civil affairs division of the section on military government of occupied countries. On July 18 Allied Headquarters in North Africa reported that Poletti was serving there as senior civic affairs officer of the AMG. On that same day General Sir Harold R. L. G. Alexander, as military governor of Sicily "and adjoining islands," dissolved the Fascist Party and annulled all discriminatory laws based on race, color, or creed. The power of the Crown was also "suspended" during the period of military occupation. All officeholders except political leaders were required to continue to perform their duties under the direction of AMG officers, even though most of them were members of the Fascist Party, but it was emphasized that Fascist ringleaders would be punished. AMG officers followed so closely after the assault troops that in one instance Poletti found himself the only American in a town captured only a few minutes before. He made a speech to a mass of people crowded around City Hall and explained there would be no difficulty if they obeyed the military regulations. "They applauded and cheered as I drove away. It was just like a political meeting back home."

The job confronting the AMG in Sicily was, however, tremendous; and few situations could be solved as simply as in Poletti's anecdote. There was the problem of the great monopolies that had run Italy's industrial structure under Mussolini—would AMG come to terms with them? There was the problem of the Fascist labor and corporative organizations —these were abolished in September and a "free labor movement" substituted, but at the same time the provisions of the existing contracts between workers and employers continued, subject to revision based upon investigation conducted by the provincial labor office. And, most immediate of all, there was the problem of using Fascist personnel—a practice deeply resented by anti-Fascist Italians. As Herbert L. Matthews '43 pointed out (in explanation, not criticism), "What often happened in effect was that the Fascist label is removed, but the same men carry on the same functions." Undoubtedly the Sicilians realized as well as Matthews that, though "theoretically the people of Italy will have their chances to choose their own form of government when the time comes . . . it takes only a little cogitation to realize that AMG's activities between now and then will profoundly affect her mechanism and the choice of leaders through which the new government will take form." When in October, in a speech at Palermo, Poletti said Italy must oust her Fascists from office before she could enjoy full freedom, *La Parda* wondered how this speech jibed with the decisions of the Allied Advisory Council.

Like many another citizen now in military service, probably Poletti's hardest task to date was leaving behind a comfortable, happy family life. "Mrs. Lieutenant Governor" has stood heart and mind with her husband throughout his career—and at the same time pursued an active one for herself. As Jean Knox Ellis from Buffalo, before her marriage (June 1934) she had been graduated from Vassar College and was writing fashion copy for several New York department stores. There are three attractive young Polettis: Carla Knox, Charles Ellis, and Joanna Shattuck. It has been said that Mrs. Poletti "reminds one of Mrs. Frank-

POLETTI, CHARLES—*Continued*

lin D. Roosevelt ['40], not in physical appearance so much as in carriage, graciousness, and a general impression of achievement." While in residence at Albany she did work for her college, of which she is a trustee, and was in charge of educational work for the Women's Democratic National Committee. She also carried on a radio "political debate" program, *Opposing Views in the Campaign*, with Mrs. Preston Davie, GOP supporter.

While their father was at home the Poletti children held a large share of his attention: he took them to the zoo and for rides on ferryboats and busses. On week ends the family went to the John Shattuck farm near Elizabethtown, New York to fish, pick berries, and feed the farm livestock. The Polettis had their own cottage, where Mrs. Poletti did "the Governor's" secretarial work. Poletti never found much time for most forms of recreation. He had played squash, rackets and tennis during his school days; he rarely played golf. He "doesn't care much for the theatre, movies, or professional sports"; but he does like to read. He "isn't fussy about his food" and dresses conservatively, except for an occasional elegant necktie. His "sturdy frame, dark wavy hair, lustrous brown eyes, and exuberant vitality and gaiety" are inherited from his father. Mostly he finds recreation in the enjoyment of the work he happens to be doing. As Mrs. Poletti has put it: "I cannot tell what the future will bring forth, but I am sure it will be exciting. Life with Charles could never be anything else."

POLING, DANIEL (ALFRED), REV.

(pō'ling) Nov. 30, 1884- Clergyman; editor; author

Address: b. Baptist Temple, Broad and Berks Sts, Philadelphia, Pa; h. 2315 N. Broad St, Philadelphia, Pa.

"War is not holy. War is the sum of man's inhumanity to man. But there are holy causes. Freedom is holy." With these words from his book, *A Preacher Looks at War* (1943), Dr. Daniel Poling, president of the International Society of Christian Endeavor, takes his stand on the issues involved in the Second World War. Author of some sixteen books, editor of the *Christian Herald*, a monthly publication with a 250,000 circulation, prominent lecturer and clergyman and one-time Prohibition candidate for the governorship of Ohio, rugged, energetic Dr. Poling is now engaged in a crusade against what he characterizes as "immoral and unchristian" pacifism, writing: "Let the Church have no blessing for war, but shame upon us as churchmen if we have no blessing for our sons and no blessings for our Governments who, in the presence of war, defend with their very lives our holy things."

Daniel Alfred Poling was born in Portland, Oregon, November 30, 1884, the son of Oregon pioneers, Dr. Charles Cupp and Savilla (Kring) Poling. For seven generations there had been clergymen in the family, so it was small wonder that young Daniel was attracted to the pulpit. At the age of eleven he listened spellbound to a campaign speech by the silver-tongued William Jennings Bryan and then shook hands with the great orator. Profoundly impressed by this incident, Poling resolved to make preaching his career, little dreaming that years later he himself would be described as a "Bryanesque" figure. He preached his first sermons in neighboring evangelical churches while he was still a college sophomore. Poling's college activities were not confined to studies and sermons, however. When he received his B. A. from Dallas College, Oregon, in 1904, he was president of his class, captain of the football team, and a diving, track, and boxing champion.

His "muscular Christianity," as his vigorous religious program has been called, stood him in good stead during the early years of his career. Besides doing graduate work at the Lafayette Seminary in Oregon, Dallas College (M. A. 1906), Ohio State University (1907-09), Albright College (LL. D. 1916), and Defiance College (Litt. D. 1921), and serving as a delegate to the Prohibition National Conventions of 1904, 1908, and 1912, Poling was working as pastor, author, and social worker. He moved to Canton, Ohio, in 1905 when he was appointed pastor of the Navarre Evangelical Church there. In 1906 he preached at the Grace Evangelical Church in Canton, and on September 25 of that year married Susan J. Vandersall. (She died in 1918, and a year later Dr. Poling was married to Lillian Diebold Heingartner.)

Dr. Poling launched his political career in 1912 when he was Prohibitionist candidate for the governorship of Ohio. Although he was actually four years too young to hold the office of Governor, he campaigned vigorously, touring the state in an automobile, with a cornettist to attract crowds, and speaking seven times a day for fifty-nine days. He lost the election, but his work was not entirely in vain, for he "raised the state's Prohibition vote 150 per cent." Poling continued his struggle for Prohibition, stumping the country in campaigns covering every state in the Union. He wrote extensively in support of the cause, publishing the first of his many works, *Mothers of Men*, in 1914, and was elected temporary chairman of the 1916 Prohibition National Convention.

When America entered the First World War, Dr. Poling volunteered for overseas service in the YMCA. He went to France with the American Expeditionary Forces. "With the American soldier he lived and roughed it from the port of entry to the front line, sharing his hardships and seeing things at their best and at their worst." *Huts in Hell* (1918) is his account of life with the A. E. F., and for his glowing tribute to the American soldier he was personally thanked by Secretary of War Newton D. Baker.

Poling remained in Europe after the War doing special relief and rehabilitation work. Then, under the auspices of the Prohibition Education Commission he made speeches in England, Scotland, and Wales.

In 1923 Dr. Poling was ordained minister in the Reformed Church in America and was invited to become the pastor of New York City's famous Marble Collegiate Reform Church. It was from the Marble Church that Dr. Poling began his popular radio talks. Informal, sentimental, and down-to-earth, these talks won him a nationwide reputation, and they were later published in three volumes, *Radio Talks to Young People* (1926); *Radio Talks* (1927); and *Youth and Life* (1929). During this period he also found time to write four novels: *The Furnace* (1925), a blood-and-thunder story of a strike in a steel mill; *John of Oregon* (1926), a fabulous story with a Paul Bunyanesque hero, intended for teen-age readers; *The Heretic* (1928), of which one reviewer wrote: "Though sentimentally mawkish and unconvincing, it is quite evidently honestly meant"; and *Between Two Worlds* (1931), a life of Jesus from the visit to the Temple to the Resurrection. On this book the New York *Times* commented: "Dr. Poling writes with force and vigor. His material is always handled with taste and reverence."

Since 1925 Dr. Poling has served as president of the World's Christian Endeavor Union. The Christian Endeavor Societies, of which there are now some 80,000 throughout the world, were organized in 1881 with the purpose of promoting "an earnest Christian life among members, to increase their mutual acquaintance, to train them for work in the Church, and in every way to make them useful in the service of God and their fellow men."

As president and as editor of the *Christian Herald* and the *Christian Endeavor Quarterly,* Dr. Poling has become one of the leading figures in American religion. In his editorials he is the champion of youth, constantly asserting his faith in young people: "Modern youth is incurably religious even though he may deny the fact for the moment, by deeds as well as words." He was, of course, an outspoken foe of repeal of the Eighteenth Amendment and headed the allied forces for Prohibition. In 1931, however, when the quarrel between the "wets" and the "drys" was reaching its heated climax, Dr. Poling shocked some members of his own faction by announcing that he wished "to dispel the popular impression that the holier-than-thou spirit pervaded the Prohibition movement." He wanted, he said, "to divorce Prohibition from religion and morals and make it a business proposition."

While Dr. Poling was on one of his round-the-world Christian Endeavor visitations in 1936, the Temple Baptist Church in Philadelphia asked him to become their pastor. This was no simple decision for the Temple Church to make, for Dr. Poling was not a Baptist, but a member of the Dutch Reformed Church. The entire question of Christian unity (defined as "the removal of sectarian restrictions so that any Christian may be received into membership without being rebaptized") was involved. Dr. Poling was eager to receive the appointment. "He was strongly impressed by the overtures of the pulpit committee and seemed to see in the Philadelphia parish an opportunity for a ministry worthy of his powers." Finally he agreed to be rebaptized and he has been the Temple Baptist Church pastor ever since.

REV. DANIEL POLING

With the attack on Pearl Harbor and the subsequent entry of the United States into the Second World War, churches of all denominations met to decide whether the War was "just and righteous." At the Northern Baptist Convention in Cleveland, early in June 1942, Dr. Poling took his stand at the head of the "interventionists." Poling, who, in the words of *Time* Magazine, "can usually sway any meeting to his will," proposed a resolution calling for "defeat of the Axis, the restoration of sovereignty to enslaved people, and the triumph of freedom and democracy." In spite of the persuasiveness of his oratory, the "pacifists" won out, and the resolution was defeated.

Reverend Dr. Poling was not discouraged and continued to fight for church support for his seven-point peace program, first proposed in July 1941. His plan calls for "American support of a world agency for the administration of world affairs, police power to administer the agency, open economic frontiers, collective responsibility for the administration of colonies and mandates, establishment of higher living levels everywhere, a coalition peace commission representing all political faiths, and cancellation by America of war debts." This program has been endorsed by the International Society of Christian Endeavor, representing some 4,000,000 members throughout the world.

Early in 1943 Dr. Poling's son, Army Chaplain Clark Vandersall Poling, died heroically in the sinking of an Army transport during the North African campaign. Young Chaplain Poling (along with three other chaplains of

POLING, DANIEL, REV. *-Continued*

the Protestant, Catholic, and Jewish faiths) gave his lifebelt to a soldier who had none. The four chaplains went down with the ship. Dr. Poling's book, *A Preacher Looks at War,* is dedicated to his son's memory and was written for "Christians who find it difficult to reconcile their faith with participation in the War." In the fall of 1943 Dr. Poling left the United States for a visit "to religious leaders and chaplains in Egypt, India, China, Australia, and other areas" and to the armed forces serving there. As in his visit, early in 1943, to England and North Africa, he represented the Christian Conference on War and Peace, and, in addition, sent back articles to the *Christian Science Monitor* and the *Christian Herald.* He returned in December with a prediction that American servicemen, now on foreign soil, would control practical affairs in the United States for the next fifty years at least. "Right now they grow impatient when people talk about details of the post-War world," he said. "But they're fighting to insure at least a fair hope that their children won't have to fight. They're going to have their say in industry and politics. And they're not going to be taken over by any group; they'll do the taking over."

A "husky, clear-eyed six-footer," Dr. Poling has received many honors, including the Boy Scout Silver Buffalo Award and a humanitarian award from the Pennsylvania Eastern Star. He holds a D. D. from Hope College (1925); an S. T. D. from Syracuse University (1927); a D.D. from the University of Vermont (1934); an LL. D. from Temple University (1937); and a D. D. from Phillips University (1939). Interested also in philanthropic work, Dr. Poling is a director of the Penney Foundation and of the Bowery Mission in New York City. Although he heads one of the largest religious organizations in the world, he still likes to think of himself as a plain-spoken preacher. "His proudest description of himself is that he is a man of the people."

POZNER, VLADIMIR (pōz'nėr) Jan. 5, 1905- Journalist; author

Address: b. c/o Maxim Lieber, 545 Fifth Ave, New York City

Free-lance journalist, author, and scholar, Vladimir Pozner belongs to that younger group of articulate Frenchmen who used their pens to fight Fascism before the Second World War and who were mustered into uniform to fight for democracy when the Second World War began only to find themselves betrayed after a year of inaction. Pozner "left Paris the day the Germans entered it, crossed the Loire three times, repaired his car on the tracks of a railroad, and pursued imaginary parachutists near Vichy." During the two last weeks of the retreat Private Pozner drove "4,000 miles without a map." He managed, however, to avoid personal annihilation and eventually to come to the United States, where he could take up his pen again in the struggle.

Vladimir Pozner was born in Paris, France, the son of Russian Jewish parents, Solomon and Esther (Sidersky) Pozner, on January 5, 1905. He was educated at the Sorbonne, from which he received his licencié-ès-lettres degree in 1925.

Pozner never considered any career but a literary one for himself and the next fifteen years after graduation, except for his service with the French Army, he spent as a free-lance journalist and writer. He visited England and the United States several times and traveled extensively on the continent. Besides contributing to numerous French and European journals he wrote for many American periodicals, including *Travel, The Nation, New Republic,* and *Harper's.*

Pozner has written considerably about his travels, under such titles as "Main Street through French Eyes" and "Three Strategic Ports of Europe." He has interviewed such notables as H. G. Wells and George Bernard Shaw. The majority of his articles published abroad, however, deal with Fascism and related subjects. In "Pogroms for Profit," published in *The Nation* in 1939, he accused the Nazi leaders of absorbing Jewish businesses into their own personal enterprises instead of turning them over to the "Aryan" people as their propaganda had promised. In "The Cagoulards Continue," an article published in *New Republic,* Pozner accused the French police of knowing of the continuance of this Fascist organization but doing nothing about it. "The reasons for this silence can only be guessed at," he wrote. "It is alleged that even more important personalities . . . among them a former Premier—are involved. It is also charged that the British Tory Government, under the pretext that civil peace must be preserved in France at any cost, has intervened in behalf of the CSAR leaders. And it is still a matter for conjecture whether the police will discover the missing twenty-five tons of munitions, or wait until it is too late to forestall their use against the French people."

Pozner is the author of seven books, three of which have appeared in English as well as French. His first work was an anthology of contemporary Russian prose in French (*Anthologie de la Prose Russe Contemporaine,* published in 1929). This was followed by a distinguished critical study of contemporary Russian literature, *Panorama de la Littérature Russe Contemporaine,* also published in 1929 with a preface by Paul Hazard '41. In 1935 *Tolstoï Est Mort* appeared. This was a connected narrative by Pozner which included telegrams sent to and from Astapovo (now Tolstoi) from October 31 to November 20, 1919 relating to the Russian novelist's illness and death. This work was based on V. I. Nevskii's collection of new material on the death of Tolstoi.

In 1937 *Le Mors aux Dents* appeared; the following year it was published in the United States under the title *Bloody Baron* and in England as *White Despot.* This is a "fictionized biography of a Russian White general [Ungern] who gained considerable notoriety and a reputation for unbelievable cruelty and despotism in Siberia in the days of the Russian revolution." "I dare say there is some truth, some propaganda, more sensationalism in this tour de force so candid on the surface," F. T. Marsh wrote in *Books.* "Ungern, there can be no question, was some sort of mad man. I don't believe that the author has been able to come near him or to his subject matter." The Boston *Transcript* found that "fact and fiction have been skillfully combined to make an entertaining story." Some of the critics found it somewhat shocking, others found it "a perfect book for those who like to sup on horrors." They agreed that Pozner "offers more than a dash of genuine style in addition."

Les États-Désunis (The Dis-United States) appeared in 1938, but did not have an American edition. This book was described by *Travel* Magazine as "distinguished for its vivid pictures of American life and for its understanding of those basic national characteristics and problems which so frequently bewilder the ordinary European traveler."

VLADIMIR POZNER

In the summer of 1939 Pozner's class was called to the colors and for a year he "vegetated" in his artillery depot. "Then in six weeks he saw a lifetime of warfare, and then France fell." Armed with an obsolete revolver and no bullets, he had driven an army car. He was demobilized with the rest of the Army and he fled from France to North Africa, visiting Oran, Casablanca, and Rabat. From Tangier he flew to Lisbon and from Lisbon he went to New York in January 1941.

In New York Pozner began work on a novel depicting his experiences in the French retreat in the last days before the occupation and the fall of France. Published in the United States simultaneously in English and French, it appeared in 1942 as *Deuil en 24 Heures,* and as *The Edge of the Sword.*

The Edge of the Sword is concerned "not with the fate of the privileged folk who lost their privileges, but with the soldiers who lost their regiments and the families who lost their homes. This is the motivating theme of his book. Shuttling from the Belgian Front to the exodus from Paris and finally to the region of the Loire where the last stand was to have been taken," Pozner followed the fortunes of various men from one scattered regiment. He wrote about what he saw: "Senegalese unloading their rifles against the Stukas; a baby born in the woods; women prostituting themselves for a can of gasoline; lost tanks haunting the countryside in search of the enemy; regiments abandoned by their officers; and—always—the common people of France, soldiers and civilians alike, 15,000,000 of them, jammed along the highways."

(Continued next page)

POZNER, VLADIMIR—*Continued*

Edge of the Sword was enthusiastically received by critics. Virgilia Sapieha wrote in the New York *Herald Tribune*: "Pozner believes in the men who rode the tank, in the men who drove the trucks, in the stubborn, fleeing families. He believes in the plain folk of France and in their final victory." Marianne Hauser said: "His story possesses the authentic ring of Habe's '43 new book and the moving directness of Hans Sahl's poems about the French debacle." Lon Tinkle, writing in the *Saturday Review of Literature,* found that Pozner's style had a "hard agate-like brilliance" and an "oblique approach . . . reminiscent of Ernest Hemingway." "In mood this volume is neither lyric nor epic," he wrote, "but dramatic, sometimes with an overtone of Olympian humor; and its emphasis is not political, but narrative. As narrative it is a virtuosic performance." Alexander Kendrick, writing in the Philadelphia *Inquirer*, called it "the best novel yet to emerge from this war." Kay Boyle '42 was also enthusiastic. "I do know that I want to miss nothing that Pozner writes from now on. The quality of truth is alone a rare enough thing, but when this truth is set down by a gifted and subtle stylist we are getting very close to the best that literature can give. I have read the book with satisfaction and with love."

Besides favorable professional criticism, the New York *Post* reports, Pozner received many letters from Frenchmen praising the book. One wrote: "You have succeeded in putting it all into your book, everything we had felt and thought, cursed and hoped. I feel I must thank you in the name of all those who were there with us for this sort of revenge . . . that your book offers us."

As soon as *The Edge of the Sword* was in the publisher's hands Pozner began work on a second novel, *First Harvest,* which appeared in April 1943 simultaneously in English, French, and Spanish. *First Harvest* (*Les Gens du Pays*) is the story of the Nazi occupation of a hamlet on the coast of Brittany or Normandy. Concerning the authenticity of the background, Pozner wrote to his publishers: "I have known the Channel Coast from Pas-de-Calais to Finistère since I was a child."

In this novel a Bavarian private disappears from the French coastal village where he is stationed and is later found, neck broken, at the foot of a cliff. Ten hostages are taken from the villagers, innocent of his death and plotting only to save their grain from the Nazis. How a young girl who knows the truth discovers what she must do and carries out her resolve provides the climax to the story, which is prefaced by Goethe's words: "Concerning the French I have not the slightest anxiety; they stand so high in the perspective of world history that their spirit can no longer be subdued in any way."

Some American critics were not too kind to *First Harvest.* "Rich in character studies of Nazi soldiers, Gestapo functionaries, French villagers, *First Harvest* is a dismal, moral tale of average literary merit," wrote the critic for *Time.* Clifton Fadiman '41, writing in the *New Yorker* said: "Well-written, capably engineered," but "the theme, the people, and the treatment are the sort that is beginning to appear standardized. The author leans so far backward to make his Nazis believable that they end up by sounding almost sentimentalized, if that is possible." Alfred Kazin in the *New Republic* said that the book "is more competent than most anti-Nazi novels of its kind," but "glossy and empty. . . His France tells me as little as Steinbeck's '40 *Norway.*" On the other hand, F. C. Weiskopf wrote in the *Saturday Review of Literature*: "*First Harvest* is a moving, powerful, and beautifully written novel." And E. M. Olcott commented in the *Library Journal*: "Characters are drawn with humor, tenderness, and real understanding. . . Will be popular."

While working on *First Harvest* Pozner contributed frequent articles to the Fighting French Press. As soon as the manuscript was in his publisher's hands, however, Pozner decided to contribute more actively to the American war effort and obtained a position with the Kaiser '42 shipyards on the West Coast. In April 1943 he was awarded a Guggenheim Fellowship.

Vladimir Pozner was married to Ida Liebmann in 1937. He has two daughters, one from a previous marriage. His elder daughter is still in Europe, but his younger daughter and his wife accompanied him to the United States and in 1943 were with him in California. Pozner is above average height and very slim (he is five feet eleven inches tall and weighs 145 pounds). He is a personable, dark-complexioned young man.

PRATT, WILLIAM V(EAZIE) Feb. 28, 1869- News commentator; retired United States Naval officer

Address: b. Newsweek, 152 W. 42nd St, New York City; c/o Navy Department, Washington, D. C.; h. 33 W. 51st St, New York City

On active duty in United States Naval service for almost forty-five years prior to his retirement in 1933—and again in active service for several months in 1941—Admiral William V. Pratt rose from the ranks to become (in 1929) commander in chief of the United States Fleet. Admiral Pratt has been serving on the home front in recent years, particularly as a Naval strategist conducting a weekly column, "War Tides," for *Newsweek* Magazine.

William V. Pratt was born in Belfast, Maine on February 28, 1869, the son of Nichols and Abigail Jane (Veazie) Pratt. He was appointed a Naval cadet from the 3rd Congressional District of Maine in September 1885 by the Honorable S. L. Milliken. Having completed the course at the Naval Academy in 1889, he was assigned to duty on the U. S. S. *Atlanta.* He was commissioned an ensign on July 1, 1891, and seven years later he was promoted to lieutenant (junior grade).

He served successively on the U. S. S. *Chicago, Philadelphia, Petrel, Lancaster,* and *Annapolis.* During the Spanish American War he was attached to the U. S. S. *Mayflower*, the prize steamer *New Foundland,* and the U. S. S. *Newark.* Later he served on the *Bennington, Monadnock, Indiana, Kearsarge;* then as navigator of the *Newark,* as executive officer of the *St. Louis,* and as executive officer of the *California.*

Admiral Pratt was married to Louise Johnson on April 15, 1902. The couple have one son, William Veazie Pratt, Jr.

From January 1911 to June 1913 Pratt was at the Naval War College. He was then ordered to duty as aide on the staff of the Commander of the Torpedo Flotilla Fleet, and on the U. S. S. *Dixie* with additional duty in 1914 in command of the *Birmingham.* In November 1915 he was ordered to the Panama Canal Zone for duty and the following year he was again at the Navy War College.

During the First World War, Pratt, with the rank of captain, was assigned in 1917 to special temporary duty in the Office of the Chief of Naval Operations, where he served until May of that year. He was then assigned to the Office of Naval Operations, and in August 1918 was appointed assistant to the chief of Naval Operations. In December 1918 he had the honor of accompanying President Woodrow Wilson to Europe. For his services during the war years he was awarded the Army Distinguished Service Medal and the Navy Distinguished Service Medal with the citation: "For exceptionally meritorious service in a duty of great responsibility as assistant to the chief of Naval Operations."

After the War, from January 1919 to October 1920 Pratt commanded the battleship *New York.* He then served as commander of the Destroyer Force, Pacific Fleet. His next duty was as a member of the general board, on which he served from 1921 to 1923. During the Limitation of Armament Conference in Washington, D. C. (1921-22) he also served as a member of the Technical Staff of the United States as technical expert general.

From 1923 to 1925 Admiral Pratt was in command of Battleship Division Four, Battle Fleet; and in 1925 he returned to duty with the general board, where he was on duty from June until September. He was then appointed president of the Naval War College. In 1927 he was made commander of the Battleship Divisions, Battle Fleet, with the rank of vice-admiral. In June 1928 he was commissioned commander in chief of the Battle Fleet with the rank of admiral. A year later he succeeded Admiral Henry A. Wiley, now on the retired list of the Navy, as commander in chief of the United States Fleet with the rank of admiral.

Succeeding Admiral Charles F. Hughes, Admiral Pratt became chief of Naval Operations on September 17, 1930. In that year he also served as adviser to the American delegation at the London Naval Conference. Three years later, in 1933, he was transferred to the retired list of the United States Navy. On January 6, 1941, because of his experience in Naval service and his value as an expert strategist, he was again put on active duty, but on July 15, 1941 he was returned to inactive status.

ADMIRAL WILLIAM V. PRATT

Admiral Pratt's careful analyses of Allied and Axis sea strategy in his column in *Newsweek* have been appreciatively followed by many readers. He is a staunch defender of the value of sea power in the winning of the Second World War, and he believes that the campaign against the submarine menace will be won—through the aid, however, of air power coupled with that of seacraft. When not following Naval operations, Admiral Pratt takes up his favorite hobby, gardening, his specialty being roses. For recreation and sport he likes golf, baseball, and football.

RAMÍREZ, PEDRO P(ABLO) (rä-mē′rās) Jan. (?), 1884- President of Argentina

Address: Casa Rosada, Buenos Aires, Argentina

General Pedro Pablo Ramírez, who succeeded General Arturo Rawson as President of the new Argentine Government which took power in June 1943 through a military coup, has little in his background which would indicate democratic sympathies. He was born in January 1884 at the Plata River port of La Paz (a meat-packing center) in Entre Ríos Province. His father, who has been variously described as a chief of police and as a prosperous merchant, secured for him an appointment to a military school in Buenos Aires at the age of seventeen. A classmate of Arturo Rawson there, he was trained under General Luis Villanueva, a conservative officer of the old Prussian school. He was graduated as a 2nd lieutenant in 1904 and in 1910 was promoted to the rank of 1st lieutenant in the cavalry. The next year he was sent to Germany to complete his studies, from 1911 to 1913 serving in Kaiser Wilhelm's famous Fifth Hussars. He was joined in Germany by his sister, who married a German. Today his nephew is fighting in the Nazi forces.

In 1913 young Ramírez returned to Argentina, where he specialized in cavalry tactics, and advanced in rank from captain to colonel and finally to general. In September 1930, after spending two years as chief of the mobilization plans of the Argentine Army, he joined General José Uriburu in the uprising against the liberal Irigoyen regime—a revolution "directed against a system, not a party," according to Uriburu. As a reward for Ramírez' services Uriburu named him chief of the general staff of the information services and the next year sent him to Rome as military air attaché in the Argentine Embassy so that he could observe Mussolini's '42 new Army. Ramírez returned to Argentina in 1932, however, to take over the command of the 2nd Cavalry Brigade. He also returned in time to witness the turning back of Uriburu's military dictatorship to the civilians; Uriburu, though frankly a Fascist, had been so sure of his popular support that he had announced an election, in which he was unexpectedly defeated. Ramírez later declared in a published letter that the "revolutionary" aims of the revolt had been lost because the Army had given back its power too quickly.

During the next decade General Ramírez occupied cavalry and staff posts, in 1937 becoming a brigadier general with the 1st Army. But apparently he had not lost sight of the aims of the Uriburu revolt, aims which his stay in Italy must have helped to crystallize. According to John W. White, he helped to organize the Milicia Nacionalista, later known as the Guardia Nacional, the vanguard of Argentine Fascism, which is now said to be 600,000 strong. A "minimum program of action" to bury democracy in Argentina was formulated, published in pamphlet form, and distributed among the members of the Nationalist militia throughout the country. When the militia came to power all three branches of the democratic state—executive, legislative, and judicial—were to be dissolved. Uriburu's Fascist revolution was to be carried on until democracy was supplanted by a corporate state, similar to Mussolini's Italy. All political parties were, of course, to be abolished. The vote would not be the right of citizens but would be bestowed according to economic functions. Jews and Communists were to be "handled with a maximum of energy." Education was to be along military lines, the military training of children to begin in the primary grades. The program was not only anti-labor but also anti-foreign, and particularly anti-United States.

It was not until November 1942, however, that General Ramírez found himself in a position to help carry out these proposals. At that time President Castillo '41 was persuaded by some of the General's associates to appoint Ramírez to the post of War Minister, from which General Juan Tonazzi had just been forced to resign because of his sympathy for the Allied cause. At the time Ramírez was described as a close personal friend of Castillo and as an opponent of his chief rival, the pro-Allied General Agustin P. Justo, who was to meet his death in 1943. White says that the next month the Guardia Nacional joined with the Uníon-Nacional Argentina to form the first totalitarian party of the country, the party of the Recuperación Nacional. At the same time Ramírez began to reorganize the Army, appointing General Rawson commander of the cavalry—the post which he himself had formerly held. It was noted with some astonishment that on the annual Army promotion list of December 30 nearly all of his appointees to key military positions were considered United Nations sympathizers, although at least one was notorious for his pro-totalitarian beliefs.

Castillo's policy of "neutrality" in the Second World War, a policy which actually favored the Axis, was creating much restlessness in Argentina—and not only among radicals and democrats. The Army leaders watched the Brazilian and Chilean Armies getting lend-lease aid from the United States with envious eyes. The great landowners saw Argentina pointedly omitted from the list of nations participating in the food conference at Hot Springs in May 1943. And, as Axis fortunes took a turn for the worse, it became increasingly apparent to Argentines of all classes that some outward support must be given to the cause of the United Nations if Argentina were not to be left far behind. It was true that the odds in the coming election of September 5 were heavily in favor of Castillo's hand-picked candidate, Robustiano Patrón Costas, who, though an extreme conservative, seemed to be less attached to "neutrality" than Castillo; but he would not be able to take office until February 1944, probably too late to recoup Argentina's prestige.

Such was the situation that laid the ground for the Army revolt. Nationalists who wanted an immediate break with the Axis in order to get lend-lease aid, irrespective of the nature of Argentina's domestic regime; pro-democrats who opposed both Argentina's "neutrality" and Castillo's repressive domestic policies; pro-Nazis who feared that Costas would be less sympathetic to the Axis than his predecessor; native Fascists, with the models of the Vargas '40 and Trujillo Molina '41 regimes before them, who wanted to see an executive in power who they were sure was capable of coping with any possible resurgence of democracy—all were against the President. They could not have all been of one mind as to the policies of the regime that would succeed Castillo's, it was true. General Rawson, co-leader in the revolt, was described by most sources as pro-Allied; Ramírez had reportedly made some pro-Axis statements in the past.

Castillo, according to *Newsweek*, had some warning as to what was coming when on May 18, 1943 General Ramírez warned him in a Cabinet meeting that the poorly equipped Argentine Army was determined to secure aid from the United States even if it meant drastic changes in Argentina's neutrality policy. According to *Newsweek*, too (Ramírez denies this), Castillo later learned that Ramírez had been invited to head a third party ticket as a Presidential candidate in opposition to Costas and demanded that the General leave his Cabinet; Ramírez promptly departed for military headquarters, where the forces under Rawson were mobilizing for a march on Buenos Aires. In any case, on the eve of Costas' formal nomination by the Conservative Party, Castillo rejected an ultimatum from Rawson demanding his resignation and made a plea for assistance to his 1st Field Artillery. The plea was futile, and not many hours later the President and his Ministers hurriedly abandoned the Casa Rosada and fled the capital on a mine sweeper. Resistance was so ineffective that Rawson and his Army were able to stroll into the Casa Rosada at 2:40 in the afternoon of June 4, and a flock of unsigned handbills were soon being distributed saying that a democratic revolution was taking place and that the Rio de Janeiro pact, including a rupture with the Axis, would be fulfilled. Rawson was proclaimed President of the new Government, which was at first described as "provisional"; Ramírez, who had been ousted by Castillo, was to be his Minister of War.

Rawson himself may or may not have been sincere, but if this was a "democratic revolution" his new Cabinet showed no signs of it. Its only civil members were two well known Rightists, one of whom, José Maria Rosa, was connected with the Nazi newspaper *El Pampero*, which supported the new Government from its very first day. Among the first actions of the new Government were the dissolution of Congress, an order to the police to suppress any "pro-Communist" statements, and the suppression of *La Hora*, a pro-Soviet newspaper. Neither *El Pampero* nor *Cabildo* (another pro-Nazi newspaper) were touched. Rawson's only pro-Allied move was a verbal message to the diplomatic corps of the American republics that he intended to maintain friendly relations with American states and to comply with international agreements.

GEN. PEDRO P. RAMÍREZ

On June 7, after the Argentine public had begun to show signs of disillusionment and suspicion, Ramírez succeeded Rawson as President. He removed the two Ministers of marked pro-Axis sympathies from the Cabinet, among other changes, and, proclaiming democracy from the balcony of the Casa Rosada, pledged friendship toward the other American republics and neutrality "for the present" toward the rest of the world. Yet his Cabinet, which was also made up entirely of Rightists, and which included but one civilian, the man who replaced Rosa, made no move to undo the work of the last. The state of siege which had been decreed by Castillo in December 1941 was retained, and Ramírez threatened "very serious measures" against anyone who circulated reports that the situation was not "absolutely normal" —"attempts of that nature" being considered as "treason against the country." A *Christian Science Monitor* correspondent wrote that the new Government's repressive acts actually "exceeded anything imposed by the ousted Castillo regime under its 'state of siege.'" While Fascist leaders and institutions carried on their activities unmolested, more than one pro-Allied organization was closed down, more than one pro-Allied newspaper suspended, and a severe censorship was imposed which seemed to affect *Yanqui* correspondents most of all.

(Continued next page)

RAMÍREZ, PEDRO P.—*Continued*

Ramírez nevertheless won prompt recognition from other Governments. Brazil, Paraguay, Bolivia, and Chile quickly recognized the regime; recognition by the Axis nations followed. The United States, Britain, and Canada followed a "wait-and-see" policy for a few days. Then Ramírez banned the use of all code messages in international radio communications (after twenty-four hours during which such messages could be sent—a privilege which presumably allowed Axis radios to clear the accumulated business with their principals and to transmit information as to new arrangements for getting around the ban). His reward was quick. On June 11 the United States State Department issued its official acknowledgment, followed by a conference between United States Ambassador Norman Armour and Argentina's new Foreign Minister—apparently one of the most pro-democratic members of Ramírez' Cabinet, for Armour later described the conference as "a happy augury for Argentine-United States relations and consideration of problems of mutual interest." At the same time Great Britain and Canada also recognized the new Government. There were no indications that Allied lend-lease aid or economic help for Argentina would be forthcoming until Ramírez had shown more symptoms of anti-Axis activity, but Allied recognition of his anti-popular regime profoundly disappointed liberals.

By the middle of June the New York *Herald Tribune* was reporting that Washington itself believed that the palace revolution had been engineered mainly by pro-German forces who wanted to forestall the nomination and election of Costas. Ramírez' actions continued to contradict his promises. He promised that the military character of his Government would not be perpetuated and that the national Constitution would be reestablished in its entirety only a few days before he suspended the Presidential elections, banned the word "provisional" as applied to his Government, and removed from office the majority of provincial Governors, the heads of several governmental departments, and many other officials, in more than one case replacing them with outspoken pro-Nazis. The Governors had been elected by fraud, he said, and the department heads had been guilty of graft; before the Argentine political parties would be permitted to return to power they must clean out the corruption which he now called the chief cause of the revolt. On July 8 he was quoted by a Rightist newspaper as saying that he didn't intend to sever relations with the Axis "immediately" and that no elections would be held in the "near future." Finally he dissolved several important organizations which had been working for the United Nations, along with a branch of the Confederación General de Trabajo, on the charge that there had been an "infiltration of Communist elements" into them. At the same time German cultural and benevolent circles were ordered to close down, but it was charged that this was "apparently to create the impression that the new moves are not specifically anti-democratic," and it was pointed out that the treatment of Nazi groups was far milder than that of anti-Nazis. Several hundred secret arrests of liberals and Communists had been made by this time, it was also reported.

In September the United States State Department made public some notes exchanged by Secretary of State Hull '40 and the Argentine Foreign Minister Segundo Storni, in which Hull bluntly charged the Ramírez Government with permitting Axis espionage agents to operate on its soil and with having broken faith with sister Latin American republics by refusing to sever diplomatic relations with the Axis. Hull said that "vicious propaganda against the United Nations appears in publications . . . supported by subsidies from Axis sources," and allowed by Government decree to get supplies of newsprint at favorable prices. He refused Argentina's request for Lend-Lease aid and added that Argentina's attitude excluded her from all "arrangements . . . to solve post-War problems."

Another rebuke came from the United States on October 16, when President Roosevelt '42 denounced the Ramírez Government's ban on Jewish publications. The ban was lifted a few hours later, but two known pro-Fascists and one notorious anti-Semite were promptly appointed to Cabinet posts. Wholesale arrests of labor leaders, the suspension of the rights of meeting, organization, and strike, the intensification of anti-Communist and anti-Jewish agitation, the removal of Government critics from their posts, the emergence of a secret police resembling the Gestapo—none of these were exactly symptoms of a more anti-Axis orientation. And it seemed unlikely that Argentina would remain the only country in which Axis elements had their way. In December 1943, when an Army coup in Bolivia overthrew the Peñaranda '40 Government, it was revealed that the new Bolivian Finance Minister, Victor Paz Estenssoro, had visited Buenos Aires a few months before the revolution—to which the pro-Axis press in Argentina and elsewhere gave its open approval.

"Wiry, black-haired, tight-lipped," General Ramírez acquired the nickname "El Palito" (Little Stick) because of his short, stiff figure. He has a "motherly auburn-haired wife," who is named María Inez, three daughters, and a son, and he lives in the same second-story five-room apartment that he rented on Buenos Aires' Santa Fe Avenue in his subaltern days. When he became President he ordered no additions to military salaries, meaning that he must get along on his regular general's pay of about $125 a week. On all but state occasions he continues to drive his blue Plymouth sedan, and he immediately removed the No. 1 license plate from the Presidential Cadillac. According to *Time*, he "entertains freely, jokes continually, sneaks candy whenever he can get it, wishes there were more time to tinker with mechanical gadgets."

RATHBONE, ELEANOR 1872- British Member of Parliament

Address: b. House of Commons, London, England; h. 5 Tufton Court, Westminster S. W. 1, London, England

A vigorous feminist, and a member (Independent) of Parliament since 1929, Eleanor Rathbone has fought during her long social and political career for various legislation on behalf of women. Her greatest victory in Parliament—and one which took a generation to win—was getting the Government to accept the principle of family allowances, with direct provision for the cost of child maintenance. She was actively engaged during the First World War in social reforms, and was a leader in the woman-suffrage movement. Social problems and needs rising from conditions during the Second World War have also been of especial interest to Miss Rathbone.

Of an old Lancashire family, Eleanor Rathbone is the daughter of the late William Rathbone, M. P., a prominent Liverpool merchant and philanthropist who initiated district nursing and several other reforms, and of Emily (Lyle) Rathbone, daughter of Acheson Lyle, the former Lord Lieutenant of Londonderry. She attended Kensington High School, then entered Somerville College, Oxford. She did not take part in games, sports, or social activities, but she was a serious student of political philosophy, intending ultimately to divide her time between philosophical writing and work for social reform. She received her M. A. and D. C. L. degrees at Oxford, and an LL. D. at Liverpool University.

Her career in social work started when she began to make inquiries into industrial conditions. Case work for relief societies led to an elaborate investigation, in 1904, of dock labor at Liverpool. Many of her proposed reforms, in a report which both employers and employees declared to be accurate and impartial, were accepted years afterward. At this time she also edited the *Memoirs* of her father, William Rathbone.

For several years prior to the last War Miss Rathbone, a member of the Independent Party, worked in Liverpool—in 1909 she was the first woman to be elected to the City Council. She served on the Council until 1934 and gained a good deal of experience concerning housing and hospital management. At this time, also, Miss Rathbone was an ardent advocate of woman suffrage, technically on the non-militant side, but a persistent worker in that cause. From 1920 to 1929, in succession to Mrs. Henry Fawcett, she was to serve as president of the National Union of Societies for Equal Citizenship.

During the First World War she was responsible for organizing the work of the Soldiers' and Sailors' Families Association in Liverpool. From that time on she continued her fight for feminist reforms, such as widows' pensions. She became a member of the executive committee of the League of Nations Union. With others she also initiated several bills which became law during the Baldwin Administration of 1925 to 1929.

ELEANOR RATHBONE

Believing more and more that the most urgent social need in Great Britain was better provision for mothers and children, Miss Rathbone wrote a book, *The Disinherited Family* (1924), a plea for direct provision for the costs of child maintenance through family allowances. At the time Sir William Beveridge '43 said: "There are few whose opinions the book will leave unchanged." In 1924 she stood unsuccessfully as Independent Parliamentary candidate for the Liverpool division, largely in the hope of stimulating such domestic reforms as had been called for in her book.

After reading Mayo's *Mother India,* Miss Rathbone became aware that millions of Indian mothers were suffering even more acutely than British women. With the hope that she might in some way help them she stood again, in 1929, for Parliament—this time with success—as Independent candidate from the Combined English Universities. In 1931 she went to India to confer there with national leaders. She published *Child Marriage: the Indian Minotaur,* in 1934. While the Act of 1935 was being considered she concentrated on securing a better status and more opportunities for Indian women.

Now well established in the House, Miss Rathbone carried on her work in domestic social reform as chairman of the Family Endowment Society and of the Children's Nutrition Council. The years just before the Second World War saw her active on behalf of Abyssinia, Spain, and Czechoslovakia. She was a member of the National Joint Committee for Spanish Relief. In January 1938 she wrote a short book, *War Can Be Averted,* which "contained many forecasts later verified." In 1940 appeared *The Case for Family Allowances,*

RATHBONE, ELEANOR—*Continued*

which helped instigate Parliamentary action on the family allowance issue.

Miss Rathbone was a prominent member of a deputation, in 1941, that called on Foreign Secretary Anthony Eden '40 to demand that the ban on women entering the diplomatic and consular service of Britain be removed. Among arguments advanced was that the United States, Russia, China, and other countries had women diplomats who had been most successful. Viscountess Astor '40, a member of the deputation, declared that "a woman is far more skillful than a man at wangling other men. That is what you want in a diplomat." Eden promised to consider the issue and to see the deputation again when he had done so. "The important thing," observed Miss Rathbone, accustomed to waiting years for reforms to materialize, "is that the door has not been slammed in our faces."

Since the outbreak of the Second World War, Eleanor Rathbone has been gravely concerned with the refugee problem. She has pressed unceasingly for larger and more generous measures for refugee aid and rescue. She has been active on committees to secure food for the starving Greeks; she has urged the freeing of political prisoners, especially those in Spain and North Africa. Her work on behalf of persecuted Jewry is well known. In January 1943 she was a member of an important delegation, headed by Arthur Greenwood '40, and representing both Houses of Parliament, meeting to confer with Ministers on what should be done for the relief of persecuted Jews in enemy-occupied countries. The group urged an immediate announcement that Britain would offer asylum to any Jews who escaped or were released from Axis countries. It suggested that colonies be opened for such refugees, and that the United States and Allied countries and dominions be asked to follow suit.

Eleanor Rathbone's own Parliamentary career has demonstrated her belief that women's contribution in politics consists mainly of two things. The first is the forcing of domestic social reforms which especially concern women and children, "more of which have been passed since women M. P.'s were elected than during the whole of the previous century." The second contribution derives from women's particular sensitiveness toward human suffering. Out of long experience, however, she has learned that even much-needed reforms take a long time. She used to tell younger women that, if they wished to secure reforms, they must combine "the methods of Bruce's spider, the giant Sisyphus, the Ancient Mariner, and the importunate widow." At the same time, it would be fatal if they became so boring that people fled at their approach.

Because her political faith "is an unquenchable belief in the ultimate goodness of human nature," Miss Rathbone has learned to be patient without falling into cynicism. She may lack fire and brilliance, but she is persistent. "She belongs to the bulldog breed, and once she gets her teeth into a matter she worries it until she eventually gets what she wants." She generally gets her point of view heard, although she is said to be no master of Parliamentary technique. Her major failing in this respect is a tendency to expand her supplementary questions into speeches.

"The firm lines of her mouth and chin, the glint in the eyes behind her half-spectacles, the set of her head—crowned by an ordered billow of whitening hair—the upright carriage which disguises her lack of height: all these speak of the fighter. There is nothing of the merely muddled benevolence of a Mrs. Jellby or the vague kindliness of the amateur of good causes." It is said that, in the House of Commons, Miss Rathbone's seat below the gangway has come to be a symbol "of an independence and integrity which have won her respect in all quarters. In her position in the House and her humanitarian aims, she recalls Wilberforce; and though she has not had advantages equal to those which Wilberforce enjoyed from his friendship with Pitt, her achievement will bear the honor of comparison. . . If the universities will continue to send men and women like her to Parliament, university representation will have fully justified itself."

Who's Who 1943

RATOFF, GREGORY Apr. 20, 1893-
Film director; actor

Address: h. 1417 N. Western Ave, Hollywood, Calif.

To see Gregory Ratoff directing a film is to deplore his loss to millions of film-goers who would perhaps be more intrigued and entranced by his antics than by the productions he directs. Fabulously eccentric, colorful in personality, exotic in speech, "Gregory the Great" sprawls inelegantly on the set, cigaret dangling from his mouth, slippered feet planted on an elevated block, and with the aid of his indispensable agate-headed cane (which serves as infant, lover, or enemy) blissfully lives and acts through each part as the great drama unrolls before him. In himself an almost incredible caricature of Hollywood directors, his grandiose mind works only in superlatives—his most confidential whisper is an earth-shaking roar, his most casual acquaintance a "genius" whom he "adores," his most commonplace remark a gory butchering of the King's English.

Communication with his fellow-man has not always been such a source of high adventure to Gregory Ratoff, for he has solemnly assured interviewers that when he acted on the stage in the country of his birth, Russia, he spoke "vitout an occent. Rossian I talk like a natiff, vitout any dialect." It was in Samara on April 20, 1893 that Gregory first saw the light of day. Since his parents could not agree on the career which would most fully utilize the talents of their promising offspring, young Gregory was prepared for several contingencies by a business education at the Imperial School of Commerce in Petrograd and a law course at the University of St. Petersburg. (His own early vocational yearning, which was completely ignored, was to be a physician.) After receiving his law degree Gregory asserted himself by enrolling at the

St. Petersburg Dramatic School, much to the alarm and chagrin of his respectable middle-class merchant family. "They ver disgusted vit me I should be an octor," he relates. "They said I vas a bomb" (pronounced by hide-hound conservatives, "bum").

Nevertheless he persisted in his choice and made his first professional appearance in *Mad Money* at the Malay Theatre in Petrograd. After several years of stage experience there and at the Imperial Theatre in Moscow, he allied himself with the Sineknikov Theatre at Kharkov, where a group of earnest young people were making stage history. It was at Kharkov that he met the ingenue, Eugenie Leontovich, who was later to become his wife. Their early meetings were far from romantic, however, for Ratoff was a nobody with prospects obscure while Eugenie was a magnet for masculine attention. In due time Miss Leontovich married one Paul Sokolikov, a prominent banker of the district. Far from being discouraged, Ratoff, fortified by the unblushing ego which has carried him through many a tight situation since, acted as best man at the wedding, at the same time informing the happy bride that she was making a distinct error in judgment, and would some day marry him.

When Russia entered the First World War the stalwart Gregory marched off as a soldier of the Czar, serving two years in the Army. (Until recently, he admits apologetically, his opinions were "White, darling [his customary form of address to a female interviewer], very White—the worst White that ever lived" —but they changed when the Nazis invaded the Soviet Republic. Then, along with every Czarist doorman and Imperial ballerina he knows, "I turned pink in five minutes.") He remained in Russia for a short time after the Revolution, playing for two months to Bolshevik audiences, then fled the country, traveling through Turkey, Greece, Serbia, and Austria before settling in Berlin in 1920. There he found conditions favorable for the establishment of his own Russian theatre, an enterprise enthusiastically supported by the expatriates from the East. While he was engaged on the development of road companies to amuse the provinces with the musical shows he produced, Ratoff received word that Eugenie Leontovich's husband and brother had been killed during the Revolution and that Eugenie herself was stranded. He immediately wired and asked her to fill a place in his company, an offer she was glad to accept.

The year 1922 was a fateful one for Gregory and Eugenie: it was then that Lee Shubert saw them playing at the Alhambra in Paris in *Revue Russe* and signed the entire company for an American tour. Contrary to Shubert's expectations, the *Revue Russe,* which opened at the Booth Theatre on October 5, 1922, was doomed to a short and unhappy life. Its failure did not prejudice the producer as to the actor's talents, however, as Ratoff appeared later in thirty-two Shubert shows. In 1941 what Ratoff remembered chiefly about the *Revue Russe* was his linguistic masterpiece: "I had von line to say in Anglish that I learned after they coached me t'ree weeks. I vould lean over the footlights ond say, 'Tall me confidahnshally, vere con I get a dreenk?' It vas prohibition here then, you see." With a great sigh he added, "I am still vanting a dreenk. Isn't it a coincidence?"

GREGORY RATOFF

On January 19, 1923 Gregory and Eugenie were married in Buffalo, New York, and they spent some months after that seeking roles which they could play together or separately. Finally their luck changed: Ratoff was cast as Count Sharntoff in *Blossom Time,* which opened at the Jolson in May 1924. Later appearances included the part of the Chancellor in *Castles in the Air* (1926); Carl Fink in *Tenth Avenue* (1927); Rinkleman in *Café de Danse* (1929); and, prophetically, the Stage Director in *Out of a Blue Sky* (1930). One of his biggest successes was in Joel Harris' *Wonder Boy* (1931) in which he played Phil Mashkin, president of the Paragon Pictures Corporation, an uncouth chap with a talent for ending up on the right side of a ledger. He played just one more stage role—in *Twentieth Century* (1932) at the El Capitan in Hollywood.

When Ratoff became a successful actor on Broadway he made every effort to establish the stage career of his wife, who was appearing in slight vehicles while she struggled to master the English tongue. He went the rounds of the managers' offices so often that as soon as he popped his head in the door he would be met by "Nothing for your wife today, Ratoff." Deciding that his strategy had been faulty, he commenced to speak of her only as Eugenie Leontovich, mentioned her European successes, and soon had several magnates springing at the bait. Later some of these impresarios—who still didn't realize she was Ratoff's wife—boasted of Eugenie as their discovery.

It was in 1932 that Ratoff's ebullient personality first dazzled the film colony when he appeared in RKO's *Symphony of Six Million.* His opinion of Hollywood is still that it is "movelous. Hollywood made me vat I am.

(Continued next page)

RATOFF, GREGORY—*Continued*

Ven I come to Hollywood the first time in 1932 . . . I don't know anythink about making pictures. They teach me everythink. They make me a man . . . the climate, the people, everythink there is vonderful." Nevertheless, in spite of his praise, he resented the fact that in the innumerable pictures he played in his role was always the same—that of a Jewish theatrical producer with a comic accent. (He appeared in such RKO films as *What Price Hollywood* and *Thirteen Women* in 1932 and *Professional Sweetheart* and *Headline Shooters* in 1933. In 1933 he also played in *I'm No Angel, Sitting Pretty, Girl without a Room,* and *Broadway through a Keyhole* for Paramount.) In an attempt to escape his fate he fled to England in 1934, and there, under contract to Gaumont-British, played the part of—a showman, Russian, Jewish, accented. Undaunted, but deciding that stronger measures were needed, Ratoff returned to Hollywood and asked Darryl F. Zanuck '41 to make him a director. "I vent to heem, and I say, 'Darryl, I don't vant to be an octor any more, I vant to be a director. He looks at me like I am crazy. 'You are an octor,' he says to me, 'you are vorth $2,500 a veek as an octor, but as a director, Gregory, you are only worth $500 a veek because you don't know anythink about directing.' I conwince heem that I am not crazy; I tell heem that I am an octor vorth $2,500 a veek because of my occent, but soon people vill get tired of it, and then maybe he vouldn't even be able to pay me $500 a veek, ond he listens to my logic."

The fact that earlier in his career Ratoff had produced and staged eight plays including *The Kibitzer* and *Candlelight* may have influenced Zanuck's decision, but at any rate 1935 found the former actor launched as a director—and making a phenomenal success of it, too. Among the films he has directed are *Rose of Washington Square* (1939); *The Great Profile* (1940); *The Men in Her Life* (1941); and *Something to Shout About,* with a Cole Porter '40 score (1943). In 1943, he says, he made his greatest picture and his worst picture—his greatest being *Song of Russia* and his worst being *The Heat Is On* with Mae West. Late in 1943 he was scheduled to produce *Bandwagon,* the Broadway show, as a big film musical, and to direct *When Irish Eyes Are Smiling.* "Part circus ringmaster, part classical artist, part high-pressure salesman, and part Coney Island barker," he puts on a good show. Said to be 220 pounds of "friendly volcano," the way he handles his cane is a Ratoff barometer, indicating storms or calm ahead.

"He says he hates noise, and his is the only closed set on the Columbia lot. He has a man hired just to yell, 'Quiet!' But 'quiet' applies to everybody but Ratoff; his tone of polite conversation is a shout. Excited, he sounds like a bassoon in distress—a bassoon with a thick Russian accent. Ratoff, however, is no show-off; he *is* the show. He originates ideas—and changes plot and dialogue while in production. He picks his own stars—sometimes from the ranks of the chorus, sometimes from among old actors. He teaches the dancers how to dance, the song writers how to write songs. And having been a well-trained character actor himself, he rehearses scenes until tempers snap and schedule keepers agonize."

It has been intimated that Ratoff wanted to be a director in order to give himself a chance to act. In *The Men in Her Life,* in which he made his debut as producer-director, "Loretta Young, in the starring role, enters the film as an awkward, ignorant girl of sixteen, and during its action matures to the age of thirty and to the status of a great and dazzling figure in the world of the theatre. Therefore Ratoff was a girl of sixteen and a star of thirty, to say nothing of being a handsome young female at several way points. He was also all three of the romantic interests in Miss Young's life, her theatre manager, her duenna, her infant daughter, and a great many other people." In spite of all this, "he finishes on time, and his box office is invariably 'terrifeec.' So Hollywood once again tells the plump director he is wonderful. Ratoff merely twirls his cane. 'In theese business,' he booms confidentially, 'you are either vonderful or hongry.'"

Not content with being a mere actor-director-producer, Ratoff has written original scenarios for a number of films, including *The Great Flirtation* (1934); *This Woman Is Mine* (1935); *Café Metropole* (1937), in which he also appeared; and *You Can't Have Everything* (1937). By 1937 he had a three-way contract as writer, actor, and director. In spite of his huge Hollywood salary, on August 30, 1932 he filed a petition in bankruptcy at Los Angeles, listing liabilities as $38,994 and assets as $10,976. Since his salary was $1,000 a week at that time, Bankruptcy Referee Rupert Turnbull, hearing the plea on January 28, 1933, decided that a man and wife earning such salaries as did the Ratoffs could not seek discharge of debts—particularly when the record showed recent Christmas presents of a $1,750 diamond ring to the wife, and a $350 diamond-studded cigaret case to the husband.

Ratoff's life with Eugenie has been complicated by the fact that she has often played in corners of the earth farthest from his. In the early days, when she was playing in New York and he in Chicago, they used to fly to Pittsburgh for week-end meetings. At that time there were reports of an impending divorce based upon the incompatibility of their careers, but the rumors came to nothing. Eugenie gained her own success in such roles as *Grand Hotel* (1930); *Candlelight* (1930); *Twentieth Century* (1933); and *Tovarich* (1935). In 1943 she was one of the three feminine stars of the hit play *Dark Eyes,* for which she shared script credit with Elena Miramova.

Gregory Ratoff is a naturalized American citizen (1936) and a Greek Orthodox Catholic. Far from being content to rest on his laurels, he has of recent years become increasingly interested in the prospects for film-making in New York. As he explains it, even in Hollywood it is impossible to go on location now because of the planes overhead. Moreover, "ofter you feenish a day's vork in Hollywood, vot is there to do? Go to a prize fight? I don't go for those things. Here in

New York there are the opera, the Philharmonic, all kinds of concerts, they are necessary for an artist. Onfutunately, there are not those things in Hollywood. My frand, I tell you, the owtomobiles, the svimming pools, the big houses on the heels, they don't help an octor. Those things will make an artist soft. A person needs a little rain in his life, a little cold as vell as varmth." In 1941 he had his plans made—money, actors, stories, technical workers all set up. He needed only a little municipal cooperation—and he was sure that he would get it. "I am dyink to meet the Mayor," he said, and an interviewer commented, "There is a meeting that should be recorded in sound and pictures." But apparently the plot is still thickening. Although in February 1943 Gregory Ratoff Enterprises, Incorporated, with offices listed in New York, was chartered at Albany, the directors denied having any "particular purpose" in mind for the time being.

Now a free-lance director, Gregory made his debut as an *Information Please* expert in 1943 without moving from Hollwood. While the New York experts raised their hand in response to Fadiman's '41 questions, he rang a little bell when he wished to talk, thus cueing Fadiman and the engineers—who heartily wished that they worked on another program. His implausible accent won the hearts and applause of the radio audience—and a series of return engagements.

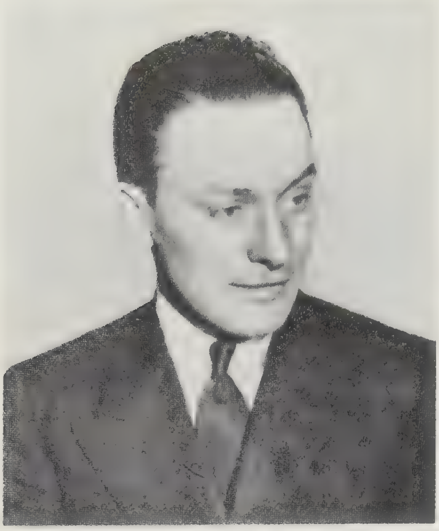
RESTON, JAMES B(ARRETT) Nov. 3, 1909- Journalist; author

Address: b. c/o New York Times, Savoy Hotel, London, England

"An exceedingly able young man, esteemed by his colleagues as one of the outstanding newspapermen of his generation," according to Wallace R. Deuel '42, James Barrett Reston, author of the book *Prelude to Victory* (1942), was born in Clydebank, Scotland, on November 3, 1909, the son of James and Johanna Grace (Irving) Reston. The boy attended the Vale of Leven Academy in Alexandria, Scotland, from 1914 until 1920, when his parents came to the United States. They later became citizens and he automatically became a citizen through their naturalization. They came to Dayton, Ohio, where he was educated in the public schools. In 1928 he entered the University of Illinois and in 1932 was graduated.

Immediately after his graduation from college the young man got a position as a reporter on the staff of the Springfield (Ohio) *Daily News*. He held it until 1933, when he left for work in the publicity department of Ohio State University. The following year found him publicity director of the Cincinnati Baseball Club. That same year (1934), however, he left publicity work to return to journalism, joining the staff of the Associated Press in New York City as a sportswriter, and later becoming a theatre columnist. On December 24, 1935 he married Sarah (or, as she is better known, Sally) Jane Fulton.

In 1937 the Associated Press sent Reston to London, where he had "the novel assignment of covering major sports events in summer and the Foreign Office in winter." He worked for the Associated Press until 1939, when he became a reporter on the London bureau of



JAMES B. RESTON

the New York *Times*. In 1941 he left England and returned to the United States to work at the Washington, D. C., bureau of the New York *Times*. At Washington he specialized in diplomatic and foreign affairs.

For nearly two years in Washington Reston "watched his countrymen repeating the mistakes that the British had made before going to war. For six months after Pearl Harbor he watched them repeating most of the British mistakes before Dunkerque, while all the time implying that they were wiser in battle than the British would ever be. Finally, Mr. Reston boiled over. The steam condensed and he called it *Prelude to Victory*." The book appeared in the summer of 1942. "This is not a book," the author states in the preface, "so much as it is an outburst of bad temper against careless thinking; bureaucratic officials; selfish 'special groups'; irresponsible citizens, newspapers, and politicians; people who think wars don't really settle anything; people who want 'to get back to normal'; people who think time and money are on our side; and people who are afraid to win because of post-War problems. In short, it is an outburst of temper against anything and anybody who is concentrating on anything but winning this War."

"The book," Reston asserts, "is written because of a profound conviction and a very real fear. The conviction is that we got into this War because we underestimated the price of freedom; the fear is that we shall lose the War unless we clear out of our minds several fundamental illusions which are minimizing our effort." The theme of the book is that "we cannot win this War until it ceases to be a struggle for personal aims and material things and becomes a national crusade for America and the American Dream."

"The interests of the state and the individual in this country," Reston concludes in the book, "are not incompatible. For while it is true that every man must in this crisis sublimate his own personal interests in the interests of the state, while it is true that he must make many great and fundamental sacrifices, it is also true that the only hope of personal satisfaction in this age of sorrow is in making those sacrifices willingly and without reservation. There are honor and dignity and true simplicity to be found in the service of this great nation in the hour of its trial. There is, on the other hand, nothing but unhappiness and despair for those who will not look forward and upward and who insist on crying for an age that is gone. We must see both sides of China's word *crisis*. We must defy the *danger* and welcome the *opportunity*. We must strengthen the things that unite us and remove the things that divide us. We must look forward to the future with faith in each other and in the rightness of the American Dream. For that is the Prelude to Victory."

"This," wrote Deuel in the New York *Times*, "is a brilliant and altogether admirable book. Time may even decide that it is a great book. One of the great things about it is the penetrating insight with which Reston discusses what he quite properly says has been the greatest single weakness in the American—and not only the American—war effort thus far; a weakness of faith and will. . . Another great thing about *Prelude to Victory* is Reston's insistence that there can and must be no buck-passing." The book as a whole, the critic commented, "is a formidable indictment. Yet it is truly drawn. And it is also exceedingly well drawn. . . *Prelude to Victory* is one of the half-dozen best written, best thought out, most informative, and most important books to come out of the War so far." Most reviewers agreed in essence with Deuel. The New York *Herald Tribune* found Reston's style "fast-paced vigorous prose without frills or mawkishness." Clifton Fadiman '41 called the author a "valuable propagandist." Some critics, however, objected to the fact that there had been too many books on the same subject appearing at that time, even though Reston wrote his "more ably than most." Others took exception to his excessive loyalty to the New York *Times* and to his occasional extravagance of language.

Reston was awarded the Ohioana Award for "a book written by an Ohio author in 1942 which contributed most to the understanding of present-day America." His prize was a War Bond. Walter Wanger, the Hollywood producer, was so impressed by the book that his enthusiasm reached the proportions of an active crusade. He arranged for a Hollywood bookshop to offer the book for sale "with Mr. Wanger's promise to underwrite the refund to any one who returns the book as not in agreement with the movie man's view of its importance."

In England *Prelude to Victory* also met with a warm reception. "This tract for our times," wrote the critic of the London *Times*, "has had a great and deserved success in America. It deserves comparable success here. . . The only serious criticism one can make is that inevitably the very appositeness of the illustrations of the general argument to the current American situation may limit the effectiveness of the argument here. . . Mr. Reston's tract is timely reading for anyone so foolish as to think that time is firmly on our side without our having to do anything very strenuous to deserve its favors." The *Spectator* considered the book "an admirable polemical volume. It is a call for action and for critical thought."

Soon after the publication of *Prelude to Victory*, Reston was sent by the United States Government to England in order to organize the new London office of the Office of War Information. He returned to the United States early in December 1942 and assumed his new post of assistant to Arthur Hays Sulzberger '43, publisher of the New York *Times*, but in September 1943 left for England again to take charge of the London office of the *Times*. The next month he scored a scoop when, more than twelve hours ahead of Churchill's '42 and Roosevelt's '42 joint announcement, he cabled the news of Italy's decision to declare war on Germany. Since that time he has continued to cable trenchant articles on military and political developments in the War as seen from the vantage point of London: the Cairo, Moscow, and Teheran conferences and their implications; the Polish-Soviet border dispute; Churchill's illness; the British reception of Eisenhower's '42 appointment as supreme Allied commander of the Western Front. Only rarely does he descend to the simple "human interest" article, but on December 25, 1943 he cabled sadly that "this is an island of lonely people," ninety per cent of all families having been broken up for one reason or another.

In addition to the book Reston has written a number of articles which have appeared in the New York *Times*, the *Reader's Digest*, and other periodicals. Reston is dark, five feet ten inches tall, and weighs 150 pounds. He is a member of Sigma Pi. Appropriate to his Scottish background is his favorite sport, golf. Although Reston describes himself as "a backsliding Presbyterian," he has, wrote Deuel, not slid very far. "There is a positively Old Testament wrath in much of his writing that lends both a passion and a clarity to his style." The Restons have two children, Richard Fulton, born in 1937, and James Barrett, Jr., born in 1941. To his associates Reston is known as "Scotty."

RICE, ELMER (L.) Sept. 28, 1892- Playwright; director; producer; novelist

Address: b. Playwrights' Producing Co, Inc, 630 Fifth Ave, New York City; h. Long Ridge Rd, Stamford, Conn.

Bachrach

ELMER RICE

Elmer Rice belongs in the group of contemporary playwrights who believe "the theatre can be something besides a place of entertainment, that the stage is a legitimate forum for discussion in emotional and dramatic terms of problems that affect the lives and happiness of millions." He is a realist, not an escapist. A man who has always faced facts and who "has dived belligerently into the thick of political and economic issues . . . he is a trifle on the Left." Never "orthodox in his radicalism," however, Rice "seems to have veered more definitely toward the position of those who have renounced the revolutionary attitude of Marx and Lenin in favor of one which they hold more moderate as well as more in accord with our native tradition."

Born on September 28, 1892 in New York City, Elmer L. Rice is the son of Jacob and Fanny (Lion) Reizenstein. He changed his name after the production of his first play because it was so often misunderstood over the telephone. He grew up in the neighborhood of Madison Avenue and 106th Street, attending the public schools in New York but dropping out before he finished high school in order to enter business. After less than a year, dissatisfied with his progress, he began the study of law, going to school in the evening and working in a law office during the day. He was graduated *cum laude* from the New York Law School in 1912. The following year, after he had been admitted to the Bar, he suddenly amazed his family with the announcement that he was going to write a play.

"Young Rice blasted theatrical traditions when as an unknown writer he had his first play accepted through the naïve procedure of mailing it to a producer." Before the play reached production, however, Rice, under the direction of Arthur Hopkins, had rewritten it many times. The play, *On Trial* (1914), was a sensational success, running for nearly a year on Broadway and earning for the twenty-one-year old playwright (who

RICE, ELMER—*Continued*

had given up a $15-a-week job as a law clerk to write it) nearly $100,000. A courtroom melodrama which employed for the first time in the theatre the film technique of the "cutback," it was hailed as a dramatic masterpiece.

Despite the wide publicity given his Cinderella-like rise, Rice refused to regard *On Trial* as anything more than a "shrewd piece of stage carpentry." Wishing to use his talents to inject some elements of vitality and meaning into a theatre which seemed to him "utterly futile and piffling," he began a serious study of the drama. While a student in Hatcher Hughes' course in dramatic composition at Columbia University, Rice contributed several one-act plays to the Morningside Players, an amateur organization under the direction of Hughes. He also served as dramatic director of the University Settlement, and as chairman of the Inter-Settlement Dramatic Society.

For nine years he studied and experimented —"experiments in technique, experiments with ideas, experiments in using the theatre for a social purpose." His produced plays of this period include: *Home of the Free* (1917); *Iron Cross* (1919); *For the Defense* (1919). In 1920 *Wake Up Jonathan* (written in collaboration with Hatcher Hughes) was presented on Broadway. This was the first play since his initial success which evoked any particular interest. It was regarded by one critic as a "comedy with intellectual body." *It Is the Law*, a melodrama, regarded as a "potboiler" by Rice, appeared in 1922 but failed to do much even to make the pot boil for its author.

In 1923 *The Adding Machine* (written in the expressionist mode) was produced by the Theatre Guild. Though it was not a popular success, running for only nine weeks with the Guild's subscription audience, and though there were a few adverse criticisms, John Gassner regards it as one of the most original plays of the American stage, a genuine triumph for Rice. The play has grown in reputation, and with each successive year it has been played by an increasing number of art and repertory theatres.

Mr. Zero, hero of *The Adding Machine*, is an aging routine office worker. When he is discharged from his job because an adding machine has made him unnecessary, he rebels for once in his life, stabs his boss to death, is executed for murder, and ascends to a heaven in which he is put to work at a machine of the very sort responsible for his downfall. But even heaven cannot use him as he is, and when the curtain falls he is on his way back to earth again.

Close Harmony (1924), a collaboration with Dorothy Parker, successfully toured the road under the title *The Lady Next Door*, but met with little success on Broadway. In collaboration with Philip Barry, Rice then wrote *Cock Robin*, which was produced in 1928. The play, as the title suggests, was a murder mystery. The chief mystery to Broadway, however, was why its distinguished authors had chosen the backstage of the theatre for their "who done it" play. Current at the time of its production was the tremendous box-office success, *The Spider*, and a less successful play, *Triple Crossed*, both of which were backstage murder mystery plays.

In an article written some years later describing this period in his career, Mr. Rice said: "Five more troubled years followed *The Adding Machine*. I spent three of them in Europe trying to get a perspective on the American scene and to overcome any doubts that there really might be some place for me in the American theatre. In 1928 I wrote *Street Scene*. It was promptly and emphatically rejected by practically every manager in New York. Finally . . . it was produced [the following year] by William A. Brady, who also gave me a chance to find out whether I could direct plays as well as write them.

"*Street Scene* not only solved my economic problems [with a family to support he had been forced to spend two years in the pay of Hollywood] but resolved my doubts as to my place in the theatre. I knew now that I wanted to go on and in which direction... I had found justification for my belief that the theatre must not necessarily be devoted exclusively to gags, wisecracks, tap-dancing, knockabout farce, fustian romance, and polite adulteries."

Street Scene, which was awarded the Pulitzer Prize in 1929, is a tragedy of New York tenement life. It was a tremendous success, ran for over a year, and later it was made into an excellent film. Played against a "flat" representing the exterior of several apartment-converted brownstone front houses, the play was originally called *Landscape with Figures*. Rice said that he chose this title because he conceived "the house as the real protagonist of the drama, a brooding presence which not only literally dominated the scene but which integrated and gave a dramatic unity to the sprawling and unrelated lives of the multitudinous characters and lent to the whole whatever meaning it may have."

The year 1929 saw the production of *The Subway* and of *See Naples and Die*, the latter, a comedy, said to have been written by the author for his own pleasure when he was recovering from an illness and when *Street Scene* was going begging for a producer. Writing in *The Nation*, Joseph Wood Krutch said: "The gentlemen of the daily press were not favorably disposed toward Elmer Rice's comedy *See Naples and Die*, which is now playing at the Vanderbilt just opposite his *Street Scene*. Indeed they were rather grumpy about it, and Mr. Allen of *Women's Wear* is alleged to have expressed the sentiments of all of them by remarking: 'For months Rice worked to win the Pulitzer Prize on one side of the street, and now he goes and loses it on the other.'" Krutch's own opinion of the play was that "carelessly written though it is, I found contagious the pleasure which Mr. Rice obviously took in composing it, and I see no reason why one should gravely object to the improbability of a plot which never was intended to be probable."

A Voyage to Purilia (1930) was Rice's first novel. It is a satire on the motion pictures, possibly his revenge for the "unhappy" years he spent in Hollywood. The New York *Times* pronounced it "a satire of high order, so high that it sometimes suggests the *Golden Ass of Apuleius*." In 1931, returning to New York from another European vacation with two new plays, Rice began his career as a manager-author. *The Left Bank* and *Counsellor-at-Law*, written, directed, and produced by Rice, were conspicuously successful. *The Left Bank* ran for thirty weeks on Broadway, and *Counsellor-at-Law* not only proved to be popular in its first season but was revived eleven years later (with Paul Muni again in the star role) and became one of the successful box-office attractions of 1943.

Writing of these last two plays, Krutch said: "Both are characteristic of Mr. Rice because they exhibit his great skill as a practical playwright. . . No contemporary dramatist has (or rather had) a keener ear or a shrewder eye. . . What most of us have only seen or heard he has noticed; and the result is a spectacle at once novel and familiar—familiar because we have met everyone of its elements before, amusingly novel because we have never previously realized just how characteristic these familiar things were."

John Gassner, paying tribute to Rice's particular forte for observations, called *The Left Bank* "a picture of pseudo-Bohemianism popular among self-deluded Americans who coddled their second-rate talents on the left bank of the Seine while despising their country for its raw strength." A 1931 review of *Counsellor-at-Law* says the play "holds one's interest because the characters are familiar . . . and the situations rest upon a solid foundation of realism." The New York *Times* reviewer in 1943 pointed out that "there have been a few minor changes for the revival, but the fact that only a few were required is proof that Mr. Rice, when first he was setting it all down, was delivering a taut, tidy play that would stand on its own for a long time."

Black Sheep (1932) was the first failure Rice had in his career as author-manager. Its thesis the conflict between the artist and the conventions, it "has infrequent moments, but is an undistinguished play to creep from the typewriter which earlier wound out such a stirring drama as *Street Scene*." In 1933, at the height of the depression, Rice created in *We, the People* "a veritable chart of the nation's rumblings—nearly every line of the play recorded some injustice—from racial—to hunger and frustration in love. In conclusion he held his report angrily before the eyes of his audience and called for remedial action. It was a gallant effort but one that was considerably weakened by diffusion and a miscellaneous case history."

Judgment Day and *Between Two Worlds* were Rice's 1934 contributions to the Broadway stage—both in the category of propaganda plays. The late Percy Hammond, dean of drama reviewers in 1934, complained that the stage "has responsibilities other than those of feverish propaganda." Continued the critic: "Mr. Rice abhors tyranny in all its manifestations, and his cries for Liberty have sounded in many a playhouse. . . The abuse that now rends Mr. Rice's soul with fury is that of the dictatorships." After the presentation of *Between Two Worlds*, Brooks Atkinson '42 wrote: "Several weeks ago this Jovian department was reproving Elmer Rice for being too ebullient in the staging of *Judgment Day*. After the staging of *Between Two Worlds*, Jove will have to put the shoe on the other foot. For this time Mr. Rice is writing such a scrupulous analysis of character and is staging it with so much persuasive ease that it does not excite the bloodstream as much as a good play should."

A few weeks later, Rice, believing the drama critics had been unjust in their reviews, told a small lecture group at Columbia University, with his characteristic courage in defending his opinions, that the entire Broadway system was a bar to honest writing and that he felt compelled to abandon it. "The first nights," he said, "were composed of 120 representatives of the press looking for wisecracks to characterize the play as a means of elevating their egos. . . There is not a drama critic in New York City who knows anything about the problems of acting and directing. . . You can call them all ticket grabbers."

Rice's comments made page one: J. B. Priestley, a visiting dramatist-manager from England, came to Mr. Rice's defense. The end of the quarrel came when Rice announced, "I'm through for a long time as a producer of plays," and sailed for a trip around the world. In England he saw the much criticized *Judgment Day* produced with much success. On his return (1935) he accepted the position of regional director of the New York Federal Theatre Project of the WPA. A repertory theatre had been one of his dreams for a long time: in the Federal Theatre he hoped to make a new approach to the theatre which was not possible in the commercial theatre of Broadway, which "was too conscious of the box office to become a cultural force in the country."

"A new form of theatrical exhibition appropriately named the *Living Newspaper*" was founded by the Federal Theatre while Rice was its regional head. The new form, a "most successful effort to use the stage for the purpose of propaganda," was the journalistic presentation of facts and arguments with occasional dramatic interpretations on a selected subject. The first "living newspaper" planned for staging by Rice was on the Italian-Ethiopian question. Mussolini '42 and Haile Selassie '41 were to be impersonated by living actors, however, and Washington censored the production on the grounds that "foreign rulers and Cabinet officials could not be depicted upon the stage under government auspices." Rice resigned, saying that the ruling "stifled freedom of expression in the organ in which it was itself created."

Another play, *Not for Children* (1935), was followed (1937) by Rice's second venture as a novelist. "*Imperial City*," wrote

RICE, ELMER—*Continued*

a reviewer in *The Nation*, "is enormously readable; conceptually, it is mature; in its social thinking it is admirable. But it is ruined by a crude and false sensationalism. . . " The New York *Times*' reviewer, though stating that blue penciling would have improved the book, concluded that it was "an honest and accurate observation on an epoch in New York life."

In *American Landscape* (1938) Rice returned to the "purposeful fantasy that had served him so well in *The Adding Machine*. It was a penetrative work [because of] its implication that 'Homo Americanus' is too compound a person, compounded of ancestors from too many races and having too fine a tradition of liberalism, to indulge in prejudices without inconsistency. . . Unfortunately the imaginative device of bringing ancestral apparitions on the stage was not sufficiently primed for successful operation." *Two on an Island* (1939), produced by the Playwrights' Company, was written in "a gay and engaging mood." Just as the house was the chief protagonist in *Street Scene*, Manhattan Island was the chief protagonist in *Two on an Island*, which was regarded as picturesque and pleasant but as lacking the force of the earlier play.

Wolcott Gibbs, writing in the *New Yorker* of *Flight to the West* (1941), said: "Rice has written an exhaustive and impassionate indictment of totalitarian government, but I am not at all sure he has written a play. . . The passengers on a transatlantic Clipper on her way from Lisbon to New York are little more than convenient symbols of the universal war between freedom and oppression, and they speak with the unmistakable accent of the editorial writer and the crusader." Most critics called the play "a failure."

The author's present wife, Betty Field, was starred in his *A New Life* (September 1943). In general, reviewers agreed that the first act was well written, but that "the second act . . . is where conversation takes command over dialogue and a good show gets crossed up by some extra heavy dashes of propaganda." Burton Rascoe was led to remark, in the New York *World-Telegram*, that "Mr. Rice has been repainting his old streamer, which used to read 'Down with Capitalism!' It now reads 'Down with Fascism!' His symbols for fascism are still the same as they were for capitalism—the man who has grown rich in American industry producing consumer goods as differentiated from the playwright who has grown rich in the theatrical industry writing plays denouncing capitalism." The play closed in November 1943.

On June 16, 1915 Elmer Rice was married to Hazel Levy. There are two children by this marriage: Robert, editor of the drama page of *PM* until his induction into the Navy on August 17, 1943, and Margaret, a research worker in a defense factory in New York City. Divorced on January 10, 1942, two days later Rice was married to Betty Field, star of stage and screen. They have one son, John. Rice is five feet ten and one-half inches tall and weighs 180 pounds. His hair, red during his youth, has turned to a light brown in recent years. He has a number of decided dislikes, chief among which are crowds, rich people, and the tawdriness of Broadway. His likes include Claude Lorrain, the seventeenth century French painter, a few of the modern painters, and country hiking. At one time Rice said he walked because he could not afford to ride, but when his first play, *On Trial*, was earning for him $10,000 a week in royalties, he and his bride, Hazel Levy, made their honeymoon trip through some of the New England states on foot. He is president of the Dramatists' Guild of the Authors' League of America; a member of the board of directors of the American Civil Liberties Union; and a member of the National Institute of Arts and Letters and of the Panel of the American Arbitration Society. Most important of all, he is a member and a director of the Playwrights' Producing Company, which he helped to found in the summer of 1938, and he has directed *Abe Lincoln of Illinois* (a Pulitzer Prize winner) and other plays for that company.

RICH, LOUISE DICKINSON June 14, 1903- Author

Address: h. Middle Dam, Me.

The December 1942 Book-of-the-Month Club selection was an odd choice for a nation in the midst of a devastating war. The book *We Took to the Woods* by Louise Dickinson Rich, has nothing to do with totalitarianism or the range of the latest fighter airplane. It is, instead, an intelligently written and witty account of what it feels like to live in a wilderness home in the northwesternmost corner of Maine.

Louise Dickinson Rich was born in Huntington, Massachusetts, on June 14, 1903. Two years later her family moved to Bridgewater in the same state. Her father, James Henry Dickinson, was the editor of a small-town weekly newspaper; her mother was Florence Myrtie (Stewart) Dickinson. Louise and her younger sister, Alice, early got the smell of printers' ink in their nostrils, and they used to help their father correct proof. This, together with the fact that their father "bore a remote relationship" to the poet Emily Dickinson, "made them feel vaguely literary." Young Louise was graduated from the Bridgewater High School in 1920 and then continued at the Bridgewater State Teachers

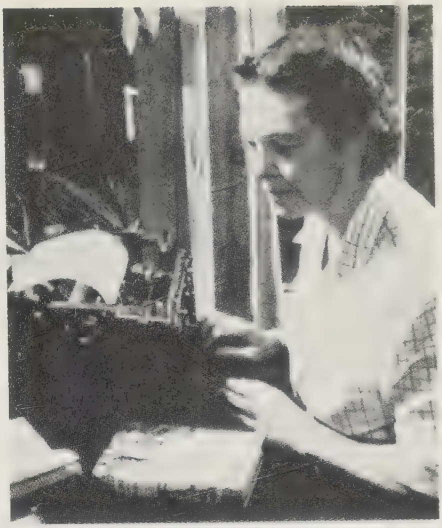
College, where she received her B. Sc. in Education in 1924.

In *We Took to the Woods* the author says: "During most of my adolescence—specifically, between the time when I gave up wanting to be a brakeman on a freight train and the time when I definitely decided to become an English teacher—I said, when asked what I was going to do with my life, that I was going to live alone in a cabin in the Maine woods and write. It seemed to me that this was a romantic notion, and I was insufferably smug over my own originality. Of course, I found out later that everybody is at one time or another going to do something of the sort. It's part of being young. The only difference in my case is that, grown to womanhood, I seem to be living in a cabin in the Maine woods, and I seem to be writing."

Some years elapsed between the wish and the fulfillment. First, beginning in 1924, she taught English in high schools in New Hampshire, New Jersey, and Massachusetts. Later she worked in an institution for the feebleminded, and spent a summer vacation in Europe. Her life continued placid and even until the summer of 1933, when "I, the schoolteacher-on-vacation, and my sister and some friends, went to Maine on a canoe trip" among the Rangeley Lakes, which form "a gigantic staircase to the sea." As they were walking along, weary of travel and canoeing, they "saw a man splitting wood in the yard of the only house we had seen in days, and we stopped to talk to him. He had just arrived there that morning, and he was about to build his first fire and cook his first meal. He invited us to stay and eat with him, because he felt like celebrating."

That man, Ralph Eugene Rich, a Chicago businessman and graduate of Harvard, invited the group to spend a week fishing, sunbathing, and swimming at his place. The author doesn't mince words—she comes right out and says: "I became obsessed with the idea that if I didn't see more—a lot more—of this Ralph Rich, I'd quietly go into a decline and die. It's a common phenomenon, I believe, both in fact and fiction... It's seldom fatal, I understand, so probably I'd have recovered if I'd had to. I didn't have to." She returned to Massachusetts and began "getting letters, telegrams, and finally telephone calls, almost daily from Ralph. Then he began spending his time and money on the long and painful trek from Maine to Boston." They decided that "this was a lot of expensive nonsense, so why didn't we get married?"

Which was what they did—on August 27, 1934. Mrs. Rich from then on made her home in a wild and "virtually inaccessible part of Maine" between "two ranges of mountains, the Boundary Mountains and the Blue Mountains . . . in a high valley," which has "a few narrow trails, but travel through the woods is so difficult, with the swamps and blowdowns and underbrush, that the lakes have remained what they were to the Indians, the main thoroughfare... Our clearing is on the Rapid River," says Mrs. Rich, "just below Pond-in-the-River Dam; and because Rapid River is not navigable, being the swiftest river east of the Rockies—it drops one hundred-eighty-five feet in three miles, with no falls, which is some kind of record—we amazingly live on a road. It doesn't go anywhere. It's really a 'carry' between two lakes."



LOUISE DICKINSON RICH

In summer the Riches can get from their wilderness home to the "Outside" by lake and "carry road," but winter presents grave problems—travel on skis, snow shoes, dog sled, or snow boat, if they cannot use their cars. Getting the mail means a twenty-mile trip; the nearest A & P is forty miles away, "but after the autumn freeze-up it might as well be in Egypt." (The freeze-up, explains Mrs. Rich, is the "fall in-between period, when the lake is just frozen and the ice is too thick to put a boat through and too thin to support a man or a horse or a car.") Consequently enough food must be stored to last a month in winter. Together with lighthouse keepers and sheepherders, the Riches get special ration allowances. Hunting and fishing supplement the stock of canned goods. "Hunting's the hardest work I do," says Rich. "I'd rather dig a ditch."

In *We Took to the Woods* Mrs. Rich describes the life which, Thoreau-like, they live. They get their water from the river; do their bathing in a tin washtub before the kitchen stove; use an outhouse ("supreme test of fortitude when the thermometer crawls down to ten below zero"); and for a living they write articles and stories, act as guides for city "sports," use their old cars and boats to haul "anything from logs and boats to litters of pigs and Camp Fire girls."

For chapter headings in the book (which was first published in *Atlantic Monthly* and in *Reader's Digest*) Mrs. Rich uses the questions which relatives and friends ask her, "presumably in an effort to establish her sanity." "But How Do You Make a Living?", "But You Don't Live Here All the Year 'Round?", "Isn't Housekeeping Difficult?", "Aren't the Children a Problem?" Mrs. Rich answers these and many more questions (according to Clifton Fadiman [41] in the *New*

RICH, LOUISE DICKINSON—*Continued*

Yorker) "to her own perfect satisfaction, without making any try at conversion, and leaves the reader with the conviction that here at last is that rarest person on earth—one who really knows what he (or she) wants."

She is proud of being able to get breakfast on winter days with mittens on. "The kitchen stove," she says, "won't hold a fire over night, so in the morning everything in the place is frozen—the wood, the water in the pails, the bread, the butter, everything." She does all the cooking and house work, acts as a guide, fishes, chops wood, and gardens.

On a December night, with the temperature at zero, Mrs. Rich's son, Rufus, made his premature arrival. She had spent the previous day ice skating and taking numerous tumbles. Ralph Rich had spent hours pouring over a handbook, *If Baby Comes Ahead of the Doctor.* He couldn't get a doctor and delivered the baby himself. Full of strange bits of knowledge (the neighbors call him "an ingenious cuss"), he proceeded to grease the baby. "Did you get him greased all right?" asked his wife hopefully, upon being told this was customary. "Certainly I did," he replied. "I should hope so, after all the pistons I've oiled in my lifetime." Rufus, a healthy boy, boards in the nearest town so that he can attend school. So does a teen-age stepdaughter (Mr. Rich had been previously married and divorced). Since the book was written a second child, Dinah, has been born. For her birth Mrs. Rich went "outside" for the first time in five years.

The book, with its tales of lumberjacks, log rollers, native Maine guides, the occasional Maine backwoodsman and the summer hotel boarders, was well received by the critics. Rose Feld in the New York *Herald Tribune* said: "While, as she confesses in a self-evaluation which endears her to a reviewer's heart, she has no gift for creating literary works, she has something that is admirably suited to the delightful material with which she packs her pages, an engaging and robust sense of humor and a fine gift for narrative; and there are moments in her book when she comes close to writing literature." "Uncommonly good reading," said another critic. "It will arouse in the reader," said Clifton Fadiman in the *New Yorker,* "sharp envy and warm admiration for Mrs. Rich, together with a fierce determination to go and do likewise. The fierce determination will last about six hours."

Mrs. Rich confesses that it took nearly three years to write the book. She thought she could do a column for syndication. "But everyone showed an appalling apathy. So my agent suggested that I write a book, even if it wasn't much good, it would at least bring me to the attention of editors." And so it has—and to the attention of more than 425,000 readers who bought copies through the Book-of-the-Month Club and from book stores. In 1943 Mrs. Rich was at work on a novel about Maine and also a sequel to *We Took to the Woods.* She also writes occasional pieces for the women's magazines.

The author is five feet six and weighs 145 pounds. At home she wears slacks and cotton blouses; in New York, which she visited in March 1943 in order to see her publishers, "she was all dressed up in fawn-colored tweeds, with earrings twinkling under her short brown curls, and her nails as sleek and polished as any metropolitan author's. . . She looked . . . like the high-school teacher of English she was . . . . before she met Ralph Rich." Her hobbies are fly-tying, fly-fishing, canoeing, knitting, walking, and spending long evenings with books. Fame has changed things some for the Riches; for one thing the first money from royalties was spent in "buying a huge white and glistening refrigerator, which runs by kerosene . . . and required the services of five strong men to transport it in by boat." During the summer of 1942 the Riches bought "a new place on the next lake down the chain, Umbagog." "It is simply swell," says Mrs. Rich. "Two hundred-fifty acres of wild land, surrounded on three sides by water, a simply elegant set of camps—in short, The Works!" Another change that has come to Mrs. Rich is a "fan mail" problem. "But what are you going to do," she asks, "when a woman writes that after twenty years of married life she has read your book, and it has opened new vistas to her, so that she is about to leave her husband and flee with another?"

ROBERT, GEORGES (ACHILLE MARIE-JOSEPH)

(rô'băr' zhorzh) Jan. 31, 1875- Former High Commissioner of Martinique and Guadeloupe

Admiral Georges Robert, former High Commissioner of the French islands of Martinique and Guadeloupe, is now "enjoying full civilian status." "Robert le Nazi," as he was known in the French Antilles, remained true to Marshal Pétain '40 while other Vichy men were scrambling to attach themselves to the United Nations cause. On June 30, 1943 he broadcasted a request to the United States Government "to send a plenipotentiary to fix the terms for a change of French authority." Impelled by an imminent revolution in favor of the French Committee of National Liberation, he negotiated with American Vice-Admiral John Hoover and on Bastille Day (July 14) turned over his authority to the new Commissioner, Henri-Étienne Hoppenot (former director of civil services for the Committee). Diplomatic relations and United States food shipments to the islands were resumed, while Admiral Robert proceeded by warship to Puerto Rico and thence to Lisbon and Barcelona, where he was reported en route to Vichy at the end of December 1943.

Georges Achille Marie-Joseph Robert, a man with a "white, out-jutting spade beard," dark brows, and an imperious nose, was born on January 31, 1875. He entered the French Navy in 1893, and was made a vice-admiral on April 15, 1930. As commander of the Mediterranean squadron his record has been described as "excellent." According to a French officer quoted by Pertinax '40 he was, however, "one of those sailors who seldom go to sea. . . He was no friend of the late Admiral Jean François Darlan '41, and the Admiral of the Fleet kept him at arm's length. When war broke out he was already on the retired list but, with other veteran admirals, he craved a further spell of 'active' service. Darlan could not sweep him aside but hastened to ship him off to the Western Hemisphere. There Robert found an opportunity to recoup himself."

Martinique is the southernmost French island in the West Indies, a mountainous mass of volcanic origin embracing about 385 square miles of territory that was discovered by Columbus in 1502 and first colonized by the French in 1635. For some time it was passed back and forth between Great Britain and France, but since 1816 the French have been in undisputed possession. The numerous battles that have taken place in and around it emphasize the significance of its position in the Caribbean: it is an estimated 1,200 miles by air from the Isthmus of Panama, 1,615 miles from Miami, Florida, and its two sides are flanked by deep-water passages leading to the Panama Canal. Enemy planes based on Martinique could knock out the Canal, although there is no airfield on the island. As for the harbor of Fort de France, it is reputedly the finest between Cuba and South America, with fifteen square miles of protected water—enough to permit anchorage by the entire United States Atlantic Fleet.

ADMIRAL GEORGES ROBERT

The population of both Martinique and Guadeloupe is predominantly Negro. At most there are 5,000 whites out of a population of 250,000 in Martinique, but the whites own all the large estates and control all the commerce. (Actually, according to the Fighting French, Martinique has Four Families who claim to be the only truly white families on the island and whose economic power is absolute.) The rest, aside from a Negro elite of a few thousand, are poorly-paid workers on the sugar cane or banana plantations, fishermen, or small tradespeople. Guadeloupe, 100 miles north, is twice the size of Martinique, but its population is about the same. There the whites number only about 1,500, and the Negro elite is also smaller. In spite of the economic setup of the islands, under the Third Republic their local legislative assemblies were elected by universal manhood suffrage, and they sent two deputies and a Senator to the French Chamber. The natives were therefore jealously concerned with their political liberty, and the French capitulation in June 1940 came as an incredible shock.

Admiral Robert stood by Marshal Pétain, who named him absolute dictator of all French possessions in the Western Hemisphere. Supported by the privileged classes and by the sailors who had arrived on French warships after the capitulation, he then gradually set about to tear down the structure erected by the Third Republic. "Special envoys of Marshal Pétain" came to assist him. The General Council was suppressed. The Mayors, all but four or five of whom were Negroes, were replaced by Administration appointees. The higher civil officials were weeded out and replaced by "reliable" agents from France, sailors, or policemen. The news service, radio, censorship, secret police, foreign relations, and other important agencies were all taken over by Robert. When the suspicious population began forming dissident groups in clubs and cafes a reign of terror was instituted. Listening to Allied broadcasts was made a crime, as was the failure to keep Pétain's picture on the wall. Lists of political suspects were given to local storekeepers with orders to deny them all but the most meager supplies. Many were thrown

ROBERT, GEORGES—*Continued*

in concentration camps on Martinique or Guadeloupe or shipped to the prison colony in French Guiana, which was now also under Robert's rule.

Naturally Robert could be of great help to the Nazis. At the time of the French capitulation the aircraft carrier *Béarn* had been traveling from Halifax to a French port with 100 or more American-made planes when orders came to put about and head for Martinique. The United States tried to get the planes back, but Vichy refused to return them, saying that Berlin would not permit it. They were subsequently transferred to a storage field at Fort de France, where they allegedly represented a threat to the Panama Canal and other vital points. Moreover, several cruisers and auxiliary vessels and six tankers in addition to the *Béarn* were in anchor in the broad expanse of the harbor of Fort de France, and early in the War part of the gold reserves of the Banque de France had been brought to Dakar, part to Martinique.

The situation at Martinique alarmed both Britain and the United States, but they hesitated to use force, and Robert insisted that the armed forces on Martinique would offer strong resistance to any invader. For a while the British therefore kept the French ships penned up in the harbor by a blockade which resulted in severe economic hardships to the island. Martinique's economy is based on sugar and its by-products, and before the War the larger part of the food and other necessities of the island had been imported and paid for with exports to France of rum, sugar, and bananas. The British blockade made it difficult to send exports to France, and French funds in the United States had been frozen.

Finally, after conversations with United States Rear Admiral John W. Greenslade in November 1940, Admiral Robert came to an agreement with the United States. Details were not revealed, but apparently there were guarantees with reference to the movement of French vessels in American waters; a daily sea and air patrol of Martinique and Guadeloupe was permitted, with a representative of the United States Navy stationed at Fort de France to check its observance; and the three French warships were immobilized in the harbor by having their boilers removed, all trial runs canceled, and the importations of fuel oil stopped. In return, the United States released on a monthly basis enough French credits to permit Martinique and her sister colonies to obtain foodstuffs and other essential supplies in the United States—according to most sources, from $800,000 to $1,000,000 a month. According to *The Nation,* a guarantee was probably also given that Vichy control over French possessions in the Americas would continue undisturbed, accounting for the consternation of the State Department when a year later the Free French liberated the islands of St. Pierre and Miquelon.

Many commentators persisted in seeing Vichy control over Martinique as a menace to American security even after this agreement, and there were rumors, probably unfounded, that the harbor was being used as a base for Nazi espionage and attacks against Allied shipping. Such suspicions were not lessened by Robert's radio station, which, named "The Voice of France in the Antilles" and nicknamed in Martinique "The Voice of Germany in the Antilles," constantly poured out anti-British, pro-Vichy propaganda to the French-speaking areas of the Western Hemisphere. When in July 1941 Indo-China surrendered to the Japanese the American State Department grew alarmed, and new negotiations were opened, reportedly with the hope of getting hold of at least the fleet of merchant ships at Martinique. The United States failed to win a single new concession, however, in the accord of December 1941, and when it tried again in May 1942 Robert referred all proposals to Pierre Laval '40 and declined to give any answer until they were approved by Vichy. Negotiations were therefore still going on when in November 1942 the Americans invaded North Africa and finally broke off relations with Vichy itself.

Just after the American landings in North Africa, Secretary of State Cordell Hull '40 announced that negotiations with Robert "had reached a point where announcement of a comprehensive solution could be expected at an early date." Optimism rose. The Giraud '42 forces were anxious to obtain use of the French ships held by Robert at Martinique, and they hoped that Robert would send sugar and other island products to French North Africa. It was also remembered that on Martinique were from 15,000 to 17,000 thoroughly trained artillerymen and infantrymen, officered by graduates from St. Cyr—a prize if Robert should swing over to the Allies.

Robert himself indicated no very "comprehensive" solution. On November 12 the Martinique radio broadcasted an announcement to the crews and officers of merchant vessels then on the high seas or in the Mediterranean: "Turn back immediately to a French port in the Mediterranean or in Corsica. London is inviting you to commit treason. Do not let yourself be deceived. Your duty is clear. Marshal Pétain demands that you return to French ports and continue to serve France." Robert attacked Darlan for "exceeding his powers," and on November 16 both the Martinique and Guadeloupe radios transmitted in full Pétain's declaration forbidding Giraud to act in his name. On November 21, however, it was officially announced that Robert had detached himself completely from the Laval Government and was now acting independently on his own authority; and two days later Hull announced that a satisfactory agreement had been reached in Martinique between Robert and Samuel Reber, the State Department's representative, as a result of which the American occupation of French Guiana, Martinique, and Guadeloupe could be regarded as unnecessary. The text of the agreement was not published.

Whatever the agreement, nothing more was heard about it until February 19, 1943, when Pertinax revealed in the New York *Times* that "at the eleventh hour in November Admiral Robert refused to append his signature to the treaty that Samuel Reber of the American State Department had been discussing with him for fully six months." Next, on March 8, Under-Secretary of State Sumner Welles '40 told a press conference in Washington that food shipments to Martinique had been suspended in November and not resumed on account of Robert's recalcitrant attitude. (According to Welles, the situation had not developed until late in December: food might have been sent for some time after November 8, but Admiral Robert had not sent any ships to this country for that purpose during that period.) For some time before Welles' announcement commentators had been advocating American occupation of Martinique, and the State Department's announcement was the signal for fresh criticism of American policy. It was pointed out that the island could hardly be starved into surrender, for Robert had had all food stores requisitioned, and the blockade fell exclusively on the majority of the population hostile to his government.

The situation was confused still more when Representative James H. Morrison of Louisiana denied that food shipments to the islands had actually been suspended. Early in March, according to Morrison, the sailing of a food ship from New Orleans to Martinique had been prevented "not by the State Department, but by a strike of the pro-American, anti-Vichy seamen aboard the ship." A former commander of the land forces in Martinique who had escaped from that island on December 30, 1942 was the Congressman's authority for the statement that a steady flow of American food had been arriving in Martinique at least up to the end of 1942.

In April 1943 refugees from the islands reported the situation there as desperate. Robert was operating Martinique and Guadeloupe (French Guiana had broken away from him suddenly and peaceably in March, when it announced its adhesion to the Fighting French) for a handful of plantation owners whose main worry was their mounting stocks of rum and sugar. The food shortage affected everyone except the officers, men of the Navy, authorities, their families, and some privileged civil servants. Bread contained only about twenty per cent wheat; there was no more medicine; and the suffering of the people was made worse by grafting officials. Both military men and civilians who could escape were leaving at the rate of about fifteen a day, many to join the de Gaullist movement, although they were often drowned in the attempt to escape and were imprisoned or shot if caught. The gold bullion store, it was believed, had been removed from Fort Dessez to a secret hide-out. The ships remained in good condition. Robert had, however, let it become known that at the faintest sign of coercive action all of them would be scuttled immediately.

In a letter received by the Associated Press in Puerto Rico on April 16 Robert listed the conditions on which he would join the struggle against Germany. First, the act must not mean the necessity of rebellion against the French Government; second, the Allies must permit the French who were fighting to form a unity under one single authority vested with sovereign rights; third, the act must safeguard the interests of the French Antilles "such as I have been able to conserve them up to the present." Robert also commented that "the manner in which the French who believed that the moment had come to join the United Nations have been treated by the Allies only confirms me each day in my prudence."

According to an authority quoted by Pertinax, a "distinguished military officer who has never lost touch with Admiral Robert and who even assisted him at Fort de France," by this statement Robert was striving to build up for himself a position not unlike those of de Gaulle '40 and Giraud and to have a voice in the negotiations in progress between them, emphasizing the fact that he alone owed his appointment to regularly constituted republican government.

On April 26, 1943 a communication of the American State Department informed Robert of the severance of political relations, the recall of the American consul general at Fort de France, and the termination of agreements previously entered into with him by Washington. Robert regarded himself as a representative of the Vichy regime, the note said, "now an integral part of the Nazi system," and the United States Government would not "recognize or negotiate with any French representative in the Antilles who remains subservient to or maintains contact with the Vichy regime." Robert promptly protested this action, and the Vichy radio said that Allied military operations against Martinique could "undoubtedly be expected." From Puerto Rico Vice-Admiral John H. Hoover, commandant of the 10th Naval District, expressed doubt that an actual state of war would develop against Martinique, but said that the Navy was maintaining a day-to-day policy of watchful waiting. Edgar Ansel Mowrer '41 respectfully suggested that the time had come for Britain and the United States to turn the situation over to their French allies to handle, letting the combined forces of de Gaulle and Giraud carry out the "execution" of Admiral Robert and reconquer ships and islands and impounded gold for the French Republic.

Giraud and de Gaulle had agreed to joint action with respect to Martinique, but the word to go ahead did not come from the United States. Unrest in the island itself increased, however, particularly among the Negro population, and early in June there was an abortive attempt at revolt. On June 30 Robert made his plea that the United States send a "plenipotentiary to fix the terms of a change of French authority," and a few days later, when notified that Henri-Étienne Hoppenot had been appointed High Commissioner to the Antilles, he requested that Hoppenot "come as soon as possible"—demonstrations against his regime were increasing. It may be assumed that Robert's return to "full civilian status" was a relief for all concerned.

Robert's enemies have not made the mistake of considering him a fool. According to Major Jean Victor Sarrat, he is "an intelligent man, a diplomat, a man of considerable background as an administrator." According to another source, "He is not the single-minded seadog, blind to the intricacies of internal and external politics, that you readily imagine. He is no fool and no maniac [in 1941 it was falsely rumored that Robert had gone mad, and that his screams could be heard miles

ROBERT, GEORGES—*Continued*

away]. He is a clever man, endowed with a dextrous intellect and a ready tongue, who can be a match for any intriguer."

ROMULO, CARLOS P(ENA) (rō'mu̇-lō) Jan. 14, 1901- United States Army officer; journalist; author

Address: h. Suite 1485, Hotel Waldorf-Astoria, New York City

In *I Saw the Fall of the Philippines* (1942), Colonel Carlos P. Romulo, former publisher, editor, university professor, and playwright, and today aide-de-camp to General MacArthur '41, has written what the New York *Times'* Orville Prescott calls a "bitter, bloody, beautiful book." Colonel Romulo was the last man to leave Bataan, and one of the few men alive and free today to tell the story of the heroic and hopeless battle of 7,000 American combattant troops and 75,000 Filipinos against 250,000 Japanese. And the reason that the Filipinos fought so valiantly is made clear in another book, *Mother America* (1943), in which he sets forth the idea that the United States' method of dealing with the Philippines, extended to all the subject populations of the Eastern world, is the best and only solution to the Asiatic problem. (This thesis has been set forth, too, in a number of articles.)

Carlos Pena Romulo was born in Manila in the Philippine Islands on January 14, 1901, the son of Gregorio and Maria (Pena) Romulo. His father was one of the Filipino guerrilla fighters in their province during the first days of the American occupation of the Philippines, and one of the boy's earliest recollections was hearing his father, when he came secretly to their house in Camiling, in the Province of Tarlac, talk about the "blue-eyed foreign devils" camped out in the town park. "Don't let the boys go near them," he would tell their mother. Curiosity, nevertheless, got the better of young Carlos and his friends, and when the "foreign devils" gave them apples they quickly made friends. An American sergeant taught him and eight or ten others to read English.

What the boys did not realize was what it meant when their friend dismissed his class, grabbed his gun, and dashed out of the park with the other soldiers. The first realization that the sergeant was one of the men fighting against their "guerrillero" fathers came when Carlos saw a neighbor's body dangling from a tree. He promised himself that he would hate the Americans forever, and for a while he didn't return to the park. He finished his English lessons after his friends began twitting him and calling him too dumb to learn, but he remembered his promise, particularly after some American soldiers tortured his grandfather by giving him the "water cure" because he had refused to tell where his son was hiding.

Eventually the leader of the guerrillas was captured—by a ruse, the boys were told. Then Carlos' father surrendered, took the oath of allegiance to the Americans, and soon was sincerely reconciled to American rule. The first Filipino in town to learn English, he was elected a municipal councilor and later municipal president (or mayor), and an American revenue officer became his best friend and came to live at the Romulo house. But Carlos remained stubborn, believing that his father's American friend was different from the other "foreign devils." For a long time his chief rival in intermediate school was an American, the son of one of the American teachers, and although after a battle in which young Romulo got the better of it they became good friends, even this friendship did not greatly change his ideas.

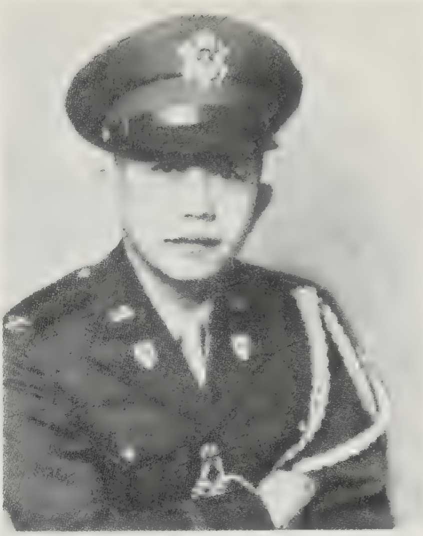
Eventually the elder Romulo was elected Governor of his Province, and the family moved to Tarlac, the capital of the Province of Tarlac. Romulo attended the Manila High School. He was a senior when Manuel Quezon '41 made his dramatic homecoming from the United States as resident commissioner, bringing the Jones Act, which placed the legislative body in Philippine hands and gave the first promise of independence by Congressional action. Carlos was carried away by enthusiasm, and his feeling about President Quezon still retains much of that same youthful fervor and hero worship.

That same year, while a senior in high school, a humiliating experience crystallized Carlos' resentment against the Americans. For some reason he found himself in the Army and Navy Club in Manila and he was promptly asked what he was doing there in a tone which left him no doubt that there were places in their country where Filipinos were not welcome. The high school principal, an American to whom he confided his bitterness, won his confidence, however, and it was not long before Carlos was the winner of an oratorical contest on the subject "My Faith in America." After he received his B. A. degree from the University of the Philippines in 1918 the Philippine Government sent him to Columbia University in New York City for further study. His years there, he now says, were the "happiest in my life." "Some of my best friendships were made during these years. I learned that the average American is fundamentally fair and always for the underdog. I was boyish-looking and a foreigner, and the audiences were always on my side when I competed on the debating team."

After receiving his M. A. degree from Columbia in 1921 Romulo returned home and became an assistant professor of English at the University of the Philippines, later heading the English Department. In 1922 he also became a member of the Philippine Independence Mission, and since that time he has made five official visits to the United States on various independence missions. He says: "I had everything a man could ask of life in a gay and cosmopolitan pre-War Manila that was truly the Pearl of the Orient." Romulo has "a beautiful wife [the former Virginia S. Llamas, a onetime Manila Carnival queen, whom he married in July 1924], four sons, and a home in the Malate district where we welcomed friends from all over the world."

As head of the D. M. H. M. Newspapers, a Philippine newspaper chain, until the Japanese came, he was the publisher and editor of the Philippine *Herald*, one of Manila's three dailies in English, of the Monday *Mail*, also in English, of *La Debate* (in Spanish) and of *Mabuhay* (in Tagalog). (Previously he had been editor of the *Tribune* of Manila.) He had become a regent of the University of the Philippines in 1929; he was a board member of several Philippine corporations; and he had been an active Rotarian since 1931, serving as president of the Manila Rotary Club in 1935 and as director and first vice-president of Rotary International in 1937 and 1938. He contributed not only to the *Rotarian* but to American magazines like *Foreign Affairs*, in which he wrote, in April 1936, that when the United States retired from the Philippines there was little doubt that Japan would attempt to grab them. This uncheerful but realistic view of Japan's intentions did not prevent him, however, from attacking in the columns of the *Herald* the "bright correspondents who drop in among us for a day and then write back home reams upon reams of 'inside stuff' about the Philippines"—particularly those who said the Filipinos were ready to call off their demand for independence out of fear of a Japanese invasion.

In September 1941 Romulo set out on an extensive tour of the countries neighboring the Philippines. He went first to Hongkong, then flew to Chungking over Japanese lines, and from Chungking to Kunming; he took an unbelievably uncomfortable automobile down the Burma Road, a trip which took eight days and seven nights; from Lashio he took a plane to Rangoon, then went on to Bangkok, Thailand, visited Malaya, Batavia, and Bandoeng, and finally reached French Indo-China. Almost everywhere he went he spoke to Rotary Clubs, giving his frank opinion of the military situation. He told the Bangkok Rotary Club that when the Japanese came—as they surely would—the Thais would make a token resistance of from three to five hours. After he left, the Japanese registered a protest against his speech, and the president of Rotary was called on to make an explanation. But his prophecy was accurate: actually the resistance in Thailand was of five hours' duration. In Malaya he said that Kuala Lumpur was unprotected, and that the Japanese would come from the supposedly impregnable forests. He also said that Singapore would be without naval support.



Blackstone

COL. CARLOS P. ROMULO

Much of his pessimism was based on the pro-Japanese attitude fostered by the British, Dutch, and French treatment of natives of the countries which he visited. He did not, however, reveal all of what he saw and heard in his newspaper articles, which were published in his own Manila newspapers and carried in the United States and elswhere by the King Feature Syndicate. This series won him the 1941 Pulitzer Prize for distinguished correspondence as well as the enmity of the Japanese. "I can tell you now that those articles would never have won the Pulitzer Prize if I had told all of my experiences in the Orient," he says. "I held back a lot because as a writer I knew hatred is created by incidents."

In November 1941, when Kurusu '42, Japan's "peace" envoy to the United States, passed through Manila, Romulo went to see him. "You have made a tour of the East?" Kurusu asked. Romulo nodded. "Why do you hate us?" Kurusu asked. Romulo replied that he could not and did not hate. "Nonsense!" the Japanese promptly exclaimed. "You are only an emissary of the A-B-C-D!" "Yes," acquiesced Romulo, "if by A-B-C-D you mean Accuracy Beyond Cavil or Doubt!"

"The role of a warrior was as much of a shock to me as Pearl Harbor was to the United States," Romulo says. On the day of the Japanese surprise attack on the Philippines most of his staff on the *Herald* resigned

ROMULO, CARLOS P.—*Continued*

in order to enlist. Romulo, a major in the Philippine Army Reserves, and a close friend of MacArthur's since 1928, was called into active service as press aide to the commander in chief on December 10, 1941. On December 17, the day the Japanese Blitz really began, he got his desk in the Press Relations Section and began working day and night, "sustained by cat naps and by sandwiches and coffee wolfed at my desk," issuing press releases to newspapermen, helping to select headlines that would both soothe and inform the civilian population, writing and arranging radio programs. At the time his sons, aged from four to seventeen, and wife were hiding in the provinces. The situation became more and more hopeless; finally, in hopes of sparing the city, Manila was declared an open city and all antiaircraft defenses evacuated. The Japanese replied by bombing it more mercilessly than ever, and on December 29, 1941 Romulo's newspaper plant, bombed, went up in smoke. After this Romulo's eldest son enlisted as a private in the Philippine Army. Romulo said farewell to his wife for the last time and left the city on New Year's Day 1942. On January 2 Manila officially surrendered.

Romulo went to Bataan as a sort of public-relations man between fox holes and headquarters. He was there for fourteen weeks following the enemy occupation of Manila, and they were fourteen weeks of nightmare. He calls Manila, Corregidor, and Bataan "three tight little components of hell." On January 5, 1942 he made his first broadcast over the *Voice of Freedom* from Corregidor, a challenge which the Japanese answered within an hour, and which caused them to put a price on his head. Because of this, when the fall of Bataan seemed imminent MacArthur arranged his last-minute rescue in a makeshift amphibian nicknamed "The Duck." It was the night of April 8, 1942. Romulo carried only letters from some of the doomed men on Bataan, which fell that very night, and the diary on which his book was based. (Later, in *Mother America,* Romulo was to write: "The Oriental's hatred and fear of imperialism spoke at last in Burma, French Indo-China, Thailand, Singapore, Hong Kong, and Java, when he did not protest, but accepted, Japan. Only the Filipino did not gloat over the fall of the white man.")

After his escape to the United States, Colonel Romulo was reportedly asked to join the Cabinet of Quezon's Government-in-Exile in Washington, but he preferred to return to Australia as aide-de-camp to General MacArthur. On March 5, 1942 he had been made a lieutenant colonel. On March 10, 1942 MacArthur had cited on the field every member of the rear echelon of which Romulo had been an officer, "for having under continuous aerial bombardment, between December 8 and December 31, 1941, planned and directed the delaying actions that made possible the withdrawal of the northern and southern Luzon forces into Bataan Peninsula; planned and executed the evacuation of Manila; and, through prodigies of labor, working to complete exhaustion of the personnel, brought about the movement of supplies and equipment which made possible the prolonged defense of Bataan." Finally, on July 7, 1942, he received a cable from MacArthur promoting him to the rank of colonel. He has also been decorated with the Silver Star by MacArthur, with the Purple Heart by Lieutenant General Wainwright [42], and with two Oak Leaf Clusters, and he is the recipient of an honorary LL. D. degree from the University of Notre Dame.

"Small, suave," Colonel Romulo is himself the best illustration of his thesis that the Filipino is the cosmopolite of the Orient, the product of three influences: the basic Malayan, Spanish, and American. One of the best English-speaking Filipino orators, in the fall of 1942 he was on leave in the United States for a lecture tour which was a sensational success. He traveled over 60,000 miles, appeared in about 289 different cities, and spoke more than 356 times. To his audiences he said substantially what he wrote in the *Rotarian* for August 1942: "There is too much smug complacency. I know. I have seen the British in Hongkong, in Burma, in Singapore. I have seen the French in Hanoi and Saigon. I have seen Chungking. I have seen Java. I have seen Corregidor. I have lived through Bataan."

Today Colonel Romulo's Manila home is used as quarters by part of the Japanese High Command, and he has had no word from his wife or children since January 1942, when he received one message from his wife and a note from his eldest son ending: "It's a Jappy New Year." What is more, when the Japanese entered Manila they demanded his car by its license number and ransacked his house, hunting for pictures of his family. He nevertheless dedicated his first book to his wife and four sons, Carlos, Jr., Gregorio, Ricardo, and Roberto. "The world we shared so joyously has been taken from us. I look forward to greater happiness. I know you are holding the prayer with me, wherever you may be, that we find our ways back to one another."

ROOT, WAVERLEY (LEWIS) Apr. 15, 1903- Radio commentator; journalist

Address: b. Press Alliance, 235 E. 45th St, New York City; h. 123 Waverly Place, New York City

Friends of Waverley Root, we are told, describe him as "a newspaperman's newspaperman." "What they mean by that is that instead of covering the same story at the same time and in the same way as his colleagues, he specializes on spotting the new developments before they have popped up in the news, and revealing what is behind them when they do. When a newspaperman in New York wants to look up a fact from the past he consults the files; when he wants to find out what is likely to happen in the future he phones to Root. He usually gets an answer."

Waverley Lewis Root was born in Providence, Rhode Island on April 15, 1903, the son of Francis Solomon and Florence Mae (Lewis) Root. His mother is a Canadian, born at St. John, New Brunswick, of Scotch-Irish stock, the daughter of a sea captain. His father's family, Scotch-English in origin, settled in New England in 1635. Notable members of the family include the composer, George Francis Root, the Secretary of State, Elihu Root, and the wife of General Pershing, Frances Warren.

In 1909 the Roots moved to Fall River, Massachusetts, where Waverley attended the elementary school and the Durfee High School. In his youth his principal interests were music and writing. He played the piano, harmonium, drums, trombone, and tuba, he tells us, and had his own twenty-five-piece orchestra which rehearsed at his home. He played in the Fall River Boys' Band and the high-school orchestra (a different instrument each of his four years), and he composed the music and lyrics for his class ode. After he was graduated from the Durfee High School he entered the Liberal Arts School of Tufts College in Medford, Massachusetts. At college he was a member of the musical club and of the band. He left at the end of his third year, lacking only three semester hours of the necessary credits for graduation. (Tufts gave him his B. A. *ex ordinem* in 1941 with a citation for service in the fields of music and international journalism.)

Root started writing in grammar school and won a city-wide essay contest while he was in the eighth grade and a nation-wide one when he was in high school. With a high school friend he published a handwritten literary paper and in college he "virtually edited the college newspaper for all three years he was there," although he held the title of editor in chief only in the third year. As a college student he represented the Boston *Telegraph* for a year and the Associated Press for two years. He was assigned chiefly to covering sports events. Before he left Tufts he founded a college comic magazine.

In July 1923 Root started his professional career working for a trade publication. He next held a series of "unimportant editorial and advertising agency jobs" and read books for motion-picture companies until 1927, when he went to Europe on what he intended to be a short trip. (He stayed there thirteen years.) Between 1923 and 1927 he wrote musical criticism "for several obscure publications in New York, and he still thinks it no worse than what was being written in more solemn publications. His musical interests were later reflected in *The Truth about Wagner* [1930], which he wrote in six weeks in London on the basis of Wagner material unearthed by Philip Dutton Hurn." Root was about to hire the Paris Symphony Orchestra to play a symphony composed by himself when the outbreak of war disrupted that organization.

WAVERLEY ROOT

Root spent eleven of his years abroad in Paris and two in London, although his assignments frequently carried him from Poland to Portugal or from Sweden to Italy. Hired first as a reporter by the Paris edition of the Chicago *Tribune,* he numbered among his colleagues such outstanding journalists as Vincent Sheean '41, William L. Shirer '41, Jay Allen '41, and Edmond Taylor. From 1928 to 1930 he was assistant London correspondent for the Chicago *Tribune*; from 1930 to 1934 he was news editor of the Paris edition. In this last capacity, he recollects, he was at one time or another the boss of almost every American newspaperman who has ever worked in France. In 1934, when the Paris Chicago *Tribune* was sold, Root became night cable editor of the United Press in Paris. To this job he attributes his minute information on France in particular and on Europe in general, for it gave him time to read nightly twenty of the twenty-five daily newspapers printed in Paris as well as a number of papers of other countries. In 1938 Root became the Paris correspondent for *Time* Magazine and the French representative of the Mutual Broadcasting System. In 1940 he returned to the United States.

Besides the positions mentioned, Root has always had an assortment of assignments on the side. From 1932 to 1940 he was Paris

ROOT, WAVERLEY—*Continued*

correspondent for the Copenhagen *Politiken* and through it for the the Stockholm *Tidningen* which shared the Danish paper's foreign service. From 1932 to 1940 he was correspondent of *Newsweek* Magazine's "Periscope" department. From 1939 to 1940 he was Paris correspondent of the Chicago *Times.* At one time during the war in France he was representing ten different news-gathering organizations.

The stories Root has covered during his long sojourn abroad include Lindbergh's '41 arrival in Paris, the French reaction to the Sacco-Vanzetti case, the London Naval Conference of 1930, the arrival in England of Amelia Earhart, the Concordat in Rome, living conditions in South Wales during the worst period of employment in 1928, the Stavisky scandal in Paris, and all the major events leading up to the War. When he was with the United Press, Root "scored such scoops as securing Franco's '42 reply to the London Non-Intervention Committee and reporting three months ahead of time the exact date on which the *Anschluss* would occur." Years before, Root had started a book which he was going to call *War by 1940.* He abandoned it "because the pace of developments outstripped his writing speed on the book," and because publishers whom he consulted about it thought it "alarmist and far-fetched."

Root scooped his colleagues on the bombing of Paris on June 3, 1940, then fled with the Government to Tours and to Bordeaux, and covered the signing of the armistice. He made the last American broadcast from France to the United States during an air raid on Bordeaux. The armistice ended broadcasting, and he returned to the United States with his wife and sixteen months' daughter on the last trip of the *Manhattan.* (Root was married to Joanne Albinelli in April 1937, and his daughter, Diane Lane, was born in Paris in February 1939.)

On his return to the United States, Root began a nightly news commentary broadcast from station WINS in New York City. He also started a syndicated column, "Uncensored," for the Press Alliance. "Uncensored" was originally written in collaboration with Pierre Lazareff '42, but when the United States entered the War the title was changed to "Backstage of the War," and Root conducted it alone, Lazareff having been employed by the Office of War Information. Root has also been lecturing and writing miscellaneous articles for various publications as well as working on a book, *The Secret History of the War,* in collaboration with Lazareff. He edited the "World behind the Headlines" page for the New York *Daily Mirror* from his return in 1940 until 1942.

Root's journalistic theories, he informs us, "are not orthodox." He claims "journalism is essentially unskilled labor, and that a young man coming out of college trained for no particular job, and not a good enough salesman to peddle bonds, naturally gravitates into journalism." Since Root has the greatest contempt for uninformed journalists and believes that a solid background of general information is necessary for adequate performance of the most important journalistic tasks, his unorthodoxy is not, we understand, to be taken too seriously.

Root believes that great men should be avoided by the journalist who wants to be able to continue to judge them and to appraise their acts without bias. Instead of seeking to establish contacts with leading statesmen—whom he does not believe ever open themselves to journalists unreservedly and without political motives of their own—he prefers to know the men three or four stages down in the Ministries who do the actual business of government. He has not been able to dodge all the statesmen, however. Newspapermen in the know consider him one of the United States' outstanding experts on France and the political tangle in French North Africa, and his advisory opinions are, therefore, sometimes sought by men of political prominence. (Root remembers the time he met Elihu Root on board the steamship *Augusteo* at Naples and traveled all the way to Genoa with the American statesman and Nobel Prize winner without obtaining any state secrets. Elihu Root avoided his young cousin's questions "by continuing a running lecture on the family genealogy.")

In his radio broadcasts Root criticized the North African political maneuvers, feeling from the beginning that the deal with Darlan '41 not only did not save the lives of American soldiers as was claimed, but alienated resistance movements in occupied countries, which might eventually cost more American lives. He accused the United States' State Department of being prejudiced against the de Gaullists and contended that Giraud's '42 rule did not restore a republican government to Africa. He opposed the late Wladyslaw Sikorski's '40 attitude on the Polish post-War frontiers as in line with the policy of the old Polish "party of the colonels." In March 1943 Root warned in a broadcast discussing the revelation of the 1942 "purge" of two Polish labor leaders in Moscow that Russia might make a separate peace with Germany. He felt that such a peace would be a result of the inadequacy of Lend-Lease, the Allied failure to open a second front, the clash of interests in Yugoslavia, and the State Department's "hardly veiled attempts" to restore post-War European Governments which are anti-communistic. This was, fortunately, not one of his more successful prophecies; but in May 1943 Root upheld his reputation as a seer by announcing that Hitler '42 would resist any Allied invasion of Italy, for "a fight on the peninsula would give the Nazis more time to prepare their European Fortress and use up the good invasion weather." Moreover, "if we have to take Italy as part of the war strategy, negotiations with Italian Fascists will not save us the cost of an invasion." A staunch advocate of the second front in Western Europe, in July he analyzed German reports about the effectiveness of Allied air bombing as propaganda designed to convince us that we need do that and nothing else. An equally staunch opponent of the policies of the United States State Department, in September he charged that department with "deliberate attempts to lead its opponents into the errors Mr. Hull '40 self-righteously charges them with making, by withholding from them the explanations which it gives to its tributary writers."

Root is a member of the board of governors of the Overseas Press Club and of the executive committee of the Association of Radio News Analysts. He is one of the founding members of the latter organization, which boasts such notable members as H. V. Kaltenborn '40, Raymond Gram Swing '40, and Elmer Davis '40.

Root is fond of bridge, chess, and "Go," a Japanese strategic game older than chess, he says, and more complicated. He used to play a "fair game of tennis" but for years he has not had time for the sport. His interests are eclectic: he reads widely in psychology, biology, music, and current literature. Root is blond and portly; he is five feet eight inches tall and weighs 215 pounds.

ROPER, DANIEL C(ALHOUN) Apr. 1, 1867—Apr. 11, 1943 Lawyer; first Secretary of Commerce in President Roosevelt's '42 Cabinet (1933-38); former United States Minister to Canada (1939); as internal revenue head first man to enforce the prohibition law.

ROSENBERG, ANNA M(ARIE) July 19, 1900- Regional head of the United States War Manpower Commission; regional director of the Social Security Board

Address: b. 11 W. 42nd St, New York City; h. 1136 Fifth Ave, New York City

Called the busiest woman in New York, Anna M. Rosenberg holds down a dozen or more jobs in the public official category and as many more in an unofficial capacity, including those of investigating and trouble shooting behind the scenes for labor and government. When she was appointed a regional director of the War Manpower Commission (September 1942) by Paul V. McNutt '40, Mrs. Rosenberg was well known for her capable work as director of New York's Social Security Board. She was also known (through investigations of a Federal Appropriations Committee) as the woman who was making $28,500 annually on the side as an "adviser" to three private clients. In 1942 Mrs. Rosenberg decided to drop these outside paid activities and patriotically devote herself exclusively to government work. This work includes jobs for the petite, feminine coordinator with the "red-hot personality" on any number of national, state, and city councils and committees. In between times she "gets along with the Mayor; arbitrates and settles labor disputes; participates in the activities of fourteen more organizations; speaks at meetings, at conferences, and on the radio; is a housewife; has her hair waved; keeps her lipstick smooth." It is reported that another busy woman, upon hearing what Mrs. Rosenberg does, said: "I am going out and kill myself."

ANNA M. ROSENBERG

This dynamo so perfectly geared to the contemporary American pace was born in Budapest, Hungary on July 19, 1900. Her father, Albert Lederer, was a prosperous furniture manufacturer who lost his fortune when the Emperor canceled a large contract after the furniture had been delivered. Her mother, Charlotte (Bacskay) Lederer, is a successful writer of juvenile fiction. When Anna was eight the family came to the United States and settled in The Bronx. She remembers how the school children made fun of her accent, of which she still has a trace. She entered Wadleigh High School in Manhattan when she was fourteen, showing in those early years a talent for leadership. When the students went on strike against compulsory military training she organized a political club and took a prominent part in arbitrating the strike. After its settlement she headed a large delegation to the Board of Aldermen to ask for a shorter school day to relieve overcrowded classrooms. Manhattan's aldermen were impressed; so were reporters.

While still in high school Anna Lederer did part-time work at a base hospital in the old Siegel Cooper Building. On one occasion, it is said, she stood by a soldier, at his request, while his arm was being amputated. She also sold Thrift Stamps and Liberty Bonds at the corner of Broadway and 145th Street, and made an exceptional record. In 1918 she left school to marry a man in service, Julius Rosenberg, now a rug merchant. "Mother made me go back to school," she said. "When my husband went overseas with the 51st Pioneer Infantry, I volunteered for work at the Debar-

ROSENBERG, ANNA M.—*Continued*

kation Hospital at Sixth Avenue and Nineteenth Street. I had charge of the recreation room there."

A son, Thomas, was born in 1920. He is now in the Army, and his mother admits that "her chief vice is her willingness to keep the entire WMC marking time for an hour to be with Private Rosenberg whenever he reaches town." She likes to go to the movies, but saves the best shows for "Tommy's leaves."

In the early '20's Mrs. Rosenberg entered politics via the Seventh Avenue District. She won a rough and tumble bout with James J. Hagan in the Amsterdam Democratic Club and was on her way up. Her political activity led her into social welfare work, public relations, and labor mediation. Mrs. Rosenberg's first important contact, politically, was with Belle Moskowitz, mentor of Alfred E. Smith. "She asked me to organize a concert to raise funds for charity. I thought it was a voluntary job and returned the check she sent me. It came back again with a note saying, 'If your time is worth nothing to you, it's worth nothing to others.' There's something in that."

Since then Anna Rosenberg's time has been worth quite a bit to others. During the '30's her work widened into the field of trouble shooting in industrial and social welfare issues. Her present industrial relationships began with trips through the South to smooth out labor troubles. In 1933 she succeeded Nathan Straus, Jr., as NRA regional director of New York. Mayor LaGuardia '40 commented on her ability: "She knows more about labor relations and human relations than any man in the country." After the NRA folded she was kept busy by employers and union business agents calling for her advice on knotty labor problems. It was in 1935 that she became director of the Social Security Board in New York City.

When war activities began in this country Mrs. Rosenberg was appointed to several important posts. She became a director of the Health and Welfare Defense Services; member of the State War Council; secretary of the combined War Labor Board; member of the Mayor's Business Advisory Committee. As Federal defense coordinator for New York State she was instrumental in plans to avoid waste in the Government's training program for defense workers. Tests of physical fitness were given workers entering the program, resulting in the assignment of trainees to the kind of job they were best equipped to fill. Under her direction a committee was also formed to provide social and recreational activities for enlisted men stationed within sixty miles of the city. These various jobs meant coordinating all the welfare work being done in the State of New York as part of the Federal armament program. It was a man-size undertaking, and Mrs. Rosenberg was the only woman among the eleven regional defense coordinators.

In the meantime, industry had been competing with government for her services, and Mrs. Rosenberg's jobs for private clients were netting her a considerably meatier income than her public works. Her fees from private industry included a payment of $8,000 in 1938 for advice on a series of radio programs. She became labor relations and public relations adviser for R. H. Macy & Company and for L. Bamberger & Company, department stores, receiving from them a fee of $20,000 annually. From I. Miller & Sons, Inc. she received $2,500 annually; and as consultant on the staff of Nelson Rockefeller '41, coordinator of Inter-American Affairs, she earned $6,000 a year.

Early in May 1942 members of the House Appropriations Committee were determined to write into all future supply bills a provision prohibiting Federal administrative officials from accepting employment outside the Government. Mrs. Rosenberg became a case in point. It was disclosed that her total earnings were $36,000 annually, $13,500 being paid by a government agency and $22,500 by private industry. Under the new legislation she would be required to abandon one activity or the other. Brought before the Committee, Mrs. Rosenberg protested. "I have bent backward not to let anything interfere with my government work." She declared that the time given to her private clients had been taken out of her social life or her vacation. Mrs. Rosenberg also mentioned that she had taken the social security job with the understanding that she could continue to represent her private clients. This was confirmed by Arthur J. Altmeyer, board chairman, who further testified that "Mrs. Rosenberg is a most efficient regional director."

Although she seemed cleared of the charge that outside activities interfered with her successful discharge of government work, pressure of criticism continued. Accordingly, in September 1942, when Paul V. McNutt was considering her for a regional manpower post, Mrs. Rosenberg wrote Mr. Altmeyer stating that after December she would confine her paid activities "to my work for the Government." She wrote further: "I feel that my contribution can best be made through sharing in the administration of a program of social security, war manpower, and defense health and welfare agencies." Reportedly offered $100,000 by the radio networks for a two-month job as a labor adviser in the fall of 1943, Mrs. Rosenberg refused the offer, although she had more than two months' leave due her.

Soon after she took her WMC post the United States Employment Service was given the job of recruiting 20,000 workers for Henry J. Kaiser's '42 Pacific coast plants. Supervising this job of transferring manpower from one coast to another, Mrs. Rosenberg met with a number of technical problems. The Kaiser agents, however, expressed high satisfaction with the service and cooperation given in the matter by Mrs. Rosenberg's organization. One difficulty was not solved. She had refused to fill the original Kaiser order when she learned that no Negroes would be accepted into the Kaiser A. F. of L. union. She had then been assured that the company did not discriminate, and went ahead supplying Negro labor. But at least one West coast local refused to hire the qualified Negroes except as helpers and laborers.

The Kaiser drafting of labor, however, took care of only a small portion of New York's jobless, numbering 370,000 in the city alone. And Mrs. Rosenberg's efforts to ship workers to upstate defense areas, where there was a shortage of skilled labor, were met with considerable "prejudice" by employers. She therefore asked for the assistance of the Federal Advisory Council in breaking down these prejudices. The National Youth Administration, through vocational training provisions, and the Board of Education were also asked to cooperate in meeting upstate needs. Mrs. Rosenberg worked, too, through the Office of Production Management to get defense orders for small business in the city. On November 10, 1942, she reported substantial improvement in the situation.

A committee to make a state-wide study of New York State's farm problems, with special emphasis on the serious farm labor shortage, was appointed late in October 1942 by Mrs. Rosenberg. For temporary work during the harvest season several hundred men were recruited, chiefly Negro workers from Harlem with agricultural experience. In November the farm-labor committee presented its recommendations for meeting the year-round shortage. These included stabilizing labor not only for dairy and poultry farms, but for those producing essential fruits and vegetables; urging employers in factories not to hire workers on stabilized farms; removal of existing interstate barriers to employment of migratory workers.

In June 1943 Mrs. Rosenberg solved the "Buffalo manpower muddle" by devising a system of labor priorities, which has since been applied elsewhere. The problems created by the 27,000 New Yorkers whom the services expected to discharge as psychoneurotics before 1944 absorbed her attention in October, as she drafted plans for a consultation and referral service for the mentally unfit.

When asked how she managed to keep all her various jobs going, Mrs. Rosenberg said: "I delegate authority to other people in whom I have confidence and who do not come running to me with every little problem. Sometimes they make mistakes, but they don't make any more than I would if I were handling the matter myself." Most of her social security work is in the hands of a man "so capable that I can now give most of my time to various defense activities, and these, incidentally, are directly connected with social security." Probably the ability to let the problems brought up by one public job help solve those of another, as well as the successful delegation of authority, has made Mrs. Rosenberg one of the nation's outstanding women executives. Although she is often the only woman serving on special boards, she believes in hiring women—her own Social Security Board has a preponderance of women employees. "Men bend backward not giving women a chance," says Mrs. Rosenberg. "So if women don't give women a chance, it's bad."

The fact is that most men have learned to bend forward to give Mrs. Rosenberg a chance—or else. Her secret in getting along with and if necessary overriding the male contingent lies in looking soft, coy, charmingly feminine, but being tough as a teamster underneath and developing the ability to fight with words till her opponent falls for the count. Nor is her vocabulary limited. Alice Hughes writes: "When those soft feminine lips open up on a barrage of Pier 6 language, the listener couldn't be more shocked if he had been bopped over the skull with a bung starter. In a crowd of politicians Anna laps up every bit of masculine adulation that is rightfully hers by virtue of being petite and looking clingy. The minute the boys get set to relax, because she's just a frail little woman after all, Anna lets them have it." She has a way with women, too. "She has so much charm she doesn't have to hoard it," Cecelia Ager of *PM* says of her. "She has also energy, diplomacy, cajolery, common sense, decision, direction, toughness, sympathy, humor, and tact. By the time the other woman (the woman who's meeting her for the first time and is naturally hostile) has discovered that, curses, Mrs. Rosenberg is good looking, too, it's too late. She likes her anyway."

Mrs. Rosenberg spends four days a week in her New York office and two in Washington, where she often confers with the President and with political bigwigs or labor leaders, most of whom she knows by their first names. Abe Savage, her assistant, says of her office: "A hot dog stand would clean up from the persons coming and going." While phones ring and secretaries rush in and out for dictations that won't wait, Mrs. Rosenberg is glad to interview innumerable callers. She is a little over five feet tall, weighs less than 115 pounds, and is always smartly tailored. Prominent on her desk are two pictures: one of son Tommy, the other of her old friend Franklin Roosevelt '42. There is also a vase always filled with flowers, her "greatest extravagance" next, perhaps, to her hats, which are elegantly and radically feminine. It is said that she smokes cigarets in moderation, takes an occasional drink, and likes to mix with many people. She doesn't have much time for home life, but has a comfortable apartment on upper Fifth Avenue. As a hobby, she likes to cook. "I'm a good cook and can get up the best Hungarian dishes you've tasted," she boasts. Anna Rosenberg declares she is not a crusader or a reformer, only "there are a lot of things happening you just cannot sit by watching idly. I decided to do something about some of those things—and here I am."

ROSS, HAROLD W(ALLACE) Nov. 6, 1892- Editor

Address: b. New Yorker Magazine, 25 W. 43rd St, New York City; h. Wire Mill Rd, Stamford, Conn.

"Whenever he can't find anyone to play gin rummy with him," Random House reports, "Harold W. Ross, editor of the *New Yorker* Magazine, is busy writing his autobiography *My Life on a Limb*." Those who know the editor of the American *Punch*, as those who know about him, look forward to the inside story of the man who speaks "only to Wolcott Gibbs and God," but do not expect to see it soon.

Harold Wallace Ross was born in Aspen, Colorado, November 6, 1892, the son of George and Ida (Martin) Ross. Aspen, which was second only to Leadville as a silver mining camp, was, says Ross, "a very spectacular place. It was on the other side of the range from Leadville. It went flat with the collapse of silver in 1896, and everybody in town was broke, including my father." The family moved to Salt Lake City, Utah, where Harold's father, a well known mining man in the West for forty years, was a contractor, and as a side line, opened a wrecking company ("materials reclaiming"). Ross says his father "was pretty much a mining man all his life, his other interests being dilettante-ish. The trouble was, mining went out from under him, except for the big-scale low grade copper mining."

Harold attended high school for two years, was "something of a reporter at twelve or thirteen," writing on the school paper and doing other "reporting chores outside of school hours." "After two years of high school I drifted off into full-time newspaper work. . . I found high school too dull and newspapers glamorous (what with riding on the fire engines, the police patrol, and all) and I still find journalism glamorous," Ross explains. He worked from 1906 to 1908 as an apprentice reporter on the Salt Lake City *Tribune*, where he was a protégé of the managing editor, Frank I. Seifert.

In 1908, when Ross was sixteen, he left Salt Lake City to visit California, accompanied by an older boy. "The older lad ditched me with our joint capital in Albuquerque, New Mexico," says Ross, "and I hoboed my way to Needles, California. I wasn't a very good hobo, and the Santa Fe didn't have many trains in those days, and I walked most of the distance. At Needles, I got a job as timekeeper (being competent because I had done the same work for my father). I went back to Salt Lake City (as a first class passenger) but I didn't stay long, deciding to see the world.

During the next seven years Ross held a number of newspaper positions on papers all over the United States. He was with the Marysville, California, *Appeal* in 1910; the Sacramento, California, *Union* in 1911; the Republic of Panama *Star and Herald* in 1912. From 1915 to 1917 he served on the New Orleans *Item*, the Atlanta *Journal*, and the San Francisco *Call*. *Fortune* recalls that "he is best remembered around the Golden Gate—he was water-front man for the San Francisco *Call*—for his feat of having provided the local newspaper club with an elegant set of wicker furniture" which Ross had "cabbaged" from the Danish buildings of the Pacific Exposition. Of this period *Fortune* says, too, that Ross once chaperoned a past king of Thailand on a "see-night-life-incognito" tour and that he earned for himself the nickname of "Rough House."

During the First World War, Ross enlisted as a private in the Railway Engineer Corps. In Bordeaux he heard that the Army was about to launch a newspaper, *Stars & Stripes*, and he decided he would like to join the staff. Ross was a candidate for 2nd lieutenant at a training camp at that time. The *Stars & Stripes* was edited by enlisted men—not officers. After "much turmoil" Ross resigned from the training camp, became a private once again, and joined the editorial staff of the paper. Many different stories have been printed about Ross' part in running that illustrious journal. As Ross himself tells it: "To lay the apocrypha, here is how I came to be the so-called editor of *Stars & Stripes*. Our commanding officer had a nervous breakdown and the editorial department was left without authoritative direction. Six of us, Sergeant Alexander Woollcott '41, Private John T. Winterich (now colonel in the Army censorship section at Washington), Private Hudson Hawley, Private (Marine Corps) Albian A. Wallgreen (comic cartoonist), and C. LeRoy Baldridge (serious cartoonist), held a meeting to decide what to do. My idea, which prevailed, was that we should elect an editor and that editor would have full authority to give instructions to the others and to run the paper but could be removed at any time by a meeting of the six of us. My candidate for editor was Winterich but he backed out. Winterich was more the editor than anyone else, from start to finish, but he shied away from the personal contacts that went with the job. I was never fired by the staff and we finished the War that way. Winterich really did most of the editing, though. Woollcott used to say that after my election I sent the staff out on so many assignments and such distant ones that it never got to meet again."

When the War was over Ross sponsored an unsuccessful attempt to continue the *Stars & Stripes* as the *Home Sector* Magazine. He edited the *American Legion Weekly* (1919-24) until, according to Ralph Ingersoll '40, "he quit in a huff when he saw his journal heading into politics." (Others say that he left because he was not happy working for an organization paper "which in effect has almost as many editors as the organization has members.") In 1925 he edited *Judge* until the owners cut his editorial budget and then, turning down a lucrative offer to work on Hearst's *Cosmopolitan* Magazine, he set about to find the money for a weekly paper of his own devising.

The "Thanatopsis Literary & Inside Straight Club," which had started in Nini's in Paris, and which was publicized by Franklin P. Adams '41 in the New York *World*, was composed of a group of serious wits who lunched at the Algonquin Hotel and met Saturday nights at one another's homes to play cards." Most of the *Stars & Stripes* alumni belonged, as did a non-journalist, Raoul Fleischmann, one of the heirs of the yeast king. Fleischmann was also in the baking business, but he liked his literary friends better than his business acquaintances and he was, according to *Fortune*, a good gambler. It was mostly Fleischmann's money in 1924 which brought the *New Yorker* into existence.

The first issue of the *New Yorker* appeared on Thursday, February 19, 1925. The cover was decorated by a "supercilious antique in high stock and high hat, observing a butterfly through a monocle." (Drawn by Rea Irvin, the gentleman has since been dubbed Eustace Tilley, and his likeness is reproduced every year on the magazine's birthday.) At first the new magazine did not live up to expectations. "It was full of *Life* and *Judge* humor and half-baked Broadway gossip. It had neither good rhyme nor much reason. And it looked as if it had been made up by the office cat's knocking over the wastebasket. It was its own best joke."

In time, however, with the financial help of Fleischmann, who passed through a period of resignation to the fact that his money was lost for good, Ross found the right formula and the right writers to make the kind of magazine he had visualized. Gradually the journal became a unique advertising medium as well as America's foremost humor magazine.

The "heart" of the *New Yorker* is the part called "Talk of the Town" and written in part by Elwyn Brooks White, James Thurber '40 (for a number of years), and Russell Maloney. Selections from it have been reprinted in book form and included in textbooks for college freshmen who are learning prose style. Among the notables who have made the *New Yorker* what it is, and who have been given in return a reputation for wit, whimsy, and skill beyond that bestowed by any other American magazine, are James Thurber, Morris Markey, Wolcott Gibbs, Lois Long, Peter Arno '42, Helen Hokinson, and William Steig. In its cartoons, "news breaks," and some of its articles, the *New Yorker* is humorous, sarcastic, sophisticated, and often fantastic. Its stories and articles, however, more frequently than not have overtones of seriousness and social consciousness, especially since the outbreak of the Second World War. Many of the contributors whose single stories have blossomed into series have achieved book publication and dramatic and cinematic acclaim for work originally done for the *New Yorker* Magazine. Leonard Q. Ross '42 with his H*Y*M*A*N K*A*P*L*A*N stories, Emily Hahn '42 with her Mr. Pan tales, Ruth McKenny '42 with her anecdotes about her sister Eileen, Richard Lockridge '40 with his saga of Mr. and Mrs. North, the late Clarence Day with his "life with father" sketches, and many others received their reputation as humorists in the pages of the *New Yorker* Magazine.

Pach Bros.

HAROLD W. ROSS

The *New Yorker* Magazine in June 1942 had a circulation of 64,655 in New York City and of 127,932 in the rest of the nation. Its financial success is attributed partly to the genius of Ross, who was able "to make big business of frivolity," and partly to its excellent promotion by John Hanrahan, part owner of the magazine (Ross modestly takes exception to the terms "big business" and "frivolity" in discussing the *New Yorker*. "We have never been a big business; we're a peanut business compared to the other magazines. And I don't think we're so frivolous, either. My personal opinion of our promotion is that it

ROSS, HAROLD W.—*Continued*

was terrible and probably gave unobservant people the notion that we were frivolous.")

As *Fortune* pointed out in 1934, a merchant can "at $550 a page call his advertisement to the attention of some 62,000 active and literate inhabitants of the metropolitan area; while to reach the same group, either through a national medium or through a local paper, would cost him several times that amount." The 1943 advertising rates are $550 a page for the Manhattan edition and $1,250 for the combined edition, which reaches 192,589 readers. The *New Yorker* prints two editions, local and national. Its national advertising includes a great many liquor and luxury items. Its local advertising includes entertainment, department-store notices, and other purely New York items. Once the magazine was on its feet financially it rose steadily in circulation and profit, weathering the depression and a consistently erratic editorial budget.

The *New Yorker* has attracted editorial and critical notice from a number of its fellow publications throughout its career. ("The *New Yorker* is unique of its kind and it is this rather terrifying uniqueness that regularly fascinates critics and reviewers, so that no critical season is complete without at least one learned article attempting to define what makes the *New Yorker* tick.") In 1934 *Fortune* Magazine devoted a large part of its August issue to a discussion of the *New Yorker* Magazine and its staff, and in 1943 a similar article was published by *Harper's*. Writing in *The Nation* in 1942, Lionel Trilling said of *New Yorker* fiction that "one of the admirable things about the *New Yorker* Magazine" is that "it insists on continuing the old polite tradition of literature. The *New Yorker* is always aware of its readers and knows just who they are—the intelligent, comfortably fixed, urbane, moral people, who dress in good taste, enjoy all the arts but also all the sports, and in their politics are liberal but not rash." Ross, on the other hand, maintains that the *New Yorker* is not "aware" of its readers—"It's the other way round with me," he says. "All I know about getting out a magazine is to print what you think is good (or as near to your standard as you can get) and let nature take its course: if enough readers think as you do, you're a success, if not you're a failure. I don't think it's possible to edit a magazine by 'doping out' your audience, and would never try to do that."

In a discussion of *New Yorker* fiction in the *New Republic*, Stanley Edgar Hyman wrote in 1942 that "the two outstanding characteristics of the *New Yorker's* serious stories are their strong social edge and their surprisingly high quality. . . True, the *New Yorker* story is almost as rigid a form as the *New Yorker* editorial paragraph, and there is little or no place for experimental or 'different' writing, but within these limitations the stories are excellent." With the entry of the United States into the War, Hyman comments, "the *New Yorker* suddenly went all-out." " 'The Talk of the Town' was given over entirely to tributes to Colin Kelly and comparable subjects, most of the cartoons were devoted to bespectacled Japanese, and the magazine even dug up a bad story . . . that managed to mention Pearl Harbor before the smoke had cleared away. This hysteria gradually abated, 'The Talk of the Town' returned to a relative if somewhat more serious normal, the cartoonist recalled that other things besides the Japanese might be funny, and no stories quite so frantically topical turned up."

Marjorie Farber, writing in the *New Republic* in 1943, however, decided that it might be time for liberal reviewers to drop their "older-brother attitude" toward *New Yorker* fiction, whose "psycho-sociological writers have developed a new formula for presenting social problems. The older one depended on the reader's identifying himself with the underdog against the villain, society. . . [But] no sensible reader is going out of his way to feel guilty if there is any loophole for feeling indignant instead. . . To plug up these loopholes and eliminate all possibility of villains, the *New Yorker's* psycho-sociological writers have decided to make the liberal reader identify himself not with the underdog, but with the best element in society—that is, himself. He is then caught in a humiliating crisis where his liberalism breaks down, exposing the hidden prejudices, ambition, snobbery, which even the most enlightened members of this society begins to imbibe almost with his mother's milk."

The "final clue" to the *New Yorker* has been described as "that paradox of inclusiveness." "If you think of it as a funny paper or a snob paper, what are you going to do with its strong weekly dose of social criticism; if you think of it as a slick-paper *New Masses*, Sally Benson '41 comes up behind and trips you. Its outstanding feature is a catholicity wide enough to include prim moral judgments and wholly amoral reporting; sharp social satire and columns telling what it assumes to be its readers where they can get thousand-dollar hairbrushes with each bristle torn from a different Siberian boar; some of the best and toughest contemporary writing and incredible silliness; maniac humor and bitter attacks on injustice."

Harold W. Ross has been married three times. His first wife was Jane Grant whom he met in Paris during his *Stars & Stripes* days. She was a reporter for the New York *Times* and a noted feminist. He and his second wife, the former Marie Françoise Elie, were divorced in 1939. One daughter was born of this marriage. In 1940 Ross was married to Ariane Allen, who is a graduate of the University of Texas and has also attended Barnard College. She studied dramatics at school, and hoped to become an actress.

Although the average reader of the *New Yorker* has never heard of Ross and his name does not appear anywhere in the magazine except in the semi-annual statements required by law, he has remained the magazine's chief editorial force and the ultimate authority insofar as its editorial policy is concerned. According to *Fortune*, "Ross lives on his nerves. Working best in a rage, his favorite trick is to prop someone's mistake in front of him on his desk—a picture with a silly caption, a misrouted letter. For months, whenever the culprit appears, Ross can refresh his rage by gazing at the evidence of blunder, can keep his adrenals toned up. He is full of phobias—afraid of crossing streets, afraid to the point of acute terror of the suggestion of earthquake. His native prudishness is a prejudice that has probably helped the magazine more than it has hurt it. The only dirty jokes the *New Yorker* has printed are jokes he did not understand."

As an editor Ross has been respected as well as feared and disliked. John R. Tunis remembers that from the beginning Ross' remarks on the margin of manuscripts were "always pungent and to the point. He had also an irritating way of making you explain the simplest details in your piece, of pretending to be dumb. 'If it isn't clear to me it won't be to others,' he'd say." "His judgment of value, of importance, timeliness, effectiveness," another observer commented, "is exceptional to the point of brilliance. For all his strange record with fellow human beings, those who are nearest him have great loyalty to him. If there is eternal schism in his ranks, many have a tremendous personal affection for him. He is the one man whom the *New Yorker's* finest craftsmen would prefer to have criticize their work and to edit it. Without him the magazine might easily disintegrate even today, and his directors know it." One of Ross' favorite admonitions to writers is: "Use the rapier, not the bludgeon." The "apparently effortless" prose of the *New Yorker* is achieved after considerable sweating and polishing have been done by Ross and his editors. As *Harper's* points out, "no Lucely-written phrase finds its way into the magazine, unless with malice prepense."

Ross is five feet eleven inches tall, he tells us, and he weighs 160 pounds. His face has been described as "made of rubber which he stretches in every direction. Out of the lower half hangs a huge Hapsburg lip to which cigarets stick. Widespread teeth diverge downward. Until civilization overtook him a few years ago, ramrod straight hair rose from his forehead, diverged upward and outward. It was Ina Claire who once remarked that her life's ambition was to walk through it barefoot. Under heavy eyebrows Ross' eyes are fierce, shifty, restless. He is nervous beyond belief. Wildly, with great sweeping gestures, he talks—with furious intensity, with steady, unimaginative profanity. He has charm—and the vitality of a mad bull." In an article on Ross and his magazine in *Harper's* Dale Cramer and George R. Clark wrote: "Staff members of the *New Yorker* have—with reason—likened their habitat on the nineteenth floor of 25 West 43rd Street to the slum area of a rabbit warren. . . Ross himself occupies a large barny office whose outstanding decoration for many years was the head of a department-store dummy, crowned with an old wig, whose name was Sterling Finny. Ross is guarded closely by a squad of editors and secretaries. Some staff members of years' standing have talked with Ross no more than half a dozen times."

With his wife, Ross lives in the country near Stamford, Connecticut. In the summer of 1942 he had occasion to write to the Governor of Connecticut a letter, which, *Time* Magazine reports, began, "I address you in a state of considerable panic and alarm," and ended, "I write in sheer terror." "In between was a communication having to do with an invasion, not by a foreign enemy, but by New Yorkers. Mr. Ross understood that a park might be laid out near his estate outside Stamford, and what he feared was picnickers from Harlem and The Bronx. . . *PM* called Mr. Ross undemocratic. The president of the Borough of The Bronx called him 'a grandee,' a 'so-called editor,' and . . . a 'creature.' Injured, Mr. Ross protested that he wasn't against Harlem and The Bronx in particular, but against picnickers." "I don't care whether they're from The Bronx or from Indianapolis, Indiana," he said. "They are extremely numerous."

RUBICAM, RAYMOND (ru'bĭ-c'm) June 16, 1892- Advertising executive

Address: b. Young & Rubicam, Inc, 285 Madison Ave, New York City; h. 430 Park Ave, New York City; Rolling Ridge Farms, Danboro, Pa.

"Probably no force has had a more profoundly creative role in determining the cause and rate of economic development in America than modern advertising. It is a curious fact that while hundreds of writers of plays and novels have become well known to the public by name through the press, the men who influence the nation's habits, living conditions, and daily lives more than any group of literary figures are anonymous." One of these is Raymond Rubicam, whose life reads like the traditional Horatio Alger story. Not only has he climbed from the bottom of the ladder to the top rung (Young & Rubicam, Incorporated, of which he is head, does the largest volume of business in the United States—its total billing of accounts amounts to between forty and fifty million dollars a year) but, according to the citation

Bachrach

RAYMOND RUBICAM

accompanying the Gold Medal Award given to him (1938) by *Advertising & Selling*, he possesses all the virtues and abilities of an Alger hero.

Advertising & Selling gave him that honor in spite of the fact that he is the largest stockholder in *Tide*, a rival trade magazine. The citation stated that the jury of awards (whose members included Mrs. Ogden Reid '41 of the New York *Herald Tribune*, Henry R. Luce '41 of *Time*, and Richard Compton of Compton Advertising, Incorporated) had considered not only his services as a brilliant copy writer but also such qualities as "thoroughness, straightforwardness, loyalty to associates, encouragement to young people in a supremely difficult business." Further praise in the citation calls Rubicam "one of the few men who would rather be right than President," and states that though he is not the possessor of a formal scientific education, "he is none the less one of the most scientific advertising men who ever lived."

Born in Brooklyn, New York on June 16, 1892, Raymond Rubicam is the son of Joseph and Sarah Maria (Bodine) Rubicam, whose German ancestors settled in Germantown, Pennsylvania in 1725. The original spelling of the family name was "Rubencamm." They were Lutherans; four members of his ancestral tree were Lutheran ministers. Rubicam comes naturally by his writing talent. His father, after failing in an importing and manufacturing business which he had inherited, became a trade journalist; his mother contributed poetry to *Godey's Lady's Book*. After the death of his father the family were scattered to various parts of the United States. Raymond attended school in New Jersey, Pennsylvania, Ohio, and Colorado. When twelve he went to live with an elder brother in Denver. He had done odd jobs since the age of eight, and his formal schooling ended at fifteen when he took a full-time job as a shipping clerk's helper at $5 a week.

Young Rubicam had hoped to study law but, unable to obtain a college education, his ambition turned toward writing. While still in knee-pants he applied to every city editor in Denver for a reporter's job. He was told to come back later, but "they did not laugh at me," he recalls gratefully. For the next eight years he worked at anything and everything, devoting what leisure he had to study so that he might achieve his ambition to become a writer. With O. Henry for an exemplar, he decided to take to the road so that he might know the people of America. He set out for Germantown. During his one-year journey toward his destination he worked as bellhop, usher, movie machine operator, door-to-door canvasser of colored enlargements of family portraits, and as "chaperon of cattle en route to the East." Some of the time he led a hobo's existence.

His free-lance feature stories won him a job in nearby Philadelphia as newspaper reporter at $12 a week. But he had not forgotten his ambition to write short stories; sending two of his stories to Gouverneur Morris, he asked for the famous writer's opinion of his talent. "Morris' answer began one of the great years of my life," says Rubicam. He had analyzed the stories; so had his neighbor, Richard Harding Davis. Their opinion was that he could become a successful writer, even a great one, but Morris advised the twenty-one-year-old Rubicam to stop writing fiction until he was more mature. For a year they corresponded, Morris guiding and directing him in a course of reading and writing. Rubicam considers Morris' help one of the most "generous things a man could do for a complete stranger."

When Rubicam fell in love and wanted to get married, he needed more money. He therefore left his newspaper job to sell automobiles; he succeeded as a salesman, but didn't like it. Advertising copy writing seemed to be a happy compromise, an outlet for his creative urge through words and a speedier route to an income sufficient for married life. He wrote two pieces of advertising—one about tobacco in Ring Lardner style, one about a motor truck in a Walter Lippmann '40 "reason-why" style. With dogged persistence, Rubicam made a list of agencies from the telephone book and, equipped with his tobacco and motor-truck copy, called on the first agency listed under "A."

The receptionist, after inquiries in the inner sanctum, told him to leave the copy and return the next day. The time and the place were Philadelphia in 1916—the agency opened at eight o'clock. Rubicam arrived punctually. He was told that the boss would see him but didn't know when. He waited (with an hour for lunch) until the five o'clock closing time. "For nine business days hand running," says Rubicam, "I sat in that lobby—on a bench so hard that I can still feel it. On three different days the boss passed me, amazed me by calling me by name, but said he couldn't see me that day. By the ninth day going to that office had become a sort of hypnosis. But while I was full of hope each morning, I had been getting madder toward the end of each day. At the end of the ninth day, I exploded. After rehearsing for the receptionist, I went home and wrote the boss a letter calculated to produce an immediate interview or a couple of black eyes for the writer." The letter, delivered in person, brought the boss out of his seclusion. Waving the letter, he said: "Those ads you wrote didn't amount to much, but this letter has some stuff in it."

He got the job and stayed with the firm—the F. Wallis Armstrong Company—for three years. He had asked for a six months' trial, with a salary at the end of the period big enough to marry on, or else a prompt dismissal. On November 30, 1916 he married Regina McCloskey—for he had made good. In 1919 he accepted a better position with N. W. Ayer & Son, then the largest advertising agency. Four years later he was among the top-flight copy writers of advertising. Two of America's best known slogans, Steinway's "The Instrument of the Immortals" and Squibb's "The Priceless Ingredient," came from the "fertile mind of twenty-seven-year-old Raymond Rubicam while employed with Ayer." Another famous slogan he originated is "No Rolls-Royce has ever worn out." In 1923 he and John Orr Young, another Armstrong-to-Ayer man, founded Young & Rubicam, from which Young has long since retired.

In 1916, when Rubicam entered the field of advertising, the watchword of success was "dominant space"—bigger ads and bigger circulation. But dominance by space was hard to maintain—competitors stepped up their space too. Large scale competition between advertised brands had begun. For the advertising agency it was the era of brilliant super-salesmen. They led and ruled the agencies. When Rubicam founded his own agency he decided to change the order of things. He would give more credit to the creative artist, and in advertising would put more emphasis on skill and less on bulk. The motto was not to be "How much?" but "How best?" "The trouble with advertising is that it reads too much like advertising," he concluded.

Admitting that written ads were after all only salesmanship in print, he pointed out, "But the way to sell is to get read first and the way to get read is to say more about the reader and less about yourself and your product. Mirror the reader to himself; then show him afterwards how your product fits his needs." His theory was called the "indirect copy approach." An important ingredient in the new technique is "contained in the dictum to *know* more as well as say more about the customer." Rubicam pioneered in new methods of research regarding people's preferences, prejudices, their reading and radio listening practices. For the research work, Dr. George H. Gallup '40 was engaged in July 1932. Today, under Gallup's supervision, four hundred field investigators are constantly checking consumer-interest in newspapers, magazines, and radio. "Rubicam knows he cannot turn the art of advertising into an exact science, but he works hard and spends money freely to get some of the exactness of science into it. His research unit, headed by Dr. Gallup, is a manifestation in that direction."

Six months after Young & Rubicam's founding came its first big account—from General Foods. During negotiations, the General Foods man asked: "If we give you a chance what product of ours would you want?" Typical of Rubicam was the answer: "Your toughest one." That product was Postum. Young & Rubicam's campaign for it won the Harvard Award for the most distinguished campaign of the year. Other General Foods products followed, but Rubicam steered clear of having a one-client agency or a one-man organization. Profits were plowed back into the firm; extra copy talent was hired; a leading art director was called in; and a leader in merchandising was invited to join the organization to head his own group of specialists.

By 1935 the agency was turning out the advertisements for Packard motor cars, Gulf Oil, Parke Davis drugs, General Electric radios, Arrow shirts and collars, Travelers Insurance, International Silver, Jell-O, Borden's dairy products, Johnson's baby powder and many other nationally known products. Today Rubicam makes no pretense of writing or master-minding the huge volume of advertising copy which comes from his firm, although he first built his reputation on copy. But he is credited with innovations in the field, including the development of so-called "sequence-picture copy," an adaptation of both dramatic and comic-strip technique to advertising. He was the first to use Sunday comics as a medium of advertising. "Mr. Coffee-Nerves" and "Little Albie," two comic series originated for Postum and Grape-Nuts, are early examples. Current "sequence-picture" campaigns in which Young & Rubicam use dramatic conflict and humor are those now running in leading publications for such products as Sanka Coffee, Arrow shirts, Johnson's baby powder, Sanforizing, Statler Hotels, and Castoria. Not all of the agency's "human interest" copy employs this technique, however, as witness such campaigns as those of Metropolitan Life, Cannon sheets, Postum, International Silver, Parke Davis, Swan Soap, Four Roses Whiskey, and other products.

Young & Rubicam use all advertising media (principal ones: newspapers, magazines, billboards, and radio) for their campaigns. When a new account is acquired the market research and merchandising departments make a study of the product to determine its salable qualities. The original analysis usually requires months; follow-up studies are periodically made. Some Young & Rubicam campaigns employ all four media; most use two or three. Choice of media depends on several factors: type and price of product, size of market opportunity, amount of money available for promotion.

In radio, as in printed advertising, Rubicam recognized early that competition for public interest would soon put a premium on resourcefulness and creative skill; consequently the agency staffed itself liberally to discover and originate shows and to improve and direct production at a time when most other agencies were leaning heavily on the network or other outsiders for this service. Also consistent with his activities in printed advertising, Rubicam made extensive use of research to learn what people like and do not like to hear on the air. This extended to the com-

RUBICAM, RAYMOND—*Continued*

mercial or selling parts of programs as well as the entertainment, and Young & Rubicam "commercials" have been repeatedly cited for lifting radio selling off the offensive plane.

There are seven units in the radio department. One of the units is the talent division, which is responsible for new and effective program ideas, uncovering new personalities, and the revision of existing programs. Talent scouts cover every form of entertainment from Broadway shows to non-sponsored radio programs in their search for new performers. Dinah Shore '42, Kenny Baker, and Dennis Day were all given their first big network opportunity on Young & Rubicam shows. The agency first used Henry Aldrich as hero of a seven-minute incidental sketch on the Kate Smith '40 program, but recognized the idea as a potential radio leader and persuaded Clifford Goldsmith, who had first created the character for a Broadway show, to try his hand at a full half-hour radio serial. *The Aldrich Family,* one of the top radio programs, was the result. *We, the People* was another Young & Rubicam discovery. The agency's creative contribution varies with different shows, its role being comparable to both the play producer's and the play doctor's on Broadway. Jack Benny '41 was bought long before he was a leader; Kate Smith, Burns '40 and Allen '40, *Duffy's Tavern,* and most other Young & Rubicam productions have had substantial increases since going on the air through this agency.

There is also a production division—responsible for casting, directing, and staging programs. Some of the directors and producers have been developed entirely from radio experience; others have been engaged from the legitimate theatre, motion pictures, and the field of music.

Radio programs produced by Young & Rubicam for the 1943-1944 season include the following: The Dinah Shore show with comedy skit by Cornelia Otis Skinner '42 and Roland Young; *We, the People*; *Duffy's* with Ed Gardner '43; Kate Smith hour; Edwin C. Hill '40; the John Charles Thomas '43 show; the Jack Benny show; *The Aldrich Family*; *Mystery Theatre*; *Those We Love*; *The Battle of the Sexes*; *Musical Telequiz* (in Canada); *Great Moments in Music*; *Bulldog Drummond*; *The Silver Theatre*; *We Love and Learn*; *Bright Horizon*; Burns and Allen; Eddie Cantor '41; *Sherlock Holmes*; *Joyce Jordan, M.D.*; *The March of Time,* and others. The new version of *March of Time* which went on the air during July 1942 was originated by the Young & Rubicam staff, and has more than twice the audience of the former show.

Building the firm of Young & Rubicam to its present importance has not been a one-man job, but Rubicam is still called what he first was—"guiding genius and chief spark plug" of an organization which has grown from two to hundreds of creative, research, and executive workers (800 employees in all) with branches in Chicago, Detroit, San Francisco, Hollywood, Toronto, and Montreal. He has won the respect and liking of his employees because he has shared generously credits and profits. Thirty-eight associates own, or have set aside for them, eighty-two per cent of the common stock, entirely acquired without direct out-of-pocket investment. These thirty-eight are heads and associate heads of departments, the leaders of the business. There is no absentee ownership. A bonus plan and a trust fund help "to provide for the future" of all employees after three years of service.

Although Rubicam did not fulfill his early ambition for a literary career, a piece of writing he did in 1942 has been called a wartime masterpiece. "Johnny Russell—In Memoriam," a tribute to a former office boy killed on the day of his graduation as an officer in the United States Air Forces, has been given by admirers of the piece a voluntary circulation of more than twenty-five million, broadcasts on two national network shows, and on forty or more individual radio stations. It has been included in a school textbook on war subjects, *They Told Their Story*, published by Harcourt, Brace and Company. David Selznick '41, by a payment to Johnny Russell's mother, has acquired from Rubicam the right to the use of the text in an episode of his next picture, *Since You Went Away.* Rex Stout, chairman of the Writers' War Board, considers it one of the most valuable pieces of patriotic propaganda put out by the board.

Other contributions of Rubicam toward the war effort include six months spent in the position of special assistant to Paul McNutt '40 of the War Manpower Commission organizing a public relations division. He recently served as chairman of a committee preparing anti-inflation advertising for Justice Byrnes '41 and the publishers of 481 national magazines, which donated space with ninety-one million in circulation to carry the messages. His agency has donated its services to the Treasury Department on all three War Loan Drives, has also done volunteer campaigns or research for the Department of Agriculture on farm labor recruitment and for the War Production Board on salvage, and recently became the official advertising agency of the War Department on WAC recruiting. In 1941 Rubicam was a director and Greater New York chairman of United China Relief. He is a member of the executive committee of the Boy Scouts Greater New York Council, a director of the American Arbitration Association and of the National Better Business Bureau. He is a member of the Sons of the Revolution and an honorary member of Alpha Delta Sigma. Rubicam heads two businesses in addition to Young & Rubicam: he is chairman of the board of Tide Publishing Company and of Audience Research Institute, of which Dr. George Gallup is president, and which conducts public opinion and attitude research on motion-picture subjects for leading producers.

By his first marriage, which ended in divorce (1939), he has three daughters—Kathleen Bodine, the eldest, married to Lieutenant Colonel John D. Witten; Jane Collins, now Mrs. Judd L. Pollock; and Anne Wilson Rubicam. On September 16, 1940 he married the former singer and actress, Bettina Hall, who sang leading roles in the American Opera Company and later in such musical comedy favorites as *The Cat and the Fiddle* and *The Little Show.* Rubicam is a well-built man, weighing

154 pounds, and is five feet seven and a half inches tall; his hair, once brown, is graying. His brown eyes reflect his alert mind. Rubicam tells us that he is actively religious, though not now affiliated with any church, a Republican who "reserves the right to go off the reservation." Once a six-handicap golfer, he gave up the game at forty when he bought his first farm, to which several others have been added to make Rolling Ridge Farms, at Danboro, Pennsylvania, where he breeds Aberdeen Angus cattle and Berkshire hogs. His writing plans for the future include a book on "new job and career opportunities in the United States and in other countries for those discharged from the armed forces and from defense work at the end of the War."

REUVEN RUBIN

RUBIN, REUVEN Nov. 13, 1893- Artist
Address: h. 40 E. 58th St, New York City

The artist, according to Reuven Rubin, is among the happiest of men. In spite of the privations he may have to endure, a man with paints and canvas is a man to be envied. Furthermore, he says, "happiness is to be found everywhere; it is such a tremendous thing that it can be shared with others." "I do a painting; I show it to my wife, my family, or a friend; they are pleased, and I am also happy."

It is in Palestine, where he has lived for many years and which he considers his home, that Rubin loves most to paint. He has dedicated his talents to the interpretation of the ancient spirit of the Holy Land in a modern idiom. The founder of the group of artists who comprise a school of Palestinian art, Rubin has been called "The Gauguin of Palestine." He is not as successful in attempting other than Palestinian subjects, for critics found the few New York scenes that were included in a showing otherwise entirely Palestinian in background "lacking in the emotional quality which has given the remainder of the exhibition a distinctive and personal appeal." Few painters, however, wrote the critic of *Art News*, "have shown the essential spirit of Palestine, plus a *je ne sais quoi* that is deeper, better than Rubin."

Rubin is not a native of Palestine, and he did not see it until he was seventeen. He was born in Galatz, Romania, on November 13, 1893, the son of Joel and Fanny (Rabinowitz) Zelicovici. Since childhood he has signed his paintings with the name Rubin, which later in life he adopted as his family name. All his paintings are signed with but one name—Rubin—in Hebrew and in Latin characters.

In the Romanian high school which he attended, Rubin majored in economics. Drawing, however, had been his favorite occupation ever since he was a child, and this pastime later developed into his most engrossing interest. At the age of seventeen, "eager for adventure," he went to Palestine to paint the ancient sites of Galilee and Judea. Soon anxious for real learning, he left the Orient and went to Paris. There he began the study of art at the École des Beaux Arts and the Academie Collarossi. He remained in art school for only one year, and with that year his formal training ended. The problems in his painting which were yet to be solved were worked out by himself; and he justly considers himself a self-made, self-taught artist.

After his stay in Paris the young man traveled extensively for a time. He spent a year in Italy and returned to his native Romania to see his family just as the First World War was breaking out there. Since it was a hard time for artists, Rubin proved that he was capable of being an efficient businessman as well as a painter. He worked intermittently as a manager in a leather factory, a wine agent, a corn merchant, and a dealer in furs. When the War ended Rubin decided that Palestine, where he had lived previously, was the country in which he wanted to make his permanent home. In 1922 he settled in Tel Aviv, becoming one of the first settlers of that city. His greatest pleasure has been to watch this small community grow into an important center of Palestine. According to William Schack, Rubin became the leader of the group of Jewish artists, who, settling in Palestine, have brought to its interpretation the fresh vision of modern art. "With his keen eye, his love of the new-old land and his great energy, he has been the first to stake out his artistic claims, and, in the intensive exploitation of this virgin soil, to find himself as man and artist."

In 1921, backed by Alfred Stieglitz['40], Rubin for the first time showed his work in New York. This first exhibition for the most part dealt with the horrors of war. His second one-man show in New York

RUBIN, REUVEN—*Continued*

(1928), which showed work done only in Palestine, was received more favorably. At the time his painting was in the primitive vein, his style was extremely simple, with broad sweeps of color, and his work was invariably compared to that of the Douanier Rousseau. "Utterly devoid of sentimentality," Schack commented in *Creative Art*, "Rubin has been able to paint Palestine in more rich and varied aspects than ever the eye of pious pilgrim beheld it, to record more vividly than any facile Orientalist the profound picturesqueness of folk and country."

Rubin exhibited many times afterward in New York as well as in Paris and other important art centers in the United States and abroad. (He is also represented in many museums and collections. In 1943 the Museum of Modern Art in New York acquired a painting, *The Flute Player*, for its permanent collection.) As an artist he is a romanticist, with a tinge of mysticism in his work. His romantic character, critics find, is not "torpid," but infused with vitality. Color, the most seductive feature of his art, is brilliantly used. His landscapes are drenched with luminous tone and shimmer with the hot white light characteristic of the region he loves to paint. He has, however, been criticized for an "occasional thinness of color, flatness of figure, or literalness of landscape." Some critics have found his figure pieces less appealing than his landscapes and have called them "tenuous"; others find his figures impressive, and his landscapes merely "charming." Movement, impasto, and rich pigment are characteristic of Rubin's art—in all of his pictures he makes design and technique play a part in creating the mood of his subjects. Rubin, Edward Alden Jewell wrote in the New York *Times*, is "a painter of air, of colored air with strange fourth dimensional transparencies: a painter of sharply communicated personality, who has decidedly his own way with paint. All is fluid, a whole fluid world swimming in light—and this fluid world is Palestine."

Most critics find Rubin's style individual. Although his earlier paintings show the influence of Matisse, Dufy, and Henri Rousseau, in the last ten years, he writes us, he has completely changed his style, and has developed a strong and powerful technique all his own. A biographer and critic, George S. Hellman, has written about Rubin: "This man, who is also a poet and a sculptor, is assured of his place as a fortunate discoverer who has had the genius to record in terms of beauty a land that beguiles the imagination of all the world. . . "

On one of his many trips Rubin met Esther Davis, an American girl who had won a Mediterranean cruise as prize in a college oratorical contest. They were married in Palestine in 1930. That same year, Rubin says, he fulfilled a longfelt wish to help in the revival of that ancient land by planting an orange grove near Tel Aviv.

Six feet tall and thin, "with sparkling eyes and a mop of wavy gray hair that is not unlike the olive trees he loves to paint," Rubin has been described as a picturesque character. He is said to be master of half a dozen languages and "ready to sing the praises of the Holy Land in any one of them." In his youth he wrote poetry and also worked as a sculptor, and lately he has done some stage designing for theatrical groups in Palestine, especially for the Habima Players. Although he has lived in the United States only since 1940, the country is not really foreign to him, since he visited America many times before finally coming to live here.

RUBINSTEIN, HELENA 1882(?)- (rü-bin-stīn hə-lē′nə) Beauty culture executive

Address: b. 715 Fifth Ave, New York City; h. 625 Park Ave, New York City; Greenwich, Conn.

Most men do not realize that in a single year American women spend more than a half billion dollars on cosmetics alone. Statistics reveal that during the year 1941 $517,500,000 was spent on powder, lipstick, perfume, cold cream, etc., by approximately seventy-five per cent of the women of the United States. In one year $20,000,000 is spent for lipstick; $60,000,000 for cold cream; and the same amount for face powder. Beauty, like steel, food, or clothing, is a commodity. With all its ramifications of beauty parlors and cosmetics counters, the beauty industry is one of the twenty top industries in the United States, ranking, in pre-War years, just below rubber. Wartime has not harmed the beauty industry; in fact, increasing amounts of cosmetics are being purchased by women, particularly in defense areas. Leaders of the War Production Board feel that in the midst of war, such stupendous expenditures are hardly justified, "even on a basis of morale." Doctors feel, however, that make-up for women is "an essential non-essential," while psychiatrists say that by "depriving a whole nation of women of their creams and rouges you would actually produce a wholesale sense of insecurity."

One woman who has labored to keep the American woman from such a sense of insecurity is Madame Helena Rubinstein. The almost universal desire for beauty and youth by women the world over has made it possible for her to become, in the words of Elaine Brown Keiffer of *Life* Magazine, "perhaps the world's most successful businesswoman." Madame Rubinstein says that she has netted more than $25,000,000 during forty-five years of business. This huge sum was realized entirely from the "sale of creams and lotions, at fancy prices, across the counters of stores." As a result, Madame Rubinstein's name "has become a boudoir word in four dozen countries and millions of homes. The sleek little salon in New York is the capital of the world-wide beauty business which she built and now runs with autocratic success."

Helena Rubinstein was born in Kraków, Poland, one of eight daughters of a middle-class Jewish family. Her father, Horace Rubinstein, was a merchant, and her mother was Gertrude (Silberfeld) Rubinstein. Most women in the beauty business hide their birth dates. Helena Rubinstein is no exception, but *Who's Who in American Jewry* gives 1882 as the year of her birth.

Kraków did not have much to offer the amibitious Helena and in 1902, at the age of twenty, she left for Melbourne, Australia, to visit relatives. Her career proper started when she noticed that most Australian women had dry, weather-beaten, sallow skins, caused by the difficult Australian sun and heat. Her own complexion was creamy white, and she attributed it to a cold cream she had been using in Poland since girlhood. This cream, a stimulating type, which she first called Valaze Cream and later called Skin Clearing Cream, is still part of the Helena Rubinstein line. In 1938 the name was changed again, this time to Wake-up Cream, following a ruling by the United States Food and Drug Administration.

In those early Australian days Helena gave away her supply of cream to friends. The canny girl, seeing that women were enthusiastic, then sent to her mother in Poland for a supply of the cream, and opened a shop in Melbourne. She added other preparations for skin and hair and found her business a tremendous and instant success. A year and a half later, at the age of twenty-two, she was able to leave Australia to launch her business in Europe with $100,000 capital, she says. She left her sister in charge of the Melbourne shop, while she (armed with a growing book of cosmetic recipes) went to study with dermatologists in Vienna, Dresden, Berlin, Munich, and Paris. In 1908 she decided to open a salon in London. Everyone told her that she would be a failure in this conservative city where the use of lipstick was considered socially taboo, but she disregarded such advice. She converted Lord Salisbury's house into a beauty salon, fitted it with expensive equipment, and soon began to attract the most fashionable ladies of London society. Princesses, members of the aristocracy, noble women from the continent, she says, "beat a path to her door." That year two other distinctions came to her—she married an American chemist, Edward J. Titus, and she was cited as "the best-dressed woman in London."

From London to Paris was an easy step and by 1912 Miss Rubinstein was ready for that center of fashion. All the time she was adding new creams, perfumes, and lotions to the line of cosmetics made under her name. Two years after she opened her Paris salon she came to the United States. She says she "found the appearance of American women appalling as I observed their 'purple noses' against dead white skins." By 1918 she had salons located in New York, Chicago, Boston, Los Angeles, and other metropolitan cities. That year she began to sell her products in department stores, and she also employed women to act as her sales representatives, these being, she says, the first traveling saleswomen to be engaged anywhere.

Charmante Studio, Inc.

HELENA RUBINSTEIN

In 1927 she opened a salon in Milan, Italy; the next year she equipped two others, one in Vienna and the other in Toronto, Canada; and two years later she opened one in Rome. In 1936 the elegant salon at 715 Fifth Avenue in New York was ready. It contained "an impressive staff of physiotherapists, make-up and skin care experts, dieticians, gymnasts, a physician, coiffure experts, etc." After the Second World War started Madame Rubinstein turned her interests from Europe to South America. In 1940 she opened a salon in Rio de Janeiro, Brazil, and in the spring of 1943 she was preparing to leave by plane to Buenos Aires to open still another salon. She had not neglected the war workers in Washington, D. C., either.

These salons, artfully and expensively decorated, with equally decorative staffs, are known as "treatment houses," and all lose money, says *Life* Magazine. They "exist to promote the Rubinstein line and to assure its standing in the topmost bracket of a snobbish industry." In addition to the salons almost 3,000 shops and department stores sell Rubinstein products.

Madame Rubinstein is constantly enlarging the number of these products and introducing new ones with great promotional fanfare. By early 1943 she had about 160 products in her complete line. Alcohol and nylon stockings have gone to war, and to take their places Madame Rubinstein has perfected formulas for such products as solid cologne and cream perfume, neither of which require alcohol for their manufacture, and cosmetic stockings. According to trade sources, most of Miss Rubinstein's products are the result of the great rivalry between the house of Rubinstein and that of Elizabeth Arden, Rubinstein's great competitor in the high-priced line. "For some mysterious reason," says Miss Keiffer in *Life*, "the Arden line seems to have a slight edge in prestige, a fact infuriating to Madame. Perhaps it is the fancier name, perhaps Arden's head start in the United States market, per-

RUBINSTEIN, HELENA—*Continued*

haps the Arden décor, which runs to pastels, while Rubinstein uses stronger colors. At any rate, salesgirls report that customers will often buy Rubinstein preparations for themselves but Arden preparations for gifts."

Elizabeth Arden maintains an equally smart salon which is also on Fifth Avenue, and both she and Madame Rubinstein "adopt each others' products . . . swap employees, copy packages, and borrow advertising angles." For years they have waged a bitter war over personnel. In 1938 Miss Arden hired away Miss Rubinstein's general manager at a salary of $50,000 a year, and also took eleven members of his staff. Madame Rubinstein retaliated with a revenge "which, when it came, was beyond doubt the neatest coup in the history of the beauty business." Elizabeth Arden in 1934 divorced her husband and business manager, T. J. Lewis, and fired him, at the same time legally enjoining him from entering the beauty business for five years. In 1939, when the five years were up, Madame Rubinstein made him the new manager for her firm.

The boss of the whole business, however, is Madame Rubinstein. In Long Island City three buildings and a staff of over 200 employees are necessary to make the Rubinstein line. In October 1941 the employees of the plant went on strike for union recognition. Some employees affiliated with the C. I. O. maintained that a "long-dormant company union" had been revived. On January 14, 1942 it was announced that the strike had been called off and that the employees were returning to work, after receiving increases in salary.

In the beauty business, says Miss Rubinstein, "you must be very smart, very clever. In this business you must work twenty-four hours a day and 300 years in a life time." Constantly she complains that she cannot find anyone who is willing to work as hard as she does. When she is deciding on a new series of products she will sniff as many as 800 odors before she finds one she likes. "I am very difficult to please," she explains. Then, after deciding on the numerous formulas for the new products, she must plan a general decorative motif, work with bottle designers, decide on the shape and color of the soap, choose a name for the products, and get artists to work on boxes. Only then can she turn her attention to the marketing campaign. Once in 1942 she had hundreds of women madly scrambling on Fifth Avenue for 500 pink and blue balloons which had been dropped from the roof of Bonwit Teller's specialty store, each with a wicker basket containing a vial of cologne and the message: "Out of the Blue to You."

Life Magazine says that "Rubinstein's greatest promotion," however, "is undoubtedly herself. She has made herself not only a multimillionairess but a lady scientist and a figure of international glamour. Madame's personal promotion is, in fact, an essential part of her business success." Of great publicity value is Miss Rubinstein's flair for collecting modern and primitive African art, antiques, glass, jewelry. Her collection of the last, worth over a million dollars, is "an astonishing hodgepodge of the real and the fake, the good and the bad." All of it, including some pieces purchased in the 10¢ store, is kept in a metal filing case. For many years she has been a "shrewd bargainer" in the world of art. Some of the purchases were made with discrimination and others were bought because they were bargains. Her collection of modern French art, said by dealers to contain "a good deal of plain junk," nevertheless has been called one of the best private collections in the world.

Before the Second World War, Madame Rubinstein maintained five homes—in Paris, Combs-la-Bille, London, New York, and Greenwich, Connecticut—and crossed from Europe to America six to eight times a year, holding for a while the Atlantic crossing record. These homes, fabulously decorated and furnished, have been the subject of numerous articles and photographs. She adores fantastic beds. In Paris she slept on a mother of pearl bed—which had previously belonged to the son of Louis Philippe, the Duc de Montpensier. In her bedroom in Greenwich she sleeps on a fluorescent lucite bed which she had built for $675. "A bargain," says Madame Rubinstein. According to *House Beautiful*, she "haunts the salvage shops" and comes forth "with wonderful, inexpensive treasures that others have overlooked. She knows how to get daily use out of Victorian gimcrack chairs, East Indian teakwood tables, or Early American herb chests, garnered from secondhand shops and furniture boneyards the world over." In New York, Madame Rubinstein entertains titled folk in what has been called "perhaps the most arrestingly decorated apartment" in town. "The drawing room is French modern, 'with a Victorian influence,' hung with excellent Picassos '43 and Renoirs. The apartment has fourteen rooms on three floors, with one room devoted entirely to Salvador Dali's '40 paintings.

Madame Rubinstein is a short, top-heavy woman with even, distinctive features and straight black hair which (disregarding the fashions she advertises) she wears pulled back severely from a high forehead and gathered into a knot at the back. She wears quantities of necklaces, bracelets, earrings, and many rings. Noted as a generous friend, she is also known as a woman "with an iron determination to eliminate all waste and needless expense." Her many surprising economies are called "the sound natural instinct of a woman who saw enough poverty in her youth to give her a horror of waste."

For herself Madame Rubinstein disregards the beauty routine so assiduously prescribed for other women. She walks through her salon seeing "ladies stretched, exercised, rubbed, scrubbed, wrapped in hot blankets, bathed in infra-red rays, massaged dry and massaged under water, and bathed in milk—all before lunch. After a lunch of raw things they get a face treatment, foot masque, wax fingertip masque, scalp treatment, shampoo, and coiffure by Michel. The whole thing costs $25." Or she watches working girls go through the "make-over course" in evening sessions—all for a total cost of $15. Among these women the salty-tongued executive moves "with now and again a faint chuckle.

As for herself she has neither time nor desire for such strenuous beautification." Raw foods have interested Miss Rubinstein for a long time. In 1938 she had published *Food for Beauty*, a system of diet based on the Bircher-Benner diet as practiced in Zurich, Switzerland. The book contains over 100 recipes for raw food combinations. Before that, in 1930, she had written *The Art of Feminine Beauty*, which caused the British author, Rose Macaulay, to say that "presenting a handsome appearance . . . is done by taking thought and using unguents, lotions, and exercises, morning, noon, and night; by never having one off moment from the care of the figure and face, never a thought or fancy which strays from these. One minute's inattention and all, one gathers, is lost." *This Way to Beauty*, published in 1936, gave further instructions for beauty care at home.

In 1937 Madame Rubinstein divorced her first husband, Edward J. Titus, after twenty-five years of married life. He had started out as a chemist and later carried on a "dilettante book-publishing business in Paris." Two sons born of this marriage are in the Rubinstein business, together with a number of Madame Rubinstein's sisters and nieces. Roy Valentine, the elder son, born in 1909, is "a pleasant, genial young man who left Princeton and later got a degree from Oxford." He coordinates the sales end of the business. The second son, Horace Gustav, born in 1912, left both Yale and Oxford, and handles the advertising for the firm in an agency which was started in 1941. He is shy and retiring and wants to be an artist, while his brother is fond of people and happy in business life.

A year after her divorce, Madame Rubinstein was married to Prince Artichil Gourielli-Tchkonia, a Georgian nobleman, some years younger than she. "The Prince," says *Life*, "is a charming, easygoing man, recently become an American citizen, who regards his strong-willed wife with a combination of amazed admiration and amused affection." In 1942 Madame Rubinstein launched a new venture with her husband, just around the corner from the Rubinstein Salon. It is known as the Gourielli Apothecary. Under the name of Gourielli, two new lines of very expensive products, one for women and one for men, were introduced with a promotional campaign. The new products were the result of Madame Rubinstein's contention that possibly, by concentrating on women alone, she had tapped only one-half of the beauty market business. "Men could be a lot more beautiful," observes Madame Rubinstein.

RUKEYSER, MURIEL (rŭk'ī-zẽr) Dec. 15, 1913- Author

Address: b. c/o Doubleday, Doran & Co, 14 W. 49th St, New York City

Considered one of the most important of America's younger poets—Louis Untermeyer calls her "the most inventive and challenging poet of the generation which has not yet reached thirty"—is Muriel Rukeyser, author of three books of verse and a biography of Willard Gibbs, the latter published in 1942. Born on the eve of the First World War, coming to maturity in the shadow of the Second, the consciousness of armed conflict, revolution, and the world issues at stake, most particularly the threat to science and to the creative arts, dominate her work. Born, too, in New York City and knowing only an urban environment, her symbols are drawn from pavements, skyscrapers, tenements, factories, machines. Her mind, as Stephen Vincent Benét puts it, "has fed on the quick jerk of the newsreel, the hard lights in the sky, the long deserted night-street, the take-off of the plane from the ground." And born, further, into a period of beginning economic and political change, followed in this country by depression years, the New Deal, and the United Front efforts, her early work, like that of other poets of her generation, reflects a strong Left-wing viewpoint. As she wrote in her autobiographical "Poem out of Childhood," hers was a generation which grew up to rebellion against the truth-destroyers:

George Platt Lynes
MURIEL RUKEYSER

They who manipulated and
misused our youth,
smearing those centuries upon
our hands,
trapping us in a welter of
dead names,
snuffing and shaking heads
at patent truth.

RUKEYSER, MURIEL—*Continued*

Much more may be learned about Miss Rukeyser from a reading of her early poems than from the sparse factual data on her life. The daughter of Lawrence and Myra Rukeyser, she was born in New York City on December 15, 1913. Sent to the Fieldston School in New York, from which she was graduated in 1930, she entered Vassar College in the fall of that year. We know, from her poems, that her childhood was lonely, imaginative, emotional; that she loved music and probably studied music. We infer, likewise from the poems, that her ideas were in conflict with those of "conventional" education and society; that her viewpoint was often at odds with that of her family (See the differences of reaction, for instance, between father and daughter expressed in "Sand Quarry with Moving Figures.") During her two years at Vassar she was on the staff of the *Vassar Review* (the college magazine) and the *Vassar Miscellany News* (the college newspaper). She was also having her poems published in *Poetry* and in the New York *Herald Tribune Books*. She left Vassar in 1932, and during that year and the next she was on the staff of the *Student Review*, Left-wing journal of undergraduate opinion. In March 1933 she drove South with two friends to report the Scottsboro trial. When the police discovered them talking with Negro reporters and found in their possession some "calls" to a Negro student conference at Columbia, they were held for "inciting the Negroes to insurrections," then released. From the Scottsboro experience came her poem, "The Trial." Most of the poems written during her undergraduate years, however, were on purely personal themes, such as the "Effort at Speech between Two People."

After leaving college, Miss Rukeyser gave more time to her writing. She was for a while editor of the *Housatonic*, a New England literary journal, and she continued her studies during the summers of 1931 and 1933 at Columbia University. In the spring of 1935 she was associate editor of *New Theatre* Magazine. Meanwhile, also, she had taken a course in flying at the Roosevelt Aviation School in order to learn the mechanics of aviation for her poems in *Theory of Flight*.

Theory of Flight, containing a group of poems on the structure of the plane, personal poems in the "out of childhood" grouping, and a number which were social in theme, was published as the 1935 selection of the "Yale Series of Younger Poets." Stephen Benét, the book's editor, praised the book for the remarkable power displayed by a young poet of twenty-one. The volume attracted much critical attention, being commended for the significance of its subject matter and for the keen observation and emotional intensity of such poems as "The Tunnel", "The Strike," and the often-reprinted "City of Monuments." Miss Rukeyser did not escape critical censure, however, for lines overburdened with nonselective figures and images, the piling up of unclarified detail, and an overly lush emotional content bottle-necked by an awkward, inadequate technique.

Never one to discover life, or the values of life as she conceived them, in the classroom, Miss Rukeyser spent the next few years traveling and observing a changing world at firsthand. Since she had determined to make in poetry an evaluation of the Atlantic Seaboard, she set out to explore the United States highway from Maine southward. Visiting England in the summer of 1936, she was sent by *Life and Letters Today*, a literary journal, to Spain to report the first Peoples' Olympiad, organized by the workers' sports clubs as a retort to the Olympics of Nazi Germany. She found herself a witness of the opening events in the Spanish Civil War. In sympathy with the Republican Government, she worked with the Spanish Medical Bureau for some time before returning to the United States.

The observations made of places and people on this journey down the Eastern coast were put down in her second volume of verse, *U. S. 1* (1938). The most notable part of the collection was the section "The Book of the Dead," which dealt with a West Virginia mining village, Gauley Bridge. Here the workers were dying of silicosis; and the poem treats the situation from the medical, social, political, industrial, and other angles, and from various viewpoints. With objective subject matter and a theme that could be stated in concrete human terms, the poem has been placed by critics among Miss Rukeyser's best work. Excellent, too, were some of the shorter pieces whose subjects were drawn from the depression years. Of the most memorable of these, "Boy with His Hair Cut Short," Louis Untermeyer has commented: "For the craftsman there is the deceptive prose statement varied by brusque image and casual rhyme; the alternation of abstractions and concrete objects; the overhanging sense of personal failure contrasted with the impersonal and brilliant sign, the always 'successful' neon. But it does not take a craftsman to appreciate the quietly charged mood, the unresolved drama, the articulate communication of small details and their huge implications."

Late in 1939 Miss Rukeyser's third book, *A Turning Wind*, appeared. With the exception of its five New England portraits, the poems in it were concerned not so much with a social evaluation of the Eastern seaboard as with what the poet termed our "sources of power." These were obscurely and complexly set forth in a number of "Elegies." Ruth Lechlitner, while acknowledging the validity of her New England portraits, found her work, technically, "an unrelieved bombardment of fragmentary phrases and half-sentences, sometimes packed with abstractions, sometimes overburdened with physical imagery." Selden Rodman lamented that Miss Rukeyser, "steeping herself in Kenneth Burke, Jacob Bohm, Willard Gibbs, and Donald Mackenzie, has written a book so dense with symbols that extracting the poetry on any one page is a scholar's problem."

Miss Rukeyser's long poem, *The Soul and Body of John Brown*, parts of which had already appeared in *Poetry* was issued as the text of a book of etchings by Rudolf von Ripper in 1940. The poem also appears in Untermeyer's *Modern American Poetry*. In it the prophecies of Joel and of Ezekiel and the dream of John Brown are made symbolic of our own time: "Miss Rukeyser synthesizes their apocalyptic visions, repudiates the self-willed doom of the appeasers and defeatists, faces the death-wish and, feeling the line of the past, urges more freedom." In 1940 also, Miss Rukeyser gave a series of five lectures on "Poetry and Communication" at Vassar. The next year she was busy on film work—translating Jean Renoir's *People of France* and writing *A Place to Live*, produced by the Philadelphia Housing Association. From June to December 1941 she was associate editor of *Decision*, a literary magazine edited by Klaus Mann '40.

Tentative experiments with photographs and running verse commentary by Miss Rukeyser have appeared in *Life* and *Coronet*. A short poem, "Wake Island," a tribute to the heroic American Marines who defended that outpost, appeared in 1942.

Miss Rukeyser's first publication in prose, *Willard Gibbs: American Genius* (1942), is a biography of the noted physicist, the subject of one of the New England portraits in verse printed in *A Turning Wind*—the quiet Yale professor who, in the years immediately following the Civil War, withdrew to study the language of mathematics. "To her, the life of Gibbs is a clue to much that has happened and is happening now: the stifling of the spirit of free inquiry, the deadening of pure imagination in a period that demands only the immediate and practical."

Willard Gibbs was considered by many critics to be the outstanding biography of 1942, and Clifton Fadiman '41 recommended it for the Pulitzer Prize. Bernard Jaffe, writing in *Books*, described it as "the definitive biography of an American genius done with the pen of a distinguished poet in the tradition of Parrington's *Main Currents of American Thought*." Waldemar Kaempffert '43 of the New York *Times* found Miss Rukeyser's insight penetrating and her literary and expository powers superior to that of most biographers.

On May 1, 1943 Miss Rukeyser resigned from the Graphics Division of the OWI six months after she had been engaged to plan poster campaigns because, she said, most of her poster ideas had been rejected "either through a policy of playing down the issues of the War or through fear of these issues."

Physically large, tall, and heavy of figure, with dark hair and gray eyes and expressively determined features, Muriel Rukeyser is a young woman whose energy keeps pace with her talent. She has been the recipient of two major literary awards: the Oscar Blumenthal *Poetry* Prize of $100 for two poems which appeared in that magazine in 1940, and an award of $1,000 made in April 1942 by the American Academy of Arts and Letters and the National Institute of Arts and Letters.

RUML, BEARDSLEY (ruml) Nov. 5, 1894-

Financial expert

Address: b. R. H. Macy & Co, Broadway and 34th St, New York City; h. 213 E. 62nd St, New York City

In the midst of the Second World War, Beardsley Ruml seemed likely to crowd Erwin Rommel '42 off the front pages of American newspapers: Congressional tempers reached a new high as the House of Representatives debated the merits and demerits of the income tax plan originated by the treasurer of R. H. Macy & Company and Chairman of the Federal Reserve Bank of New York. Although Congress voted down the Carlson bill, an adaptation of the Ruml "pay as you go" plan, the 1943 tax bill which was finally passed was a compromise plan which also incorporated the "forgiveness" and "pay-as-you-go" principles.

World Wide

BEARDSLEY RUML

Pictured by some as the discoverer of Santa Claus, by others as an expert at mathematical sleight-of-hand, Beardsley Ruml actually defies both descriptions. He was born in Cedar Rapids, Iowa on November 5, 1894, the son of Wentzle and Salome (Beardsley) Ruml. His father, a Czech, was a country doctor, and "a damn good one." (He still is, in fact.) His mother, a New Englander, was superintendent of the Cedar Rapids Hospital. His only sister—he was one of four children—grew up to be the dean of Radcliffe College. According to his mother, however, Beardsley was always the most intellectual of the lot. Her greatest problem was to keep him from getting too far ahead of his age group in school, and so when he had "whipped through" his regular work he was put on a course of special reading. He finished the course at Cedar Rapids High School in three years.

Young Ruml first went to Dartmouth, where he ran the literary paper, "played just

RUML, BEARDSLEY—*Continued*

enough football to get athletics out of his system forever," earned his Phi Beta Kappa key, and was graduated with a B. S. degree in 1915. He took his Ph. D. in psychology and education at the University of Chicago in 1917. That same year a fellow student who had been studying for her Ph. D. "got her Mrs. instead." Lois Treadwell became Mrs. Ruml on August 28.

In 1917, too, after a few months of teaching at Carnegie Tech, Ruml went to Washington to serve on the War Department's Committee on Classification of Personnel. Armed with several months' experience in working out trade tests, after the Armistice he and five associates started the Scott Company to advise private industry on personnel problems. Ruml did the statistical work. In 1921 Dr. James R. Angell '40, then president of the Carnegie Corporation, who had learned to appreciate Ruml's abilities while at the University of Chicago, called the young man away from the Scott Company to become his assistant.

After a year with the Carnegie Corporation, where he first learned to think in terms of millions of dollars, Ruml became director of the $80,000,000 Laura Spelman Rockefeller Memorial to promote the welfare of women and children. Up to that time most of the funds had been devoted to direct-benefit philanthropies, but under Ruml's administration (1922 to 1929) American universities were given gifts for social science research, and fellowships were given to men and women who seemed likely to contribute something new in the fields of anthropology, international relations, law, psychology, and sociology. During this time Ruml traveled a great deal in Europe, where he picked up a collection of Russian blouses and developed enthusiasms for modern French art, Italian meat sauces, English parliamentary procedure, and Swiss scenery. "But I did not go for skiing in the Alps," he says.

Since 1929 Ruml has been a member of the board of trustees of the Spelman Fund of New York. In 1930 he was brought to Washington as a lieutenant to Arthur Woods, chairman of President Hoover's '43 Federal Committee on Employment. ("Cagey, you see," he comments. "They didn't call it unemployment in those days.") In 1931 he left the Spelman Fund for the University of Chicago at the invitation of President Hutchins '40. He remained there as dean of the Social Science Division and professor of education only until 1933. "We wanted to achieve unity in the several disciplines including the social science field," he says. "But I had trouble with a handful of distinguished professors, and after three years of effort, my progress was microscopic. Those professors wouldn't work together. They wouldn't even play together." In 1934 Ruml departed for New York City to become treasurer for R. H. Macy & Company, the world's largest department store. "I guess they hired me for a counter-irritant."

Always available for "heavy thinking" on all sorts of problems connected with Macy's, after the United States entered the Second World War, Ruml got to brooding about a problem with broader implications. What would the young Macy executive earning $7,500 a year who was called into the Army do about his 1941 income tax on a salary of $50 a month? What, for that matter, would anyone in a similar situation do? The more he thought about it, the more important it seemed to Ruml that the nation's taxpayers get out of debt to the Government and on a "pay-as-you-go" basis. But this would be difficult without some "doubling-up" in taxes, which were already high. What would the results be if the tax clock were simply moved ahead a year and the tax paid in 1942 became a tax on income for 1942? According to the *New Yorker*, "he meditated for a few months, then gave a dinner at the Plaza to a small, select group he thought might be interested in the plan. 'Not professional intellectuals, but intellectual professionals,' he added. With a nice knowledge of the relations between mind and stomach, he explained the plan *before* dinner, while everybody's mind was still sharp."

After discussing the plan with his colleagues, in the summer of 1942 Ruml went to Washington to present it to the Senate Finance Committee. It was "strenuously opposed" by the Treasury, however, and the Committee rejected it by a vote of thirteen to three, also rejecting an amended version submitted by the Treasury. In October, when Roosevelt '42 signed the 1943 revenue bill, Ruml nevertheless expressed the belief that his plan would be integrated into the Government's revenue structure by March 1943. In January 1943 Roosevelt announced he was for pay-as-you-go taxation, and again in his annual budget message he asked Congress "to put our taxes as far as feasible on a pay-as-you-go basis." Early in 1943, therefore, the House Committee on Ways and Means began considering various plans to get the country's taxpayers on a current basis. By this time the Republicans were almost solidly lined up behind the Carlson bill, a revised version of the Ruml plan, providing for a twenty per cent withholding levy on the taxable parts of wages and salaries, and requiring persons with a taxable income of $20,000 or more to pay taxes on either their 1942 or 1943 income, whichever was larger. Democrats on the Committee, however, were unable to agree on any alternative pay-as-you-go plan, the most popular of which seemed to be the Forand-Robertson plan, which provided for partial abatement.

On March 8 the Committee rejected the Carlson bill by a vote of fifteen to nine, and, backed by the Treasury, which evidently felt that no alternative pay-as-you-go plan would be passed by the House, adopted a recommendation for a twenty per cent withholding tax effective July 1 without tax abatement. The taxpayer would go on remitting on the basis of his income of the previous year, or, if he wished, he could "double up" and pay off the past year's liability in full, then go on a "pay-as-you-go" basis. It was explained that if there were not a certain amount of "doubling up" to get on a current basis, and if the $16,000,000,000 in additional revenue asked for by President Roosevelt was to be realized, income taxes (or alternative methods of collection, such as compulsory savings) would have to be much higher on 1943 income. If the Carlson bill were passed, revenues assessed on 1943 income either by taxes, compulsory savings, or other methods would naturally have to be higher than would be the case if some proportion of the 1942 assessment of $9,815,000,000 were also collected in 1943.

Nine out of ten Republican members of the Ways and Means Committee promptly submitted a statement "regretting" the rejection of the Carlson bill, and its supporters remained optimistic, for the Ways and Means Committee bill was popular with almost no one. The House, in committee of the whole, voted 199 to 188 to substitute the Carlson bill for the Committee bill, and victory was seen as almost certain. When on March 30 the issue came before the full House, however, the Democrats managed to muster twenty-seven more votes, the Republicans lost one vote, and the Carlson bill was defeated. Twenty-three Republicans evidently agreed with Representative Clare Luce '42, who had warned: "For us to give the people a bonus of last year's taxes will not in the end incite their gratitude if we give ourselves and the 100,000 above us bonuses hundreds of times greater." The Committee bill was sent back to the Ways and Means Committee by an even larger majority, and the country shook its collective head over the "tax muddle."

Finally chairman Doughton '42 of the Committee produced a "pay-as-you-earn" tax bill without "excessive doubling up and without permitting undeserved windfalls." It would cancel 1942 taxes for 7,000,000 of the small taxpayers, and would provide a substantial reduction in 1942 taxes for most of the others, taxpayers in the lower brackets being given the most relief in percentage terms. Furthermore, in contrast to the Ruml plan, it would contribute a $3,000,000,000 start toward the job of raising an additional $16,000,000,000 of revenue. Republicans, however, overlooking the savings those in the upper brackets have from 1942 income, attacked it on the grounds that the rich would have to pay more in taxes during the next three years than they would earn: i.e., taxes on four years' income.

According to a Gallup '40 Poll taken in March 1943 eighty-three per cent of the Democratic taxpayers and eighty-seven per cent of the Republican taxpayers favored the Ruml plan. Republicans in Congress, and a large part of the press, charged that the Administration opposed the plan only because the "Treasury didn't think of it first." Labor and liberal groups, however, insisted that "great care seems to have been taken to make sure that publicity on the Ruml plan was never definite enough to reveal the true content of the proposal," which would "make the rich richer and the poor poorer."

Although it was true that if the tax clock were turned ahead a year everyone who was already paying taxes would pay one less income tax than under the present system, the Treasury would continue to collect a year's taxes every year from every taxpayer until he died or ceased to receive income. The "loss of revenue" on 1942 taxes would, therefore, in Ruml's own words, be "spread perhaps over a period of fifty years, would be partially offset by certain increases in tax collections under the plan; and in any case could be made up by slightly higher rates over this long period of time." According to Ruml, moreover, if we had a long-time trend toward rising national production and rising taxable real income, along with an efficient withholding tax, the gross loss would be more than offset by better tax collections and collection methods "without increased burden on this account to any taxpayer."

According to its opponents, under the Ruml plan a higher proportion of the Treasury's tax collection over a period of years would come from the middle and lower income bracket taxpayers of this generation than under the present system even if the present tax rates were kept, while those brackets would have to bear the main burden of increased tax rates if the year's taxes "forgiven" today's taxpayers were ultimately to be recovered; rates in the upper brackets could not be increased proportionately to the benefits conferred. Half the $9,815,000,000 in 1942 taxes canceled would represent gains for 385,000 individuals who earned more than $10,000 in 1942, those few with a million-dollar gross income receiving a "bonus" of $854,000 that would add to their wealth more than they could save in six years if they saved every cent of their income after taxes. Those who were earning enough to be subject to taxes for the first time in 1943 or thereafter would receive no "bonus" at all, but would be helping to pay for these "bonuses to the rich" even if tax rates remained the same.

This Ruml denied. His reply to this argument was that benefits under his plan would not have to be recovered by the Treasury, since they "would not become real until Judgment Day": "the laws of government finance are not the laws of household finance." Furthermore, "although the financial benefit would be in equal and exact proportion to the 1942 tax liabilities," estate taxes would exert an equalizing influence, and in no case would any taxpayer pay less in taxes until his income decreased or declined. In any case, it was the middle and lower income bracket taxpayers, whose incomes are most uncertain, who found the present system most onerous.

In May 1943 Congress rejected the Carlson bill once and for all after the President had warned that if it was passed he would veto it as bestowing undue benefits upon the wealthy, but the tax bill that was passed that month was described by Administration supporters as "nothing more nor less than the Ruml plan in new dress." It canceled seventy-five per cent of a year's tax liability for the 40,000,000 taxpayers whose tax was over $50, 100 per cent for the 4,000,000 whose tax was below that figure, and did not even include two of the safeguards against "windfalls" suggested by Ruml—those to prevent "forgiveness" on capital gains, and a special estate tax to protect the Treasury. "The effect of this bill is to transfer an unfair part of the burden of this War from the wealthy to the low income

RUML, BEARDSLEY—*Continued*

people," said its opponents. Defenders of the Ruml plan, on the other hand, criticized it as "discriminating" in favor of taxpayers in the lowest brackets, but supported it as an improvement over the Treasury plan. By July 1 twenty per cent of the wages of wage and salary earners was being withheld at the source, as the new taxbill went into effect. In the meanwhile the British Exchequer was supposed to be working out a "pay-as-you-go" tax plan, too, but one excluding high-income groups from its provisions.

Beardsley Ruml himself registers Republican and votes Democratic "to even things up." He has voted for Franklin Delano Roosevelt three times. A member of the advisory committee of the Coordinator of Inter-American Affairs and of the State Department's division of cultural relations, an advisor to the National Resources Planning Board of the Agricultural Department, he is in Washington about once a week. He is the originator of the domestic allotment plan, which became the basis of the New Deal's farm program. He is chairman of the Federal Reserve Bank of New York, a member of the new Committee on Economic Development (a private organization for planning post-War industrial expansion), director of the National Bureau of Economic Research, and a trustee of the Museum of Modern Art and of the Farm Foundation. He never made a public speech until the Ruml plan forced him to, and he rarely saw his name in the newspapers. In 1943, however, he has made many speeches, chiefly on the problem of full post-War employment for 55,000,000 Americans—which, he and the CIO's Philip Murray '41 agree, can be brought about only by free competitive enterprise supplemented by government work projects and a sound fiscal policy. In 1943, too, a book, *Government, Business, and Values*, was published. Reviewing it, Saul Cohn said in the *Saturday Review of Literature*, "Dr. Ruml refreshingly takes the role of philosopher and affable arbiter and limits himself to the marking out of guideposts." In his fifty-two-page outline for cooperation between government and business Ruml "explicitly asserts planning to be the antithesis of regimentation," and urges as our objective "a society that will foster a feeling of belonging and personal significance—a feeling he calls 'homefulness.'" The book was well received by both the conservative and the liberal press, the *New Republic* (which had been hostile to the Ruml plan) calling it a "well written and clearheaded discussion."

Known as "B," and hardly ever called by his first name, Beardsley Ruml is "a robust fellow in his late 40's, with no hobbies and a love of anonymity. He thought that his plan received too much newspaper publicity. 'Too much fuss about it entirely. . . Either it's good enough to adopt or we should forget about it and try something else.'" He is intellectually energetic, but conscientiously avoids physical exercise. "If you ever hear of me dropping dead on a tennis court, you'll know it was because I was crossing it on my way to a Scotch-and-soda," he once told a reporter. His office on the thirteenth floor of Macy's is equipped with "a super-comfortable office chair, Ruml having a theory that nobody can think if he's not comfortable. He likes to think a great deal, he says, mostly about people." When in Washington he gets both a sitting room and a bedroom in a hotel whenever he can, however: "I have to pace around, and a bed gets in my way." Ruml and his family—that is, that part of his family which is in New York—live in their own house in Manhattan's East Sixties the large part of the year and before the War spent their summers in Canada or in Europe. The eldest son, Treadwell, a Harvard graduate, is in 1943 an Army officer in Africa; Alvin, who attended Harvard, is also in the Army; and the one daughter, Anne, who attended Vassar, is now a fashion reporter.

Unconventionality is one of Ruml's chief characteristics. In the country he wears pastels—an orchid corduroy jacket and dove-pink corduroy trousers—and among friends he sometimes wears brilliant Russian peasant blouses. "He is an engaging companion, with a lively wit and an infectious laugh that shakes his slight paunch." Well acquainted with classical and modern art, classical music, and the opera, his favorite topic of conversation is, nevertheless, his work. "Why not?" he asks. "Shop's the best entertainment in a man's life. If it isn't, he's in the wrong job." Robert Moses '40, one of Ruml's good friends, says that his "philosophy at times has a Chinese quality."

Who's Who in America 1942-43

RUSSELL, ROSALIND June 4, 1912- Motion-picture star

Address: c/o RKO Radio Studios, Inc, 780 Gower St, Los Angeles, Calif; h. Beverly Hills, Calif.

An "unchallenged popular rating as the screen colony's balmiest lady citizen" belongs to actress Rosalind Russell, because of her deviation from Hollywood standards of sanity. In the course of her career Miss Russell has also acquired, among other things, "a reputation as an actress of parts, a sizable fortune, a Beverly Hills home complete with salt-water swimming pool, and a museum collection of astonishing hats." In Hollywood, where competition for that honor is keen, Miss Russell has the distinction of being universally acclaimed as the wearer of the craziest hats in screendom. Her spectacular shoes run a close second. She was, nevertheless, selected by the Fashion Academy in 1941 as the "best dressed woman of the screen." In addition she was voted one of the ten best dressed women of the world in that year.

Miss Russell's background is not calculated to inspire the routine Cinderella story so commonly told about the majority of film heroines. She was born in Waterbury, Connecticut on June 4, 1912, and named after a steamship, the S. S. *Rosalind.* Her father, the late James E. Russell, was a well-to-do lawyer; her mother, Clara (Knight) Russell, one of the fashion editors of *Vogue* Magazine. One of seven children, the intrepid lady of the screen describes herself as the "lone ham in the middle." Being one of many children proved to be financially valuable, however, and Rosalind early became an "economic royalist" by the simple expedient of exercising her brothers' and sisters' horses at the magnificent rate of twenty-five cents an hour. The tomboy of the neighborhood, she was said to be the best baseball player in the district. "I was the loud, snappy-eyed youngster who played all the games the hardest. I was the one who didn't need any cod-liver oil. It was a problem of toning me down rather than toning me up," Miss Russell recalls.

Miss Russell received her early education at the fashionable Notre Dame Academy in Waterbury and at the Marymount School at Tarrytown on the Hudson, where sports were one of her major interests. She went on to Barnard College, where she dabbled in literature, metaphysics, and theology, with a misguided attempt at journalism which she shortly gave up, and eventually received a B. A. degree.

All the members of Miss Russell's family were career-minded—three brothers became lawyers and two sisters have jobs on New York magazines. After Barnard, Miss Russell decided that she would like to make a great deal of money. The theatre seemed to her one of the best methods, and she enrolled in the American Academy of Dramatic Arts. Again, contrary to the best rules of fiction, her parents did not object. Her father, who had hoped that she would become a lawyer, asked only one thing of her: that she have enough sense to become a star.

Always alert, Miss Russell kept her eyes and ears open at school and one day overheard two people discussing a tent show which was looking for a leading lady. She quickly rushed to the producer, and, feigning an English accent which for some strange reason seemed to be the passport to success, she got the job and a salary of $15 a week. In 1929, after touring with the group for a year and a half, she joined the more respectable Copley Players in Boston.

After Boston, Miss Russell joined the *Garrick Gaieties*, a Theatre Guild production. She next went on tour with *Roar China.* Three years in stock followed. Then came *Talent* with Mady Christians, followed by *Second Man* with Bert Lytell. Brought to Hollywood by Universal, the future star was given nine reading tests, and then was dropped. Metro-Goldwyn-Mayer signed her up, however, and her first role was a supporting one in *Evelyn Prentice* (1934) with William Powell.

Miss Russell next appeared in *Forsaking All Others* (1934), but her first big break came when she replaced Myrna Loy, who was having salary trouble, in *Rendezvous* (1935), with William Powell. Although she was hindered at first by comparisons with Myrna Loy, her talents were noticed by Richard Watts of the New York *Herald Tribune*, who saw promise in the new film actress and wished that "Miss Russell, who is one of the most interesting and beautiful of the cinema's new lady sophisticates, hadn't been forced to appear as a complete nitwit, but anyway she is one of the greatest pleasures of the film, even if miscast as one of the dumbest women of all time."

ROSALIND RUSSELL

Craig's Wife (1936), in which Miss Russell played the coldly perfectionist housewife, provided an excellent role, and she received enthusiastic reviews. A cycle of "heavies" followed, among them the role of the frightened companion in *Night Must Fall* (1937). In 1938 Miss Russell went to London to appear in *The Citadel* with Robert Donat. She played Christine, the gentle, intelligent young schoolteacher who marries the protagonist when he is still practicing medicine in a Welsh mining town. The picture was voted the best motion picture of 1938 by the New York Film Critics poll.

During all these serious roles, she retained a secret desire for comedy. George Cukor '43, the motion-picture director, recognized a comedy streak in her and signed her to do the outstandingly malicious, gossiping Sylvia Fowler of *The Women* (1939). Miss Russell "went to town" in the role; her exaggerated bustle frocks and surrealistic headgear gave the precisely correct comedy touch to a stupidly vicious character. Her screen fight with Paulette Goddard remains a classic as one of the funniest scenes recorded on celluloid.

Hollywood, always pleased to discover it is right, now bombarded her with comedy roles, among them *His Girl Friday* (1940), the remake of the Hecht '42-MacArthur *Front Page*; *No Time For Comedy* (1940), which led a critic to describe Miss Russell as "very slick and smooth and good to look at"; and *Hired Wife* (1940). Said Bosley Crowther in the

RUSSELL, ROSALIND—*Continued*

New York *Times* of her work in the last: "If Rosalind Russell doesn't cop all votes for the best screen comedienne of the year, it certainly won't be her fault. Her magnificent self-possession, her ability to fling the barbed retort, her vast superiority over lesser females in matters requiring maneuver, and her cool, crisp beauty clinch it without a doubt. Maybe the lady patrons will find her a bit too glib, too sleekly formidable. But we don't; we think she's perfect."

Even in pictures which themselves receive none too good notices, the lady of the extraordinary hats invariably turns in a good performance. Concerning *They Met in Bombay* (1941), Crowther remarked: "In spite of some of the most outlandish clothes this male has ever seen, Miss Russell manages to look attractive and be fairly convincing in an unconvincing part." Another critic commented of her work in *The Feminine Touch* (1941), "Miss Russell is perfectly captivating, even in a business like this."

Now a free lance, Miss Russell received $100,000 for her work in *Take a Letter, Darling* (1942). Although this also received mixed reviews, Miss Russell was again complimented upon her performance. One critic said: "Rosalind has never been more adroitly stunning than she is as the advertising executive," while the New York *Times* remarked that Miss Russell, in her usual fashion, managed "to get across enough charm and zest to make the portrayal appealing and competent, in a surface style."

My Sister Eileen, which appeared late in 1942 received excellent reviews. Rosalind Russell, wrote Crowther, "plays the smart sister with a delightfully dour and cynical air." *Time* Magazine commented that Miss Russell handled her part "with the neat feeling for bias on which she tailors her comic flair."

Flight for Freedom, a story based on the life of Amelia Earhart, and *What a Woman*, the story of another career woman who is trimmed down to size by a Male, were Miss Russell's next films (1943). Miss Russell had by this time been signed to play the role of Sister Elizabeth Kenny '42 in the motion-picture dramatization of that famed Australian nurse's life. Before consenting to have the picture made, Sister Kenny selected Miss Russell to impersonate her.

Long one of the most eligible bachelor girls of the screen, and rumored engaged or married at some time or other to almost every available Hollywood bachelor, Miss Russell was married in October 1941 to actors' agent Frederic Brisson, son of the Danish actor Carl Brisson. Hollywood stars generally elope because of the added publicity, but Miss Russell was married in traditional fashion at a Santa Ynez mission in a wedding gown of Danish design. Cary Grant '41 was best man. A son, Carl Lance, was born to the Brissons on May 7, 1943. Brisson, who was in the Army Air Corps, flew from New Mexico for the event.

Prior to the War the screen sophisticate, a sports fan, divided her free time between swimming at Palm Springs and tobogganing at Arrowhead. She is also fond of tennis, riding, skiing, and hockey. Four nights a week at the movies were a convention, although this came under the heading of professional study as well as recreation. Since the War she has been devoting a major part of her spare time to bond drives and other war activities. Just before her baby was born she gave a party for 40,000 soldiers.

She admits she loves the activity and does not miss the parties and frivolities which consumed so much time before, although she misses her husband (now an Air Corps captain). She is fond of card games, and plays rummy, bridge, and other games fairly well. Accomplished at the piano, she refuses to play in public, although she is occasionally prevailed upon to perform for her friends. Her favorite food is cheese, and she often makes an entire meal of several different kinds of it.

Miss Russell has been described as "clear-cut as a rhinestone buckle, and as clear-thinking as a professor of logic." A clever and easy conversationalist, she is said to have so impressed Anthony Eden '40 that, after lunching with her not so many years ago, he remarked: "America would be a nation of geniuses if everyone understood national affairs as she did." Determined and intelligent in her approach to her career, Miss Russell realizes that in her profession either "you stay on top or resign yourself to oblivion." Once oblivion comes, however, she says she would like to own a beauty shop.

Miss Russell is five feet six inches tall and weighs 120 pounds. She has freckles, hazel eyes, and dark brown hair with copper glints in it. Her favorite description of herself is derived from an old beau, who once informed her that she looked like a gazelle. "That's me," she said, "long legs, long arms, and long neck. And I sort of bound here and there."

RUTLEDGE, WILEY (BLOUNT, JR.) July 20, 1894- United States Government official

Address: b. United States Supreme Court, Washington, D. C.; h. 4928 Indian Lane, Washington, D. C.; legal res., Iowa City, Iowa City, Iowa

When Justice Rutledge took the oath preliminary to assuming his robe as an Associate Justice of the United States Supreme Court on February 15, 1943, the Court reached its legal membership of nine for the first time since his predecessor, James F. Byrnes '41, resigned on October 3, 1942 to become director of economic stabilization. Rutledge was the eighth man to be appointed to that high bench by President Roosevelt '42, and it was expected that "if one judges by his past decisions, he will contribute to an already liberal court, not conservatism, but a background of judicial experience, a scholar's respect for history, and a deep interest in people, whose servant he considers the law to be."

Wiley Blount Rutledge, Jr. was born in Cloverport, Kentucky, the son of Mary Lou (Wigginton) and Wiley Blount Rutledge, on July 20, 1894. The Rutledges are descendants of Tennessee backwoodsmen, and Rutledge, Sr. was a Baptist preacher who "rode the circuit" in the Appalachians, frequently accompanied by his son.

Young Rutledge received his high-school education in the preparatory department of Maryville College, Tennessee, and he then attended the College proper for three years. In 1913, however, he transferred to the University of Wisconsin, from which he received his B. A. degree the following year.

From 1915 to 1922 Rutledge taught in the high schools of Indiana, New Mexico, and Colorado, at the same time studying law. The New York *Post* reports that while teaching school in Indiana "he had the greatest shock of his life": he was told that he had tuberculosis. He went West, where he "made the necessary adjustments," and he returned before long to his teaching and his law studies. In 1922 he received his Bachelor of Laws degree from the University of Colorado and was admitted to the Colorado Bar. He was in private law practice for only two years, from 1922 to 1924, with the law firm of Goss, Kimbrough, and Hutchinson, in Boulder, Colorado.

In 1924 Rutledge accepted the position of associate professor of law at the University of Colorado. Two years later he accepted a position as professor of law of the Washington University School of Law (St. Louis, Missouri), but he returned in subsequent summers to Colorado as visiting professor. He became acting dean at Washington University School of Law in 1930 and dean in 1931. Four years later he went to the College of Law of the State University of Iowa to serve as professor of law and dean of the Law School until 1939.

As professor and as dean Rutledge was always a favorite with the students. His specialty is corporation law, but his interests range throughout the legal field and beyond. It is said that as Law School dean Justice Rutledge believed in humanizing the rules and dealing with students as individuals. One of the questions which he put to his students most frequently, it is reported, was: "Of what good is the law if it does not serve human needs?"

In 1939 Roosevelt appointed Rutledge to the bench of the United States Court of Appeals to the District of Columbia. When his nomination was before the Senate Judiciary Committee he was asked what had been his attitude toward Roosevelt's 1937 plan to enlarge the Supreme Court. According to the New York *Times*, Senators later reported that he had generally favored the proposal, but had opposed some of its features, and that he had actually taken no part in the controversy.

Rutledge's tenure as Associate Justice of the United States Court of Appeals was marked by his participation in decisions reflecting a liberal point of view. He was one of the three members of the Court who sustained the conviction of the American Medical Association and the District Medical Society on anti-trust charges of conspiring to block the work of the Group Health Association, a cooperative. While in the lower court, too, he expressed himself strongly against alleged invasions of religious freedoms in a District of Columbia "Jehovah's Witness" case.

WILEY RUTLEDGE

Rutledge's name had been suggested several times to fill Supreme Court vacancies, notably when Justices Frankfurter '41 and Douglas '41 were named. In January 1943 he was appointed to the Court after Senate confirmation by voice vote. The appointment was, in general, approved, but Rutledge was not without his detractors. Before the Senate voted Senator Langer of North Dakota made a thirty-minute speech attacking the nomination. "So far as I can learn," the Senator declared, "the nominee never practiced law and never even had been in a courtroom until he took his seat on the Circuit Court of Appeals in Washington a few years ago." He read a brief biography of Rutledge and then continued: "The only justification I can find for this nomination is that the appointee comes from Iowa City, the home of Harry Hopkins '41. I can find no better reason for his disqualification." Senator O'Mahoney, chairman of the judiciary subcommittee which had reported the nomination favorably to the full committee, asserted that Rutledge had "a judicial capacity in a marked degree" and that the Supreme Court would "profit by his elevation."

Of his appointment the New York *World-Telegram* wrote: "We're glad to see Justice Wiley Blount Rutledge, Jr., moved up to the Supreme Court after nearly four years on the District of Columbia Court of Appeals: first, because he is a lawyer and jurist of distinction; second, because this eighth Roosevelt nominee to the highest court is being promoted for able service on a lower Federal bench, in recognition of a sound principle heretofore ignored; and third, because he

RUTLEDGE, WILEY—*Continued*

comes from west of the Mississippi, a region strangely neglected in important appointments, judicial or otherwise, under this Administration."

The New York *Herald Tribune,* voicing another point of view, felt that he did not possess the "distinction of the background of realistic legal experience which the new Supreme Court badly needs if it is to retain its high and valuable place as an authoritative instrument of government. He comes, like too many of the present members, out of the schools rather than from the more practical experience of the courts; his confirmation would add to the academic cast which is already too pronounced and so would supply still another sample of the President's inability to infuse even into his own policies the strength and realism which can be achieved only through the choice of effective officers, with reputation and talents consonant with the practical tasks to which they are approved."

On February 15, 1943 Rutledge was sworn in as Associate Justice of the Supreme Court, and almost immediately the Court announced that it would reopen three cases because of a four-to-four deadlock which he alone could break. In June 1942 the Court had issued a five to four decision upholding a municipal restraint on pamphlet distribution by Jehovah's Witnesses. When Justice Byrnes resigned, however, one of the majority votes was subtracted, and the court vacated its previous decision and accepted appeals in two similar cases. The second case involved a rehearing of the undecided status of William Schneiderman, California Communist Party official, whose naturalization had been canceled by a Federal court on the grounds that he had concealed membership in the Communist Party. Reopening of the case would "bring Rutledge face to face with Schneiderman's illustrious lawyer, Wendell Willkie '40." The third case, involving the New Jersey Power and Light Company, would test jurisdiction of the Federal Power Commission over a utility which claims to operate entirely within one state, but which sells current to a company transmitting it across the state line.

It was said that Washington lawyers planned to watch the three reopened cases closely for confirmation of their opinion that Rutledge would side with the Black '41-Douglas-Murphy '40 "liberal" bloc. If he did, these Justices would form a solid four-man minority which could become a majority on various cases merely by picking up one vote. And such, in general, proved to be the case. In May 1943 the decision that Jehovah's Witnesses may not distribute literature without payment of a municipal license fee was reversed by a vote of five to four, a reversal accomplished through his vote alone. The next month he voted with the majority in the decision that membership in the Communist Party is not sufficient reason for revoking American citizenship; and the same month the 1940 ruling that a United States citizen may be compelled to salute the flag was reversed with his help.

Justice Rutledge is an admirer of the late Supreme Court Justices Brandeis and Cardozo, and he is almost completely in agreement with President Roosevelt on social and economic problems. He is quoted as having said: "I am not a radical in any sense of the word, but I cannot remain blind to the ills of the present system, and I am interested in seeing them remedied as far as possible." He is known to have criticized the "Old Supreme Court" severely for having declared child labor laws unconstitutional and he is a staunch believer in a liberal interpretation of the "general welfare clause" of the Constitution. "If our national Government is without the power to control production, to place limits upon the scope and methods of unfair competition, and to regulate all phases of industrial and commercial life which fundamentally affect these problems," he said in 1933, "the only alternative is continuance of the economic disorder with which we have struggled for four years."

Rutledge is not very fond of writing, and most of his work has been confined to articles in such specialized periodicals as the *American Law School Review,* the *Iowa Law Review,* the *Rocky Mountain Law Review,* the *Federal Bar Association Journal,* and the *Cincinnati Law Review.* He was awarded the honorary degree of L.L. D. by the University of Colorado in 1940.

On August 28, 1917 Rutledge was married to Annabel Person, a former teacher of Greek who taught him for a time at Maryville. They have three children: Mary Lou, Jean Ann, and Neal. When he was law dean in Iowa, it is said, "he lived in a rented house, wore ready-made clothes, mowed the lawn himself, and kept open door to everyone." When he became a Federal judge he moved with his family to Spring Valley, a residential section of Washington, where he has many friends who are hospitably entertained in his home.

The new Supreme Court Justice has been described as "stocky", "ruddy," and "youthful in appearance." He is a "Westerner by adoption," but he still has the Southern accent of his native Kentucky. He tells us that he is five feet ten and one-half inches tall, weighs 175 pounds, and that he is dark-complexioned. His favorite sport is trout fishing; his hobbies are people and boats. He is said to be an excellent "off-the-cuff" speaker.

RYAN, T(UBAL) CLAUDE Jan. 3, 1898-
Airplane manufacturer

Address: b. 2701 Harbor Dr, Lindbergh Field, San Diego, Calif; h. 3141 Xenophon St, San Diego, Calif.

No vocational guidance was needed by T. Claude Ryan to determine his career in life. It came to him from the sky, one bleak autumn afternoon in 1911 when, at the age of thirteen, in his native Parsons, Kansas, he saw the first airplane in flight. This plane, oddly enough, was the epochal Wright Model B biplane piloted by the famous Cal P. Rodgers in the initial transcontinental flight of a heavier-than-air craft. Since then Claude Ryan has climbed with airplane speed to a distinguished position in the nation's aircraft industry. During this period he trained as an air cadet, served with the United States Aerial Forest Patrol, inaugurated the first intercity daily scheduled passenger airplane service in the country, founded several flying schools, built the *Spirit of St. Louis* in which Charles A. Lindbergh '41 made the first successful transoceanic flight from New York to Paris, organized the Ryan Aeronautical Company, and pioneered in the mass production of planes. Unlike other captains of industry, the former Kansas farm boy did not start his airplane empire on the proverbial shoestring. His initial capital, in addition to a driving ambition, consisted of a piano box. From this packing-crate beginning, his industrial enterprises have grown into one of the major aircraft manufacturing concerns in America, whose annual volume of business runs far into the eight-figure class.

Tubal Claude Ryan was born in Parsons, Kansas on January 3, 1898, the son of William Marion and Ida Frances (Ziegler) Ryan. From early adolescence, the future aircraft magnate was an avid reader of popular aviation publications. By the time his family moved to Southern California young Claude was determined to become a "birdman." He saved money earned during summer vacations, borrowed the rest from his father, until he had amassed the sum of $500 to pay for 400 minutes of instruction at a second-rate flying school in Venice. The school could boast of only one plane that could fly, and even that one was so decrepit that it had to be patched after each landing. This, however, did not dim Ryan's enthusiasm for aviation. He was fortunate in having the renowned Al Wilson as one of his teachers. The embryo aviator's first solo flight was not uneventful. It consisted of a sudden, overconfident hop to an altitude all of thirty feet, then an unexpected, equally rapid descent which culminated in a smashed propeller. The cost of repairing their one plane completely ruined the school financially. But Ryan had earned his flying wings.

Equipped now with an imposing, engraved "diploma"—albeit from a dubious institution—Claude applied for admission to the United States Army. Since he was still under twenty-one, the minimum required age, he had to procure a special waiver. By the time he obtained one the Armistice had been declared, all enlistments had been suspended, and Ryan missed his chance of flying in the First World War. Disappointed but not discouraged, he did the next best thing. He matriculated at Oregon State College at Corvallis where he studied mechanical engineering for about a year. At the time new flying cadet classes were being formed by the Army. Ryan tried again, and at the close of 1919 his ambition was realized. He received notice of his acceptance as a cadet and was assigned to March Field, California, for his training. Barton K. Young, who is now a brigadier general and head of the A. A. F. Flying Training Command, was then commander of March Field. The course of study at the United States Air Corps Pilot School encompassed primary instruction in "Jennies" and advanced training in Sopwith SE-5 pursuits and De Haviland DH-4Bs. Many of Ryan's fellow students have subsequently gained national fame as pioneer air-line pilots. "Jimmie" James, Fred Kelly, and Lowell Smith were some of his classmates. Others now occupy positions in Army aviation. Of the seventy-five starting cadets, Ryan was one of three to receive pursuit pilot ratings. In 1921 he was graduated with the commission of 2nd lieutenant.

Gladser-Mitchell
T. CLAUDE RYAN

His first assignment as a pilot was to the United States Aerial Forest Patrol. There he acquired a considerable amount of experience and skill in maneuvering planes. He flew a De Haviland over heavily timbered mountains at altitudes up to 10,000 feet with small clearances in the forests serving as emergency landing fields. His active service with the Forest Patrol ended in January 1922. With no other openings available in government agencies, Ryan decided to return to Southern California to seek a position in commercial aviation. Air transportation was still in its infancy, and there were few calls for pilots. He knocked at the doors of all the existing air lines with no success. Reluctantly he tried his hand at various activities—and for a while had to content himself with a stopgap

RYAN, T. CLAUDE—*Continued*

job in an auto-supply shop—but his heart remained in aviation.

In September 1922 Ryan went to Rockwell Field in San Diego to refresh his flying. There he learned that an unscrupulous pilot who had operated from a runway at the foot of San Diego's Broadway, near the waterfront, had been forced to abandon his "enterprise" when convicted and sentenced to a long prison term for smuggling Chinese across the Mexican border. Ryan hurriedly clinched a deal with the City Harbor Department for the use of that landing strip. To be sure, it was not much of an "airport." It was bounded on one side by high-tension electric lines, two poles at the end of the runway, and the mast on a dredge in the bay near by. The owner of the airport then rushed off to North Island, California to purchase from the Army one of its superannuated, wartime Jennies. Thus equipped with an old airplane, a miniature runway, and a packing crate for an office, the one-man, one-plane outfit anxiously awaited business. It was slow in coming. During the first few months he would take off and land with just a handful of passengers.

As business improved, Ryan moved farther up the harbor to the salt flats—later known as Ryan Airport—and acquired another aging Jenny. He also acquired a pretentious name for his enterprise, the Ryan Flying Company. From then on he began making aviation history. The Government was anxious to dispose of its outmoded war planes. For a few hundred dollars he purchased six standard biplanes and had them shipped from the Army post in Texas. When they reached San Diego, Ryan realized that they were not much of a bargain. To save his investment, he branched out into "manufacturing." With the assistance of his mechanics—Hawley Bowlus, who has since become one of the leading authorities on gliders and sailplanes; Martin Jensen, the famous flyer; and John van der Linde and Dan Burnett, both still with the firm and at present in charge of production at the Ryan Aeronautical Company—the deteriorated aircraft were redesigned and practically rebuilt. What had been two-place open ships were metamorphosed into streamlined five-passenger cabin planes powered with 150 horsepower Hispano-Suiza engines.

With these unrecognizable flying hybrids, which gave prospective passengers an assurance of security, his sight-seeing venture became more lucrative. Every day close to a hundred Eastern tourists paid $5 a ride. As a side line, Ryan capitalized on the growing interest in aviation by offering courses in flying. This proved highly profitable, and today he operates three schools—in San Diego and Hemet, California, and Tucson, Arizona—which pour out a continuous stream of Army aviation cadets every month. These flying institutions, used as "guinea pigs" in a Government experiment, were among the first to receive the highest ratings of the Department of Commerce.

"Use of civilian flying schools by the Air Corps," Ryan asserted in an article in the October 1940 issue of *Aviation*, "has had the great advantage of utilizing the long experience and facilities of the leading commercial schools, and brought about a decentralized training program in a way which would permit rapid expansion, as has now been fully demonstrated. This expansion has been carried on more rapidly than could possibly have been done if executed directly by the Army. In addition the Air Corps has greatly profited by the executive and organizational ability of the various civilian schools."

On March 1, 1925, entering into a partnership with one of his students, Ryan launched the Ryan Airlines, Incorporated—the first year-round, regular passenger air service in the United States. It shuttled passengers between Los Angeles and San Diego for a fare of $17.50 one way or $29.50 round trip. By simple arithmetic, the partners figured out that one passenger a day would cover all their operating expenses. With the acquired profits, Ryan bought the same year an early Douglas Cloudster and converted this three-place open plane into a cabin ship accommodating ten passengers and a two-man crew.

This conversion project started the Ryan shop on a production program of its own. On the drawing boards of the growing company the first Ryan plane was conceived. It was the M-1, a high wing monoplane which had a speed of 115 miles per hour and was capable of carrying a load of 800 pounds. It topped the De Havilands on both counts—a superiority which the Ryan plane established in a challenged race. As a result numerous orders came in from air-line firms throughout the country, and the Ryan Company went into a steep climb. The M-1 was succeeded by the M-2 and was followed immediately by the Bluebird, which was the first Ryan cabin monoplane. The latter in turn was improved and led to the design of the famous B-1 Brougham which was sold to the late Frank Hawks, noted speed flier.

In 1926 Ryan sold his interest in the manufacturing business to his associates but agreed to remain as manager for a few months. During this period a laconic telegram was received from the Robertson Aircraft Corporation of St. Louis: "CAN YOU BUILD PLANE CAPABLE MAKING NONSTOP FLIGHT NEW YORK PARIS?" With alacrity Ryan accepted the challenge and in a few days the Robertson pilot arrived—a lanky, rustic youth, somewhat shy and antisocial in manner. He introduced himself as Charles Lindbergh. In a record-breaking sixty days *The Spirit of St. Louis* was rushed to completion.

On February 18, 1928, shortly after he severed his connections with the firm, Claude Ryan married Gladys Bowen, a San Diego schoolteacher. Together they went on their first trip abroad, combining a honeymoon with business engagements in Europe. On his return to the United States, Ryan at first devoted himself entirely to his flying school. Three years later he returned to manufacturing and formed the present Ryan Aeronautical Company, Incorporated. In 1933, during the depression, the company brought out the first S-T metal-fuselaged monoplanes which have since become the most noted sport and military trainers in the world. By 1935 they were rolling out of the plant on a mass production basis. Ironically enough, Latin America adopted the plane long before the United States Army, and they have seen service in eleven countries besides the United States. At the same time the factory parts' division began turning out manifold assemblies and accessories for bombers and transports which included the fabrication of exhaust collector rings employing the patented ball and socket universal joint for absorption of engine vibration.

In succeeding years Ryan designs have developed the PT-22, the United States Army Air Force trainer; the NR-1, the Navy counterpart; and the YO-51, an Army observation plane, variously known as the "Dragonfly" and "Flying Motorcycle." The year 1942 saw the designing of the YPT-25, a bonded plywood trainer which is said to have pioneered a new "wood era." The onrush of war orders necessitated a manifold expansion in the firm's facilities. Numerous extensions and a complete new factory have been built in the last three years. In September 1942 the Ryan enterprises celebrated their twentieth anniversary and their legendary climb from a piano-crate office to a high position in our country's aircraft industry.

Apparently the firm's prosperity was not shared with its employees. In the winter of 1941, organized by the United Automobile Workers, C. I. O., they threatened to go on strike unless the wage scale was increased to the level maintained at other aircraft plants. In an interview with the Associated Press on January 19, 1941, Claude Ryan blamed the "difficulties" on "outside influences and currents of thought and action largely beyond our control." A week later, however, the firm granted blanket increases to the employees. The dispute went to the National War Labor Board, which on June 19, 1942 requested the firm to grant an appropriate wage increase.

Claude Ryan is the father of three sons: David Claude, Jerome Donald, and Stephen Michael. According to his associates he "still retains early vigor" and "works sixteen hours daily."

SALVEMINI, GAETANO (säl-vā-mē'nē gä-ā-tä'nō) Sept. 8, 1873- Historian; educator; author

Address: h. Lowell House, G-24, Cambridge, Mass.

In *What to Do with Italy* (1943) Gaetano Salvemini and George La Piana, both Italian-born professors at Harvard, not only deal with the rise of Fascism, its standing in international affairs before the outbreak of the War, and what they suspect will be the attitude of the United Nations toward Fascism, but "offer a blueprint for the future of Italy . . . based on the supreme concept that democracy given half a chance can remake Italy." Appearing at a time when the very question which they discuss is in everyone's mind, the book, which is full of "acidulous comment on certain tendencies in the Vatican, the British Foreign Office, and our own State Department," has provoked a great deal of attention—and critical comment ranging from *The Nation's* "bold and candid . . . wise and illuminating" to *Time* Magazine's description of it as "a book guaranteed to exasperate practically everybody who reads it."

But Gaetano Salvemini, called by his friends "the mother-in-law of the revolution," is at least as much exasperated as exasperating. He was born in Molfetta, Italy, September 8, 1873, the son of Ilarione and Emanuela (Turtur) Salvemini. Educated in clerical schools until he was seventeen years old, at that time he became, in his own words, "unruly." (Asked by a *PM* reporter how he accounts for this, he replied: "Why, why, why? You ask why, why. I do not know why I am an anti-Fascist. My mother and father made me, just like Mussolini's '42 mother and father made him. I was born this way. I don't know why. All I know is *what*.")

Having taken his Ph. D. from the University of Florence in 1894, young Salvemini decided to become a teacher. From 1895 to 1896 he taught in the Gymnasium at Palermo, Italy; from 1896 to 1898 at the Lyceum of Faenza; from 1898 to 1900 at the Lyceum of Lodi; from 1900 to 1901 at the Lyceum of Florence. In 1901 he became professor of medieval and modern history at the University of Messina, and there he remained until 1908. Then, from 1910 to 1916, he taught at the University of Pisa.

The list of his historical studies published during this period is imposing. It includes *Dignitá Cavaleresca* (1896); *Magnati e Popolani* (1899); *Studi Storici* (1900); *Mazzini* (1905); *Rivoluzione Francese* (1906); *La Riforma della Scuola Media* (with A. Galletti, 1908); *Come siamo Andati in Libia* (1913). But his interest in history was far from being purely academic. He was an active opponent of Giolitti from 1902 to 1914, a Mazzini republican, a debunker of the short-sighted imperialism which clamored for Dalmatia; and during the First World War, when he wholeheartedly favored Italy's intervention against Germany and Austria, he was a heated critic of the Italian Government. To those who insist that Italy was a dictatorship even before the advent of Mussolini, however, Salvemini points out: "Nobody dispatched me to jail or the next

DR. GAETANO SALVEMINI

world. Nobody even thought of dismissing me from my teaching positions. . ."

In 1916 he was married to Fernanda Dauriac of Brest, France. In the same year he became professor of modern history at the University of Florence—a position he was to hold until 1925. *La Questione dell' Adriatico,* written with C. Maranelli, was published in 1918. The following year he ran for the Italian Parliament as an independent and was elected. For two years he fought both nationalism and the threat of Fascism in Parliament (Mussolini once challenged him to a duel which never came off), and then in 1921 he left the political arena to continue the fight in the classroom. His *Partito Popolare e Questione Romana* was published in 1922, the year in which Mussolini's so-called "March on Rome" took place.

But Salvemini neither laid down his pen nor closed his mouth with Mussolini's coming to power. He continued to teach at the University of Florence, and in 1923 delivered a course of lectures on the Triple Alliance at King's College in England. His *Dal Patto di Londra alla Pace di Roma* was published in 1925. That same year, in June, he was arrested at Rome and spent thirty-six days in prison. His friends were attacked and beaten, his lawyer's office burned. The Fascist paper in Florence demanded that he be expelled from the University, writing: "We are told that Professor Salvemini has never taken advantage of his professorship in order to make anti-Fascist or anti-National propaganda. But it is well known that the functions of a professor, and, above all, a university professor, are not limited to his classes. It is in the corridors and in his own home that real contact is established between master and pupil, and it is not an accident that Salvemini's students are—with very few exceptions—among the most rabid and incurable of anti-Fascists. Therefore the Fascist Government cannot and must not allow this anti-Italian, this perverter of youth, this corrupter of the young mind, to continue his historical teaching at the University of Florence or at any other." At about the same time a number of persons signed a declaration on Salvemini's behalf, and at his trial he was unexpectedly let free.

At 11 p. m. on July 13, 1925 Dr. Salvemini emerged from prison. The police advised him not to go to his own house to sleep, since the Fascists would probably attack it. He therefore slept at the house of a young friend, whose manservant, acting as a Fascist spy, informed the Fascists. On July 15 the Fascists looted his friend's house and caused $7,500 damage. Not very long afterward the Minister of Education suggested to Salvemini that since the academic year was about to recommence he might ask for a long leave. On November 5, 1925 Salvemini resigned from his teaching position.

"The Fascist dictatorship," he wrote the Rector of the University, "has suppressed in our country those conditions of liberty without which the teaching of history in the University—at least, as I understand it—loses all its independence and, therefore, all its dignity. It must, therefore, cease to be the instrument of a free education in the life of the citizen, and abased itself to servile adulation of the dominant party, or it must become a dry exercise of erudition, alien to the conscience both of master and pupil.

"I thus find myself forced to part from my young friends and my colleagues, to my profound regret, but in the assured conviction that I am fulfilling a duty of loyalty toward them even more than a duty of consistency and respect toward myself. I shall return to serve my country in the University when we have regained a Government worthy of a civilized country."

That same year Salvemini fled to France without a passport, and from France sailed for England, deprived of his citizenship, property, and professorship. From England he continued to write against Fascism ("an alliance of big capitalists and high military authorities of which Mussolini is the figurehead and propagandist"), and in 1927 he lectured throughout the United States on the same subject. His *Fascist Dictatorship in Italy* (1927) was a sweeping indictment of Fascism, covering its rise and its growth of power, and supported at every point by documentary evidence. Wrote Claude G. Bowers '41: "This little volume is convincing. It is vivid—and damning. It is the most intelligent and honest discussion of Fascism we have seen, dispassionate, coldly critical, analytical, and readable." However, as Salvemini pointed out, "For many 'respectable' folk outside Italy, crimes are only abominable when committed for ideals which 'respectable' folk do not respect. When the same crimes are committed to serve the ideals of 'respectable' folk, then they summon up their moral delicacy to make themselves blind or look the other way." Salvemini's voice could therefore be barely heard in the chorus of praise of Mussolini that was at this time still rising abroad.

During the year 1930 Salvemini was a visiting professor at Harvard. In 1931 his *Mussolini Diplomat* was published in French. In

1932 he was a visiting professor at Yale. In 1933 he settled down in Cambridge, Massachusetts, and since 1934 he has been Lauro de Bosis lecturer at Harvard in the history of Italian civilization. His writings, however, continued to deal with modern Italy. In articles published in such periodicals as *Foreign Affairs,* the *New Republic,* and *The Nation* he showed the weaknesses and contradictions of the Fascist economic structure: how the Fascist Government was concealing from the public the true composition and size of its national debt; how, while Mussolini chanted of Italy's need for colonies, he repressed immigration and commanded child-breeding; how the strain of payments in gold taxed the Italian economic machinery. *In Under the Axe of Fascism* (1936) he showed the institutions through which Fascism claimed to have solved the problem of relations between capital and labor as they really were. (As early as 1926 Mussolini's *Imperium* had said: "For Salvemini there is only one solution—death. We hope that the blessed hand of a divine madman will find somewhere abroad a way to shoot down this shameful purveyor of treason. Cold steel!") *Historian and Scientist* (1939), whose substance was delivered as a series of lectures at the University of Chicago in 1938, is almost his only work in English not dealing directly with Fascist institutions. In these delightfully witty essays he maintained that the use of history, one of the "imperfect sciences," lies "in the order impressed upon the mind when the multiplicity of the details has fled."

After the beginning of the Second World War, Salvemini had much to say about the American Government's treatment of Italian Fascists in the United States. From the first he suggested that the Government investigate and control the Fascist activities of the Italian Embassy and Consulates in the United States, of Italian-speaking radio stations, and of most Italian-speaking Catholic priests, and that prominent Fascists be deprived of their citizenship and deported. According to him, even Attorney General Francis Biddle's '41 order of November 1942 taking Italians in the United States out of the ranks of enemy aliens would be construed by Italian-Americans as showing simplicity rather than generosity if not coupled with an announcement that such proceedings would be undertaken.

As the crisis in Italy itself deepened, Salvemini's pen kept busy. Early in 1943 he revealed how Pope Pius XII '41 had consistently blessed Fascist and even Nazi arms while making "peace" speeches for foreign consumption; he wrote of Allied dreams of a "conservative" succession to Mussolini, with such men as Grandi '43, Ciano '40, and Badoglio '40 the leading candidates; he warned that rumors that Victor Emmanuel '43 would abdicate were false and dangerous. Such articles were written before the fall of Mussolini and the subsequent Italian surrender, as was *What to Do with Italy,* in which all these themes were repeated and developed. But although the book was not published until after the events which led to the Badoglio regime, so keen had his prophetic insight been that its appearance was peculiarly timely. "What the British Foreign Office and the American State Department want to set up in Italy is a Fascist regime without Mussolini in place of the Fascist regime with Mussolini," he had written, still suspecting an Allied plot with the Vatican to prevent genuine revolution. It was Dino Grandi, however, and not Badoglio, whom he had selected as Il Duce's most probable successor.

Since the writing of his book, Salvemini has become no less suspicious of Allied intentions in Italy. In July he wondered why AMG had put exiles and refugees under its ban and why Churchill '42 was begging Italy to avoid chaos and anarchy. In August he suggested that if a few hundred parachutists had descended on Rome as soon as Mussolini fell, or if Randolfo Pacciardi and a few hundred volunteers had been available in Sicily on that day and had been sent immediately to Civitavecchia with intentions of marching on Rome, the Germans might have had no opportunity to occupy Italy. Both in the minds and actions of Churchill and Roosevelt '42, he suggested, "war against revolution interferes with the war for unconditional surrender and paralyzes it." In October he was surer than ever that Churchill and Roosevelt had no right to "force the Italian people to be represented by traitors," pointing out also that the Italian people had been "summoned by Allied broadcasts to demonstrate against the King and Badoglio. Then they were machine-gunned in the name of the King by Badoglio. Then, while they were demonstrating against the King and Badoglio in Milan, Turin, and Genoa, they were bombed by the Allied air force. Now they are told to rally around the King and Badoglio." In November he wrote that not a single life had been saved by the Badoglio deal: that when Badoglio surrendered there was no longer an army under his command anywhere.

Still a Mazzini republican of the old school, according to *Time,* Salvemini advocates "a combination of twentieth-century socialism with nineteenth-century republicanism." For Italy he proposes the confiscation of big properties; the private ownership of small business; the division of large landed estates among tenants and sharecroppers; a political parliament, elected by popular vote, which would deal only with "general principles of law, foreign policy, customs duties, budgets, etc."; the internationalization of all colonies; and the nationalization of big, monopolistic industrial concerns. He is far from being a Communist; indeed, his opposition to the Communists led him to write as far back as 1927: "The great majority in the country has no desire to fall from the frying pan of the dictatorship of the Fascist minority into the fire of the dictatorship of a Communist minority." His individualism is so strong that he even withdrew from the Mazzini Society and from Giustizia e Liberta (Justice and Liberty), spearhead of the Italian underground. "I am the leader of no movement. I indorse no committees," he says. "I am an isolated individual. I have made my decisions and I regret none." Naturalized in 1940, there is small chance that he will return to Italy. "The present writer is no longer an exile," Salvemini says. "He took, in dead earnest, his oath of allegiance to the Constitution of the United States, and, therefore, cannot have any

SALVEMINI, GAETANO—*Continued*

schemes for personal political power, even if his age did not tell him that he must have other cares to worry about than political ambitions."

Now beginning his seventies, Salvemini is a voluble, vivacious man with a completely bald head and a snowy white goatee. He talks so quickly and with so many gestures that one photographer had to shoot him at an exposure of 1/400 of a second rather than the usual 1/200. Nor is he a patient man. "I don't like to talk to myself," he told one reporter, on being asked for biographical notes. "No, no, no. I don't even talk about myself to myself... What do you think I am, a Hollywood actress? You are wasting your time. Go, go, go." Popular with his students at Harvard, he nevertheless lives a fairly secluded life, pursuing his historical researches, and in late 1943 had nearly finished a history of Italian foreign policy from 1871 to 1915. He divides his day into three periods: ten hours for sleep, twelve hours for work, two hours for eating. (Occasionally he makes time to listen to phonograph records of works by Mozart or Handel or Italian operas, too.) He also manages to keep up a vast correspondence with anyone anywhere interested in fighting Fascism.

Who's Who in America 1942-43

SANDERS, GEORGE July 3, 1906- Film actor

Address: c/o Twentieth Century-Fox Film Corp, Beverly Hills, Calif.

"The only thing that keeps me from killing most of the people in Hollywood," declared George Sanders, popular cinema villain, on one of the infrequent occasions when he was awake, "is the fear of being jailed." Although he is thus outspokenly a hater of Hollywood, Sanders, his greatest asset a sneer, is one of the cinema city's busiest and best-paid actors. There is a plethora of material concerning the "god-like" Englishman's career, but few of the facts coincide, since Sanders not only objects to being interviewed but when finally trapped into an interview refuses, as disgruntled reporters put it, to be serious, and unfolds a dark past which his publicity agents lighten considerably in their releases. On the other hand, there is a coincidence in the fact that the parts generally given Sanders on the screen and the character which he claims in real life seem to agree.

Talk about art for art's sake irritates Sanders: he is in the acting business, he says, solely for the financial returns. Acting, moreover, was only a last resort, turned to when he had failed at a number of other professions. At present, writes Nord Riley, "acting and sleeping are his major occupations, and the former is merely a means toward attaining the latter." "In pictures," remarks Sanders, "one makes more money with less effort than in any other job or profession I know." Although Sanders is as British as they come in Hollywood, he was born in St. Petersburg, Russia on July 3, 1906, the son of English parents. His father, also named George Sanders, was a successful rope manufacturer; his mother, Margaret (Kolbe) Sanders, was a horticulturist, but gave up her profession in order to be with her husband in Russia. The family prospered in Russia and planned to make it their permanent home. George therefore started his education at a Russian grade school.

Then came the Revolution! The Sanders, being capitalists, were, of course, in danger. The actor still remembers the family's harrowing escape across ice-covered rivers to Scandinavia, and thence to England. In England the family tried to rear their young son as a normal Briton. They sent him first to Dunhurst Preparatory School—which may have been the coeducational institution in which, Sanders gleefully relates, his parents mistakenly started his schooling only to see him expelled almost at once. His next school was Bedales Preparatory, where he organized the "roller-skate rebellion." The skates, Riley tells, were not George's: they belonged to another boy. George simply wanted them. His brother Tom (now Tom Conway, also of the films), "a straightforward child," suggested that he steal them. George, however, was more ingenious: "I got the fellow to bet his skates I didn't dare run away from school." This not only gave young Sanders the skates, but also an honorable excuse for running away from school. Accompanied by his brother and six satellites, he started out cross-country in order to reach an estate about which he knew and to become a poacher. After the group had trekked thirty miles, eating only potatoes, they were ignominiously captured by a portly female on a motorcycle. She was the matron of Bedales.

When he had finished his preparatory education George went to Brighton College, where "the Sanders' talent for invention and finance flowered." There he invented a multiple pen, cigarets made out of blotting paper, and, commercializing the Brighton penal system, which punished prisoners by requiring them to copy pages of history, hired small boys to copy pages in advance, which he sold, already written, to the culprits. This thriving industry was blighted, when, as Sanders explains, "a bloody fool handed over three pages of his stuff to the proctor while he was still in the act of penalizing him." All this time, however, his publicity agents hasten to say, Sanders was showing remarkable prowess in good, clean sport. "He became interscholastic champion in boxing, and topped a swimming career by saving a man from drowning in the Thames. For this he was awarded a medal by the British Humane Society." He also created and patented three inventions—water devices for swimming toys.

Sanders' final schooling was obtained at the Manchester Technical School, "where for some extraordinary reason I thought I wanted to learn about textiles." Gainfully employed in a Birmingham textile mill, he had another of his brilliant commercial inspirations—nothing less than buying cloth below cost, which the benevolent factory management permitted its employees to do, then setting up a textile store to sell the cloth, and thus amassing fabulous profits. The young man soon found himself unemployed after a long speech by the millowner "on England, cricket, and all that sort of thing."

Undaunted, Sanders entered the tobacco business and was shipped by his firm to South America "to discover why the natives were not smoking our cigarets." After arriving at his employer's betrothal soaked in alcohol, Sanders was transferred across the Andes, where he soon made his presence noteworthy by "engaging in an impromptu opéra bouffe duel with an outraged swain who was finding his lady less cordial since Mr. Sanders' arrival. The duel, in which some blood, not Mr. Sanders', was harmlessly shed, cost him his job and 2,000 *pesos* in small bribes here and there." The young man was "summarily booted" back to England, where he started an advertising business with two other gentlemen of keen business acumen. At the time each of the three thought the other two would find the financial backing for the partnership, and later each of them stayed at home thinking the other partners would do the work. After the inevitable collapse of this venture Sanders tried other jobs, but they bored him, and, since he sleeps when he is bored, his ennui eventually caused his dismissal.

One of Sanders' uncles, who had been in opera, suggested that his nephew take up singing on the stage as a career. Sanders had a musical background—he played the piano, guitar, and saxophone, and he had organized a dance orchestra of his own in college—but he could not sing a note. A trifle like that did not disturb him, however, and in six months he had achieved a baritone that *Time* Magazine calls "excellent," his press agents, "rich," and he, "loud." (He has never used it in films.) He could then "sit at the piano and sing little songs," most of them of a scurrilous nature. A London producer happened to attend a party where he was doing this and engaged him for part of a three-man piano act in a short-lived musical called *Ballyhoo*. After the early demise of *Ballyhoo*, "I stirred up a cabaret act, a trio that wound up its numbers with a bit of close harmony—frightfully sophisticated." At the same time he went after chorus jobs and landed them consistently. The secret of his success was, he says, "volume. The guy that roars loudest is always hired." Furthermore he knew that once in the chorus, "if you look fairly eager you always get a chance to understudy, and as understudy I tried with varying success to get the principals drunk. In short, I progressed." In the three years that he spent in London show business he played fifty radio shows and understudied almost everyone on the English stage, including Noel Coward '41. "I was even fired as an understudy," he maintains, "often considered an impossible feat."

Films were obviously the next step for Sanders. He made his motion-picture debut in a bit part as a nude god riding a horse across the Milky Way in *The Man Who Could Work Miracles*—a rather uncomfortable role, as the scene was shot outdoors at night in the dead of winter. He played in several more English pictures, then, temporarily unemployed because of a fire at his studio, journeyed to Hollywood. He was immediately put under contract by Darryl F. Zanuck '41, head of Twentieth Century-Fox, who cast him as the villain in *Lloyds of London* (1937), along with another newcomer by the name of Tyrone Power. Zanuck's astuteness caused him "to hit the jack pot. In Power he got an epic hero; in Sanders an epic heel. Except for [the 'Saint' series], the 'Falcon' series at RKO, *Foreign Correspondent* (1940), *Rage in Heaven* (1941), and a few others, Sanders has been a stinker ever since. Being low he does not mind, because he feels like a skunk a good deal of the time, especially mornings; afternoons he favors comedy roles." The few pictures in which Sanders did play the leading roles were "B's." Ruth Waterbury, in *Photoplay* Magazine, felt that he was either buried in "B" pictures or "cast for a row of such heavies as would have killed most performers" because of his "completely unfettered soul," which, his studio decided, needed disciplining. "The difficulty ... was that he made the heavies so attractive, he usually took the audience's attention away from the heroes, who seemed very colorless by contrast." Hollywood would like, continued Miss Waterbury, "to wring his beautiful neck," but desists solely for the reason that he is a million-dollar asset, popular because of his "indestructible acting ability ... and the simple, pleasant fact that the public loves good acting and will go to see it." His brother Tom has inherited most of his "B" roles, particularly the "Falcon" series.

GEORGE SANDERS

Despite Sanders' oft-repeated protestations that he cares only for the financial end of motion pictures, he has been suspended three times by his studio for refusing to accept roles that bore him. This, he has pointed out, not only gives him time to accept other producers' offers, but also the opportunity to work on an airplane which he has been building in his back yard for two years and which still, to his

SANDERS, GEORGE—*Continued*

amazement and indignation, will not fly. Only once has he ever regretted refusing a role. "I had just got home from the last all-night session in shooting a picture to find a note curtly ordering me to report for work a day or so later—dressed as a gorilla. My refusal grieved my stand-in no end. It seems that for two years he'd been painfully sewing together just such a costume."

Sanders' last suspension was indirectly owing to his home studio's lending him to United Artists (his services are in frequent demand by other studios). United Artists cast him in the leading role of Charles Strickland in the film version of Somerset Maugham's novel *The Moon and Sixpence.* This was Sanders' first really good part, and he did the role justice. When the film was released in the fall of 1942 critics, even those who disliked the picture as a whole, agreed that he gave an exceptionally fine performance. Sanders promptly refused to accept an assignment in his home lot's production of *The Immortal Sergeant* because he regarded the part as "unsympathetic"—this despite the fact that he had often declared that he loved to play villains. He was promptly suspended by the studio. Sanders then traveled East with his agent to lay his cause before the film critics of the Eastern papers who had given him such enthusiastic notices on *The Moon and Sixpence.* Twentieth Century-Fox finally relented and assigned him to one of the leading roles in *We Came to Blow Up America,* with an increase in salary. In this picture Sanders was not made to blow up America, being given the part of a heroic FBI agent who poses as a Bund leader. And apparently he was finished with villainous roles altogether. In *Appointment in Berlin* he played a typical Lord Haw Haw, who turned out to be a British secret agent. In *The Lodger* he did not even don wolves' clothing, but started out as a Scotland yard inspector and remained to rescue Merle Oberon '41 from the clutches of Jack the Ripper. He was also scheduled to star in *Nine Lives,* in *International Zone* (another spy yarn, this time about the region around Damascus), in *The Moon Their Mistress* (based on a story by Anton Chekhov), and in *The Picture of Dorian Gray* (in which he was to play the part of Lord Henry).

Sanders' chief avocation is sleeping. "On the set between scenes," Riley comments, "Sanders could be mistaken for an abandoned body. . . By conscientious training he has made himself the classiest free-style sleeper west of Tobacco Road. He can sleep anywhere at any time. He uses sleep as a kind of fender against press agents, visitors, and other pests. Waking him for each scene is not perilous; a short scream from the assistant director does it easily." At home, having conserved his energy by sleeping on the set, he likes to read, invent weird gadgets, and think. He feels that short men are at the root of all evil and cites Hitler '42, Mussolini '42, and Tojo '41 as examples. Tall men, he believes, should be the only ones allowed to rule. He himself is six feet, three inches tall. He weighs 215 pounds, has pale gray-green eyes, light brown hair, and is "reasonably beautiful." According to the publicity director of his studios, he speaks English, Russian, French, German, and Spanish with equal facility.

For a long time Sanders' studio tried to create, for the sake of his large and adoring female public, the illusion that he had "skilfully avoided matrimony." His wife, Elsie M. Poole, an actress professionally known as Susan Larson, revealed, however, in the fall of 1942, that they had been married on October 27, 1940. Mrs. Sanders gave up her career after her marriage. "I emphatically believe that woman's place is, to coin a glittering new phrase, 'in the home,'" says her husband. "I do not find intelligent women attractive. Brilliant women bore me. . . Women lack a sense of humor. . . I do not spoil women. I am not what is known as 'attentive.' I do not send flowers, gifts. I do none of these things because I have found it isn't necessary. I am saving all that . . . for when I am an old man and have to!"

Sanders, it is reported, will have nothing to do with Hollywood's social life. He dines out rarely. Each morning his wife delivers him at the studio in a car of ancient vintage, and each night she retrieves him. He is impolite to interviewers and to most other people. It is said that once Sanders decided that his studio dressing room was sadly in need of repairs, and he informed a studio official that he would like it redecorated. "A pleasure, Mr. Sanders," the official is supposed to have said. "But first a little favor for us, maybe?"

"Like what?"

"Like kindly stop calling the head of the studio those vulgar names."

Sanders mediated over the proposed bargain, then concluded with dignity, "It is not worth while." His dressing room continues to fall to pieces.

"I hate interviews," remarks Sanders, "because I do not get paid for them. . . I hate to give autographs and never do. . . I am always rude to people. . . I am not a sweet person. I am a disagreeable person. I am a hateful person. I like to be hateful." One of his particular hates is the kind of movie fan who has a "nauseating interest" in what he has for breakfast or whether he sleeps in the top of his pajamas or a nightgown. If they must know, his favorite night attire is an Inverness cape and a fur parka.

SAUNDERS, HILARY A(IDAN) ST. GEORGE Jan. 14, 1898- Author; librarian

Address: b. Library, House of Commons, London, England; h. 3 E Airlie Gardens, London, W. 8, England; Old Holbans, Broad Oak, Heathfield, Sussex, England

Probably the world's best-selling author today, defeating by a wide margin so popular an American author as Margaret (*Gone with the Wind*) Mitchell, is Hilary A. St. George Saunders, assistant librarian of the House of Commons. The books he has written for the British Government, and which have sold more than 12,000,000 copies, are not by-lined. Only recently has the Saunders authorship become known—after his *Combined Operations,* the official British story of the Commandos, was made a June 1943 selection of the Book-of-the-Month Club. Saunders' books, because of their government sponsorship, "are written in a cool, dry, official manner that is as impersonal as a weather report, only occasionally breaking out in passages of emotion and beauty." It is their subject matter that is vitally important—and because of this the already huge Saunders audience is "hugely increasing."

Yet Saunders was a well known author long before the War that brought about his government-inspired books. Under the nom de plume of Francis Beeding, he and his friend, John Leslie Palmer, have collaborated in producing between thirty and forty excellent and extremely popular "thrillers" and *"romans policiers."* With the same collaborator Saunders has also written a series of historical novels signed David Pilgrim. Saunders has confessed that "I have had a share in no less than five noms de plume," but he refuses to reveal what the other three are. It has been suggested that "maybe Bernard Shaw and H. G. Wells are just two more of his pseudonyms."

Hilary Aidan St. George Saunders was born at Clifton, a suburb of Bristol (England), on January 14, 1898, the son of the late Reverend G. W. St. George and the late Sybil K. Somers (Clarke) Saunders. He received his early education at Windesham House, the oldest preparatory school in England, and at Downside. The World War broke out in 1914, and, at the end of the following year, the youth interrupted his studies to join the British Army as a private. After he had served in the ranks for six months he received a commission in the Welsh Guards. Five days before the Armistice he fought his last battle near Bavay on the borders of Belgium and France. On November 6, 1918 he led his platoon in charge against the enemy post, killing two of the enemy and capturing the remainder of the garrison. Well in advance with his platoon for the rest of the day, Saunders finally succeeded in consolidating a position further forward than any other part of the battalion line. For this "conspicuous gallantry and devotion to duty," the twenty-year-old boy was awarded the Military Cross.

In April 1919 he was demobilized, and went immediately to Balliol College, Oxford, where he studied history under H. W. C. Davis, one of England's greatest historians. His fellow students included such future notables as Anthony Eden '40, whom he had first met in France, Leslie Hore-Belisha '41, Raymond Massey, and Clarence Streit '40.

In the fall of 1920 Davis suggested to his pupil that he might "like to see something of history in the making," and proposed that he leave the University for six weeks to go to Geneva for the first assembly of the League of Nations. Saunders went and stayed seventeen years instead of six weeks, joining the staff of the newly-formed Secretariat of the League together with an old friend of his, John Leslie Palmer, who is a scholar well known for his works on the Restoration drama, and who had achieved some reputation as a London dramatic critic. The two young men worked together in the section of the Secretariat which kept the minutes of all the international committees of the League from the Council downward. During the meetings of the Assembly they ran an official daily newspaper, distributed to the delegates in two languages.

HILARY A. ST. GEORGE SAUNDERS

After Saunders had been in Geneva about a year he was chosen by the great Norwegian explorer and philanthropist, Dr. Fridtjof Nansen, to be his temporary private secretary. With the explorer Saunders traveled in England, Holland, parts of France, Belgium, Sweden, Norway, and also visited Berlin, Germany. When his time with Nansen was up Saunders returned to Geneva, where he remained until after the death of his first wife, Helen Foley, in 1937.

Meanwhile, in 1923, Saunders and Palmer decided that they would pool their literary talents, and in 1925 *The Seven Sleepers,* a "thriller" dealing with von Hindenburg, appeared under the name of "Francis Beeding" ("Beeding" from the name of a Sussex village where Saunders had inherited a cottage from his mother). The book had such a success that it encouraged the two young authors to collaborate on other books of a similar nature. The whole series now numbers between thirty and forty, and includes such well known novels as *Death Walks in Eastrepps* (1931); *The Norwich Victims* (1935); and *Eleven Were Brave* (1941). The series also contains such delectable titles as *Street of the Serpents* (1934); *The Ten Holy Horrors* (1939); *Heads Off at Midnight* (1938); and *Murdered: One by One*

SAUNDERS, HILARY A. ST. GEORGE
—*Continued*

(1937) (also published under the title *No Fury* in 1936). Those novels which were not out and out detective stories dealt with the amazing adventures of one Colonel Alastair Granby, "head of the British Secret Police," and his cohorts. The identity of Francis Beeding was not kept a secret. In the summer of 1925 Saunders appeared at Norwich and, as Francis Beeding, gave a talk on his method of work. Palmer appeared in the audience and heckled him "until Saunders, in seeming desperation, invited him to the platform, where the twain were revealed to be one."

The Beeding novels fared well critically. "Mr. Beeding," wrote an American reviewer, apparently unaware of the author's dual personality, "has long been known as a master of the tight pattern of mystery story. His plots are neat examples of mathematical precision." Another critic called the books "full-blooded, high-sounding, and richly melodramatic carryings-on most excellently told."

The League of Nations evidently gave its employees plenty of spare time, for a little more than ten years after "Francis Beeding" was born the two started a series of historical romances, under the authorship of one "David Pilgrim"—the "David" standing for Saunders' son's name, and the "Pilgrim" merely another version of Palmer. In 1937 *So Great a Man*, a novel based on one year in the life of Napoleon, and the first of the series, appeared. Four years later it was followed by *No Common Glory*, the first half of a lengthy novel set in the Restoration Period. *The Grand Design*, the second volume, was to be published in 1943.

In 1937 Saunders returned to London, where, at the beginning of 1938, he was appointed assistant librarian to the House of Commons. This post he still holds officially, under Librarian J. V. Kitto. When War appeared imminent a number of the House officials were "lent to government departments," and Saunders was borrowed first by Vice-Admiral (then Rear Admiral) John Godfrey, formerly director of Naval Intelligence. In May 1940 Saunders was summoned to Paris to act as liaison officer between the British Embassy and the French Ministry of Information. After three hectic weeks in Paris he was joined by his second wife, the former Joan Bedford, a doctor, who got through to Paris to join the Red Cross on the last aircraft to come from London. They had one dinner together in Paris, after which they escaped, just ahead of the oncoming hordes of Germans. When the French surrendered Saunders was given the task of arranging for the evacuation of all British and French journalists who wanted to leave. After a harrowing four days' voyage he and his protégés reached safety in Wales.

When he reached England, Saunders returned to his position in the House of Commons, as his superior had been injured by a bomb. By December 1940 Kitto had recovered, and Saunders joined the Air Ministry. While looking through back files of official communiqués he got the idea that it might be useful to publish an official and coherent story of the *Battle of Britain*, based on them. The government encouraged him in this project, and the day the book was published (March 23, 1941) it sold over 300,000 copies. After *Battle of Britain* came *Bomber Command* (1941); *Coastal Command* (1942); *Air Sea Rescue* (1942); and *Bomber Command Continues* (1942)—all, like the first, published anonymously. These books are printed in twenty-four languages, and their total sales figure of 12,000,000 is more than twice the last official German total of Hitler's '42 forced sales of *Mein Kampf*, thus justifiably giving Saunders his title of "the man who out-sold Hitler."

Besides being the champion of all best-selling authors, Saunders is said to be one man "who knows more about the progress of the War than Winston Churchill '42." As official recorder of the Combined Operations Command, headed by Lord Louis Mountbatten '42, Saunders is the final recipient of all reports from land, sea, and air forces engaged in raiding enemy territory in France, Belgium, Holland, and Norway preparatory to the invasion of Europe. He has to correlate all these reports into the picture of the entire War—and he also has to know what's going on in North Africa, New Guinea, China, Iceland, and Australia. This is a fairly large order for an assistant librarian—but Saunders is, after all, no ordinary librarian.

"While working for the Air Ministry," Saunders explains, "I became more or less involuntarily the inventor of our present system of official reports to the people on the War. Our idea is that since this is a people's war, the people should be informed as speedily and completely as it is possible." Now, besides Saunders' books, more than thirty-seven officially sponsored records of British operations have been published, written anonymously by a staff of writers in government service. "We don't just choose successes either," Saunders proclaimed. "We've written the stories of Dunkerque, Crete, and the Ark Royal, as well as the others."

Combined Operations (1943) is a report on the activities of the Mountbatten Commandos, which included units of the United States Rangers, the Royal Navy, the British Army, and the Royal Air Force, as well as Norwegians, Fighting French, Canadians, Poles, and other United Nations forces. The book, which also has 125 excellent photographs, is described as "a tale of the sea, the wind, and the sky, and of men who, careless of the friendship or hostility of the elements, keep watch and ward by day and night, ready to attack and destroy a formidable, unscrupulous, but not invincible foe." Although straightforward and official, the account contains interesting bits of information and tells several exciting tales of individual exploits of skill and daring. This book was also published anonymously, but, because of its immense success, the author's name was revealed. The authorship of the books in this series, however, has never actually been a secret, for *Who's Who* has listed them under Saunders' name since their publication.

At the special invitation of Elmer Davis '40, head of the United States Office of War Information, Saunders was invited to the United States, under British Information Service auspices. He arrived in May 1943 to confer with the OWI on the method used to publicize Britain's war effort. "Naturally, I can't say how I came," he told reporters, "but I arrived with Sir William Beveridge '43, if that's of any interest." Later it was revealed that he came over with Winston Churchill. Besides participating in OWI conferences, Saunders discussed with the Academy of Motion Picture Arts and Sciences the matter of factual war reporting through the medium of the screen. He expressed surprise at the absolute equality between people here in America. "Why, before the War in England, if anyone addressed you in a railway carriage, you'd almost pull the cord and ask to have him removed. The American soldiers have done a lot to change that."

Back in England, in late 1943, Sanders was busy writing a short history of the Royal Air Force. He had already completed a book about his impressions and experiences in America tentatively titled *Pioneers O Pioneers,* which was to be published in the United States in the near future.

Saunders has been described as "of stocky build, with sandy hair, ruddy complexion, and penetrating blue eyes." He has two children—one son and one daughter. Golf and skiing are his favorite sports. He has a great passion for the latter, having skied, until the War broke out, every winter since 1921. Before the War he was famous for his knowledge of the best wining and dining places in Europe, and one of his chief recreations is "conversation accompanied by the wines of France."

SAVAGE, JOHN LUCIAN Dec. 25, 1879- Engineer

Address: b. United States Bureau of Reclamation, United States Custom House, Denver, Colo; h. 1651 Dahlia St, Denver, Colo.

The designer of the famous Boulder, Grand Coulee, and Shasta Dams, and of more than fifty-five other major dam and power projects in this country, John Lucian ("Jack Dam") Savage has been called the first "Billion Dollar" American engineer. He is chief designing engineer of the United States Bureau of Reclamation, with which he has been associated since 1924. The irrigation and power structures built under his supervision during this time not only total a billion dollars in cost, but represent an incalculable value, social and economic, to generations to come. It has been said that "no engineer in the history of this country, or even of the world," has a record of accomplishment equal to this. Dr. Savage's achievements have not been confined solely to America. In 1941 he was assigned to Australia (as a "loan" to the British Government) by the Bureau of Reclamation to advise on the building of a dam on the upper Yarra River, and to consult on other hydroelectric projects for defense in Australia and in India. On his return to the United States he was loaned to the Government of Mexico for consultation in the building of the Valsequilla Dam in Puebla, a highly important irrigation project for that country.

Lainson
DR. JOHN LUCIAN SAVAGE

Many of his services to other countries were without remuneration. He insisted upon this when attention was directed to the law which prohibits employees of the United States from accepting emoluments from foreign governments. "I shall not accept any fee. The contacts with our good neighbors . . . will be sufficient compensation." This American hydroelectric expert modestly insists that he is "just one of Uncle Sam's employees" and that the Reclamation Bureau program consists of teamwork among 700 engineers.

John Lucian Savage was born on a Wisconsin farm near Cooksville on Christmas Day in 1879, the son of Edwin Parker and Mary Theresa (Stebbins) Savage. His was a typical farm boyhood of that time. He tells how once he was assigned by his father to drive to a distant field and bring in the hay. He got into a baseball game and forgot all about his duties until sunset, so he forked the wagon full from a neighbor's stack, with a painful sequel the next day. Another time he celebrated his father's gift of a slingshot by carefully breaking all the windows in an empty neighboring house.

Young Savage was sent to private school for two years at Spring Green, Wisconsin, where he was the only Latin scholar. One year in Evansville High School and two at Madison were followed by four at the University of Wisconsin. There he was admitted to Tau Beta Pi, honorary fraternity, in his

SAVAGE, JOHN LUCIAN—*Continued*

junior year, and was a member of the *Badger Annual* staff. In this publication he was characterized by the quotation: "Women are not of his sphere." He took his B. S. degree in civil engineering in 1903. It was in June 1934 that the University of Wisconsin awarded him the degree of Doctor of Science.

He had been offered a teaching position at Purdue University when called for work by the Reclamation Bureau. Having had three summers' experience with the Wisconsin and United States Geological Surveys, he went to work on the Minidoka Dam project in Idaho. It was not an easy beginning. "His first sight of headquarters was a tent with a yellow smallpox flag in the sagebrush plain." The story is told that, during Savage's period of field work, the young engineers had an agreement to swim in the Snake River at least once each month of the year. When December came around the other boys got it over with quickly, "but Jack kept insisting the weather would break, and waited hopefully until the afternoon of the 31st, Then it was not only snowing, but much colder than it had been before. A huge and appreciative audience saw him streak into the water, do a double flip something like a seal, and alight on the bank with barely a pause."

The four following years Savage spent in the Boise office of the Reclamation Service, learning to design irrigation structures under the guidance of Arthur P. Davis, D. W. Ross, and A. J. Wiley. He became associated with Wiley in 1908 in an engineering practice boomed by a water utilization program by private interests in the irrigation and power fields. For the next eight years Savage participated in and designed many important structures. These included the Salmon River Dam, the Swan Falls Power Plant on Boise River and the American Falls Power Plant on Snake River, remedial structures at the Barber Power Plant on Boise River, and the Oakley Reservation works. He received a special assignment from the Reclamation Bureau for the design of gates in the Arrowrock Dam project.

On June 1, 1918 Savage was married to Jessie Burdick Sexsmith, who died on July 17, 1940. The Savages were childless, so, during the course of years, they helped through college eleven nieces and nephews. Since the death of his wife Savage has made his home with a widowed sister, Mrs. Mary S. Winston, in Denver, Colorado.

During his early years as an independent engineer "Jack" Savage got the reputation of being a prodigious worker. Fourteen hours a day including week ends constituted his usual schedule. His associates recall that, although "he was the worst cook and the poorest pistol shot in the world," he was also the first out in the morning and the last to leave work at night. While still in Idaho he had, for a time, one interest outside of engineering. He bought a farm and developed a fine herd of beef cattle that he enjoyed "looking at Sunday afternoons."

His private engineering business promised to be lucrative and, had he so desired, he might have amassed a large fortune. But making money was never one of his ambitions. He preferred to have a part "in enterprises that have as their objective the development of human relations," and to work in association with men of technical and scientific attainments. For these reasons he decided in 1916 to return to the Reclamation Service, to the newly organized office of the chief engineer at Denver, Colorado. In this service, "where seniority does not hold back a talented man," his rise was rapid. In 1924, accordingly, he was placed in charge of all important designing for the Bureau with the title of chief designing engineer.

The next fifteen years saw to completion or under construction a number of stupendous power structures designed by Dr. Savage and his engineers. Heading the list in appeal to the imagination was the $130,000,000 Boulder Dam and Power Plant. Because it is responsible for the striking developments of the last decade in Bureau Research, it is said to be Savage's favorite. It was necessary to produce a crack-free mass of concrete for its enormous dimensions, and to produce it in a construction period of two years. To Savage and his experts goes the credit for devising a cooling system that would accomplish in a few months the same amount of cooling, without cracks, that would in the past have taken more than 100 years. The method devised is now in general use in other mass concrete construction where volume change must be controlled.

Other major dams and power plants designed by Dr. Savage are the Grand Coulee, Shasta, Norris, Wheeler, Friant, Madden, Marshall Ford, Imperial, Parker, American Falls, Owyhee, Seminoe, and Hamilton. In addition to these huge structures he supervised the designing of a number of smaller dams, bringing the total (by February 1937) up to fifty-five at an estimated total cost of $627,470,000. He has also supervised the designing of hundreds of canals and other irrigation project structures; he has been consultant on the TVA dam and power projects; and he has been associated with hydroelectric projects in Puerto Rico and irrigation projects in San Domingo. He turned down an offer of a post on the first Soviet five-year development plan.

At a testimonial dinner in February 1937 Savage was presented with the Colorado Engineering Council's Gold Medal Award for distinguished service. "In the technical and scientific world the presentation was one of great importance." Outstanding American engineers spoke at the dinner in high praise of Dr. Savage's accomplishments as "the most outstanding and widely known authority on high dams in the United States if not in the world."

The Bureau of Reclamation in October 1941 assigned Savage to aid the British Government in "furthering long-range hydroelectric projects to provide power for industrial centers heavily taxed by war production, and to provide for post-War industrial agricultural expansion." To cover his trip Savage was given the longest air transportation ticket ever issued in Denver—a round trip of 31,000 miles, considerably more than a round-the-world trip would be. Dr. Savage described the venture as the most exciting of his sixty-odd years. His first stop en route to Australia was Pearl Harbor (November 1941), where he was consulted on the design of underground fuel storage tanks of great magnitude and importance. He was busy on Australian dams when the Japanese struck at Pearl Harbor. His work in Sydney, Australia was advising officials on the Burrijuck Dam of New South Wales, constructed in 1918 and considered to be in serious danger of collapsing. At Melbourne he advised on the construction of a huge dam on the upper Yarra, where the problem as he saw it would be to get proper foundation treatment and adequate embankment construction, taking into consideration the poor material available. He also inspected the hydroelectric scheme in the Kiewa Valley, which would include a chain of dams and power plants linked by long tunnels. Dr. Savage's original assignment to inspect three great hydroelectric and irrigation projects in India was not carried through because of the outbreak of hostilities.

Australians apparently were impressed by the "unassuming, soft-spoken" American engineer who held a Doctor's Degree in his profession but who said, "I don't use the Doctor. In the States they call me 'Jack.'" He, in turn, spoke in warm terms of the "Aussies." "They are a lovable people," he said, "full of fight and imbued with the will of preserving their last outpost of democracy in the Far East."

On his return to Denver, Savage immediately sat down to conferences on new dam problems confronting our own engineers. In July and again in December 1942, however, he was sent by the Bureau of Reclamation to Mexico City for conferences and inspection of the Valsequilla Dam on the Atoyac River in Puebla, Mexico. Back in the United States again (January 1943), Savage took up consideration of a project (in course of passage through Congress) for another dam higher up the Colorado River than Boulder Dam. The proposed dam would be about as high as Boulder, but would supply a smaller amount of water storage and power. It would amplify and reinforce Boulder Dam power and would also supply power for the local production of magnesium, important in American war industry. But the period for completion of this new dam, following its authorization by Congress, would be five years.

In September 1941, while Dr. Savage was in Australia, the American Society of Civil Engineers elected him an Honorary Member, the highest honor available to his profession. He was made a Life Member of the Society in December 1942. In October 1943 Dr. Savage was making preparations for departure to India, China, and possibly to another Far Eastern country, on detail from the United States Government, for consultation on important dams, hydroelectric projects, and irrigation projects.

Among Dr. Savage's major satisfactions is that of having seen the West grow and thrive as a result of the Bureau program for power and irrigation. "When I first went into the Snake River Valley in Idaho," he has said, "there were just two houses amid all those millions of acres of sage. Now there must be half a million acres under irrigation, thousands of homes. Seeing development like that means something." He has no time for recreation, but keeps in shape, "and good shape at that," by climbing over dam sites. They are usually in tough terrain, and Savage spends a good deal of his time in the field inspecting every inch of the site and its surroundings.

He is described as "a quiet, precise man, almost diffident in manner. He wears neat blue or gray suits, quiet ties. His hair is thinning and turning toward white. But his face is ruddy and brown, with the outdoor look. His eyes, magnified slightly by the rimless glasses he wears, have bottomless black pupils surrounded by an unusually wide, unusually bright gray iris. The effect is of one who looks afar." Dr. Savage, when asked about his hobbies and interests, said that his chief one was helping young men and women of promise to complete university training. He believes that "one of the worst forms of waste is that talent should lie undeveloped and unutilized."

American Men of Science 1938
Who's Who in America 1942-43

SAXTON, ALEXANDER (PLAISTED)
July 16, 1919- Author

Address: b. United States Maritime Radio School, Gallups Island, Boston, Mass; h. 40 Gramercy Park, New York City

Alexander Saxton's first novel, *Grand Crossing* (1943), has been singled out by Harper & Brothers as the novel of special merit designated by them as their "find." Usually two or three outstanding books are selected by this publishing house every year; this year the only book thus honored was that of Alexander Saxton. Despite the author's twenty-four years, he has succeeded in cramming his life full of varied, if seemingly unrelated, experiences. Shortly after he completed college he set out to do editorial work and to study architecture, but he threw over both undertakings for a stint of tough, physical labor. Among other things, he has worked as a gang laborer, a factory foreman, a train brakeman and switchman. Saxton is at the present time a member of the United States Merchant Marine, having enlisted prior to the publication of his book.

Saxton was born on July 16, 1919 in Great Barrington, Massachusetts, the son of the late Eugene Francis Saxton, the well known editor in chief of Harper & Brothers, and of Martha (Plaisted) Saxton. His brother Mark, who is with the Farrar and Rinehart Publishing Company, is also a writer. Like

ALEXANDER SAXTON

the hero of his book, Alexander Saxton was reared in a literary environment, and so became "a young man with ink in his veins."

"Sandy," as he is known to his friends, spent his boyhood in New York City, receiving his entire elementary schooling at the Friends' Seminary on New York's 16th Street. Subsequently he went on to Phillips Exeter Academy, from which he was graduated *cum laude*. Following Exeter, he enrolled at Harvard in 1936, but not without considerable hesitation. While at Harvard he served on the editorial staff of the *Advocate* until "the goings on on that august publication sufficiently annoyed him," whereupon he and some other rebels revived the Harvard *Guardian*, a literary magazine which had been dead for several generations.

But the young man's doubts and dissatisfaction grew stronger with each semester spent at Harvard, and finally, in his junior year, he transferred to the University of Chicago. Not at all surprisingly, the doings of Michael Reed, the protagonist of *Grand Crossing*, parallel those of Saxton. Made uncomfortable by his position of privilege, stifled by the polite complacency and by the social and academic snobbery of his own college set, Reed leaves Harvard. Since Reed is admittedly a portrait of the author, the reader may readily guess the reasons which led Saxton to quit Harvard. Saxton himself stated that he had had "six years of Harvard, or six years of Exeter, whichever you wanted to call it, and six years was enough."

Saxton's brother offers another reason for his decision, which, he believes, is more fundamental: "He [Saxton] was becoming increasingly fascinated by the phenomenon of the Middle West, its size, its power, its culture, its identification with the realities of American life, and he wanted to know more about it and be part of it."

Immediately after he received his B. A. degree from the University of Chicago in 1940, Saxton departed for New York to work for *Common Ground* Magazine, as assistant to the assistant editor, who then was Louis Adamic '40. After several months he suddenly turned from the literary life and became a gang laborer. Thereafter an interest in architecture led him back to school for a year of graduate study in that subject, following which, in 1941, he held a position as an apprentice in an architect's office.

For some time then he remained in Chicago, working not at architecture, but at various railroad jobs. During the latter part of 1941 he was an engine wiper in a locomotive roundhouse and a factory foreman. In 1942, when he had already begun to write his novel, Saxton worked as a brakeman for the Baltimore and Ohio Railroad, later becoming a switchman with the New York Central Railroad. As might be expected, some of the material for his book was based upon his experiences in railroad yards; the Chicago yard, known as the Grand Crossing, furnished the title of the novel.

In June 1943 Saxton resigned from his position as switchman in order to enlist in the United States Maritime Training School, and was stationed at Sheepshead Bay and at Huntington, Long Island. Later selected for further training in the school's radio division, in the fall of 1943 he was at Gallups Island, Boston.

Saxton's book, *Grand Crossing*, has elicited unusually favorable reviews for a first novel. Although an enthusiastic critic likened it to James Joyce's *Portrait of the Artist As a Young Man,* the consensus of critical opinion is not so extravagant. "*Grand Crossing* is well written," states Orville Prescott in the New York *Times.* "It flows briskly and smoothly forward, filled with sharp, observant reporting of the American scene from a young man's viewpoint. . . Mr. Saxton has a seeing eye for significant detail, but his outstanding ability is to record the conversation of Michael and his friends." Saxton's weaknesses, according to the same reviewer, are manifested in his handling of love and sex themes, "in his effort to insert a melodramatic punch toward the end of the story," and in his innocence "of any sense of form and structure." Less censorious is the analysis of Lewis Gannett '41, who writes in the New York *Herald Tribune*: "*Grand Crossing* is the most satisfying novel I've read in 1943." In his opinion Saxton treats "the entire problem of America's thinking younger generation on the eve of war with an eager and exciting honesty. It is an amazing first novel."

Saxton has been married since January 1941 to the former Gertrude Wright, and has a baby daughter whom her parents christened Catherine Plaisted. The novelist is five feet eight inches tall, weighs 140 pounds, and has a high, broad forehead topped with a crop of stubborn, straight hair. He has always been interested in drawing and carpentry: since the age of five or six he has made linoleum blocks; later he learned to use water colors and oils with considerable skill. In late 1943 he is at work on a second novel, which is as yet unnamed.

SCHERMAN, HARRY Feb. 1, 1887- Publisher; author

Address: b. 385 Madison Ave, New York City; h. 322 E. 57th St, New York City

"One day each month a small group of literary people sit around an intimate luncheon table in New York and plot the cultural course of more than half a million people." Few of the half million are acquainted with Harry Scherman, the oyster-eating host at the head of the table, although it is he who directs the literary destinies of the Book-of-the-Month Club subscribers. Harry Scherman's business acumen and knowledge of direct-mail advertising methods helped to found the Club in 1926; now that he is "president . . . and (for all practical purposes) sole owner," he directs the mammoth advertising campaigns which keep the club going and make him "the most powerful man in publishing."

It was on February 1, 1887 that Harry Scherman was born in Montreal, Canada, the son of Jacob Scherman, a Jewish merchant, and Katherine (Harris) Scherman. Both parents had emigrated from England. When he was two years old the family moved to the United States, and Harry grew up in Philadelphia. As a student at Central High School, he was a friend and classmate of the late Alexander Woollcott '41, of whom he saw a great deal, since they were both interested in books. He still muses over the strange life that Woollcott led when a high-school boy: "He lived alone. I believe that he had relatives in Jersey, but he didn't live with them. He had his own place." Later Scherman attended the Wharton School of Finance and for a few months the Law School of the University of Pennsylvania. In 1907 he deserted the Quaker State to try his hand at journalism in New York City, joining the editorial staff of the *American Hebrew* Magazine on which he remained until 1911. His free-lance efforts during this period were unsuccessful and have led him to say in later years, "Writing is hard work, as hard as you'll find. . . No one bought my stories or produced my plays, and the farthest I got was newspaper reporting at space rates. When an advertising job was offered me I took it because at the time it was too tempting a salary to turn down. I didn't intend to keep it long, then got married and had to."

Scherman embarked on the road to fame and fortune when he started his advertising career as a copy writer for Ruthrauff & Ryan in 1912. In 1914 he was with the J. Walter Thompson Company, in a job specializing in mail-order copy. (In this same year, on June 3, 1914, he was married to Bernardine Kielty. The couple have two children—Thomas Kielty, an orchestral conductor, now an officer in the Army, and Katharine Whitney, a staff member of *Life* Magazine.) So energetic and enterprising a young man could not long be content as a mere paid hireling, and in 1916 Harry Scherman, together with Max Sackheim and Charles and Albert Boni, launched the Little Leather Library, an enterprise devoted to spreading capsules of culture in the form of ten-cent miniature size reprints of classics. By that time Scherman was considered one of the ace copy writers of the country, and, true to his reputation, during his presidency of the company (1916-20) he managed to spread 40,000,000 little leather volumes from coast to coast. "We sold so many books that we flooded the market and drove ourselves out of business. The sales cost became too high."

Eliascheff

HARRY SCHERMAN

In the year 1920 Harry Scherman established an advertising agency specializing in books (Sackheim & Scherman, Incorporated) with his friend and associate, Max Sackheim. The firm endured until 1926 when the two partners, along with Robert Haas, started the revolutionary and precedent-shattering book guild called the Book-of-the-Month Club. According to Robert van Gelder in the New York *Times*, "In the middle 1920's it was an accepted fact that although old books could be sold by mail, new titles could not be sold in that way. The cost of plugging a title, making it known, and selling it was too great. Scherman worked out the formula of the Book-of-the-Month Club and quickly reached a large mail-order market. The principle is that of the standard brand—the Book-of-the-Month Club establishes itself as a sound selector of good books and sells by means of its own prestige. Thus the prestige of each new title need not be built up before becoming acceptable."

The tremendous success of Scherman's idea and promotion may be judged by the statistics of which the company is proud. From an original membership of 4,000, the Club has grown to an organization of more than 550,000 members. To satisfy the members' literary cravings the Club is forced to keep a staff of approximately 600 busy. The Book-of-the-Month Club is one of the post office's largest customers. In the course of just one day the mailing room sends out approximately 30,000 books, covering almost every post office in the United States. Financially the figures are just as imposing. In 1942 almost $10,000,000 worth of books were sold by the Club. The yearly

SCHERMAN, HARRY—*Continued*

promotion bill alone runs far more than $500,000.

Although Harry Scherman has been president and chief stockholder of this vast organization since 1931, he does not select the book which is to hit the jackpot for $25,000 (minimum guaranteed royalties split between publisher and author) each month. "Over 100,000 copies (and all choices now go far over that) we pay a royalty of thirty cents a copy," says Scherman. "The final royalty payments on the average book at present (1943) run around $85,000." Scherman explains the procedure in selecting books: "We have an inside permanent staff of five paid readers, and maybe fifteen or twenty outside, varying with the time of the year. Every submitted book is reported upon by two or three readers independently. Any book, going through this sifting process, which gives an indication of being one the judges would want (for any reason) to see, gets to them. Three hundred books is probably the average that comes in each month over the year. 'A' books are ones that *all* the judges are obliged to read. Each one of them, however, has read quite a few others. Any judge, or any responsible reader down the line, can make a book an 'A' candidate, so that it surely gets read by all the judges and is seriously discussed as a choice. On the average, I should say, there are about seven or eight 'A' books each month." The judges have never changed in all the seventeen years of the Club's existence: Dorothy Canfield Fisher, Harry Seidel Canby '42, Christopher Morley, and William Allen White '40. The place of the late Heywood Broun on the board has not been filled. Amy Loveman '43 is in charge of the reading staff. Before attending the monthly luncheon the judges have read the recommended books and are ready for a lively and informal discussion. Scherman too has read all the "A" books for the month. He writes the advertising copy for the Club. He does not try to influence the decision of the judges, however, who make their fateful selection on a simple basis—the book chosen is "the one the judges most enjoy or regard as the most important." Once chosen, the book "makes its author, financially and literarily," and influences the thinking of thousands of American families. (Members are not required, however, to follow the decisions of the judges but are given a wide choice of titles from which to select their reading. Nevertheless, the tendency is, of course, to choose the "book of the month.")

Harry Scherman protests, "I've been studying books and selling them most of my life... But I still can't tell what makes a book popular. Who can?" The judges don't always hit the nail on the head either, but occasionally they are surprised by the tremendous popularity of a selection. The March 1943 book of the month, William Saroyan's '40 *The Human Comedy*, broke all records (since exceeded by other books), in the history of the organization, as many as 342,000 copies being sent out in one month. On the other hand, Mark Aldanov's *The Fifth Seal*, chosen for May, created quite a furor in Leftist circles as being "subtly and viciously anti-Soviet." *In Fact*, edited by George Seldes '41, gave as an example of these protests the resignation from membership of Professor Dorothy Brewster of Columbia University in a letter to Harry Scherman which stated that "distribution of this book is injurious to the prosecution of the War, is disruptive of efforts for unity, is insulting to a brave and staunch ally. . . To select the *Fifth Seal* is indeed to use 'books as weapons' and to place those weapons in the hands of the enemies of our country's aims in this War." The judges characterized the pressure exerted by the *Daily Worker* and "fellow-travelers" as a "new kind of book burning," and Burton Rascoe in the New York *World-Telegram* took the occasion to point out the dangers to democracy of permitting pressure groups to use "threats and other means of intimidation to achieve their end rather than the peaceful arts of persuasion."

As a pioneer in the book club field, the Book-of-the-Month Club has encountered a good deal of opposition in the trade in the course of its history, chiefly from booksellers, who felt for many years that the organization was in direct competition with them. It has been asserted that the Book-of-the-Month Club (along with other book clubs and guilds) is a commercial organization run exclusively for profit; that a book is chosen as a potential best seller rather than on its merits; that books selected by clubs receive an amount of concentrated advertising detrimental to other books of equal or superior merit; that the price-cutting policies of book clubs result in a type of competition which it is impossible for the bookseller to meet and detrimental to the entire book trade. Scherman replies to all of these allegations by pointing out that his organization offers no competition to booksellers since it permits them to offer their customers Book-of-the-Month Club subscriptions; "that it doesn't presume to choose twelve books for a subscriber that he *must* read; that it tries to pick not the 'best' books but those the judges most enjoyed; that it widens the book market." Moreover the Club is responsible for tremendous nationwide activity in the book field "in newspaper, over the radio, and through women's clubs, in promoting the reading of all new books—and only incidentally Book-of-the-Month Club choices. This is something the whole book industry should be doing and paying for, not just ourselves. The principal and direct beneficiaries are the bookstores. We do it because we are part of the industry and, for the long term, realize it is beneficial to us." (Technically the Book-of-the-Month Club does not cut prices. However, a subscriber, who must promise to buy at least four books a year, is given a free premium book upon joining, and another "book dividend" for every two he purchases thereafter, so that he receives seven books in his first year for the price of three. Book dividends are chosen, not by the judges, but by Scherman himself.)

Since 1938, when Random House published Harry Scherman's first book, *The Promises Men Live By*, a discussion of the debt and credit structure in modern society, the president of the Book-of-the-Month Club has become widely known as the author of popular articles on economics, particularly monetary theory. In the numerous articles which subsequently appeared in such magazines as the *Saturday Evening Post,* the *Saturday Review of Literature,* and the *Atlantic Monthly,* he showed a lucidity and clarity of exposition in presenting intricate economic problems (such as the gold standard and inflation) which won high praise from the reviewers. At the request of the Treasury Department he put his persuasive style, developed in long years of writing fast-selling copy, to use in an essay entitled "Invisible Greenbacks," pointing out the necessity for the widespread purchase of war bonds if future inflation is to be avoided by the American people. Bennett Cerf '41 stated in October 1942 that the article "has probably had a wider circulation in a shorter time than any other piece in the history of American journalism. It appeared practically simultaneously in the *Saturday Evening Post,* the *Reader's Digest,* and the *Ladies' Home Journal.* Over a thousand newspapers reprinted it. It was dramatized over NBC. Private organizations have mailed out over 2,000,000 reprints to date, and the Investment Bankers Association declares that it hasn't really started yet! . . The most phlegmatic citizen cannot read it without running checkbook in hand for his nearest bank."

Harry Scherman is described as the kind of man who works best under pressure. Dark, nervous, and crinkly-eyed, with thinning hair, "he appears to be mild and friendly and is the sort of person to whom newcomers at bookish social affairs are inclined to turn as a kind of refuge in a room full of strangers." Once residents of Riverside Drive, the Schermans have moved into an apartment on Fifty-Seventh Street in Manhattan. In the summers they live in a country house in Bernardsville, New Jersey, where it is quiet and they can write and read.

Besides his overwhelming interest in his brain child (which he shares with Mrs. Scherman, a former editor of *Story* Magazine and now a member of the editorial staff of the Book-of-the-Month Club) he is a director at large of the National Bureau of Economic Research, a trustee of the Committee for Economic Development, and one of the directors of Freedom House, an organization advocating a world organization and an international police force.

SCHMITT, GLADYS (LEONORE) May 31, 1909- Author; teacher; editor

Address: b. c/o The Dial Press, Inc, 432 Fourth Ave, New York City; h. 746 N. Beatty St, Pittsburgh, Pa.

Coming into literary prominence with the publication of her prize-winning first novel, *The Gates of Aulis,* Gladys Schmitt has had her poetry and short stories published ever since, as a high school student, she won a prize in a national poetry contest. Gladys Leonore Schmitt was born in Pittsburgh, Pennsylvania, on May 31, 1909, the daughter of Henry H. and Leonore Elizabeth (Link) Schmitt. She began doing creative work as soon as she could "put words together." At seven she was pouring out "horrors about sunsets and castles." At fifteen she had already embarked upon her first novel, but threw it away after 300 pages because she noticed that her "style" had undergone a change somewhere in the middle. At eighteen she had finished a novel—450 pages about the Danish conquest of England—but it was never published.

In grammar school she wrote and produced four plays in verse. Inspired by her discovery of Keats, she continued to produce a steady flow of verse in high school. "During her senior year," according to the Dial Press, "she

GLADYS SCHMITT

overcame the feeling that poetry, like love, was a thing you should not speak of except to your best friends," and entered a group of four rhymed monologues in a national high school (*Scholastic* Magazine) poetry contest, winning third prize. That was in 1927. The next year she entered a group of lyrics in the Witter Bynner National College Awards and this time won the first prize.

Miss Schmitt studied briefly at the Pennsylvania College for Women, then transferred to the University of Pittsburgh, where she was given a full scholarship which carried her through five years of work in the English Department. There she was elected to the presidency of the University Quill Club, and she won the composition prize twice in succession. It was during her last two years of college, say her publishers, that she came into contact with the work of the two men who have influenced her most—Proust and Mann '42. Many critics feel, however, that she is not particularly reminiscent of those writers, "who are discursive but not wordy," and compare her rather to Dorothy Richardson, Waldo Frank, Thomas Wolfe, Djuna Barnes, Emily Brontë, James Joyce, and others. The all-pervading influence that most of the reviewers find in her work is that of Freud.

In 1932 Miss Schmitt was graduated from the University of Pittsburgh *magna cum laude*, but she remained for a year of graduate work. The summer after she left the University she submitted her first short story to *Story* Magazine, and it was accepted. Whit Burnett '41, the editor of *Story*, later called her the "American Proust." Her second story was bought by *Atlantic Monthly*; her third appeared in *Household*. After leaving college she joined the editorial staff of *Scholastic* Magazine. She worked in the Pittsburgh office until the summer of 1939, writing radio plays, reviewing films, preparing lesson plans, and doing other writing. In 1939 she was transferred to the New York office as associate editor, and she moved with her husband, Simon Goldfield, a musician (whom she had married on November 27, 1937), to Forest Hills, Long Island, New York. She "infinitely" prefers Pittsburgh to New York, and after the success of her book she resigned her position on *Scholastic* and returned to her home town.

For five years Miss Schmitt had been working on her novel, "planning the plot, building the characters, and rewriting and polishing each paragraph as soon as the first draft of it was done." She submitted it to the Dial Press, which was offering an award, a prize of $1,000 and royalties, "for an outstanding novel of high literary quality that concerns itself realistically with the problems of adjustment which face the young men and women of America today." The contest was open to writers under thirty-five years of age who had not yet had a book published. Miss Schmitt's entry, *The Gates of Aulis*, was unanimously chosen by the judges, Margaret Marshall of *The Nation*, Sterling North '43 of the Chicago *Daily News*, and Charles Lee of the Philadelphia *Record*, and was published by the Dial Press in the spring of 1942.

The Gates of Aulis is set in a large industrial city, probably Pittsburgh, and centers around the lives of a brother and sister, Carl and Ellie Hasselmann. As a family, the Hasselmanns are prone to sacrifice themselves for others in one way or another. Their whole existence is "a journey into Aulis," a search for a person whom they can serve through the "complete gift" of themselves. Carl gives up a normal life to study the question of world chaos and its cure; his sister, a painter of note, gives herself to two lonely but essentially worthless lovers. Both are betrayed by "their separate dreams."

All the critics recognized Miss Schmitt's undisputed talent, or, as some put it, genius. Clifton Fadiman '41 in the *New Yorker* found her book "annoying, but not because she lacks talent; rather because she lacks the ability to prevent it from spilling over. Her talent, indeed, is too much for her theme, whose dimensions are less grandiose than she supposes." *Commonweal*'s critic believed Miss Schmitt to be a genius even though her book was "strongly tainted with decadence." The New York *Times* reviewer, Edith H. Walton, considered the book technically and stylistically almost unbelievably good. The *Herald Tribune* found her writing excellent and conscious, if deliberately mannered. Many critics agreed with Lionel Trilling of *The Nation* that the book "is impossibly wordy, by which I do not mean merely that it has too many words (though it has), but that the words have an improper part in the creation." Fadiman remarked that Miss Schmitt "writes over-elaborately at times, but at least it *is* writing." Most critics called the book a very "feminine" novel, defined by the *New Yorker's* critic as "one in which the male characters are of such a nature that only a woman could have imagined them, and only women can entirely understand them." He found the characters "petty," although possessed of a great capacity for sulking and an intense yearning for self-sacrifice as well as enormous articulateness.

Richard Plant wrote in the *Saturday Review of Literature*: "Here is a first novel with an enormous wealth of emotions, an unceasing stream of ideas, a torrent of tortures of the mind and body, all clothed in language highly artistic, if overrich in similes and poetic images. The poesies sometimes run away with the contents, the language goes on its own, so to speak, and page after page is filled with the remembrance of an afternoon of love, or a night of bleak agony. The story proper does not matter. Even the main characters, I daresay, don't matter much. What matters to the author is to penetrate deep into the anguish which racks young and sensitive people in our time. . . Thirty-seven pages for one afternoon of talk is too much for any author, unless he is a second Goethe. Miss Schmitt, very conscientious and overflowing with ideas, describes each move every character makes. There is no doubt, however, that hers is an unusual talent, the talent of artistic writing and poetic vision. For a first novel *The Gates of Aulis* is overwhelmingly adult." *Time* Magazine commented that Miss Schmitt in her novel made a try at a United States tragedy. "Too few United States writers try that, and almost none succeed. Miss Schmitt deserves a medal for valor, not for success."

The tall, thin, dark novelist is at present engaged in teaching English at the Carnegie Institute of Technology in Pittsburgh and in writing another novel, a life of King David of Israel. She finds the combination of teaching and writing a "very felicitous one." Miss Schmitt gives herself an hour for reading each evening, her favorite recreation; she prefers history and biography. She and her husband have no children.

SCHREIBER, GEORGES (shrī'bėr jôrj) Apr. 25, 1904- Artist

Address: b. c/o Associated American Artists Galleries, 711 Fifth Ave, New York City; h. 8 W. 13th St, New York City

"America must become the refuge of every good artist," says Belgian-born Georges Schreiber, today known as one of the foremost interpreters of the American scene, and as one of America's most prolific painters. A deep-rooted love for America and what it stands for characterize his lithographs, oils, and water colors, which are equally notable for their clean-cut draftsmanship and for their fidelity to fact. In describing Schreiber's works, one critic speaks approvingly of their "posteresque simplicity of light and shadow, positive pattern, sharp delineation, direct statement—the language of illustration, albeit spoken with the culture of fine painting. Schreiber is more eager to impress us with the excitement of the human drama than to woo us with subtle artistries of form and color."

Associated American Artists' Galleries
GEORGES SCHREIBER

Born in Brussels, Belgium on April 25, 1904, the son of German parents, Herman and Pauline (Lenneberg) Schreiber, he and his parents were caught between the Scylla and Charybdis of two opposing nationalisms during the First World War. (Schreiber says that German is his mother tongue, French his native tongue.) Taking refuge in Germany at the outbreak of the War in 1914, they were hated and scorned as Belgian nationals; returning to Belgium when that country was occupied by the German Army, they were looked on as enemy aliens.

Later a witness to the German revolution, Schreiber saw the starving retreating German soldiers trading their machine guns to the Belgians for bread, only to be fired on with those same weapons. Speaking of this experience and of its effect on the themes of his work, the artist says: "All this has made me conscious of the times I live in . . . and the people I live with. It has made me strive with passion for human understanding in my work." This consciousness of his fellow man has imbued his work with a life-like realism which is startling. It has also made him impatient with "escapism" of any type. In spite of his youth, the

SCHREIBER, GEORGES—*Continued*

decisive period in his career, he says, was this First World War period.

Until 1918 Schreiber studied at the German Real Gymnasium in Brussels, Belgium, and after leaving Belgium he pursued his art studies, encouraged by his businessman father, at the Arts and Crafts School in Elberfeld, Germany, and at the Academy of Fine Arts in Berlin. He then went on to London, and, after his father's death in 1925, to Rome, Paris, and Florence. Although he has not been employed a single day of his life, he has been self-supporting since he was twenty-one. At first he earned his living as a cartoonist. If an artist must have a steady job, however, Schreiber advises working at something that leaves him free to create as he pleases—even working as a soda jerker or waiter.

Coming to the United States in 1928, the young artist was so eager to depict the American panorama ("New York is not America," he says) that he insisted on visiting each of the forty-eight states. This took time, but in five jaunts across the country in an old jollopy he eventually scoured the states, from the barren coasts of New England and the arid deserts of the Southwest to the semi-tropical lushness of Southern California. And from the beginning the artistic results of his curiosity were rewarding. Said the Boston *Transcript* in 1934: "Schreiber is a facile and serious young draftsman who has brought the aid of line to water colors which run the gamut of portraits and vignettes of contemporary American life." Said Lydia Nadejena: "His themes are contemporary. In all his pictures Schreiber shows himself to be acutely aware of the actualities and brutalities of the world he lives in, responsive to the characters he portrays. His representations have life."

The large exhibition which resulted from work done on these trips was titled "Panorama of America" and was exhibited in museums throughout the country in 1939. The project, however, turned out to be less a study of states than a "regional study of America, influenced not by man-made boundaries, but by the habits of a people." When asked why he had undertaken such a gargantuan task, Schreiber described it as a labor of love. "I don't want to be just an American with his citizenship papers," he said. (He became a citizen in 1938.) "I want to completely associate myself with America. America is the hope of the world. So young! So fresh in ideas! In Europe there is too much culture, too many traditions." The artist believes, however, that the recent influx of European refugee artists into America has exerted a beneficial influence on American art. "The artist who paints America," he says, "should particularly beware of chauvinism or of extreme art nationalism."

Expressing his impressions of the United States from the artist's point of view, the Belgian-American, strangely enough, uses the musician's terms. "To me the United States consists of four parts. When I start from home in New York I compare it to a symphony. From New York to Chicago would be *allegro*, a quick moving country, slightly mountainous. Then Chicago to Denver would be *andante, poco moderato*, prairies with the endless gentle swing of wheat fields. Then suddenly the third movement . . . which starts with a *molto vivace con fuoco*. The Rocky Mountains introduce the final stage of the trip, the grand finale of which is California." "I have never had in any way such a travel experience as my trips through America," Schreiber also says. "I have traveled through Italy, the Black Forest, the Alps, and France, but all of them are concentrated to a much higher degree in about the distance from Denver to the Pacific."

Of the Americans as a people, Schreiber says that they have fresh, vital minds but that they drink like children. He has an intense admiration for American women and an equally intense dislike for American girls, who, he explains, are sometimes eighteen years old and sometimes forty. Despite this opinion of young feminine Americana, his study of a *Young American Girl* has received wide acclaim as a portrait of the typically American young woman.

Paintings in his "Panorama of America" exhibition included *Night Haul in Maine*, a fishing scene familiar to all Down-Easterners; Midwestern farming scenes like *Going Home*, which shows a farmer and his wife, finished with work for the day, doing just that; and *Mississippi Moon*, an eerie painting of a horse and buggy and lone scraggling tree sharply outlined in brilliant moonlight.

Of this exhibition Edward Alden Jewell said in the New York *Times*: "Schreiber works with equal success in two mediums . . . he paints with exuberant emotional and lyric zest, fluent decorative charm, sometimes with a delicacy that appears Oriental, often with a feeling that might be traced back to Flemish or antique German sources. America? Well, the panorama is unquestionably American in theme. Beyond that it is unquenchably, incorrigibly Schreiber, a self-portrait in forty-four chapters." In style the critic noted a kinship with George Grosz '42 and Adolf Dehn '41 in the water colors, and with William Gropper '40 and Thomas Benton '40 in the oils.

Howard Devree said in *Magazine of Art*: "Georges Schreiber has been knocking about into every state in the Union, and has stored his impressions in water colors representing many phases of the life of his adopted country. He sees it somewhat as a visual symphony. . . To the score of papers illustrating this teeming life he has added ten oils and a number of miscellaneous water colors in which he proves his ability in other respects, for example, the powerful and really distinguished figure of Negro woman. . . From such sketchy impersonal panoramas as *Boothbay Harbor* he passes on to such emotional vignettes as the *Sharecroppers Funeral* and the violent movement of *Oklahoma Dust*, distinctly one of his best impressions. Schreiber has undertaken a big task, and acquitted himself very creditably."

A more recent exhibition entitled "Southern Journey," which was shown at the gallery of the Associated American Artists in New York City in March 1943, provoked similar reactions from critics. In this exhibition, recording Schreiber's travels in Virginia, North Carolina, Louisiana, Texas, and other Southern states, it was noted that his favorite composition was "a lonely type set against a simple landscape background." "Everywhere he is interested in human things, adept at characterizing them, sympathetic and technically efficient," wrote the New York *Herald Tribune* critic.

Most of Schreiber's paintings are rural rather than urban in subject. Explaining his predilection for studies of life away from the cities, Schreiber said: "I think people away from cities are so untouched by civilization they are more human. I want to live these people . . . not depict them."

The artist has received widespread recognition by museums. Winner of the Tuthill Prize of the Twelfth International Exhibition of Water Colors at the Chicago Art Institute, he is permanently represented in the collections of the Whitney Museum, the Metropolitan Museum (that institution acquired two of his paintings within a twelve months' period), the Syracuse Museum, the Museum of the City of New York, and many others. His picture *The List*, depicting a group of European civilians gazing anxiously at some fateful document, received the first prize in the *PM* exhibition at New York's Museum of Modern Art.

The American public has grown familiar with Schreiber's work in other ways than through visits to museums, however. During the Hauptmann trial he sketched courtroom scenes for the Boston *Globe*; he did the illustrations for Hans Fallada's *Little Man, What Now?* (1933); and he has frequently contributed to *Life* and to *Fortune* (the latter once sent him to Hollywood to paint a series of scenes of Paramount Studios in action). He is widely known for his caricatures of Washington personages, and he is the author of *Portraits and Self-Portraits* (1936), a book of illustrations of famous contemporary figures, with short autobiographies or biographies of each. In this book he included such diverse celebrities as Ernest Hemingway, Henri Barbusse, Thomas Mann '42, Sinclair Lewis, and Albert Einstein '41.

Selected by Walter Wanger in 1940 as one of nine artists to paint scenes from the *Long Voyage Home*, Schreiber chose the bombardment scene from the picture; his work depicts the horror on the faces of John Qualen, Constantine Romanoff, Bob Perry, and Thomas Mitchell as a bomb drops near the prow of the ship. Explaining his choice, the Belgian-American said: "The drama of human emotion has always interested me. I selected for my theme the subject which not only expressed what I felt most, but a scene which I had experienced many a time in reality during my childhood in Brussels." While in Hollywood he also painted the portrait of John Ford '41, director of the film.

Because of his widespread interest in the United States, Schreiber was the artist selected by the Department of Justice in 1941 to broadcast from New York a nationwide address on "I Am an American Day." And now that we are once more embroiled in an international struggle, he characteristically is doing his bit. He has recently completed *There Is a Job to Be Done*, which will be donated to the permanent archives of the Federal Government by Abbott Laboratories. This is the first of several war paintings on which he is now working. Today it is the artist's business to do everything he can to aid the war effort, Schreiber believes: "art for art's sake" should be shelved for the duration. In March 1943 he completed a series of paintings of the students of aviation training in Pensacola, Florida which the United States Navy planned to use for posters. During his visit to Pensacola he was permitted to fly in a squadron leader's bomber while on maneuvers—probably the first civilian ever allowed to do so. It was a thrilling experience, Schreiber says. "One really becomes physically a part of the plane." The experience was so thrilling, as a matter of fact, that the artist was unable to draw a line while it was going on.

Schreiber painted the War Bond posters, "Keep 'em Flying" and "Back the Attack," for the United States Treasury Department. The latter poster was the official one chosen for the Third War Loan Drive. He was also the creator of the slogan, "Back the Attack." In late 1943 Schreiber returned from a week's trip on a submarine, during which he collected material for a series of paintings depicting the activities of a submarine on patrol. (He was the first artist ever permitted by the Navy Department to go to sea on a submarine.)

Schreiber approves of any medium which brings good art to great numbers of people—whether it is the Associated American Artists' project of selling etchings by well known artists at $5 apiece, the Federal Arts Project, or the present Lucky Strike advertising campaign, for which he is doing a series of paintings. He points out that 16,000,000 see these paintings, done by some of the finest artists in America, every day. In June 1943 the Art Directors' Club awarded him a gold medal for "the most distinguished painting of the year to be used in advertising," for a painting used by the Shell Oil Company.

He has very definite ideas on art schools. The art education system in the United States, he says, is very bad: art students study under artists they admire, and often become mere imitators. Actually the art school should furnish the student with only the techniques of art, and two years of full-time study in such a school should be a maximum. Only after such a basic training should the student be allowed to study under his favorite artist, who should be a good teacher as well as a good artist. Furthermore, art teachers should receive a definite set salary, and should not be so financially dependent on the number of students in their classes that they are tempted to lower their standards in order to cater to their students.

A man of medium height, with an aquiline nose and straight, light brown hair, in appearance Schreiber resembles a businessman or college professor far more than the old-fashioned conception of an artist. He is a pleasant and friendly person, with little "temperament," and not a trace of a foreign accent. From the windows of his tenth-floor studio, where he lives with his wife, the

SCHREIBER, GEORGES—*Continued*

former Lillian Yamin (they were married on September 28, 1941), it is Greenwich Village that one sees, but Schreiber's working attire consists of overalls and a farmer's shirt. And the artist's working habits are as individual as his attire. He sits while he works, surrounded by sketches done on onion paper. He frames his canvases before he starts painting (it helps to tie the composition together, he says); and even if it is a water-color sketch he is doing he has matting put on the white paper before starting. He does most of his work in his studio, but when outdoors he fills sketchbooks with pencil or crayon drawings of a diagrammatic nature.

SCHWIDETZKY, OSCAR (OTTO RUDOLF) (swĭ-det'ski) Dec. 31, 1874- Surgical instrument maker

Address: b. Becton, Dickinson & Co, Rutherford, N. J.; h. 174 Terrace Ave, Hasbrouck Heights, N. J.

OSCAR SCHWIDETZKY

In 1933 the Association of Medical Directors, recognizing the invaluable work Oscar Schwidetzky had done for the medical profession, set aside one of its bylaws, which limited its membership only to medical men of high standing, in order to make him a member. As a maker of surgical instruments he has originated the Ace bandage, the Asepto syringe, the Greeley Unit (later developed into the Syrette), and the Continuous Caudal Needle. The latter was designed in 1942 to meet an urgent call from Doctors Robert A. Hingson ['43] and Waldo Edwards ['43], co-discoverers of the use of continuous caudal analgesia in obstetrics—the method which has made childbirth painless and safe. One of the dangers of this method during the experimental period was that of needle breakage. The need for a special needle was brought to the attention of several medical supply firms by the doctors, who, however, did not give its specifications. Schwidetzky finally designed a needle of annealed, stainless steel which is so pliable that it can be curled around one's finger. It proved to be the perfect instrument. "Without it," says Dr. Hingson, "we never would have had the success we've had."

Oscar Otto Rudolf Schwidetzky was born December 31, 1874, in Konitz, in what later became the Polish Corridor. His mother, Fredericke (Mohnké) Schwidetzky, was of French Huguenot ancestry; his father, August Schwidetzky, was of German-Polish-Lithuanian extraction. Reverses in his father's business compelled him to leave school at the age of fourteen to learn a trade. He served a four-year apprenticeship to Julius Martiny, a maker of steel and surgical dental instruments in Berlin. During his first year he was paid in marks the equivalent of seventy-five cents a week; his fourth year as an apprentice advanced him to $2.20 a week.

Before the German Army claimed him for military training, Schwidetzky worked with instrument-makers in Berlin, Crefeld, and in Aix-la-Chapelle. During this time he learned orthopedic work. Upon his release from military training (1897) he decided not to return to "shop work," for he realized that there was no future in it. Believing that practical knowledge combined with sales training (in which he would learn how instruments are used in the medical profession) would give him a foundation to do creative work, he set about preparing himself for a sales position by attending night school and studying "instrument catalogs and medical journals."

"The sales and office forces in all the important surgical instrument houses at that time [the '90's] in Germany and in other European countries were composed of practical instrument men," says Schwidetzky. H. Windler, a German instrument-maker, had the most distinguished reputation in his field—his house was the mecca of young instrument-makers from all over Europe. To be admitted to Windler's house a young man had to have unusual qualifications or prestige. In 1898 Schwidetzky, the young instrument-maker from Poland, became a member of Windler's sales force on his proved ability.

His desire to visit the United States later prompted him to study English. In 1900 he arrived in New York City where, discovering that his limited knowledge of the language did not fit him for a sales position, he returned to shop work for a time. To improve his English he accepted a teaching post in German with the Berlitz School of Languages and after five months was able to go back to selling. Two years later he returned to Germany on his wedding trip. Upon his return (1902) he became an importer of surgical supplies. The Bender Ideal bandage, the first elastic bandage without rubber, was one of his importations. From this he developed the Ace bandage, which is now used "by practically every physician in cases where pressure and support are needed." (The new pressure treatment of wounds practiced by the medical profession in the armed forces "is greatly helped because rubberless but elastic bandages are available.")

The beginning of another of his important aids to the medical profession was also made during the time he was an importer. In 1911 Dr. Howard Greeley came to him with the Greeley Unit, an instrument for the injection of morphine tartrate. Impressed with its value, Schwidetzky and Dr. Greeley incorporated the Greeley Laboratory for its manufacture. The instrument failed to sell to the medical profession, although the Canadian Government bought many thousands of them for the armed forces during the First World War. In 1913 Schwidetzky discontinued his importing business and joined the New Jersey firm of instrument-makers, Becton, Dickinson & Company, with which he is still connected.

He brought into the company several of his specialties, which were the foundation of a separate department of the "B-D" company. One of these was the Asepto syringe. "About 1910 I made the first glass barrel and rubber bulb syringe," says Schwidetzky, "for a doctor in Seattle. In 1916 it was called the 'Asepto' and is now the standard syringe in G. U. work and irrigation in our armed forces." This instrument has changed the technique of hand injection and also the technique known as the "Carrel '40-Dakin." The Syrette was developed by E. R. Squibb & Sons from the Greeley Unit, an instrument in the kit of every member of the American armed forces. Each Syrette contains one and one-half cc. of morphine tartrate which can be self-administered by a wounded man, easing his pain until medical help is given to him. "The Syrette and the Continuous Caudal Needle," says Dr. Robert A. Hingson of the United States Public Health Service, "are outstanding contributions to the medical profession."

Schwidetzky has written the following pamphlets and articles: a pamphlet on the standardization of needles and syringes (written in 1916 but still in use by the trade); a pamphlet on the Ace bandage (1931); "Refinement in the Equipment for Parenteral Medication," an article published in 1936 in the *American Journal of Clinical Medicine;* and "The History of Hypodermic Needles and Syringes," an article published in 1943 in *Current Researches in Anesthesia and Analgesia.* He also is the director and secretary of the Carlstadt Mutual Loan & Building Association, one of the "largest institutions of its kind in New Jersey." His son (by his first marriage), Oscar M. Schwidetzky, is employed as a salesman with Becton, Dickinson & Company.

In May 1916 Schwidetzky was married to Anna Hasselhuhn (his first wife died in 1914). In June 1917 he became an American citizen. He and Mrs. Schwidetzky are members of the First Reformed Church of Hasbrouck Heights, the New Jersey town in which they live. They have a summer home in Sag Harbor, where they enjoy fishing, hunting, golf, poker, and gardening. Schwidetsky likes to cook and in late 1943 was engaged in writing a cookbook on the preparation of "innards." He is five feet ten inches tall and weighs 165 pounds. His complexion ruddy and his hair gray, he is an affable, jolly man who thinks he deserves the name "Lucky Dutchman" because "I am lucky." He believes this is due to his practice of the philosophy, "If you help willingly without though of reward, you will get your reward with interest and will not have to wait for it beyond the present." Regarding his work, he says: "I know nothing but this business —but I make it a point to know all there is to know about it. I read practically every medical journal and keep in close touch with the medical profession and the trade."

SCOTT, HAZEL (DOROTHY) June 11, 1920- Pianist; singer

Address: b. Cafe Society Uptown, 128 E. 58th St, New York City; h. 25 Monroe Pl, White Plains, N. Y.

"I know lots of people have good reasons why it's all right to swing the classics, but—well, I wish I didn't do it. I just can't help it," *Collier's* quotes Hazel Scott as saying. Her sincerity might be questioned, but those unsuspecting souls who were present at Carnegie Hall on the memorable day in December 1940 when Miss Scott stepped to the stage to play Franz Liszt's *Second Hungarian Rhapsody* are almost inclined to believe that she "just can't help it." The *Rhapsody* started out conventionally enough on that occasion—and then, "subtly, something strange began to happen. Delicately the tempo changed, and there was a stir in the auditorium. Someone in one of the center boxes laughed nervously, another person giggled, and then the entire aggregation was snickering happily. For Hazel Scott was swinging it."

Few classicists seem to object to Miss Scott's interpretations of the masters, which since that date have made her name more familiar to the general public than that of Myra Hess '43. Commented one dazed reviewer, after the Carnegie Hall performance: "It was the most impudent musical criticism since George Bernard Shaw stopped writing on the subject. It was witty, daring, modern, but never irreverent. I think Liszt would have been delighted." According to a later article in *Time* Magazine: "Where others murder the classics, Hazel Scott merely commits arson. . . She seems coolly determined to play legitimately, and, for a brief while, triumphs. But gradually it becomes apparent

Ivan Black

HAZEL SCOTT

that evil forces are struggling within her for expression. Strange notes and rhythms creep in, the melody is tortured with hints of boogie-woogie, until finally, happily, Hazel Scott surrenders to her worse nature and beats the keyboard into a rack of bones. The reverse is also true: into *Tea for Two* may creep a few bars of Debussy's *Clair de Lune*."

Hazel Dorothy Scott was born in Port of Spain, Trinidad on June 11, 1920, the daughter of R. Thomas and Alma (Long) Scott. Both of her parents were creative workers. Her father, who had been a well known Negro scholar in Liverpool, England, had come to the British colony to teach English at St. Mary's College. Her mother was not only the daughter of the King's architect and a ranking debutante in local Negro society, but was herself a talented music student. In 1924 the family, including Hazel's grandmother, moved to the United States, where Mr. Scott was to teach at a large Negro university. Hazel spent her fourth birthday on the ship.

Once in the United States, the Scotts settled in a four-story private house on Harlem's 118th Street. Hazel was a prodigy in more ways than one. At the age of three she had learned to read; at the age of three and one-half she had been discovered to have perfect pitch, and by this time she was used by her family "as a convenient substitute for a tuning fork. Hit an off note, and she'd chirp, 'Wong!' Be on key, and she'd cry, 'Bwavo!'" By the time the family reached the United States she was using both her hands on the piano with confidence, and by the time she was five she was improvising. Her grandmother was on one occasion a chance auditor of one of these concerts. "She was awakened by music in the parlor. Tiptoeing in, she discovered Hazel perched precariously on an unabridged dictionary mounted atop the piano stool. She was playing her own arrangement of the lullabies that were nightly sung to her—a medley of *Rock-a-bye-Baby* and *Gentle Jesus*."

Hazel went to public school, but her first important music teacher was Professor Paul Wagner of the Julliard School of Music, who heard her rendition of the Rachmaninoff *Prelude*. When she had finished Wagner put his hand on her head and quietly remarked, "I am in the presence of a genius." Wagner explained that Hazel was too young for a regular Julliard scholarship, but added that he would be glad to teach her himself. On Friday evening, November 24, 1933, there was a recital and dance in Harlem, at which, the program noted, Mrs. Alma Long Scott presented "her thirteen-year-old daughter, little Miss Hazel Scott, child wonder pianist."

With a serious illness of Professor Wagner, Hazel's formal musical education came to an abrupt halt. From that time on she "worked at her music alone, playing the standard classics over and over until she had them pat. Then boredom set in, and she developed the 'bad habit' of syncopating the symphonies for variety's sake. She knew that her mother would be unhappy about her swing, and her father would be wrathful. He was an academic man, proud of his daughter's tastes."

Mr. Scott's "sense of dignity was constantly in conflict with American race prejudice, and, in Hazel's fourteenth year," he was "involved in a lynch riot in the South and at once took to reading all available books on the subject of race differences. He died a few months later of pneumonia." Mrs. Scott, "now head of the family," took a job as saxophonist in Mrs. Louis Armstrong's all-girl band. Before long she had organized her own women's orchestra, in which Hazel "played the piano and doubled in brass, because mother also taught her the trumpet." The latter instrument was soon abandoned because "Hazel feared that a pronounced embouchure—trumpet player's lips—might spoil her looks." Fifteen-year-old Hazel liked "working in the smoky Port Chester bar that hired the band," she "liked the late hours, the shop talk."

When this band broke up Hazel got a chance in the 1938 Broadway show, *Sing Out the News*. She stopped the show with the hit tune, *Franklin D. Roosevelt Jones*. The "song and its singer were the recipients of standout reviews, and Hazel's salary promptly bounced upward to $100." After this show closed there were "smoky little places" and "medium-sized places selling soft drinks and hard music—two of them at the New York World's Fair." For a short time there was a Hazel Scott Band, but the eighteen-year-old girl was not enough interested to keep it operating. "She preferred roller skating and polishing her nails."

It was about 1940 when Hazel was hired for a "three weeks' fill-in engagement" at a new Greenwich Village night club, Cafe Society Downtown, temporarily taking the place of Ida Cox, a well known blues singer. But when Barney Josephson, the owner, planned that short shift, he "had never heard her syncopated classics. The first time he did, he rushed up to her and said, 'Hazel! Hazel! Hazel! You have a job for life.'" After that Hazel stayed on permanently, though she moved uptown. After the first club was well established Barney Josephson "got ambitious for the uptown trade, and set up a place on East 58th Street, with a higher ceiling and a less murky atmosphere." Hazel continued to be the star turn at the new club, with occasional side trips to places like the Boston Ritz-Carlton Hotel Roof and the New New York Paramount.

And there were other side trips. In the spring of 1942 Gregory Ratoff '43 filmed a few sequences of her at the piano and took them to Hollywood to insert in a picture that was then being made, *Something to Shout About*. When the Columbia officials saw them they were so impressed that they revamped the film, writing in a fat part for her. It was not until Hazel came to Hollywood that Ratoff discovered her singing voice. "Why didn't you tell me you could sing?" he asked. "You didn't ask me," she replied demurely. Since then Hollywood has made use of her talents, and in 1943 she was committed to MGM for *Broadway Rhythm* and for Red Skelton's *I Dood It*; to Columbia for *The Heat's On* (in which she and Xavier Cugat '42 came off considerably better than Mae West) as well as *Something to Shout About*; and to Warner Brothers for *Rhapsody in Blue*. In between film roles she appeared in Broadway's attempt to revive vaudeville, *Priorities of 1942*, in which, according to *Time*, she tossed tunes "from one end of the piano to another in a dazzling succession of tempos and keys." Wrote Brooks Atkinson '42: "She has the most incandescent personality of any one in the show, and she is dressed and turned out to make the best possible use of it. There is not a dull spot in her number. Every moment counts as she intends it to."

Hazel Scott's "swing style piano solos with drums" have also been recorded in several phonograph albums, one of which, *Swinging the Classics,* nearly broke sales records in its class. Leonard G. Feather wrote notes on Hazel and her music for her first two albums made for Decca. Of the *Ritual Fire Dance* (de Falla) he says: "It stays nearest to the original interpretation, with only the steady rhythmic background to furnish any basic difference during the body of the performance." The *Two Part Invention in A Minor* (Bach) "is one of several swing arrangements designed to make Johann Sebastian revolve in his grave at a solid four to the bar." As for the Rachmaninoff *Prelude in C Sharp Minor* which Hazel had played for Professor Wagner during her eighth year, the "variations start subtly and insinuatingly as she goes into a slight syncopation of the melody, using an occasional accent shifted back from the first beat to the fourth beat of the previous bar and similar little effects that help to lend the jazz atmosphere without destroying the melodic structure of the work." Hazel's non-classical discs like *Mighty Like the Blues, Calling All Bars,* and *Boogie-Woogie* sell well, too, but she says: "My stuff is hybrid. I'm not grim enough for the classics. As for swing—well, I'm not sufficiently aboriginal." "I know," she also admits, "that I'm not the best girl pianist I ever heard."

Hazel is a young woman with a "round, roguish face", "large flirtatious eyes, a pouting mouth, a quietly confident grin." Her personality has changed during her years with Cafe Society, and so has the view which the audience gets of her. She first played with her back to the trade and later presented a side view, but now she has the piano between her and her audience. Her evening gowns usually display her shapely round shoulders ("I think my shoulders are my best points. Don't you?"), so that her admirers can watch her muscles move as she plays. She usually buys about eighteen evening dresses a year, but seldom pays more than $20 or $25 for any of them.

When playing at Cafe Society, Hazel has three appointments an evening: at 8:00, 12:00, and 12:30. In between times she reads, listens to records, and talks to innumerable friends (they include most of New York's celebrities) in her dressing-room. In New York she lives with her mother in a new stucco house in Westchester County, but makes frequent excursions to Harlem, where everyone knows her and greets her with a "Hi, Hazel!" In Harlem she wears bright slack suits in the afternoon, or the familiar schoolgirl costume of sweater, skirt, socks, and flat shoes. She doesn't particularly like fuss in clothes, and confides that "it takes something pretty special to get me into a hat. I buy them but I don't wear 'em more than once." She now wears a mink coat, however, in keeping with her income, which has risen from $65 to something like $1,500 a week, exclusive of movies. For her pictures in 1943 she was upped to a weekly $4,000 apiece.

In Hollywood, when her daily chores on the lot are done, Hazel assuages her homesickness for Cafe Society by taking a turn at the Mocambo, a Hollywood night club. Her hobbies are collecting miniature band instruments, miniature pianos, and very old native Calypso songs which have not been heard before in the United States. She is currently at work on her first piano concerto, and is said to look forward to concert work and a "legitimate" career. (On December 12, 1943 she was scheduled to play a combination straight piano and boogie-woogie recital in the Civic Opera House in Chicago.) As far as boogie-woogie is concerned, however, she remains loyal to Barney Josephson, even though other night clubs have offered her far more money than he can afford to pay. With all of her professional activities she never refuses a charity appearance if she can possibly make it, and she is an extremely popular celebrity. In May 1941 the students of New York University's School of Education gave her a silver cup and crowned her Queen of their Senior Prom; in 1943 she received a Page One award from the Newspaper Guild of New York.

SCOTT, ROBERT L(EE), JR. 1908- United States Army officer; author

Address: b. c/o Charles Scribner's Sons, 597-599 Fifth Ave, New York City; h. The Anchorage, Winter Park, Fla.

A lanky, daredevil fighter pilot from Georgia, Colonel Robert L. Scott, holds the Army record for enemy planes downed. Besides the many medals and citations he has won, he has gained the personal tribute of his former leader, Brigadier General Claire L. Chennault '42, who wrote of Scott: "His story is a record of persistence, determination, and courage from early boyhood. Having determined early in life that he had to fly, he overcame all obstacles in the way to the attainment of his ambition. This story alone should be an inspiration to every American boy. Having become a military pilot, his determined struggle to meet the enemy and his glorious record, first as a 'One Man Air Force,' and later as Commander of the American Fighters in China, should be an inspiration to all Americans of all ages."

COL. ROBERT L. SCOTT, JR.

Robert L. Scott, Jr., was born in Macon, Georgia in the year 1908. His boyhood desire to fly caused him, at the age of twelve, to steal fifty feet of canvas from a Holy Roller tent with which he fashioned a homemade glider. A split second after his first take-off the wings of the contraption snapped, and he crashed sixty-seven feet to the ground; his life was saved only because his fall was broken by a providential Cherokee rose bush. In 1921 he bought a crated wartime Jenny at a public auction for $75, hauled it home on a truck, and hid it in another boy's garage to conceal it from his parents. His complete ignorance of aeronautical mechanics did not prevent him from tinkering with the plane; he struggled for weeks in a vain attempt to assemble the parts. Finally a street-car conductor who had been a pilot in the First World War helped him put the Jenny together and taught him to fly; in return, Scott permitted him to use the plane for week-end "barnstorming" expeditions. The partnership ended suddenly with an accident that killed the conductor and destroyed the plane.

Too much interested in flying and athletics to be concerned with his school work, Scott learned that his undistinguished academic record prevented his entry to the Military Academy at West Point. But nothing was to stand in the way of his ambition: although he had already attended two colleges, Scott, in 1926, returned to high school to master the subjects in which he had been deficient. Then in the summer of 1927 he enlisted in the Regular Army as a private in order to be trained in the Army's West Point Preparatory School. His labors were rewarded, for the following year he was admitted to West Point. There, according to his own account, he was a borderline student and prankish at the wrong times. Nevertheless he was graduated in 1932.

After a motorcycle jaunt through Europe in the summer of 1932 Scott reported to the Air Corps Training Center at Randolph Field, Texas, where he was to begin his training as a pilot. Confident and elated as he approached the training grounds for the first time, Scott says he kept repeating to himself: "This is what I've waited for all the days of my life." During his training period at Randolph Field his extra-curricular activities included breakneck auto rides to see his girl friend who lived 1,300 miles away. Since he had only forty-seven hours off every week end, he had to drive at an average speed of about fifty-four miles an hour, counting the time he saw the girl. He estimates that the combined mileage covered in his courtship was 84,000 miles. He wore out two cars but finally persuaded the girl to marry him.

He won his wings in 1933 and was assigned to Mitchel Field, New York, where his eagerness to fly prompted him to volunteer for every flight he could get in addition to those that were routine. The next year he became an Army air-mail pilot, flying mail from Chicago over the Alleghenies to New York, a route dubbed by pilots as the "Hell Stretch" because of its hazards. In those days when the Army air-mail service was in its infancy schedules were disregarded by necessity, and the information available on flying conditions was often inaccurate. On some occasions, Scott found, the Cleveland mail destined for Chicago would be sent to New York by mistake.

Scott's next assignment took him to Panama and South America. He supervised the construction of air bases in those countries and he collected hundreds of varieties of wild orchids which he cultivated during his stay in Panama. Upon his return to the United States three years later he was appointed instructor of flying students at Randolph Field, and before long he was promoted to the rank of flight commander and was teaching instructors. Another promotion followed in 1939, when he was sent to California as assistant district supervisor of the West Coast Training Center.

Altogether Scott had now been an instructor for nearly four years, and although he had trained some crack pilots, such as the late Colin Kelly, he began to find teaching monotonous. Action was what he required, and when Pearl Harbor was bombed he decided to get into the fight. His applications for combat duty were rejected because of his age: he was informed that at thirty-four he was too old to fly a fighter plane into combat. But when they refused his request, the authorities didn't understand that they were dealing with the most persistent man in the country. Despite the rejection, Scott continued to petition and cajole general after general, even after he had been shunted into another director's job at a flying school.

Eventually he received a phone call from a colonel who wanted to know whether he had ever flown a four-engine plane. Scott had been in such a plane once, as an observer; knowing that a negative answer would kill his hopes, he promptly lied, "Yes, sir." When asked how many hours he had flown a Flying Fortress, Scott replied: "Eleven hundred." He might as well be hung for a sheep as a lamb, he explained.

"Properly innoculated against fourteen diseases, with visas for everywhere, with trinkets for trade with natives in Africa, Arabia, and Burma," Scott was given command of one of thirteen bombers which were to be flown to Asia, from where they were to bomb Japan. Fortunately for Scott, the co-pilot of his plane turned out to be one of his former students who was very willing to show him how to operate the ship for a few days before the take-off. On the South America-to-Africa lap of the exciting flight, a navigator's error put the plane off its course somewhere over the Atlantic; that the ship ever arrived at its destination can be attributed only to Scott's uncanny sense of direction.

At the end of the journey, Scott and the others learned that the proposed bombing of Japan had been frustrated by the fast-moving Japs, who had taken all American bases in the Philippines. Nevertheless Scott remained in the Far East as a pilot in the A. B. C. Ferry Command, transporting men, refugees, and supplies along the China-Assam route. One day, by way of diversion, he decided to find out how high a small, single-seater plane could climb. He took one clear over Mount Everest, thereby arousing the ire of the British authorities, who informed Scott that he was liable to court martial because he had violated the religion of Nepal by crossing the sacred peak.

Eager for more action, Scott talked General Chennault into giving him a P-40 with which he soon constituted a one-man air force, doing enough damage to the Japanese in Burma to convince them that an entire squadron of American planes was after them. In June 1942, after Chennault's American Volunteer Group had been incorporated into the United States Army, Scott was given the command of the American Army's first pursuit planes in China. In the fall of 1943 Colonel Scott had at least thirteen enemy planes to his credit in addition to six "probables." Although he has never been shot down his plane has very often been perforated by Japanese bullets, and he himself has stopped occasional shell fragments. In January 1943 Scott was ordered back to the United States to train fighter pilots.

Scott's book, *God Is My Co-Pilot*, published in the summer of 1943, is a lively account of the author's adventures. Called by John Chamberlain '40 of the New York *Times* "the most fascinating personal story of the War," the book's only pietistic feature is its title. Chamberlain continues: "He has a downright genius for writing about his own Gargantuan living... Whatever way you take him, Colonel Scott is one whale of a man. His book is written with verve and humor." The reviewer of the New York *Herald Tribune* states: "It's the toughest fighting book that has yet come out of this War." (An article by Colonel Scott, "The American Fighting Spirit," which appeared in the September 26, 1943 issue of *This Week*, gives Scott's own explanation of this toughness. He says: "We deliberately put a chip on our shoulder . . . as necessary to fighter flying as our planes and our guns.")

Scott is described as a "tall, lean, dark-haired Southerner, with bright blue eyes and a quick, pleasant smile." His manner is "quiet and unassuming," and he speaks with a thick Southern accent. He credits a great deal of his heroic aerial performances in China to the acuity of his former boss, General Chennault. "The General is a genius in the opinion of everybody flying for him," the Colonel explains. "There is no other way to explain the manner in which he always guesses right.'

SEAGRAVE, GORDON S(TIFLER)

1897- United States Army officer; surgeon; author

Address: b. c/o W. W. Norton, Inc, 70 Fifth Ave, New York City

For twenty years Dr. Gordon S. Seagrave has conducted a one-man war against disease and human suffering in the wilds of Burma. "All I wanted," he writes, "was plenty of jungle and thousands of sick people to treat, preferably with surgery." Both of his wishes were amply gratified when the War reached Burma and the Doctor began devoting him-

DR. GORDON S. SEAGRAVE

self entirely to the care of the wounded, with complete disregard for his own safety and well-being. The job he did so magnificently is becoming widely known since the publication of his autobiographical book, *Burma Surgeon*, in August 1943.

The youngest of four children, Gordon Stifler Seagrave, born in Burma in 1897, was to carry on the missionary activities which for four generations had occupied his family: his father, the Reverend A. S. Seagrave, grandfather, great-grandfather, and several aunts and uncles had been Baptist missionaries in Burma. As a child he was prankish, spirited, and, according to his own accounts, not spanked enough: "If I'd been spanked as often as I deserved, I probably would never have grown to manhood." His determination to become a medical, rather than an evangelistic, missionary dates from his fifth year, when a colorful Irishman of the former calling indelibly impressed young Seagrave's imagination with his extravagant tales of adventure and his ability to drink water while standing on his head.

The Seagrave family came to the United States in 1909, settling in the university town of Granville, Ohio. There Gordon raised chickens and cultivated his own farm. One year he raised so many beans that the grocery stores were filled with them, and the price of beans on the Granville Stock Exchange crashed. Later, by working at various odd jobs, he earned enough money for his expenses at Denison University, from which he received his B. A. degree. In the summer of 1918, while working at a camp in Wisconsin as handy man, he met Marion G. Morse who, two years later, became his wife. They have four children: Leslie Mae (now Mrs. Richard D. Rittermore, Jr.), Weston Morse (now in the Navy V-12 program at Case School, Cleveland), John Howard, and Sterling Vinton.

Upon receiving his M. D. from Johns Hopkins in 1921, Dr. Seagrave interned at the Robert Garrett Sanitarium for children in Maryland and at the Union Memorial Hospital in Baltimore. One day intern Seagrave happened to encounter an operating-room superintendent in the act of throwing out all the useless, broken-down surgical instruments. He asked for and received an entire wastebasketful of these discarded instruments, with which, he reports, "in spite of the fact that they were broken and not mates," he was to do all of his surgical work the next five years.

In 1922 the Doctor, with his wife, baby daughter, and wastebasket instruments, sailed for Burma where he was to take charge of the Baptist Hospital at Namkham in the Northern Shan States. Arriving at Namkham, the Doctor's hopes were nearly shattered by the condition of the "hospital," a rotten wooden building with blood-soaked floors, indescribably filthy walls, and one solitary patient.

But circumstances, no matter how unfavorable, were not to interfere with Dr. Seagrave's plans. His first objective was to win the confidence of the natives. Well-equipped to communicate with the people of the community (he spoke Karen before he learned English and he later learned Burmese and Shan), he went among the natives, distributing pills and gospel tracts. Both of these excited interest: one man, eager for a speedy cure, took all his pills at once, while all of the Shans clamored for extra copies of the tracts. It wasn't until some time later that the Doctor discovered the Shans rolling their huge cheroots in the pages of the tracts. "Smoking the gospel seemed to me a funny way to convert a man," said Dr. Seagrave. His position became firmly established, however, when a tubercular man died exactly according to his predictions.

With a minimum of equipment, and, at first, entirely without professional assistants, Dr. Seagrave did all sorts of surgery. Whenever he had to perform an operation he had never before attempted, he opened his books and studied every detail. "Then I was profusely sick, went to bed on it and the next morning, still nauseated, started operating." That the operations usually were successful the Doctor attributes to his having "had the breaks."

As the need for nurses became acute, Dr. Seagrave undertook to train his own nurses, since American nurses were unavailable. He began by teaching two girls, a Shan and a Kachin. Gradually, as their number increased, the language difficulties multiplied. The Doctor taught one girl in Shan; she in turn taught a Kachin girl in Burmese. During operations, four languages were spoken at once: English, Burmese, Shan, and Kachin. Before very long Dr. Seagrave had turned out a first-class body of nurses—devoted, efficient, and inexhaustible. In his entire experience, only one of his nurses failed the Government examinations.

For many years Dr. Seagrave fought to keep his hospital out of the "wastebasket" category. The American Baptist Foreign Mission, which subsidized the hospital, was far more enthusiastic about schools and sermons for the Burmese than it was about badly-needed hospitals. The allotment for the Namkham hospital had been $600 yearly for thirty in-patients, and by the time the number of in-patients had risen to 200 the allotment had been increased to only $1,200. Deeply moved by the appalling physical misery all around him, for a long time the Doctor worked desperately to make financial ends meet. The situation was but slightly alleviated by his supplementing the allotment with the tiny fees he received from private patients. (An obstetrical case, for instance, earned him the equivalent of thirty cents.)

Several years later a memorial fund of $20,000 enabled the Doctor to build a new hospital. With the help of friends, native workmen, and Mrs. Seagrave, who, together with the nurses, hauled cobblestones, a firmly constructed stone edifice with modern plumbing replaced the old wooden building. Dr. Seagrave was also able to establish several outlying branch hospitals and dispensaries, staffed with graduate nurses. All of the facilities of the new hospital were drawn upon when a plague epidemic in 1939 killed off people by the hundreds. Children in particular succumbed: before the plague was brought under control, every child under ten years of age who had contracted the disease was dead. Dr. Seagrave and his staff worked furiously. They administered thousands of plague vaccine inoculations and finally stopped the epidemic.

While Dr. Seagrave was busy with his hospital, repercussions of the "incident" between China and Japan began to be felt in Burma. In October 1940 the first Japanese bombs fell in the vicinity of Namkham. Casualities by the truckload were brought to the nearby Loiwing hospital, where there was no electricity because the power lines had been destroyed in the bombing. Dr. Seagrave and his assistant, Dr. Yu, performed operations all night, working by candlelight and Storm King lamps.

Then came the Japanese attack on Pearl Harbor, and soon the battle for Burma began. Upon three days' notice Dr. Seagrave set up a 400-bed hospital at Prome for which he recruited some of his best doctors and nurses. He organized mobile medical units to serve the entire Chinese Army over a front extending several hundred miles. In recognition of his services the British offered him a commission as a lieutenant colonel which he declined to accept, lest he thereby lose his American citizenship. Meanwhile, all Americans had been ordered to evacuate Burma. Mrs. Seagrave, who was suffering from malaria, reluctantly went back to the United States, via India.

When General Joseph W. Stilwell '42 arrived to take command of the American Army in Burma, Dr. Seagrave placed his facilities at the General's disposal. Seagrave's medical units accordingly were transferred from the British Liaison Mission to the American Army, and the Doctor was commissioned as a major in the Medical Corps. The rest of the story is one of incredible endurance. The Doctor set up base hospitals behind the lines where he received hundreds of wounded and dying brought in by volunteer ambulance drivers. While Japanese bombs fell and fires raged nearby, the Doctor operated incessantly (sometimes uninterruptedly for thirty-six hours), fighting against time, fatigue, the intense heat, and the innumerable insects that kept dropping into the wounds of abdominal cases. The nurses who assisted at his surgery worked in shifts, each group carrying on until they literally dropped from exhaustion. For weeks, with little food and less sleep, Dr. Seagrave and his heroic band did nothing but operate, pack, and retreat.

The group made the retreat from Burma with General Stilwell. At first they traveled in trucks and jeeps but later they proceeded on foot because the General had ordered everything to be abandoned except what could be carried. Plodding on through jungles and over mountains, the party went hungry except for the wild greens picked along the way by Dr. Seagrave's nurses, and some occasional rice begged from natives. By sheer will-power Dr. Seagrave, his feet covered with sores and his body ridden with malaria fever, managed to get as far as India. Throughout the arduous journey the constant laughter and singing of the frail-looking Burmese nurses, who had followed Dr. Seagrave, prevented many a "strong" man from giving up.

Now a lieutenant colonel with the Medical Corps of the United States Army Forces in China, Burma, and India, Dr. Seagrave has been honored with a decoration by King George VI '42, and is the recipient of the Order of the Purple Heart. He is the author of several books: *Waste-basket Surgery* (1930); *Tales of a Waste-basket Surgeon* (1938); and the current best-selling *Burma Surgeon*, his autobiography. Of his latest book Orville Prescott of the New York *Times* states, "*Burma Surgeon* has little professional polish. It is rough and ready writing of the amateur. . . Dr. Seagrave was too engrossed in a job magnificently worth doing to have much time for the joys of contemplation. His work has been his life. It has been a fine life, and his book about it is a good book." The reviewer of the New York *Herald Tribune* was even more favorably impressed: "*Burma Surgeon* is a rough-hewn, exciting book. . . He [Dr. Seagrave] writes as he has lived, with raw gusto. . . Throughout, and triumphantly, he tells the happy story of a man happy at having found so much to do." The book was the December 1943 choice of the Peoples Book Club. By that time its author was recovering from a broken shoulder and shrapnel wounds suffered while treating casualties on an exposed position on the new Ledo road, which replaced the old Burma Road linking India and China.

Dr. Seagrave, who is gray-haired and of medium height, describes himself as "short and ugly." He is the idol and inspiration of his Burmese nurses, who call him "Daddy" and who cry whenever they are refused the nastiest and most dangerous tasks. Without exception, he has won the respect and affection of all those who have worked with him simply by treating them with respect and affection at all times. This procedure, he reports, has never failed.

SÉLINCOURT, ERNEST DE. *See* De Sélincourt, E.

SERLIN, OSCAR Jan. 30, 1901- Producer; director

Address: h. Brookbox, West Cornwall, Conn.

Oscar's Serlin's most successful production, *Life with Father*, opened in New York City in 1939, and by 1943 it seemed, to his press agent at least, likely to go on forever like Tennyson's brook. Serlin's theatrical career has included a wide variety of experiences—from supernumerary with the Chicago Opera Company to producer of an outstanding Broadway comedy success.

Oscar Serlin was born in Yalowka (Grudnow), Russia, on January 30, 1901, the son of Max and Fania (Shamberg) Serlin. His father was in the lumber business, and his mother ran the town's general store. In 1910 the Serlins came to the United States and settled in Chicago, where Oscar's uncles were in the cleaning and dyeing business. Oscar, who had attended a Greek Orthodox school in Russia, now studied in the Chicago public schools, at De Paul Academy, and at De Paul University. He maintains that his interest in the theatre started when he was a grammar school student. His Russian-accented English was held up to ridicule. For long periods each day he practiced speaking before a mirror and thus became interested in acting.

Vandamm

OSCAR SERLIN

While going to school Serlin had a succession of part-time jobs, starting with selling candy in a theatre and working his way up to usher, ticket taker, and box-office man. Finally, at the age of eighteen, he became assistant manager of the Olympic Theatre in Chicago. Along with his academic and outside activities he had time to become an all-Cook County football player at De Paul and to write the varsity play, *Pals*, in which he had the leading role. At college he was also captain of the football team and producer of plays at the school's little theatre. During this period, too, he wrote a number of vaudeville acts that were played on "family circuits."

Serlin left the University before graduation and after a tour of European theatre centers came back to the United States to try to find a place for himself in the American theatre. He worked for a time as a gag writer in San Antonio, Texas, and then returned to Chicago to work briefly as manager of a burlesque show.

Serlin's next field of endeavor was in New York, where he was the stage manager of a play called *Skidding*, produced by Marion Gering, on which the later Judge Hardy film series was based. In January 1929 he produced Preston Sturges' '41 first play, *The Guinea Pig*. In March of the same year he produced *Solitaire*, which, according to Jack Gould, was "financed in part by a bootlegger and to the extent of $500 by Sam Levene, who raised the money from his brother. Sam had his first speaking part in the show, which is not even listed in Burns Mantle's summary for the season of 1928 to 1929." In May Serlin was the stage manager for *Jade God*, in which he "made his one and only professional stage debut as an actor . . . as two actors, in fact. Using the name of Ronald Dexter, he played a dead man in the opening scene. Under his own name he doubled, later in the play, as Peters, a Cockney policeman." In November 1929 he produced *Broken Dishes*, a play notable chiefly for bringing Bette Davis '41 to the attention of Broadway, and the following year he produced *Lost Sheep*, which ran for three months.

After a lean period in which Serlin tried in vain to raise enough money to produce two plays written by his friends—Paul Osborn's *The Vinegar Tree* and Moss Hart's '40 first play, *Once in a Lifetime*—and during which time he adapted the Russian play, *The Singer of Sorrow*, by Ossip Dymow, he was hired by Paramount Pictures as a talent scout. He was with Paramount from 1932 to 1937, working up to head of the Eastern talent department and eventually to associate producer. An able publicist, he made the word "talent scout" an everyday American expression. He was responsible for sending Cary Grant '41, Olympe Bradna, Fred MacMurray, Frances Farmer, Dorothy Lamour, John Howard, and Margo to Hollywood; he found Tommy Kelly for the title role in *Tom Sawyer*; and he participated in the hunt for a Scarlett O'Hara for the film version of *Gone with the Wind*. In 1935 he presented the Russian film *The New Gulliver* to American audiences. He also assisted in the production of ten pictures, two of them starring Charles Laughton. After his talent scouting days were over, Serlin was still influential in sending actors to Hollywood. Among them was Teresa Wright '43, who had her first important Broadway role in *Life with Father*. Greer Garson's '42 fiance Richard Ney, who played Clarence in one of the road companies, and Peter Jamerson, who had the same role in another road company, both have been hired for motion-picture work. Ney scored in a leading role in *Mrs. Miniver*.

In 1937 Serlin first had the idea of producing a play based on the late Clarence Day's *Life with Father* sketches in the *New Yorker* Magazine. After lengthy negotiations and conferences with Mrs. Clarence Day, owner of the copyright, and with Howard Lindsay '42 and Russel Crouse '41, the co-authors of the play, *Life with Father* went into production in the fall of 1939, opening at the Empire Theatre on Broadway to the unanimous acclaim of the critics. In three years the play, including Broadway, out-of-town, and road companies, has grossed more than five million dollars, and has received the largest Hollywood offers ever made for a play. In September 1942, after having rejected all motion-picture offers, Serlin announced that the play was available for film adaptation on the following unprecedented conditions: the price was one-half million dollars down plus a percentage of the gross receipts; the film rights were to revert after seven years, and only one film could be made; the picture would have to be made entirely from material in the play; Mrs. Day and the authors were to have editorial jurisdiction over the film, especially in matters of "good taste," and could stop any script they dislike from being filmed; no radio or television rights were to go with the sale; the picture was not to be released before the end of 1944. Hollywood observers were divided among those who felt that the terms were fantastic and, if accepted, would set a dangerous precedent; those who felt that "Serlin and Company may have overreached themselves"; and those who commented: "It's a tough deal but . . . a terrific property." By the end of 1943 the film rights were still unsold. Serlin planned to make the picture himself, probably in an Eastern studio, according to the New York *Times*, and in his own good time, releasing it through a regular film company. This was probably just as well, for more than one studio had reportedly withdrawn its bid, and Producing Artists had made it clear that its $600,000 offer was its first and last.

A corollary to Serlin's production of *Life with Father* was a feud between him and the Shubert brothers, who control the United Booking Office which in turn controls a majority of the desirable theatres in American key cities. In November 1939 Serlin looked over several Shubert theatres for his *Life with Father* and, dissatisfied with them, rented the Empire Theatre, an independently owned house. Angered because they had lost a hit, the Shuberts made it difficult for Serlin to secure theatres for his out-of-town and road companies. Serlin was able, however, to find suitable independent houses, sometimes outside the theatrical districts, and other producers were cheered by his "David and Goliath" success in defying what had hitherto been a virtual monopoly.

In 1939 Serlin produced a documentary film, *The City*, under the auspices of the Carnegie Foundation for the World's Fair in New York. It was very well received by the critics, who praised it for its advanced photography and technique. In August 1941 he tried out his adaptation of Ferenc Molnar's *The King's Maid*, which never reached New York.

In April 1942 *The Moon Is Down*, a timely play by John Steinbeck '40, was produced by Serlin at the Martin Beck Theatre in New York City. The notices were generally unfavorable, and "important critics and columnists who disagreed with Steinbeck's picture of the Nazis continued to hammer away at the play throughout its New York engagement. This undoubtedly killed at least half of its potential run on Broadway." The play closed in May, but the motion-picture rights were sold for a record $300,000. In October, with Lindsay and Crouse as co-producers, Serlin produced *Strip for Action*, a "burlesque of burlesque" which received good notices, but lasted only three months because its high operating cost made it impossible to keep it running after attendance fell short of near capacity. In April 1943 he produced Victor Wolfson's play *The Family*, based on Nina Fedorova's '40 *Atlantic Monthly* Prize novel. While praised for casting and production, *The Family* did not measure up to expectations, as Serlin stated in a succinct closing announcement, and it was taken off the boards after seven performances.

Oscar Serlin has been married twice. He was married to Jane Udell in 1932 (marriage dissolved in 1940), by whom he had two children, Michael David and Dorothy Fortune. In August 1942 he was married to Babette (Block) De Sheim, widow of the actor Charles De Sheim. Mrs. Serlin, a slim brunette young woman, has a reputation in the theatre in her own right. She is her husband's assistant in his theatrical productions. In November 1943 a son, Anthony Block, was born to them.

Serlin has been described as a "neat meticulous dresser with a fine sense for line and color, even in clothes." He is "tall, dark, and softspoken." His hobbies are collecting theatrical items (books, prints, posters, and the like), seeing Charlie Chaplin '40 films, and playing the part of the country squire at his Connecticut retreat.

Serlin expected to enter the United States Army in November 1942 and formed the Oscar Serlin Associates to carry on his business, but when the age limit was lowered to thirty-eight, thus eliminating him as Army material, he dissolved the firm. The Associates, as their friends have been quick to point out, are "the only producers without a flop in their careers. They didn't have time." For the future Serlin has several things in mind, among them a play based on the life of Nijinsky, a dramatization of Oliver Gramling's *AP*, and a dramatization of A. Roothaert's *Dutch Vet*. It is not likely, however, that he will attempt to produce another play until after the War. "A good writer can't think straight these days," he claims.

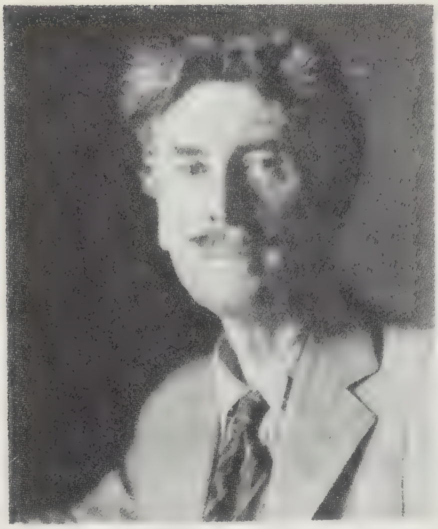
SETON, ERNEST THOMPSON (sē'tən)

Aug. 14, 1860- Naturalist; artist

Address: b. Seton Institute, Santa Fe, N. Mex.

To students of nature lore and wild life, old and young, possibly no name is better



ERNEST THOMPSON SETON

known than that of Ernest Thompson Seton. Though already in his 80's the famed artist-naturalist, author of literally hundreds of books and articles illustrated by himself, is still active as a writer and artist. The dean of American naturalists is not only well known to young readers as a writer of animal stories, but also as the founder of the famous outdoor organization for boys and girls, the Woodcraft League of America. Scientists consider his monumental work on game animals an invaluable contribution to the field of natural history; and he is credited with having founded the modern school of animal-story writing—giving in fiction form the actual facts of the animal's life.

Ernest Seton Thompson is a descendant of the famous Scottish family of Seton; his forebears, however, adopted the name of Thompson for political reasons. The naturalist took legal steps to have the original name restored, but for several years used Seton-Thompson as a pen name. All the Setons were sportsmen and had literary tastes and gifts. His grandfathers were shipowners; and his father, Joseph Logan Thompson, was established in comfortable circumstances in the shipping business when Ernest, the twelfth of fourteen children, was born on August 14, 1860 in South Shields, Durham, England. His father, he has written, was a man with scholarly ambitions, "of high ideals and remarkable personal force," but was "the most selfish person I ever heard or read of." His mother, Alice (Snowden) Thompson, was "a beautiful woman with a strange diversity of gifts, full of energy yet weak in character." Seton says she was almost drowned in the sea just before he was born, with the result that he, unlike his brothers, had a fear of water for some years. None of his brothers, on the other hand, had that interest in wild life that was his absorbing passion.

His father having suffered financial reverses when several of his ships were lost, the family went to Canada when Ernest was five. His strongest impression of the voyage to Quebec was the rats that were everywhere on ship. From Quebec the family made a 500-mile trip to a raw frontier town in Ontario, where his father bought 100 acres in the backwoods. The boy always remembered the musky scent of the first deer shot: "My memory was more gripped by smell than by appeals to other senses." The Seton boys went to a log schoolhouse a mile away; but at home Ernest learned carpentering and also timber cutting. He learned, too, the characteristics and personalities of the farm animals, encountering his biggest difficulty with a bad-tempered ram. In summer the boys hunted birds' nests and young animals. Ernest's interest in art first came when his grandfather sent him a book on engraving, and a brother bought him three wood-engraving tools.

His father was not a success at farming, so after four years the family moved to Toronto. In his first public school Ernest learned how to fight tough boy associates, who called him "Squinty." Later, placed in a better school, he stood at the head of his class and won a scholarship to Collegiate High School. He studied birds, cats, and rats around Toronto, and went to Toronto Marsh and Island to observe bird life. He slaved away at many odd jobs to earn a dollar to buy Ross' *Birds of Canada*, only to discover "that it was worthless." At fourteen, thin and underdeveloped from overstudy, he was sent back to live with the people who had bought his father's farm, where with outdoor life and good food he soon regained his health.

Young Seton's father was determined the boy should be an artist; he was just as determined to become a naturalist. At his father's insistence, however, he took up "art" at sixteen, beginning as a portraitist's assistant. He also earned money by painting in flesh tones the black eyes of boxers and men injured in brawls: "I got my first financial start in life as operator in a beauty parlor." He then joined the evening classes of the Ontario Art School. Having won their Gold Medal Award (1879), he was sent by his father to London, in 1880, for a year of art study. There he won a scholarship at the Royal Academy School of Painting and Sculpture. He had almost no money and he was always hungry, but in London he discovered the Natural History Library of the British Museum. Although he was only nineteen, and although it was an inflexible rule that juniors were not admitted, young Seton got admission by the simple procedure of writing to the Museum trustees, none other than the Prince of Wales, the Archbishop of Canterbury, and Lord Beaconsfield. They gave him, moreover, a life membership ticket.

Possibly because he lived so ascetic and disciplined a life, the young naturalist "began to hear voices." These voices, writes Seton, advised him to return to Canada, then to go to New York, where fame awaited him. Accordingly, at twenty-one he went to Manitoba to live in the newly opened prairie country with two of his brothers. It was an ideal place for his studies of wild life, and there he began his journals of his "Western travels." He had taken a number of chickens with him, and from these he made his living. He was happy observing and recording bird life, with descriptions, measurements, and drawings. He learned to track and to read trails. In 1883 he made "some important bird discoveries," which were recorded at the Smithsonian Institution.

In the winter of 1883, also, Seton went to New York City. He arrived with only ninety cents, and for several days almost starved until he located a friend, Charles Broughton, at the Art Students League. Seton then got a job with a lithographic firm. He had already had his first sketch, "Life of the Prairie Chicken," published in the *Canadian Journal*, and he now began writing animal stories. Among them was the famous "Molly Cottontail," which later (1889) found publication in *St. Nicholas* and other magazines.

Having proved he could face the world on his own and make a living, Seton returned to Carberry, Manitoba, Canada in 1884 to resume the life of a frontier naturalist, trailing and hunting. On his return to New York the next year he got an order for drawings of animals to illustrate the forthcoming *Century Dictionary*. After completing these he went back to Carberry, following the wilderness trails again until acute arthritis ended, for some time to come, his travels by foot.

He decided to go abroad again to continue his art study. The year 1890 found him in Paris, a student at Julian Academy. He spent four years studying and painting under the French masters, exhibiting several animal pictures at the Salon. His drawing *The Sleeping Wolf* caused much comment. So did a larger entry, *The Wolf's Triumph*, which was refused by the Salon, but later exhibited at the Chicago World's Fair. Seton finished also the elaborate studies of animal anatomy for which he is well known. On his return to America in 1892 he was invited to a ranch in New Mexico to hunt the gray wolves that were raiding cattle there—a pack led by Lobo, the king wolf, about whom he later wrote one of his most entertaining stories. Lobo was finally captured after a long siege.

On the return voyage to France (1894) Seton met on shipboard Grace Gallatin, a woman of broad culture and a social leader. They were married in 1896, at which time they bought a country home in New Jersey. (At this time, too, Seton was commissioned to illustrate Frank Chapman's *Bird Life*.) Shortly afterward the country house (which was reputed to be haunted) burned down, and they moved to New York. The Setons had one child, Ann, who grew up to become interested in science. But divergent interests gradually separated the parents, and after the daughter was grown and married they were divorced.

It was in 1898 that Seton first collected his stories of animal life into a book, *Wild Animals I Have Known* (1898). The book became a best seller, and Seton, a canny Scot who saved and invested carefully, was soon in comfortable circumstances. His work became widely known. Kipling wrote him that he had been influenced by his animal stories before writing his *Jungle Tales*. Two other writers of stories about wild life dedicated their books to Seton. His work also found a great admirer in Theodore Roosevelt, whom he met at a dinner that was the beginning of their long friendship.

Under the stimulus of public recognition, other books by Seton followed as fast as he could write and illustrate them. Among the best known were *Lives of the Hunted* (1901); *Biography of a Grizzly* (1918): *Animal Heroes* (1905); *The Trail of the Sandhill Stag* (1899); *Woodmyth and Fable* (1905). Each was enthusiastically received, and sales mounted. Among his popular books for young people were *Two Little Savages* (1903); *Woodland Tales* (1921); *Rolf in the Woods* (1911); *Wild Animal Ways* (1916); and *Woodcraft and Indian Lore* (1912). Seton has also written several poems, in both free and regular forms, on birds and animals. His numerous magazine articles range in subject from "Why Wear Clothes" and "The Wild Animal Bed Quilt" to "The Natural History of the Ten Commandments," the latter showing how even animals obey them. The lecture field was also to prove a lucrative source of income; as a lecturer Seton was in high demand. "I am gifted naturally with a powerful voice and stage presence. Instinctively I act out my stories—never read them." Under arrangement with his manager, James B. Pond, he received a $600 weekly fee.

In May 1902 Seton founded the Woodcraft Indians (later incorporated as the Woodcraft League) for boys and girls, its immediate object being "to lead the young to the spiritual side of nature through recreational outdoor life." Seton believes that learning about outdoor life, nature, and woodcraft are the best means of character building. The Boy Scouts were established in America in 1910 by a committee of which Seton was chairman. He wrote for them their first Manual and was duly installed as Chief Scout, a post which he held for five years. His *Life-Histories of Northern Animals* (1909) won the Camp Fire Gold Medal. For his magnum opus, *Game Animals and the Lives They Live* (1924) he received the John Burroughs Medal (1926) and the Daniel Girard Elliot Gold Medal (1928).

A violent attack by the naturalist John Burroughs on Seton and his followers was printed in 1904 in the *Atlantic Monthly*. Burroughs accused Seton of being a "nature-faker." Seton decided not to strike back, but to win Burroughs over. This he eventually did, and Burroughs retracted what he had written after visiting Seton. Both later worked together to get a bill passed by Congress for the conservation of migratory birds.

Seton had bought a large estate in Greenwich, Connecticut—a ninety-acre park with a twelve-acre lake that became a haven for wild fowl, and an enclosure to "demonstrate the growing of fur-bearing animals." In 1930 he sold out these holdings and bought a wild tract of 2,500 acres of land near Santa Fe, New Mexico. About this time also he met Julia M. Butree Moss, a writer and authority on Indian life, then dean of the College of Indian Wisdom at Santa Fe. They were married in 1935. At the age of seventy-

SETON, ERNEST THOMPSON—*Cont.*

eight Seton became the father of a second daughter, Beulah. The Seton estate in New Mexico was developed as Seton Institute, dedicated to the conservation of pristine Indian lore, religion, and craft—an expansion of the Woodcraft Indians which was founded in 1902. Throughout his life Seton has devoted a good many of his lectures to the defense of the Indian as superior to the white man. He has proposed that the United States Government give back to the Sioux and other western tribes their old hunting grounds in the prairies, where the land could be fenced off and newly stocked with buffalo herds. The desert Indians, experts in crafts such as weaving and pottery, could support themselves on reservations "if white men will desist from sending them to distant schools where they are taught civilized ways."

The Seton home at Santa Fe has thirty rooms, an adobe type structure with a library that is "the largest private one in the state." For some years after their marriage Seton and his wife turned out an average of a book a year each, besides going on lecture tours. Their little daughter often appeared on programs with them, dancing Indian dances. July and August of each year were devoted to Seton Institute work, but 1940 was its last year in "a camping sense." Currently the Setons have retired from lecturing and other activities to devote most of their time to writing.

SHAW, LLOYD Sept. 29, 1890- Educator

Address: b. Cheyenne Mountain School, Colorado Springs, Colo; h. 1527 Winfield Ave, Colorado Springs, Colo.

A Western educator who has become famous for his hobby, square dancing, and who, according to Ernie Pyle '41, has "built up the finest public school I have ever seen," is Dr. Lloyd Shaw. The tall, sun-browned teacher is a "modern" educator in the best sense of the term. As superintendent of the Cheyenne Mountain School at Colorado Springs he has kept scholastic standings unusually high; at the same time he has encouraged individual sports instead of organized, competitive athletics—mountaineering, skiing, horsemanship; he has also developed dramatics and the art of folk dancing.

Dr. Shaw writes in an autobiographical account written especially for *Current Biography*:

"Born in Denver, Colorado [September 29, 1890], the youngest of three sons [of William Goodman and Julia Anne (Banker) Shaw], I was taken to Los Angeles at the age of two and spent my boyhood along the then undeveloped beaches, in the vineyards, and among the orange groves of southern California.

"Father was in real estate, and with his partner (Wilcox and Shaw) secured an old ranch in the foothills near Los Angeles, and subdivided it in order to start a small town. They called it Hollywood and it has since done quite well. But father lost everything in the panic, and we were [destitute].

"As a lad I sold newspapers on the streets of Los Angeles (an invaluable set of memories). For awhile we lived out in the country, and I started my education at a country school. At nine they brought me back to Denver. There, besides my school, I entered into business as a *Saturday Evening Post* boy, working the downtown district. I think I held in my memory the face, the place, and the disposition of every merchant in Denver. I worked hard at it and managed to be champion salesman of Colorado for one month.

"Then we moved down to Colorado Springs, and I have been here ever since—my last two years in grade school, then the local high school, Colorado College, and after graduation a schoolteacher in the same home town.

"During high school and college days my summers were mostly given to 'calling scenery' on the famous tourist trips around the region. One summer I circled Pikes Peak daily, going up the Short Line Railroad and coming back around the Peak on the famous old Colorado Midland.

"On the Crystal Park Auto Highway I soon changed from 'guide or lecturer' to assistant photographer, helping to 'snap' each bus load, developing, 'quick proofing,' and boarding the busses on their way down to show the tourists their pictures and to take their orders.

"Tourist photography was such a good game that I took over the concession on the old Colorado Midland Wildflower Excursion, a daily railroad trip a hundred miles back into our most scenic mountains. . . I partly paid my way through college with photography, taking snapshots of everything and everybody under every unexpected circumstance, long before the word 'candid camera' was invented, and it proved a gold mine or at least a mine of silver and nickle.

"I of course played football in high school and college, but my chief interests were in the mountains, in writing, and in dramatics. Not only did I take part in all the plays I could, but I even wrote a few little ones myself. Because I didn't want to train for the chorus I went with our college glee club as 'reader,' but they were joyous trips. I was on many debate teams, but didn't like it much. I was put in the state oratorical contest for high schools and managed to win it. Writing always fascinated me, and I did a good deal of it, editing our college annual and contributing to many of our school publications.

"One of my chief interests was the mountains—hiking, climbing, camping. This generated such an interest in the outdoor sciences that I majored in biology and spent a great deal of time in field work of one kind or another. The first summer I was out of college I wrote a daily column of outdoor popular science for our local newspaper, which was later published as my first book, *Nature Notes of the Pikes Peak Region* [1916]. [Shaw had been graduated from Colorado College in 1913. He obtained his L.L. D degree from the same college in 1928.]

"While I was a sophomore in college I was engaged to Dorothy Cory Stott, a classmate, a Denver girl, and a poet with a love equal to mine for our mountains and our West. While she has not published widely, some of her verses have been printed in our best magazines.

"As soon as we had been graduated we wanted to be married, but like many another young man I had no job and no prospects. It at first struck me as a sort of insult when they asked me to teach science and English in the preparatory school of Colorado College. But as we thought it over, it gradually looked less objectionable and we decided to give it a trial. It let us be married before the school term opened in the fall. . . [The Shaws have one daughter, Doli, now Mrs. Donald J. Obee.] We discovered the great joy of teaching [at Cutler Academy] and decided that that would be our life work.

"The next two years I taught biology at the Colorado Springs High School, with most of my old teachers still there and lifting an eyebrow at what had joined them. But they were joyous years, with coaching of dramatics, there and at the College, on the side.

"Then our faculty got into a row and a third of us resigned as a protest against our principal. I refused to teach there any longer, and I wouldn't leave the Pikes Peak region, and I didn't know what to do. Then I heard of a vacancy in the principalship of a little suburban school out at the foot of Cheyenne Mountain.

"Cheyenne School proved a challenge and a joy. It was so small and personal that it was just one big enthusiastic family. They were husky lads there, and I developed and coached them into a football team. There were only fourteen boys on the squad (and three of them from the grade school), but how they played! They beat the state high school champions and we found ourselves famous, too famous for our own good. The statewide newspaper publicity was too much. Football was soon going to ruin our school, so we dropped it, and have never played football since.

"It seemed to me that individual sports should be developed, sports that could be carried on in later life. We went in for mountaineering, skiing, horsemanship, etc. We developed a mountain club that finally expanded to include the public, until we let it become the Pikes Peak Branch of the Colorado Mountain Club. We introduced the first skiing in the region, and with Thor Groswold, a Norwegian skier, I organized the first Pikes Peak Tournament and developed the Glen Cove runs.

Loyde Knutson
DR. LLOYD SHAW

"To finance these activities we gave a good many plays, which we advertised as 'every inch amateur.' I wrote the plays and coached them and we built all of our own scenery. Our little Christmas play, which we have given for twenty years, achieved a very wide fame. I also wrote this play, and Mrs. Shaw wrote the accompanying verses, and the whole school built itself into the service, until it has been written up in several national magazines and has been described as the 'little Oberammergau of the West.'

"When after three years the city school board came and offered me the principalship of the Colorado Springs High School, and with a definite probability that I would soon move into the superintendency, there didn't seem to be any choice in the matter. I instinctively said, 'No.'

"Shortly after this a small group of friends handed me a large check and suggested we go to Europe to see what we could see. It was a rare experience for our young and very Western minds—England and Scotland, a cruise through the fjords to the north tip of Norway, down through Germany from Sweden, by way of Belgium and Holland and Switzerland to Italy, then home by way of France. We joined no tour but worked our way from point to point as our whimsy dictated. A few years later we went back to the British Isles, especially Ireland, in search of the sources and influences of the Celtic trace that runs through our literature.

"In my first years at Cheyenne School I found a strong community prejudice against dancing. I began to experiment with the European folk dance as a social adjunct to our athletic program. When I had won my football team to it the whole school accepted it and we had great fun. . . I assured the youngsters that if they would dance better

SHAW, LLOYD—*Continued*

they would get better invitations, and that would make them dance yet better and get yet bigger invitations. And so we started up that spiral staircase until they danced well enough to be invited to Los Angeles and Boston, and have danced for the Rose Festival at Portland, Oregon, on a New Orleans Mississippi River boat, and at the Rainbow Room in New York.

"We soon after that first trip added early American dances to our repertoire. And then I found that we had hidden away, almost lost to sight, fragments of the old authentic cowboy dances. The old callers were cagey at first, and their memories had gone pretty rusty.

"So many requests came for material and 'calls' that I had to write a book, *Cowboy Dances* [1939], in protection. Groups from all over the country wanted to start this particularly lively form of the American dance. I offered a couple of short intensive courses in Western dancing each summer. Before the War made its necessary inroads we had all the enrollment my small gymnasium could hold.

"It isn't all dancing at our little school, however. The students are afraid our chief interest is a very high scholastic standard. But we still have our camping trips and our cabin, our basketball, track, and dramatics. We still have skiing and horseback riding and a good variety of other interests.

"What are my hobbies? I sometimes feel I have tried them all. I took up the flute once until I could play with my school orchestra. I started a sketching group and painted in oils until I could manage to have a couple of things hung in an exhibition. I started an archery group which made its own bows and arrows.

"I have had my horses and little ranch up back of Pikes Peak. Perhaps that was as fine a thing as I ever did when I built my mountain cabin there. . . For the most part I did it alone and with my own hands. It took several long summers to build those four large rooms and the heavy staircase and the fireplace and all.

"I have quite a collection of old Western guns. I also have a collection of old-time dance books and phonograph records of the old dances. And we have recently taken much pleasure in assembling a collection of several hundred albums of the finer symphonic records, which we can share with our students and friends, and especially the soldiers from the nearby camp.

"And what of the educator? The academic dignities, the offices, the conferences, the speeches, the classrooms? That, of course, is the skeleton on which all the rest must hang. But this real bone and muscle can only show itself through the pleasanter contours of the outer form. We are not yet ready for an autopsy."

SHIBER, ETTA (shī'ber) 1878(?)- Author
Address: b. c/o Charles Scribner's Sons, 597 Fifth Ave, New York City

Etta Shiber, a soft-spoken, modest, grandmotherly woman, is the author of the best seller *Paris—Underground* (1943), and a heroine of the Second World War. It is universally acknowledged that the War has upset radically the normal course of life of every individual involved in it, but few lives have been so completely revolutionized as Mrs. Shiber's. An American citizen who had always known financial security, in her sixties, living graciously in Paris with her good friend, Kitty Beaurepos, and their three dogs, Etta Shiber suddenly found herself involved in the anti-Nazi underground. Her story, told simply and honestly, needs no fictional embellishments to become exciting and dramatic. For suspense it has no rival in the best spy fiction. The facts speak for themselves.

Until the fall of France in June 1940 Mrs. Shiber led a quiet life. She was born about 1878, received a good education, and all that is known of her childhood is that she was timid, "the product of a sheltered environment," and raised somewhat "in the shadow of a young and good-looking mother." Mrs. Shiber married young. Her husband, William Noyes Shiber, was a newspaperman, and the Shibers lived in the East Sixties in New York City. Her brother, to whom she was devoted, was a music critic on a New York newspaper, and she shared his interest in music. She tells that she went "almost daily to concerts and the opera, and the highlights of her life were the first appearances in America of Toscanini '42, Heifetz, Menuhin '41, and other luminaries of the concert stage." Her shyness prevented her from making many friends, and she devoted herself almost exclusively to music, literature (her favorite reading is Dostoevsky, Ibsen, and Tolstoi), and her husband and brother.

During their thirty-five years of marriage Mr. and Mrs. Shiber made many trips to France. On one of these trips, in 1925, Mrs. Shiber went to buy a dress at a shop owned by Kitty Beaurepos, an Englishwoman married to a French wine merchant from whom she was living apart "on a thoroughly amicable basis." They became fast friends, and Mrs. Shiber visited her annually. In 1933 she went to France with her brother, who was in poor health. He died in Paris that year. Mrs. Shiber writes: "In that crisis I do not know what I should have done without Kitty, alone as I was in a strange city and a foreign country. I had always depended on my husband and brother to look out for me; and without them I was lost."

Only three years later, in April 1936, William Shiber died, and his wife found herself alone in America without friends. As soon as she had notified Kitty of his death, she received a cabled invitation to come to live with her friend in Paris. Mrs. Shiber accepted gratefully. A few weeks later she and Mrs. Beaurepos, their servant Margot, and their dogs, Winkie, Chinka, and Mickey, were comfortably settled in an apartment at 2, Rue Balny d'Avricourt, an "exclusive residential section of Paris."

Their life was pleasant and uneventful until the outbreak of the War. Actually both women were free to leave France, but Kitty decided to remain because England was in the War and she was French by marriage. Out of loyalty and out of a desire to be useful in the war effort, Etta Shiber determined to remain in Paris with her friend. They joined the Foyer du Soldat, "the French equivalent of the U. S. O.," and spent their time visiting hospitals, sending packages to soldiers, rolling bandages, etc. As yet their lives had been little disturbed. Then, on June 13, 1940, it was clear that Paris would fall to the Germans. The general exodus from the city was on. After waiting until almost the last moment Mrs. Shiber, Mrs. Beaurepos, and the dogs got into their car and joined the long, painfully slow-moving line of refugees streaming out of Paris.

Mrs. Shiber's account of conditions on the roads leading out of the city has been praised by reviewers of the book as eloquent in its simplicity and realism. The roads were jammed; traffic was at a standstill. There was nothing but confusion and hopeless defeat all around them. French soldiers sat helplessly on the roadside. The refugee-packed roads were machine-gunned by German planes, and, hiding in a ditch to escape German bullets, the two women learned at firsthand the grim, terrible reality of war. The onrushing Germans finally overtook them and herded the refugees back to Paris.

On their way back Mrs. Shiber and Mrs. Beaurepos stopped at an inn in a somewhat futile attempt to get food. There they discovered a British aviator who had not been able to escape at Dunkerque, and a few minutes later, with the young man hidden in the luggage compartment of their car, they drove through the German lines back into the occupied city.

Mrs. Shiber gives her friend Kitty the major credit for this daring exploit. Kitty was the more aggressive of the two, but Mrs. Shiber's cautiousness proved a steadying influence. She did not lack her own share of courage, although modesty forces her to admit: "I can't say I wasn't terrified most of the time. . . But we knew when we saw that first young English officer at Orléans we could never abandon him to the Nazis and certain death."

ETTA SHIBER

The problem of arranging the escape of the first British soldier was by no means solved when the two ladies had him hidden in their apartment. The Germans made frequent house-to-house inspections (in one case Mrs. Shiber's quick thinking saved them from arrest when she claimed that the man in the apartment was her brother and displayed the identification papers of her late brother as proof). Moreover, they knew of no means of getting the soldier out of Paris into unoccupied France. Through a stroke of luck they found friends who were operating an underground, and the first soldier they rescued was sent on his way to safety.

When he was gone Mrs. Shiber breathed a sigh of relief, but not her friend Kitty. That determined lady began casting about for others to rescue. With the most flagrant audacity she advertised in the "personal" columns of the German-controlled press and answered ads which appeared there. Less aggressive but equally determined by now, Mrs. Shiber went with her friend to the hospital at the dreaded citadel at Doullens and smuggled out two wounded Englishmen right from under the noses of their German guards. The underground headquarters in their neat, respectable Paris apartment began to flourish. Through one of their advertisements they met Father Christian Ravier, who was trying to rescue nearly a thousand starving British soldiers who were hiding in the woods around Conchy-sur-Conche. This courageous priest would bring about four British soldiers at a time to the Paris apartment where forged papers and money were provided for the men. From there they managed to slip across the line into unoccupied territory.

For five months the underground worked smoothly, and over 150 soldiers escaped. But the Gestapo, which Mrs. Shiber and Kitty Beaurepos had tricked successfully so many times, was not napping. The death penalty had already been decreed for those who aided in the escape of British military personnel.

(Continued next page)

SHIBER, ETTA—*Continued*

In November 1940, while Kitty was in the south of France working for the underground, Mrs. Shiber was arrested. She was held for nineteen days, during which time she denied any connection with an underground and prayed secretly that Kitty would be warned before she returned to Paris and fell into the Gestapo's trap. When Mrs. Shiber was released she knew that she was being followed and moved cautiously. But a chance meeting on the street with one of the members of the underground led to the re-arrest of Mrs. Shiber and the arrest of Kitty and their co-workers. At the grim Cherche-Midi prison, on a semi-starvation diet, she awaited a trial which proved to be a travesty of justice. The sentence was death for Kitty and Father Christian, and for Mrs. Shiber three years at hard labor. Whether or not Kitty's sentence was ever carried out, Mrs. Shiber never discovered, but she feels that her friend is still alive. Father Christian made a spectacular escape from prison but chose to remain in France and continue his work with the underground.

Sent to Fresnes prison, Mrs. Shiber shared her cell with political prisoners, German "stool-pigeons" who tried to get information from the other prisoners, and hardened criminals. She suffered terribly from the cold, from the lack of food and exercise. In the middle of the winter she was sent to the prison at Troyes, where conditions were even more miserable. When she was asked recently how she endured life there she answered: "Looking back now, I really don't know how I managed to get through it all, but somehow I did. I am not a young woman or unusual in any way; but one thing I have learned is not to be a fussmaker, and when I find myself up against a stone wall I know better than to try to batter my head against it." In spite of her resolute will to survive, Mrs. Shiber became very ill. The United States meanwhile had entered the War, and one day in the spring of 1942 Mrs. Shiber was told that she would be released temporarily to regain her health. At that time she did not know that negotiations were going on to exchange her for a German prisoner in the United States. On May 17 Mrs. Shiber was told that she would be exchanged. Gestapo agents escorted her to the Spanish border where, shabby and worn and broken in health, she watched the arrival of the smartly dressed Johanna Hoffmann, who had been convicted of carrying on German espionage in the United States.

Back in America Mrs. Shiber took a long rest in order to regain her health. But her memories were too vivid to be obscured by her pleasant, easy life here. In collaboration with Anne and Paul Dupre she began writing the account of her experiences in Europe. The book *Paris—Underground* was published in the fall of 1943. Critics, while expressing some incredulity at the fact that two such quiet ladies should have had such adventures, nevertheless agreed that it was "a true story of underground Europe." Orville Prescott wrote of Mrs. Shiber's book: "It shows that it is only those of high courage and willing self-sacrifice who carry on the fight [against Nazi rule]." Lewis Gannett '41 wrote of the first half of the book: "There was nothing of the finesse of an Oppenheim or Maugham secret agent in the work of these women. They were ordinary folks, doing a job that fell their way, on their own, almost childishly careless of the awful risks involved." The second half, he continues, "lacks the uniqueness of the soldier-smuggling chapters, but again it is told with an almost banal matter-of-factness that is bitterly convincing." Other critics pointed out that Mrs. Shiber's account of the underground fight which the common people of France are waging against the Germans is an important contribution to our understanding of that country today.

With *Paris—Underground* a best seller and one of the two Book-of-the-Month Club selections for October 1943, Mrs. Shiber is frankly bewildered. She told one interviewer: "I'm not used to getting all this attention. I don't know what to make of it." She is still shy, dislikes parties and crowds, and enjoys movies and the theatre. As yet she has not gotten over the sheer joy of being in a free country and says gratefully: "I am amazed when I hear people complain because they lack small conveniences or comforts such as gasoline or . . . meat. We still have more in America than anywhere else in the world."

SHIFRIN, ALEKSANDR MIKHAĬLOVICH *See* Werner, M., pseud.

SHIGEMITSU, MAMORU (shing-ə-mi′tsū ma′mōrū) July (?), 1881- Japanese diplomat
Address: Tokyo, Japan

Following a Cabinet shuffle by Premier Hideki Tojo '41 in April 1943, Mamoru Shigemitsu emerged as Japan's new Foreign Minister, succeeding Masayuki Tani, a supporter of the militarists. Tani took Shigemitsu's job as Ambassador to the Japanese puppet Nanking regime. The appointment of Shigemitsu, a former advocate of Japanese cooperation with the United States and Great Britain, was thought by some to indicate a victory of the "moderate" group in Japan's war policy. Others were not so optimistic concerning the change in Foreign Ministers, believing that the shift meant only a temporary bid for time to consolidate gains, and that Shigemitsu could not be counted on to oppose seriously any plans made by the dominant Tokyo militarists. Such proved to be the case.

An able young Japanese official, Mamoru Shigemitsu (called "Shiggy" by American newsmen) had served briefly in the United States soon after the First World War as consul at Portland, Maine. Prior to 1930 he rose from minor to more important diplomatic posts, finally becoming Minister to

China. In 1932, when the Japanese were holding a victory celebration in Shanghai's Hongkew Park, a Korean patriot threw a bomb at a review stand filled with Japanese officials. In the explosion Shigemitsu lost a leg; Admiral Nomura '41, later Ambassador to Washington at the time of Pearl Harbor, lost an eye. As a result of the accident, it is said, Shigemitsu "became sallow and bitter." Then he met a one-legged American author, Ellery Walter, who had so mastered the use of his artificial limb that few suspected he had it. Becoming a friend of Walter's, Shigemitsu learned from him how to use a wooden leg.

Because of his many years in China Shigemitsu became established as an authority on that country. He successfully used this knowledge to further Japan's encroachments upon China. He then became Ambassador to Russia, and in Moscow negotiated settlement (1938) of the famous Russo-Japanese border clash at Changkufeng Hill, which threatened to develop into a full-fledged war. Later, in 1938, he was appointed Ambassador to London, where he made many "useful" acquaintances and for a long time managed to convey the impression that he was opposed to the ambitious, fascist-minded militarists of Japan.

After Japan joined the Axis it was Shigemitsu's difficult task to stress the fact that this did not constitute any reason whatsoever for hostilities between Japan and Great Britain. These assurances Shigemitsu conveyed, early in 1941, in several conferences with Prime Minister Churchill '42. In summary Shigemitsu said to Churchill: "Japan's foreign policy is based on the Three-Power Pact, and Japan will be faithful to her obligations in deference to international honor. But there is no reason why, because of the Three-Power Pact, Japan should go to war with Britain. The Japanese Government seeks to avoid the catastrophe of war and believes that the British Government has the same desire." At the same time in the United States, where feeling against the Japanese had risen considerably higher than in England, Ambassador Nomura was busy giving similar assurances.

In June 1941 Tokyo instructed the London envoy to return home for consultation. (A British Labor M.P. had suggested that he be returned home even before this—for giving information to the Axis.) It was the opinion of British diplomats that he would be succeeded by a new Ambassador. Shigemitsu left for Tokyo via the United States. Accompanied by Takejero Inonu, he arrived on July 1 to spend a fortnight in Washington, conferring with Admiral Nomura and other officials. Germany had just attacked Russia, and it was rumored that Shigemitsu might replace Yôsuke Matsuoka '41 as Foreign Minister. At the time of his visit to the United States Shigemitsu declined to speak specifically on Japanese-American relations. The Japanese seemed divided on the course of the War. It was said that Shigemitsu and his group, as opposed to Matsuoka, wanted Japan to withdraw from South China and open the Pearl and Yangtze Rivers to foreign trade, but to keep her dominant position in North China. Britain, according to Shigemitsu, might be interested in this scheme. At the same time the United States would object to any plan that called for a northward advance or would further concentration of the Japanese Navy in North Pacific waters.

MAMORU SHIGEMITSU

Shigemitsu did not succeed Matsuoka as Foreign Minister. Two days after the Japanese attack on Pearl Harbor he was appointed Ambassador to the Japanese-sponsored Chinese puppet regime at Nanking. With the militarists in full control, Shigemitsu was apparently relegated to the task of "buttering up" the Chinese puppet officials at Nanking by giving them positions of greater governmental authority. While there he signed a series of agreements turning over Japan's concessions and extra-territorial rights in China.

Soviet victories over Germany and the strong Allied offensives in North Africa were said to have been possible factors in the 1943 changes in Japanese war policy. The appointment of Shigemitsu as Foreign Minister was accompanied by five other Cabinet changes, in which "moderate" appointees replaced supporters of Japan's "fire-breathing reactionaries." It was the "moderates" who advocated holding the "west wall" of the Burma-India borders and a "south wall" paralleling New Guinea, but not advancing farther. They contended also that Japan should exploit and pacify occupied China, and avoid aggravating relations with Soviet Russia any further. The ultimate objective was to launch peace offensives against both China and the Western Powers.

Since Shigemitsu's appointment as Foreign Minister came close on the heels of President Roosevelt's '42 disclosure of the execution of eight American aviators captured from Major General Doolittle's '42 raid on Japan in 1942, it was not a very auspicious time for any "peace" maneuvers on Shigemitsu's part. Secretary of State Hull '40 declared on April 22, 1943 that unconditional surrender of Japan was our objective. When asked about the appointment of Shigemitsu as Foreign Minister, "he made it clear that that diplomat's repu-

SHIGEMITSU, MAMORU—*Continued*

tation in the past of being friendly toward the United States and Great Britain would have no effect here." In a speech made in December 1943 marking the second anniversary of the Axis pact, Shigemitsu himself called upon "Japan and Germany to fight through the War to victory."

Shigemitsu, like most Japanese, wears spectacles, but he is said to look more Chinese than Japanese. He has a wife with the name of Kie and a son and daughter. He enjoyed dancing to American jazz before he lost his left leg.

SHINWELL, EMANUEL 1884- Labor member of the British House of Commons
Address: h. 70 Beechcroft Rd, London, S. W. 17, England

"I am going to say what I think," Emanuel Shinwell, unofficial leader of the Labor Opposition in the British House of Commons today, once told his constituents. "Criticism is the lifeblood of democracy, and that is what we are fighting for. . . It is a foul slander to suggest that when anybody indulges in criticism of the Government he is playing into the hands of the enemy. If it had not been for criticism we should never have changed the Government; Mr. Churchill '42 would not be Prime Minister, nor would we have succeeded in stimulating the Government on many questions where it was obvious that drastic change is necessary."

Emanuel Shinwell, who is of Polish descent, was born in London in 1884, the son of poor parents. He had to leave school at the age of eleven, and after a few years went to the Clyde, a tough working-class ship building center, in search of work. He was soon active in the trade-union movement, and in 1912 was elected president of the Glasgow Trades Council, an office which he held again from 1916 to 1919. The year 1919 found him chairman of the Forty Hours' Strike Committee, a position which made him a subversive influence in the eyes of Lloyd George's Coalition Government, and as a result he spent five months in prison. Emerging from prison, he became national organizer of the Amalgamated Marine Workers' Union (for which he is still Parliamentary Agent). In this position he fought Havelock Wilson, a highly conservative labor leader who challenged his leadership of the seamen; he assisted the late Ramsay MacDonald in fighting Communist sympathizers; and he also gained such a wide knowledge of every aspect of the shipping problem that he can best almost anyone in Commons in a debate on the subject.

After serving as a member of the Glasgow City Council, in 1922 Shinwell was first elected to Parliament as Labor member from Linlithgow. In 1924 he lost his seat in Commons, but Ramsay MacDonald rewarded him for his services by making him Parliamentary Secretary to the Department of Mines in the first Labor Government. He sat in Commons again from 1928 to 1931, and in the second Labor Government he served as Financial Secretary of the War Office from 1929 to 1930 and again as Parliamentary Secretary to the Department of Mines from 1930 to 1931. Then in 1931 he refused to take a post in MacDonald's National Government, whose formation he regarded as a betrayal of Labor, and in consequence spent four more years without a seat in Commons.

He had a brilliant revenge, however. In 1935 he went up to MacDonald's own constituency, the Seaham Constituency of Durham, and contested the former Labor Party chieftain's seat. The battle was vigorous and bitter, but the workers (mainly miners) had seen four years of the National Government's "economy," and Shinwell won by a majority of more than 20,000. After the contest, which MacDonald described as "a tremendously keen one and a filthy one as well," the former Prime Minister announced: "All I want is sleep, and still more sleep. My energies are absolutely spent up." He left Seaham after the last meeting, not even staying there to hear the results of the election, and never set foot again in what has been Shinwell's constituency ever since.

Shinwell has not been particularly popular with the leadership of the Labor Party, although in 1942 he was serving as chairman of the Central Committee for Reconstruction appointed by the National Executive of the Party. In Patricia Strauss' words, the Labor movement "always distrusts 'clever' people," and Shinwell is also unpopular "because in personal conversation, in passing contacts in the corridors of the House, he is almost certain to give a brisk or insulting answer to any remark a colleague may make." He had the reputation of being the rudest man in Parliament until the election of Sir James Grigg '42 to Commons in April 1942. In 1938 Shinwell was attacking the Government's policy on the Spanish War when in the middle of the speech a Conservative M. P. arose and shouted: "Go back to Poland!" Shinwell, interpreting this as a slur on his Jewish father, walked across the floor of the House and slapped his interrupter in the face. ("This is an example of what may happen if the Socialists get in," was the Conservative's reaction.) Both men later apologized to each other and to the House, but Lady Astor '40 still makes similar remarks to Shinwell "with physical impunity," although she may interpret his political notions as a personal slap in the face.

Writing in May 1937 in the *Labour Monthly,* Shinwell, as an advocate of collective security, denounced the National Government for its past blunders and its existing foreign and domestic policies and suggested that, if war occurred, Laborites must effect a change in the Government of their country in order to weaken the power of capitalism and destroy Fascism of both foreign and domestic varieties. Shortly before the outbreak of the Second World War, when charged with being rude and sneering to his fellow M. P.'s he announced: "I am not in politics to whisper sweet nothings into the ears of my rival politicians, nor to be always pleasant, affable, and courteous to those responsible for the parlous condition of the people of this country." After the declaration of War he criticized Churchill as well as Chamberlain, in December 1939 attempting to prove to Commons that England had no more than 10,000,000 tons of effective shipping, while Churchill had informed Commons that the amount was nearly twice as large. In May 1940, with Chamberlain's Government just fallen, he refused an invitation to join Churchill's Government: he would support the Prime Minister, but he did not wish to be a prisoner of the Tories, without power to criticize. He calls the Cabinet "Winston's Beauty Parlor."

Having preserved his freedom to criticize, he took full advantage of it. In November 1940 he told the House: "Unless we can with speed and with the utmost efficiency reorganize our resources . . . victory may be beyond our grasp." He denounced the Government's "exaggerated optimism" and inconsistent announcements on industrial production; he announced that shipping losses were so "ominous" that the Admiralty's shipbuilding program was insignificant in comparison; he complained that labor was not being transferred to the most useful work and that in an emergency, when compulsion was necessary, the Government relied solely on appeals to patriotism. By June 1941 he was even more convinced that Britain's unnecessarily lagging production accounted for her war reverses, and told a Labor Party conference: "The wisest course is to bring the whole of our industrial effort under State direction and control." As for Churchill, he took too much upon his own shoulders, Shinwell believed. In August 1941 he spoke bitterly: "He wants to be Prime Minister and everything else. There is no room in this country for dictators. Our task is to fight dictatorship, not encourage it." In October 1941 he rose to demand a debate on the subject of Britain's aid to Russia. Replied Churchill: "The honorable gentleman should not suppose that he has a monopoly of anxiety in these matters. I do not see any reason at all for an early debate. . ."

The most heated battle between Shinwell and government spokesmen, however, did not take place until November 1941, when he led an attack in Commons on Churchill's war policies. He publicly doubted Lord Moyne's contention that an invasion of western Europe would be "suicidal," and announced that if recent claims that the British-Russian air strength surpassed that of the Nazis were true, "our failure to take the initiative is indefensible." He asked if the defense of Britain's eastern empire represented the Government's idea of a second front, and if so, was this strategy approved by the Russian Government? He didn't go so far, he said, as to accuse Churchill and some other Government leaders of "harboring subversive thoughts" about the Russian ally, but "we are not so sure of all the others."

EMANUEL SHINWELL

This attack, of course, brought a heated reply from A. V. Alexander '40, First Lord of the Admiralty, as the Government's spokesman. Alexander called Shinwell a "self-appointed critic who prefers to receive the applause of the less-informed among the multitude rather than to work in self-imposed discipline and silence," and said: "Mr. Shinwell finds more and more difficulty in making numerous speeches in which he must always prove the Government wrong or lose his publicity, and he must find arguments or language that will enable him to assert he was never wrong, whatever changes or chances this war may bring."

All through 1942 Shinwell continued to call for a thoroughgoing political overhauling in England. In an article published in December 1941, "Design for Victory," he had written: "It will come as a surprise to certain political Rip van Winkles to be told that the present-day trend of social and economic thinking is toward the Left. . . The effect of the Russian resistance to Nazi aggression on political thinking in this country is very great. . . We cannot afford to entrust any administrative task to those who frown heavily at the mere mention of an economic as well as a political democracy for this country." In January 1942 he told Commons that Britain had been "caught napping in every theatre of war" up to then; that the British Empire was

SHINWELL, EMANUEL—*Continued*

breaking up before their eyes, "yet the men responsible remain in power and we have no guarantee that worse will not befall us." On May 26, at the forty-first annual convention of the Labor Party, he declared that the War must be won not only in order to defeat Hitler '42 and his accomplices but also in order to see that capitalism is no longer firmly entrenched. On July 4, explaining the Libyan defeat, he told a Birmingham audience that Britain had "declined to abandon vested interests and refused to do what will have to be done before victory is gained . . . abandon private enterprise." As for military matters, he continued to call for an immediate second front in Western Europe, and in July 1942 reentered the shipping situation with rolled-up sleeves by a declaration that British shipbuilders had "mucked up" production by insisting on types of ships with the greatest post-War commercial value. After the Allied invasion of North Africa in November 1942 he criticized developments there—the Allies' support of Darlan '41 and other ex-Vichyites. In the summer of 1943 he expressed his alarm at the growing might of the American merchant marine, and his fear that Britain might not be able to compete with American shipping after the War.

This truculent Laborite whom Patricia Strauss describes as "one of the cleverest and sharpest debaters in the House" is, according to Johannes Steel '41, "a man of solid build, cleanshaven, dark-complexioned, with plain, rugged, but strong features." He receives more mail than any other man in Commons, and his working-class constituents are firmly behind him. "If 'Manny' took any other line we'd kick him out," said one.

SIMKHOVITCH, MARY (MELINDA) K(INGSBURY) (sim-kō′vich) Sept. 8, 1867- Social worker; author

Address: b. Greenwich House, 27 Barrow St, New York City

In November 1942 Greenwich House celebrated its fortieth anniversary as the social and cultural center of Greenwich Village in New York City. On that occasion Marshall Field '41 said of Mary Simkhovitch, director and one of the founders of the settlement: "Mrs. Simkhovitch may not have been the first, but no one was quicker than she to grasp that the Lady Bountiful approach to social problems would be found wanting. As she has pointed out, no permanent changes are likely to result when social improvements are taken by one class on behalf of another. For lasting gain the participation of all concerned is necessary." For more than forty years Mrs. Simkhovitch has lived up to her ideal of helping her neighbors by living among them and by participating in the life of the community in which she is working.

Mary Melinda Kingsbury was born in Chestnut Hill, Massachusetts, the daughter of Colonel Isaac F. and Laura D. (Holmes) Kingsbury. "My mother was primarily an intellectual person," Mrs. Simkhovitch wrote in her autobiographical *Neighborhood* (1938). "Domestic duties worried rather than interested her." Mrs. Kingsbury had been an outstanding student and a successful teacher when she was married to Colonel Kingsbury during one of his furloughs from duty in the United States Army at the time of the Civil War. After the War the Kingsburys settled down in Chestnut Hill, Colonel Kingsbury to work in the Customs House and later in the State House, and Mrs. Kingsbury to raise a family and to write and to study. ("All the events of our family life," Mrs. Simkhovitch recalls, "were celebrated by my mother's verses. . . Indeed, only three days before her death at ninety-four she thanked in verse a friend who had sent her flowers. Widely read in many languages, she exemplified the old literary culture now passing away and indeed deprecated by a generation too engrossed in the violent passions of world conflict to sympathize with the detachment of more innocent years.")

Mrs. Simkhovitch remembers her early schooling as "uneventful, though disciplinary incidents left their impress." She was a serious student and found in her high school an "air of solid study and intellectual excitement." Music and singing were taught her by her grandmother, and when an Episcopal Church was organized in Chestnut Hill, Mary Kingsbury became the organist.

Because of their successful holdings in real estate, the Kingsburys were well-to-do and Mary Kingsbury "went to college by the road of the unearned increment." When she was ready for college, however, she had no desire to go far from home. She enrolled in Boston University, which was but seven miles away.

Comparative philology was Miss Kingsbury's chief subject in college, and her commencement essay was on the supine in "u" as a dative. She believes it is sounder to choose teachers rather than subjects. "It doesn't make much difference what one learns, for any one subject leads to all others. Interest and thoroughness are more important than subject matter." When she found a teacher whose lectures interested her, she took all his courses, whether they were Latin, Sanskrit, or German. Among the influences which affected her most strongly at this time Mrs. Simkhovitch recalls the Brotherhood of the Carpenter, a congregation ministered to by the Reverend W. D. P. Bliss, most widely known as the editor of the *Encyclopedia of Social Reform*; Denison House, a center for union activity and open forums; and St. Augustine's Chapel, a church for Negroes. Miss Kingsbury played the organ for St. Augustine's and supervised a club of girls. These activities gave her a chance to know Negroes well and to learn that the primitive and unsanitary dwellings in the Negro slum district were owned by upstanding members of Boston's exclusive churches. After a time her interests shifted from classical literature to social studies, but in those days there was not much college work available along such lines. She was active in Kappa Kappa Gamma, a social sorority, and she was elected to membership in the honor society, Phi Beta Kappa.

In 1890 Mary Kingsbury was graduated from Boston University with the B. A. degree and she accepted a position as Latin teacher in the Somerville (Massachusetts) High School. She relates that she lacked the patience for correcting papers and spending time on backward students and that finally, after teaching for two years, she decided to resume her education. She went to Radcliffe College for graduate study (1892).

After the co-educational liberal atmosphere at Boston University, Miss Kingsbury found Radcliffe "rather restrained and narrow." Here she studied medieval history, philosophy, sociology, and similar subjects. At the end of her year's study she was offered a scholarship by the Women's Educational and Industrial Union for further study in Berlin.

Mrs. Kingsbury accompanied her daughter abroad, since "girls were not free then to take trips by themselves," and they spent the first summer in Eisenach and Weimar while Mary Kingsbury turned her knowledge of German "from a reading acquaintance into conversational ease." She studied sociology, economics, philosophy, and political science at the University, and between terms, with her mother and a few friends, she visited Italy. After the last semester they went to Paris and to London. Mrs. Kingsbury returned home, but her daughter, with new-found friends, remained in London for "the last great International Socialist Trade Union Congress."

On her return from Europe, Miss Kingsbury enrolled in graduate courses at Columbia University. She continued her studies in sociology, economics, and history, but she was growing more and more interested in the practical application of her theories, and in 1898 she became a settlement worker at the College Settlement on Rivington Street in New York City.

In order to acquire background for her new work, Miss Kingsbury read the works of Karl Emil Franzos and the stories of Abraham Cahan. She familiarized herself with the Yiddish language and, after a short apprenticeship, she was placed in charge of the house. She became interested in the social ideas discussed in the neighborhood at the time and formed a Sunday evening economics club. She was also the author of a pamphlet about Socialist Activities on the Lower East Side in New York City.

Arni

MARY K. SIMKHOVITCH

After a year with the College Settlement Miss Kingsbury moved to the Friendly Aid House on East Thirty-Fourth Street. In January 1899 she was married to Vladimir Gregorievitch Simkhovitch, whom she had met in Berlin. He had taken his doctorate at Halle and then had come to America in August 1898. After completing work at Cornell University as a Foreign Fellow, he returned to New York to accept a position with Columbia University, where he has been ever since. (Vladimir Simkhovitch is the author of a number of books, including *Marxism versus Socialism* [1923] and *Toward the Understanding of Jesus and Other Historical Studies* [1921].)

At the Friendly Aid House Mrs. Simkhovitch soon discovered that she was at variance with the principles on which the house was founded. The directors looked upon the project "as a philanthropy rather than a social movement; as a mode of altruism for the church members rather than an attempt at social understanding and a cooperative effort for social betterment." In 1901 she embarked on a new enterprise "founded on the principles in which we believed and endorsed by some of our friends in New York who were so generous as to have confidence in us and our ideas. Thus Greenwich House came into being."

The new organization was called the Cooperative Social Settlement Society, and the members included Henry C. Potter, then bishop of the Episcopal Diocese of New York; Eugene Philbin, a prominent Roman Catholic layman; Carl Schurz; Jacob Riis; Felix Adler; Robert Fulton Cutting; and Mrs. Simkhovitch.

(Continued next page)

SIMKHOVITCH, MARY K.—*Continued*

Greenwich House was first a group of buildings on Jones Street in New York City's Greenwich Village. In 1917 it moved into its new building on Barrow Street. At first the settlement paid its own way. The workers took no salaries (except a kindergartner who was paid $400 a year), and the first year's expenses, which came to $2,800, were met by the founders. In time, however, the settlement drew the interest and help of local philanthropy, the first donation coming from the elder Mrs. J. Pierpont Morgan. In 1909 the music school was started to increase the neighborhood's cultural opportunities.

As head of Greenwich House Mrs. Simkhovitch founded the Greenwich Village Cultural Association, and Greenwich House became a cultural as well as a social center for the neighborhood, offering art workshops, cultural courses, and clubs of various kinds. The settlement was active in agitating for better housing and health laws. It secured free baths and libraries for the neighborhood and cooperated with other social improvement agencies. Many persons who later rose to public prominence were active in Greenwich House. In 1942, at the House's fortieth anniversary tea, Mrs. Frances Perkins '40 remarked that she had seen "New York through Greenwich House." In his congratulatory telegram President Roosevelt '42 remembered his mother's interest in the work of the settlement.

Although Mrs. Simkhovitch has been active in politics, she believes that a settlement should be completely non-partisan and non-sectarian. "The reformer and the settlement worker," she wrote, "look at life from two different angles. The reformer, the missionary, the dogmatist of any kind, religious, political, or economic, is valuable and necessary. But for the settlement the primary object is to understand the situations that arise, and by constant association so to get the slant of the neighbors that when opportunity for change comes there will be a genuine comprehension of what is desirable and possible. It is this attitude which has often kept the settlement from taking sides in political campaigns."

In 1928 Mrs. Simkhovitch was herself active in support of Alfred E. Smith's campaign for the Presidency, however. In an article in *The Nation* she described the Democratic candidate as able, honest, and liberal. She has also favored the New Deal and has consistently described herself as a liberal. "Liberalism," she has written, "the middle of the road, is supposed to be fast disappearing. And in its place are the forces of Fascism and Communism, the dogma of intolerance, propagandist in spirit, suppressing inquiring criticism or the experience of opposition in any form. Liberalism is now pictured as a weak, uncertain course, incapable of decision and with no chance of a future. But if the spirit of liberalism is the attempt to understand the complexity of our times and step by step to effect change, rebuilding on the basis of factual knowledge and in the light of new desires, then liberalism, notwithstanding the prophets of today, is the only road possible for adult men and women who see the destruction that necessarily takes place in the train of revolution and want to avoid that waste. But this liberal road is not possible unless education, social legislation, and labor organization can overtake social need."

Mrs. Simkhovitch has written many articles on public housing and on various other social and economic problems, and she is the author of several books. The first, *Settlement Primer*, a handbook for neighborhood workers, has gone through several editions and revisions. In 1917 *The City Worker's World in America* appeared. In it she described "simply and briefly the main facts concerning the life of the industrial population of an American city." Well received, the book was found to be "trenchant", "objective", "enlightening and suggestive," and replete with "imagination and fervor."

In 1938 *Neighborhood* appeared, "a book which takes its place with Jane Addams' *Twenty Years at Hull-house* and Lillian Wald's *Windows on Henry Street*." In this book Mrs. Simkhovitch tells the story of her life and the story of Greenwich House. The earlier chapters of the book appealed particularly to the "lovers of old Boston," the later ones to those who feel nostalgic for old New York, especially the early days of Greenwich Village. Beyond her reminiscences, however, Mrs. Simkhovitch describes the social experiment that was Greenwich House "simply and unpretentiously," although in "distinguished" style. "To read this book," R. G. Fuller wrote in the *Saturday Review of Literature*, "is an invitation to the living of a more complete life and an impulsion toward it."

Mrs. Simkhovitch is also the author of a slim book, *Group Life*, published in 1940. In 1942 she collaborated with Elizabeth Ogg on *Quicksand; the Way of Life in the Slums*, a small but amply illustrated book describing and illustrating the kind of backgrounds which breed crime and disease in large cities.

Mr. and Mrs. Simkhovitch have one daughter, Helena (Mrs. Frank Didisheim). Their son, Stephen, is deceased. In 1908 they bought a 300-acre farm in New Jersey which they called Orlanova in memory of the Orla in Russia where Vladimir Simkhovitch spent his childhood. Until 1925 they spent their week ends there. Mr. Simkhovitch supervised the farm and started the first local branch of the Dairymen's League. Since they sold Orlanova, the Simkhovitches have spent their summers in Maine, where Mr. Simkhovitch's delphiniums "draw visitors from far away." Mrs. Simkhovitch has been described as "tall and stately." She has gray hair, blue eyes, and a fair complexion. Her hobby is music. Besides indulging in horticulture her husband collects Chinese paintings, masterpieces of the T'and and Sung periods.

Mrs. Simkhovitch has been active in civilian defense work since the United States entered the Second World War, and is utilizing both her personal efforts and the facilities of Greenwich House in the defense activities of the community. Speaking at a city-wide rally of the Junior Auxiliary Members of the American Women's Volunteer Service, she declared that every young person not of military age ought to find a place in war work on the home front. Mrs. Simkhovitch has also been a member of the New York City Housing Authority since its inception. She is president of the National Public Housing Conference and a member of its Board of Social Welfare.

SIMONDS, G(UY) G. 1903- Canadian Army officer

Address: b. Ministry of War, Ottawa, Ontario, Canada; h. Winnipeg, Canada

The youngest commander of his rank in the Canadian Army is Major General G. G. Simonds (formerly in charge of the Canadian forces in the Mediterranean area, including Sicily, and of the invasion of Italy), who was recently transferred to the command of a Canadian armored division. It was in 1941 that the late Lieutenant General Andrew G. L. McNaughton '42, then commander of all the Canadian forces, picked "keen, slender Guy Simonds" as the coming man of the Canadian Army. His has been the honor of leading Canadian troops in the "first major operations in which the Canadian Army has taken part." Said Prime Minister W. L. Mackenzie King '40: "The Canadian people have every reason to rejoice at the results so far achieved."

The young major general was born at Ixworth Abbey, Bury St. Edmunds, England, in 1903. He received his early education at Ashbury College, Ottawa, and subsequently attended the Royal Military College at Kingston, Ontario, from which he was graduated with honors in 1925. He was first commissioned as a lieutenant in the Royal Canadian Horse Artillery in June 1925.

In 1932 Simonds attended the Gunnery Staff Course in England and was, for one year, gunnery instructor at the School of Artillery at Kingston. He then returned to England to the Staff College at Camberley, with subsequent attachments at Sandhurst and Woolwich. On his return to Canada he served as instructor in tactics at the Royal Military College from April 1938 to September 1939.

Appointed general staff officer, 2nd grade, of a Canadian division in October 1939, he went overseas with the first contingent and was promoted to lieutenant colonel. In July 1940 he was appointed to command a field regiment of the Royal Canadian Artillery. In December of that year he was detailed as commandant of the first Canadian junior war staff course held in England; six months later he was appointed general staff officer, 1st grade, of a Canadian division.

Simonds became a brigadier general, appointed to the headquarters of the 1st Canadian Corps, in August 1941, and held this position until July 1942. He was then selected for special operational duties in connection with which he won the recommendation of the highest authorities in the Navy, Army, and Air Forces, and in recognition of which he was awarded the C. B. E. in January 1943.

Canadian Army

MAJ. GEN. G. G. SIMONDS

While on his special operational duties he visited Canada for a short period, and on returning overseas was appointed commander of a Canadian Infantry Brigade. In January 1943 he was appointed brigadier, general staff, at the headquarters of the 1st Canadian Army. As a brigadier he went to North Africa, and commanded at the battle of the Mareth Line and the fall of Sfax in Tunisia. Then he was recalled to Great Britain and made a major general and divisional commander.

When the Sicilian Campaign was under way General Simonds led his Canadian troops just west of the hard-fighting Britons. They found themselves up against the remnants of the Germans' 15th Armored Division, which had retreated across Sicily and joined the Göring '41 Division. But the Germans were already showing signs of defeat, being short of tanks, fuel, and even of land mines for demolition. After brief opposition General Simonds and his Canadians moved on, to share honors with the British and Americans in a swift conquest. In November 1943 Simonds was named commander of a Canadian armored division, giving rise to unofficial speculation that more Canadians might move from Britain into the Mediterranean theatre.

Major General Simonds is married and the father of two children, Ruth and Charles. His family lives in Winnipeg. "He has few friends, but he is ahead, not merely abreast, of the latest in tactics, strategy, and equipment. He rarely laughs. A story that convulses the officers' mess barely lifts his eyebrow. But he inspires confidence." The General bears a striking resemblance to Montgomery '42 of the 8th Army, who is a close friend of his.

SINATRA, FRANK (si-nä'trə) Dec. 12, 1917- Singer

Address: b. 1619 Broadway, New York City; h. 220 Lawrence Ave, Hasbrouck Heights, N. J.

FRANK SINATRA

Catapulting to almost sensational fame and fortune in little more than two years, young Frank Sinatra, crooner, has, his admirers consider, wrested the title of most popular vocalist away from Bing Crosby['41], holder of the crown for so many years that it was considered to be a permanent Crosby prerequisite. The idol of thousands of adolescent females, "pint-sized, pop-eyed" Sinatra gets mobbed by semi-hysterical audiences, and receives at least six proposals each week in his fan mail (which averages from 2,500 to 3,000 letters a week). Mrs. Sinatra, who answers all her husband's fan mail, replies to these letters: "Rejected—with thanks."

Frank Sinatra was born in Hoboken, New Jersey, on December 12, 1917, the son of Martin and Natalie (Garavanti) Sinatra, both of Italian ancestry. His father was and still is a member of the Hoboken fire department. Frank's childhood was uneventful: "I was just an average kid," he says. He began singing when he was attending Hoboken's Demarest High School and used to book bands for the school dances, which gave him the prerogative of stepping up on the bandstand and crooning whenever he wished, a privilege of which he frequently availed himself. When his father got him a position on the Jersey *Journal* he stopped singing for a time to work as a cub sports reporter. He also took some engineering courses at the Stevens Institute of Technology in Hoboken.

Sinatra had given up the idea of becoming a professional singer until the day in 1933 when he took his fiancée, Nancy Barbato, to a Jersey City vaudeville house to see Bing Crosby, who was making a personal appearance there. "The Groaner," wrote Harry Henderson and Sam Shaw, "knocked Frankie for a loop, and he quit the next morning 'to become a singer.'" Confident of himself, even though he couldn't and still can't read a note of music (his voice training has been "strictly self-inflicted"), the youth immediately took steps to achieve his ambition.

For a while Sinatra sang with the various amateur units in vogue at the time; then in 1937 he appeared on a Major Bowes['41] amateur program. Successful, he subsequently toured with one of the Bowes units. Dissatisfied for some reason or other, he left the show in California and returned to New Jersey, where he took on sustaining programs at five local radio stations. By 1939 he was singing on eighteen different radio shows on various local stations, without financial remuneration except for the 70¢ weekly which the Mutual Broadcasting Company kindly allowed him for carfare. The reason for his working sixteen hours a day for nothing was not philanthropy, nor even the desire to disseminate culture, but the certainty that if he sang often enough someone important was bound to hear him and recognize his talent. No one, however, seemed to have heard his early morning warblings except the song pluggers. Finally he gave up the broadcasts and accepted a position as headwaiter and master of ceremonies at the Rustic Cabin, a small New Jersey roadhouse in the neighborhood of his home. His salary was only $15 a week, but he received as much radio time as he had had on the sustainers. Early in 1939 his salary was raised to $25 a week, and on February 4 he was married to Miss Barbato.

A trumpeter in Benny Goodman's['42] band heard Sinatra's singing at last, and got in touch with the crooner. The trumpeter, a young man named Harry James['43], had always hoped to organize a band of his own, and he told Sinatra that when he did he would give him a job. Some time elapsed, however, before he could keep his promise. Sinatra lost his job with the roadhouse and decided to give up his vocal ambitions and return to sportswriting. In June 1939, two days before Sinatra was to leave his job, Harry James appeared. He had finally organized his own band and he now signed Sinatra to a two-year contract at $75 a week. After six months as featured vocalist with James, Sinatra got a release from his contract and signed up with Tommy Dorsey['42], another bandleader, then more successful than James.

Up to the time of his joining Dorsey's band, Sinatra had merely crooned like many other popular vocalists. Dorsey's success as a bandleader, the young singer noticed, had come from his unusual method of phrasing with his horn. "I figured if he could do that phrasing with his horn," he says, "I could do it with my voice." He could and did, and this, according to Henderson and Shaw, "is Frankie's success secret. . . He ties the phrases together with moans." "With long study he learned," wrote George Frazier, "the trick of breathing in the middle of a note with his mouth open, which gave him the extraordinary ability to preserve the continuity of a lyric without breaking it for a detectable breath."

Sinatra toured and played with Dorsey's band for almost three and one-half years, having few chances to see his family in the meantime. "Tommy taught me almost everything I know about singing," he declares. "He was my real education." With Dorsey, Sinatra's popularity began to grow, but the singer realized that, although a featured vocalist, as a mere member of "the Dorsey three-ring circus" he could not go as far as he wanted. In the fall of 1942 he therefore left Dorsey and started out on his own.

Sinatra's first solo engagement, at the New York Paramount Theatre, broke all records at that theatre: he remained longer than any one performer had ever stayed before. In January 1942 he returned to the radio with *Songs by Sinatra*, his own five-a-week sustaining program. The following month he became the singing star of Lucky Strike's *Your Hit Parade* at $1,000 a week. He won both the *Metronome* and *Downbeat* polls for best popular vocalist for two consecutive years. In addition to his radio work he appeared at the Riobamba, a New York night club, starting at a salary of $800 weekly and rising to $1,500. He continued his rise right into the Wedgewood Room of New York's Waldorf-Astoria.

In the summer of 1943 Sinatra made his debut as a screen star in *Higher and Higher*. (He had appeared in *Reveille for Beverly* the season before, but only to sing one number.) Apparently Paramount was pleased with the public's reception when the picture was released late that year, for they revised his contract to read "a seven-year optional with salary increase." Sinatra's second film was planned for production early in 1944, and was fairly sure to come off as scheduled, for the singer emerged with a 4-F rating—due to a punctured ear drum—when he reported for induction into the Army in December 1943. Although Sinatra pronounced himself "unhappy about it because I've been bragging to friends that I'd get through; I wanted to be a Marine," it was certain that many others were happy about that puncture. For one thing, Sinatra was slated for a CBS Program starting January 5 and sponsored by the Lever Brothers. He also planned to continue on *Your Hit Parade*.

Sinatra used to "pay his bookers a stiff commission. His press agent came in for another cut. His arrangements, which he paid for himself, were made by high-priced Axel Stordahl, who infuriated Dorsey by leaving him after seven years to work for Sinatra. In addition to these more-or-less routine expenses, he faced the prospect of forking over thirty-three and one-third per cent of his earnings to Dorsey, an old horse trader, and ten per cent to Leonard Vannerson, Dorsey's personal manager. Sinatra, who felt that Dorsey was putting the bite on him a little too tightly, had his lawyers seek an adjustment." In August 1943 Music Corporation of America bought out Dorsey and Vannerson for $60,000, and so "The Voice" began really profiting by his popularity. In 1944 he anticipated earnings of from $5,000 to $6,000 a week from the radio show that was to begin January 5; around $250,000 from motion pictures; and $150,000 from record royalties. (The young singer's popularity combined with the recent Petrillo '40 ban on recordings even resulted in the revival of some of his old recordings, made when he was unknown.) In late 1943, in his personal appearance tour of eastern key cities, he was guaranteed $15,000 against fifty per cent of the gross. In one week in Boston alone he earned $30,000.

"God's gift to the girls," write male reviewers concerning Sinatra, "has what you and I haven't got, and the girls fasten on him with a sigh that makes him famous." His voice, critics say, is good, but not very good. "The trick of his success is in timing the phrasing of the lyrics to give the music additional feeling and meaning. Sometimes it amounts only to a tour de force, but an effective one." The secret of his phenomenal success, however, seems inexplicable to most observers. What his voice does to women, someone is said to have remarked, is immoral. "Amateur psychiatrists," writes Frazier, "who have attempted to explain Sinatra's popularity invariably arrive at widely divergent conclusions. Some insist that it is a manifestation of wartime degeneracy; others, that it is a product of the maternal instinct which his voice arouses in women." He sings in "a come-hither, breathless voice and . . . as he whispers the lyrics, he fondles his wedding ring, and his eyes grow misty." Much of his success, students of popular singing agree, comes from his complete sincerity. "He has the ability to believe implicitly the rhythmic goo he sings."

Sinatra has a house in Hasbrouck Heights, New Jersey, where he lives with his wife and their infant daughter Nancy Sandra. He has no political affiliations and is a Catholic. Outside of singing, his favorite passions are prize fighting, followed by golf and baseball. His two greatest friends are a heavyweight, Tami Muriello, and his trainer, who "put ten pounds on the half-pint Sinatra frame." The young man has always boxed since his early days with the Hoboken back-alley gang. He would rather be a championship prize fighter than anything else in the world, and, in the opinion of his fighter friends, would make a good lightweight. Sinatra has a record of numerous impromptu knockouts, including the flattening of three inebriated gentlemen who made uncomplimentary references to some of Dorsey's guests at a party, and Dorsey's drummer, who angered the young singer by his rudeness to autograph seekers. Sinatra, on the contrary, loves his fans. "He realizes that he owes his popularity to the kids and he goes to endless bother to keep them on his side."

Sinatra is slight (138 pounds), boyish-looking, and appears smaller than his five feet ten inches. Gaunt, hollow-cheeked, and sunken-eyed, he looks, he says himself, "hungry." His ears are too large and his neck is scarred. All this endears him to his admirers. He feels that his attraction for adolescents lies in the fact that he resembles them physically. "I wear bow ties, sport jackets, and sweaters, and kids like 'em. I'm their type." He looks, remarks Frazier, like nothing so much as he looks like a Frank Sinatra fan. His vocabulary resembles that of his admirers, too. He constantly describes people or things, Frazier re-

SINATRA, FRANK—*Continued*

ports, as being "*so* terrific" or "*so* sensational," and a band or song that excites him is "solid." He has written the lyrics for a hit tune, *This Love of Mine*, and a book, *Tips on Popular Singing.*

"The kid," wrote Joe Schoenfeld in *Variety*, "is a true trouper." His friends and colleagues call him "Angles," another source reports, because he carefully calculates the steps to success. His personal appearance is planned—he staggers sleepily when he walks on stage; his suit seems a little too large; his hair is slightly mussed. Girls crowd the front rows because, it is said, he smiles at each one. "I am," says Sinatra, "a bedroom singer."

SKOURAS, SPYROS P(ANAGIOTES) (skū'räs spē'rôs) Mar. 28, 1893- Motion-picture executive; philanthropist

Address: b. Twentieth Century-Fox Film Corp, 444 W. 56th St, New York City; h. Mamaroneck, N. Y.

When Lincoln MacVeagh '41, former American Ambassador to Greece, returned to the United States in the summer of 1941 he reported that the spirit of Greece was "magnificent" and that the people were "defeated but unconquered." He also spoke, however, of a food situation that was appalling; of famine and disease that were spreading throughout every province because of the systematic looting and pillaging of foodstuffs and medicines by the victorious Germans and Italians. Unless, he warned, immediate efforts were made to send food to Greece, the entire population faced eventual extermination by starvation.

That plea for help did not fall on deaf ears in the United States. Aid was furnished which resulted in reducing by two thirds the appalling death rate during the winter of 1941 to 1942. By early 1943 more than 110,000 tons of foodstuffs, exclusive of medicines, had been shipped from this hemisphere to starving Greece, and, as a consequence, three million Greeks now look to the United States and the Greek War Relief Association for their daily food ration. Before the food could be sent difficult negotiations had to be undertaken. An official of the Association explained: "The German Government has promised not to touch it. The Italian Government has promised not to sink it. And the British Government has promised not to intercept it."

The man who brought about "this miracle of international humanitarianism" in the midst of a world at war is Spyros Panagiotes Skouras, president of the Greek War Relief Association, Incorporated, and president of Twentieth Century-Fox Film Corporation. On March 28, 1893 he was born in a small village, Skourahorian, on the shore of the Ionian Sea in Greece, one of five boys and five girls, children of Panagiotes Skouras. His father was a sheepherder, and the boys helped him. Spyros, fired with ambition, was not content with his position in life. When he was fifteen he began to study for the priesthood in Patras, and to earn a meager living by working as a journalist every morning. In the afternoons he studied English and accounting. In the evenings he attended a school of theology. The brothers saved every penny they could earn in order to send Charles, the oldest, to America. They felt that their towering ambitions could only be satisfied in the United States.

Charles sailed in 1907. As soon as he had saved the price of a steamship ticket (it took him three years), he sent for Spyros, and two years later both brothers had saved enough to bring over a younger brother, George. Another brother, Dimitrios, now dead, divided his time between the United States and Greece.

Spyros met his brother in St. Louis, Missouri and immediately began work as a busboy in the old Planter's Hotel there. Before the boy was given the job by the head barman, also an adopted son of America, he had to promise that he would learn the words of the *Star-Spangled Banner*. Together every morning at 6 a. m., both he and the barman sang the national anthem, with heartfelt thanks, says Skouras, that they were in a bright land of opportunity where each man could rise to wealth and position if he worked hard. Spyros followed his own counsel and worked hard at the hotel every day, saved as much money as he could, and spent his spare time in the evenings learning English, business methods, and business law at Jones Commercial College in St. Louis.

In 1914 the Skouras brothers heard that three compatriots of theirs were building a "nickelodeon," but were short of money to complete it. The brothers sensed that the youthful and rather disreputable motion-picture industry had a glowing future. Between them, Spyros and Charles had saved close to $4,000. With this sum they took over the theatre, calling it "Olympia" after Mount Olympus near their home town in Greece. From 1915 to 1917 they operated the small motion-picture house at a profit, then Spyros and his brother George left to join the United States Air Force training center in Texas, leaving Charles to look after the business.

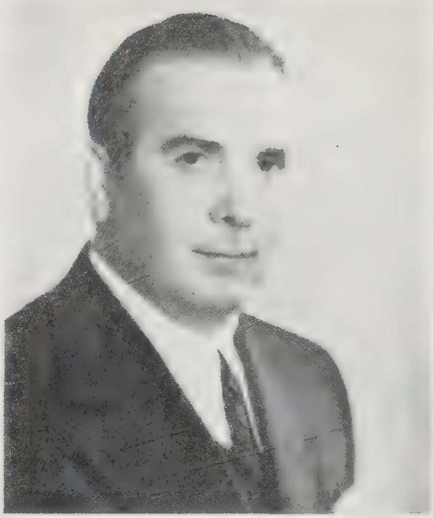
Honorably discharged from the Air Force in 1919 (he did not see overseas action), Spyros returned to St. Louis, where he began to expand his theatre interests. By 1926 he controlled thirty-seven theatres in St. Louis and also, in collaboration with Paramount Publix, a large number of houses in Kansas City and Indianapolis. At one time the former sheepherder from Greece borrowed $150,000 to meet stiff competition from other picture theatre operators. All this time he studied motion-picture finance, real-estate values, and theatre operation.

His St. Louis theatres, always very successful, attracted the attention of Warner Brothers, who bought his holdings. It was the beginning of a special phase of motion-picture operation—the rise of huge film circuits and the purchase of motion-picture theatres by film producers, who increased their profits by showing their own films in their own theatres. Skouras persuaded Warner Brothers to take over the First National Film Company, a venture which greatly aided Warner Brothers' future progress. Skouras remained with Warners' as general manager of the theatre circuit.

When in 1931 he saw an opportunity to enlarge his motion-picture interests, Skouras left Warner Brothers and joined Paramount as president of a subsidiary formed to operate all Paramount theatres in New York, Ohio, New Jersey, Virginia, West Virginia, Delaware, Maryland, and the District of Columbia. A year later he became head of the Fox Metropolitan Theatres in New York, which up to then had been losing $1,000,000 a year. That loss presented a challenge to the hard-working executive, and within twelve months he had transformed the loss into a $200,000 profit. Together with his brothers Charles and George he signed a contract to head Wesco Corporation, a holding company in which all the Fox Theatre interests were merged. Both Spyros and Charles Skouras spent the balance of 1932 touring the country to study these theatre holdings. In 1933 they took over the active operation of Wesco, which was renamed National Theatres Corporation. The next year during a reorganization Chase National Bank secured holdings in the company. By 1942 the chain was operating 563 theatres, and was rated as "one of the outstandingly successful theatre operations in the country." So successful was it that in the spring of 1943 Twentieth Century-Fox Film Corporation took an option to acquire the Chase National Bank's holdings in National Theatres for $13,000,000.

Since Twentieth Century-Fox Film Corporation and National Theatres are partly under the same ownership, when Sidney R. Kent, president of Twentieth Century-Fox, died it was natural for the presidency of the important film company to be given to Skouras. He was made president on April 9, 1942, and Wendell L. Willkie '40 was made chairman of the board.

Twentieth Century-Fox has had a somewhat checkered career. It is composed of two companies. The Fox Film Company, debt-laden and bankrupt, was reorganized both in 1931 and 1933 and in 1935 merged with the Twentieth Century Company, controlled by Joseph Schenck, president, and Darryl F. Zanuck '41, vice-president. Hollywood was skeptical of the new firm. Zanuck threw away "most of the Fox scripts, stopped shooting on others, installed his own production manager, re-inventoried studio properties, cut down the payroll $10,000 a week, and really set to work." The result was that Twentieth Century-Fox showed a profit of $3,500,000 for the first year, $16,000,00 for the next two years. Later Joseph Schenck left to serve a sentence for income-tax evasion, and Zanuck was placed in sole charge as vice-president in charge of production.



Jean Raeburn Studio

SPYROS P. SKOURAS

The year 1940 was the most disastrous the company had ever had, with a net loss of more than $500,000. Part of this was due to heavy foreign losses, part to a reserve of $800,000 set up against those losses, and part, says *Time* Magazine, was because of a "string of unlucky pictures." Zanuck, commissioned an officer, joined the Army, and his place was taken by William Goetz, son-in-law of MGM's Louis B. Mayer '43. In May 1943 Schenck returned to his old position as vice-president in charge of production, and Colonel Zanuck agreed to turn over the entire studio control to Schenck when he is himself released by the Army.

Until Zanuck left for the Army the films of the company "testify to his implacable influence," says Leo C. Rosten '42 in *Hollywood: the Movie Colony: the Movie Makers.* With the rare exception of a *Young Abe Lincoln* or *The Grapes of Wrath* . . . Twentieth Century uses formula plots with clever variations —the characters are stereotyped; the motivation shallow; the movement swift and economic; the conflicts are unsubtle; and the denouements are 'pat.'" The company employs young stars for this type of film play—Tyrone Power, Alice Faye, Don Ameche, Linda Darnell, and Betty Grable.

Skouras has nothing to do with either the type of film produced or the stars selected to appear in them. He works mainly in the New York home office and is concerned with

SKOURAS, SPYROS P.—*Continued*

the business end of the company—its finances, policies, theatres, and trade problems. For solving the many problems of the business, Skouras is well paid. In May 1943 it was announced that his contract runs to December 31, 1950 at a salary of $250,000 per year, the company being allowed to terminate the contract upon payment to Skouras of $500,000. In 1939 when the United States Treasury released its figures on top-ranking salaries for 1938 Skouras (designated by *Time* as a "chain cinema tycoon") was fifth in a list of the five highest cinema salaries, with a salary of $254,000. (The four above him were all screen stars.) In the fall of 1943 Skouras was planning a trip to unoccupied Europe in the interests of Twentieth Century-Fox. He was to visit all the exchanges in England, Ireland, Scotland, South Africa, Sicily, Sweden, Switzerland, and that portion of Italy now in Allied hands.

Both as president of National Theatres and as president of Twentieth Century-Fox, Skouras has been active in civic and patriotic affairs. At the request of the United States Treasury Department, he organized and conducted the National War Heroes Parade in June 1942, at considerable personal expense and great sacrifice of time. He is also a director of Freedom House.

A greater sacrifice of time has been Skouras' charitable efforts in behalf of the country which gave him birth. When Greece was invaded by Italy he immediately recognized the overwhelming need of the small nation for material support from the United States. On November 8, 1940 he was elected head of the Greek War Relief Association formed by such prominent Greek-Americans and American sympathizers as William Helis (oil operator of New Orleans), George C. Vournas, Harold S. Vanderbilt, Mrs. Lytle Hull (the former Mrs. Vincent Astor), and Thomas J. Watson '40. Skouras' brother Charles, who took over the presidency of National Theatres when Spyros resigned, and their brother, George, who is president of Skouras Theatres Corporation, are also active workers in the organization.

Although Skouras is a very busy man he spent six weeks in conferences in Washington with members of the State Department arranging negotiations with foreign powers on Greek war relief. He raised $9,700,000 at the low administrative cost of four per cent in what was one of the most efficiently operated fund-raising campaigns ever to be held in the United States. Much of the administrative expense was borne by Skouras and other members of the association personally as part of their contributions to the fund.

Following the raising of the money (mostly, says Skouras, contributed by Greek-Americans), there arose the almost unsurmountable problem of getting food shipments to beseiged and by this time occupied Greece. Some members of the association wanted to give up, feeling that no food would enter the starving country, but Skouras did not cease in his work of negotiating with the International Red Cross and the United States State Department. Finally he was able to arrange with Axis authorities to permit the shipments to start. Swedish ships, paid for by the Association, sail regularly to Greece carrying monthly allotments of wheat donated by the Canadian Government, dried milk and powdered vegetables given by the Lend-Lease Administration of the United States, and medicine donated by the American Red Cross. The Greek War Relief Association purchased, in addition, more than a million dollars worth of food from Turkey to be sent to Greece, besides American hospital equipment, motor cars, and food packages for Greek prisoners. While these shipments seem large, Skouras says they provide nothing "beyond the barest subsistence for 3,000,000 people. In normal times Greece required the importation of 100,000 tons of foodstuffs every month to supplement the national food supply."

Spyros P. Skouras, according to the late Lemuel F. Parton of the New York *Sun*, is "tall and handsome and built like a discus thrower." He and "all his brothers are versed in the classics and are never tagged with any of the solecisms of movie moguls." He is a home-loving man, whose chief interests center about his wife, the former Saroula Bruiglia, to whom he was married in 1920 in St. Louis, his three euphoniously-named daughters, Daphne, Diana, and Dionysia, and his two sons, Spyros, Jr., and Plato.

The film executive is a member of the Greek Orthodox Church and is on the board of the New York Greek Cathedral. At home in Mamaroneck, New York, he sees every motion picture produced by each film company in a large, private projection room. He likes to play golf (when he has the time), and he is fond of elaborate practical jokes. Skouras still likes the favorite dishes of his homeland and at the fashionable St. Moritz Hotel in New York has found a chef who prepares them to his liking and serves them in a private dining room.

More than thirty years ago as a busboy in the Planter's Hotel Skouras could hardly have dreamed of the goal he has achieved. With success came also a personal philosophy, which he once summed up in a telegram sent to a St. Louis theatre owner who was having financial difficulties. Skouras wired him this bit of encouragement: "No mariner ever distinguished himself on a smooth sea."

SMITH, BETTY (WEHNER) Dec. 15, 1904- Author

Address: h. 502 North St, Chapel Hill, N. C.

There is a tree that grows in Brooklyn, the Tree of Heaven some people call it, "which would be considered beautiful except that there are too many of it, for it grows lushly, but only in the tenement districts." Betty Smith knows this tree well. It brooded over the neighborhood she knew as a child, and she was moved by all the love and pity which she attributes to it. Miss Smith was born in the Williamsburg section of Brooklyn, New York, in 1904, and though it has been many years since she lived there, the images of, and feeling about, every scene, every poor little store with its colorful proprietor have remained with her so vividly that eventually they became the material for her first novel, *A Tree Grows in Brooklyn* (1943).

Miss Smith says that only "some of the book is me. Every character in it is a composite of a hundred characters I've met—in Michigan, North Carolina, everywhere I've been. The dialogue, though, is Brooklyn, and I've put in things that could only happen in Brooklyn. The book, in a sense, is autobiographical in that everything in it is something I've seen, heard, and figured out about. It is not the story of my life. Although almost everything in the book actually happened, it did not necessarily happen to me. Some of the episodes date back to before I was born. They came to me by hearsay. Other episodes are as recent as the news in the 1942 newspapers. I got a lot of my material while working at a Williamsburg settlement house."

But Betty Smith, one of the three children born to John and Catherine (Hummel) Wehner, did have a lot in common with her young heroine, Francie Nolan. Both seem to have had the ability always to pass by the sordid and to translate everything into terms of beauty.

Miss Smith readily admits that her early life was one of hardship, but she did not grow up to think of her childhood with bitterness; on the contrary, all of her remembrances are nostalgic and tender. She states that her childhood was a happy and a very dramatic one.

Of course she knew the junk dealer and the candy store owners and, like other children of her time, she took over much of the family's marketing. She made friends with all the shopkeepers and got to know a lot about them. She used this knowledge to good effect in her book. She admits that some of her teachers were cruel; that there was a librarian who didn't like children; that, like her heroine, she went to Mass at the neighborhood church and tried to understand the meaning of her parents' religion. She knew the delight in books that carried Francie to the library every day. She knew the quick, deep sympathy for people that is evident in all of Francie's thoughts.

Both Francie and Miss Smith moved from Williamsburg while they were still in their teens. What happened to Francie is not yet written. What happened to Miss Smith is known. She married early and had two daughters. Eventually the marriage ended in a friendly divorce. When the children were old enough for a kindergarten Betty Smith got herself enrolled as a special student in the University of Michigan. Because she had to be at home when kindergarten let out, she was forced to take such courses as coincided with the time when the children were at school. Consequently, her education ran to writing and reading courses. She started writing soon after she enrolled at Michigan, doing articles for the NEA syndicate and a column for the Detroit *Free Press*. Her first published work was a controversy in print with Bertrand Russell '40 on the topic of sex education for children. (She took issue with Russell's "tell-all" policy.)

BETTY SMITH

Betty Smith also took a course in playwriting at the University of Michigan. When the first two one-act plays she wrote were immediately published she decided to devote her life to the theatre. (She attributes her interest in the theatre to the fact that her father was an actor.) After winning the Avery Hopwood Award offered by the University for excellence in dramatic writing, she enrolled at the Yale School of the Drama and studied playwriting and all aspects of the theatre under famous teachers: George P. Baker, Walter Prichard Eaton, John Mason Brown '42, and others. Every one-act play she has ever written has either been published or produced. To date she has written some seventy-odd one-act plays and has edited two volumes of plays for the amateur theatre—all in the six years since she has lived at Chapel Hill, North Carolina. These plays are in themselves a staggering total. But when one considers that she has at the same time been engaged in the exacting job of keeping house and sending her daughters through school and living a normal social life, the accomplishment becomes even more imposing.

It was because friends at Chapel Hill believed in her ability as a writer that Miss Smith decided to make her home there. Paul Green and Professor Koch were instrumental in getting her a Rockefeller Fellowship in Playwriting when she was making a start. Later these friends, aided by Barrett H. Clark of New York, were instrumental in getting her a Dramatists' Guild Fellowship in Playwriting. Between writing plays she has worked at various things, most of them also connected with the theatre. She worked with a stock company during various summer seasons; she acted in the road tours of a couple of plays; she worked as playreader and editor for the Dramatists Play Service; she served as playreader and actress for the Federal

SMITH, BETTY—*Continued*

Theatre; she had a fling at radio broadcasting.

Although the idea of writing about Brooklyn had long been nurtured by Miss Smith, it was not the force of her observations alone that brought her novel into being. The propulsive factor was Thomas Wolfe, for in 1937 she read *Of Time and the River*, and "it all came back, then, like a flood. All of Brooklyn." Because of circumstance, however, it was not until years later that the novel was begun. Even when Miss Smith finally "got to it" she had difficulty because she found that she was already using all the available hours of her day, and a novel is no little task. But she was determined that her tale of Brooklyn be told—and so she created time. As it was, her accustomed routine did not get under way until seven in the morning; she therefore began writing at six. "I wrote an hour a day for a year," Miss Smith says. "It was no harder to do than writing in a diary. I put down all the things I remembered and had heard of . . . of Brooklyn."

Miss Smith's efforts were generously rewarded. Harper & Brothers bought her novel and ran four pre-publication printings before its appearance in August 1943; the Literary Guild made it its September selection and ordered 150,000 copies; Twentieth Century-Fox bought the screen rights for $55,000 (and later, it is said, refused a quarter of a million dollars for it from another studio). Miss Smith was also offered a fabulous salary to go out to Hollywood to work for motion pictures, but she would have none of it. She claims that the film people have no ability to recognize talent in an unknown piece of work —they wait until a novel or a play is a success and then automatically consider it good. Since the publication of the novel, however, Miss Smith has completed a three-act play. Michael Todd planned to produce it on Broadway but because of trouble between agent and producer the deal fell through.

As for the critics, they continued to acclaim the book as the outstanding first novel of years. The only fault they found with it was the somewhat over-cheerful, unrealistic ending. Diana Trilling writes in *The Nation*, "Surely popular taste should be allowed to find its emotional level without being encouraged to believe that a 'heart-warming' experience is a serious literary experience." The majority opinion, however, was expressed by the *New Yorker*: "The author sees the misery, squalor, and cruelty of slum life but sees them with understanding, pity, and sometimes with hilarious humor."

The success of *A Tree Grows in Brooklyn* was not without its own measure of humor. Miss Smith has had innumerable invitations to literary luncheons and teas. She has signed thousands of autographs, been followed by reporters and photographers, and criticized on the floor of Congress by Representative Eugene J. Keogh of Brooklyn, New York. The Congressman complained that "Miss Smith had been unfair to Brooklyn in implying that only ailanthus trees grew there and that Brooklynites had abandoned 'hope.'"

In August 1943, the same month that she was catapulted to fame by the publication of *A Tree Grows in Brooklyn*, Miss Smith, probably, the *New Yorker* quips, "out of some instinctive urge for anonymity," was married to Private Joe Jones of the United States Army. Private Jones had lived in Chapel Hill for six years, but he and Miss Smith had never met there, although they had mutual friends and were admirers of each other's work. (Private Jones was assistant editor of the Chapel Hill *Weekly* and wrote articles for it.) It was not until after Jones was inducted into the Army that they became acquainted. Even then their friendship was conducted only through the mail until Miss Smith went to Norfolk, where Jones was stationed, for a visit. Forty-eight hours after they met, they were married.

Late in the summer of 1943 Miss Smith visited New York and impressed reporters with her frankness and natural manner. Although she occupied luxurious quarters in a New York hotel, she persisted in going to the automat each night to fill a thermos bottle with coffee, which she took back to her suite. A reporter understood that action to imply that she didn't care to avail herself of the hotel's room service. As a matter of fact, she is in the habit of getting up at six in the morning—too early to get room service—and it occurred to her that the sensible thing to do was to stock up on hot coffee the night before so that it would be available when she awakened.

Miss Smith still retains her extremely modest home at Chapel Hill, having refused to make changes in it in keeping with her new status. Her children grew up there, she insists, she wrote her novel there, and she is sentimentally attached to everything in and about the house.

During her visit she returned to Brooklyn for the first time since she had left there at the age of seventeen. Protesting that she loves Brooklyn still and that it has always been her "lodestar," she nevertheless admitted that she would not want to live in the borough she has helped to immortalize. "Brooklyn," she says candidly, "seems wonderful when you're away from it."

Miss Smith writes: "I like to write, have always written. My main interest is in the theatre—not to see plays especially, but to work in the theatre. I love children and dogs and cats. I love popular sentimental songs, and my favorite reading is Shakespeare and the Bible from a literary point of view." She has long dark hair and a "wistful look." "I always look sad," she says, "I don't know why. It feels easier to look that way."

SMITH, CLARA E(LIZA) 1865(?)—May 12, 1943 Professor emeritus of mathematics at Wellesley College; holder of a Ph. D. degree from Yale University; author of textbooks on higher mathematics.

Obituary

N Y Times p19 My 14 '43

SMITH, GERALD L(YMAN) K(ENNETH) 1898(?)- Editor; lecturer
Addresss c/o WJR, Detroit, Mich.

Nearly everyone in Detroit knows the voice of Gerald L. K. Smith, head of the Committee of One Million and of the American First Party, editor of *The Cross and the Flag*, friend of Father Coughlin '40 and foe of President Roosevelt '42; for in addition to speaking over Detroit's WJR every Sunday night he is in the habit of holding political rallies that "border on revival meetings." With "a platform manner combining the best techniques of Billy Sunday and George M. Cohan," Smith has earned the plaudits of many of his contemporaries. Lowell Thomas '40 once called him "the most fearless and dynamic orator in America today." H. L. Mencken described him as "the gustiest and goriest, the deadliest and damnedest orator ever heard on this or any other earth . . . the champion boob-bumper of all epochs." "Before a live audience," wrote Herbert Harris, "he makes Father Coughlin seem somewhat less articulate than a waxworks dummy. His great frame shuddering with emotion, he lashes himself and his hearers into a frenzy, shedding his coat after the first few minutes, staining his blue shirt with sweat." "Religion and patriotism, keep going on that" is Smith's formula for success. "It's the only way you can get them really 'het up.'" Typical of his technique was a speech delivered at a Townsend convention in 1936 in which he finished, "his eyes bulging, his face lustrous with perspiration":

"They tell me that I mustn't refer to our sacred flag. That would be rabble-rousing. They tell me that I must not speak of our glorious Constitution. That would be rabble-rousing. They say to me that I mustn't quote from the Holy Book, our Christian Bible. But let me tell you, friends, that if it is rabble-rousing to praise the flag and the Constitution, and to love the Bible, then I can only pray to God that in His infinite wisdom He will make me the greatest rabble-rouser in the United States."

Talents such as Smith's combined with ideas such as Smith's are always a source of alarm to liberals, and in May 1942 *The Nation* decided that he was more than a successful "rabble-rouser of the Right": he was "perhaps our most dangerous professional defeatist, now that Father Coughlin has been partially silenced." And in June 1943, after the occurrence of the race riots in Detroit, many commentators pointed out that they had occurred in an area where Smith was particularly strong—an "area in which native Fascism has made use of fundamental economic and social conditions to increase racial friction."

GERALD L. K. SMITH

Gerald Lyman Kenneth Smith was born forty-odd years ago in Pardeeville, Wisconsin, the descendant of four generations of circuit-riding "hellfire and brimstone" preachers. His father was the pastor of a rural congregation, and Smith is fond of telling how as a boy he rode daily fourteen miles on horseback to attend high school at Viroqua, Wisconsin, "always doing a fair share of the chores, besides." The best debater in his county, during his junior year he won an elocution contest with William Jennings Bryan's "cross-of-gold" speech. He was brought up on the *La Follette Weekly*, to which he later attributed his "early tendencies toward political liberalism." According to Herbert Harris, writing in *Current History*, he worked his way through Valparaiso University, Indianapolis, majoring in literature, Biblical history, and dramatics, and was graduated after two and a half years, at the age of nineteen. According to the *Literary Digest*, he was graduated from Indianapolis' Butler College.

As the *Literary Digest* has it, for a while after graduation from college young Smith served his apprenticeship in country churches, and he then returned to Butler as college chaplain. Harris, however, says he "pinch-hit" at various pulpits when regular ministers were ill or on vacation until he received a legitimate "call" to a church in Deep River, Indiana. There he won thirty-eight new converts and baptisms within a month, and in 1922 he made such an impression at a St. Louis church convention that he was given a post in the Seventh Christian Church of Indianapolis. (That same year he married his boyhood sweetheart, Eleanor Marion Sorenson.) He was next promoted to the bigger Butler University Church in the same city, according to Harris.

Both sources agree that in 1928 the Reverend Smith was summoned to the fashionable King's Highway Church at Shreveport, Louisiana, where Huey Long was then an attorney and counselor at law. According to *Literary Digest*, moreover, the young minister, discovering "grave social injustices" in Shreveport, promptly became a social reformer—even working as a union organizer on the side. He found that 218 men and corporations owned seventy-two per cent of the property in Shreveport, and so in 1931 demanded that they make up seventy-two per cent of the $200,000 Community Chest quota. He attacked public utility companies on the radio. He exposed sweat-shop labor

SMITH, GERALD L. K.—*Continued*

conditions. He accused one of the church's influential members of piping "hot oil" from Texas. And, finally, when he learned that Shreveport capitalists, in expectation of the Home Owners' Loan Corporation Law, were about to foreclose on $1,000,000 worth of Shreveport homes, he went to Huey Long and asked him to intervene in the situation. As Smith himself tells it: "I told him they were going to grab homes right and left. 'The hell they are,' Huey answered. And they didn't. He passed a law. I decided then that Long was the right man." This account of Smith's Shreveport career seems rather improbable, however, in view of the fact that he was reportedly an early member of the Silver Shirts (registration No. 3223) and in 1933 promoted William Dudley Pelley's cause by lecturing on such topics as "Some Day 100 Million Americans Will Hide Behind the Silver Shirts for Protection" and "Why I Left the Conventional Pulpit to Join the Christian Militia of the Silver Shirts."

When "the Kingfish" became virtual dictator of Louisiana, Smith started speaking at his political meetings. Soon he became a "stellar attraction on Huey's sound-caravan, touring the hinterland to spread the gospel of $5,000 a year and 'Every Man a King,'" and in 1934 he severed his connection with the Shreveport church in order to travel up and down the land and set up "Share-Our-Wealth" clubs on a national scale. In 1935 he credited himself with making 20,000 converts daily by a simple technique. He would ask his audiences if they had a fair share of the world's goods. Getting a negative answer, he would then point out that "the Kingfish," if given the chance, would equalize the division through levies on large accumulations of wealth. Anyone who would like to give him the chance could become a member of the "Share-Our-Wealth Society," entitled to wear a badge, merely by signing a card and mailing it to Huey. There were no dues, no State directors or other "big-shot" officers in the organization except Long; instead, small groups of members were urged to get together, elect a president and a secretary, and hold meetings of their own.

Smith reportedly received $650 weekly for plugging the "Share-Our-Wealth" plan while Huey was alive—but, as Huey's "most plausible apologist," he was worth it. Long's was merely "the dictatorship of the surgical theatre," he once said. "After all, the surgeon is put in charge because he knows. The nurses and assistants therefore defer to him, not because they are servile, but because they believe in the surgeon and realize that he is working for the welfare of the patient." At that time Smith would have had the world believe that Huey was a great liberal, too. In 1935, in a defense of "the Kingfish" published in the *New Republic*, he commented that before the advent of Huey in Louisiana "labor unions were very weak and the assembly of workers was prohibited in industrial centers," that "it was not uncommon for labor organizers to be beaten or assassinated," that "little consideration was given to Negro education," etc.

Huey's assassination in September 1935 was apparently a great blow to Smith. Since then he has repeatedly asked for an official investigation of "the Kingfish's" death, charging that it was plotted by certain officials of the Roosevelt Administration, and more than once announcing that he himself was in danger of meeting the same fate. He hoped to become Huey's successor, however. "Six million people have written me to say: 'You lead. I'll follow you,'" he proclaimed. "And when the time is ripe, when chaos comes, I'll lead them, all right." In this ambition he was blocked at every turn by the other members of the Long machine, who had never been enthusiastic about the "Share-Our-Wealth" idea; and in December 1935 the Long machine ended its fight with Roosevelt, to Smith's great disappointment. The next month, when Georgia's Governor Talmadge '41 held a "grass roots" rebel rally at Macon, Georgia, Smith almost stole the show with his pronouncement: "We're going to drive that cripple out of the White House—and we're going to do it in 1936." "Roosevelt is rapidly becoming the most despised President in the history of the country," he also announced. "He gave us the Russian primer and cursed the Bible. . . He and his gang are in the death rattle. We have only to put the cloth of the ballot over his dead mouth!" According to *Current History* and other sources, that same year Smith sponsored a movement to boycott the rich Jewish merchants of New Orleans, but one of Huey's ex-henchmen put a quick end to it.

In February 1936 Smith formally recognized Huey's widow as the titular head of the Share-Our-Wealth Society and began looking around for greener pastures. Dr. Francis Everett Townsend was having his troubles at that time, and so Smith handed out press statements defending the doctor's integrity, endorsed OARP (Old Age Revolving Pensions, Ltd.), and soon emerged as virtual second-in-command of the Townsend movement, whose name he suggested changing to "Townsend Recovery Plan." He had other ideas, too. The youth of the nation had to be enlisted before the organization could get anywhere, he announced, and he promptly started a nationwide campaign to organize "youth battalions" of "nice clean boys from the farms, simple and Christian—with courage that seems to be disappearing, nowadays."

Smith's speech at the Townsend national convention in July 1936, when he called William Lemke the only real Democrat, heralded the short-lived alliance of Smith, Townsend, and Father Coughlin, who supported Lemke for President. In his speech before the National Union for Social Justice the next month, when all three men appeared on the same platform, Smith, denouncing the Roosevelt Administration and all its works, announced that his "real mission" was "to see that the red flag of bloody Russia is not hoisted in place of the Stars and Stripes." He was soon making new friends. The Republican columnist, Mark Sullivan, was particularly impressed by a speech Smith made before the National Press Club the same month. "Yes, the Reverend Mr. Smith's speech was what we call 'rabble-rousing,'" he wrote. "But under the spell of his oratory one felt that there was something fine, and to some extent justified, in the indignation with which he answered those who call him a 'rabble-rouser.' "

By this time Smith had come out as a staunch supporter of capitalism. "Public ownership? Not in anything!" he told one reporter. "I'd rather that a municipality didn't even own the town pump. It would be better in private hands. Even the police department and the fire department. I mean it, everything." What he really wanted, he announced, was an organization of "1,000 eloquent men" who would "go up and down the country preaching true Americanism. They will, first of all, preserve the sacred right of private property; second, help to uphold the Constitution; third, glorify the American flag; and lastly, drive the Communists out of the country." And by October 1936, when Smith began organizing his Committee of One Million, which, he said, "a million" of his friends had asked him to start, both Townsend and Lemke had repudiated him. Townsend's assistant publicly accused him of being in the pay of William Randolph Hearst.

In March 1937 Smith's Committee of One Million was formally launched as a "nationalist front against Communism." And from 1937 to 1939 Smith himself went from city to city, wherever there was labor unrest, denouncing the C. I. O. Though prevented from taking over his friend Father Coughlin's radio work and thus reaching a vast national audience, he did manage to speak before Rotary Clubs, Kiwanis Clubs, Chambers of Commerce, American Legion posts, and private gatherings of industrialists, from whom he solicited funds. He made excellent contacts. Arthur Hays Sulzberger '43 once invited him to lunch with the executives of the New York *Times*; in 1939 Lowell Thomas introduced him to members of the Advertising Club of New York; and when later in 1939 Smith came to Detroit to settle down, it caused Henry Ford no particular displeasure. It was noted that members of the Ford Service Department were on guard at the anti-C. I. O. rallies which Smith staged for workers at the Ford plants all over Michigan. Furthermore, in 1940 Smith boasted of having received "big money" from Republican interests, of having been sent to the Philadelphia convention by Republican leaders of Ohio and Michigan, and of having virtually written the Party's 1940 war plank.

By 1941 Smith was devoting himself mainly to preaching isolationism, although he took time out to denounce the C. I. O. during the Ford strike (most of the strikers looked like "aliens" to him). He testified at the Senate committee hearings on the arms lend-lease bill. He spoke at meetings of Hamilton Fish's '41 Keep America Out of War Committee. He did not join the America First Committee, but he announced that he "admired many of the things it accomplished," and Senator Nye '41 and other leading America First spokesmen addressed his own Committee of One Million.

Then came Pearl Harbor. Smith promptly proclaimed: "This is not the war of the warmongers . . . this is a fight in which you choose between Japan and America," turned isolationist meetings already scheduled into "victory rallies," and, according to the *American Mercury,* "switched all his resources to red-baiting of the typically fascist variety." As for war strategy, in *The Hoop of Steel,* a pamphlet published in 1942, he accused a "set of highbinders in Washington" of "trying to sneak us back into the British Empire," and advocated the passage of a "hoop-of-steel" law to compel the President to bring the fleet back to our shores, withdraw troops from all foreign theatres of war, and stop shipments of all war materials to our allies until he could "swear under oath that every acre of ground and every human being within the territorial responsibility of the United States is safe from attack, by an actual or potential foe." He also held that Russia was entirely too friendly toward Japan, and would like nothing better than to leave us facing Japan alone; that there was something un-American about the term "United Nations"; and that, all in all, it was necessary to fight for "a victory that will accrue to America rather than to the international bankers." He was the principal speaker at a meeting sponsored by William G. Grace's Citizens' Committee in Chicago on February 13, 1942 where Britain and Russia were booed and the audience had to be reminded to "be careful that only American sentiments are expressed." Even before Smith had formed a secret society called the Inner Circle "to keep the America First spirit alive," and after a trip to Washington (where he said he spent four hours with one Senator and received much information from him) he wrote a confidential letter to Inner Circle members. *The Cross and the Flag* was the first project of the Inner Circle.

In March 1942 the first issue of Smith's *The Cross and the Flag* appeared. Praised by Senators Nye and Reynolds '40, the magazine, which took the same line, was generally accepted as the successor to Coughlin's *Social Justice.* The next month its editor "consented" to run for the Republican Senatorial nomination from Michigan. Announcing that he would be supported by the "old-fashioned, Christian, American people," he went on to say: "I shall defend the right of free speech and free press for Father Charles E. Coughlin. The treatment that this minister of Christ is receiving at the hands of the bloodthirsty Reds is unbelievable." His four-point platform called for "one hundred per cent loyalty to the war effort" but complete isolationism after the War, $100 a month for every soldier, a cut in "non-defense" spending but an "honest hearing" in the Senate for the Townsend plan, and tires for everybody. His nomination, he announced, would "be construed as the repudiation of Wendell Willkie's '40 fifth columnism"—and, although Smith failed to get the nomination, election results showed that 100,000 people in Michigan agreed with him. Smith's America First Party grew out of this contest, and apparently made such rapid strides after the election that in 1943 Smith found it worthwhile to spend an increasing amount of time in Chicago and other Midwestern cities, reportedly

SMITH, GERALD L. K.—*Continued*

planning a Midwestern Congressional campaign for his followers.

In June 1943 the Detroit race riots put Smith's name in the news once more, for his indictment and prosecution in connection with them was demanded of the Federal Bureau of Investigation by fourteen national organizations, and he, indignantly denying the charges, set out for Washington shortly afterward to help in Martin Dies' '40 projected investigation of "racial antagonism." (Previously he had had 400,000 signatures collected on petitions urging Congress to renew Dies' appropriation.) Early in July he told reporters that he had submitted to Dies, the FBI, and a few select Congressmen the name of the man who had precipitated the riots, and he appealed to Vice-President Wallace '40 to call off a speech scheduled for Detroit later that month. He made more and more frequent trips to Washington, had secret discussions almost weekly with Senators and Representatives who had formerly been political spokesmen for America First. He sent out a great amount of propaganda literature and countless fund-raising appeals, and addressed mass rallies and meetings in a number of Midwest states (wherever he was not refused permission to "hire a hall"). In a speech in Cleveland in August he put forward his three-point "victory" program: defeating Roosevelt for a fourth term, sending the Communists back to Moscow, making Vice-President Henry A. Wallace a milkman in China. He made various suggestions for the Presidency in 1944; in July it was Robert R. McCormick '42, in October Charles A. Lindbergh '41. In October, however, he gave his blessing to Senator Robert Rice Reynolds, calling him a "symbol of what we stand for" and assuring him that he would have Lindbergh's support. If the Republican Party should be "kidnapped again" by Willkie, America First would enter the campaign with its own ticket, Smith warned. Reynolds at first announced that he was "flattered and honored," but later was reported as having broken with the America First Party, whose candidates "polled ridiculously low votes in the [November 1943] Detroit municipal elections." The shift of the center of isolationist political activities from Detroit to Chicago was seen as further evidence of Smith's diminishing importance by some commentators. In the meanwhile *The Cross and the Flag* (named by the Justice Department in 1942 as participating in a conspiracy against American morale) continued to be published regularly.

Smith once boasted that he was a friend of all of Roosevelt's enemies. This can't be literally true, but he has certainly expressed an admiration for a great many people besides Dies: Elizabeth Dilling, Gerald B. Winrod (both of them awaiting trial for sedition in 1943), William Randolph Hearst, Colonel Robert McCormick, Charles A. Lindbergh, Eddie Rickenbacker '40 (in whose honor Smith planned a meeting in February 1943), Senators Reynolds, Nye, Wheeler '40, Walsh, Taft '40, Vandenberg '40, and Brooks, Congressmen Hoffman, Fish '41, and Short—and, of course, Father Coughlin and Henry Ford. The slogan of his Committee of One Million is, significantly, "Christ First in America," and he is a doughty opponent of the "international bankers." In 1943 he also helped to send out "Peace Now" propaganda.

Average in height, Smith, according to Gerold Frank, "has sandy hair with a forelock, a bronzed, high-lighted face with high cheekbones like an Indian's, a large mouth with strong white teeth, a hawk-like nose, and staring blue eyes. He's healthy and likes being so. He weighs 200 pounds—'Huey Long and me used to weigh the same to an ounce. Wore each other's clothes. Huey—he was a genius.'" "When he speaks," says Frank, "he hunches his trousers, rubs his nose, dries the palms of his hands on his blue shirt front, gulps water direct from the water pitcher." According to Herbert Harris: "He doesn't drink nor smoke but seems to take out the lack of such indulgences by chewing matches, gnashing them into bits between his very white teeth, and spluttering out the splinters."

Carlson, J. R. Under Cover 1943

SMITH, HAROLD D(EWEY) June 6, 1898- United States Government official

Address: b. 252 State Department Bldg, Washington, D. C.; h. 3125 N. Abingdon St, Arlington, Va.

"He's the most important man in this Administration," says Vice-President Wallace '40 of a man named Smith, who is probably the least known, least spectacular figure of influence in Washington. However, as director of the Federal budget in these years of huge wartime spending, Harold D. Smith has a tremendously important job. His responsibility is so great that one member of Congress remarked, "We grant the power and Harold Smith writes the laws." Yet capable performance of that job is not Smith's sole administrative service. Slow-moving, tactful, sound, and decisive in judgment, he acts in the inner circle of the White House as President Roosevelt's '42 pinch hitter, who "doubles for the President in vital government action nearly every day in the week. . . In less than four short years he has risen from nowhere to become the adviser and personal agent, the business manager and efficiency expert, the messenger boy and, when necessary, the muscleman of Franklin D. Roosevelt."

To say that Smith went to Washington "from nowhere" is, of course, figurative, since he had done public administrative work in Kansas and Michigan valuable enough to catch the Presidential eye. A Republican, he was recommended to the President by Democrat Frank Murphy '40 who, while he was

Governor of Michigan, had picked Smith as his budget director. Even before that Smith had acquired a national reputation in his chosen profession, the science of government.

Harold Dewey Smith was born on a farm near Haven, Kansas on June 6, 1898, the son of James William and Miranda (Ebling) Smith. Both his grandfathers fought in the Civil War on the Northern side. On his father's side his forebears were Scotch and Irish; on his mother's, Pennsylvania Dutch. His parents had met in Indiana and migrated to Kansas, where he grew up as the eldest of five children. He knew what hard farm work was, and for two or three summers he got up before 5:00 to build a fire in the old-fashioned wood-burning threshing machine the neighborhood farmers used. At night and on Sundays he had to move the big, cumbersome machine to the next farm.

He worked his way through high school and the University of Kansas, where he got his B. S. degree, 1922, in electrical engineering. At college he was president of the YMCA and was planning to go to China as a scientific missionary. But the young man was convinced by his professor of government that he could accomplish more by attacking the incompetency and crookedness in local political administrations. He then met Professor Thomas H. Reed, who was starting a course in municipal administration at the University of Michigan. Reed offered him an assistantship at $900 a year, which gave him time for classwork and an M. A. in public administration (1925).

The following spring he went back to Kansas, where a former classmate, "tall, dark, and strikingly pretty" Lillian Mayer, was working. To repay his father for financial aid while at college, he helped him build a home in Lawrence. "I think I fell in love with Harold," Mrs. Smith now recalls, "when he was hanging by his knees from a rafter. I was working at the college at Lawrence, and every day I walked by the house he was building. He drew the plans, laid the drainage and foundations, put in the plumbing, wiring, and everything else, including the roof, with his brother's help. Well, as I passed, he was usually in some funny position that made me afraid he would fall, but he was always singing. He really has a wonderful voice. You know, one of his suppressed desires has always been to be a grand opera singer." This Smith denies; but he admits to falling in love with Miss Mayer and taking her on a honeymoon to California. Mrs. Smith is an enthusiastic golfer, and the mother of four attractive children: Lawrence Byron, Mary Ann, Sally Jane, and Virginia Lee.

Having received his Master's degree, Harold Smith served first with the Detroit Bureau of Governmental Research and then as consultant for the League of Kansas Municipalities. In 1928 the offer came to become director of the Michigan Municipal League. It wasn't much of an agency, then; but with a rented typewriter in a combined bedroom and office, Smith set to work. It was not long before cities and towns were glad to pay the requisite dues for the League service, since Smith showed the way to efficiency and economy in every phase of municipal government. From 1934 to 1937 he was also director of the Bureau of Government at the University of Michigan, and editor (1928-37) of the *Michigan Municipal Review*. Then Frank Murphy became Governor of Michigan and made Smith his budget director. Murphy wanted Smith to revise and modernize the budgeting and accounting system of Michigan, since the state's financial position came out each year in three separate official statements which only occasionally agreed. "He gave me something I could bite into," says Smith, "and I took it."

HAROLD D. SMITH

During his first few years in the White House, President Roosevelt had trouble with the organization of his Budget Bureau, believing that the top man should not be a politician but a professional administrator. When Budget Director Daniel Bell preferred to be Under-Secretary of the Treasury, the President ordered a survey to find the man who best answered his specifications. Smith's name was highest on the list, and he had the further recommendation of Frank Murphy. Smith was called to Washington, where he told the President he was reluctant to take the job, having too many bridges to burn in Michigan. The President picked up a packet of matches and handed them to Smith. "Start burning your bridges," he said.

When Harold Smith took over the Budget Bureau in April 1939 its total appropriation was only $187,000. But by September of that year the budget director was given much broader powers. President Roosevelt told Smith that he wanted the Bureau not merely administratively in the executive office but physically as near the White House as possible; hence, with an enlarged staff, it was moved to the State Department Building. In its reorganization, the Bureau was "to conduct research in the development of improved plans of administrative management, and to advise the executive departments and agencies of the Government with respect to approved

SMITH, HAROLD D.—*Continued*

administrative organization and practice." It was also to "aid the President to bring about more efficient and economical conduct of government service," and to make "recommendations as to the Presidential action on legislative enactments." Thus all legislative recommendations must be approved by the Budget Bureau.

Even before the United States entered the War, all the complex details of government "housekeeping" required time and patience. Standardizing government accounting and checking on the spending of government agencies form part of the routine duties of the 400 Bureau employees. But the five branches of the Bureau have spread beyond fiscal estimates to many other functions. One of the chief jobs has been to find space for the vast flood of war workers in Washington. It is Smith who decides what bureaus and agencies are to move out of Washington. In the estimates division the Bureau now has eight chief examiners and fifty examiners. These send in field reports from every part of the country on all phases of government activity.

The division of legislative reference is concerned with the mass of legislative recommendations that go from the President to Congress. They propose new policies and draft, analyze, and criticize all sorts of programs. "Every bill passed by Congress goes to the Budget Bureau for study and a report to the President recommending approval or veto, and why." On each of the successive war shake-ups of various organizations, starting with the Executive Reorganization Act, the spadework was done in the Budget Bureau. It is obvious that Smith and the Bureau recommendations have a vital effect on labor, military, industrial, and economic policies. But the director, who has been pictured as "sitting literally at the nerve center of our democracy, almost literally with one hand on the moneybags and the other on the President's knee," considers himself not a political power, but a scientist. "We consider the budget as an integrated social and fiscal program," he says. "We go into the economic inter-relativities of various proposals. We serve as an agent of the President in coordinating operations. No budget office, if it is worth a damn, can run counter to the social forces of a democracy. In peace or war, management lies at the core of democratic government."

It was the budget director's task to detail the spending plan of lend-lease. This, as reported early in 1941, came to a seven-billion-dollar total. In June 1941 Smith said that defense expenditures would soon rise to a billion a month. But the Treasury and the Budget Bureau were found in disagreement on several financial issues. Secretary Morgenthau '40 and Director Smith differed concerning the nature of defense and non-defense expenditures, the latter saying that it was impossible to make accurate distinctions between them. The two also came to blows on the matter of revenue. Smith warned the President that if effective means were not taken at once to block climbing wages and prices the national economy was "riding hell-bent for an explosion." He called together, with Roosevelt's o. k., a group of key men to decide on tax levies, compulsory savings, and ceilings on prices and wages. Morgenthau dissented on the issue of compulsory savings, believing that war bond drives would be sufficient. At that time (1942) Morgenthau was successful in getting most of the program put off indefinitely, and Smith was pretty grim about it. However, since one of Smith's assignments is to keep the "big boys" of the Administration from fighting, he and Morgenthau had to bury the hatchet, "although every once in a while something sharp seems to be discernible, still sticking out of the ground."

By April 1942 Smith estimated that the country would spend for war in the coming fiscal year "the unprecedented amount of seventy billion dollars." But receipts for 1943 would only be two per cent greater than the previous year. The incredible figure of 101 billion for the 1943 to 1944 war effort was announced in May 1943. In view of the great need for increased taxation, Smith had been one of the early advocates of a pay-as-you-go income tax collection plan, and had stated that it should be installed not later than April 1, 1943. He continued his insistence on the need for additional taxes before the Ways and Means Committee in October 1943, again basing his arguments on the rate of revenue collection and government spending, but found the Committee an impatient listener. Other wartime duties of Smith have been eliminating non-war expenditures and drastically curbing such New Deal outlays as the National Youth Administration. He further ordered government agencies to dismiss some 41,000 employees (April 1943).

As a settler of "family" quarrels, the cool and calm budget director has been invaluable to the President. "When someone must be tactfully fired or kicked upstairs, when a new man is needed to fill a difficult executive post, Smith often is called in." It is said that he sees more of President Roosevelt than any other man in Washington, with the exception of Harry L. Hopkins '41. Hence he is constantly sought after by public figures for help in putting across ideas with the "Boss." According to Vice-President Wallace, Smith "steps aggressively into all sorts of situations, views them from an all-over global standpoint, and tries to weld conflicting viewpoints and pressures into a single intelligent and energetic government policy. . . All sides to every dispute know that he will be utterly fair about it. Everybody has confidence in him." His friends say, "Harold has just one speed—low gear," but he manages to get there on it. His insistence on "scraping barnacles off the ship of state" once made him the recipient of some choice Ickes '41 epithets. But Smith came back with his jaw out and a sure retort; now he and Ickes eat noontime sandwiches regularly in the latter's office.

"In a crowd," says *Time* Magazine, "Mr. Smith is the fellow in the brown suit. Middle-sized and homely, he has pale blue-gray eyes behind rimless glasses, and a mustache which (though he boasts 'I haven't had a clean-shaven upper lip in fifteen years') is invisible in a poor light. He is cautious with his talk, and likes to take several puffs at his straight-stemmed briar pipe before answering a question." As for his politics, Smith once called himself "an independent Republican with Socialist leanings who frequently votes Democratic."

Smith seldom has time for lunching out; and in one seven-week period he was home to dinner twice. "When the going is too tough he takes an evening off to operate his power lathe in the basement at home, working on black walnut, one of the hardest of woods. Shaping a chair leg, he has a chance to think out a difficult problem." He likes carpentering, plumbing, electrical work. His house in Arlington he bought at a bargain, and fixed the heating, plumbing, and wiring himself. He enjoys nothing so much as a first-rate bargain. Once, before rationing, he took off a shoe and said, "What do you think I paid for that?" It looked like a $10 item. "Nope," said Smith. "Ran into a sale. A dollar ninety-five. I bought all they had—four pairs." While he wrestles daily with figures running into the billions, Smith doesn't handle his own personal budget. Mrs. Smith runs the family finances, and gives him a daily allowance—which he often exceeds. But that is one worry, at least, off the mind of the blond, chunky, genial, and hard-driving budget director.

Who's Who in America 1942-43

SMITH, HOWARD K(INGSBURY) May 12, 1914- Journalist; radio commentator

Address: b. c/o Alfred A. Knopf, Inc, 501 Madison Ave, New York City; h. 59 Viktoria Strasse, Berne, Switzerland

Howard K. Smith is the "brilliant young reporter" whose *Last Train from Berlin* (1942) has been called a "highly educational book if you don't take too much comfort in it." He drew his title from the fact that he was the last American foreign correspondent to leave Germany before the United States declared war on the Axis. Since December 1941 he has been writing from Berne, Switzerland.

Howard Kingsbury Smith was born in Ferriday, Louisiana, on May 12, 1914. He was educated at Tulane University, New Orleans, where he was president of the student body and captain of the track team. While at the University he won a "human interest story prize" offered by Dorothy Dix '40 to journalism students. In 1936 he received his B. A. degree and with $100 in his pocket (the proceeds of the sale of a short story) he embarked for Germany, which was, at the moment, the cheapest country in Europe in which to travel.

HOWARD K. SMITH

Smith worked his way across the ocean as a deck hand. His German professor at Tulane had procured for him a scholarship which would enable him to study cheaply for a month at Heidelberg, and his sociologically-minded friends had charged him with the mission of factfinding about Nazi Germany for all of them. He took his mission seriously, reading all the books he could on the background of modern Germany and filling many blank notebooks with his observations. He tabulated all his observations carefully and came to the conclusion that "National Socialism was quite decidedly a *Bad Thing.* It offered no solution to any problem. For the very reason that it could solve no problems, but only postpone them, I held that Nazism absolutely, inevitably, and even in the terms of our debating question, *necessarily* meant war."

On his return from Europe, Smith relates, "I earned a precarious living working as a leg reporter for the New Orleans *Item-Tribune.* By careful maneuvering, I eventually managed to work my way into a department of the newspaper where my main duty was rewriting foreign dispatches from the news agencies and writing features on foreign affairs—mainly about Germany." In January 1937 Smith applied for a Rhodes scholarship to study at Oxford University in England and won it. It did not become valid until October 1937, but, Smith writes, "I couldn't wait that long to go back to Europe. I pinched pennies, borrowed more, and in May I quit my job and—this time I traveled in style, paying $50 for transportation on a freighter—returned to Bremen."

Smith found Germany little changed, except that the Germans had pulled their belts a little tighter, more people were in concentration camps, a sailor he had met on his last visit was in Spain as a "volunteer" to fight the Bolshevik menace, and there were more uniforms on the street. In the fall he went to Merton College, Oxford, where after encountering considerable coldness toward his

SMITH, HOWARD K.—*Continued*

now militant anti-fascism, he settled down among kindred souls in the Oxford Labor Club, a branch of the British Labor Party. He became active in the Party's activities, although by so doing he endangered his scholarship. He spent the liberal vacations "sharpening his zeal" by revisiting Germany and by visiting Russia, Holland, and Austria. In 1939 he was elected head of the Oxford University Labor Club.

In his autobiographical introduction to *Last Train from Berlin* Smith confesses to having made several wrong predictions. He had felt certain that the Chamberlain Government would not take up Hitler's '42 challenge in invading Poland, and the Nazi-Soviet pact had come as a severe and confusing blow. One morning in September 1939 he went to the United Press' London offices and asked the chief correspondent, Webb Miller, if he might have a job if war should come between Britain and Germany. "He said I could come in and take a desk. War had just been declared."

Smith spent three months at his desk in London and then he was sent to Copenhagen to be on hand in case hostilities should break out between Russia and Finland. Two months later Frederick Oechsner '43, the United Press' Berlin correspondent, asked for an addition to his staff, and since Smith could speak German he was sent to Berlin. Smith remained in Berlin, first as a correspondent, later as a radio broadcaster. During the last half of 1941 he was Harry W. Flannery's '43 assistant representing the Columbia Broadcasting System, and when Flannery left for the United States, Smith was left in charge. By the end of the year he was in such "bad odor" with the Nazis that he could no longer work in Germany and he applied for an exit visa. He received it only after his employers had promised to send a substitute as hostage. On December 7, 1941 he crossed the border into Switzerland.

Last Train from Berlin is a record of Smith's experiences in Germany as well as of the conclusions he reached. Written under severe handicaps, it was published in the United States in September 1942. In a letter to his publishers Smith wrote: "Regarding the circumstances in which the book was written, they were most unfavorable, and I fear the manuscript bears all the signs of them. I had absolutely no notes to refer to, as they were either burned by myself in Berlin or confiscated by the Gestapo when I came out of the country. The book was written in the record time of one month, not because I was trying to break any records, but because the London publisher who first requested the book begged me to finish it as soon as possible. Thus I fear parts of it are unwisely phrased, and much of it could stand a good polishing. At the same time I suffered under the additional strain of trying to get my fiancée [Benedicte Traberg] out of Denmark (which endeavor was successful, thanks to the efforts of Queen Alexandra herself, after we had tried for four months) and out of the reach of the Nazis.

"In terms of physical health the book has been damned expensive. With troubles heaped on me (at the same time it became impossible for me to broadcast from Switzerland, and I feared I would have to leave before the book was finished and before my lady arrived) and working eighteen hours a day, I consumed some five bottles of 'schnapps' weekly for the period of writing and ended up in the hospital with a bad breakdown and a lovely, inflamed appendix. When I finished the manuscript I was so sick of it I have never read it over a second time." In a postscript Smith added: "My wife, legally acquired in March 1942 in the Berne town courthouse, is Danish, lovely, twenty, former correspondent for the Danish paper, *Berlingske Tidende,* in Berlin."

In *Last Train from Berlin,* "as up-to-date a firsthand account of conditions in the Reich as we are likely to get from a trained observer until the War is over," Smith discusses the social, political, and economic state of Nazi Germany; he describes the three forces within Germany which are working against the Nazi Party, the underground Communist Party, the Catholic Church, and the Prussian officer caste; he outlines the damage done to the Nazi cause by Germany's failure to defeat Russia in the early stages of the Russian invasion; and in a chapter entitled "How to Win Wars and Beat Nazis," he offers his own program for defeating the Nazis. Comparing the German people to men holding a lion by the tail, he says: "They are not convinced Nazis, not five per cent of them; they are a people frightened stiff at what fate will befall them if they do not win the mess the Nazis have got them into." He concludes that "unless the British, the Russians, and the Americans offer, with deep sincerity, to the German people another way out besides life or death with Nazism, this War is going to last for an unnecessarily long time, and the Germans, to avoid their horrible fate, are going to fight it with the reckless spirit of men who have absolutely nothing to lose but their lives. His plan to separate the Nazi leaders from the German people has three points: (1) reasonable and democratic peace terms announced immediately by the United Nations; (2) proof of good faith on the part of the democratic countries by instituting "total democracy" (political, social, and economic) at home and in the colonies; (3) proof of military might by fighting war with all resources.

Clifton Fadiman '41 found Smith too much of the "unrestrained optimist." He maintained that Smith was one hundred per cent wrong about the effect "total democracy" abroad might have on the German people. "The world has been appeasing the Germans ever since their human wolf packs broke out of their forest lairs in the time of Arminius." Henry C. Wolfe, writing in the *Saturday Review of Literature,* found the book a "sensational and heartening story, and reporter Smith tells it superbly. He tells it with indignation, disgust, and cynical humor. His sense of social change gives vital significance to his chronicle of the proletarianization of the German middle class." Ralph Bates, writing in *The Nation,* welcomed the book for having an "out and out anti-Fascist point of view, and that view a clear-cut socialist one." On the whole the reviewers welcomed the book for its timeliness, for its freshness of insight, for its heartening picture of possible Nazi collapse. On the chapter in which Smith offers his suggestions on what to do about it ("my first editorial") they were about evenly divided between those who found his observations "sage" and those who found them, to their detriment, "breathing all the ardors of the University Labor Club at Oxford."

Since his arrival in Switzerland, Smith has been broadcasting regularly from Berne for CBS, and as a foreign correspondent for *Time* and *Life* Magazines has been contributing articles to those publications on various phases of the Second World War—all with a strongly anti-Fascist slant. His book was serialized in abridged form in the New York newspaper *PM* early in 1943.

Wallace Deuel '42 describes Smith as a young Southerner from New Orleans with a "mild manner and a soft voice." He is tall, slim, athletic.

Smith, H. K. Last Train from Berlin 1942

SMITH, IDA B. WISE July 3, 1871- National president of the Woman's Christian Temperance Union

Address: b. Woman's Christian Temperance Union, 1730 Chicago Ave, Evanston, Ill.

"Do you want any proportion of 36,000,000 young people to STAGGER through life, because they have become recruits of the drink habit?"

With such provocative questions does the National Woman's Christian Temperance Union challenge the public. "Alcohol is a habit-forming racial poisoning," their campaign leaflets assert. "The more you drink the more you want, and the more you drink the more likely it is that your children will be handicapped for life. . . The point is not—who wants to drink or who doesn't. The point is that ALCOHOL IS A POISON."

The woman behind these leaflets, "small, sharp" Ida B. Wise Smith, president of the WCTU since 1933, was born in Philadelphia, Pennsylvania on July 3, 1871, the daughter of Robert Emanuel and Eliza Ann (Piper) Speakman. Most of her early life was spent in Iowa, where her stepfather, Roland Parkhurst, was a minister. In 1887, when she was sixteen, Mrs. Smith was graduated from the public high school at Hamburg, Iowa, and began her career as a public schoolteacher "providing for herself, her parents, and two orphan nieces." Two years later she married James W. Wise.

"During schoolteaching days," according to the *Christian Evangelist*, "Mrs. Smith read tragic evidence of the evils of drink in the pinched faces of little children from liquor-impoverished homes." Turning her eyes toward temperance problems, Mrs. Smith joined the WCTU, which had been founded in Cleveland in 1874 by a "group of women crusaders against the liquor traffic. . . The organization, dubbed by an early member 'organized mother love,' spread rapidly across the nation and was instrumental in the passing of prohibition laws in many states." Its motto was: "For God and Home and Every Land."

IDA B. WISE SMITH

Mrs. Smith studied as an undergraduate at the University of Nebraska for two years and was graduated from the Kindergarten Training College of the University. In 1902 her husband died, and she was left with one small son, Carl Edwin Wise, and her parents to support. For two years she carried on as general storekeeper and postmistress; then she organized a township high school and returned to her teaching. She taught in Des Moines, Iowa for eight years. In 1912 she was married for the second time—to Malcolm Smith, who died three years later. There were no children by this marriage.

Mrs. Smith soon rose to prominence in temperance circles. In 1913 she became Iowa State president of the WCTU and in 1923 director of Christian Citizenship for the national organization. Honors began to be heaped upon her. She was ordained a minister of the Church of Christ (Disciples) and received an honorary LL. D. from John Fletcher College in Oskaloosa, Iowa in 1927. In 1925 she was designated by the Governor of Iowa as one of the ten most honored women of the state and three years later she rose to be "the most distinguished woman of the state" (so termed by another Governor). Six years after she had been appointed president of the WCTU of Iowa she became vice-president of the national WCTU. "There was no doubt in 1933," wrote Frances Dunlap Heron in the *Christian Evangelist,* "about the ablest person to succeed Mrs. Ella A. Boole as national president." On November 1, 1933 Mrs. Smith was elected to that office. She "came in with repeal."

Some of the modern educational techniques the WCTU employs to teach the public "medical, scientific, and economic truths about alcohol" are posters, display advertising, convention exhibits, radio programs, and films. "Millions of young people" each year see three motion pictures—*The Payoff, A Family Affair,* and *The Beneficent Reprobate.* An annual seminar is held at headquarters to show

SMITH, IDA B. WISE—*Continued*

educators "how to impart alcohol information to pupils."

Mrs. Smith has figured that "132,000,000 men, women, and children in the United States drink per person per week an average of one quart and two gills of alcoholic beverages, and that the War has increased the rate 17.7 per cent. Besides working out these problems in statistics, Mrs. Smith spends her time in wrestling with social problems and agitating for a speedy restoration of prohibition.

The WCTU head is still hopeful that drinking alcohol, which she called a "fifth column" and a threat to national defense, will be abolished. Even though its greatest triumph, the Eighteenth Amendment, prohibiting the sale of liquor in the United States, has been repealed, the WCTU is not without power. Numbering half a million members, it has succeeded, according to Mrs. Smith, in placing one-sixth of the American people under some form of prohibition today. She states that "the efforts of the liquor trade to entice thousands of persons into regular drinking are showing results. With the brewing industry openly declaring its intention to make customers of the boys in service camps, we can expect that the rate of alcohol consumption will increase." As a result the WCTU has redoubled its efforts to restore prohibition to the United States. It supports passage of the Bryson bill for wartime national prohibition.

Mrs. Smith is a member of the Women's Committee of the Council of Defense, the League of Women Voters, the Conference of Social Agencies, the Citizenship Committee, the National Council of Women (chairman—1935), and the Illiteracy Commission of Iowa. For twenty-nine years she has been president of the board of trustees of the Benedict Home for Girls. Editor in chief of the *Union Signal* Magazine, Mrs. Smith also writes numerous pamphlets, leaflets, and articles every year.

"Clever, plump, beagle-eyed" Mrs. Smith is an "astute politician and public agitator." She has a sense of humor and likes to tell about receiving ten cents in the mail with an anonymous letter saying the dime was "to start a fund for the purpose of clearing you out of the country." At the three-story WCTU headquarters building, Mrs. Smith's womanly touch has provided the "sturdy plants that adorn the windows" and the "quiet friendly atmosphere" that give the offices that "homey" look which surprises businessmen. Mrs. Smith is "always smiling and ready to break into a merry laugh—but never loud—except when she talks about little children being harmed through alcohol. Then there is a tear in her voice."

Blond, five feet one inch tall, Mrs. Smith leads a very busy life. Her personality "shines right through the vivid blueness of her eyes." She is "vigorous and affable, attractive in appearance, fond of blue dresses," and lives on a largely vegetarian diet. Deeply religious, she has made an intensive study of the Holy Land and never makes a speech in which she does not quote from the Bible, of which she has memorized thousands of verses. All her life she has been a consistent Republican except where a Prohibitionist party existed.

Who's Who in America 1942-43

SMITH, PAUL C(LIFFORD) Nov. 24, 1908- Journalist

Address: h. 354 Greenwich St, San Francisco, Calif.

Private Paul C. Smith of the United States Marines was named by the United States Chamber of Commerce as the "outstanding young man of 1942." A prodigy with red hair and the spirit considered its natural accompaniment, the aggressive young man from the West held several jobs before signing up, at the ripe age of twenty-seven, as the *Chronicle's* executive editor. The "pint-size, freckle-faced boss of Mark Twain's and Bret Harte's newspaper" owed his success mostly to his ability to get along with both liberal and conservative elements in local and national affairs. To be on friendly terms with both Harry Bridges '40 and Herbert Hoover '43 was enough in itself to stamp Smith as San Francisco's wonder boy.

Paul Clifford Smith was born in Seattle, Washington on November 24, 1908, the son of Wallace B. and Carrie Augusta (Mason) Smith. Privately tutored, he began his career as a prodigy by finishing high school at Pescadero, California at the age of fourteen. He didn't care about higher education, but was anxious to see the world. First he went to Canada and got a job in the Saskatchewan wheat fields. He rode freights east to Ontario, where he "sought gold, but found none." He then went West again, via freight car, and worked for a time in a logging camp in British Columbia. Once more he tried prospecting, this time in the Mojave Desert, with no better luck than before. Coal digging was the next venture, first in Utah, then in Pennsylvania mines. Then the West coast drew him back, and at Eugene, Oregon he found someone willing to set him up as proprietor of a sporting goods store. He gave golf lessons to promote sales, although his own score was about 120.

In 1928, however, having by now grown old enough to shave, Paul Smith began a more solid career in San Francisco as a bond salesman. He ignored the falling stock market of 1929, and the following year, at twenty-two, he became resident manager in New York of the Anglo-California Bank. With that experience behind him, he returned to San Francisco and got his first job with the *Chronicle*—writing a financial column. In 1932 he decided that he would go to Europe and see what things were like there, and he borrowed $500 for the trip. While abroad he asked Mussolini '42 for an interview, and got it—which made copy for the *Chronicle*. He might have stayed on indefinitely in Europe if that paper had not cabled him that he could be the financial editor if he came home at once.

The depression was hitting bottom with the bank holiday in 1933 when the new financial editor took over. Roosevelt['42] moved into the White House, and Ex-President Herbert Hoover went to live at Palo Alto, only thirty miles south of San Francisco. He read the *Chronicle,* and liked what the young financial expert—who was also a Republican—had to say about certain New Deal measures, including what Al Smith called "baloney dollars." Hoover and Paul Smith became, in fact, good friends, and Hoover tried to hire the bright young man away from the *Chronicle* to be his personal secretary. The owners of the *Chronicle* were impressed enough to make Paul Smith executive editor in 1935.

Now an important man of the community, Editor Smith decided to celebrate, and at the same time add dignity to his person, by buying three expensive suits, and a red carnation (to go with his hair) for his lapel. The red carnation, it is said, has become his trademark; and he has been called (but not around the office) "Pinky" Smith.

Soon after Smith got his appointment as executive editor, labor trouble broke out in the lettuce fields near Salinas. The case became a significant item in national news, and Smith sent his reporters to get the facts. When the facts were printed and commented upon editorially, men prominent in California Big Business read them with considerable uneasiness. The *Chronicle,* which they had always considered "sound," was suggesting that the strikers actually might have some basis for their demands. The words "Smith" and "Communist" were being uttered in the same breath. Then came a front-page editorial, signed by Paul Smith, squarely presenting the situation to the readers. The strike was finally settled, satisfactorily to both sides, and Editor Smith had helped to settle it. Smith was also known to be friendly with Harry Bridges, water-front labor organizer, and a good many influential Californians disapproved of Bridges. But they knew, also, that Smith was a good friend of Herbert Hoover's. Apparently the young editor had the situation well in hand: in 1937 the president of the *Chronicle* appointed him general manager of the paper.

When a C. I. O. longshoremen's and warehousemen's union went on a strike that tied up shipping for weeks, Smith printed another signed, front-page editorial demanding that the conflicting parties, in the interest of the general good, make peace. The union and the shippers were both angry. When the *Chronicle* was told to mind its own business, Smith replied in an editorial that "the *Chronicle* makes it its business to stick its nose into any so-called private row which affects the broad public interest." It was the union which then asked Smith to serve as mediator. After twelve days of painful negotiations he finally got an agreement. Once again a strike had been settled, with much of the credit going to Paul Smith.

A second trip abroad came in 1938 when Smith went with Herbert Hoover as friend and adviser on a tour of Europe. At Hoover's private conversations with governmental leaders Smith was present—at all but the one with Hitler['42], who wouldn't admit him because he was a journalist. On Smith's return in 1939 several thousand San Franciscans petitioned that he run for Mayor. But a good many *Chronicle* readers petitioned also that he stay on as editor of the paper, which was exactly what he chose to do. "A conscientious newspaperman," said Smith, "can be of real service to his community." After a trip across the continent he wrote in the *Chronicle* a series of four articles, "The Way Out for America." He suggested an All-American Council to develop his plan, naming a group of twenty-five leaders. His committee included such diverse characters as Herbert Hoover, Eleanor Roosevelt['40], John L. Lewis['42], William Green['42], Charles Evans Hughes['41], and William S. Knudsen['40]. Nothing much came of his plan to save the country.

PAUL C. SMITH

About this time Paul Smith became interested in the political potentialities of Wendell Willkie['40]. When he went to New York to attend the annual convention of editors and publishers in April 1940, he discussed Willkie with Bartley C. Crum and Oren Root, Jr.['40], also of San Francisco. Root's enthusiasm was aroused to the point of starting a personal campaign for Willkie—a campaign which Paul Smith ardently supported and aided.

Following the Willkie campaign Smith made another effort, undeterred by the failure of his "All-American Council" to save the country. Early in 1941 he instituted in the *Chronicle* the "Monday Meeting," a page-long discussion of some vital problem by six or eight locally prominent persons. The first Monday Meeting, which included among its debaters George Creel, First World War propaganda chief, and William Saroyan['40], playwright, was on the subject of whether the country should deny freedom of speech, press, and assembly to Communists and Fascists. Another meeting focused on the necessary

SMITH, PAUL C.—*Continued*

steps to cement relations between the Americas.

In March 1941 Smith, at the invitation of the State Department, made a five weeks' trip to England to observe British defense efforts. On his return he expressed his doubts of the possibility of an invasion of the Island by Germany, and stressed the importance of the Battle of the Atlantic. He reported many night bombings of British workers unloading docks in which the Nazis destroyed valuable cargoes of food. "The United States has a big job in keeping the British supplied with planes," he added.

Since the *Chronicle* is a morning paper, Smith's working day, for some years, began in mid-morning and extended late into the night. Family life would have been difficult under such a schedule, but Smith is unmarried, so there were no impediments to the hours he kept. He liked to entertain, and his apartment was the gathering place of leaders in the arts, professions, sports, business, and labor circles. When evening parties broke up, or groups left the theatre, the suggestion often was, "Let's go over to Paul's." Quon, Smith's Chinese master cook, was always prepared for a crowd; and many a night of good talk and good food at Paul Smith's are recalled by San Franciscans.

Smith had been for some time a Naval Reserve officer when his appointment as press officer for the Navy was announced in December 1941. He was in charge of the Navy's press section at Washington, D. C., with the rank of lieutenant commander. In August 1942 he left active Naval duty to become chief of the OWI news bureau. According to *Time* Magazine, he was "tired of red tape in the Navy Department and of being snooted at by admirals." In November, however, he gave up his $9,000 a year position to enlist in the Marines as a private. There were some who felt that his self-demotion was a result of having "backed himself into corners where he could not deliver" and others who contended that although he had ability and enterprise he was "unhappy wherever he couldn't be top boss." He received unquestioned admiration from all, however, for being willing "to drop the two and a half gold stripes of a Naval Reserve officer for the hard and humble way of a seagoing buck private." Smith is quoted: "There's nothing wrong with being a lieutenant commander except that I couldn't run a destroyer, which is what lieutenant commanders are supposed to do." In late 1943 he was training with the Marines in San Diego, California. According to Leonard Lyons, "His office at the San Francisco *Chronicle* still has his name on the door, awaiting the day when the War is over and he returns.

SNELL, FOSTER DEE June 29, 1898-
Chemist

Address: b. Foster D. Snell, Inc, 305 Washington St, Brooklyn, N. Y.; h. 66 Park Ave, New York City

Various analytical and consulting jobs in the chemical field have been Foster Snell's since his decision to major in chemistry at college. He was born at Binghamton, New York on June 29, 1898, the son of Dayton A. and Bertha Viola (Hickling) Snell. Whether he made any unusual chemical experiments in boyhood is not on record; and if he took any prizes, Snell himself says that he has forgotten them, along with the Latin and ancient history learned in early school years. But he did enter Colgate University, in 1915, with the idea that he wanted to be an organic chemist and work on dye-stuffs—why, he doesn't know. At Colgate his chemistry progressed through general, qualitative, quantitative, and organic. He admits that by the time he had learned that the name for his idea was synthetic organic chemistry, the idea began to fade.

He was graduated in 1919 with the degree of B. S. (he had seen minor military service), and in those immediate post-War years jobs were scarce. A professor advised him that, since he couldn't get a job in chemistry, he might as well study more chemistry. During the summers of his college years, however, he had been a salesman for a seed firm, and he used this experience in getting a job with the Binghamton Gas Works. He received $15 per week (later he got $16), and he held the job for two months. He then went to Albany and spent some time taking notes for a thin volume entitled *Colorimetric Analysis*. It was accepted for publication, the first book to be published on a subject that has since become tremendously important. In 1936 and 1937 revised editions appeared, in the preparation of which he collaborated with his wife, Dr. Cornelia Tyler Snell, whom he married in 1921. In 1940 Dr. and Mrs. Snell's *Chemicals of Commerce* appeared, and in the spring of 1943 D. Van Nostrand Company published a monumental four-volume work, *Chemistry Made Easy*. In addition to his writings Dr. Snell is the patentee or co-patentee of something over fifty patents.

In 1919 Snell went to New York, where he taught chemistry at the Barnard School for Boys and took a few graduate courses at Columbia University. During the next three years, from 1920 to 1923, he taught at the College of the City of New York. In 1922 he received his M. A. degree from Columbia, and in 1923 his Ph. D. The basic theme of his research was dehydrothioparatoluidine, a favorite subject in those days for Professor Bogert's researchers. Snell admits, too, that he "did something with zinc salts of thiophenols, which is still occasionally mentioned in the sacred pages of the *Journal of the American Chemical Society* as a basis for some syntheses. It never merited any medals." At any rate, Snell gives his wife credit for doing most of the research under his direction. Since he got the Ph. D., however, Mrs. Snell later had to complete a research problem of her own to get a Ph. D. for herself. The Snells have one daughter, Barbara Anne.

The young Ph. D. was recommended to fill a vacancy at Pratt Institute occasioned by one of the staff's having been graduated to a higher salary in city work. Snell got the position. For the succeeding five years, until he resigned in 1928, he was in charge of the work in technical chemistry and an evening session course in organic chemistry.

During these years, too, Snell became a consulting chemist. His first job was the examination of a shipment of lace to determine whether it had been damaged by sea water. The water damage was unquestionable, but absence of sodium chloride in either the cases or the lace indicated that the damage was by fresh water. Snell's fee was $5. In 1923 the development of methods for treatment of industrial waste for plants in the Passaic Valley furnished him with several fair-sized problems, justifying a part-time assistant. Parts of that work were published, with various co-authors, under the heading *Treatment of Trade Waste.*

The chemical specialty field began to occupy his interest. He offered to small manufacturers a general consulting and advisory service to keep them up to date. The business grew, and in 1925 it was necessary to open a separate laboratory. By 1928 the amount of consulting work was so great that he resigned from Pratt Institute and opened an office at 130 Clinton Street, Brooklyn. Additions to the staff broadened the scope of Snell's work. Silicates and acid-proof cements were the basis of research projects and later publications. Soap and allied detergents also became an important field of activity, as indicated by Snell's papers on "Detergency of Alkaline Salt Solutions." The January 1943 issue of *Industrial & Engineering Chemistry* carried a very comprehensive survey on the subject "Surface Active Agents" by Dr. Snell. This article is an expansion of the previously published work on detergency. Other fields of consulting and research activity were magnesia cements, lime mortar, glass for blackboard use, soap, textile fibers, rubber, and saponifiable oils.

In 1929 Snell's organization took over the operation of their first manufacturing plant. Office and laboratory space was doubled, and a staff of twenty-five was required. A year later Foster D. Snell, Inc., with Snell as president, was formed to take over consulting activities. The depression came, but the new organization progressed steadily, even moving to new and larger quarters in 1933. The concern is built up around a group of men important in the field of chemistry, such as Frank M. Biffen, Cyril S. Kimball, J. Mitchell Fain, Albert F. Guiteras, Theodore Sullivan, and Leonard C. Cartwright.

Dr. Snell believes that the most important approach to any problem is the fundamental, physical chemistry. He relates acid-proof cement to sodium metasilicate by the statement that the former depends on the latter in a lower state of neutralization which accentuates certain properties of the silicate and lowers others. Development of a color for branding coal from a base for a plastering material was postulated on the similarity of the colloid chemistry of the problems.

Bachrach

DR. FOSTER DEE SNELL

A member of various chemical societies, Snell is also a fellow of the American Association for the Advancement of Science and of the Chemical Society of London. He is chairman of the American Section of the Society of Chemical Industry and vice-president of the American Oil Chemists' Society. In 1939 he was made president of Chemsearch, Inc., and in 1940 he was elected president of the Alumni Association of the graduate schools of Columbia University. Dr. Snell is also a member of the referee board of the Office of Production Research and Development of OPM—"a dollar-a-year job."

It has been said of Dr. Snell that he has changed his hobby "about every five years." In college it was winter sports and tennis. Later it was golf. Then it was bridge, as the Chemists Club's Saturday sessions can testify and as his single championship of an obscure bridge league offers evidence. Before the gasoline shortage developed it was yachting.

SODERO, CESARE (sō'de-rō chā'sä-re) Aug. 2, 1886- Conductor; composer

Address: b. Metropolitan Opera Association, New York City; h. 52 Riverside Drive, New York City

When Cesare Sodero was appointed a conductor of the Metropolitan Opera Company in November 1942, his selection came as a considerable surprise to the general public as well as to himself. Although he has had a long and distinguished career in music, he was comparatively unknown to the general public, and according to *PM*'s music commentator, Henry Simon, he had "never expected a call from the Metropolitan at this late date." His conducting has amply justified the choice, however, and the critics, who were taken by surprise, too, have been unanimous in their acclaim of his accomplishments.

James Abresch

CESARE SODERO

Cesare Sodero was born in "the city of beautiful voices," Naples, Italy, on August 2, 1886, the son of Frank and Carolina (Bartoli) Sodero. Frank Sodero was the absent-minded harpist of the San Carlo Opera House in Naples. Cesare Sodero is fond of telling how his father took him along (when he was two years old) and left him sleeping in the orchestra pit all night. "I have the theatre in my blood," he comments.

Sodero's father died when Cesare was six years old. His older brother inherited his father's harp (which he later played for eighteen years as a member of the Metropolitan Opera Orchestra in New York City), and Cesare was given the cello to learn "for the very good reason that there was a cello vacancy in the Conservatory, and this offered the best start toward a remunerative career." For seven years he studied the cello as well as piano and musical composition under Giuseppe Martucci and in company with Vincenzo Bellezza and Gennaro Papi, both of whom preceded him as conductors at the Metropolitan.

Sodero finished his schooling at the age of fourteen and received his first professional post as first cellist and assistant chorus director with a Neapolitan company at San Severo. Meanwhile he continued to work in musical composition and when he was sixteen he had the privilege of having his first full-sized composition, a ballet entitled *Les Amours du Papillon,* presented in Alexandria, Egypt.

In 1906, when he was not yet twenty, Sodero came to the United States, where he secured a position as first cellist in Oscar Hammerstein's Opera Company. After that he had a number of miscellaneous assignments in opera and symphony orchestras. He played with the Aborn Company for five years and in 1911 he conducted for Henry Savage the first production in the English language of Puccini's *Girl of the Golden West.*

Concurrently with his opera engagements, from 1913 to 1925, Sodero made what was probably his most unique contribution to opera, experimentation with recordings for the Edison Phonograph Company. According to *Opera News,* in those twelve years Sodero made more than 11,000 records, largely operatic in character. "Those were the days before electric transmission permitted the music to be picked up by microphone. Singers and orchestral players alike had to be grouped around the horn where the music was recorded. Artists were forced to back away for high notes, raise their heads at inconvenient moments, rehearse until they were tired, and then be asked to record. Never twice did exactly the same players sit in the same positions. It was the period of experiment in the phonograph field, and Cesare Sodero experimented as thoroughly as his men."

In 1925 Sodero turned to a new infant entertainment industry, the radio. He directed one of the first grand opera performances for radio, *Cavalleria Rusticana,* from the original radio station WEAF on lower Broadway in New York City. During the succeeding years he prepared fifty-three operas in "tabloid form." Some of the operas were very short; the longest was *Parsifal,* which Sodero presented in an hour and a half. Sodero made all the adaptations himself, and he remembers that it took him two weeks to compress *Lohengrin.*

From 1925 to 1934, along with his operatic work, Sodero conducted approximately 600 symphonic concerts. In 1929 his employers, the National Broadcasting Company, presented an opera which Sodero had written in 1912 to a libretto by Silvio Pichianti, *Russian Shadows.* It was extremely well received and the following year it was given a full-length stage première in Venice with Carlos Morelli and the La Scala singers. Sodero, however, did not go to Italy to hear it.

As a member of the Philadelphia Grand Opera Company, in 1930 Sodero officiated at the American debuts of Nino Martini and John Charles Thomas. He opened the Cleveland Stadium with a performance of *Aïda,* using a cast of 1,000. In 1933 he conducted for the Fides Opera Company during its short existence and for nine months he conducted for Bruna Castagna, Armand Tokatyan, and Carlos Morelli at the Hippodrome in New York.

In that same year he accepted the leadership of the Mendelssohn Glee Club, over which he presided for nine years. In 1934 he changed networks, to edit, rehearse, and conduct for the Mutual Network until 1940.

In the fall of 1942 Sodero was appointed conductor for the Metropolitan Opera and on November 28 he made his initial appearance with the company, in a production of *Aïda*. The New York *Times* reviewer commented that Sodero "knew the score intimately and well, and from the sensitive manner the orchestral prelude to the first act was played, it was obvious that he would hold his forces under sure control, as later proved to be the case." Olin Downes '43 found him "a thoroughly practical conductor and one firm in his tempi and his routine." Downes feels that Sodero shows what can be done with Verdi operas, which have suffered much from slack interpretations.

Although he has led a busy musical life as conductor and arranger, Sodero has found the time to write a number of orchestral works and pieces for chorus and instrumental ensembles as well as a number of motion-picture scores. He considers himself an American rather than an Italian musician. (He became an American citizen in 1911.)

Music is Cesare Sodero's hobby as much as it is his vocation. He is slight in build, with a dark complexion and a rakish mustache. His two sons are in the United States Army, one being a conductor, the other a cellist with the medical corps.

SOHEILY, ALI (sō-hā'lē ä'lē) 1897- Iranian statesman

Address: Teheran, Iran

The Middle Eastern state of Iran, the ancient kingdom known as Persia, was the scene of a "diplomatic tug of war" between Germany and the Allies until late in 1941 when Allied pressure forced out the Axis interests. Although the culture of Iran antedates the culture of the Western world, the twentieth century country is primitive by Occidental standards, with a low literacy rate, poor transportation, undeveloped natural resources (except for those, such as the Iranian Oil Company, which have been developed by foreign capital under foreign supervision), and with a largely nomadic population. The capital, Teheran, however, is a modern city on the surface, at least, and it is there that Ali Soheily as Prime Minister directs Iranian cooperation with the Allies. It was there, too, that the famed Teheran conference took place in late 1943.

Ali Soheily was born in Iran in 1897 and educated at Teheran University. He entered public life early and rose to head the Iran-Soviet Fisheries Department and then to act as secretary to the Minister of the Interior. From 1931 to 1936 he was Under-Secretary of State for Foreign Affairs, and in 1936 he went to London as Iranian Minister to Great Britain. In 1938 he returned to Iran to take his place in the Cabinet as Minister of Foreign Affairs; two years later he added the portfolio of the Minister of the Interior.

Soheily is a statesman of the new Iranian regime dating from 1925, when the old Sultan was deposed and the insurgent faction chose as their king (Shah) the Prime Minister, Riza Shah Pahlavi. Although the Shah was made supreme ruler to be succeeded by his son, by virtue of having placed him in office his Parliament had more power than the Majlis (the Iranian legislative body elected for two years) had hitherto enjoyed. Under the new system, like the old, the Shah chose the Prime Minister, but only if he were acceptable to the Majlis could he form a Cabinet.

The new Shah proceeded to modernize Teheran, build railroads, and encourage education. He drove a sharp bargain with the British, abrogating previous agreements with the Anglo-Iranian Oil Company, and he secured an annual revenue of from ten to twelve million dollars from the development, although it still remained in British control. British-Iranian amity, however, subsequently declined (despite Soheily's efforts to maintain amity during his 1936 to 1938 tenure in London). The Trans-Iranian railway completed in 1938 was regarded by many to indicate Iranian fear of British invasion because it avoided all cities, with the exception of Teheran, and did not run near the oil fields or the fertile farming districts. It could have, therefore, little other purpose than to serve as a military line.

When Soheily returned to Iran in 1938 he found Anglo-Iranian unfriendliness stronger than ever. The Iranian Government had granted a commercial aviation concession to the German-owned Lufthansa instead of to the British Imperial Airways and had given its order for sloops and gunboats for the small Iranian Navy to Italian shipyards. The money for these projects all came from the royalties on the British oil developments, and when the Second World War broke out the British had to face the possibility that they would be opposed by an Iranian army of 150,000 to 190,000 men, all equipped and trained with money received from the British in royalties.

The struggle for control of Iran and her resources started out as a three-cornered one, with Russia reportedly on Germany's side at first, and then pulling with British interests. In May 1941 it was reported that Russia and Germany were arranging some "joint action in the Middle East," and the Soviet Army began spring maneuvers with a considerable concentration of troops at Tashkent, near the Iranian frontier. Early in June hundreds of German "fifth columnists" were reported to have visited Iran with Russia's consent, so that the two countries could share the benefits of the Iranian oil fields. By June 7, however, the "Russo-German negotiations" had broken down. As Minister of the Interior and Foreign Affairs, Ali Soheily met frequently with representatives of the British, Russian, and German interests, although the decision as to the fate of Iran did not seem really to be in his government's hands.

(Continued next page)

SOHEILY, ALI—*Continued*

After the invasion of Russia by Germany, on June 22, 1941 the Russians and the British coordinated their pressure on Iran to drive out the Germans. In August the Iranian Government replied to an Anglo-Soviet ultimatum demanding the expulsion of some 5,000 German "tourists and technicians" with a "belligerent" note indicating that they would be turned out only when the Iranian Government convinced itself they were a menace, and not before. Later the same month British and Russian troops made simultaneous advances into Iran. The Iranian Minister to the United States, Mohammed Schayesteh, called upon the State Department to say that the invasion was based on a pretext and that Iran was a remote country, not dangerous to either side, and entitled to neutrality. The Premier, Ali Khan Mansur, told an extraordinary session of the Majlis that all necessary precautions had been taken and that Iran would resist the British and Russian attack by land, sea, and air.

In less than twenty-four hours the British forces had taken control of the world's largest oil refinery plant at Abadan and had captured the entire Iranian Navy; they had seized the strategic wireless station at Muhammereh, and had trapped several Axis merchant ships in the harbor at Bandar Shahpur. After a futile attempt to stop the war by guaranteeing that all Germans except a few at indispensable technical posts would be ousted within a week, the Cabinet of Prime Minister Mansur resigned and a reorganized Iranian Government was formed by Ali Furanghi. The new Prime Minister, a famous Iranian philosopher and once president of the League of Nation's Assembly, announced to the Majlis that the troops had been ordered to cease firing. In his Cabinet Furanghi retained Soheily as Minister of Foreign Affairs. (According to André Visson, Soheily belongs to the "'old gang' of self-interested politicians.")

Although actual fighting had ceased, the Russians and the British continued their advance until they met at Sinneh in Western Iran, cutting off Iran from Turkey. Furanghi had accepted the armistice terms of August 30, 1941 but he balked at a stiffer note of September 8 which provided for mass expulsion of Axis nationals, closing of Axis legations, and the occupation of strategic points by the Russian and English forces. The agreement was signed, but Riza Shah delayed in carrying out the terms. When a series of tribal uprisings threatened the stability of his Government, and when Persian-language broadcasts from Great Britain urged the Iranian people to turn against their cruel and autocratic leader, Riza Shah abdicated in favor of his son, who is married to a sister of the King of Egypt and who is considered friendly to the English. The former Shah retired first to the island of Mauritius and later received permission to settle in Canada. The Allies considered his abdication their first major gain in safeguarding "the Indian frontier and the back door to the Middle East." The Russians, who isolated the three northern provinces of Azerbaijan, Guilan, and Khorassan, think of Iran as their Burma Road, on which moves the flood of American-British supplies. The British occupied the southern provinces "to help the Russians, but partly also to assure themselves that the presence of the Russian forces will not endanger British post-War interests on the Persian Gulf shores. American troops are stationed there to guarantee the protection of American supplies moved to Russia."

Upon the Shah's abdication the Majlis seized the opportunity to demand the establishment of a constitutional government, recognition of civil rights, reform of the nation's finances, release of political prisoners, and the return to their owners of illegally seized property. The new Shah acceded and on September 21 Furanghi formed a new Cabinet which had seven new members. Ali Soheily, however, remained as Minister of Foreign Affairs. The new Shah made a radio broadcast praising the democratic form of government. In January 1942 the Iranian Government signed an Anglo-Soviet pact binding the fortunes of Iran with those of Britain and the Soviet Union "for not longer than six months after the end of the War." Opinion in London was that although the people of Iran were unenthusiastic over the treaty provisions, it was a useful document for the United Nations and would "in the long run" secure good will in the Near East. The sincerity of the Soviet pledge to respect the independence and integrity of Iran was unofficially questioned in Britain and America, however, especially since the economic situation in the Soviet-occupied north ("superior to what it was in the days of Riza Shah," according to Visson) contrasted so favorably with the "economic chaos" of the areas under British control as to contribute to the rise of Russian credit with the Iranian peasants.

In February 1942 the British changed "Iran" (which the Irani call themselves) to "Persia" in official documents. Ali Furanghi's Government proved itself increasingly unstable. Furanghi had formed several Cabinets by the summer of 1942, when Ali Soheily became Prime Minister with a Cabinet which lasted for a few months. During this time Soheily announced that Iran would welcome a post-War Polish refugee colony if the colonists would apply for Persian citizenship. In August the Soheily Cabinet fell, and Ahmed Qavam Sultaneh tried to form a government, but without lasting success.

Premier Sultaneh appointed Ali Soheily as Ambassador to Afghanistan, but before Soheily finished the preparations for leaving for his new post the Sultaneh Cabinet resigned, and the Shah asked Soheily to try his hand again at forming a Cabinet. Much of the difficulty was said to have been purely because of internal questions, chiefly differences over constitutional procedure.

In the middle of February 1943 Soheily succeeded in forming a Cabinet. When he opened the Majlis he received a strong vote of confidence following a speech in which he said that there was "no reason to be alarmed because the Americans came to execute works to help their Allies." He continued: "The United States Government and people belong to those unselfish and liberal people and government which never refused to give all assistance to others in trouble." Soheily received eighty-nine of the ninety-five votes and was expected to maintain a firm government. In April 1943 a reciprocal trade agreement was signed by Secretary of State Hull '43 and Mohammed Shayesteh, the Iranian Minister; and in September Soheily, now Prime Minister of Iran, declared war on Germany. This move assured his country Lend-Lease aid and a seat at the peace table.

The Teheran conference late in November 1943 brought forth an Anglo-American-Russian statement concerning Iran that banished worries about Russia's intentions in that country. Iran's independence and territorial integrity was guaranteed. Next, on December 15, it was reported that Soheily had presented his resignation to the Shah. "The move was believed designed to permit reanimation of the Cabinet in accordance with new political conditions in Iran resulting from the recent tri-power conference there. Iran Cabinet members also submitted their resignations, and political circles said the Shah was expected to ask Premier Soheily to form a new government that would show few changes."

SOMERVILLE, SIR JAMES (FOWNES)

(sum'ẽr-vil) 1882- British Naval officer

Address: b. c/o Ministry of War, London, England

On the retired list in 1939, because of ill health, was Vice-Admiral Sir James ("Slim") Somerville, one of Britain's tough old salts who had won a good many honors in the First World War and who, prior to his retirement, had been in active command in the East Indies. Within three months after he heard the guns of the Second World War begin firing he recovered his health. Winston Churchill '42 described him as "an officer with an almost unrivaled experience of the conditions of modern war." Assigned to command the British Navy in Indian waters, Somerville came back to fight—and to win new laurels.

Admiral Sir James Fownes Somerville is said to be a seaman in the old Nelson tradition: his great-great-grandfather, as a matter of fact, was one of Nelson's captains and, like his commander, died at the moment of victory. Born in 1882, the son of Arthur Fownes Somerville, and destined for Naval service, on completion of his education Somerville was commissioned a lieutenant (1898). He first specialized in torpedoes and wireless. He rose rapidly in the service, holding various offices and assignments prior to the outbreak of the First World War. During the War he was wireless officer on the staffs of various admirals, holding the rank of commander. For his services as fleet wireless officer in a brilliant Naval exploit at Gallipoli he was awarded the D. S. O., and he then became wireless officer with Admiral de Robeck in the Grand Fleet. After the end of the War he served at the Signal School; and later, 1924 to 1927, he was director of the Signal Department at the Admiralty.

British Official Photo
ADMIRAL SIR JAMES SOMERVILLE

Following this land service, Somerville served as flag captain to Admiral Sir John D. Kelly with the 1st Battle Squadron in the Mediterranean. For the next three years he was naval instructor at the Imperial Defence College. After a year's command (1931-32) of the cruiser *Norfolk* he returned to become commodore of the Royal Naval Barracks at Portsmouth and (1934-36) director of personnel services at the Admiralty.

Regarded as one of England's best authorities on naval seamanship, strategy, and operations in the Mediterranean region, Somerville went back, at the age of fifty-four, to active command at sea in charge of destroyer flotillas of the Mediterranean Fleet. The next step took him to the East, when he was made commander in chief of the Fleet in the East Indies (1938-39). That post he held to within a month of the beginning of the Second World War, when he was invalided home. That, it seems, was to have been the close of almost a brilliant half century in the British Navy.

Within four months, however, Somerville was gladly taken back into the service. At first he was given only special duties at the Admiralty. It was then that he became famous as a broadcaster of the events of the War. Possessor of a quick tongue, humor, and a strong sense of the dramatic, he became famous for his reporting of the defense of Calais and the Battle of Narvik. British listeners are said to recall with pleasure many of those vivid accounts. Reuter's, the news agency, tells of a well-remembered broadcast which the doughty Admiral began with the loud aside: "My God, they've given me a bottle of water to drink." The remark

SOMERVILLE, SIR JAMES—*Continued*
shocked the staid BBC, but caused appreciative laughter in thousands of British homes.

The Admiral's step became energetic and brisk as he stalked in and out of the Admiralty, and it wasn't long before he had his sea boots on again. After aiding in the evacuation of Dunkerque, in 1940 he sailed as vice-admiral in command of a Mediterranean fleet. The capitulation of the French had deprived Britain of important ports at Toulon, Bizerte, Algiers, and Oran. Accordingly, at Oran on July 3, Somerville's fleet led a brilliantly executed attack in which two enemy battleships and a cruiser were put out of action. Following that the fleet scouted around looking for an opportunity to go on the offensive. Early in February 1941 Somerville, commanding the 32,000-ton battle cruiser *Renown,* and accompanied by the battleship *Malaya,* the aircraft carrier *Ark Royal,* and the cruiser *Sheffield,* swept right through Italian waters to Genoa. Without regard for enemy mines, submarines, or shore batteries the ships pumped broadside after broadside into Italy's fourth city and chief merchant port. Docks, warehouses, power stations, ship-building plants were destroyed. In the whole operation only one Swordfish was lost. This exploit by Somerville was not only humiliating to the Italians, but a warning to the Germans not to launch a sea-borne expedition to North Africa from Mediterranean ports.

This naval operation, accomplished by slow, careful thinking and quick, forceful action, won for Somerville high praise. Then in May 1941 came the historic pursuit of the battleship *Bismarck* by the British Fleet. It was Admiral Somerville who detached the cruiser *Sheffield* to make contact with and shadow the Nazi vessel. He was in at the death in that great sea hunt. In October 1941 an important convoy finally got through Mediterranean waters after a three-day air and sea battle. Later it was disclosed that Somerville had been in command of Force H, the Western Mediterranean Squadron engaged in this battle. For his "gallantry, determination, and resource" in getting the convoy safely through, he was knighted.

In April 1942, when Somerville was given his command in Indian waters, a superior Japanese fleet was known to be cruising there. Every British torpedo plane and bomber which had attacked it off Trincomalee had been shot out of the air. Further, the British had lost in that region the aircraft carrier *Hermes* and the 10,000-ton cruisers *Dorsetshire* and *Cornwall.* Somerville, who succeeded Admiral Sir Geoffrey Layton in the Far Eastern command, had a tough task ahead, but no one doubted his ability to come off top man in future engagements. He participated in the discussion at Washington, D. C. in May 1943, a gathering at which top ranking officials in the Eastern Theatre of War were conspicuous.

A square jaw, a firm mouth, and a determined eye denote Sir James Somerville's vigor and drive. His hobby is making delicately-scaled ship models; and he has a pet Siamese cat, named Figaro, who accompanies him even into battle. Charm, wit, and the ability to maintain the most friendly relations with the men under his command are prominent among his characteristics. He doesn't believe in pompous mannerisms or hidebound routine. An officer who served with him in pre-War days recalls how he used to wander into the wardroom wearing a white sweater, after rowing a boat around the harbor for exercise (some say he rowed around the anchored ship four times before breakfast), and how he would then sit down on the arm of a chair with his officers gathered around him for friendly discussion. He has not had much time ashore with his wife, Mary Kerr Somerville, whom he married in 1913 and who is the daughter of the late Colonel T. Ryder Main, C. B., C. M. G. The Somervilles have one son and one daughter.

A story also told by a Naval friend gives a good picture of the Admiral. "At 7:00 one morning, in the Grand Harbor at Valetta, Sir James decided to visit one of his damaged destroyers, which was alongside the dockyard wall with a hole in her side. In singlet and shorts he rowed into the aperture to have a look, and was greeted by a burly naval stoker with a few adjectives and the words: ''Ere, mate, wot d'you want? You 'op it quick!' The unrecognized admiral replied, also with a few adjectives: 'All right, my dear, but get that hole stuffed up before the mice get at it.'"

Who's Who 1943

SOUTHWORTH, JAMES L(ARRY) *See* Hingson, R. A., Edwards, W. B., and Southworth, J. L.

SPANGLER, HARRISON E(ARL) June 10, 1879- Lawyer; chairman of the Republican National Committee

Address: b. Merchants Bank Bldg, Cedar Rapids, Iowa; h. 655 Cottage Grove Ave, Cedar Rapids, Iowa

Harrison Earl Spangler, chairman of the Republican National Committee, is a "dirt farmer, county seat lawyer, avowed middle-of-the-roader," and faithful Republican wheelhorse who has never run for any public office, although he was mentioned as a possible Senatorial candidate in 1936. He was born on a Guthrie County, Iowa farm on June 10, 1879, the son of a farmer-politician father, Zwingle B. Spangler, and of Martha McManus (Couts) Spangler. The Dutch ancestors on his father's side had migrated from Holland to Pennsylvania before the Revolutionary War, and back in the eleventh century a Spangler was supposed to have been cupbearer to one of the leaders in the Crusades. His mother was a McManus of Scotch descent.

After serving as an Infantry private in the Spanish-American War, young Spangler matriculated at the University of Iowa to study law. A member of Sigma Nu Fraternity, he received his Ph. B. in 1903 and his LL. B. in 1905, and he was admitted to the Iowa Bar that same year. He hung out his shingle in Cedar Rapids, where, in 1907, he joined the firm of Deacon, Good, Sargent & Spangler. The next year, on October 14, he married Fay McIntire.

One of the other members of Spangler's law firm was the late James W. Good, who in 1908 was elected to Congress with Spangler's help. (Good retired from Congress in 1921 to practice law in Chicago, and at that time Deacon, Good, Sargent & Spangler became Deacon, Sargent & Spangler.) Spangler's father had put him to work polling the township for the Republican Party when he was quite young, and Spangler never strayed from the Republican fold except in 1912, when he supported Theodore Roosevelt for the Presidency. He worked up through the precinct and county leadership to become chairman of the Republican State Central Committee of Iowa in 1930, a member of the Republican National Committee in 1931, and a member of the executive committee in 1932. He still holds these last two offices.

Spangler was chairman of the committee which organized the "Grass Roots" convention of delegates from ten Midwestern states in Springfield, Illinois in June 1935, and that same year he was credited with fathering the Glenn Frank Committee on Republican Policy. In 1936 he was named director in charge of the Western headquarters for Alfred Landon in Chicago; and John Hamilton, chairman of the Republican National Committee, also named him executive vice-chairman of the National Committee to run things during his future absences. Spangler promptly announced that by election day he intended to have one personal-pressure worker or Republican volunteer for every thirty voters in the land—a commendable ambition which was never realized.

Although known as a master of strategy, Spangler apparently had some talents for making enemies even within his own party, for in 1940 a group of Republicans who called themselves liberals organized to defeat him for re-election as a Republican committeeman. At the National Convention (where Spangler supported Senator Robert Taft '40 for the Presidency) they found, however, that most of the delegates had been pledged to the Spangler cause even before the revolt had been organized. And by December 1942 Spangler had emerged as a compromise candidate for the chairmanship of the Republican National Committee. The need for a compromise candidate arose when, at the Republican Convention early that month, there was a deadlock between the two leading candidates, Frederick E. Baker, who was supported by Wendell L. Willkie '40, and Werner W. Schroeder, who was backed by the isolationist Chicago *Daily Tribune*. Both sides were persuaded to accept Spangler as a man who (in spite of having been for Taft in 1940) had nothing in his past to stamp him as either a pre-Pearl Harbor isolationist or interventionist. As the *New Republic* puts it, "Mr. Spangler did not represent the first choice of anybody. He represented Willkie's veto of somebody else."

Universal Press
HARRISON E. SPANGLER

Upon his election, Spangler told the Republican delegates that the vote had been a sign of their unified desire to defeat the New Deal. "I started after that animal in 1932," he was quoted, "and I hope to be in at the kill in 1944." Wendell Willkie also proclaimed himself satisfied: "My fight was to prevent the masthead of the Chicago *Tribune* from being imprinted on the Republican Party. I am happy that the result prevented that calamity. Mr. Spangler has a great opportunity for progressive public service." According to *Time* Magazine, however, "the unanimity with which he had been chosen was synthetic; the harmony which he is supposed to stand for will be, at best, ersatz." And the Chicago *Tribune* consoled itself by pointing out that "Spangler, except when it was his party duty to support him as the party nominee, always has been against Willkie."

Spangler's statements on policy at his first press conference were as "double-jointed" and "fence-straddling" as a successful compromise candidate's should be. He was not "a student of international affairs," he told reporters, and so his views on the War were of no importance: he would confide only that "We haven't the same world, with the modern bomber, that we had in the days of the thirty-knot battleship. You no longer can say that the Atlantic and Pacific Oceans are moats around America." He wasn't an expert on domestic affairs, either, he said; but on domestic affairs he could be freer with his opinions. "Those bungling New Dealers haven't 'awoke' to the fact that we have a war on our hands," he said. "They're too busy with regimentation and interference with private enterprise." Vice-President Wallace '40 came in for a crack or two because of his alleged desire to change the diet of the Asiatics from rice to milk, and then Spangler added, significantly: "My job is to build up an army of voters in the United States to

SPANGLER, HARRISON E.—*Continued*

defeat the New Deal, and I don't think there are any votes in China or Mongolia or Russia that I can get for the Republicans."

With James P. Selvage (former director of public relations for the National Association of Manufacturers) working as Spangler's able assistant, in charge of publicity, soon the campaign against the Roosevelt '42 Administration was in full swing. Spangler's first long article was published in the *American Magazine* for February 1943. In it he announced that the November 1942 vote had been an "enormous vote of confidence for the Republican Party." Although "politics as politics must be adjourned until we have won the War in which we are engaged," and although "the Republican Party must withhold nothing calculated to strengthen our arms," granting "every essential power to the President of the United States," he emphasized that they must also "fight to withhold all powers dangerous to the enterprise, opportunity, and thrift of the American people," and must "applaud the efficient and denounce the inefficient, the blundering, or the perilous."

Spangler denounced the Government as "totalitarianism," as an "autocracy of regimentation"; he denounced Government officials and employees as "absentee bureaucrats", "coat-tail riders", "couriers", "sycophants", "yes-men", "jesters," and "adulators"—a "vast army of over 2,500,000 officials and bureaucrats who swarm the land like locusts, harass our people, and eat our substance. Largely, they are the political slaves of the power from which they receive their appointments." The President was a "monarch," Elmer Davis '40 a "New Deal Propaganda Minister," head of a bureau that "bristles with New Deal and Communist propaganda."

Spangler was particularly indignant at the fact that the Democrats were "playing politics" at a time when "winning the War and bringing our boys home should be our first consideration." In April 1943, replying to Democratic National Chairman Frank Walker's '40 suggestion that the 1944 campaign be held late, he announced: "We are willing to accept your plan for a short campaign . . . if you can and will give assurance that Mr. Roosevelt does not have the ambition for and will not accept nomination for a fourth term. . . If you find you cannot give such assurance, we must assume that you have already nominated Mr. Roosevelt. . ." Nevertheless, in June he gave assurances that "the Midwest from the Alleghenies to the Rockies is now pretty solid Republican," and predicted the election of a Republican President in 1944 even though, as he put it, the New Deal Democrats were using the War politically by attempting to build up a conviction that "you can't beat the Commander in Chief." Actually Roosevelt was the Commander in Chief of the Army and Navy, but not of "the miners or of the citizens," he said. By July he was even more confident. In a memorandum analyzing public (and private) opinion polls, he predicted that 1944 would be a Republican year, and noted with satisfaction that within the past six weeks "the revolt against Mr. Roosevelt and the New Deal has become more pronounced." When in a radio speech that same month Roosevelt gave a six-point mustering-out program for veterans, Spangler, in letters to the heads of various war departments, demanded that a Republican attack on the speech describing it as a bid for a fourth "and perhaps continuing" term be transmitted to the American armed forces throughout the world. In general, Spangler's program has been described as "What Roosevelt is for, we're against." Early in November he opposed any Presidential appointment of a Federal Election Commission to administer voting by the members of the armed forces.

By his attitude toward foreign policy and the post-War world Spangler gives little aid or comfort to the Willkieites. "We must be willing and wise to collaborate, but that collaboration must be without impairment of our national identity as an independent nation, without surrendering our individuality as an independent State," he cautioned in January 1943. It is true that not much later he helped to push reciprocal trade treaties through Congress, but late in May 1943, when he appointed a Council of Forty-nine to make a study of post-War problems with a view toward making recommendations to the 1944 Republican National Convention the Council was, according to most journalists, "considerably weighted with pre-Pearl Harbor non-interventionists." Willkie (like Hoover '43 and Landon) was left out, although Spangler announced that "Republican leaders" were to be consulted; and Senators Ball and Burton, two of the sponsors of the Ball-Hatch-Burton-Hill Congressional resolution looking toward post-War cooperation, were also conspicuously ignored.

Spangler's attitude on foreign policy resulted in the formation of the Republican Post-War Policy Association by Dennen A. Watson, who hoped to shed any suspicion that the Party was isolationist. Some accused Watson of trying to split the G. O. P., but Watson remained firm in his belief that isolationism would mean defeat in 1944. The Party's final post-War resolution at Mackinac Island in September was, however, generally described as an effort to please everyone—isolationist or interventionist. In this it resembled Spangler himself.

The results of the 1943 elections found Spangler cheerful and confident. "We are no longer the weak, disarmed party of the '30's but a unified party looking to the future." His cheerfulness was, moreover, unimpaired by the names that he had been called—the pro-Willkie New York *Herald Tribune* had labeled him "a handicap" to the Party; the pro-Roosevelt *New Republic*, "the Republican Party's Colonel Blimp . . . an Old Guard conservative, whose mind goes back to Coolidge-Hoover, and whose heart belongs to McKinley."

The Republican National Committee chairman has been described as chunky and red-faced, with thick jowls and sandy hair that is rapidly thinning. His wife died recently. He is a Mason (32°) and an Elk. He owns two farms, one of 280 acres and another of 260, and he is also the proud owner of several Irish terriers which he formerly entered in show competitions. He is a great admirer of Herbert Hoover: on the wall of the reception room in his law office in Cedar Rapids hangs a picture of Hoover's birthplace at West Branch, Iowa, and on the wall of his inner office is an autographed photograph of the ex-President. Spangler says of Hoover: "I have always thought that he is one of our great Americans. And I have resented the smearing the Democratic Party gave him. He is now our elder statesman, retired from politics and a happy philosopher of American life."

Who's Who in Law 1937

STANLEY, OLIVER (FREDERICK GEORGE) 1896- British Government official
Address: h. 58 Romney St, Westminster, S. W. 1, England; Witherslack Hall, Westmorland, England

Since November 1942 Britain's Colonial Secretary has been the Right Honorable Oliver Stanley, a representative of what can only be called Britain's ruling class. A Conservative, he is the only surviving son of the seventeenth Earl of Derby, who was Britain's War Minister from 1916 to 1918 and again from 1922 to 1924. "For 400 years there has hardly been a generation in which the name of Stanley has not figured conspicuously in England's history," it has been pointed out. In the last century one of the Earls of Derby was three times Prime Minister, and since then members of the Stanley family have occupied nearly every high office Great Britain has to offer, from Governor General to British Ambassador in Paris. The late Earl of Derby was also famous as an owner of great race horses.

Oliver Frederick George Stanley was born in 1896. He was educated at Eton and at Oxford, and he served in the First World War with distinction, earning the Military Cross and the Croix de Guerre and being mentioned in dispatches more than once. In 1919 he was called to the Bar, and four years later he contested the Edgehill Division of Liverpool. Although he and his family had always been Free Traders he campaigned under the banner of Protection; Baldwin, then chief of the Conservative Party, was making his first attempt to obtain the mandate for that policy. The young man was defeated that year, but the next year he was shown into the Conservative seat of Westmorland, which had been uncontested by another Party since the First World War. He received more than two thirds of the votes, and he has been returned from Westmorland at every election since that time. During the General Strike he served as a clerk in the Westminster tube station.

According to the author of *Right Honourable Gentlemen,* Stanley's Parliamentary progress has been due to his "forensic artfulness, personal probity, and lordly connections." In 1931 he was made Parliamentary Under-Secretary to the Home Office, a post which involved his introduction of a bill to permit the opening of motion pictures on Sundays. His speech at that time is still remembered. "To me and to most Members a quiet Sunday at home means comfortable surroundings, complete privacy, every aid to intellectual enjoyment. . . But are there not many thousands of people in this country to whom the Sunday at home . . . may mean a continuance of the terrible intimacy of overcrowded houses, of the round of household drudgery from which we are exempt, of the drab surroundings which they see every day of their lives, and to whom a visit to the cinema, however meretricious it may be, means at least privacy, warmth, color, life? And if those people go to the cinema on Sunday evening, I, for one, will not admit that Christianity condemns their action until I am sure that Christianity approves their action."

OLIVER STANLEY

Stanley next served uneventfully as Minister of Transport from 1933 to 1934, when he became a Privy Councillor as well. (Hore-Belisha '41 took over the Ministry from him later in 1934 and promptly covered the streets of London with brilliant orange "Belisha Beacon" traffic globes which were set atop zebra-striped poles.) From Transport the Earl of Derby's youngest son went to the post of Minister of Labor, which he filled in his usual unspectacular fashion until great demonstrations broke out against the new regulations made by the Unemployment Assistance Board, by which the rates of assistance paid the unemployed were raised in some cases and lowered in others. His was the task of amending these Means Test regulations so that the new determinations were to stand where they were higher than the old, while the old determinations were to be restored where any reduction had been made. "When you are dealing not with inanimate

STANLEY, OLIVER—*Continued*

things but with men and women, then feelings of dignity or pride ought not to stand in the way of prompt and effective action," he announced at that time. "That the responsibility for the error was mine is a thing that I have never attempted to evade," he also stated. In June of that same year (1935) he moved to the Board of Education as its president.

Stanley presided over the Board of Education until Chamberlain succeeded Baldwin in May 1937, and he was then advanced to be president of the Board of Trade (ironically enough, under a Protectionist Prime Minister). He was reportedly opposed to Chamberlain's foreign policies, and was said to have been associated with Alfred Duff Cooper '40 at the time of Munich, but publicly he remained almost as uncritical of appeasement as of Protection. In January 1940, after the outbreak of the Second World War, Chamberlain made him his new Secretary of State for War. The move was greeted with scanty applause, for Hore-Belisha had been extremely popular in that post. "Mr. Oliver Stanley is a most unsatisfactory appointment," commented the London *Daily Express.* "He belongs to the Tory hierarchy. . . Belisha does not belong to that class." Stanley's gift for remaining out of the limelight was therefore probably an asset. When Churchill '42 came to power Stanley was one of the first to go from the War Cabinet, and he immediately joined the Royal Artillery as a 2nd lieutenant.

Stanley did not return to the Cabinet until November 1942, when Churchill appointed him to the post of Colonial Secretary in the Cabinet shake-up which dislodged Sir Stafford Cripps '40 and resulted generally in a victory for the Conservative Party. He succeeded Viscount Cranborne '41, who had been under fire from Labor critics in Commons. Since that time his main duties have been to announce government decisions in such matters as the help being given to Jewish refugees from Europe to Palestine. On February 23, 1943 he also had the privilege of announcing that the island of Jamaica had won from Downing Street acceptance of its proposals for a new form of government based on universal adult suffrage and a bicameral legislature. The first real criticism which he had to face was after his speech to the Oxford Conservative Association in March 1943, when, replying to "a great volume of friendly criticism and disinterested advice" from the United States, he announced that he was much more interested in what Britain thought of the British Empire than in what the United States thought of it, and rejected any scheme for the international administration of British colonies after the War. Laborites spoke later of his "unhappy phrasing," calling it a "somewhat truculent speech" which showed "a little contempt for American opinion" and "created misgivings both in the United States and the Dominions." When Churchill was asked by Laborite Dugdale if he was aware of Colonial Secretary Stanley's speech he growled, "We must equally beware of truculence, and also of groveling." Later that month he himself endorsed Stanley's pronouncement that the administration of Britain's colonies must continue to be the sole responsibility of Great Britain.

In July 1943 Stanley revealed a plan for regional commissions for the colonies, each of which would enlist the advice of other nations whose major interests would be affected by the colonial decisions being discussed. This, however, did not mean that there would be any fundamental change in the basic fact of British control of the British colonies. Stanley said he had no inclination to apologize for the Empire. "Even our critics admit that we have brought to millions of people security for life and property and an even-handed justice which they had never known before." His plan was nevertheless described by the *Christian Science Monitor* as indicating an almost revolutionary change of attitude toward national possessions, one which might set a pattern for the colonial administrations of other nations after the War. *Time*, on the other hand, commented that Stanley's words "were a quieter echo of Churchill's growl last Armistice Day: 'I did not become the King's First Minister to preside over the liquidation of the British Empire.'" The new policy, *Time* also said, had little to do with colonial freedom, although it "at least kicked the ball toward a limited form of native self-sufficiency in place of time-honored absentee exploitation."

Stanley is tall, bespectacled, colorless, and correct. "He is not tough," says the author of *Right Honourable Gentlemen*, "he is not hearty, there are doubts about his tenacity, and he has certainly not got the leathery hide required by all supremely successful politicians." The same writer also confides that "there is much in him to suggest the super-curate," although he is known for his good humor and his wit. Once, interrupted by a Labor member near the end of a speech, he beamingly complained: "Now the Honorable Member has spoilt my peroration!" Once, referring to Lloyd George's schemes for relieving unemployment and reviving industry, he spoke of "the New Deal from the Old Dealer." And of Sidney Webb he once said that he had "blue books in his veins."

Stanley is now a lieutenant and an acting major in the Royal Artillery. His wife was the late Lady Maureen Stewart, the daughter of the seventh Marquess of Londonderry (at one time the chief exponent of appeasement in Great Britain). Before Lady Maureen's death their house in Westmorland, that "neighborhood of sky and mere and mountainside," was one of the most hospitable in England. There are two children: a daughter and a son.

STANLEY, WINIFRED (C.) Aug. 14, 1909- Congresswoman; lawyer

Address: b. United States House of Representatives, Washington, D. C.; h. 119 Lancaster Ave, Buffalo, N. Y.

One of the eight female members (six Republicans and two Democrats) in the United States House of Representatives, Winifred Stanley took her place in January 1943 as one of "the dramatic figures who attract nationwide publicity"—women in Congress. New to national politics, Miss Stanley, Republican Representative-at-Large from New York State, found herself elected to the first major office she had ever sought. One other new female member entered Congress at the same time—Mrs. Clare Boothe Luce '42 (Republican, Connecticut). Attractive, youngish Miss Stanley, reporters commented, almost nosed out Mrs. Luce of celebrated beauty for the "glamour girl" title when cameramen greeted the two upon their entering the Capitol.

Winifred C. Stanley was born in the Mount Hope section of The Bronx, New York on August 14, 1909, the eldest of her parents' six children. She received her elementary education at the public schools of New York City and Buffalo (New York), where the family moved when she was six, and at the Parochial School of the Holy Angels in Buffalo. After finishing Lafayette High School in Buffalo she entered the Arts College of the University of Buffalo on a scholarship from the New York State Board of Regents. At college she had a remarkable scholastic record, being graduated *magna cum laude* in 1930. She is said, however, to have been no bookworm and to have participated in many extra-curricular activities. She was news editor of the school paper, active in dramatics and music, and president of Cap and Gown, the senior women's honorary society. Continuing her studies at the University's law school with all the brilliance she had shown as an undergraduate, Miss Stanley won first honors in the competition for the Sprague Scholarship in her first year as a law student. In the following year she again won a prize—in the Clinton Scholarship Contest. When she was graduated from law school in 1933, one of four women in a class of fifty-nine, she received the Edward Thompson Award for the highest average over the three-year period. She also won second prize in a thesis contest with a monograph entitled "The Constitution and the Flag," a study of the territorial expansion of the United States.

In the year of her graduation from law school the young woman was admitted to the Bar of Erie County and she immediately secured a position in the law office of Elmer E. Finck. Since that time she has been entirely self-supporting. She worked in the same law office until January 1938, when she was appointed to the staff of District Attorney Leo J. Hagerty as the first woman assistant district attorney in the history of Erie County, the only woman of a staff of eleven. Her salary was $3,100 a year. As assistant district attorney she appeared in cases in the Buffalo City Court, the County and Supreme Courts, and the Appellate Division of the Supreme Court, earning, writes Emma Bugbee in *Independent Woman*, the ungrudging admiration of masculine colleagues for the ability with which she prosecuted all manner of cases that came her way. Holding a high record of convictions, Miss Stanley specialized in cases involving women and children, "such as abandonment." Meanwhile she continued her activities in the numerous professional and social organizations of which she was a member, which included the Business and Professional Women's Clubs, the YWCA, and the Young Republican Club. She was the first of her sex ever chosen to the nominating committee of the Erie County Bar Association, as well as the first woman to serve as chairman of the meetings committee.

WINIFRED STANLEY

It was as assistant district attorney of Erie County that Miss Stanley came to the conclusion that government needed the personal touch. "Many of the people who came into the district attorney's office," she says, "were in need of employment or had not been able to find the right kind of job. I listened to their stories and put them in touch with the proper agencies. I have become more and more convinced that expert vocational guidance for young people is going to become increasingly important in boom times as well as when employment is slack."

When the United States entered the Second World War, Miss Stanley was not unaffected personally, for one of her brothers joined the Army Air Corps. She herself volunteered for the Erie County War Council and gave six hours a week to defense work. In the fall of 1942 she ran for Congress on the Republican ticket, entering the political campaign on a win-the-war platform. She based her campaign primarily on a twelve-point war program which included making official Washington as willing to sacrifice as the people, furthering legislation against sabotage and all subversive influences and activities, preparing America to take leadership in the establishment of stable peace, maintaining the Republican Party as an effective instrument of two-

STANLEY, WINIFRED—*Continued*

party government, and, after the War, terminating the centralized powers which the Federal Government has received during the emergency. Miss Stanley's opponent was supported by Eleanor Roosevelt '40.

Campaigning alone, Winifred Stanley covered ten counties; subsequently she joined the campaign train of Thomas E. Dewey '40, then Republican gubernatorial candidate (now Governor) on a two weeks' tour of the state. Miss Stanley is, according to the Republican Party, an excellent speaker, with a background of numerous speeches on public affairs.

Elected in November 1942, Miss Stanley took her seat in Congress the following January—the youngest woman ever to sit in the House of Representatives. She remarked at the time that she would be interested in serving on any Congressional committee which would utilize her training as a lawyer, and cited as instances the House Committees on Education, Judiciary, and Patents. (She was appointed as a member of the Committee on Patents and the Committee on Civil Service—the only woman member on each.) When Mrs. Luce, the other new female member of Congress, arrived in Washington, she "got in wrong with the petticoat press" by reason of a "brushoff" women reporters maintained she had given them at Union Station. But Miss Stanley, evidently more considerate of the press, was honored at a supper party attended by "top-notch members of the feminine newspaper corps."

Miss Stanley was honored in Congress by being chosen as one of the Republican tellers to count the vote on the election of the Speaker of the House, and by being named to the forty-one-member Republican Congressional Food Study Committee. (She is its only woman member.) In the course of her short term in national politics she has also had the opportunity to make public her opinions on various important topics of the day. She endorsed the "win by peace" resolution, signing the following statement: "The only way to keep the United States out of future wars is not to have future wars. Our nation alone cannot police the world. Our nation alone cannot prevent wars. The world can progress toward permanent stability and peace only through the collaboration of its component peoples." She gave her "enthusiastic approval" to the bill which provides for the commissioning of women physicians and surgeons in the Army and made "a special plea" for their cause. She seconded the "unconditional surrender" fighting aim of the war conference at Casablanca and "agreed that the Giraud '42-de Gaulle '40 aspects of the parley would help to unite the people of France and further release French war power to the United Nations." She sought relief for New York's meat packers, who were losing sales because of an "uncontrolled rise" in live stock prices, demanding "prompt attention" from Prentiss M. Brown '43, price administrator. She also interceded with the OPA on behalf of New York State's grape growers.

Her voting record has already given her a reputation as a "regular" Republican. She has voted for the continuance of the Dies '40 Committee to Investigate Un-American Activities, for the revocation of the President's order limiting salaries to $25,000 after taxes, for the Hobbs Anti-Racketeering Bill, for the Smith '41-Connally '41 Anti-strike Bill and for overriding the President's veto of same, for the Ruml '43-Carlson tax bill, for liquidating the Home Owners' Loan Corporation, for reduced funds for OPA enforcement, for abolishing the OWI domestic branch, for creating the Smith Committee, for dismissing Watson, Dodd, and Lovett '43. She has opposed incentive payments to farmers, more money for soil conservation, incentive payments for certain crops, funds for crop insurance, more money for rural electrification, funds for a price rollback, and in November she voted to kill the Administration's food subsidy program. Almost the only important issue on which she and Administration supporters found themselves on the same side were the anti-poll tax bill and the Fulbright '43 post-War collaboration resolution. Unlike Mrs. Luce, however, she made no speeches in 1943.

In March 1943 Miss Stanley was chosen by the Fashion Academy as one of the best-dressed women of the year. Other winners included actresses Carole Landis, Jeannette MacDonald, and Judith Evelyn. Miss Stanley does not spend very much on clothes, however: her secret, she says, is a few good dresses with lots of collar and cuff sets and "dickies" to make them look different. She has owned only one fur coat in her life—a muskrat—and she still wears it. She was wearing a $2.98 hat at Saratoga when the Republican Convention nominated her. After the session a beautifully dressed woman rushed up to her and exclaimed: "I'm so glad they've chosen you, my dear! The other woman they were considering wears such atrocious hats!"

Five feet three, slender, gracious, prematurely gray, with clear blue eyes, Miss Stanley, *Newsweek* avers, is pretty enough to "twitterpate" some of her male colleagues. Although her salary as a Congresswoman is $10,000 a year, Miss Stanley has not yet been able to find a permanent residence in congested Washington. In Buffalo she lived with her parents and brothers and sisters in a pleasant, old, tree-shaded house on Lancaster Street. She has helped her three younger sisters with their education and in 1943 was putting the youngest through the University. She and her sisters used to swap clothes, too, but when she went to Washington the joint wardrobe had to be divided into four parts.

Although unmarried, Miss Stanley thinks being a wife and a mother is the greatest career in the world, and she doesn't believe it impossible to combine marriage and a job successfully. She herself is undomestic, though—a "bottleneck cooker." "I can cook and I can bake," she explains, "but I can't make things come out even. The corn is ready fifteen minutes ahead of the ham steak, and the soup is heated through in time to be served with the pie. How do people synchronize their dishes?"

STEBER, ELEANOR (stē'bėr) July 17, 1916- Opera singer

Address: b. c/o Haensel & Jones, 113 W. 57th St, New York City; h. 55 W. 11th St, New York City

Though only in her 20's, Metropolitan opera singer Eleanor Steber has made a name for herself in musical circles as a singer of unusual talent and accomplishments.

She was born on July 17, 1916 in Wheeling, West Virginia. Her father, William Charles Steber, was a bank cashier; her mother, Ida A. (Nolte) Steber, had been singing in Wheeling churches and had given concerts there for many years. Eleanor made her debut as a songstress in a Sunday School program when she was five years old. This debut was less successful than her subsequent career, for when she got up to sing her song she forgot every word of it.

Eleanor's mother was her first singing teacher. In the local high school the young singer majored in dramatics, at first determined to be an actress. She got her first professional job when she was sixteen as soloist at the Second Presbyterian Church of Wheeling. After her graduation from high school, she decided on music as a career and went to Boston to enter the New England Conservatory of Music. Though her father was able to promise the tuition only for the first year, Eleanor made the best of her opportunities and won scholarships for the ensuing three years.

The scholarships, however, merely took care of tuition, and Miss Steber had to find the means of supporting herself. Since she played the piano exceptionally well she hired herself out as accompanist to little groups that sang around Boston and she worked as a soloist with the Federal Music Project there. She earned part of her expenses by acting as desk attendant at the dormitory where she lived, and she made an occasional solo appearance. She had gone to Boston to become a concert pianist, but "little by little her emphasis changed through the seven Boston years," according to *Opera News*, "from the instrument of wood and metal to the subtler organ of the vocal chords."

De Bellis

ELEANOR STEBER

With the guidance and interest of her Conservatory teacher, William Whitney, Eleanor Steber began to sing in Boston, Cambridge and other New England cities. She also was heard on various programs over the Boston radio station WEEI. Other appearances in the city included the leading soprano part in Louis Gruenberg's fairy tale opera, *Jack and the Beanstalk*, the role of Senta in a performance of Wagner's *Flying Dutchman* at the Boston Opera House, and several appearances with the Commonwealth Orchestra and Stage Chorus.

Miss Steber made a recital tour through the Eastern Seaboard States, the South, and into the Middle West. In the spring of 1939 she was a finalist in the National Music Club League contest and lost first prize by just one point. That summer she went to Elberon, New Jersey and sang in the church choir, and from there she went to New York, where she sang at St. Paul's and St. Andrew's churches. In New York she studied with Paul Althouse, and when he felt she was ready for the opera she entered the Metropolitan Opera's radio auditions. After a successful tryout she chose *Ah Fors! e Lui* from *La Traviata* for her first broadcast. In the finals she sang *Ernani, Involami* from Verdi's *Ernani*.

In March 1940, from a field of 758 operatic aspirants, Eleanor Steber was chosen winner and was awarded a check of $1,000 and a silver plaque in addition to the coveted Metropolitan contract. For her final appearance in the auditions she sang the gay *Sempera Libera* from Verdi's opera *La Traviata* and Claude Debussy's *Mandolin*. Following the "Victory Broadcast," which included a formal reception at which she was congratulated by Edward

STEBER, ELEANOR—*Continued*

Johnson '43 and other members of the Metropolitan Opera Association, she returned to her home town, which declared an Eleanor Steber Day in her honor.

Miss Steber worked hard for her Metropolitan debut, perfecting and widening her repertoire, and finally in December 1940 was ready to appear as Sophie in *Der Rosenkavalier*. That first night was a night she will never forget: flowers filling her dressing room, telegrams pouring in by the dozens, and the road to success or obscurity lying before her. "I was in another world," Miss Steber said after the performance: "Thank Heaven, all thought of its being my debut left my mind entirely and I was caught up in the swell of the music. The real excitement came after it was over—when I realized I was in truth a full-fledged member of this historic opera company." Erich Leinsdorf '40, who conducted *Der Rosenkavalier* for Miss Steber's debut, gave her the baton with which he had conducted that night.

The next day critics agreed that the new Metropolitan addition was a find. They praised her voice and dramatic ability as well as her beauty. But personal triumph was not the only thrill associated with working for the Metropolitan; Miss Steber was equally pleased at having the opportunity of watching well-established stars at work. Speaking of working with Lotte Lehmann '41, she says: "In the weeks of working with the great Lehmann, every line, every word she addressed to me on stage or off was a thing to be treasured and a new incentive toward operatic success."

In addition to her work with the Metropolitan in her first season (she also appeared as Micaëla in *Carmen*), Miss Steber was among the soloists with the New York Philharmonic Symphony Orchestra, chosen by Bruno Walter '42 to sing in the performance of the Mozart *Requiem* which he conducted on the one hundred-fiftieth anniversary of the composer's death. Radio audiences have also heard her as soloist on such programs as the *Ford Hour* and the *Coca Cola Hour*.

Most observers suppose that a contract with the Metropolitan Opera Company is the culmination of a singer's career, that it is an indication that the long period of training is over and that the time has come for the artist to relax and to reap the rewards of his diligence and talent. Miss Steber wrote an article, "What the Metropolitan Does for Young Singers," for *Opera News* in which she pointed out that membership in the Company is in a sense the beginning of a new phase of the singer's musical education. "The Met," she writes, "provides training that is thoroughly modern and efficient, yet designed to bring out the best in each singer by close attention to his or her individual ability and problems. For some of us expert instruction is provided, through the generous medium of the Opera Guild scholarships, in such vitally important subjects as posture and 'body control.' Thus we achieve that extra bit of poise or grace which we may have lacked to make up the excellent stage presence required for difficult operatic roles."

In the Metropolitan's 1942 to 1943 season Miss Steber emerged as a mature artist, confident in her roles and firm in her musicianship. She sang the role of the Countess Almaviva in Mozart's *Marriage of Figaro*; she was Sophie in *Der Rosenkavalier*; and she was one of the three ladies in *The Magic Flute*. In *Das Rheingold*, the first of the Metropolitan's uncut version of the Wagner cycle, Miss Steber sang the role of Woglinde, and won the approval of the most exacting critics.

Like that of many people in the entertainment world, a great deal of Miss Steber's time is taken up by work for the U. S. O. and war benefits. She has sung for servicemen in the United States and in Canada, touring training stations and Army camps. At one Army camp—Fort McPherson—she has been dubbed colonel by the officers and men. Since she has concentrated most of her time and energy in cultivating her voice and widening her repertoire, she has had little time to acquire any non-musical hobbies. She likes to read and on trains during her concert tours has the opportunity to read the books she misses during the opera season. Prior to the War she enjoyed long automobile drives over the countryside.

Besides being possessor of a lovely voice, Eleanor is lovely to look at. Blond-haired, blue-eyed, and tall, the singer was asked by Atlanta artist Milner Benedict to pose for her portrait. This was exhibited in the Southern capital and now hangs over the fireplace in Eleanor's New York apartment. Because she likes people she has a warmth and charm which draws them to her, and those who have met her would agree with the Oklahoma City newspaperman who wrote: "Eleanor Steber is a girl you would like. She has big blue eyes and a gorgeous smile and an *esprit* that is really wonderful." She was married on September 25, 1938 to Edwin L. Bilby.

Who's Who in America 1942-43

STEINER, MAX(IMILIAN RAOUL)

May 10, 1888(?)- Film composer and conductor

Address: b. c/o Warner Brothers' Pictures, Inc, Burbank, Calif; h. 1012 Cove Way, Beverly Hills, Calif.

Detesting both the ostentatious and the hackneyed like all true artists, by some strange quirk of fate Max Steiner has found himself completely absorbed in the motion-picture industry, which seems to some observers to be the epitome of both. The fact that the musical scoring of Hollywood productions, particularly during the last seven or eight years, has become less and less trite and derivative is in large part the result of his influence. He has "a style all his own, with an individuality and great gift for original melody and adaptation" which has been shown in the music composed for such films as *Gone with the Wind* (1941); *They Died with Their Boots On* (1941); and *The Informer* (1935).

Maximilian Raoul Steiner was born in Vienna on May 10, 1888 and attended the Vienna School of Technology and the Imperial Academy of Music in Vienna. While his father is a Protestant, his mother was a Catholic, and his grandparents were of the Jewish faith, Steiner himself is a Lutheran. When he was thirteen the Imperial Academy awarded him a gold medal for the remarkable feat of completing the eight-year music course in one year. Upon leaving school he wrote the book, lyrics, and music for the musical comedy, *The Beautiful Greek Girl,* which played in Vienna for two years. At sixteen he was already a professional conductor in Russia. He studied counterpoint and composition with Robert Fuchs, harmony with Herman Groedner, and conducting with Gustav Mahler. Before leaving Europe after the outbreak of the First World War, he had made appearances in Moscow and Hamburg. In London Steiner conducted at the London Opera House, Daly's Theatre, the Adelphi Theatre, the Hippodrome, the Blackpool Winter Garden, and the London Pavilion. Described as a theatre, vaudeville, opera, and symphony composer and conductor, as well as a concert pianist, his versatility is further indicated by his ability to play the violin, organ, and brass instruments.

He tells an amusing story of the time when, having just arrived in the United States from Vienna (in 1914), he was living in a boardinghouse in New York and looking for a job. A friendly fellow-resident asked him what kind of work he did.

"I'm a conductor," answered Steiner.

"I'll get you a job," said the friend, and he gave Max a card. To Steiner's amazement, the card was addressed to the superintendent of a New York railway company.

In spite of an established European reputation, Steiner, "a little man who is incessantly making questionable puns . . . pre-Hollywood, was the kind of a conductor that a producer of musical comedies always thought of third," says Oscar Levant '40 in *A Smattering of Ignorance.* "He would be called in to conduct if the two conductors you had thought of first couldn't be had. An overrich orchestrator for the theatre, Steiner's abilities in this field were suitable for occasional spots but not for a whole musical comedy." Whether Levant is right or not, Steiner was eventually hired to make the orchestral arrangement for *The Rainbow Girl,* produced by Abe Erlanger, and was also engaged by George White, Florenz Ziegfeld, and Victor Herbert as conductor and orchestrator.

It was not until November 1929 that Steiner made his first contact with the film industry. At that time, Harry Tierney, a well known show composer, was imported to Hollywood to add a few new tunes to his *Rio Rita* (1929), then about to be filmed. Tierney insisted on bringing his own orchestrator, Max Steiner, with him. Steiner's particular talents were made to order for the film scoring of that time, for the formula was to provide a few motives which appeared at the beginning, middle, and end of the picture, His first "creative" work, however, was in the preparation of RKO films for the Spanish market. The Spanish dialogue was not usually nearly as full as the original English text, and the resulting *lacunae* were filled in by the music which Steiner scored for a six-piece orchestra.

MAX STEINER

Steiner relates that "at this time music for dramatic pictures was only used when it was actually required by the script. A constant fear prevailed among producers, directors, and musicians that they would be asked: Where does the music come from? Therefore, they never used music unless it could be explained by the presence of a source like an orchestra, piano player, phonograph, or radio, which was specified in the script." Producers felt no such qualms, however, about musical pictures. "The success of the early musicals like *Broadway Melody* and *The Rogue Song* (1930) caused every company to concentrate on the production of this type of picture, and fabulous salaries were paid to singers and musicians. . . Through lack of sufficient good material and the ever-changing taste of a fickle public, musical picture after musical picture failed, and the studios decided to call it a day and go back to dramatic pictures." In September 1930, therefore, every one of the high-salaried musical stars was dismissed, those with contracts being bought out for the most part. "Steiner did not qualify for inclusion in this category, and his services were retained." In October 1930 he was made head of the RKO music department.

It was in that year that Steiner wrote his first original score for *Cimarron,* but screen credits of that time did not make even a reference to the music. The composer recalls that "almost insurmountable difficulties confronted musicians in those days in successfully transferring even a small part of the actual sound on to the sound track. The reasons were numerous: producers and directors did not know how to handle music; sound

STEINER, MAX—*Continued*

men and musicians were inexperienced; the microphone was in its infancy; and, therefore, the entire technical staff went into contortions to reproduce, even in part, what was actually heard on the set. I remember, during the filming of a certain picture, that it took us two days to find a suitable spot for the double bass, as the acoustical conditions on the stage were such that every time the bass player 'touched his instrument the sound track would overshoot' (distort or blur). This experience, with the entire company—actors, singers, and musicians—on the set, cost the company $75,000."

In the early 1930's, however, sound technique developed rapidly. Steiner states, too, that "at this time the process of re-recording was slowly being perfected, and we soon learned to score music *after* the completion of a picture. This had two advantages. It left the director free to cue his picture any way he pleased without hurting our work, and we were able to control the respective levels between dialogue and music, thereby clearing the dialogue." With the improvement of re-recording, the studios began again to import conductors and musicians. Steiner wrote the scores for *Symphony of Six Million* (1932) and *Bird of Paradise* (1932), the first of which had about forty per cent, and the second one hundred per cent musical scoring. "The directors and producers wanted music to run throughout, and this gradual change of policy resulted in giving music its rightful chance. One-third to one-half of the success of these pictures was attributed to the extensive use of music."

By 1932, Steiner's composing had already drawn favorable comments from the press. A Los Angeles *Times* comment states that "a thing that should be noted, and more than just in passing, is the work that this musician, Max Steiner, is doing in bringing out atmospheric possibilities through tone in pictures. He contributes immeasurably to *The Bird* and even more to *The Most Dangerous Game.*" It is significant of the development of music in the films at that time that the critic went on to praise Steiner by saying that his music provides the emotional sweep and stimulus which the orchestra or organ provided in the silent films "in portions of *The Bird of Paradise* and also for fully half of *The Most Dangerous Game.*" In an interview with Steiner printed some months later, the composer was praised for the "delightful music" used in connection with *So This Is Harris* (a short subject), which also won the Academy Award. Steiner's work was described by the interviewer as being done "in a funny little cubbyhole off his office. . . He doesn't want to see people, but doesn't mind noise."

Another of Steiner's early successes was *King Kong* (1933), for which the score was written in two weeks and the music recording cost was about $50,000. At least twenty-five per cent of the success of the picture was attributed to the music, which made the artificially animated animals more lifelike and the battle and pursuit scenes more vivid. Oscar Levant says that Steiner had a passion for "illuminating action with sound" in this period, and that he leaped at the opportunity to write the score for *King Kong*. "It offered him a chance to write the kind of music no one had ever heard before—or since. Full of weird chords, strident background noises, rumblings and heavings . . . it was always my feeling that it should have been advertised as a concert of Steiner's music with accompanying pictures on the screen." Levant comments further that "Steiner is particularly adept at this sort of thing, though his heavy-handed impressionism does not serve him too well in more subjective situations. He is, however, an excellent man on prison-break fogs, and also does a good job of industrial noises. Do you recall the whistles, bells, clanging of doors, and other institutional sounds for *Crime School* (1938)? The hammer blows and engine noises in *Dodge City* (1939)? They were all a part of Steiner's score for these films, and enormously effective." The composer disagrees with Levant in the type of music he writes. Steiner says he had done more pictures with sensitive subjects than heavy-handed ones. He "hates heavy, dramatic pictures like the Errol Flynn type."

Steiner has also composed outstanding scores for such films as *Zola* (1937); *The Magic Bullet* (1940); *Dark Victory* (1939); *The Old Maid* (1939); and *Four Wives* (1939), which contained a celebrated seven-minute tone poem. (This tone poem, *Symphonie Moderne*, has been published and is selling very well. It has been performed by many symphony orchestras throughout the United States. This is the first symphonic work composed for a picture which has ever been performed in a concert.)

Steiner was borrowed by Selznick-International to prepare the music to accompany *Gone with the Wind*. The score for *Gone with the Wind* is the longest original one ever composed for the film industry and was recorded at a cost of approximately $100,000. Levant speaks also of other remarkable effects created by Steiner: "You recall perhaps the poignant background music for *The Informer*? The dissonant trumpets in *The Lost Patrol* (1934)? . . The undercurrent of music in *Four Daughters* (1938)? The tortured death music of *Angels with Dirty Faces* (1938)? These, and the sounds, effects, and suggestive noises of a hundred other films were all by Max Steiner."

It has been said that "music is the only Hollywood Cinderella without a success story." This statement is borne out by the fact that reviewers seldom comment on the musical score of a film, contenting themselves merely with a credit line listing for the composer. Composers and orchestrators are definitely "behind the scene" craftsmen of Hollywood, sharing the anonymity of the technical staffs. One of the reasons for this is the subordinate position of music in the films as "the servant of the image." Many producers consider a musical score excellent in proportion to the lack of attention it merits from the newspapers and the public. Yet the importance and effectiveness of suitable background music is well known in the film industry and was very aptly illustrated by the preview of *Of Human Bondage* (1934). The film was originally released without music, and, to everyone's consternation, the audience laughed at the wrong time. After the picture had been taken back and proper mood-evoking music composed for it by Max Steiner, audiences understood the picture's intent and were thoroughly in accord with it emotionally.

In spite of the lack of publicity given composers for dramatic pictures in Hollywood, Max Steiner's capacities have been generally recognized in the trade for some time and various public honors have been bestowed upon him during his many years of service to the film industry. In 1933 he was the winner of the Concordia Award, Vienna, Austria; in 1935 and again in 1943 he won the Academy Award for the best original music with his scores for *The Informer* and for *Now, Voyager,* respectively; in 1936 he was made an officer of the French Academy by the Minister of National Education and Fine Arts as a tribute for his contribution to modern music. In his connection with Warner Brothers in early 1943, he is one of several Hollywood composers who are given a whole frame to themselves for their credit lines. Nevertheless, Stein yearns for fame of a different stamp. Essentially a worktable-direct-to-orchestra composer, he longs to see his work published, but since there is no ready market for film music, he finds himself frustrated in this regard. Recently he has been engaged in the creation of a symphony, from which perhaps he hopes to derive a more permanent fame.

The admirers of Max Steiner's scores are contradicted in part by critics who feel that most American film music is lush, over-orchestrated, and in many cases borrowed in idea or in chunk from the classics. However, some knowledge of the exigencies of the form and the difficulties under which film musicians still work is necessary to properly evaluate these objections. Many producers are notoriously unmusical, yet feel they know the type of music required by their films, and are often insistent about planning technical musical effects of which they know nothing. Originality in music sounds harsh and bizarre to their ears in many cases, and they are apt to insist that the musician remember that he is writing, not for musicians, but for millions of people, all over the United States and in some cases abroad, whose musical appreciation and tastes differ radically. The music must also be synchronized with the action of the film, a difficulty which Steiner has met by the development of his "Mickey-Mouse technique": that is, a breakdown of the action of the film in terms of minute detail and the number of seconds required to complete each detail in the running of the film, and the subsequent composition of music to "underline" the detail within its exact time limit. Speed is a vital factor, too, in Hollywood composing. The composer does not start to create his score until after the film is complete, and then he is required to study the film and to compose, orchestrate, synchronize, and record the music within the short time remaining before the release date of the picture, which is usually set ahead of time. "When the dreaded release date is upon us," Steiner relates, "sleep is a thing unknown. I have had stretches of work for fifty-six consecutive hours without sleep, in order to complete a picture for the booking date." The pressure of time, too, forces the composer to merely sketch the effects he has in mind and to give the labor of actually working out the instrumentation to one of the music department's orchestrators.

A picture of the development of a Steiner musical score is given by Levant: "A peculiarity of Steiner's scores is that his orchestrator must always provide a part for the harp—and a good one. This caused some difficulty in the life of Robert Russell Bennett '42 when he went West to orchestrate Jerome Kern's '42 *I Dream Too Much* (1935), in which Lily Pons was starred. This was altogether a confusing picture, because it was conducted by Steiner, who was also a composer, orchestrated by Bennett . . . and starred Pons, who insisted on having André Kostelanetz '42 conduct her sequences. Possibly to escape some of this concatenation of temperaments, Bennett did his orchestrating in Montana, sending in each number as it was completed. Not aware of Steiner's penchant for the harp, he omitted that instrument from the scoring of the title song, a chromatic waltz, and thus not suited to the harp. Immediately there came a telegram from Steiner:

"'Why no harp part?'

"After puzzling over this for an hour Bennett reached a conclusion and wired back, 'If there's a charming girl you want to use, put in a harp part.'

"The inevitable P. S. is that there was a 'charming girl,' who is now Steiner's wife."

Steiner's young son is a collector of toy automobiles. Steiner's own "hobby is guns. He has a large collection, both new and antique. The only shooting he does, however, is target shooting with rifle and pistol. He never goes hunting, as he cannot bear to kill anything. His main and only interest in life is his son."

The conductor has "gone Hollywood" only in his fondness for horses. Parties at his Beverly Hills home are musical evenings riotous only with technical disagreements.

STERNE, MAURICE July 13, 1878-
American artist; sculptor; teacher
Address: h. Byram Lake Rd, Mt. Kisco, N. Y.

"I do not try to teach my students to draw and to model. Anyone can be taught to do such things. I try to teach them to see. It is by cultivating not technique but vision that art escapes from conventional channels. The artist must develop his sense of vision. . . Art becomes sterile when artists become *blasé*. They lose their belief in themselves. They become too concerned with manner, with technique, with esthetics. . . The man who has vision will develop his own technique. To one who has seen something that I have not seen, I say, 'It is not for me to show you how to paint it.' . . The training of an artist has no specific curriculum. It is the work of a lifetime."

Ansel Adams

MAURICE STERNE

"This is the artistic theory which Maurice Sterne follows in instructing his students. A prolific painter, Sterne remarks that the three essentials which have guided him and which he has endeavored to fuse into one are "instinct, environment, and tradition."

Maurice Sterne was born in Libau, Russia on July 13, 1878, the son of Gregor and Naomi (Schlossberg) Sterne. The boy's early youth was spent in Moscow, but when he was eleven or twelve he and his widowed mother emigrated to the United States. As an immigrant in New York young Sterne, according to *Newsweek*, "nailed miniature American flags to sticks, receiving thereby a cent and a quarter a gross. Later he sold papers, worked in a bronze foundry, a mirror factory, and for a map engraver. He even was once a bartender in New York—a career that came to an abrupt end after three years, when some tough customers set fire to the saloon because he wouldn't dish out more free beer."

Sterne studied first at Cooper Union and then, in 1894, entered the National Academy of Design. There he learned anatomy from the great Thomas Eakins, who came once a week from Philadelphia to teach. For the next ten years Sterne studied at art schools in this country. His work was first shown in New York in 1902 at the Old Country Sketch Club on Broadway. The late William Merritt Chase, one of the most famous painters and teachers of painting at that time, bought a picture from the exhibition. In 1904, winning the Mooney Traveling Scholarship offered by the National Academy of Design, Sterne went to Europe to study. He worked in the museums of France, Germany, and Italy. An exhibition of his drawings and etchings was held in Berlin in 1910. Sometime during this period or before he had been the very intimate friend of the actress Alla Nazimova.

Although Sterne's early work was compared to, and, in fact, confused with Whistler's, he actually was most interested at this time in Mantegna, Pollaiuolo, and Piero della Francesca. It was from that last-named master that he absorbed "the method of modeling figures in light and shade in a composition dignified and unified by a harmonious use of color." He was also somewhat influenced by the work of the French moderns, Cézanne and Manet.

"With an academic technical equipment achieved," Sterne returned to America to become an instructor at the National Academy. Then the painter started on his travels once more. They took him to Egypt and to Greece, where he was particularly engrossed in antique sculpture. His own attempts at sculpture, which first dated from this period, show the influence of that study in their "broad plain surfaces and the largeness of the modeled forms." For eight months Sterne lived in a monastery at Mount Hymettos.

"In Paris Sterne was in on the new century art movements but not of them. He remained an eclectic with a sensitive if not easily impressionable mind. By the time Davies and others were bringing Cézanne back with them to America, Sterne had carried to India his clear appreciation of these canvases which were just beginning to filter into the art consciousness of Paris." After that Sterne turned his course to Bali, and stayed three years (from 1911 to 1914) "before the world tourists began to invade that island of romance." There he absorbed the artistic trends of the natives and borrowed their knowledge of the use of color, which now served to enhance his work, already dignified by a sense of form and design. He made several thousand drawings, mostly with oil on rice paper, and these brought him great acclaim in the United States and abroad. Out of that "exotic sojourn" came some of Sterne's best paintings. Mabel Dodge Luhan '40 feels these to have been greatly influenced by Gauguin.

Returning to Italy, Sterne took up residence in a forty-one room castle in Anticoli, near Rome, where he painted until world events caused him to return to the United States to his studio at Croton-on-Hudson. He painted there until 1918, when he returned to Italy. His sentiments during the War, according to Mabel Dodge Luhan, were pro-German. After this came "an interlude in New Mexico," various exhibitions and prizes, and intermittent returns to his castle in the Sabine hills.

It was at this castle that Sterne taught art to the one-time banker-lawyer, Edward Bruce, head of the United States Government's Section of Fine Arts. For three years Bruce shared Sterne's castle, painting methodically from dawn to dark and forcing his teacher to work similar hours. This regime made Bruce an artist and sent Sterne into a decline. Through Bruce, however, Sterne obtained his largest commission, that of twenty murals for the library of the Department of Justice Building. The Government paid him $20,000 for them, and the project took him almost five years to complete. The critics' comment upon this ambitious work which depicted the "struggle for justice" was, in the main, unfavorable. The murals were considered "too conventional" and "a little too closely bound to the allegorical genus of mural painting which for generations has prevailed in America."

Sterne taught for some years at the California School of Fine Arts in San Francisco. At present, he has his own art school in Mt. Kisco, New York.

Maurice Sterne has been called "the greatest draftsman among modern painters." "Whereas in many of his large works," according to one critic, "he uses his gifts in overambitious compositions which in the process of being worked lose unity and spontaneity, in his drawings and small oil sketches done on paper he necessarily escapes both of these faults. His draftsmanship, his knowledge of form, color, and composition are instinctive; so that when he does a quick drawing he does not have to worry over them. What he catches, in addition to these qualities natural to his hand and eye, is beauty of line, movement, even texture."

Sterne's line has been called the most characteristic achievement of his art, and his use of it has been described as Oriental. Not merely a delineator of form, his line becomes in itself form and achieves an interest as an abstract unity in a drawing quite aside from its connotation. In his experiments in sculpture he has tried to translate his line into plastic form. His sculptures, however, for the most part "are interesting as curiosities related to the rest of his work." "His memorial to the pilgrims in Worcester, Massachusetts," wrote Inslee A. Hopper, "is Sterne's most widely known work, but it should lead no one to say, 'This sculptor is also a painter.'"

According to Thomas Craven, Sterne's art reflects his study of the Old Masters, Greek art, and his extensive travels. "He is too big, too versatile, and too individualistic as an artist to be tagged with the label of any one school of thought. . . His approach to art is that of one who has the sympathetic and sensitive but penetrating understanding of a great humanist."

Drawing which suggests playing the piano from notes," says Sterne, "is obviously all wrong. You must not draw what you *see*, but what you *have seen*. One cannot make a decent drawing while the vision is divided in seeing different parts at different times. Only when the vision is so coordinated that every part is seen in its true relationship to the rest has one the right to indulge in drawing. For drawing is not a visual experience in the making. It is a direct simple statement of the experience."

Sterne is one of the few artists who has had a self-portrait commissioned by the Uffizi Gallery of Florence, Italy. He has exhibited his work in various galleries throughout the world. A retrospective exhibit of his paintings was held in the Museum of Modern Art in 1933. His work is represented in important permanent collections throughout the country.

The "stocky, broad-palmed" artist has been married twice. His first marriage took place at Peekskill, New York in 1917, where he married Mabel Dodge, whom he divorced four years later. She describes him as a "black-haired man with red cheek bones and a white brow." She noticed him at once in a crowd "for there was something vivid and colorful about him that marked him out among the other more neutral personalities." His second wife is Vera Segal, whom he married in Vienna in 1923.

STEVENSON, WILLIAM E(DWARDS)

Oct. 25, 1900- Director of the American Red Cross in North Africa; lawyer

Address: h. Buttonwood Brae House, Stamford, Conn.

"There is one awfully important American in Africa," recently wrote Ernie Pyle '41 of the New York *World-Telegram*, "who has been mentioned very little." The reference is to William E. Stevenson, the American Red Cross chief in North Africa. Stevenson had been the head of a successful New York law firm until the outbreak of the present War when he became the brains behind the organization of the Red Cross in England. He then was charged with the establishment of Red Cross clubs in Morocco, Algeria, and Tunisia. "Starting from scratch, he built the now immense Red Cross system in Africa. And wherever the American Army goes next he will move with it and do the same thing all over again." (This was written before the Allied invasion of Italy.)

"Stevenson's job," continues Pyle, "is unromantic, but it is more vital than many a general's. A good portion of the morale of the Army in Africa depends on his decisions. His employees run into the thousands. He spends millions of dollars a year. His daily headaches, though less important, are as numerous as General Eisenhower's '42."

William Edwards Stevenson was born in Chicago, October 25, 1900, the son of J. Ross and Florence (Day) Stevenson. His father

WILLIAM E. STEVENSON

was a minister whose change of pastorates caused the family to live in various parts of the country. At different times they resided in New York, Baltimore, and finally at Princeton, where the Reverend Stevenson became the president of the Princeton Theological Seminary. After completing his preparatory schooling at Phillips Academy at Andover, young Stevenson went to Princeton. At the time of the United States entry into the First World War, Stevenson was too young for military service; however, toward the end of the War he was able to meet the age requirement of the Marine Corps, in which he served for a few months.

As a student Stevenson was at the top of his classes. Upon his graduation from Princeton in 1922 he was awarded a Rhodes Scholarship which enabled him to study law at Oxford for three years. While in England, Stevenson learned to understand and admire the British but he always remained an American, adopting neither the customs nor the accent of the British. It was during his stay at Oxford that he became acquainted with Eleanor Bumstead, an American girl, who became Mrs. Stevenson on January 9, 1926.

In his student days Stevenson also achieved fame as an athlete. He won the 1921 American championship for the 440-yard dash, and in 1923 he took the British championship for the same distance. In 1924 he went to the Olympics at Paris where he ran on the 1,600-meter relay team that established a new world record. Stevenson, the athlete, has at least one exploit of which he is especially proud. In 1921 he won the half-mile for the Princeton-Cornell team competing against Oxford and Cambridge. Four years later he was a member of the Oxford-Cambridge team which defeated the Princeton-Cornell team in the quarter-mile run.

The Rhodes scholar left his carefree days behind him in 1926 when he returned to New York to work. His first job was as assistant to District Attorney Emory R. Buckner. He chose the Prohibition Enforcement Department because it paid $1,000 more a year and he needed the extra money in order to get married. Stevenson tried to practice what he preached as a Prohibition enforcer; he set an example as a teetotaler to his men by going so far as to ban champagne at his own wedding. His wife is still indignant about it!

Later he left the district attorney's office and entered the law firm of John W. Davis in New York, where he remained until 1931. Then he formed a firm of his own in partnership with Eli Whitney Debevoise. The enterprise was a success from the start. Stevenson and Debevoise have had as many as twenty-one lawyers on their staff.

After Pearl Harbor, Stevenson says he felt out of place in the world as a successful lawyer. Though he was too old for active service he was neither old enough to be indifferent nor complacent enough to be satisfied with a desk commission. For a while he merely searched and pondered. Before long he learned that the Red Cross wanted someone to go to England. The possibility of working for the Red Cross had never entered Stevenson's thoughts and he knew next to nothing about the details of the work. His only qualifications besides his determination to be useful were his law experience and his previous residence in England. He was given the job. Stevenson was happy about it because it gave him exactly what he wanted, an opportunity to work in the midst of the fight. In England his task was to set up the entire organization of the Red Cross. As soon as that was accomplished he moved on to Africa where he formed Red Cross units wherever fighting men were stationed.

Working with Stevenson is his attractive wife who joined him while he was in England. In order to be with her husband Mrs. Stevenson left their two young daughters, Helen and Priscilla, with their grandmother in the United States. Although the Red Cross tacitly disapproves of wives being with their husbands in war areas, the Stevensons are regarded as exceptions to the rule: it is inconceivable that they be separated. Mrs. Stevenson has put in a tremendous amount of work. Besides her headquarters duties she is "a sort of roving delegate, cheerer-upper, smoother-over, and finder-outer for the whole Red Cross of Africa and half the Army, too." She is a big sister to every soldier, from private to general. Her husband jokingly refers to her as "the G. I. girl friend."

The outfit headed by Stevenson includes mobile canteens and tents which bring a great deal of cheer and comfort to "motherless, sisterless, wifeless lads who otherwise have no place outside their lonely bivouacs to make them welcome." In the opinion of General Eisenhower, the American Red Cross is "the most important morale booster of any activity we have." In October 1943 Stevenson announced that more than one hundred Red Cross workers, including many field men who went in with units on invasion day, were already on active service in Italy. Stevenson himself was just back from an inspection trip.

Stevenson and his wife live in a "small but nice" apartment somewhere in North Africa.

They drive to work in their own Oldsmobile sedan. Since they have no servants they generally eat at the Red Cross mess. Stevenson is described as "tall, handsome, and athletic." "To everybody who knows them," Pyle writes, "Stevenson is 'Bill' and Mrs. Stevenson is 'Bumpy.' . . They have a way with them of making everybody crazy about them." Both are instinctively democratic and share an aversion to social climbing in any form.

"Stevenson," writes Pyle, "has been successful because he is honest, in the deepest meaning of the word. He has no sideline ambitions and no axes to grind. He wants nothing for his future out of the Red Cross nor out of Africa or England or Italy or anywhere else. He is simply serving with his whole being. When it is all over he will go back and take up where he left off which was at the head of an outstanding young law firm in New York City."

America's Young Men 1938-39
Who's Who in Law 1937

STEWART, KENNETH (NORMAN)

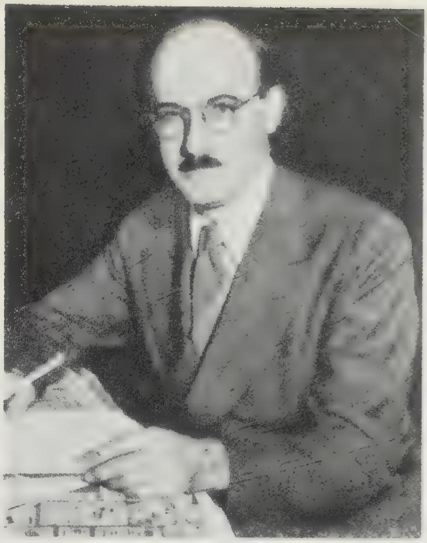
June 6, 1901- Author; journalist

Address: h. 142 E. 18th St, New York City

Not every newspaper job is a glamorous one, nor does every newspaper writer become a foreign correspondent or a columnist. Counterbalancing the handful of journalists whose names have become household words are thousands of unsung men and women whose jobs are important ones: they are the routine reporters, the re-write men, the copyreaders, and the editors.

The story of the working press is told by Kenneth Stewart in terms of his own experience in *News Is What We Make It*, published in July 1943. During the course of his varied career behind the headlines, Stewart has worked on many important papers from the Pacific coast all the way to Paris. He has witnessed the many changes effected in his profession by the impact of powerful influences: the depression, the rise of the American Newspaper Guild, the invasion of city rooms by women, the development of news magazines, and the competition of radio agencies. Stewart believes that the most significant change in newspapers is the shift in emphasis from so-called "factual", "objective" reporting to a mixture of opinion and fact which approximates full truth.

Bespectacled, scholarly-looking Kenneth Norman Stewart was born June 6, 1901, of Scottish-American parents, Alexander and Myra (Brown) Stewart, in Leadville, Colorado. As far back as he can remember, he had always wanted to be a newspaperman when he grew up. He was reared in an isolated California town named Eureka. There, at the age of twelve, he engaged in his first journalistic venture: every week he wrote out a single manuscript sheet entitled *Neighborhood Gossip*, which he carried from house to house, allowing each "subscriber" to keep it for three hours. The paper contained items of local news interest.



KENNETH STEWART

On Armistice Day 1918, just before graduation from the Eureka High School, Stewart acquired his first newspaper job: keeping track of the tides and ship schedules for the Eureka *Humboldt Times* at $6 a week. At his high school commencement the next year Stewart was chosen to read the valedictory address. "Its title was 'C'est la Guerre,'" he relates, "which I couldn't pronounce, and its theme was Saint Paul's 'I have fought the good fight,' which I didn't understand." He then enrolled at Stanford University, where he took courses in news writing and copyreading. When he discovered philosophy he plunged into its study, to the neglect of the social and political sciences. The effects of his enthusiasm for philosophy were visible in his summer work for the hometown paper, which contained a column of self-conscious platitudes under the pseudonym "Phil Ossifer, Jr."

Stewart was forced to leave Stanford in 1923 without a degree. (Eventually he received a B. L. from Columbia University.) His back-door exit from Stanford was the beginning of a lifelong career in newspaper work. Reversing Greeley's famous advice, Stewart started eastward. His first stop was at Fresno, California, where he worked on the *Bee* from 1923 to 1924, long enough to pay off the monthly installments on his Model T Ford. Accompanied by Bud, a *Bee* copyboy, traveling companion and mechanic, Stewart then made his way to the El Paso *Times* and thence to New Orleans, pawning parts of the car along the way in order to eat. At Atlanta, Stewart's stop-gap job on the *Journal* was interrupted when he and Bud were mistakenly arrested as highway robbers.

When Stewart finally did reach New York he made a vain round of the important papers, most attractive of which, to him, was the old *World*. While waiting for a better newspaper job Stewart worked on the Brooklyn *Standard Union*; before long he was hired as a copy-

STEWART, KENNETH—*Continued*

reader by the *Telegram.* This was in 1925. As soon as the novelty of living in the New York City of the mid-'20's had worn off, Stewart had himself transferred to the night shift or "Lobster trick" of the paper in order that he might attend classes at Columbia University.

Stewart left the *Telegram* in 1928 when an assignment required him to get a job as a subway ticket puncher. For one thing, he was sure his identity would be discovered by the subway officials; for another, he was beginning to feel restless. He obtained a letter of introduction to the London office of the United Press, borrowing enough money for his boat passage, and sailed for England. The English immigration inspector, however, did not allow him to disembark because he had only a one-way ticket and hardly any money. A happy turn of events prevented his "ignominious" return to New York and placed him on the staff of the now legendary Paris *Herald*, that "newspaperman's alcoholic dream in the '20's." Stewart enjoyed his share of the palmy days in that paradise of American expatriates. Two of his best friends were night club entertainers there. As a result, Stewart recalls, "I spent so much time sitting around at the tables of noisy, smoky, smarty-pants holes that I didn't care afterward whether I ever entered another." Typical of the newspapermen of that day and age, he believes, was his own cynical individualism. The depression, the New Deal, the growth of Fascism, and the founding of the Newspaper Guild were to change this attitude.

Upon his return from Paris, shortly before the crash of 1929, Stewart went to work for the New York *Herald Tribune.* It was a good place to work, he thought, "less liberal than the *World,* but livelier than the *Times.*" He worked nights again in order to avail himself of the special arrangements by which he was able to teach and study at Columbia's School of Journalism for one year. He remained at Columbia for another two years as a part-time instructor.

The academic life began to take a strong hold on Stewart. He left the *Tribune* in 1932 and went back to Stanford to teach journalism. True to the predictions of his friends, however, he remained there only two years. The series of news breaks in 1933 made him long to be in harness again: the bank holiday, the New Deal reforms, the dirigible disasters, the rise of Hitler '42 and the reign of terror in Germany.

When he returned to New York in 1934 Stewart did a short stint on the dying *Literary Digest* before he joined the special Sunday Department of the New York *Times* in 1936. He worked for the *Times* three and a-half years, his longest tenure of any job. But the refusal of the *Times* to take sides in the Spanish Civil War confirmed Stewart's belief that objective reporting, neutrality, and non-partisanship "could not serve alone as the ideals by which we and the world might be saved." He believed that it was not only the reporter's right, but his obligation to report his opinion as well as the facts of a story: opinion cannot always be isolated from fact. Opinion often *was* fact, he thought, and interpretation *was* news. Therefore, when Ralph Ingersoll '40 wrote in his prospectus for *PM* that he recognized no such thing as objectivity in reporting, Stewart asked for a position on *PM.* In 1940 he was made head of the national news department of that paper.

Shortly after *PM* got under way Jan Valtin's '41 book, *Out of the Night* (1941), achieved sensational popularity. All sorts of rumors were rife: the authenticity of the book's factual content was questioned, and the identity of the author was regarded with suspicion. *PM* assigned Stewart to make an investigation. After many adventures, including an interview with the mysterious Valtin himself, Stewart sent his findings to Ingersoll with the instructions that the story was not to be printed until his facts would enable him to form a clear picture. Disregarding Stewart's memorandum, Ingersoll puffed the report into front-page news, under the headline, "The Truth about Jan Valtin." The consequent letters of protest to *PM* and to Stewart were almost too numerous to be read. Stewart, however, believes that the type of journalism that would permit such a story to be printed fills a vitally necessary function.

In 1941 Stewart was awarded one of the coveted Nieman Fellowships at Harvard which enabled him to study uninterruptedly for an entire year and to prepare the material for his very readable book, *News Is What We Make It.* In December 1942, when he had finished his book, Stewart went to Washington to take over the foreign news desk at the Office of War Information for several months. He returned to *PM*'s editorial staff in July 1943.

News Is What We Make It was, on the whole, well received by critics. S. T. Williamson wrote in the New York *Times*: "Mr. Stewart can be read with both sympathy and uneasy tingles in the spine. His book's reception, in many newspaper offices where he worked, will not be unanimous. But it should be as useful as it is provocative, for it reflects stirrings now going on in many a city room, at many a copy desk, and (although the author may not grant this) in many a front office. I'm sure it will confirm many preconceived notions—notions held ever since newspapers appeared—that the press is going to the dogs. . . But it can't go to the dogs as long as there are books like this."

On December 26, 1931 Stewart was married to Evelyn Seeley, a former feature writer on the New York *World-Telegram* and an instructor at Sarah Lawrence College. The Stewarts have two blond children, Sally and Stephen. His cronies on *PM* report that "on his one hundred acres at Lake George he fancies himself a farmer of parts, but," they add, "the only thing we've seen him grow is a mustache."

STOLZ, ROBERT Aug. 25, 1886- Composer; conductor

Address: h. 50 Central Park West, New York City

Robert Stolz, the composer of *Two Hearts in Three-Quarter Time*, wants to write the death dirge for Adolf Hitler's '42 funeral. This self-exiled Viennese musician, who left his home because of Hitler, began his career at the age of seven as a pianist; he was a full-fledged conductor by the time he was seventeen and has been busy directing orchestras and writing music ever since. Composition comes very easily to Stolz, who has written many sure-fire operettas, dozens of musical scores for motion pictures, and more than a thousand songs. After the *Anschluss* Stolz came to America, where he helped to revive an interest in melodious Viennese operettas.

The man who is considered by some critics to be the musical heir of Johann Strauss was born on August 25, 1886 in Graz, Austria, the son of Jakob and Ida (Bondy) Stolz. His family was an extremely musical one; his father had studied with Anton Bruckner and was a well known opera conductor who had led the first performance in Vienna of Wagner's *Tannhäuser* (1845). His great aunt, Therese Stolz, the most famous Italian opera singer of her time, is prominently mentioned in the memoirs of Verdi.

As a child, Stolz received his early musical training from his father; later he became a pupil of Robert Fuchs, the noted professor of theory at the Vienna Conservatory. Stolz completed his musical studies under a protégé of Wagner, Engelbert Humperdinck, the composer of *Hänsel und Gretel* (1893).

When he was only seven years of age Stolz, accompanied by his father, made a concert tour of Europe, giving piano recitals of Mozart's music. Four years later his first composition was published by Adolf Fürstner, an important music publisher in Berlin. At seventeen Stolz was recognized as a composer and was commissioned to write the music and conduct the band for the Cirque Henri, Europe's largest circus.

Thereafter Stolz was engaged as opera and operetta conductor in Brünn, Prague, Mannheim, and other cities; finally he was made the conductor at one of the most famous musical institutions in the world, the *Theater-an-der-Wien*. It was at this same theatre that Mozart had conducted the first performance of his *Magic Flute* (1791) and that Beethoven had presented his *Fidelio* (1805) to the world. The conductorship of the *Theater*, which was rivaled in prestige only by the conductorship of the Vienna Grand State Opera, was a post for which most musicians would have given their eyeteeth. Stolz's immediate predecessor had been the late Artur Bodanzky, the celebrated conductor of Wagnerian operas. During the twelve years that Stolz was associated with the *Theater-an-der-Wien* he conducted the world première performances of many operetta favorites such as Franz Lehar's *The Merry Widow* (1905) and *Count of Luxembourg* (1909), and Oscar Straus' *The Chocolate Soldier* (1908). Every year Stolz also appeared as guest conductor with some of the major European orchestras, including the Vienna Philharmonic Orchestra and the BBC Symphony Orchestra. To date, Stolz has conducted over 17,000 performances and concerts throughout the world.

ROBERT STOLZ

Although Stolz is of "pure Aryan" stock he became a voluntary exile from Vienna as soon as Hitler and his henchmen arrived there in March 1938. "I left Vienna," explains Stolz, "because I believed in democracy and abominated the anti-Semitic excesses of the present regime. Throughout my career I have had Jewish lyric writers, publishers, and producers. Only the renegades to art have remained in Germany today."

Upon leaving Vienna, Stolz went to Paris where he remained for nearly two years before he sailed for the United States. He had no sooner arrived in Paris, however, than Leo Ritter, Hitler's president of the German Association of Composers, Authors, and Agents, tried to tempt Stolz back to Germany with all sorts of offers. "Come back to Germany," said Herr Ritter. "You shall have carte blanche. You may name your price, your theatre, your conductor, your singers. The Führer will permit you to realize your wildest ambitions." But Stolz continued to refuse every one of these offers. "I would rather spend the rest of my days in a cubbyhole in America," he said, "than occupy a palace in Vienna under the present circumstances."

Stolz, whose New York apartment can scarcely be described as a "cubbyhole," has been active as a conductor since his arrival in the United States in 1940. During the past

STOLZ, ROBERT—*Continued*

few seasons his conducting of the successful New York revivals of Viennese operettas has caused much favorable comment. The Viennese operettas presented by Robert Stolz with spectacular success were Johann Straus' *Die Fledermaus* (April 1942), *The Gypsy Baron* (June 1942), which received high praise and was repeated at the Lewisohn Stadium (August 1943), and *The Beggar Student* (September 1942) by Carl Milloecker. A New York *Herald Tribune* reviewer remarked of Stolz's ability as a conductor: "The precision, nuance, and over-all fire that he obtained from his orchestra were remarkable, as was the coordination of the entire performance under his baton." Another critic, Noel Straus of the New York *Times*, stated: "Under Mr. Stolz's knowing baton every number, from the overture on, boasted the typical Viennese rhythmic nuances without which the polkas, waltzes, and other infectious melodies of the operetta lose their essential quality. His conducting was excellent in all respects." In August 1943 Stolz conducted with outstanding success the New Opera Company's production of his new musical version of Lehar's *The Merry Widow.* Stolz won wide acclaim not only for his sensitive interpretation as conductor, but also for his musical streamlining of this presentation of the operetta. His comprehensive reshuffling of the original score and his own ballet arrangements are credited with placing the operetta on the hit class. In August 1943, too, Stolz broke all-time attendance records with his concert of Viennese music with the Philadelphia Symphony Orchestra at the Robin Hood Dell. He drew a crowd of 24,000 people, against the previous record of 15,000.

The music of Stolz is still played and sung in Germany, although no royalties from the performing rights ever are sent to the composer. Besides his most famous work, *Zwei Herzen im Dreiviertel Takt* (*Two Hearts in Three-Quarter Time* [1931]), Stolz has composed thirty-seven operettas, fifty-four scores for musical motion pictures (including *Spring Parade* [1940] with Deanna Durbin '41), 1,200 songs, a number of suites and orchestral pieces and one grand opera, *Roses of the Madonna.* One of his operettas, *Wild Violets* (1932), enjoyed a 400-performance run at the Drury Lane in London. Broadway audiences best remember his *Sky High* (1925); *The Blue Train* (1927); and *Two Hearts.* The composer claims that the melodic idea of *Two Hearts* came to him one evening while he was seated with friends at his favorite table in Vienna's famous Sacher Cafe. "Animated conversation was going back and forth," he recalls. "I seized a pencil and scribbled on the menu the tune that was to become so popular." The proprietor of the Sacher begged for and received the original, which he placed in a gilt frame and hung in the main dining room.

Before Stolz will discuss his attitude toward contemporary music he insists that a distinction be made between "modern" music and "freak" music. Of the "moderns" his favorites are Stravinsky '40 "at his best," Ravel, and Sibelius; in the latter category Stolz includes the atonal and "cerebral" composers, all of whom can be thrown out of a high window as far as he is concerned.

In late 1943 Stolz went to Hollywood to write and direct the musical score for the United Artists' film *It Happened Tomorrow,* starring Dick Powell, Linda Darnell, and Jack Oakie. "Music is dead in Vienna, as in all occupied countries," Stolz said upon his arrival. "Austria will make a comeback, but not immediately, because the people are sick at heart and apathetic. But one country will be the same, immediately, overnight, when Hitler is gone. That is France, whose spirit will reawaken quicker than Austria's because it hasn't been under the Nazi yoke so long."

At present, the composer's strongest ambition is to write the funeral march for Hitler: "I trust," he says, "I shall have the opportunity to begin work on it very soon." He believes that Germany will remain sterile artistically and musically as long as Hitler remains in power. "How is it possible to work in Hitlerland?" he asks. "All the spirit's gone. The men drink watered raspberry syrup. The girls dress and make up like mothball bags and nobody smokes—well, of course, not 'nobody.' But Hitler is the model for everything and he doesn't smoke. And when the girls look like that, how can you write Viennese operettas?"

STRATTON, DOROTHY C(ONSTANCE) Mar. 24, 1899- United States Naval officer

Address: b. United States Coast Guard Headquarters, Washington, D. C.; h. 1007 Ravinia Rd, West Lafayette, Ind.

Lieutenant Commander Dorothy C. Stratton, former dean of women at Purdue University, is director of the Women's Reserve of the United States Coast Guard, whose members are known as the SPARS. The Reserve actually owes its name to Lieutenant Commander Stratton, for its women were provisionally nicknamed "Warcogs" until she came along and, remarking the Coast Guard motto, "Semper Paratus, Always Ready," suggested SPAR. Requirements for the SPARS are the same as for the WAVES, but officer candidates are not required to have had two years of mathematics. The pay is the same as for the men in the Coast Guard, rank for rank, rating for rating. "We are not looking for any particular type," Lieutenant Commander Stratton says. "We simply want those who are able and willing to do hard jobs so that able-bodied men may be released for sea duty. We want women who know that going into service means devoting themselves wholeheartedly to the tough job of helping to win the War."

Dorothy Constance Stratton was born in Brookfield, Missouri on March 24, 1899 and grew up in small towns in Missouri and Kansas, where her father, the late Reverend Richard Lee Stratton, was a Baptist minister. Her mother was the former Anna Troxler. The Strattons' first connections in Missouri were near Rothville, where Dorothy's grandfather had a large plantation during the Civil War. She entered grade school at Sedan, Kansas, at the age of five. Her father took her to visit the school, and she was so much interested that she was allowed to enroll. She made excellent grades and participated in many extra-curricular activities.

From Kansas the family went to Lamar, Missouri, where Dorothy Stratton attended junior high and high school. After she finished high school and entered Ottawa University, Ottawa, Kansas, her family moved to Laclede, Missouri, where they lived across the street from General Pershing's birthplace. Dorothy Stratton was prominent in campus activities at Ottawa. She served on the staff of the school paper, was assistant editor of the annual, was a member of the student council, played on the school basketball team, and won the women's tennis championship in the Kansas Intercollegiate Athletic Conference. In 1918 she also taught history for a while, in Brookfield, Missouri.

After receiving her B. A. from the University in 1920 she was offered a position on the Ottawa newspaper. She had always liked to write, and so was "mighty tempted" by the offer, but her first position was actually that of high-school teacher in Renton, Washington. In 1923 she became vice-principal of the Sturges Junior High School in San Bernardino, California, and the next year dean and vice-principal of girls at the Senior High School in the same city. In 1933 she accepted the position of dean of women and associate professor of psychology at Purdue University, Lafayette, Indiana. By this time, between teaching terms, Miss Stratton had obtained her Master of Arts degree in psychology at the University of Chicago (1924) and her doctorate of philosophy in student personnel administration from Columbia University (1932). And in 1933 her Ph. D. thesis, *Problems of Students in a Graduate School*, had been published.

When Miss Stratton joined Purdue the University had no residence halls for women, and it was largely because of her efforts that the University eventually built three new residence halls for 450 girls. Miss Stratton was also responsible for opening an employment placement center for Purdue women, and she inaugurated the Summer House Mothers' Training School, frequented by 125 fraternity and sorority house mothers from different parts of the country. Her attitude toward education may be summed up in a quotation from an article by her published in the *National Education Association Journal* in 1934. "May it not be," she asked, "that the emphasis of the secondary schools must shift from the Three R's to the Three C's—character, citizenship, and culture?"

LT. COM. DOROTHY C. STRATTON

As dean of women Miss Stratton was coauthor with Helen B. Schleman of a book on social usage for college students, *Your Best Foot Forward* (1940). The book was based on the replies which students from nine co-educational institutions in different parts of the country made to a carefully planned questionnaire, supplemented by the opinions of college student leaders on fifty-nine campuses. "A skillful presentation of the material adapts it for class use without lessening its interest to the ordinary reader," wrote the *Journal of Home Economics'* reviewer.

In 1940 Miss Stratton became a full professor at Purdue. In June 1942 she served on the selection board of the Army 5th Corps Area, helping to choose the first group of WAAC's who went to Des Moines from that area. Later she herself entered the WAVES as a lieutenant. She joined, she says, because "it was a new avenue of service for women, and it seemed important that women give a good account of themselves during the war service and afterward." She attended the first class at the Naval Training School at Smith College, and in September 1942 she was named as assistant to the commanding officer at the Training Center for Radio Operators at Madison, Wisconsin. Finally, early in November 1942, she was ordered to duty in the office of the commandant of the Coast Guard, surveying the requirements and the scope of the proposed women's reserve of the Coast Guard, whose creation had not yet been authorized by Congress. On November 24 she took the oath of office as head of the SPARS. By this time she had risen in the WAVES from lieutenant to lieutenant commander, and was wearing three blue stripes on her cuffs.

The uniforms of the SPARS are exactly like those of the WAVES except that on the SPAR's sleeve the Coast Guard shield gleams instead of the Navy Star, and she wears the Coast Guard insignia on her hat and collar

STRATTON, DOROTHY C.—*Continued*

lapels. The WAVES and the SPARS are trained at the same schools, but the latter receive special indoctrination in Coast Guard principles, the SPARS are assigned in smaller contingents than the WAVES, and none are assigned to combat duty. Among other things, SPARS work as stenographers, radio experts, pharmacist mates, and photographers, and in the commissary branch. They are expected to number 8,000 by 1944. "We'll have no shortage of volunteers," Lieutenant Commander Stratton says, "because women have been traditionally interested in saving life and property. That is what the Coast Guard stands for."

Lieutenant Commander Stratton, who in January 1943 spoke from Washington on the *Womanpower* radio program, is "a small, attractive women with grayish-blue eyes and a low voice." She is a member of the National Association of Deans of Women, the National Education Association, the American Association of University Women, and the Business and Professional Women's Society, and an associate of the American Psychological Association. She "wears her military uniform gracefully, naturally. In conversation she reveals a keen sense of humor," and she has a "merry, somewhat impish grin that crinkles up around her . . . eyes." No sea-dog, when she "took the usual American's trip to Europe" in 1937 she admits that she became seasick. She has flown in a Coast Guard airplane, but she has never sailed on a Coast Guard ship. When she joined the WAVES she was in the middle of Tolstoi's *War and Peace*, and she hasn't progressed a page since that time. She saw Irving Berlin's '42 *This Is the Army* en route to the United States Naval Training School at Smith College, but she hasn't seen a play since. She left her golf sticks at school without even having removed them from the bag. "I have never worked so hard," she says, "but I like it."

American Women 1939-40
Who's Who in America 1942-43

STREETER, RUTH CHENEY Oct. 2, 1895- United States Marine Corps officer

Address: b. c/o Headquarters United States Marine Corps, Navy Department, Arlington Annex, Washington, D. C.; h. Sussex Ave, Morristown, N. J.

Declaring that "what the fighting men accomplish in this War depends on how much support we give them," Ruth Cheney Streeter, director of the Marine Corps Women's Reserve, who in November 1943 was promoted from the rank of major to that of lieutenant colonel, takes her new responsibilities very seriously. Asked why she had accepted the post, she replied: "I do not see how any American who could do so could possibly refuse anything to the Marines. Besides, the Marine Corps was about the only service one of our family was not in."

Ruth Cheney Streeter was born in Brookline, Massachusetts on October 2, 1895, the daughter of Episcopalian parents, Charles Paine and Mary Ward (Lyon) Cheney. In 1907, after the death of her father, her mother was married to the late Professor William Henry Schofield of Harvard University. Young Ruth went to school in Boston and attended Bryn Mawr College for two years in the class of 1918. On June 23, 1917, she married Thomas Winthrop Streeter. The Streeters have four children—Frank Sherwin, Henry Schofield (both in the Navy), Thomas Winthrop, Jr. (a member of the Army), and Lilian Carpenter (now attending school).

While her children were growing up Mrs. Streeter became well known in her community, Morristown, New Jersey. She has been active in the affairs of the Bryn Mawr Alumnae Association and president of her class since 1923. As a health and welfare worker she served as a member of the New Jersey State Relief Council, the New Jersey Commission of Inter-State Cooperation, and the New Jersey Board of Children's Guardians; and she interested herself in six clubs in addition to the Junior League and the New Hampshire Society of Colonial Dames. Before the War there were few town schemes and stratagems in which she didn't have a hand. When the War began she expanded her orbit to include most of the doings at Camp Dix, and from September to December 1941 she was chairman of the Fort Dix Citizens' Committee for Army and Navy, an organization which provided conveniences and comforts for the men stationed there.

For some years Mrs. Streeter has also presented jointly with her mother, Mrs. William Henry Schofield, the Cheney Award given annually to some member of the Army Air Corps for "acts of valor or extreme fortitude or self-sacrifice." The award was given in memory of her brother, William Halsall Cheney, who flew in the last War and was killed in an air collision over Italy. The Colonel has another brother, Charles Ward Cheney, United States Army Engineers, who served twenty months overseas during the First World War.

The Marine Corps Women's Reserve is very proud of the fact that when at the age of forty-five Mrs. Streeter decided to take a more active interest in aviation she not only was able to become an accomplished airplane pilot, but also acquired a commercial pilot's certificate in April 1942. They don't believe there is another woman "from the halls of Montezuma to the shores of Tripoli" who could have done nearly so well. Mrs. Streeter has been active in the Civil Air Patrol and is a former member of the North Jersey squadron of the New Jersey Civil Air Defense Services. Since May 1941 she has been the only woman member on New Jersey's Defense Council's Committee on Aviation, and she has been made an honorary pilot of the 126th Squadron, Army Air Forces. Her husband was the first chairman of the New Jersey Aviation Commission, 1931-32.

Colonel Streeter no longer owns a private plane, for she was not able to get priorities to keep one in repair, but she is much interested in flying in relation to the Marines. One of her first official trips included a visit to Camp Gillespie, California, the Leathernecks' paratroopers training base, where she got a plane's-eye-view of Marines carrying out operations. Nine thousand of the Women's Reserve were to be assigned to aviation ground forces, doing jobs involving the simpler forms of mechanics in the airfields. Colonel Streeter was pleased with this arrangement, saying, "It's pretty hard to find trained women mechanics." One of her hopes was to see her fledglings actually flying some day.

This is not the Colonel's first contact with public life: both her mother and her husband have been long in the public eye. Mrs. Schofield was the first chairman of the women's department of the New Hampshire Division of the National Civic Federation, 1916 to 1919; on the women's committee of the Council for National Defense, 1917 to 1919; first president of the Women's Land Army of America, 1917 to 1919; first chairman of the New Hampshire Women's Republican Committee, 1919 to 1920; first woman president of the New Hampshire Electoral College, 1925; first president of the William H. Cheney Unit, American Legion Auxiliary, 1920 to 1921; national chairman of the International Veterans Society, 1927 to 1928. In 1927 she broadcasted a message from the Gold Star Mothers of America to the Gold Star Mothers of France from the Eiffel Tower in Paris. Colonel Streeter's husband, Thomas Winthrop Streeter, a Republican, has also been much in the public eye. As lawyer, banker, and utilities executive he has held such positions as treasurer of the American International Corporation of New York, chairman of the board of the Simms Petroleum Company, president of the Mortgage Certificate Loan Corporation, president and director of the Prudence-Bonds Corporation, and director of such companies as the El Paso Electric Company, the Gulf States Utilities Company, and Western Public Service. Since 1938 he has been the managing partner of the Ungalik Syndicate, Alaska. During the First World War (in 1918) he was the chief of the external relations bureau of the Division of Purchase, Storage, and Traffic, United States War Department. Mr. Streeter has become well known in library circles as a member of the advisory council of the Princeton University Library and of various antiquarian and historical societies, as a member of the committee on Americana for college libraries of the American Historical Association, and as president and member of the council of the Bibliographical Society of America. He is said to have devoted much of his time to collecting one of this country's most extensive libraries on railroads.

It was on February 12, 1943 that the Marines finally decided to seek the assistance of 19,000 Women Reservists to release men for combat duty. Asked why the Marines, first to bring in women reserves in the First World War, were the last to do so in this War, Brigadier General R. L. Denig, director of Marine Corps public relations, answered cryptically by quoting from the Bible: "The last shall be first and the first shall be last." When pressed as to what he, a "tough, rough, fighting Marine," thought of women joining his service, General Denig demonstrated that the Marines add verbal adroitness to their many other virtues by replying, "I have served in the Marine Corps all over the world and have always yearned for them." Nevertheless, the idea of women in the Marines is not a new one. As long ago as 1812, Lucy Brewer, tiring of the restrictions imposed upon females, took the advice of an unnamed Marine 1st lieutenant and with "proper precautions disguised her sex" and enlisted. She served three years during the War of 1812 aboard the frigate *Constitution*. Once when the *Constitution* engaged an enemy warship Lucy covered herself with glory in the battle, but she almost ended her career by losing her post in the rigging and falling into the sea. When her solicitous shipmates tried to remove her wet clothing Lucy demurred violently, and she managed to continue her career, undiscovered as the first woman Marine until recently. In the First World War more than 300 women Marines saw duty as clerical workers, but no officers were commissioned and the United States public persisted, in spite of protests, in calling them "Marinettes."

LIEUT. COL. RUTH CHENEY STREETER

The present Women's Reserve was to consist of 18,000 enlisted women and 1,000 commissioned officers, and was to be called merely "Marines"—that is, "Class 6 of the United States Marine Corps Reserve," with "Class 6-A" designating an officer and "Class 6-B" an enlisted Marine. Colonel Streeter took considerable pains at her press conferences to refute all notions of calling the Women's Reserve either WAMS or Leathernecks. On one occasion when reporters were protesting that it would be impossible to tell whether a man or woman was referred to when the name Marine was used, Colonel Streeter replied, "There is no danger of confusion because the lady Marines. . ." She joined good-naturedly in the laughter which greeted this slip of the tongue, but insisted that the expression had popped out merely because reporters raised the issue and would never be necessary in ordinary Marine procedure. Colonel Streeter made it clear that the Women's Reserve is proud to bear the distinguished name of Marine and that they feel no need for a nickname. "The Marines are awfully proud of their name and the fact that they wanted to share it with us shows that

STREETER, RUTH CHENEY—*Cont.*

they really wanted us in." In the traditional Marine uniform, however, certain feminine alterations have been made. The uniform is of the marine green but has a flared skirt, and a scarlet cord decorates the front of the visored cap, replacing the regular Marine chin strap. A scarlet wool muffler is worn only with top-coat. Oxfords are usually worn with the uniform, but for daytime work in offices Colonel Streeter has decided that pumps are just as practical. In spite of the smart trimness of the outfit adapted by Captain Anne A. Lentz of Washington, the Colonel says firmly that it was designed to work in.

In addition to replacing men at these various tasks, a Marine Women's Band was formed, the first to be authorized in the history of the Corps. Its forty-three members release the male musicians for field duty. The Band paces in parades, plays for inspections and reviews, gives concerts, and performs all other functions regularly assigned to the male bands.

As a matter of fact, many and varied are the types of work done by the Marines. They are being recruited to serve as accountants, aerographers, cryptographers, draftsmen, electricians, Hostess House attendants, laundry workers, link trainers, messengers, motion-picture operators, motor mechanics, personnel workers, telegraphers, aviation storekeepers, and in various other clerical, laboratory, and administrative capacities. To enlist in the Marines, candidates must be between the ages of twenty and thirty-six and must have two years of high school or business school education or its equivalent, or special qualifications in a particular field. Officer candidates must be between the ages of twenty to fifty years of age and must have a college degree, or two years of college and two years of business experience, or special qualifications in a particular field. Rank and pay are equal to those of men, and women may work their way into commissioned grades. Colonel Streeter has made it plain that the phrase "or special qualifications in a particular field" leaves the door open for many women who could not qualify otherwise under the general educational requirements. Other rules are: Both married and unmarried women are eligible for service, but no married women with children under eighteen years of age will be accepted. No woman married to a male Marine can qualify, but if a woman is accepted as a Marine she can marry a Marine after completion of her training. Marriage to members of the other branches of the service will also not affect her standing in any way.

Marines have been schooled at WAVE training centers, but have received "special Marine indoctrination." The school course for enlisted personnel requires six weeks; for officers, eight weeks. Since July 12, 1943 all new recruits are trained at Camp Le Jeune, New River, North Carolina, a large Marine Corps base, instead of at the Naval Women's Reserve Training Schools. "By allowing the women to witness all phases of Marine combat training, the Marine Corps believes they will achieve a greater esprit de corps and better understanding of their own tasks." By Thanksgiving Day, 1943, 12,023 women were enlisted in the Corps, and more than half of them were already on duty in 125 different jobs.

The Reservists do not follow the Marines on land and sea and in the air, because no member is permitted by present legislation to serve outside the continental United States or on ships and combat aircraft. Colonel Streeter pointed out that this situation might be changed if a bill that was pending in Congress in 1943 were passed. She herself would be in favor of overseas service for the Corps if the commanding officers felt they were needed abroad and if suitable housing were available. Asked if she would like to serve overseas herself, she replied with enthusiasm, "Oh, yes. I'd like to be where there was the most action." No special type of woman is being sought for the Marines, the Colonel says. "Americans are individualistic. The women we want are strong, intelligent, willing and able to learn, and willing to submit to discipline."

According to reporters, the Colonel more than fits all these characteristics. They have admired her trimness in her uniform, her straightforwardness, her good nature in parrying the host of questions about organization, rules on pay, marriages, dates, and make-up, the attitude of her family, how she likes wearing a uniform, and her opinion of men Marines. The consensus of opinion has been, "She's all right." A New York *Times* reporter said after one of the early newspaper conferences, "It's safe to say that the Marines would have been proud yesterday of the director of their new Women's Reserve. If fine tradition can be swallowed like a pill, then . . . Ruth Cheney Streeter has done it."

The Colonel is described as sturdy, with rosy cheeks, blue eyes, and light brown hair. She regrets that her two sons who are at sea haven't had a chance to salute her yet and says that her husband, who is keeping bachelor quarters at their Morristown, New Jersey home, is quite "philosophic" about her new job. "He thinks it's a fine thing," she added. "However, I registered at a hotel last night as 'Mrs.,'" she said. "Want to keep things running smoothly at home."

SULZBERGER, ARTHUR HAYS Sept. 12, 1891- Newspaper publisher

Address: b. New York Times, 229 W. 43rd St, New York City; h. 5 E. 80th St, New York City; White Plains, N. Y.

Arthur Hays Sulzberger, president and publisher of the New York *Times,* believes that objective impartiality and freedom from bias are essential to newspaper publishing in a democracy. He believes, too, that the press, particularly in wartime, must be a "responsible" one. "But no press can be responsible unless it is free," he maintains, and he is certain that a free democratic press will play a vigorous and effective part in bringing a lasting peace to the world.

Sulzberger was born into a prominent New York family on September 12, 1891. He is the son of Cyrus L. Sulzberger, a well-to-do importer, and of Rachel Peixotto (Hays) Sulzberger. Educated in the New York public schools, and in the DeWitt Clinton and Horace Mann high schools, he attended Columbia University and was graduated in 1913 with the B. S. degree.

After two years in the cotton goods business of Erlanger, Blumgart, and Company in New York City, Sulzberger went to Plattsburg for training. He saw service in the First World War as a 2nd lieutenant in Field Artillery. In 1917 he was married to Iphigene B. Ochs, the only child of Adolph S. Ochs, famed owner and publisher of the New York *Times* since 1896. After he was mustered out of the Army in 1918 Sulzberger went to work for his father-in-law's paper.

For seventeen years Sulzberger was busy familiarizing himself with all aspects of the newspaper publishing business. When Adolph Ochs died in 1935 his son-in-law was ready to take charge of one of the most important American daily newspapers, and one which is generally conceded to be one of the world's greatest newspapers. In an editorial eulogizing Ochs, Sulzberger wrote, "I pray that some of the qualities of heart and mind which he possessed in such amazing strength may be vouchsafed to me, and that I may never depart from the principles of honest and impersonal journalism which he, with such force and courage, impressed upon our land." Charles Merz, a *Times'* editor, recently paid Sulzberger this tribute: "The members of the staff find a steady inspiration in the integrity, foresight, and complete good faith of the publisher with whom they work."

In recent years charges of suppression and misrepresentation of news have, nevertheless, been brought against the newspaper—brought by both radical and conservative factions among readers. Particularly objectionable to some readers were the retention of an Italian journalist, Arnaldo Cortesi, as the *Times* correspondent in Rome, and William Carney's reports from Spain in 1938, in which the *Times* reporter's "impartiality" seemed to many to favor the Fascist side. (Although the dispatches from Herbert Matthews '43 covering the Loyalist side appeared in parallel columns, many changes were made in his reports.) Unfairness to labor has also been frequently charged. The *Times* supported Chamberlain at Munich, but by 1940 and early 1941 it was being attacked by isolationists because of its support of President Roosevelt's '42 foreign policy and its sympathy with the British. One of the charges brought was that the paper's editorial department was reflecting "a specifically Jewish viewpoint." (This was a criticism readily answered by the fact that, although Sulzberger is Jewish, the *Times'* editorial board of twelve consists entirely of Christians.) Later Sulzberger himself was accused of a specifically anti-Jewish viewpoint—in October 1943, when the *Times* printed a release on the question of a Jewish State in Palestine which, delegates to the American Jewish Conference charged, was timed so as to disrupt the Conference. The story was an account of the first principles laid down by the American Council for Judaism, which opposed the creation of a Jewish State. (In December 1942 the *Times* had given six columns to a speech by Sulzberger calling on the Jews not to agitate for a Jewish Palestinian State.) The *Times* has also been charged with an anti-Russian point of view as well as an over-eagerness to defend the American State Department and its policies. Its editorial support of the French Committee of National Liberation came very late; it did not cease defending Mikhailovitch '42 in his conflict with the Partisans until late in 1943; it is in general quick to express alarm over Russian intentions in Europe. Even the New York *Times'* motto, "All the News Fit to Print," has elicited gibes from readers whose special points of view the paper has ignored and those who feel that although the *Times* has been inclusive it has editorialized its news coverage by position, length, and emphasis. On the whole, however, the *Times* readers feel that Sulzberger has been successful in perpetuating "Adolph Ochs' high tradition of complete, impartial news reporting and restrained editorial comment."

ARTHUR HAYS SULZBERGER

Although the *Times* has steadfastly avoided becoming a party organ, it had in general supported the Democratic Party up to 1940. In

SULZBERGER, ARTHUR HAYS—*Cont.*
1936 the paper lost much advertising because of its support of President Roosevelt. In 1940, however, the *Times'* editors, favoring Roosevelt's foreign policy but disapproving of his domestic policy, opposed the third term. Roosevelt has on occasion been outspoken in his denunciation of that paper's editorial policy, which has been increasingly anti-Administration—on some occasions more so than the Republican New York *Herald Tribune.* In November 1940, in connection with a Federal Reserve Board report, Roosevelt pointed out a discrepancy between an editorial and a financial item in the same paper. "Wouldn't it be nice if the editorial writers of the *Times* could get acquainted with their own business experts?" he asked. Sulzberger's reply was not conciliatory: "Mr. Roosevelt has been consistent at least in his dislike of most newspapers. That is not to be wondered at. They are, after all, the recorders of his utterances from day to day and, accordingly, the mirror of his inconsistencies. His immediate objection to the New York *Times* is that we have not altered our business index to suit our editorial policy. The only answer I can make to this charge is to enter a plea of guilty."

The New York *Times* is an influential newspaper on other fronts besides the political and economic ones. Its music, art, dramatic, motion picture, and book critics are among the best known in the country and their dicta are among the most influential. The Sunday *Times,* which has a large national (and before the War, international) circulation, includes features covering almost every type of human activity: education, science, travel, fashions, homemaking, and many others.

On the labor front everything has not always been serene. Although the *Times* has a contract with the American Newspaper Guild, Sulzberger has always been opposed to a Guild shop, which he identifies with the closed shop. The New York *Times* did not yield to the demands of the New York Newspaper Guild in 1940, but allowed the case to go before the National Labor Relations Board and refused to accept its findings. At the time Sulzberger decided to take "special pains to retain his usual imperturbability." It is said that, before the NLRB summoned him to the stand, he stuck in his vest pocket a piece of paper on which he had scribbled: "Keep calm, smile, don't be smart." During the long four-day hearing Sulzberger kept smiling. It is reported that at the C. I. O. convention that fall the New York *Times* was voted the most popular newspaper (the *Daily Worker* took second place). In October 1943 the *Times* challenged the authority of the War Labor Board to grant union security contracts to the Newspaper Guild, as it did to unions in other industries.

Sulzberger's interests and activities have not been confined solely to newspaper publishing. Besides being a director of several printing and manufacturing concerns connected with his paper, he is a trustee of the Baron de Hirsch Fund, of the New York Foundation, and of the Rockefeller Foundation. He is a member of the Congregation Emmanu-El and a director of the Jewish Theological Seminary of America. He is an incorporator and member of the Central Committee of the American National Red Cross and a director of the New York branch; and as a delegate for the organization he toured 28,000 miles in the summer of 1943, visiting Moscow, among other places. Since the outbreak of the War he has been a director of British War Relief and a member of the Council on Foreign Relations.

Since 1940 Sulzberger has lectured on the role of the press and of America in national and international affairs in several addresses throughout the country. In an address at the Founders Day celebration of the Carnegie Institute (October 24, 1940) he declared that it is the duty of the press to give the facts as nearly as they can be had, "for democracy can be strong only if it is informed and truth alone can defeat the weapons of propaganda." He praised the work of foreign correspondents, who faced personal danger and the handicaps of the most rigorous censorship. During the months when London was nightly bombed, newspapermen remained there on the job to give the best coverage they could. "It is they who make it possible," said Sulzberger, "to keep the trust that you [the public] have imposed upon us."

Like others concerned today with the issues involved in winning the peace, Sulzberger states his conviction that "we must have teeth in our international organization this time." In a speech before the Ottawa Rotary Club (November 23, 1942) he declared that there must also be "some limitation of national sovereignty," and that there must be change, but change in which "the principle of moderation must be applied." He stressed the part newspapers must play in conquering "the frontier of the spirit." Sulzberger said: "It is we in the newspaper world who serve as the insurance that when this War is over the power we have all so gladly deeded over to our respective administrations and fighting forces will be returned to the community. We of the press must be strong if that is to come to pass—we must be vigorous, we must be alert. But, more than that, we must also be responsible."

Speaking to the senior class of Dartmouth College (December 12, 1942) the *Times'* publisher proposed that we return to the boundaries which existed before Japan's attack on Manchuria, and then redraft those boundaries "in accordance with the decisions of a revitalized League of Nations." In this the United States must play its part by joining with the other nations, and by seeing to it "that the new League be given the authority of arms to enforce its decisions." It will take a long time to win the victory, and we must be "prepared to sacrifice for peace as we sacrifice for war."

A supporter of "The Six Pillars of Peace" program which was recently drafted by the Federal Council of Churches of Christ, the *Times'* publisher had an article published in June 1943 on one of the points—"Adaptation of the World's Treaty Structure to Changing Conditions." In Chattanooga, Tennessee, that same year he addressed the Rotary Club on post-War planning, advocating compulsory military service for America to provide a stream of younger soldiers to keep the peace which their older brothers were winning on world battlefronts. In October 1943 he spoke before 3,000 New York City teachers and administrators, stressing again universal military service. He advocated close cooperation between the United States, the British Commonwealth, and Soviet Russia, and warned that vigilance and sacrifice would be necessary to maintain a lasting peace.

Sulzberger was awarded the honorary degree of LL. D. from Rollins College (1939) and from Union College (1940). He is a member of the Advertising Club, the Century Association, the Grolier Club, Lotos Club, Columbia Club, the Players, and Metropolitan (Washington, D. C.) In April 1943 he was elected to the Associated Press' board of directors for a three-year term.

The Sulzbergers live quietly most of the year at White Plains, New York. Their children are Marian Effie (Mrs. Orvil E. Dryfoos), Ruth Rachel, Judith Peixotto, and Arthur Ochs. As the daughter of a publisher, and now the wife of a publisher, Mrs. Sulzberger shares her husband's interest in the editorial as well as the business side of publishing. She is also interested in various welfare activities: she is secretary of the Girl Scout Council and chairman of the Girl Scout War Emergency Fund.

Sulzberger is described as "tall and good looking, his hair neatly parted in the middle. He dresses smartly but quietly. His taste runs to fine and expensive objects, such as ornately bound books. Guests who traditionally arrive at his annual New Year's Eve party at four in the morning, and others who know him well, characterize him as possessing an excellent ability to relax. He combines a gift for writing light verse with an aptitude for poker."

SUMMERSKILL, EDITH CLARA 1901-

British Member of Parliament; physician

Address: b. House of Commons, London, England; h. 1 Fitzroy Park, Highgate Village, London, N. 6, England

A vigorous defender of fair play for women, Laborite member of Parliament, and able physician, Dr. Edith Summerskill has been called "one of the most intellectually and physically attractive women in Britain." Since 1940 Dr. Summerskill has ardently battled for the inclusion of women in the British Home Guard "with equal rights with men and no privileges." Not only as a doctor, but as a life-long champion of better social conditions in her country, she has more than once prodded the slow-moving or indifferent members of the House of Commons to action on much-needed social legislation. In December 1942 Dr. Summerskill pleaded for the repeal of Britain's inadequate venereal disease regulation, calling the responsible Minister of Health "a Victorian spinster reared in a country parsonage and sheltered from the facts of life."

British Official Photo

DR. EDITH CLARA SUMMERSKILL

The red-headed fighting British feminist has lost a good many rounds in her Parliamentarian social battles, but she continues to come back hard with new ammunition. Edith Clara Summerskill was born in Doughty Street, London in 1901, the daughter of Dr. William and Edith Summerskill. Educated at King's College, London, she studied further at Charing Cross Hospital and qualified as a doctor in 1924, specializing in gynecology.

The daughter of a physician, she also was married to one, Dr. Edward Jeffrey Samuel, in 1925. Dr. Samuel is in 1943 with the Royal Army Medical Corps. Prior to his service with the armed forces she practiced for a number of years in partnership with him. Dr. Summerskill, who has done much to aid British working-class mothers and their children, is herself the mother of two: a son, Michael, and a daughter, Shirley.

As a gynecologist, and a doctor with a general practice among the poor, Dr. Summerskill "had seen plenty of needless suffering and had railed and written against it." But she soon learned that a doctor, working alone, could do little "while politicians held the purse strings." For that reason, although she had no experience and no political connections, she decided to become a candidate for office. Her first attempt was in 1934, when she contested the Putney, London, by-election as the Labor candidate, running on a "No More War" platform. She failed, but at least knocked off 18,000 votes from the previous Conservative majority.

That same year, she became a member for the Green Lanes division of Tottenham in the Middlesex County Council. In 1935 she lost the Bury by-election, but in 1938 she campaigned on street corners and in public halls against Adolf Hitler '42. "Mr. Chamberlain's

SUMMERSKILL, EDITH CLARA—*Cont.*
childlike faith in dictators," she said, "is not shared by the people of this country." The votes of the working-class women for Dr. Summerskill piled up and accounted for her election that year as Labor Member of Parliament for West Fulham, London. She established a precedent—and created a minor sensation—by taking her seat in her maiden name.

Edith Summerskill, M. P., still practices as a doctor. But now that she had a wider audience for her social ideas, she uses it. "I like men very much," she said, "but I am an unshamed feminist and I want women to get a square deal." She became active on several committees and associations working toward fair play for women. As president of the Married Women's Association, which she has called "the nearest thing the housewife has to a trade union," she has often demanded "pay for housewives." Through her efforts a bill was drafted to fix a legal sum which any wife could claim on her husband's wage, with tribunals to settle disputes. Though many women did not expect ever to see the bill become law (some probably would not welcome it as law), they all cheered the fighting spirit behind it.

Dr. Summerskill also became vice-president of the Socialist Medical Association. She gave valuable help to the Advisory Food Committee. She joined several other well known women on the Women's Consultive Committee set up to advise the Government on womanpower in wartime. "In this total war," she said, "women should be allowed a say in industry, the forces, and the civil defense services. They are assessed at four-fifths of a man for purposes of compensation—in some cases I feel they are worth six-fifths."

The War Office had decided in 1940 that women should not serve in the Home Guard. In explaining the administrative details of the Home Guard before Parliament, Sir Edward Grigg, Under-Secretary of War, called it "a lusty infant for six months, strong of constitution, powerful of lung and very avid, as every healthy infant should be, for supplies." "But an infant of only one sex," shouted Dr. Summerskill. "Most infants are," Grigg retorted. But Edith Summerskill was not daunted by the consensus of opinion against women in the Home Guard. She said there were "big, hefty girls" who were capable of going on patrol for a few hours, and pointed out that southern England already had a women's mounted unit watching for Nazi parachutists. "If there is any invasion," she remarked, "is it likely that the women of Coventry, London, and Liverpool will retire to their homes? No. It is far more likely that those women will go into the streets and barricade them with their household goods."

Backing up her words with action to prove her points, Edith Summerskill demonstrated her ability to shoot by scoring seven bulls-eye shots out of ten on the House of Commons rifle range. She pleaded that women at least be taught to shoot, so that in case of invasion they might pick up the rifles of men who were killed or wounded and carry on the battle. Accordingly she proceeded with the organization of the "Women's Home Defense," which aimed at teaching how to use rifles, revolvers, Tommy guns, and other weapons. They wore no uniforms, performed no drills, but hundreds were coached at many centers throughout the country. "These women . . . from chorus beauties to elderly farm wives, have learned to make 'Molotov cocktails' and use them against tanks, to act as snipers against an infiltrating enemy, to join in street fighting defense of their homes . . . and everything to halt an invader. . . . During one maneuver [against men] the women . . . came out the victors after a fiercely contested tactical exercise that raged all night."

In 1941, when the question of women in the Home Guard again came up—and was voted down by the War Office—Dr. Summerskill became fighting mad. "In the north of England mock invasion last week," she exclaimed, "they actually asked for a thousand women to pretend to be hysterical. That's just like the War Office. I was simply staggered when I heard of it, for the heavy German raids have shown that hysterical women simply do not exist any more. . . It is ridiculous to say how wonderful the Russian women are and at the same time expect our women, who number more than half the whole population, to hide in cellars." Dr. Summerskill went on to say that she didn't believe women in the Army would be good on the offensive. "They wouldn't have their hearts in it. They're too constructive and they haven't the aggressive instinct of men. But on the defensive, fighting for their homes and children, they would be absolutely ideal." Unofficial quarters were beginning to back up Dr. Summerskill, since the increasingly urgent need for manpower made it idle to say that the question of women in the Home Guard was "definitely ruled out."

Since the outbreak of the War Dr. Summerskill has also written *Babies without Tears* (1941), a book of child guidance for young mothers, written from her own personal and clinical experience with children, and a pamphlet, based on her ideas of the part women should play in the war effort, *Women Fall In; a Guide to Women's Work in Wartime* (1941).

Apart from the Home Guard issue, Dr. Summerskill pressed on with her plans for social advancement. These included the compulsory pasteurization of milk, a law particularly necessary since the milk is distributed free to British school children. In December 1942, moreover, when the House of Commons debated the issue of venereal control, it was she who moved that Defense Regulation 33B be annulled, since it made treatment of venereal diseases compulsory only when two other people could be found who would assert that they had been infected. Figures showed that the spread of the disease in Britain since the outbreak of war had increased some seventy per cent. This meant, said Dr. Summerskill, that "the casualties during the last year from venereal disease were far greater than the casualties of the Blitz. Applications to civilian clinics alone totaled 70,000, and there must be as many more, besides those in the armed forces—possibly twice as many more—who have not been traced." The British Health Minister, Ernest Brown, deplored the condition, called for "indirect action to discourage promiscuity," and appealed for the support of the churches in spreading knowledge of the disease and in "bringing home the moral and health issues involved." Dr. Summerskill, indignant over what she considered an evasive, hush-hush policy, charged the Home Minister with being a cloistered Victorian spinster, and said that bold, courageous action was demanded. Her motion to annul 33B was defeated by a vote of 245 to thirty-one. Supporters of auburn-haired, gray-eyed Dr. Edith Summerskill, however, knew that her fight for this social measure would continue as surely as the women who had sent her to Parliament knew that she would carry on all her campaigns of fair play for women.

TAFT, MRS. WILLIAM HOWARD *See* Taft, H.

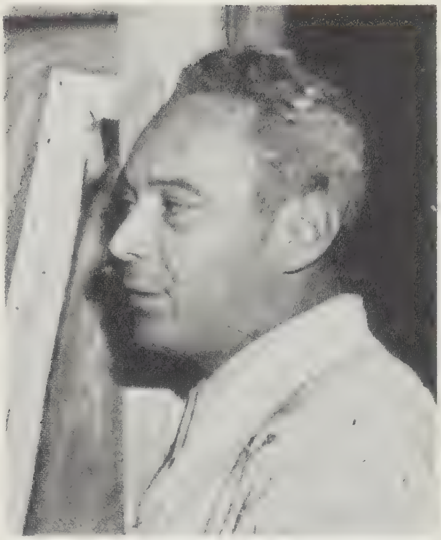
TAUBES, FREDERIC (tou'bes) Apr. 15, 1900- Artist; teacher

Address: b. c/o Associated American Artists, 711 Fifth Ave, New York City; h. 220 Central Park South, New York City

While noted particularly for his research in the technique of oil painting, Frederic Taubes is also recognized as one of the finest modern American painters. It is said that he has been given more one-man exhibitions in the museums and galleries of the country than any other living American artist. His portraits, landscapes, and still lifes are considered arresting both because of the artist's technical achievements and because of his intensely personal, poetic insight. Teaching engages Taubes' interest: he conducts art classes in his New York City studio and summer classes in San Francisco, California. His special interests, however, lie in establishing among contemporary artists the important techniques of painting used by the Old Masters in the guild workshops of Europe. "If Titian walked into my studio today," Taubes says proudly, "he would feel at home. He would see me grinding and mixing my own paints exactly as he did 400 years ago."

Frederic Taubes was born in Lwów, Poland on April 15, 1900, the son of Louis and Fanny (Taëni) Taubes. Since Taubes' father was a Viennese banker, the boy's formative years were spent in Austria. Drawing before he could read or write, Taubes began the study of art at the age of six. "By the time he was ten he already had a good knowledge of anatomy. He was less brilliant, however, in school, and, after failing to pass his high school exams . . . he ran away to live in a studio shack in the Austrian Tyrol. There he painted landscapes and lived by poaching game from the forest."

At last Taubes' father relented and gave him a small allowance so that he could continue his painting. The young man traveled to Paris, Munich, Weimar, and other art centers to study. In 1916 graduated from the Art Acad-



FREDERIC TAUBES

emy at Vienna, he went on with his work at the Munich Art Academy, and in 1920 was a student at the Weimar Bauhaus. Travels through Europe (Germany, Italy, France) and the near East (Egypt, Syria, Palestine) were the basis of further study. He was acclaimed at twenty-one with his first exhibition in Vienna. During all this time Taubes had been painting Cubistic and Dadaistic pictures.

The chaos resulting from post-War inflation ruined Taubes' family, and the artist was forced to support himself. He became in rapid succession a sign painter, a poster artist, and a magazine illustrator. He sold cotton, license patents, and became a professional guide for ski parties in Switzerland. He did not neglect his painting, however.

After working as an artist-reporter on a Viennese newspaper (1925), Taubes fled what he terms "the cataclysm and ruin of the Danubian city," traveled as an itinerant painter in Europe for a few years, and finally, in 1930, landed in New York with his wife, Lili Jacobsen, to whom he had been married in 1923, and his son, Frank Alex, born in 1924. Taubes settled in New York and became an American citizen.

Taubes has been visiting professor of art at Mills College, Oakland, California (1939), at the University of Hawaii at Honolulu (1940), and a Carnegie visiting professor of art and resident painter at the University of Illinois, Urbana, Illinois (1941-42). Extremely popular and much sought after as a teacher, he also instructs private classes at his New York studio. In September 1943 his appointment as visiting instructor to Cooper Union, the University of Minnesota, and other universities was announced.

Since coming to this country Frederic Taubes has had his paintings hung in a majority of the nation's museums, including the Metropolitan Museum of Art, the Fine Arts Gallery of San Diego, the San Francisco Museum of Art, Santa Barbara Museum, the University of Illinois, Mills College, and the Art Association of Bloomington, Illinois. Taubes exhibits regularly in all the national exhibitions, and his one-man shows have been seen in all the important museums of the country. His paintings are shown permanently at the Associated American Artists Galleries in New York City.

Taubes' poetic handling of his subjects, his paint techniques, and his remarkably orchestrated use of color—"his still lifes glow supernaturally; his reds ring out like a chime" —have been remarked by many critics. One has written of the painting technique of his work: "There is present a flexibility and sensitivity in handling pigments that yield an almost intrinsic beauty to the surface of his pictures. To explain this one must have recourse to the somewhat cryptic French term *matière,* which implies mastery in the physical manipulation of pigments, building up to precious square inches of paint surface that in themselves have power to stir emotional expression in the eyes of a perceptive beholder."

His remarkable accomplishments with textural finish, or *matière,* are the result of Taubes' careful studies of the physical properties of paint. We are told that visitors to his New York studio "are likely to find him bending over a gas burner, melting down chunks of resin in a tin can." To make his own varnishes Taubes bought—in pre-War days—his copal from Zanzibar, gum dammar from Batavia and mastic from the Greek island of Chios. "Full of spicy fragrance, his studio smells like an alchemist's shop. Powdered pigments which are later mixed with oil, are stored on shelves in a rainbow of glass jars. In the corner are piles of raw canvas, which Taubes prepares himself by coating it with a chalk emulsion to give a smooth painting surface."

Mixing his own paints, like the Old Masters, inspires him with greater reverence for his art, Taubes says. It is also considerably more economical. In a week he can prepare, at one-fifth the ready-made cost, enough paint and canvas to last a year. These colors, too, will survive longer, unchanged, on canvas. Taubes admits that, like those of other oil paintings, his colors will darken in 400 years. "But if anyone complains then," he says cheerfully, "they can sue me."

Among the better known of Taubes' paintings are his portraits of Mrs. Taubes, who, according to her husband, feels so elated at having her portraits hanging in three museums that she threatens not to cook any more. His landscapes include many Western subjects resulting from trips through the Western states, which Taubes describes as "trips through geology." In one picture broken trees and blown clouds indicate the ravages of the high wind, and scattered over the scene are the cone-shaped geological formations called "stacks," produced by the wind grinding against the mesas. His kitchen and studio are the scenes of a good many of his still life pieces. *Studio Interior* is described by *Life* Magazine as "a unique combination of still life and figure painting, enlivened by sharp lights and shadows, and by Frederic Taubes' free, speedy brushwork." Mrs. Taubes appears in this also, as do a nude figure of a professional model and a life size manikin which Taubes keeps for studies in drapery. "She is a wonderful model," he says, "because she never talks back." The afore-mentioned issue of *Life* (January 15, 1940) also reproduced Taubes' *The Birth of a Nation,* a painting on the filming of D. W. Griffith's Civil War epic.

Described as "short, neat, and enthusiastic," Taubes is tenacious as well, having often painted as much as fourteen hours at a stretch. He has lectured to many audiences of farmers and housewives, and is also a writer, the author of one of the most highly regarded technical books of his profession, *The Technique of Oil Painting* (1941). In 1942 appeared *You Don't Know What You Like,* a layman's yardstick to esthetic judgment in art. Taubes writes essays on technique and art criticism for various magazines. He has also a monthly page, "The Taubes' Page," and a "Questions and Answers Department" in the magazine *American Artist.* His book, *Studio Secrets,* was published in the fall of 1943.

TCHELITCHEW, PAVEL (che-lē'chef pä'vəl) Sept. 21, 1898- Artist

Address: h. 360 E. 55th St, New York City

"The most fantastic of stage designers," "the most metaphysical-mystic of Russians," "probably the best draftsman of the twentieth century," painter Pavel Tchelitchew is one of the most debated of modern artists. Many critics profess not to understand his paintings; others regard his work as simply "hideous"; some acclaim him as one of the greatest contemporary painters. Most agree that he is one of the most revolutionary, for with his revival of metamorphoses (changing forms) and multiple perspective in art, he attempts to smash the fixed canons which he believes have limited artists long enough. "It is not too much to claim for him," wrote Lincoln Kerstein, "that he has discovered and can teach a new way of seeing."

Pavel Tchelitchew was born on September 21, 1898 on his father's huge estate just outside Moscow, the eldest son in a family of two daughters and two sons. His parents, Theodore and Nadijda (Permiakoff) Tchelitchew, were "only mildly interested in art," and although the boy was given a good education, he had to train himself artistically, according to Maurice Raynal. The family was very wealthy, and the children had a variety of governesses, French, English, and German. Tchelitchew's art was profoundly influenced by his early life. Growing up in an atmosphere of Russian and German folklore and fairy tales, "where fact and fantasy never opposed each other but blended happily," the child pored over volumes in the family library illustrated by Gustave Doré and by the stage designs of Bakst and Benois. He collected multiple image post cards and hid them from his nurse. Legend has it that young Tchelitchew, who began to make pictures at the age of five, first produced a portrait of his mother *en amazone*—on a chestnut horse—in oils. At eight he completed a head of Medusa.

PAVEL TCHELITCHEW

When Pavel Tchelitchew was twelve he attended an art school where the class always painted statues, a procedure which irritated the embryo artist. "Always," the New York *World-Telegram* quotes him as having said, "we painted statues, Juno, Venus, and such; it was so boring. I was dreaming and thinking of beautiful scenery, so I painted landscapes from memory instead. My professor was pleased, thought it important that I should find a landscape in Jupiter's beard."

By the time he was fifteen the boy was painting big still lifes. He attended the University of Moscow for two years, but in 1917 the Revolution broke out. The Tchelitchews were aristocrats, although Theodore Tchelitchew had been known "as a liberal who had long advocated the distribution of land rights to the peasants." In the fall of 1918, therefore, after a year of the Revolution, they were forced to flee Moscow for Kiev. Young Tchelitchew was then twenty, and, faced with the necessity of earning his own living, determined to become a professional painter. He attended the free courses offered by the Kiev Academy of Art, and although he "was never tutored by a painter," he helped Rabinovitch, now one of Soviet Russia's most famous stage designers, execute the sets and costumes for a small music hall which had weekly program changes. The youth's painting, completely abstract at

TCHELITCHEW, PAVEL—*Continued*

this time, became slightly more representational before his departure from Kiev in 1920, and he evolved the theory that "a line cannot be straight, because, to be related to man's spherical existence, a line must be endless, therefore a circle."

Art proved unremunerative, and Tchelitchew moved to Constantinople, then to Sofia, and finally arrived in Berlin in the autumn of 1921, where he soon received a series of commissions for stage decors and costumes. His reputation grew, and his services were ordered by an important theatrical production and also by the Berlin State Opera production of *Coq d'Or*. During the last year of his stay in Berlin the young artist met the great ballet impresario Diaghilev, and was asked by him to go to Paris to execute a commission for the ballet. The commission did not materialize until five years later, but Tchelitchew left for Paris the next year (1923) anyhow. Arriving in Paris at the age of twenty-five, the young man "denied the Cubists" but paid homage to Picasso's '43 Blue and Rose Periods, and, attracting attention at once, soon assumed the leadership of the short-lived Neo-Romantic group. This group, which included, besides Tchelitchew, Christian Bérard and the Berman brothers, consisted of painters who had reacted violently against abstract art and who were trying to restore a lyric feeling of movement and place to painting. One critic feels, however, that the discipline of Tchelitchew's abstract painting never left him: "He fills his most romantic pictures with all sorts of technical tricks."

In 1925 Gertrude Stein discovered the Neo-Romantics. She bought Tchelitchew's pictures, and, more than that, commended him to the Sitwells in England. Through them, as through "the whole English socialistic coterie they represented," came the young painter's initial big success.

Tchelitchew had spent the autumn and early winter of 1924 painting landscapes in the Bois de Boulogne and in parts of Brittany. Becoming interested in ovoid forms in space, the young painter was fascinated by the human face, which interested him above all other subjects as soon as he discovered its affinity with an egg. He worked first in black and white, gradually adding ochre and red ochre to his palette. Next he began to paint bodies, "giving the previous faces a definite existence in time and space by relating them to the bodies. These bodies were frequently composed of the unrelated domestic objects of studio still life."

In 1925 he began his experiments with multiple perspective. Making use of Picasso's technical exploitation of the camera's distortions, Tchelitchew painted pictures with double and triple perspectives; that is to say, with two or three points of view applied to various objects in the same picture. This technique was a revival or extension of the preoccupation with perspective popularly supposed to have been inaugurated by Paolo di Dono Uccello (the one Italian artist of whom Tchelitchew "always speaks with worship") and later developed by other artists, from Masaccio through Piero della Francesca and Leonardo Da Vinci. "Michelangelo on the Sistine ceiling, and Greco in his *St. Maurice and the Theban Legion*," according to Lincoln Kirstein, "indicated the possibility of a dual or even of dispersed viewpoints." Modern developers of the same theme were Georges Seurat and the Cubists. The latter, however (although they "eventually organized given forms in a given space on a given surface in their most essential and laconic relation"), used, for the most part, still life as subject matter, and minimized "all human interest . . . to accentuate formal elements, so that Cubism tended to become useful chiefly as decoration."

Tchelitchew's first multiple-image picture, *The Ship*, was painted in 1926, the year of his first exhibition (at the Galerie Druet in Paris). "The sky in *The Ship* consists of nine eggs which are at the same time a bunch of grapes; the water is the shadow cast by the egg-grape sky." At this time blue and its ranges were predominant in the artist's palette. Clowns and circus scenes began to interest him in 1926 and 1927. First he painted single figures with shadows from which second single figures were born, "then increasingly interlaced and interchangeable groups—Siamese twins sharing life and limb [multiple image metamorphosis]. It was not as a joke, but as a highly intellectualized experiment that he painted a friend with a string of acrobats running across his coat." Tchelitchew's use of metamorphosis, a critic wrote, has pushed perspective one step further. His conception of metamorphosis or change of form is "linked to the realistic forms hidden in the garden arabesques of Persian carpets, to Jerome Bosch, and to the monsters Leonardo saw in a saturated wall, whose corruscations formed a fluid universe, as his eyes saw shifting outlines and the looming forms they enclosed." Irreverent critics, however, saw merely "high-powered guessing games in which the winner will be the one who can spot the most human or animal faces and forms in a scrambled landscape."

Between 1927 and 1928 Tchelitchew included, among the more usual media, sand and coffee in his paintings. One of the last to retain the dark almost monochromatic palette of the Neo-Romantic school, he now began to work in brighter colors. From blue and ochre, he worked into green, then red (1931 to 1932), and finally "red curdlingly laced with blue. His confrères were frankly critical when he painted *The Strawberry Basket* entirely out of geranium lake—a color since popularized as shocking pink and now regarded as more trite than alarming." His color range gradually became less limited, however, and his later paintings showed "the colors of the rainbow and of Oriental Russia." In the early '30's Tchelitchew took a trip to Spain which resulted in a strong Spanish influence on his work.

At about this time the artist began to see people as landscapes—an idea first suggested to him by the "mountainous limbs" of a Polynesian model. He explains that this is in some degree the result of his being shortsighted and refusing to wear glasses, "so that his apprehension of a figure is quite unlike that of the man with normal vision."

In 1934 Tchelitchew moved to New York, exhibited his pictures, and was given a lukewarm reception. Made sad and restless by this failure to understand him, the painter readily accepted a commission from Paul Jouvet to do the sets for his *Ondine* in Paris. The play was a tremendous hit and made a good deal of money. Tchelitchew, however, returned to the United States, which he has made his permanent home, occasionally returning to the continent for an exhibition or in order to design sets for the theatre and the ballet. James Thrall Soby feels that Tchelitchew's artistic integrity, suspect because of his preoccupation with the fields of theatre and fashion, is beyond question. Although the painter has consistently and brilliantly worked in both these fields, Soby wrote: "He has done so with a full realization that his conscience must remain doubly alert against the very real temptations which professional make-believe can have for an artist whose primary job is to tell the truth as he sees it."

Tchelitchew is also a portraitist, one of the very few among *avant-garde* European artists. He returned to the use of a normal human figure, although his portraits are often bizarre. In his *Portrait of Constance Askew* he "cleverly included fantasy" by using multiple imagery—in this case three separate views of the face—even while retaining the likeness. He painted Edith Sitwell seven times, and, observed Rosamund Frost in *Art News,* "the redoubtable full-length one, half abbess, half literary seer, proved beyond contention that Tchelitchew could turn out a cracking good portrait which was a 'finished' picture by the most exacting standards."

Tchelitchew's *Phenomena,* composed as a faceted diamond, and, in subject, "the orderly horror of our epoch in terms of Marxian opposites," was exhibited in England in 1938. A British critic, Graham Bell, remarked that "only a super-sophistication amounting almost to perversity could find M. Tchelitchew's great work anything but hideous. . . The criticism of M. Tchelitchew's picture . . . is not so much that it is horrid—which is legitimate—but that the horror is not expressed in terms of paint. . . One feels that . . . this picture must have a message. But, except insofar as it describes a private neurosis, the message does not come across." The same critic asserted that Tchelitchew was not a painter because he had no color sense and little or no feeling for paint. Another, more favorably disposed, critic suggested that *Phenomena* is "possibly a tract, naïvely over-charged with intention, but in both detail and concept it repays study."

In the fall of 1942 Tchelitchew was given a retrospective exhibition, "the first really comprehensive showing of his work," at the Museum of Modern Art in New York City. It included drawings, designs for the ballet and the theatre, and paintings, especially *Cache-Cache* (Hide and Seek), an immense canvas, the *pièce de resistance* of the show. This combines multiple-image metamorphosis with triple perspective. The central multiple image is a tree "as a joined hand and foot and also as the head of an aged Viking, with its left eye the butterfly on the tree trunk, its right eye the arm of the girl spread-eagled on the trunk, its nose the girl's torso." Woven into the branches was also a number of children's heads or "heads-and-figures." To the critic of the New York *World-Telegram* it looked like "a panorama of fresh cut beef livers." Edward Alden Jewell thought that it might be immortal.

Tchelitchew's art—his media as well as his style—disturbed many of the critics. "Pavel Tchelitchew," remarked the *World-Telegram* (in an article headed "Russian Artist Out-Dalis Dali, Plays Peekaboo with Paint Brush"), "can spot Salvadore Dali twenty paces and still beat him through Bonwit Teller's window. M. Tchelitchew paints nudes in oil, sand, and coffee, and in oil and sand on canvas, and ships in gouache, sand, and coffee. . ." Clement Greenberg in *The Nation* commented: "Pavel Tchelitchew is one of those whose function it is to supply up to date art for the forward looking masses on Fifty-Seventh Street. . . In essence his work is a vulgarized documentation of most of the fashions in advanced painting since 1920, and his pictures, taken even on their own terms, are deadened by their trite and static organization. Everything stays too obediently in its place, the value of one color is too close to the value of every other color in the given picture, tonality is too even, design too balanced. His latest oils with their shrill saccharine color and gelatinous symbolism set a new high in vulgarity." Jewell of the New York *Times* felt that, although he could not presume to have reached yet, in his own mind, "anything like a rounded evaluation of Pavel Tchelitchew's *oeuvre,*" and was still "the humble neophyte, marveling, questioning, alternately chilled and running up a temperature," he could safely state that "Tchelitchew is a wizard with paint, and his drawing is magnificent."

Various labels have been affixed to Tchelitchew—Neo-Romanticist, Surrealist, a late member of the School of Paris. The first no longer applies since the school is supposedly defunct, and the others, it is contended, never did. Kirstein considers his work essentially "traditional and classic" in the sense that it is "disciplined and objective." Most other critics disagree as to the painter's objectivity: Jewell remarked that he has "a subconscious that will get him even if he does watch out." Tchelitchew has been comparatively little influenced by the Italian painters—Uccello, and, to a lesser degree, Tintoretto, Piero, and Piazzetta, excepted. He is under obligation to Chaldean, Indo-Hellenic, and Byzantine art, as well as to the French moderns, particularly Seurat, but he is essentially a Northern painter —a Russian—and he owes much to Breughel and Grünewald.

For his choice of objects, Soby wrote, Tchelitchew has always been attached to realistic forms, "not because of the ordinary impulse to overcome the difficulties of naturalistic rendering, but simply because a realistic form, that is, a form which has an identical connotation to everyone looking at it, may be shown from multiple angles of perspective and still maintain its identity." An "excellent perspectivist" and a "sound anatomist," Tchelitchew, according to Waldemar George, is interested primarily in the human form. "His interest is in living beings. . . Understanding of mankind is the principal object of his study and experience." Stark Young considers that "what weaknesses he has arise from variations of

TCHELITCHEW, PAVEL—*Continued*

enthusiasm and debilities in mood and intuition. His virtues are all on the plane of the choice and distinguished, and sometimes the exotic, never cheap. They express community and tradition combined with a proud individuality, passionate, wayward, and solitary."

Greek Orthodox by faith, the painter is blond, five feet nine and one-half inches tall, and weighs 150 pounds. A superb conversationalist, he talks as feverishly as he works. "There seems to be almost no art he cannot master," and this, commented *Time* Magazine, "seems to be the source of his strength and his weakness; for, like a jack-of-all-arts, Tchelitchew lacks the profundity that makes a painter great." Tchelitchew has settled down in a New York penthouse studio after living for a time in the Vermont and Connecticut countrysides. He likes America because "like Russia it is not complete." "America is developing culturally," he said, "and your extraordinary architecture is proof of this. All cultural changes are indicated first by architecture. . . And your art will follow this expression. In time I expect to be understood. The time will come when they will see me clearly."

TEDDER, SIR ARTHUR WILLIAM 1890- British aviation officer

Address: b. c/o Air Ministry, Adastral House, Kingsway, W. C. 2, England

Sir Arthur William Tedder is a small, soft-spoken Scot who was British air officer commanding in chief in the Middle East during the two Libyan campaigns of 1942. The British triumph of November 1942, when Rommel's '42 armies were completely routed, was in large part due to his reorganization of air strategy to bring about perfect coordination of timing and effort with the ground forces of Sir Harold Alexander '42. Probably "the most experienced and skilled man in the world in the use of the airplane as a tactical weapon," he also "furnished and directed the air warfare lightning that as much as any single thing made possible General Sir Bernard L. Montgomery's '42 drive from El Alamein to Italy." On December 28, 1943 he was named deputy supreme commander, under General Eisenhower '42, of the Allies' invasion force.

Born in 1890, the younger son of Sir Arthur John Tedder, Arthur William Tedder showed few symptoms of military genius during his student days. He attended preparatory school at Whitgift, then went on to Magdalene College, Cambridge, where he read Shakespeare more avidly than Caesar. He received his B. A. in historical tripos in 1912 and was awarded the Prince Consort Prize the following year. After graduation he played professional rugby for a while, then went to Fiji as a colonial servant of the Empire in 1914, and that same year received his commission in the Dorsetshire Regiment. In 1916, the year after he married Rosalinde Maclardy of Sydney, Australia, his *The Navy of the Restoration* was published. (Tedder is known as a scholar as well as a soldier—one who can quote from almost any contemporary poet one might wish to name.)

In 1916 young Tedder was seconded to the Royal Flying Corps. During the First World War he served in France (1915-17), winning the Italian Medaille Militaire in 1916, and in Egypt (1918-19), where he was mentioned in dispatches three times. In 1919 he was transferred to the Royal Air Force, and from 1922 to 1923 he commanded the No. 207 Squadron at Constantinople. A member of the Royal Naval Staff College from 1923 to 1924, in the latter year he was put in command of the No. 2 Flying Training School, and he remained in this post until 1926, when called to the Air Ministry.

Tedder served at the Air Ministry until 1927. In 1928 he was at the Imperial Defence College, and in 1929 he became a member of the Directing Staff of the R. A. F. Staff College. From that time on his part in the development and training of the R. A. F. was a large one. From 1932 to 1933 he was commander of the Air Armament School at Eastchurch; from 1934 to 1936 director of training in the Air Ministry; from 1936 to 1938 air officer commanding the R. A. F. in the Far East; from 1938 to 1940 director general of research and development.

In 1940, following the outbreak of the Second World War, he became deputy air officer commanding in chief of the R. A. F. in the Middle East. At that time Sir Arthur Longmore was air officer commanding in chief in the Middle East, but criticism after the British disaster in Crete in the spring of 1941 brought about his removal from that post. The land forces had never had any real chance of repelling the Nazi invasion, for the R. A. F. had withdrawn from Crete immediately after the Nazi blitz began because they did not want to serve as bomb-fodder for the Luftwaffe operating from nearby Greek shore bases. For twelve days the Army remained at the mercy of Nazi bombers operating from bases on the Greek mainland—bases which had been called "inadequate" for use by the British only the month before. (For the

Germans these bases were "adequate" after the occupation of the island because the nearest British-held bases in Africa were 400 miles away.) The Crete air fields had also been left in a condition permitting the Nazis to land on them. Tedder, therefore, endeavored to analyze the reasons for this disaster when in June 1941 he succeeded Longmore as British air chief in the Middle East, a domain "that stretches now from Malta to the Persian Gulf and extends south to Madagascar."

He realized spectacular air activity must be subordinated to the larger ideas of integrated strategy, as did Churchill '42 when in the fall of 1941 he ruled that the Army chief must be given all aid by the Air Force, "irrespective of other targets," when battles are in progress, and that the Army chief must specify targets and tasks. At that time these mainly included air support for Admiral Harwood's light vessels; attacks on Axis warships in the Mediterranean and submarines in the Persian Gulf; the bombing of cities and airdromes; sporadic desert fighting. Under Tedder, the R. A. F. men did their job so well that in January 1942 their chief's name appeared on the New Year's honors list as Knight Commander of the Bath.

In April 1942 Tedder visited Malta and, seeing what was happening there, promised to send reinforcements and to keep on sending them. That same spring he was in command of the Air Force in the Libyan campaign. He had to be a pioneer and experimenter, one who decides what is needed and then fights to get it. And if the first Libyan campaign of 1942 ended in a victory for Rommel, it was still agreed that it had been the first campaign of the War in which Britain had been able to give more than nominal air support to her Army.

What is more, Tedder was still capable of learning from disaster. He busied himself with the development of an entirely new strategy, particularly after Alexander's appointment as the new army chief. Finally, when the British offensive in Libya started in October 1942, Rommel for the first time saw the British Air Force used as front-line offensive artillery, landing fields and paraphernalia being moved even while the planes were in operation. He saw the R. A. F. hold off enemy anti-tank guns while the Allied tanks advanced, saw Axis concentrations dispersed before they could counter attack, saw his fuel and ammunition dumps made useless. Axis motor vehicles transporting food, ammunition, gas, and oil never reached their destination. British raids on Axis air fields had made it difficult for the Nazis to get planes into the air at all, and before long the British met Tedder's test for air superiority: "whether on land, sea, and air you can do what you want to do without serious interference from the enemy in the air."

Tedder's leading role in the victory which followed was recognized on November 24, 1942, when he was raised by King George's '42 order from Knight Commander of the Bath to Knight Grand Cross of the Bath for "distinguished services." Four days later he took over the post of vice-chief of the Air Staff, while Marshal Sir Sholto Douglas '43 succeeded him as air officer commanding in chief in the Middle East. Tedder saw in the new turn in the War which came that month the means of achieving the long-time aim of the R. A. F.: to control a reasonable part of the air over the Mediterranean, thus making possible the passage of Allied shipping through the sea.

British Official Photo

SIR ARTHUR WILLIAM TEDDER

When General Sir Bernard L. Montgomery and Tedder reached the borders of Tunisia, General Eisenhower, who flew to them in a B-17, was impelled to draft Tedder for the "land and air team he was forging to drive the enemy out of its last stronghold on the African continent." In May 1943 Tedder launched his greatest experiment—carpet-bombing, in which one bomb overlapped the previous one. He threw wave upon wave of bombers across a stretch of General Jurgen von Arnim's line; and when Allied troops charged through the gap, driving the Germans and Italians to their Tunisian debacle, there was a strip four miles long and 1,000 yards wide of which hardly a yard was unplowed by explosives. Tedder also helped to improvise the ingenious defense that made it possible for the Allies to use carrier planes at the Battle of Salerno, when a landing was undertaken at the extreme range of the Allies' land-based aviation. The latter was used to protect the carriers, so that the carrier-based aviation was freed to protect the Allied landing forces.

When on December 28, 1943 Tedder was appointed supreme commander under Eisenhower of the Allies' invasion force, it was pointed out that this was the first time the Allies had given so important a task to an air commander. Those of the "Victory Through Airpower" school were particularly pleased, since Tedder has said that "air supremacy will win the War." The orthodox could not have been so pleased: Tedder is also famous for the remark, "To hell with history, what's the problem?"

(Continued next page)

TEDDER, SIR ARTHUR WILLIAM—*Continued*

Tedder is short, lean, "jug-eared," with twinkling blue eyes. A pipe is nearly always between his teeth. Before his present appointment, *Time* described him as a tough and wiry man who "never looks quite well. In the blazer which he puts on to avoid the saluting problem when he drifts around to a cricket match at Cairo's Gezîra Club, he looks something like a pale, thin Gremlin. His appearance worries his friends. Lord Trenchard, marshal of the whole R. A. F., on a visit to Middle East headquarters, kept asking him: 'Are you all right, Arthur?'" To his men Tedder has always been known as "The Chief," famous for his "frankness and biting wit," his fondness for argument, his wisecracks, his habit of slouching into an easy chair with a "half-amused, scrutinizing expression on his face" as a prelude to delivering some penetrating comment on R. A. F. matters. He always liked to pop into squadron posts and ask the maintenance man to ask him questions. Once he wasn't recognized (he was without his coat), and was kidded by the air force men about his regulation black tie. "Oh, I'm a headquarters bloke," Tedder reportedly told them. "You know how stuffy the chief is."

Lady Tedder was killed in an airplane crash in Cairo, Egypt on January 4, 1943 when returning from an official inspection of the R. A. F. hospital at Bengasi. In October 1943 Tedder was married to Mrs. Marie Seton Black, who is assisting in running Malcolm Clubs for R. A. F. personnel in North Africa. She had previously organized clubs in Algiers and Tunis, both of which had been opened by the Marshal. A son is still in school in England and a daughter is in the W. A. A. F. When Tedder's oldest son, Arthur, was killed in flying combat over England, Tedder, whose hobby and comfort is sketching, didn't say much: he just wandered away for a few days with his sketchbook.

THOMAS, JOHN CHARLES 1891(?)- Baritone; concert singer

Address: b. c/o Metropolitan Opera Association, Inc, Broadway and 40th St, New York City

Not only a rich, "cello-toned" voice, but downright good looks, natural charm, and the physique of an athlete have combined to give John Charles Thomas, Metropolitan Opera baritone, special color and distinction among personalities in the world of music. None of the traditional difficulties that beset young singers stood in his way. His family encouraged him; he was a "natural" baritone from the start; his excellent physical stamina enabled him to take in his stride the rigors of study, rehearsals and extra performances; he was so handsome that worshiping females would stand in line for hours just to see him in his various light opera roles. Possibly the chief difficulty of John Charles Thomas, who wanted to be a serious concert singer, was living down his fabulous musical comedy success. But this the dashing baritone accomplished. He has become, too, almost as well known a sportsman—through his accomplishments in golf, tennis, yachting, and racing—as he is a musician.

John Charles Thomas was born in Meyersdale, Pennsylvania, in or about 1891. His father, the Reverend Milson Thomas, was a Methodist minister, his mother, the former Anna Dorothea Schnaebel, a singer. When John was a boy the three of them formed a trio to sing at the camp meetings at which his father preached. Apparently the young son needed no inducements to sing, but caroled as lustily at home as he did on camp meeting platforms. The story is told that years afterward Savoryard, the director of de Wolf Hopper's Gilbert and Sullivan Company, told him: "Son, I've got one thing against you. You used to sing in a church choir. And those church choir chaps have a frightful reputation. We theatre people have to be careful with whom we associate. But with that voice of yours, I guess I'll take a chance."

Thomas' early schooling was sporadic, acquired at the various towns at which his father happened to be stopping. For a while he wanted to be a preacher like his father; but when he was sent to Conway Hall in Carlisle, Pennsylvania, he became interested in medicine. On his graduation from Conway Hall the fascination of surgery took him to Baltimore's Mount Street College of Homeopathy. At the same time he won a scholarship competition at the nearby Peabody Conservatory of Music. That was in 1910. A quick decision—medicine or music—was necessary. Thomas tossed a coin, and music won.

At the Peabody Conservatory Thomas studied first with Blanche Blackman and later under the Dutch master, Adelin Fermin. He then learned that Henry W. Savage was organizing a road company to tour the South in operetta repertory and attempted to sell himself to Savage by saying he was "a Southerner." He got a hearing, and his voice was all that mattered. Because he had had no stage experience, Savage supplied him with a twelve weeks' course with a summer stock company in New Jersey which played a different bill each week. For Thomas it meant rehearsing operettas from 9:00 to 5:00 in New York each day, and commuting to Newark each evening for stage performances. Fortunately he had physical fortitude as well as talent.

When the unknown young singer stepped onto the New York stage in Tyrolean "lederhosen" for the première of *The Peasant Girl* he stole the show. And, playing at the Winter Garden in *The Passing Show of 1913,* "the handsome blond singer was the answer to the Matinee Girls' Prayer. Such hair! Such a figure! Such dimples! And *what* a voice! Leading ladies slipped up on their cues and muffed their lines and matinee idolatry was revived in all its Gibson Girl splendor." After singing in 1914 with the Gilbert and Sullivan company which featured de Wolfe Hopper, Thomas was featured in a good many glamorous pre-War operettas: *Apple Blossoms, Maytime, Her Soldier Boy, Alone at Last, Step This Way.* His name blazed high in the Broadway marquees.

But being a matinee idol was not John Charles Thomas' idea of success. "The monotony of singing the same music day after day was unbearable to me. I only stayed in musical comedy to make enough money to get out and do the thing that really interests me most—concert singing." Thomas did make his concert debut in 1918, but it was six years before he devoted himself exclusively to the singing of serious music. In 1924 he made his operatic debut in *Aïda* with a local opera company in Washington, D. C. This was followed by a concert tour to make enough money for study in Europe.

It was in 1925 that he went to Europe, where he sang at an audition for the Théâtre de la Monnaie in Brussels. He was offered a contract, but he still wanted to specialize in concert work, and he didn't sign it until three months later. He made his European opera debut in Massenet's *Hérodiade* and was so successful that his contract was extended for three more seasons. At the Théâtre de la Monnaie he sang Tonio in *Pagliacci.* In memory of that event Thomas now has a painting which hangs in his New York apartment. It represents him as the white-clad clown, singing the prologue against a huge curtain of glowing burgundy. Closer inspection reveals that Tonio has his left foot in the prompter's box. "We sang the opera in French," Thomas has explained. "I was fresh from America, and George Mertens, the prompter, thought I was badly in need of his help with the text. As I sang the first lines I noticed that the little old man in the prompter's box was yelling his head off. I was afraid that he would drown me out, so I stepped on his hand to keep him from turning the pages of the score. . . But I stepped very, very lightly." While rehearsing *Hérodiade,* Thomas kept himself in trim by playing eighteen holes of golf a day and would come to rehearsals in plus fours. This caused the stage hands much concern. "The boys around the theatre," said Thomas, "weren't thoroughly at ease until they saw me at the performance in the traditional royal robes. Somehow they'd got the notion that the bloomers were the American idea of dressing the part."

In Brussels Thomas played fifteen major roles, and was featured in the world première of Milhaud's '41 *Les Malheurs d'Orphée.* Invitations to sing at Covent Garden in London and at the opera houses in Berlin and Vienna followed. On his return to America he made his Chicago debut, in 1930, with the Chicago Civic Opera Company in *Pagliacci.* He appeared also with the Philadelphia Grand Opera and with the San Francisco Opera.

Wide World
JOHN CHARLES THOMAS

It was on February 2, 1934 that Thomas made his debut, in *La Traviata,* at the Metropolitan Opera House in New York. Audience and critics both applauded the performance. "Mr. Thomas has matched his achievements on the concert stage with the same opulence of volume, polish in quality, and musicianship in phrasing," the New York *Herald Tribune* said. Other performances at the Metropolitan followed, and Thomas soon contracted for regular seasonal engagements.

But he still preferred concert singing, and during each annual season Thomas has appeared in the United States in about sixty or seventy concerts. His recitals "have placed him among the best loved concert singers in America. Few artists of the American stage can match his record of having sung before an audience of 100,000 such as greeted him in Chicago, or an audience of 45,000 which heard him in Pittsburgh." During the 1939 to 1940 season Thomas gave a series of five song recitals in New York in which he presented the song literature of France, England, Italy, Germany, and America. The American program aroused particular notice and praise. These songs, chosen from some 400 works by American composers, included *The Banks of the Yellow Sea* and *Low Bridge on the Erie Canal*; spirituals and Virginia folk songs; two songs by Charles Ives; Gruenberg's *Two Old Crows;* and *Pigeons on the Grass, Alas* from the Thomson '40-Stein *Four Saints in Three Acts.* While some critics felt that the general tone of the American program was "light" and "unhappily low," an ovation from the audience followed the concert. It convinced Thomas that singing more in English was a desirable thing. "From today on," he said

THOMAS, JOHN CHARLES—*Continued*
from the platform, "there are going to be at least two-thirds in English on every program I sing."

Thomas appeals greatly to his concert audiences, being "not merely a fine vocalist but an expert showman. He aims to please and he does please." He is not concerned with what those with "stuffed shirt" predilections may think. He continues to include a large variety of folk songs in his programs. Typical was his 1942 recital at Town Hall, New York. Italian selections, and songs by Mussorgsky, were followed by folk songs of Scottish, Irish, and English origin. According to Noel Straus of the New York *Times*: "Here Mr. Thomas' command of varied dialects was as notable as his superb diction in each of the four languages employed elsewhere."

The distinguished baritone has been heard also on various radio programs. He has appeared several times with Kostelanetz '42, the conductor, and with Albert Spalding, the violinist, on the *Pause That Refreshes* program. Thomas is no believer in formality or swank; it was often said that he did his broadcasts "in bare feet." That story got started, according to Thomas, when he once did a series of broadcasts in Florida. He was living on his yacht, *The Masquerader*, and "I'd run off the boat to the studio just as I was, sometimes in sandals, sometimes without them. I used to keep my hat on, too—there's nothing that gives you a greater feeling of ease than singing with your hat on—but the studio managers ruined that for me by inviting audiences to my broadcasts." Thomas won at least one battle with the radio authorities—the privilege of ending each broadcast, under a special dispensation from the Federal Radio Commission, with the words, "Goodnight, mother." In 1940 he worked on a musical film, *Kingdom Come*. It was his first and last effort in that medium. He soon tired of pictures—"After all, I am a singer."

Greatest of his enthusiasms, apart from concert singing, is boating. He has gone in for this in a big way, and he owns a six or seven vessel "Thomas Navy." His wife, Dorothy, is as rabid a boater as he is himself. The flagship of their fleet is the yacht *Masquerader*, so called because "living aboard her makes us feel like rich people, which we're not." May and June are religiously observed by the Thomases with a Florida fishing trip on the *Masquerader*. Next comes the *Memory*, a smaller yacht, then Thomas' own racing runabout, *Myne*. His wife has her small launch, *My Own*. There is a fishing skiff and a rowing dinghy, too. Recently Thomas also acquired a motorboat for racing, with which he has won a good many medals and other trophies and earned the right to be classed as a "Hell Diver." He is an aviation enthusiast, preferring air travel to any other. And he usually drives his car at breakneck speed.

Thomas is good enough at golf and tennis to have played with Bobby Jones and Bill Tilden. When in form "he can run a mile in five minutes, and can clear the bar in high jumping at five foot ten." He is an amateur chef of no mean ability, and says that his "scrambled eggs John Charles," made with Parmesan cheese, are inimitable. He dresses well, and is a good storyteller. When he sings *I Love Life* John Charles Thomas means it.

THROCKMORTON, CLEON Oct. 8, 1897- Scenic designer

Address: b. 102 W. 3rd St, New York City

In the early years following his graduation from the Carnegie Institute of Technology and George Washington University, Cleon Throckmorton found it difficult to choose between his dominant interests in architecture and in painting. This dilemma he solved by finding a third profession in which he could combine the other two, and he soon had launched himself on the difficult career of scenic designer, in which few men ever reach prominence. With Robert Jones, Norman Bel Geddes '40, and Lee Simonson, he contributed to the construction of a modern American theatre in which the stage settings were an important asset in the work of interpreting the play. Throckmorton has been associated with theatre productions from the early days of the Provincetown Players to the present, lending his talents not only to the Broadway stage but also to the little theatre groups. In 1943 his supply company, Cleon Throckmorton, Incorporated, is fully engaged in the support of wartime activities.

A native of Atlantic City, Throckmorton was born on October 8, 1897, the son of Ernest Upton and Roberta (Cowing) Throckmorton. He spent much of his early life in the Southern States, and there acquired a knowledge of Negro life and customs which enabled him to design settings colorfully appropriate for *Porgy, All God's Chillun Got Wings,* and other plays about Negro life. Becoming interested in engineering, he completed technical training in this field at the Carnegie Institute of Technology, then continued his studies at George Washington University.

Soon after being graduated from college Throckmorton went to New York City, and there met George Cram ("Jig") Cook, spark plug of the Provincetown Players. Throckmorton was offered a part in the forthcoming production of *Emperor Jones,* left the city before any definite arrangement was made, but was called back to design the sets for the production. When *Emperor Jones* opened in the McDougal Street Theatre on November 1, 1920 it revealed, in addition to the work of the new playwright soon to dominate the American theatre, a stage setting which is remembered as an important contribution to scenic art.

Other productions followed. For the Arthur Hopkins presentation (which had a two-year Broadway run with Charles Gilpin in the *Emperor Jones* role) Throckmorton designed new settings. The artistic superiority of the two scenic arrangements has since been a favorite controversial subject among the fraternity of stage designers. The models of Throckmorton's scenic designs for the play are on exhibition at the Museum of Modern Art. Throckmorton's favorite production of *Emperor Jones* was made by the Howard University players in Washington, D. C., in the season of 1924 to 1925. Charles Gilpin was the guest star.

After his first success as designer for the Provincetown group, Throckmorton remained with the group, soon becoming a member of the board of directors. He executed settings for *All God's Chillun Got Wings,* another of the O'Neill plays, which opened on May 15, 1924, and for Paul Green's *In Abraham's Bosom.* Meanwhile he had been active in the Broadway theatre, and he was chosen by the Theatre Guild to execute the designs for their first production (1927) of the Dorothy and Du Bose Heyward opus, *Porgy.* The sets for this play included the famous "Catfish Walk" of Charleston, South Carolina. This courtyard was shut off by municipal order at the time Throckmorton visited the city, but he was able to arrive at a recognizable reproduction through study of similar dwelling spaces in the same quarter of the city. His association with a succession of plays which were concerned with the illustration of Negro life quickly made him a recognized specialist in that field.

In addition to his work as an artist in the theatre, Throckmorton has been a teacher in several theatre schools. He has given lectures at Howard University, and in the summer of 1937 he was a member of the faculty of the Summer Theatre of New York University.

Always interested in new developments in the theatre, Throckmorton in the late '20's joined Christopher Morley in producing a succession of revivals of American plays of the "gaslight era." Presented in Hoboken, New Jersey, these revivals proved very popular with Manhattan's sophisticated theatregoing public. Most famous of the revivals was *The Black Crook,* a musical show. In 1929 the partners produced *Shoestring Revue,* which gave a new twist to the old pattern of musical comedy. Following their Hoboken productions, Morley and Throckmorton produced a number of plays in the Millpond Playhouse, a summer theatre in Roslyn, Long Island. The outstanding production was the *Trojan Horse.*

During his twenty-four years as scenic designer Throckmorton has designed the settings of some sixty or more plays. Among the notable productions in which he has engaged may be mentioned *The Hairy Ape, The Bride of the Lamb, Burlesque, The Man with a Load of Mischief, The House of Connelly, Springtime for Henry, Another Language, Criminal at Large, Alien Corn*; during the season of 1942 to 1943 Throckmorton did the settings for *The Russian People, Mr. Sycamore,* and Saroyan's [40] *Across the Boards on Tomorrow Morning* and *Talking to You.*

CLEON THROCKMORTON

Most of the original founders of the Provincetown Theatre have long left Greenwich Village, the artists' colony of New York City, but Cleon Throckmorton is still a Villager, with a large building on West Third Street, just south of Washington Square, housing his studio and the equipment required either for experimentation or construction of stage effects. The large block letters on the outside of the building which identify it as "THE STUDIO OF CLEON THROCKMORTON" make it an essential part of the stranger's tour through the Village.

Not only has Cleon Throckmorton been a resident of Greenwich Village for many years, but he has also long been identified with its group activities. Some years ago when a committee was organized to hold a street fair to raise money for the Spanish Loyalist cause, he was elected mayor and charged with the duty of supervising the fair, which consisted of exhibits, hog-calling, country dancing, and other rural activities.

The Throckmorton organization has currently turned to the consideration of wartime problems, and has placed at the disposal of the Government its skill in engineering and designing. Work is being done at the studio in experimentation and government research, and working models of necessary construction developments have been sent out on tour. In addition to the usual work of the theatre, the preparation of designs and sets for new productions, this war-directed work keeps the Throckmorton personnel busy. A new street

THROCKMORTON, CLEON—*Continued*

fair was held in Washington Mews (New York City), for the purpose of aiding the activities of the Music Box Canteen, the servicemen's and Merchant Marines' refuge on lower Fifth Avenue. Cleon Throckmorton was again called upon to lend his experience to the execution of a Village fair, and he assisted in the plans for the show. When asked who was associated with him in the administration of the fair, he found it difficult to name names, but finally answered, "Everybody from Gypsy Rose Lee to Mrs. Roosevelt '40, I guess." Throckmorton was married to Juliet St. John Brenon in 1928, on a Friday the 13th.

TINNEY, CAL(VIN LAWRENCE) Feb. 2, 1908- Radio commentator

Address: b. c/o Mutual Broadcasting System, 1440 Broadway, New York City; h. Bucks County, Pa.

> *Bulletin*: On September 27, 1943 Cal Tinney became a private in the United States Army Air Force, waiving his 3-A classification. He expected to serve in the psychological division, preferably in the Far Eastern Theatre of Operations. Several weeks before he had resigned from the Bayuk radio show in a dispute over a salary increase, but he had been building a show for the Blue Network combining music and interviews with leading personalities.

Since August 1941 Cal Tinney's slow Texas drawl and homespun humor, with intimate, folksy interpolations, have been heard over the Mutual network in *Sizing up the News* each Monday and Wednesday evening from 8:00 to 8:15 p. m. Tinney's colloquialisms, which the folks "back home" chuckle over—his "just-between-you-and-me, ain't it the truth?" "it shore is" method—has captured many a listener bored with the formal, polished, or cut and dried comments of other newscasters.

But there has been more to Tinney than his mannerisms. Speaking usually as a representative of what the "common man" thinks about affairs at home and abroad, he has taken more than one direct and shrewd pot shot, left of center, at stuffed shirt policy, the doings of Big Business, politicians who coddle Fascism at the expense of democracy under high-sounding terms of Americanism, etc. It is not surprising that the sandy-haired young man from the West has occasionally found himself in hot water. Objections have at times been made to the FCC on the "character of the broadcaster's utterances." But Tinney has apparently survived the allegations against him, since he currently continues his bi-weekly talks.

The outspoken homespun philosopher, who has become a kind of Will Rogers columnist of the air, was born February 2, 1908 on a ranch in Pontotoc County, Oklahoma, the son of David and Willie (Young) Tinney. His family, however, originally came from Texas, where his grandfather, a rugged individualist, had strange politics for those parts. "My grandfather was a Texas Republican," Tinney says sadly, "and they shot him. Seems he exploited his sentiments one Saturday night in a bar room. Ever since then my Pop has been a Democrat." So has the son and, judging by his broadcasts, a fervent New Deal-supporting one.

After attending the Oklahoma public schools Tinney went to high school, but left in June 1926 without graduating. Young Tinney apparently decided he could get a better schooling by traveling and seeing the world at first hand. After working as "leg man" for six months for the City News Bureau (Chicago) and obtaining some odd jobs in New York, on July 4, 1927 he sailed for Germany, working his way across the ocean. Later he worked on the Paris edition of the New York *Herald Tribune* and on papers in Shanghai, China. For some years he tramped around, often as an ordinary seaman aboard freighters off for foreign ports. He was a newspaperman of sorts, also, and found jobs in Shanghai and Paris. His work in the pre-War French capital was rewriting material found in English-printed newspapers. "It was easy," Tinney explains. "All you had to do was change words like lift to elevator, and caretaker to janitor."

After getting his education by travel, Cal Tinney settled down in Oklahoma as secretary to Congressman Charles O'Connor until the summer of 1930. Then he attended the University of Oklahoma for a year. Later he edited a country paper, and began to advertise it over Station KVOO at Tulsa. That was in 1932. His humorous, drawling voice soon became more popular than his gazette. So he gave up his job as an editor, but since 1934 he has written a weekly feature, "Man of the Week," for the McNaught Syndicate. He is the author, also, of a book called *Is It True What They Say About Landon? a Non-Partisan Portrait.* (1936). When Tinney turned to radio for a living, his voice was heard, successively, on the *March of Time* (1932), the *Voice of America* (1933), and the *Maxwell House Show Boat* program (1934). From 1937 to 1939 he was on the *Vanity Fair* feature, and from 1939 to 1940 on *Youth vs. Age.* That year he originated, but did not appear on, *Stop Me If You've Heard This One.*

Tinney was married to Mary Maxine Noble on December 5, 1934. The couple have three sons, David Noble, Scott Orange, and Lon Duncan.

It was in 1940 that Tinney hit on the idea of a folksy newscast and tried it out in Tulsa, Oklahoma. Farm listeners chuckled, appreciated a commentator who spoke their own language, and the fan mail started coming in. Mutual (WOR) was impressed, and spotted Tinney as a comer in the newscasting field. On August 4, 1941, Cal Tinney's *Sizing up the News* was put on a seventy-four-station hookup under the sponsorship of "Phillies" (Bayuk Cigars, Inc.). Of his Mutual series of newscasts Tinney said: "This is a show that's timed so that nearly everybody can hear it. Why, I talk so slow even I get home in time to hear my own broadcast."

Tinney's timing may contribute, technically, to his program's success. But his slants on what goes on in the world today—carefully keyed, perhaps, to a popular reaction not always caught by either the press or by other broadcasters—account also for his continued popularity. Listeners in the more intellectual category may find Tinney's sometimes suspiciously professional "homely" philosophizings amusing, but not as a steady diet. However, "the folks" like it; Tinney's voice, with its mellow, mature, and experienced undertones, somewhat belies his boyish round face topped by a thick thatch of sandy brown hair. They like his frank, confidential manner, which seems to put them "in the know" more readily than the embellished, learned statements of most news writers and public figures. They like his wisecracks: "Joe Stalin's '42 so confident now he's trainin' his mustache to stand up in a V-shape."

Among those who do not like Cal Tinney have been Congressmen in the reactionary category, admirers of the Westbrook Pegler '40 outlook, and defenders of the *status quo* in general. It is reported that "some time ago" (according to Chairman Fly '40 of the FCC) "complaints were made by two members of Congress" against Tinney. And in November 1942 other complaints received were "being investigated," including that of Joseph Goldstein, a former New York magistrate. Tinney's own credo of what a commentator may, or may not, say can probably be summed up in his words on censorship: "Reasonable censorship of war news to prevent the enemy from receiving advantage is acceptable to everyone. Censorship of opinion is sabotage of the Four Freedoms."

Tinney's comments and opinions have been quoted fairly widely in the press. His recent comment on relations between the United States and Franco '42 was repeated. "With one hand," he said, "we are helping Russia to whip our common enemy Hitler '42, and with the other hand we're helping a fellow who hopes Hitler wins." Referring to an attack by Westbrook Pegler on Charlie Chaplin '40 as "one of the unfairest, meanest, littlest pieces of journalism in our time," Tinney continued: "We know that Westbrook Pegler gets up on the wrong side of the bed every morning, but he must have gotten up on the wrong side of the gutter when he wrote that one." During December 1942 Tinney commented frequently on the situation in North Africa since the appointment of Darlan '41. He complained that the American people, after providing the men and materials for "the greatest military expedition we have participated in are entitled to more news than they are getting of what is going on there." "Any American who tries to figure out French politics," concluded Tinney, "will wind up in a straightjacket." Early in 1943 Tinney called on Captain Eddie Rickenbacker '40 to stop his "labor-baiting" speeches.

Tinney is fair, five feet seven inches tall, and weighs 165 pounds. His hobbies, he says, are "raising boys, riding horseback, and giving lectures." The Tinneys have a farm in Bucks County, Pennsylvania.

TISO, JOSEPH (tē-zō') Oct. 13, 1887- President of Slovakia
Address: h. Bratislava, Slovakia

Perhaps it is purely for phonic reasons that those who sell out their country to the enemy are known as Quislings, for when Vidkun Quisling '40 was still an obscure turncoat Monsignor Joseph Tiso was already a full-fledged, high-ranking traitor—with the distinction of having sold himself first to the Austrians, then to the Hungarians, and last to the Nazis. He was, in fact, the first man to be made puppet President of a subjugated nation by Hitler '42.

Joseph Tiso was born on October 13, 1887 at Velka-Bytec, Slovakia, which was then part of Austria-Hungary. His parents were fairly well-to-do Slovak peasants. Under the Dual Monarchy there were actually few prosperous Slovaks. For some ten centuries the Slovak people had been oppressed by the Hungarians, who treated them as serfs. Most of the landowners and all of the officials were Magyars. The native population was exploited and kept in ignorance by their Austro-Hungarian masters. Education was discouraged; fully two-fifths of the people were illiterate; the Slovak language was banned in most institutions; there was only one library in all of Slovakia (compared with 3,000 under the Republic); out of a population of over two million there were less than 1,500 who had received professional training, and of that number one third were clergymen. It was only after the formation of the democratic Czechoslovak Republic on October 30, 1918 that the cultural and economic level of Slovakia was raised. Within a few years thou-

JOSEPH TISO

sands of Slovak schools had been opened and land had been parceled out to the impoverished peasantry, even though many Slovaks complained of Czech domination and discrimination.

At the end of the last century, when Tiso was growing up, his native Slovakia was, then, a backward colony still dominated by the Hungarians. An overambitious youth, he learned early in his life that bootlicking was a key to success. In Slovakia this meant servility to the Magyars, and the opportunistic young Tiso posed as a fawning, rabid pro-Hungarian. While attending the Hungarian High School at Nitra his loud protestations of devotion to the Magyars disgusted his fellow-Slovak students but gained for him the patronage of the Hungarian bishop, who offered him an opportunity to study for the priesthood. He was ordained in 1909 and a year later became secretary to the Bishop of Nitra.

Tiso was careful to remain in the good graces of his bishop. At the latter's behest he was appointed religious instructor at a girl's secondary school in Nitra. "Accusations of misconduct by the parents of the girls," writes Johannes Steel ['41], "in no way impeded his [Tiso's] steady promotion, nor did this earn the disapprobation of his bishop, who appointed him chaplain to the prosperous village of Banovce." Here, as in Nitra, he continued his anti-Slovak activities. He founded a branch of the reactionary Hungarian Catholic Young Men's Association and became a columnist for the rabble-rousing Magyar weekly, *Nyitrai Szemle*, a counterpart of the American *Social Justice*, which specialized in Slovak baiting.

When Austro-Hungary declared war on the Allied Powers Tiso volunteered as chaplain in the Royal Hungarian Army. His "chaplaincy" consisted chiefly in ferreting out disloyal Slovak soldiers who had no interest in fighting for their oppressors. Thousands of them went over to the Allied side and formed the Czechoslovak Legion, which played an important part in the final defeat of the Central Powers. Tiso tried to stem the tide by chauvinistic sermons and by serving as an informer. Even after the overthrow of the Dual Monarchy he continued to serve his Magyar masters. He is known to have supported the Hungarian National Council at Nitra in its fight against the revolutionary Slovak National Council which had proclaimed Slovakia's independence of Hungary. It was only after the united Czech and Slovak national armies chased the Hungarians out of Slovakia that Tiso suddenly discovered that he had been a Slovak nationalist right along. In no time at all he was on top of the band wagon.

With the birth of the Czecho-Slovak Republic the opportunistic Tiso joined the Slovak People's Party, a conservative Catholic political organization whose program was reactionary but not openly separatist. Many Slovaks recalled Thomas Masaryk's promises of equality and autonomy for Slovakia in Pittsburgh in May 1918, and felt that they had been cheated out of their charter rights. They complained that all of the important offices in Slovakia were held by Czechs, and that almost all its officers and teachers were brought from Bohemia. (To this the Czechs replied that the effect of Hungarian rule had been such that there was virtually no Slovak intelligentsia in the first years after the First World War.) The People's Party vigorously expounded Slovak grievances; its leader was Monsignor Andreas Hlinka.

For years Tiso campaigned for public office without success. Finally in 1925 he won a seat in the national Parliament in Prague. The same year he was appointed district deacon and chief clergy inspector for the Banovce District. In Parliament he assured the Czech deputies that he was a staunch believer in unity, while to his constituents at home he delivered speeches berating the Czechs. The artifice worked, and in 1926 when a coalition government was formed Tiso received the portfolio of Minister of Health. His closest political friend in those years was one Bela Tuka, who was convicted in 1929 as a Hungarian spy. Although Tiso was generally believed to have been implicated in the scandal, he managed to keep his tracks covered. Tiso later made Tuka his Minister of the Interior and in 1939 promoted him to the Premiership.

In the midst of the Czechoslovak crisis in August 1938, Monsignor Hlinka, leader of the Slovak People's Party, died. His parting words were a plea to his party members to remain loyal to the union of Czechs and Slovaks. In his eulogy Tiso solemnly pledged to uphold his dead leader's political testament. This promise was soon forgotten. The Munich betrayal opened new vistas to the ambitious Tiso. He coerced Prague to grant permission for the formation of an autonomous Slovak Government in Bratislava within the jurisdiction of the Federal Republic. In October 1938 Tiso assumed the Premiership of the new Government and, tongue in cheek, took the oath of allegiance to the Czechoslovak Republic.

Entrenched in his new post, Tiso became openly Hitler's tool. In March 1939 the two contrived a plot whereby Czechoslovakia was to be strangled in a pincer movement of the Nazis and Tiso's stalwarts. On March 9, word reached the Prague Government that Tiso, at Hitler's behest, was planning a separatist *putsch* in Slovakia two days later. A decree was immediately issued dismissing the Slovak Government, and Tiso was confined in a Jesuit monastery under "house arrest." His pro-Hitler, anti-Czech, anti-Semitic Hlinka Guards, supported by Nazi Storm Troopers, staged a riot. They were soon subdued by Czech gendarmes, however, and order was restored.

Outwitted, Tiso smuggled a telegram out of the monastery to Hitler, asking for help. The Führer responded with alacrity. He dispatched fourteen of his divisions to the Czech frontier. The tension increased. The Czechs released Tiso. Hitler summoned him, and he flew to Berlin. Events moved fast. A forty-eight-hour ultimatum was issued to the Czechoslovak Government. The Czechs finally submitted. Tiso flew back to Bratislava to proclaim Slovakia's "independence." The Prague Government decreed the dissolution of the twenty-year-old republic. All this was, however, merely a prelude to the tragedy that followed. Late that night President Hácha '42 of Czechoslovakia arrived in Berlin in obedience to Hitler's command. Under the threat of bombing the Czechs "out of existence," Hácha was forced to surrender his country to the Nazi Reich. While Hácha was still "conferring," German troops had already crossed the Czech border. Later the Nazis goose-stepped into Prague, and Czechoslovakia was wiped off the map. Joseph Tiso telegraphed an invitation for Hitler to take Slovakia under his benign "protection."

On March 18, 1939 Tiso signed a pact with Hitler in Vienna in which Nazi Germany guaranteed to protect the boundaries of Slovakia for twenty-five years and in return received complete domination of the country. Slovakia, with an area of 14,836 square miles and a population of 2,450,096, has been drastically Nazified under Tiso's stewardship. It vies with Germany in the size of its concentration camps, in its oppression of minorities, and in its savage treatment of political opponents. Tiso has proved a willing Nazi tool not only domestically but also in his foreign policies. At first a rabid and open anti-Bolshevik, he temporarily changed when Hitler signed the Non-Aggression Pact with Stalin '42, and he appointed his cousin, Frano Tiso, as Minister to Moscow. On November 7, 1939, he sent an anniversary greeting to Kalinin '42 and on December 23, a birthday message to Stalin '42. But when Germany invaded Russia in June 1941, Tiso sent his troops to help the Nazis.

For his betrayal of the Czechs and the Slovaks, Tiso received the Iron Cross from Hitler on October 25, 1939 and a day later he was elevated to the Presidency of Slovakia. Since then he has made several unsuccessful attempts to influence the Slovaks in this country. The Slovak League of America, which in 1918 blueprinted with Masaryk in Pittsburgh the independent republic of Czechs and Slovaks, has repeatedly denounced Tiso as a traitor. On December 12, 1942 Tiso's "Government" declared war on the United States.

As a priest, Tiso is ostensibly responsible to his bishop, but the bishop under the Nazi-imposed "constitution" owes his allegiance to the "President." To the persecuted Catholics of Slovakia, Tiso's very name has become anathema. Under his rule several outspoken priests have been executed and hundreds of others, including high dignitaries of the Roman Church, are languishing in concentration camps. His brutality toward the Catholics is rivaled only by his treatment of his Jewish countrymen. Of 90,000 Slovakian Jews, according to figures released by the United States State Department, some 70,000 had been deported to East European prison and labor camps and the remainder were expected to follow.

On March 15, 1943 the Berlin radio announced that Hitler had decorated Tiso with the highest grade for foreigners, the Gold Grand Cross of the Order of the German Eagle, on "the fourth anniversary of the independence of the Slovak republic." In April 1943 Hitler conferred at his headquarters with Tiso and other Southeast Europe puppet leaders—a fact which was interpreted as indicating that he was making a supreme bid to get men from satellite states, and to get the satellite governments to oppose actively an Allied invasion.

Joseph Tiso is described by Johannes Steel as "flabby and gross." "Once a handsome youth," he now has "gray locks and a head of great dignity. He is a sly man, who likes to pass himself off as simple and bluff, and he fancies himself as a wit. Like most of his type, he is extremely susceptible to flattery, and he was flattered when the Nazi advance agents picked him as 'their man.'"

TITO (tē'tō) 1890(?)- Head of Yugoslav National Army of Liberation

The almost legendary "Tito" (whose real name has appeared as Josip Broz and Brozovich), head of the Yugoslav National Army of Liberation, was in late 1943 coming into his own. For nearly two years the Yugoslav Government-in-Exile had been successful in getting almost all of the Partisan victories over the Axis in Yugoslavia credited to the forces of General Draja Mikhailovitch '42; now it was generally admitted that Mikhailovitch had fought no major battle against the Axis since the fall of 1941. In recognition of this fact, Allied aircraft in Italy had been placed at the disposal of Tito's specific commands; thousands of tons of Allied war material were being sent to his troops. When in December Tito announced the formation of a Yugoslav National Committee of Liberation, a provisional government which promptly ordered the Yugoslav Government-in-Exile deprived of all rights, and "forbade" King Peter '43 to return to his homeland until it is

TITO—*Continued*

liberated, many Balkan politicians began anxiously to read the tea leaves.

Some Yugoslavs at first said Tito was really a former Croatian student, some a famous Serbian Communist, some a parachuted Red Army officer. The Fascist correspondent, Lilli, wrote only: "His popular stage name suggests a plebeian figure with an easy hold on the obscure and turbulent strata of the masses." On the other hand, most sources agreed from the beginning that his real name was Josep Broz and that he was a former Croatian metal worker. This is now admitted.

It is also fairly well established that he was born in 1890, a native of Zagorye, near Zagreb. In 1914 he was conscripted into the Austro-Hungarian Army and the next year, while fighting on the Galician Front, he deserted to the Russians along with tens of thousands of other South Slavs. When in 1917 the Russian Revolution freed him from military imprisonment he joined the new revolutionary Russian Army and fought for three years in the Russian civil war. Finally in 1923 or 1924 he returned to Croatia, which was now a part of Yugoslavia, and became a labor leader. When his metal workers' union refused to submit to the control of King Alexander's Government he was sentenced to some years in prison on the charge of being a Communist.

Louis Adamic '40 states that from 1936 to 1938 Tito had headquarters in France, from which he ran "underground" railroads across Italy, Austria, Switzerland, and France through which thousands of Balkan anti-Fascists managed to reach Spain and join the International Brigade. It is also said that, following his release from prison, he kept the underground labor movement alive in Yugoslavia. His underground name was Tito, but no one knew that Tito was really Josip Broz —least of all the political police.

Tito foresaw the War and the German occupation of Yugoslavia long before the spring of 1941, and he set up an underground organization prepared for guerrilla war. After the defeat of the Yugoslavian Army the "Slovenian Front" was soon created, and Tito went to Belgrade. There he lived for months under the eyes of the Gestapo, meeting his fellow conspirators (Communist and non-Communist) in cafes, drawing maps, laying out plans for operations, sending out directives through secret liaison channels. A program was drafted, and manifestos began to appear on the city walls warning the Germans to get out. When in June the Nazis attacked Russia major portions of the *Wehrmacht* garrisons were withdrawn from Yugoslavia, a fact which offered advantages for the guerrilla strategy of attack. Shortly afterward the Communists struck the first blow against the Germans. Revolutionary moves spread, but the first major success was in Montenegro in July. More and more non-Communists began to join the ranks of the Partisan fighters. Croatian workers began a sabotage campaign, then joined the Serbs who had fled to the forests to escape the Ustachi massacres. In August the Supreme Command was reorganized to embrace all of Yugoslavia, and a mobile headquarters for Serbia was established.

Tito, having left Belgrade, made strenuous efforts in October and November to get together with Mikhailovitch's Army of Freedom, formed mainly of survivors of the defeated Yugoslav Army who had fled into the mountains. But conflict soon arose. Mikhailovitch's chief aim was reportedly to hold and improve his positions, or to open the way to strategic rail junctions or bridges he wanted to destroy, preparing Yugoslavia's population for the far-off day when America and Britain would invade Europe. The Partisans desired the immediate destruction of as many of the German, Italian, and Quisling forces as possible, and Mikhailovitch claimed that their operations not only invited terrible Axis reprisals against the population of the occupied territory, but served no useful military purpose. There were also ideological differences which made compromise difficult. To Mikhailovitch, the Partisans were all bandits, hoodlums, and Communists; to the Partisans, Mikhailovitch represented the large landowners in the reactionary Greater Serbia movement who sought to keep the Croats and Slovenes subordinated. In the fall of 1941 sporadic fighting between Mikhailovitch and the Partisans began in which, the Partisans charged, Mikhailovitch cooperated with the Axis forces and with the Serbian Quisling, Milan Neditch.

In November 1941, according to most accounts, the Germans disastrously defeated Mikhailovitch and, the greater part of his army dispersed, he vanished into the woods of central Serbia, avoiding action against the Axis. In January 1942, however, the Yugoslav Government-in-Exile named him commander in chief of the Free Yugoslavian Army and Minister of War.

The Axis offensive also splintered the rude Partisan units, but Tito assembled all the splinters he could and led them in a long march westward through the mountains to Bosnia, where his friend Kosta Nagy, former commander of the Croat Battalion of the Spanish International Brigade, was assiduously organizing a Croat guerrilla army. Tito and Nagy, with the aid of the younger Ivan Ribar (Communist son of the president of the first Yugoslav Constituent Assembly in 1921, who was later killed by a German bullet), then started the organization of a national peoples' army of Serbs, Croats, and Slovenes; and within four months the main theatre of the war had shifted from Serbia to Bosnia, Dalmatia, and Croatia.

By the midsummer of 1942 the Partisans were beginning really big operations against the Axis. They still charged, however, that part of Mikhailovitch's organization was cooperating with the Axis forces against the Partisans, and, according to an article in *Fortune* Magazine, officials of the Yugoslav Government-in-Exile confidentially conceded that Mikhailovitch was receiving armaments from the Italians under a secret agreement that none of them would be used against the Italians themselves. Mikhailovitch nevertheless continued to receive Allied support, and no attention was paid to radioed appeals by the Partisans for Britain and the United States to send an inter-Allied commission to Yugoslavia to see for itself the state of affairs there.

In spite of all difficulties, by the fall of 1942 the Partisans, on a front one hundred miles long, ruled a solid liberated area a little larger than Connecticut. Town councils were being elected; Partisan money was being circulated; a short-wave radio station had been set up; Partisan newspapers were being printed; bombs and munitions were being manufactured in the forests. In December 1942 delegates from all over Yugoslavia met and elected the senior Ribar president of the Assembly.

In January 1943 the Germans did much damage and recaptured many key towns, but the Partisan Army retreated to Herzegovina while the peasants of Croatia and Slovenia intensified their attacks against the Axis, and by the end of February the entire Yugoslav territory outside the Liberated Region had broken out into a rash of tiny guerrilla wars. At the beginning of June 1943 the Partisans, reorganized and reinforced, were able to resume their offensive, and by July they had liberated all of Bosnia again. In May, moreover, the British had established military liaison with them, as well as with Mikhailovitch, and were helping to coordinate Yugoslav resistance to the Axis with Allied plans for an offensive in southern Europe. At about the same time ranks had been introduced into the ragged Partisan Army. Formerly all commanders had been elected by the troops, but now twelve generals were named, six of them former colonels in the old Yugoslav Army, three of them former members of the International Brigade in Spain, two of them peasants—and Tito.

After June 1943, in Cyrus Sulzberger's words, "The counteroffensive of . . . Tito's movement swelled enormously from Macedonia to Slovenia. Liaison with guerrillas in Albania, Greece, Bulgaria, Romania, and Italy was established."

At the time of the Italian armistice on September 3, 1943 Dalmatian coast ports were in the hands of troops loyal to Badoglio '40 or in the hands of the Partisans. It was a most favorable moment for Allied land operations in the Balkans, particularly after the Partisans began securing stores and arms from Italian divisions, which also swelled their numbers by tens of thousands. With the seizure of nearby Italian airfields and the occupation of the Aegean islands by the British Navy a Partisan offensive was made even easier, and soon the anti-Fascist forces claimed more than a third of the country. For sixteen days they held the port of Spalato, expecting an Allied landing on the Adriatic coast; but German tanks and artillery eventually broke their resistance, and German troops occupied the Dalmatian capital and some other key centers of the Dalmatian coast. Many unfortified Adriatic islands and large coastal strips remained in Partisan hands, however, and the Partisan offensive continued. In mid-October it was reported that the Germans had drawn on troops needed in Italy and elsewhere along the Mediterranean front to reinforce all sectors of Yugoslavia, and that Field Marshal Erwin Rommel '42 had been placed in general command of operations against the Partisans.

Even before this King Peter, who had brought his Cabinet to Cairo in order to be nearer the scene of events, had called on his people to have patience and to "obey Mikhailovitch and other national leaders of your resistance to the enemy and refrain from internal struggle"—acknowledging the role of the "other national leaders" for the first time. Peter also told an American newspaper reporter that he had ordered Mikhailovitch to avoid conflict with Tito's forces. From Cairo at about the same time came reports of new battles being waged by Mikhailovitch against the Germans, but since in many cases Mikhailovitch was again claiming the capture of towns which the Partisans said they had taken, the actual situation seemed to have been little improved. Armed clashes on an even larger scale than before were soon being reported, each of the rival guerrilla forces blaming the other. In November 1943, however, General Henry Maitland Wilson '43, British commander in chief in the Middle East (and an old Tory) finally denounced the Chetniks as Axis collaborators, and it was admitted that more Allied aid was going to Tito. Tito himself has spoken rather bitterly of the "rivers of the precious blood of our nation" that had to be poured out before "the truth about the situation" was allowed to reach the Allied world.

Now Tito felt strong enough in both the military and political spheres to take decisive steps. Delegates were summoned to a congress in Jajce in late November. There he revealed his identity as Josip Broz and was awarded the title of Marshal of the People's Army. There, too, the world learned in December, a provisional government was formed, the Yugoslav National Committee of Liberation. A manifesto was prepared ordering the Government-in-Exile deprived of all rights and forbidding the King to return to his homeland until its liberation, and Tito demanded that the Allies discontinue their recognition of Peter's government. This they did not do, but by the end of December the Allies were giving Tito's National Committee every form of support except actual recognition as a government. Tito was recognized as full Allied commander in the Balkans, and when in mid-December American and British authorities and a military mission of experts from his command met in Alexandria to plan a Balkan offensive, Peter's government in Cairo was not even notified.

Early in October 1943 an adventurous Associated Press correspondent, Daniel De Luce, began sending dispatches from headquarters of a Partisan brigade. The first Allied reporter on the scene, he wrote that he had been received "as an important ally to whom all courtesies are due." According to De Luce, Tito had "welded his guerrillas into a tightly disciplined and hotly idealistic force that visibly shows more enthusiastic determination than any outfit I have seen since I met Major General Vasily Novikoff's Caucasus army during the British-Russian occupation of Iran." These guerrillas were divided into two groups: the Narodna Oslobodilacka Vojska (National Liberation Army), which endeavored to fight as an army; and the Par-

TITO—*Continued*

tizanski Odredi Jugoslavije (Yugoslav Partisan detachments), which operated where there was no real front. Members of both wore homemade red stars on their caps, flaunted the red hammer-and-sickle insignia, and gave the clenched-fist salute; but the Communists among them were in a minority except in the military leadership. "Today," wrote De Luce, "I saw black-robed Catholic priests raise clenched right fists in greeting Partisan officers. I heard prosperous town businessmen vouch for the sincerity of purpose of the Partisan forces and pledge their own cooperation."

According to Howard K. Smith '43, among the Partisan fighters are Communists, democrats, progressives, liberals, Catholic Socialists, agrarians; peasants, workers, teachers, priests; members of the Catholic, Moslem, Jewish, and Orthodox faiths. And, contrary to popular belief, there are many Serbians among them: fifty-eight per cent, one writer claims. The Partisans have also set up an International Brigade of Foreign Volunteers which includes Czech, Hungarian, Austrian-German, and many Italian brigades as well as mixed battalions made up of British, French, and Russian war prisoners liberated in raids on German internment camps.

The Partisans have very little medicine, clothing, or food, but they do what they can with what they have. In Smith's words: "Every time the Liberation Army wrests a new town from the occupiers this administration moves in behind the troops. The sanitation service cleans up. A brigade of teachers opens schools for children and adults, and loudspeakers are set up on public squares in order to provide the latest news from Italy, Russia, Yugoslavia. . . An election of local officials is generally called within a few hours . . . and speakers of half a dozen political parties lead brief campaigns. People's tribunals are established . . . and justice is dealt to the Quislings forthwith. Meanwhile reporters . . . interview the populace. . ."

There are two Communists and nine non-Communists in the new provisional government of Yugoslavia, in which Tito is president of the National Liberation Council and Minister of War, as well as marshal and commander in chief. People call Tito "a most uncommunistic Communist," however. No single official of a Soviet delegation or any piece of Soviet equipment has been sent to the Partisans. The clenched fist salute has, since De Luce wrote, been replaced by the Western military salute. Supporting priests bless the battle flags of the Partisan Army. The aim of the Committee of National Liberation, moreover, is for a federation of the southern Slav peoples which does not favor one nationality and in which private property would be inviolate and every opportunity given for individual initiative on industrial and economic enterprise—with popular control over only big banks and industries.

According to Louis Adamic: "These people of Tito's hate the Axis and all its works. And they have no use for their own country's sordid political past, which culminated in the impossible present. They want a new deal in Yugoslavia, in the Balkans; a people's government after the War; no more reactionary dictatorship like King Alexander's and Prince Paul's '41; no more chauvinism, whether pan-Serbian (which Mikhailovitch represented) or ultra-Croatian (which found its awful expression in Quisling Pavelić's '42 massacres of Serbians)." But the Partisans also wish to put the South-Slavic lands out of the reach of Western imperialism, and this fact, says Adamic, must raise questions in Anglo-American minds.

By the end of December 1943 an area of 41,000 square miles had been liberated by the Partisans, who, according to most estimates, numbered around 250,000 by that time. Tito himself claimed that his Partisans were keeping thirty German divisions massed in Yugoslavia, in addition to 140,000 Croat troops and other pro-Axis units. British estimates were lower, but it was generally agreed that the Partisans were tying up more Axis divisions than were the Allies in Italy.

A handbill which is issued by the Nazis offers a "reward of 100,000 Reichsmarks (more than $21,000) in gold" for the Partisan leader, dead or alive; but as yet no Yugoslav has taken advantage of the offer. Veterans of the war in Spain "describe him as medium-sized, blue-eyed, blond, with a striking face, a very attractive smile, and a pleasant manner which inspire endless devotion." Devotion is also inspired by his treatment of his men: during the terrible days of the Green Mountain they ate better than Tito and his staff.

Tito's uniform, without insignia, is a gray smock, similar to the Russian heavy shirt, worn outside his trousers; riding breeches; and black boots with a pair of silver spurs. He smokes cigarets constantly in a small filigree silver pipe-shaped holder, is a first-rate shot and big game hunter, speaks German, Russian, Czech, Khirgisian, and some French; and his favorite book is Tolstoi's *War and Peace*. His first wife, who died many years ago, was a Russian; their son, now fighting with the Red Army, was recently decorated for bravery. His second wife, Herta, is a Slovenian who gives courses to peasant women behind the front. All of the other members of his family in occupied territory are dead.

TITTERTON, LEWIS H(ENRY) Dec. 22, 1900- Radio executive

Address: b. National Broadcasting Co, 30 Rockefeller Plaza, New York City; h. 544 E. 86th St, New York City; Patterson, Putnam County, N. Y.

"When a Broadway dramatist plays to a nightly audience of from 800 to 1,500 people, he walks in the dignity of his importance. When a radio writer plays to a per-broadcast audience of from three to thirty million listeners, he stands with hat in hand and apologetically whispers to friends, 'Yes, I write for radio,'" laments Arch Oboler '40. Even more unknown to the general public are the heads of radio script departments, whose duties are to see that scripts are written by station staff members and to plough through the tremendous amount of material submitted to the station by would-be radio writers.

Such duties for the National Broadcasting Company are part of the daily routine of Lewis Henry Titterton, manager of the script division. He was born in England in a small village near York, Acomb by name, on December 22, 1900, the son of the Reverend Charles Titterton and Mrs. Anna Louise (Maitland) Titterton. After an English public school education he enrolled at the University of London in 1919. He stayed only a year and then transferred to Cambridge University, where in 1923 he received his B. A. degree. There, he says, for some reason not yet entirely clear to him, he studied Hebrew and Syriac. His aptitude in languages won him a scholarship to Harvard University, where from 1923 to 1925 he worked on the collection of Syriac manuscripts, did further work in Hebrew, and delved into Arabic. When he was offered the assistant editorship of *Atlantic Monthly* in 1925 he decided to accept it and not to take an advanced degree.

A year and a half after he joined the *Atlantic Monthly* he left to become assistant to the general sales manager of the Macmillan Company. Soon he was advanced to Southern trade sales manager, and he traveled over the Southern States selling books for about six months, after which he was sent to New York and made associate editor of the company. He held this position for four and a half years, serving as the director of the religious book department during his last year (1932).

Writing occupied Titterton's spare time. He translated a French novel, *Thirteen Men in the Mine,* by an ex-miner, Pierre Hubermont, in 1931. The book, which related the story of a disaster in a Belgian coal mine, was well received and drew praise for the translation. The *Saturday Review of Literature* critic said: "It is compressed, and the style, laconic and detached (a style which the translator has caught and preserved with supreme success), fits the subject admirably." Titterton also wrote some 300 book reviews and critical articles, predominantly published in the New York *Times.*

While he worked for the Macmillan Company, Titterton became acquainted with the complicated laws of copyright and general literary rights, and, as a consequence, was asked by the National Broadcasting Company to become manager of the literary rights division in 1932. Four years later that department was merged with the script division, with Titterton as head.

LEWIS H. TITTERTON

"If all the pages of all the radio scripts which Lewis H. Titterton has read in his eleven years with NBC were laid end to end they would stretch from Radio City, New York to City Hall, Philadelphia," boasts the publicity department of NBC. "Titterton's shrewdly appraising eyes have been racing over manuscripts at the rate of 2,500 a year, sometimes as many as twenty-five or thirty in a single day. Yet reading this prodigious agglomeration of words is only part of the toil for which he is accountable as head of NBC's script division.

"To the uninitiated, the division can best be described as a sort of literary machine shop. It creates scripts of its own and places the stamp of approval or rejection on the genius of others. It encourages the cream of present-day writers to submit ideas to it for consideration. It clears subject matter of sustaining programs for policy. It worries over copyrights, literary rights, contracts, agreements, and titles. It looks after the mimeographing and distribution of scripts so that they reach the proper persons in proper time. It gives individual consideration to each of the many thousands of ideas submitted yearly by the general public. It conducts continuous research in music to the end that NBC programs and press releases may be musically literate."

While carrying on these many tasks and supervising a staff of thirty persons, Titterton has achieved an excellent reputation in the field of radio. Max Wylie '40 until recently occupied the same position at the Columbia Broadcasting Company which Titterton occupies at NBC. In Wylie's book, *Best Broadcasts of 1939-40,* he does a strange thing for a radio worker—praises a business rival. Wylie says: "Few discerning men within the industry itself would claim that broadcasting as a whole is an art or even that broadcasting as a whole has artistic form. . . Sooner or later adventuresome spirits will begin to perceive the challenge that the very immensity and heterogeneity of radio offer to the restive and exploring mind. People will begin to dissect its social implications; to discover why, when Stokowski '41 plays for it all the time, Kreisler won't play for it at all; to bring the right

TITTERTON, LEWIS H.—*Continued*

people together in order to bring the right program to the grave and grasping minds of small children; to find out how to move more merchandise without so many commercial plugs; to teach languages; to persuade adults to drop an old idea as soon as they have evidence enough to accept a better one. Some of this is being done. Within the business itself NBC has the most just, the most catholic and impartial appraiser of written show material in radio today. He is Lewis Titterton."

Wylie wasn't the only one to praise Titterton in print. Arch Oboler, one of radio's leading writers, dedicates his book *Fourteen Radio Plays* to Titterton in these words: "To Lewis H. Titterton with my particular gratitude. His help has been invaluable not only to me, but to the entire medium. A great part of radio's increasing meaningfulness as a dramatic force can be attributed to his mature understanding of both the networks' and the playwrights' creative problems."

The scholarly Titterton, whose background as a Syriac and Hebrew scholar seems so far removed from twentieth century radio broadcasting, is, nevertheless, enthusiastic about the medium. He calls it "not merely a means of information and pure entertainment, but an immensely powerful force which, if rightly handled, can and will, however slowly, gradually add to the number of thinking, articulate Americans." In 1940 Titterton wrote: "When it is remembered that the first radio play, and [by] that of course is meant the first play written simply and solely with the radio medium in mind, was, it is generally agreed, heard a scant fifteen years ago, the strides which writing for the radio has taken are giant indeed." Titterton discounts the "intriguing possibilities of combinations of sound" and sound itself as the paramount consideration in radio writing. He says: "If one may draw an analogy from the field of painting, a radio writer, to be successful experimentally or impressionistically, has to know the basic rules of his craft. A painter must know how to draw; a radio writer must know how to write."

The War has affected radio as it has everything else. Titterton has arranged many sustaining programs with relation to the war effort. In February 1943 he was commended for a Red Cross series of programs with whose planning he had been closely identified, and in which 126 out of 129 affiliated stations of NBC participated. Every year he contributes an essay on radio broadcasting to *Collier's Encyclopedia*. In addition he finds time to act as editorial adviser in the field of radio for the *American Scholar*, and to write articles for that publication.

Titterton is five feet nine inches tall, weighs 158 pounds, wears horn-rimmed glasses, and is sandy in coloring, with a blondish mustache. He is an Episcopalian and a Democrat. In 1929 he was married to Nancy Evans, a writer and book reviewer, who died in 1936, under tragic circumstances. Two years later he was married to Ruth Jordan, advertising copywriter. The Tittertons are the parents of a son, Charles Frederick. Titterton, besides devoting himself to his son, spends most of his spare time reading piles of radio scripts in his New York City apartment or on a seventy-two-acre farm in Putnam County, New York, where he spends week ends. Odd hours are spent in gardening and landscaping at his country home.

TRACY, SPENCER Apr. 5, 1900- Film actor

Address: b. c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif; h. 9441 Wilshire Blvd, Beverly Hills, Calif.

One of Hollywood's top-ranking stars, rugged-featured, red-haired Spencer Tracy is one of the few performers who, according to Howard Barnes of the New York *Herald Tribune,* can rise above the obvious demands of a script and play as large a part in the final production as scenarist, director, or producer. "It is not easy to catalogue Mr. Tracy's acting gifts," wrote Barnes. "For one thing he is enormously direct, in a field where it is easy to get a showy effect by being oblique. For another he is aware of all those small clues to universal experience which give the spectator the feeling of sharing in living rather than watching a reconstruction of it. Meanwhile, he has the great talent of seeming at ease and himself, even though he is engaged in the most difficult problem of projecting a character and even though he may actually be far from relaxed while appearing before camera and microphone." Although Barnes doubts that Tracy's artistry would "register as powerfully on the stage as on the screen," he believes that he is an actor "who endows motion-picture acting with genuine distinction." At any rate Tracy is Hollywood's top "boffo" (*Variety's* term for a box-office success).

Spencer Tracy was born on April 5, 1900, on Prospect Avenue, Milwaukee, Wisconsin, which, Hollywood biographers are careful to point out, is on the "right side of the tracks." His mother, Carrie (Brown) Tracy, was descended from the original colonists; his father, John Edward Tracy, an "upstanding, God-fearing Irishman," ran a trucking business in that city and to this day regrets that his son did not succeed him in his respectable enterprise. Legend has it that the youth once invited his father to see him perform at an old stock theatre. After the show he asked the elder Tracy what he thought of his acting. There was a long pause. Then John Tracy replied slowly: "Son, I just sat here thinking about that nice five-ton truck we just got. It's a beautiful truck and I couldn't help thinking that you'd look right at home in the driver's seat."

The future Hollywood star was no outstanding success at school. All told he attended some fifteen educational institutions before St. Rosa's Parochial School generously awarded him a diploma. During that period he got to know most of the truant officers intimately. "I never would have gone to school," he later told J. P. McEvoy, "if there had been any other way of learning to read the subtitles in the movies." In his frequent and protracted absences from school, Spencer would hide in an alley in back of Donovan's saloon with his two cronies, "Mousie" and "Rattie," sons of the bartender, and "as pugnacious a pair of toughies as the Dead End Kids ever portrayed." Tracy must either have been leading a double life, however, or have been more virtuous than his biographers care to admit, for at the same time that he was leading this errant life he is supposed to have been a Boy Scout and an altar boy at church. Young Tracy also struck up a friendship with another boy who lived on the same block, one Bill O'Brien, who is now known to motion-picture fans as Pat O'Brien.

When the United States entered the First World War, Spencer Tracy was still a student—albeit a reluctant one—at the West Side High School in Milwaukee. He wanted to join the Marines, but was two months under the required eighteen-year-old limit. In the meantime, Bill O'Brien had joined the Navy "to see the world." Tracy followed him, but all he saw was the training camp. He "fought" the War at the naval base at Norfolk, Virginia, "looking longingly eastward to the sea." Once he took a cruise in the bay on a whaleboat, and that was the extent of his seafaring. He was still learning to be a sailor when the War ended.

Mustered out with a $30-a-month pension which the Government was giving to ex-servicemen who continued their education, Tracy decided to complete his high school course—which he did at two more schools: Marquette Academy (a Jesuit school in Milwaukee) and Northwestern Military Academy, Lake Geneva, Wisconsin. By now he had attended enough schools to admit him to Ripon College at Ripon, Wisconsin (in 1921), where he studied for three semesters. (In 1940 the college conferred on its former sophomore an honorary degree of Doctor of Dramatic Arts.) "I owe a lot to Ripon," says Tracy, "and especially to Dr. H. P. Boody, instructor in English, who gave me a leg up when he started me off on the debating team." This was allegedly to overcome Tracy's "self-consciousness," and Tracy, by way of gaining further poise and confidence, also went in for dramatics. Trying out for his first role, the story goes, Tracy backed into a pile of band instruments offstage, and made his entrance saying, "Gosh, I busted the drum." Tracy was, nevertheless, assigned a part in the campus production of Clyde Fitch's *The Truth*. That gave him the "theatrical bug" from which he never has recovered.

With the $30 a month he was still getting from the Government, Tracy decided to go to New York to study at the American Academy of Dramatic Art. His father gave him the tuition on condition that he live on his monthly stipend from Washington. Pat O'Brien had preceded his friend to the Big City. Together they took a room in a lodging house on West 56th Street. Pooling the pension and the little money O'Brien earned hardly paid for the rent, let alone food. The last two weeks of the month the two usually lived on rice, pretzels, and water. The low point came when Tracy missed eight meals in a row. He stopped going to classes and made the rounds of all the theatres on Broadway. After pounding the sidewalks all day he wound up at the Theatre Guild's rehearsal of Karel Čapek's *R. U. R.* (1922). He was given a job—the non-speaking role of a robot wearing a mask—at $10 a week. He got a similar job for O'Brien. After a while Tracy rebelled at playing a deaf-and-dumb automaton night after night and secured one speaking line, which promptly raised his salary to $15 a week. In his next play, *The Man Who Came Back*, he started out with one line. That line was "To hell with him," which he would yell at the end of Act One, but he yelled it so effectively, according to Mrs. Tracy, that "he always got a nice round of applause."

SPENCER TRACY

Spencer Tracy met his future helpmeet on a train at Grand Central Station. When they alighted at White Plains, New York, they discovered that they were both members of the stock company run by Leonard Wood, Jr., the son of the general. The former Louise Treadwell played the leading lady in the show while Spencer had his usual one-line part. This social disparity did not hinder the romance. They were married, a few weeks later (July 23, 1928), between the matinee and evening performances. Together they went to Cincinnati, where they worked for the Stuart Walker Stock Company. Next came Spencer's first job with a big New York show, *A Royal Fandango* (1923) with Ethel Barrymore '41. That lasted only a few weeks, but a critic had time to observe that "Tracy looked like he had been picked up by the property man." "By that time we were really broke," Mrs. Tracy recalls, "and Johnny was on the way, but Spence remembered a rooming house up on West End Avenue where he and Pat O'Brien used to live. He said, 'Come on—Mrs. Brown will give us a room. I can talk her into anything.' Then he got a job in Elizabeth, New Jersey, in a stock company, and commuted there. After that came a succession of parts in flop shows. Spence always managed to get jobs,

TRACY, SPENCER—*Continued*

even though they didn't pan out very well." To supplement the family budget, Tracy sold pianos between his theatrical engagements.

In 1930 Tracy's arduous years of economic uncertainty came to an end. He was given the role of Killer Mears in *The Last Mile.* The play was not doing well until a prison break in Auburn, New York focused public attention on it. With its success the actor leaped to fame. John Ford '41, the noted film director, saw the performance and offered him a contract to work in Hollywood. His first picture was *Up the River,* which was followed in rapid succession by *Quick Millions, Goldie, Six Cylinder Love,* and a dozen others. In these film efforts he had "scraggly," scarcely noticed parts until *The Power and the Glory* in 1933 convinced the directors that Tracy was a major actor. Still they doubted his "feminine draw." Even in his more recent pictures, such as *San Francisco* (1936), *Test Pilot* (1938), and *Boom Town* (1940), Clark Gable would get the romantic roles, while Tracy would play what McEvoy calls "the good-natured goof." Nonetheless, his feminine fan mail at present is said to exceed that of most Hollywood matinee idols.

In 1937 the Motion Picture Academy of Arts and Sciences awarded Spencer Tracy a gold statuette (the much coveted "Oscar") for his performance in *Captains Courageous* (1937). The same award was repeated the next year for the "best acting" in *Boys Town* (1938), in which Tracy played the part of Father Flanagan '41. Some of his other pictures were *Stanley and Livingstone* (1939); *Northwest Passage* (1940); *Edison the Man* (1940) (he seems to be running a race with Paul Muni in bringing real-life characters to the screen); *Men of Boys Town* (1941); *Dr. Jekyll and Mr. Hyde* (1941); *Woman of the Year* (1942) with Katharine Hepburn '42; and John Steinbeck's '40 *Tortilla Flat* (1942). *Keeper of the Flame* (1943) in which he again co-starred with Katharine Hepburn was well received by most critics. "Tracy is excellent," said Howard Barnes in the New York *Herald Tribune.* "He is particularly impressive as the writer . . . bringing his wry and smoldering intensity to every scene in which he appears." His next picture opposite Katharine Hepburn was to be *Without Love.* In the meanwhile *A Guy Named Joe,* a fantasy in which Tracy played the role of a dead bomber pilot who is assigned to help one of the youngsters who replace the fallen pilots, was released, and critics generally agreed that he had seldom given a better performance. In late 1943 he was scheduled to play the role of Colonel James Doolittle '42 in Metro's screen version of Captain Ted Lawson's '43 *Thirty Seconds Over Tokyo* (1943) and to play roles in Anna Seghers' '42 *The Seventh Cross* and in *The Hoodlum Saint,* a story about the repentant thief who died on the cross beside Christ.

Ironically enough, Spencer Tracy, who is now No. 1 in Metro's Box-Office Hit Parade, was turned down by the same studio several years ago when he made his first motion-picture test. The keynote of Tracy's histrionic technique is underplaying, a sort of quiet reserve—plus perfect timing—which he imparts to his acting. According to Howard Barnes, film critic of the New York *Herald Tribune,* Spencer Tracy's "art, like that of any great actor, is largely indefinable. His personality is something you must judge for yourself. I say he is one of the most consummate actors and one of the most engaging fellows who ever looked down on an audience from the screen. To a remarkable degree, he combines the colorful personal appeal which means so much to a medium of shadows and the talent to give impersonation the vitality and meaning that are essential in any job of performing on the screen."

Tracy is supposed to be "genuinely modest," and, "except when he's compelled by unavoidable pressure to appear at such functions as Academy award dinners, dislikes social events at which the spotlight is focused on him. He is fond of horses, owns a dozen of them, and likes to play polo." He also likes boats and, before the War, was "generally buying a new yacht and selling the old one. Five feet ten and one-half inches tall, Tracy weighs 165 pounds, has blue eyes and dark brown hair "slightly streaked with gray." The deep lines on his face, according to J. P. McEvoy, "would hold two days rain." Tracy is extremely fond of sweets, but cannot eat them because he has to watch his weight, since he is playing "hero" parts. His nickname, which only his most intimate friends and his wife use, is "The Donkey." The Tracys have two children: John and Louise. Both are motion-picture fans. Though they admit that their "old man" is a "pretty good" actor, they really like "Tarzan" Johnny Weissmuller much better.

TREGASKIS, RICHARD (trə-gas'kis) Nov. 28, 1916- Foreign correspondent; author

Address: b. c/o Random House, 20 E. 57th St, New York City; h. 153 Chilton St, Elizabeth, N. J.

When Richard Tregaskis, who stands six feet seven inches in his stocking feet, was assigned by the International News Service to the Solomon Islands job, fellow correspondents said that "if the undersized Japs ever captured him, they'd use him for an observation post." But the Japanese on Guadalcanal didn't capture Tregaskis, whom a Marine officer characterized as "one of the fightingest, eatingest men I've ever seen in my life." Landing with the first boatload of Marines on the

Guadalcanal beachhead, Tregaskis took his chances with the rest—with a "C" band on his arm instead of a gun. He set down in a diary what he himself saw, and what his companions—the privates and officers in the Marine service—experienced. The diary was finished aboard a Liberator bomber on the way home. According to Bennett Cerf '41 of Random House, "*Guadalcanal Diary* was received by Ward Greene of INS on November 9 (1942), accepted by Random House for publication on November 11, and chosen by the Book-of-the-Month Club judges on November 16. That's a record even in these days." Bought by Twentieth-Century Fox, it was made into a motion picture which was very well received when released in the fall of 1943.

Richard ("Dick") Tregaskis, the son of Mr. and Mrs. Archibald Tregaskis, was born in Elizabeth, New Jersey on November 28, 1916. (His sister Madeline, a Smith College graduate and Junior League member, suffered a tragic death in July 1943.) Entering Harvard, the tall young undergraduate had to spend all of his spare time working to help pay his tuition, and during two summer vacations went from door to door selling Singer sewing machines. But he was an excellent student, winning five separate scholarships and, in his senior year, the coveted "Harvard Club of New Jersey" award. He also won his letter on the swimming team. His idea of a morning dip, it is said, was "a ten-to-fifteen-mile swim up and down the Massachusetts surf." During his senior year Tregaskis was active on both the Harvard *Crimson* and the *Advocate*. His work on these undergraduate papers attracted the attention of Jack Malloy, managing editor of the Boston *American*.

It was with the Boston *American* that Tregaskis began his newspaper career. After a few years as reporter and feature writer for that paper he looked about for wider opportunities. Accordingly he approached the International News Service, with a unique qualification to offer: a full working knowledge of the Portuguese language. INS was preparing him for a post on the cable desk in either Lisbon or Rio de Janeiro when the news of the Japanese attack on Pearl Harbor came.

Tregaskis was first assigned to the United States Navy at Hawaii, where he made a good name for himself. Then, in July 1942, he was chosen as the Solomon Islands correspondent. Putting an extra pair of size fourteen sneakers in his kit, Tregaskis was ready to start. He was with the Marines on transport; he was with the first landing party which, on August 7, went ashore at Guadalcanal near the Ilu and Tenaru Rivers. He knew what it was to be afraid. And he made diary entries, fresh each day, of all these happenings and experiences. In *Guadalcanal Diary* Tregaskis covers the hitting stage of the Solomons action through August and September. The book is, therefore, a companion piece to Ira Wolfert's '43 *Battle for the Solomons* (1943), in which Wolfert, taking up about where Tregaskis left off, describes the action there from October through November.

The initial operation on Guadalcanal, in which Tregaskis took part, was performed without much danger, for the Japanese were caught off guard. But holding the captured airport (renamed Henderson Field) was more difficult—particularly with almost no air support. Tregaskis describes the Tenaru River battle and the battle on Lunga Ridge; but "the best passages in the book are those in which he brings his readers face to face with men." There were real heroes among those men, and Tregaskis tells what each did. In-between bouts of action they "passed the scuttlebutt"—Marine slang for rumor. "The result is a catalog of humor and grimness. All the details add up to something we on the home fronts need very much: an insight into battle that is more coherent, more detailed, and more honest than day-to-day headlines."

RICHARD TREGASKIS

Tregaskis left Guadalcanal in September 1942 in a B-24. John Hersey, correspondent for *Time* Magazine, said: "We all had to squeeze ourselves down in the bomb bays, so as to get as much weight forward as possible. Standing space was about four feet high and one foot wide." It was scarcely a comfortable place for Tregaskis with his six feet seven inches, and shoulders that are considerably more than a foot across. Later, however, back in the fuselage, he got out his typewriter and began work on the manuscript of his book. His only distraction, he wrote, "was a low circle which the pilot described over a certain Polynesian islet." They wanted to see dusky maidens swimming in a lagoon, "with or without Japanese sarongs. If you had spent eight weeks straight looking only at Marines, Japs, and betel-chewing Melanesian men, you would have had similar ideas." Immediately upon landing at Honolulu, Tregaskis—who has an enormous appetite and hadn't had much to eat on Guadalcanal rations—descended upon the Pacific Club and ordered three porterhouse steaks.

But this honest, modest reporter with the big appetite, "monumental feet, and good nature" is not back home eating steaks; soon he returned to Guadalcanal, where he sent back many stories of men in action like those in his *Guadalcanal Diary* before being transferred to England. In July 1943 he was a member

TREGASKIS, RICHARD—*Continued*

of the newspaper group which made the historic bombing flight to Rome from North Africa. While covering the American 5th Army in Italy he became a battle casualty in November 1943, when he was severely wounded in the head. A speedy operation saved his life, eleven bone splinters being removed from the right side of his brain, but he was not expected to resume his duties for some time.

TUCKER, HENRY ST. GEORGE, BISHOP July 16, 1874- Clergyman

Address: b. 110 W. Franklin St, Richmond, Va; 281 Fourth Ave, New York City; h. 6501 Three Chopt Rd, Richmond, Va.

President of the Federal Council of the Churches of Christ in America, Bishop Henry St. George Tucker is, according to an editorial in *Christian Century*, "a churchman of long and wide experience and of proved fidelity and competence. . . Bishop Tucker has long been known as one of the most forward-looking of Episcopal leaders: he is a liberal on social and economic issues, possesses a broad understanding of the missionary task of the Church, and belongs to that large body of the Episcopal Church which is more conscious of affinities with other Protestant groups than with Rome."

Bishop Tucker comes from an old and prominent Virginia family, long active in the Church. His grandfather, after rendering distinguished service to the State of Virginia and to the Southern Confederacy during the war between the States, was forced to flee to Canada at the end of the Civil War, when the Federal Government put a price of $25,000 on his head. Tucker's father, Bishop Beverley Dandridge Tucker, was the last Confederate soldier to sit in the Episcopal House of Bishops. Tucker's mother, Anna Maria Washington, was the great-grandniece of George Washington and daughter of the last private owner of Mount Vernon. They had thirteen children, nine boys and four girls, of which four of the sons are ordained clergymen, and two others are lay missionaries in China. Two of the sons, Beverley Dandridge Tucker, Jr., and Henry St. George Tucker, have followed their father into the House of Bishops.

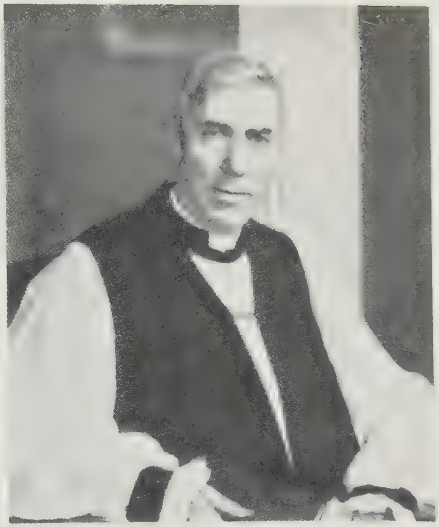
Henry St. George Tucker was born in Warsaw, Virginia on July 16, 1874. He received his early education at the Norfolk Academy, then studied at the University of Virginia, from which he was graduated in 1895 with an M. A. Four years later he received the degrees of both Bachelor and Doctor of Divinity from the Theological Seminary of Virginia. Ordained both deacon and priest in that year, 1899, he volunteered for service in Japan, where the American evangelistic staff had been seriously depleted by the retirement of several of the older missionaries. The arrival, however, of five young clergymen (of whom Tucker was one) made it possible to plan for extensive development of the work in the interior. After spending some time at the mission station in Sendai under the supervision of an older missionary, Tucker was placed in charge of the work in Aomori Prefecture, with his headquarters in the town of Hirosaki. At the time his knowledge of the Japanese language was imperfect and he was still inexperienced in the methods of work that would be effective in the remote interior. "This," he wrote, "was inevitable—a missionary in those days had to learn how to do his work by the mistakes which he made in his first attempts. . . The church in Hirosaki was a very unattractive place, which had formerly been a billiard hall. Work had been begun some two or three years previously. There were perhaps half a dozen baptized members. The problem was how to reach the non-Christians. A preaching service might attract a few passers-by, but the impression made upon such listeners by the missionary's or the catechist's preaching was not likely to develop into permanent interest. The foreigner, however, was himself an object of interest in a place like Hirosaki, particularly to the student class which was anxious to learn his language and to hear something of his country. A night school was therefore started which soon attracted every evening from seventy to one hundred young men to the missionary's home. Most of them were very poor prospects from the evangelistic point of view, and a great deal of time had to be wasted in trying to establish contacts with those who seemed to him likely to be responsive. His choice was often mistaken, but gradually a small group of listeners was produced, some of whom were ultimately baptized."

In 1902 Tucker, perhaps as a result of his pedagogical experience, was appointed president of St. Paul's College in Tokyo, a missionary school which has supplied the Episcopal Church in Japan (Nippon Sei Ko Kwai) with many of its clergymen and a large number of influential lay leaders. He served for ten years, resigning his office in 1912 upon his election to the post of missionary bishop of Kyoto. "Because of his able administration," wrote the Reverend William H. Melish, "and by means of his wide acquaintance among Japanese statesmen, he rapidly achieved a position of great influence in Japan." During his twenty-four years in Japan, Tucker became widely known as "the missionary statesman of the East." He preached only in Japanese, a fact to which he attributes his present "quietude." Tucker's work in Japan, says the Protestant Episcopal Church's Department of Publicity, "was characterized by a vigorous advance of the Church's work throughout the industrial centers of Japan. He put fresh life and vigor into the missionary educational institutions in his field and through his wide acquaintance with Japanese statesmen in all parts of the Empire, attained a position of influence not exceeded by any American resident of Japan."

When the United States entered the First World War, Bishop Tucker volunteered for service and was commissioned a major in the A. E. F., working with the Red Cross in Siberia in the administration of civilian refugee relief. He returned to his work in Japan, but, because of ill health, resigned his diocese in 1923, the year of the great earthquake. Returning to the United States, he accepted the position of professor of pastoral theology at the Theological Seminary in Alexandria, Virginia, succeeding his brother, the Right Reverend Beverley Dandridge Tucker, Jr. In 1926 he was elected bishop coadjutor of Virginia, becoming a full bishop in 1927 upon the death of the Right Reverend William Cabell Brown. He has held that post ever since. That same year he was elected to membership in the National Council of the Church, to fill the unexpired term of Bishop Brown, and was elected for the full term in 1928 by the General Convention of that year. At the end of his six-year term he was reelected to the Council to serve until 1940. Since his return from Japan he has been the advisor of the National Council upon questions of policy in the Church's work in the Far East. In 1937 he was sent by the Council to Japan to discuss and advise with the leaders of the Nippon Sei Ko Kwai with regard to the problems and necessities of the present time.

On October 16 of the same year, meeting behind locked doors in the chapel of Christ Church in Cincinnati, Ohio, the House of Bishops held the election for the new presiding bishop of the Protestant Episcopal Church. Although Bishop Tucker was not one of the three bishops on the official slate, he was nominated from the floor and elected unanimously on the second ballot. The office of the presiding bishop had, at that time, been invested with new prerogatives, which would make his status somewhat similar to that of an archbishop in the English Church. In effect he was to be the "spiritual head of the Episcopal Church" (which numbered some 1,600,000 members), with, *Newsweek* felt, "virtually dictatorial powers over Episcopal religious matters."

"It is unlikely," commented the editors of *Christian Century,* "that a better choice for a post of such responsibility could have been made, or one which other Protestants will so heartily approve. . . Virginia is strongly low church, and the election of Bishop Tucker will not give comfort to exponents of Anglo-Catholicism. It confirms, in fact, other indications that that movement has reached and passed its zenith within American Episcopalianism." The late Bishop Stewart of Chicago, who apparently considered himself one of the "exponents of Anglo-Catholicism" referred to, took exception to some of these statements. "May I be permitted to remark," he wrote, "that the election of Bishop Tucker was in no sense a party issue and that his election was made unanimous both in the house of deputies and in the House of Bishops. His election is a joy and satisfaction to all Episcopalians, for they recognize in him a stalwart churchman and a great Christian, one who has never identified himself with petty partisanships, and one who enjoys the confidence of all his brethren."



BISHOP HENRY ST. GEORGE TUCKER

"No one," continued Bishop Stewart, "can with truth and accuracy say, here is 'low' and here is 'high.' All churchmen of whatsoever school of thought profess the same faith, use the same Book of Common Prayer, observe the same rubrics and canon law, serve under the same bishops, and rejoice in the same fellowship. We all of us admire Virginia churchmen as stalwart, loyal adherents to the doctrine, discipline, and worship of the Church. Out of Virginia has come a great army of heroic missionaries. And all of us admire, respect, love, and propose to follow Bishop Tucker, not only because he is the presiding bishop-elect, but because in himself he represents that churchmanship which is at once evangelical, liberal, catholic—and Anglican."

Christian Century retorted that "the fact remains . . . despite Bishop Stewart's apparent disclaimer, that there are 'high church' and 'low church' groupings or 'wings' in the Episcopal Church, and that the election of Bishop Tucker has some significance in this connection. . . The gracious way in which the

TUCKER, HENRY ST. GEORGE, BISHOP—*Continued*

bishop of Chicago characterizes him is a token that partisan tension is lessening within the Episcopal fold as it is in all other communions." *Newsweek* felt, however, that the significance of "the missionary-minded Bishop's" appointment was that the Protestant Episcopal Church intended "to devote much of its future to work in foreign lands. The Church already has missionary bishops in Africa, China, Haiti, Brazil, Cuba, Japan, Mexico, and the Dominican Republic."

Bishop Tucker assumed his new office in 1938, continuing to retain the position of bishop of Virginia through a co-adjutor who discharged his duties. As presiding bishop of the Episcopal Church, Tucker interested himself in providing aid to war refugees. He announced in a short-wave broadcast to all English-speaking people in the summer of 1941 that the majority of the American people had come to the determination that adequate aid must be given to Britain, even though it involved us in war. In November 1941 Tucker made public a statement signed by thirty Episcopal bishops, clergy, and laymen, who comprised a council of advice to a commission appointed by the Episcopal General Convention to study the Church's attitude toward the international situation. "After the War," the statement said in part, "responsibility for peace may involve ethical use of force in behalf of law and right quite as much as in the case of a struggle for victory in war. No nation can escape this responsibility for the restraint of evil within its borders nor the coercion in the use of force in a wider sphere when it accepts a role within a family of nations. As the Christian faces the reign of sin in the world, he must view his vocation in the light of these realistic facts. American cooperation in post-War world reconstruction, accordingly, must mean not only penitence for selfish withdrawal from world community in the past, but also resolve to shoulder the burden of responsibility in the future. Cooperation for peace may require a frank recognition that the concept of the family of nations logically involves a sovereignty corresponding to this larger whole. Creation of this wider sovereignty means for each participating nation limitations which will have to be accepted."

"The exponents of a philosophy which is utterly inconsistent not only with the treasured traditions of our American life, but with the ideals and teachings of our Christian faith," the statement concluded, "have nearly conquered Europe and are seeking to dominate the entire world. In the face of such a challenge it is our national duty to take every step necessary to accomplish the complete defeat of those aims; it is equally our national and our Christian duty to hold as our major objective a just and durable peace for all nations."

In his sermons Bishop Tucker expresses similar ideas. A just and durable peace will be possible only when people put aside national and group selfishness, he says; "the time has come when God is calling upon the Christian Church to put into effect the basic principle that we must love our neighbor as ourselves." Furthermore, "the sacrifice of love and loyalty is the sure means by which the victory of the right can be attained here on earth."

In December 1942 the Federal Council of the Churches of Christ in America convened to elect a new president. Bishop Tucker was unanimously elected, succeeding the Reverend Doctor Luther A. Weigle of Yale University. Tucker's election was without precedent, as this was the first time a Council president had been chosen from the Episcopal communion—owing probably to the fact that the Episcopal Church had become a member of the Council only two years before. A statement by the Council said that "his broad experience and wide travels qualified him to serve the Council during the next two years [his term of office is two years], when its relations with churches of other lands might become a major concern."

Tucker has had a large number of honorary degrees bestowed upon him by numerous institutions of learning. He is the author of a number of articles and of several books: *Reconciliation through Christ* (1910); *Providence and the Atonement* (1934); and *The History of the Episcopal Church in Japan* (1938). He was in 1943 chairman of the World Council for the Four Freedoms. "Many of the peoples of the world are looking to America to see whether from us there is not some gleam of hope," he said in one of his sermons, "and whether we are providing in our own national experience that freedom is something that can be made to work; that unity is possible among people who belong to different races and who represent different types of human characteristics."

Tucker is tall (six feet, two inches) and lanky. He is a Mason and a member of Pi Kappa Alpha. His favorite recreations are mountain-climbing and sea-bathing. His taste in books ranges from Plato to Dashiell Hammett. In 1911 he married Mary Lillian Warnock. They have two children, Henry St. George, Jr., and James W. Tucker. The Bishop has been described as "a man of great personal charm and learning, piety and energy." Noted for his silences, he is unassuming and scholarly, with a keen sense of humor.

TURNER, LANA Feb. 8, 1920- Film actress

Address: b. c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif.

Known as America's "Sweater Girl," Lana Turner has securely established herself as one of the most popular actresses of the modern screen. She has been voted the sweetheart of Sigma Phi, Phi Delta Theta, and countless other fraternities. She has had the offer of half an island—if she would move in. Sailors have elected her the girl with whom they'd like to be cast on a desert island; college freshmen have decided that she is the girl with whom they would like to be tossed in a blanket. In her honor Beverly Hills famous Tropic Restaurant has named a rum drink "Untamed," while "Baked Potato à la Lana" is served at the Royal Hawaiian Hotel of Honolulu. In short, there can be no doubt that Lana Turner has arrived among the stars.

A combination of Danish, Swedish, Irish, French, English, and Spanish stock, America's Sweater Girl was born on February 8, 1920 in Wallace, Idaho, where her father, Virgil Turner, worked as foreman in the mines. Her real name is Julia Jean Mildred Frances Turner, and her friends in school used to call her "Judy." When three years old she made her theatrical debut—if one may call it that—at a charity fashion show where her mother was one of the models. Before anyone could stop her she rushed upon the stage and did an impromptu dance in front of the audience. Later, she did some barefoot dancing for the local chapter of the Elks, but since neither Lana nor her parents were in any way stage struck, her theatrical career was not taken seriously.

Soon the family moved to San Francisco, where tragedy awaited them. One winter night Virgil Turner was "blackjacked" by some thugs and after that Mrs. Turner had to support herself and her seven-year-old daughter by working in a beauty parlor. Lana at the time went to the Convent of the Immaculate Conception, and her great ambition in life was to become a nun until she found out that nuns had to cut off their hair. She then decided to become a fashion designer instead. In junior high, "the thwarted nun" became the school's cheerleader. After her first season in this capacity she was decisively re-elected, "an early triumph of mass judgment."

For the sake of Mrs. Turner's health, Lana and her mother moved to Los Angeles. Lana entered Hollywood High—and her film career began. It was in the drugstore across the street from school that Lana first met William R. Wilkerson, editor and publisher of the *Hollywood Reporter*, a motion-picture trade journal. He made the old, much repeated inquiry: "How would you like to be in pictures?" Although Lana "knew her Hollywood lore," her "natural feel for what's right and wrong told her this one was right." Wilkerson introduced her to the Zeppo Marx Agency, and the Zeppo Marx Agency did the rest by taking her to director Mervyn LeRoy, known as the man who had brought to stardom, among other actresses, Ginger Rogers '41 and Loretta Young. It is reported that when the fifteen-year-old girl walked into LeRoy's office the director pulled the contracts out of his desk and asked only one question: "What's your name?" When he heard it he said, "Not so good." It was then that Julia Jean Mildred Frances Turner dreamed up the name "Lana." Why, she didn't know. "It just came to her."

In present-day Hollywood it is a rare thing for "somebody without a day's experience in group theatre, a finishing school, or a committee for the relief of foreign refugees" to "knock over an important place" in the motion-picture business. Yet Lana Turner did just that. LeRoy immediately gave her a part in *They Won't Forget* (1937). It was only a small part; in fact, she was to be murdered before the first reel was over. But this small part established Lana's reputation, for it included a shot of her walking along the street in skirt and sweater. At the preview "high-school and college boys in the audience howled and cheered" when this scene was flashed on the screen. Lana herself is reported to have been the only person profoundly shocked. It is said that she has steadfastly opposed her tag of "Sweater Girl" and has insisted that she does not like to wear a sweater in front of the camera. Her studio's press agents, however, continued for a long time to call her the "Sweater Girl" in their publicity.

LANA TURNER

After *They Won't Forget* she played opposite Brian Aherne in *The Great Garrick* (1937), "one of the choicest disasters in Hollywood history." Next came Goldwyn's *The Adventures of Marco Polo* (1938), in which Lana had the part of a dancer. When LeRoy moved to MGM, Lana accompanied him there. She played leads or second leads in several minor productions: *Love Finds Andy Hardy, Rich Man, Poor Girl,* and *Dramatic School* in 1938; *Calling Dr. Kildare, These Glamour Girls,* and *Dancing Coed* in 1939. None of her performances was likely to make her eligible for the Academy Award; "their importance lay in the reactions conveyed by fan-mail letters and the cards on which, at previews, studios invite audiences to express their opinions." These reactions can be summarized as "Boy, oh boy!"—an eloquent profession of admiration from American manhood, for whom Lana "represented Something." She might not look like the average high-school girl, but "she looked like what the average high-school boy wished the average high-school girl looked like."

(Continued next page)

TURNER, LANA—*Continued*

All this time Lana Turner was engaged to a young Hollywood attorney, Gregson Bautzer, but on the set of *Dancing Coed* she met Artie Shaw '41, the bandleader, who only shortly before had made his announcement that jitterbugs were morons and that he couldn't take it any longer. Called by their associates "the most unharmonious pair that ever worked together," the two eloped to Las Vegas, Nevada on their first date in February 1940. The four months and seventeen days that followed are always referred to by Lana as "my college education." The education consisted mainly of disputes and disagreements—about food, about music, about almost everything. On the first of July the marriage finally broke up in a spectacular enough manner to suit any Hollywood gossip writer. That very night Lana was scheduled to appear at a Shaw broadcast to demonstrate her affection for him in front of the various press cameras. And so she did, but at the end of the affectionate interlude she announced that she "had left him for good." In order to relax after the strains of her married life she went away on a vacation to Honolulu, fully equipped with twenty-one pieces of luggage and a slender volume of Hawaiian love poems.

Back from her vacation, Lana got her first chance to prove that she could do more than just wear a sweater—that she could act. This chance came in a "little" picture entitled *We Who Are Young* (1940). In this picture, dealing with the troubles of a young married couple in the hostile world—hostile at least until the last reel, when everything comes out all right—Lana, as *PM* says, "not only proves herself a good actress; she does something even more consoling. She proves that not only bad girls are well set up. Even in cotton house dresses, she proves that." Next came *Ziegfeld Girl* (1941) in which she played the girl who went wrong. "It was a once-in-a-lifetime role," Lana insisted afterward. "Had everything—glamour, drama, everything." And Lana, on her part, had "that Ziegfeld look," as director Pop Leonard happily told her. Her performance in *Ziegfeld Girl* definitely put her at the top. "Sweater Girl" references were forbidden in MGM's press department—Lana became a star. Now she played only in major productions: *Dr Jekyll and Mr. Hyde* with Spencer Tracy '43, *Honky Tonk* with Clark Gable, and *Johnny Eager* with Robert Taylor.

Lana's love life flourished in the meantime. Her name was mentioned in connection with such men as Tony Martin, Victor Mature, Tommy Dorsey '42, and Dorsey's drummer Buddy Rich. It is said that she "has dated, conservatively, some 150 members of the opposite sex," that she has been "reported engaged to marry five different men at the same time, and actually was on the verge of going to the altar with a dozen." The man with whom she finally eloped, on July 17, 1942, was Stephen Crane, generally described as a tobacco heir. They had met only shortly before—some people say only nine days before. This was Lana's second trip to Las Vegas, Nevada and she was married this time—like the first time—by Judge E. Marshall, whose greeting to her was, "Welcome back, Lana!" Unhappy about the elopement was the studio which had ironically announced her next picture as *Marriage Is a Private Affair*, but "impulsive Lana, the bride, was satisfied."

Lana's satisfaction was not to last, however; for only shortly after her disclosure that she was anticipating motherhood, in December 1942, came the discovery that Stephen Crane's divorce from his former wife, Carol Kurtz Crane, had not yet become final in July, when Lana and he got married. Crane had understood that his former wife had filed suit for divorce at the time they separated, early in 1941, and had not learned until it was too late that she had not received an interlocutory decree until 1942. Lana immediately sued to annul her marriage, and on February 4 she appeared in court, suffering from a bad cold, and obtained her annulment. Asked if she intended to remarry Crane, the actress replied, "I have nothing to say on that, you know." "The distraught Crane . . . sought to remarry her" and even went so far as to attempt suicide with an overdose of sleeping pills when she would not consent. Finally the pair were reconciled. On March 14, 1943, they were married for the second time in Tijuana, Mexico. "Everything is going to be all right," said Crane, now a private in the Army. A child was born to the couple later in 1943.

Her marital tangle straightened out, Lana continues her film career. In 1942 she appeared with Clark Gable in *Somewhere I'll Find You*, like *Honky Tonk* "an action film that provided action chiefly for those who thrilled when Clark Gable gathered Lana Turner into his insisting arms." But, said the same reviewer, "you can be sure that MGM wouldn't have made this film if there weren't millions of people who would appreciate it." Her next production was *Slightly Dangerous*, with Robert Young, in which "Lana, in a costume change from her conventional sweater, still manages to undo all attempts at censorship by her adroit management of an old-fashioned camisole." After *Marriage Is a Private Affair* she is to star in *Jenny Was a Lady*. Her current contract with MGM provides for a weekly salary of $4,500 by 1945.

Lana, as her countless admirers well know, is five feet three, weighs 110 pounds, and has "perfect" measurements. Her eyes are hazel, and the color of her hair seems to vary—it has been described as light brown, as blond, and as downright red. She likes to sleep in satin nightgowns, and she wears slacks around the house. Her hobby is to collect perfumes, paying special attention to the names. She studies all her roles with her dramatic coach, Lillian Burns, who calls her "the most brilliant girl I've ever taught."

VANDEGRIFT, ALEXANDER ARCHER Mar. 13, 1887- United States Marine officer

Address: b. c/o War Department, Washington, D. C.; h. 1607 44th St, N. W., Washington, D. C.

U. S. Marine Corps

MAJ. GEN. ALEXANDER ARCHER VANDEGRIFT

On November 30, 1943 it was announced that Lieutenant General Alexander Archer Vandegrift, who led the successful Marine invasions of Guadalcanal and Bougainville in the Solomons, would succeed Lieutenant General Thomas Holcomb '42 as commandant of the United States Marine Corps on January 1, 1944. No grim-faced, rip-roaring commander in the Leatherneck tradition, quiet, capable Lieutenant General Vandegrift—so cheerful that he has earned the nickname of "Sunny Jim"— is nevertheless the toughest Marine Corps leader who ever charged at the head of his troops. His own hero was fiery "old Gimlet-Eye" Smedley Butler, under whose command Vandegrift, as unspectacular assistant, received valuable training. As a matter of fact, General Vandegrift's first big job on his own was his assignment (August 1942) to command in the Solomons operations.

Alexander Archer Vandegrift, the "calm, even-tempered, other man's man" who could wear a dozen or so medals for outstanding service, was born on March 13, 1887 at Charlottesville, Virginia, the son of William Thomas and Sarah (Archer) Vandegrift. He took the regular academic course at the University of Virginia from 1906 to 1908. It was in 1909 that he was appointed a 2nd lieutenant in the Marine Corps. Since then he has served at many important Marine Corps posts in the United States and abroad, and at sea aboard the battleships *Minnesota, Virginia, Delaware,* and *Chester.*

As a 2nd lieutenant on duty with an expeditionary battalion in Nicaragua in October 1912, Vandegrift participated in the bombardment, assault, and capture of Coyotepe Hill. This was his first service under General Butler, and he was awarded the Nicaraguan Campaign Medal (1912). In 1914 he took part in the occupation of Vera Cruz, Mexico, and in 1915 (as a 1st lieutenant) in operations against the hostile Cocos in Northern Haiti. From 1916 to 1918 and again from 1919 to 1923 he served with the *Gendarmerie d'Haiti.* He was awarded the Haitian Distinguished Service Medal and twice awarded the Haitian

VANDEGRIFT, ALEXANDER ARCHER—*Continued*

Médaille Militaire by the President of Haiti for his services.

Early in 1927 Vandegrift arrived at Shanghai, China, for duty as force operations and training officer at regimental headquarters, once again serving under General Smedley Butler. Later in the year he was stationed at Peking and at Tientsin.

Returning to the United States, from 1929 to 1933 he served as assistant to the chief coordinator, Bureau of the Budget, in Washington, D. C. For the next two years he was assistant chief of staff of the Fleet Marine Force. Then came two more years abroad (1935-37) with the Marine Detachment, American Embassy, at what had formerly been Peking, China. Back home again (1937-41), Vandegrift was on duty at Headquarters Marine Corps, Washington, D. C., part of the time as secretary to the major general commandant, later as assistant to the commandant. In 1941 his friend Major General Philip H. Torrey asked for him as assistant division commander of the 1st Marine Division, then in training at New River, North Carolina.

When in August 1942 the United States took its bold offensive move in the Solomons, the Marines and a capable commander of the Marines were indicated. General Vandegrift was ready and, to the complete surprise of the Japanese, struck with mobilized, concentrated fire power. Guadalcanal and other islets were captured. Vandegrift commented on these victories: "God favors the bold and strong of heart." On American losses he added: "Casualties, while severe, were by no means disproportionate to the results achieved."

The next few weeks the Marines held what they had taken, but General Vandegrift was in a tight spot, chiefly because he needed both reinforcements and supplies. Savage Japanese attacks on September 13 and 14 were barely beaten off by counterattacking reserves. In October the enemy was able to land reinforcements on its side of Guadalcanal; and an all-out battle for the Solomons seemed close. But despite the great Naval defeat at the start of the campaign, the Marines still held. According to one correspondent: "Certainly the command has been alert and tough. It has anticipated every Jap stroke, including the present push. General Vandegrift, who can be seen in the evenings stretched out meditatively in a canvas deck chair in front of his heavily fly-sprayed cabin, has been cool, soft-spoken, hard, and wonderfully cheerful." But the Marines were tired, tired from lying in the mud and dodging Jap guns, from fighting malaria and other illnesses. Replacements and reinforcements had been too long in arriving. The Japanese, using naval guerrilla tactics rather than open sea battle, were wearing down the United States Navy. When Vice-Admiral Halsey '42 replaced Vice-Admiral Ghormley '42, however, things began to look better for General Vandegrift and his Marines. Two decisive Naval victories in the Solomons then forced the Japanese into hiding on what bases they still held (November-December 1942), and the Marines took a temporary, much-needed rest, for on December 9 Guadalcanal was turned over to the Army under the command of Major General Alexander M. Patch '43. The Marines' rest had been well earned. On the first anniversary of Pearl Harbor, Vandegrift was able to announce that since his men had landed four months earlier the Japanese troop losses had exceeded the Americans' by more than ten to one, and their air losses by about seven to one.

Upon his return to the United States, Vandegrift was awarded the Congressional Medal of Honor, thus becoming the first Marine in the Second World War to win both that medal and the Navy Cross, which he had received on Guadalcanal in October 1942. (His command there eventually had included "sea, land, and air forces of the Army, Navy, and Marine Corps.") In July he was promoted to the rank of lieutenant general and appointed commanding officer of the First Marine Amphibious Corps. He was the second Marine ever to attain the grade of lieutenant general, the first having been Lieutenant General Thomas Holcomb, then Marine Corps Commander.

At the end of the summer Vandegrift was back in the South Pacific with the Amphibious Corps and on November 1 Major General A. H. Turnage, under Vandegrift's over-all command, led the landings on Bougainville Island. In speaking of the operations in the Pacific area, Vandegrift said: "They have demonstrated again that we are not Army, Navy, or Marines out here. We are Americans, all of us—a united, highly cooperative team which is using every effort within our means to do the job we were sent out here to do. And that is what is going to win the War for us." Japan, he indicated, never would be defeated by threats, ultimatums, or propaganda. "We will have to knock these people out completely, sink their ships and destroy them in the air."

In the middle of November 1943 Vandegrift turned his command over to Major General R. J. Geiger, who had been with him on Guadalcanal, and reported back to Washington for further duty. He had been on his way to Washington even before the landings on Bougainville, Major General Charles D. Barrett having been previously named to succeed him in command of the Amphibious Corps, but when he had reached Honolulu he had learned of Barrett's death and had returned to direct the operation.

Modest and self-effacing even after victory, General Vandegrift commented that the Solomons engagement taught certain lessons: "We've learned some things about logistics and will profit by our experiences in this field, but our arms, general equipment, and training have all proved to be well suited for this type of operation." He was especially pleased with the usefulness of the tractors—not tanks—that are a part of Marine equipment, used to haul enormous amounts of supplies. "And, of course, the jeep has been invaluable," he said. He declared further that the Marines had thoroughly learned about jungle fighting during the years they worked in Nicaragua, Haiti, and other places in the tropics, and his praise of them was unstinting.

When on November 30 Secretary of the Navy Knox '40 announced the appointment of the eighteenth commandant in Marine Corps history, the Japanese may or may not have been surprised: they had previously announced that Vandegrift had been killed in the Bougainville battle.

Although service with the Marines is apt to take one to far outposts, General Vandegrift is a home-loving man. When away he writes faithfully to his brown-eyed, sweetly determined wife, Mildred Strode, whom he married on June 29, 1910; he talks proudly of his only son, Archer, Jr., now a lieutenant colonel (temporary) in the Marines. Stonewall Jackson, Vandegrift says, is his favorite general "because he could do so much with so little." Since doing much with little was a Solomons campaign necessity, General Vandegrift seemed well on the way to emulating his hero.

VAN KONIJNENBURG, WILLEM ADRIAAN *See* Konijnenburg, W. A. van

VAN SLYKE, DONALD D(EXTER) Mar. 29, 1883- Scientist

Address: b. Rockefeller Institute Hospital, 66th St. and York Ave, New York City; h. 21 Sycamore St, Bronxville, N. Y.

Chief research chemist at the Rockefeller Institute Hospital in New York for more than twenty-two years, Dr. Donald D. Van Slyke has received many awards and honors from medical and chemical organizations. Although his studies in chemistry and his various writings still constitute a full-time job, Dr. Van Slyke in recent years has taken up new activities with a broad social scope. These include his presidency of the American Bureau for Medical Aid to China and his directorship in the United China Relief organization.

Donald Dexter Van Slyke was born in Pike, New York on March 29, 1883, the son of Lucius Lincoln and Lucy (Dexter) Van Slyke. He went to the high school at Geneva, New York, and after studying for a year at Hobart College entered the University of Michigan. There in 1905 he received his B. A. degree, and in 1907 his Ph. D., having worked with Gomberg on derivatives of triphenyl methyl. He was a graduate student for one year (1911) at the University of Berlin.

DR. DONALD D. VAN SLYKE

Associated with the Rockefeller Institute as a research chemist from 1907 to 1914, Dr. Van Slyke became chief chemist there in 1914. He still holds that position. He first worked in the laboratory of P. A. Levene, with whom he was associated in studies of proteins and amino acids. During this period he devised the nitrous acid method for gasometric measurement of nitrogen in primary aliphatic amino groups, and, with Gustav Meyer, used the method to trace the path of protein digestion products through the animal body. The "nitrogen distribution" method, for measuring the different types of amino acids in protein hydrolysates, was also developed during this period.

During the First World War, at the request of the surgeon general of the Army, he organized at the Rockefeller Institute a training class for chemists in the Sanitary Corps. On the completion of this work in 1918 he was appointed a major in the Sanitary Corps, but the Armistice prevented his receiving his commission.

As chemist at the Hospital of the Rockefeller Institute Dr. Van Slyke's studies have been directed partly at problems of theoretical and analytical chemistry, partly at problems in clinical and related physiological fields. Among the theoretical studies are those of enzyme action, undertaken with Cullen (1914), in which quantitative formulation was made and tested of the theory that short-lived, stoichiometrically-formed enzyme-substrate compounds are intermediate steps in enzymic decomposition. Another undertaking, studied with Hastings and Sendroy, was that of the unequal electrolyte distribution between blood cells and serum, which was explained by applying the Gibbs-Donnan theory to data on the amphoteric properties of the blood proteins. Micro methods of analysis have been

VAN SLYKE, DONALD D.—*Continued*

developed for the blood gases and for various other blood constituents, including urea, ammonia, amino acids, reducing and fermentable sugars, fats, the "acetone bodies" (acetone, acetoacetic acid, and hydroxybutyric acid), chloride, phosphorus, and organic carbon.

Clinical and physiological studies by Van Slyke and his collaborators, Stillman, Austin, Stadie, Cullen, and others, have developed the controlled-oxygen treatment for anoxemia in pneumonia and also various diagnostic tests, particularly those for early detection of acidosis in diabetes and of renal failure in Bright's disease.

For his important contributions to medical science, in May 1942 Dr. Van Slyke received one of the highest honors in the medical profession: the George M. Kober Medal. It was presented to him by the Association of American Physicians at that organization's fifty-seventh annual meeting.

After the Japanese attack on China, Dr. Van Slyke joined the American Bureau for Medical Aid to China. For his activities in the growth and development of that organization, which has been the chief American support of the Chinese Red Cross, he received the Order of the Jade decoration from the Chinese Government. As soon as the United China Relief was organized, he became one of its directors.

Dr. Van Slyke holds a number of honorary degrees from various universities, including the University of Oslo, Norway. Besides the Kober Medal, he was given the Charles Mickle Fellowship Award of the University of Toronto (1936) for contributions to medicine; the Philip Conné Medal of the American Chemical Society of New York (1937); and the Willard Gibbs Medal of the American Chemical Society, Chicago (1939) for contributions to chemistry. In 1942 he was made an honorary member of the British Physiological Society. His publications include *Cyanosis* with C. Lundsgaard (1923); *Observations on the Courses of Different Types of Bright's Disease and on the Resultant Changes in Renal Anatomy* (Van Slyke and others, 1930); and *Quantitative Clinical Chemistry* (Peters and Van Slyke, two volumes, 1931).

In June 1907 Van Slyke was married to Rena Mosher; the couple have two children, Elsa and Karl Keller. Fair in coloring, of average height and weight, Dr. Van Slyke at sixty is athletically active. He still plays singles at tennis, and runs the ski trails in the New England mountains.

VARIAN, DOROTHY (ve'rē-ən) Apr. 26, 1895- Artist

Address: h. Woodstock, Ulster County, N. Y.

From the time she first held a paintbrush in her hands, life has been able to offer no greater fulfillment to artist Dorothy Varian than an opportunity to work with her paints and canvases. "I have always thought my life was exactly like a roller coaster," she writes us, "—now zooming up into a cloudless blue sky with the sun full in my face; again on an almost perpendicular downgrade, painfully hanging on to my stomach!"

Dorothy Varian was born on April 26, 1895 in New York City, the daughter of Eugene W. and Helen Estelle (Bontecou) Varian. "Life seemed to begin with art school," she says. "I was fifteen when I entered Cooper Union in New York City." She took the full course the school offered in art and was graduated with the "usual little honors of cash prizes and a bronze medal."

The Art Students League was her next step, and she had her first "big excitement" when she won the first and second prizes in the William Fox art contest which was open to all art students in New York City. Somewhat awed by the monetary award of $150 and the publicity attendant on the occasion, she was not, she tells us now, sufficiently impressed with being a double winner in a contest judged by such distinguished men as Robert Henri, William Glackens, Wallace Morgan, and John Sloan. The recognition did, however, encourage her to rent a barn in Woodstock, New York, for $5 for the summer, and there she began a life of "very odd jobs and painting."

The professional artist is generally in a hazardous financial state. Miss Varian found herself occasionally affluent, but generally very much on the other side of the scale. As a result she supplemented her income with money from various odd jobs she undertook. Fortunately some sympathetic cousins rescued her from one of the worst of her "odd jobs" and offered her more than she was earning to give it up for a rest followed by a trip to Europe to continue painting.

She took advantage of their offer, and "three stimulating and full years abroad followed, with all gates open to travel, study, and work." While in France she had her first one-man exhibition at the Durand-Ruel Galleries in Paris (1922), and a picture of hers was exhibited in the Salon d'Automne the same year. After she returned to New York she once more found a succession of odd jobs that included acting as cashier and night manager in a hashhouse, making frames, teaching oil painting at the Chapin School for Girls in New York City, and the like. The happiest of these was a job selling paintings in the galleries of Joseph Brummer in New York. "It began during the disposal of John Quinn's large and famous collection of modern paintings which seemed to mark the beginning of art-mindedness in the American public," Miss Varian writes. "From the thrill of cleaning a large Rousseau jungle to hanging the galleries with Cézannes, Seurats, and so forth, to meeting museum directors and the real art patrons of the boom years, it was all very exciting."

Dorothy Varian had two American exhibitions: one at the Whitney Club, the other at the Whitney Galleries (forerunner of the modern Whitney Museum of American Art in New York City in 1929). Both of these exhibitions were happy from an artistic and economic viewpoint; for the first time Dorothy realized that the work she loved so well also

DOROTHY VARIAN

had its financial compensations. Up to that time she had given away her paintings whenever they were admired. Out of one of her exhibitions, however, eight out of twelve paintings were sold, all to artists. One artist even raised the price of a picture from $100 to $150, telling her it was ridiculous for her to ask so little.

The success of her exhibitions gave Dorothy Varian a reputation for selling everything she painted, and Mrs. Halpert of the Downtown Galleries became her dealer. She had two more one-man shows at the Downtown Galleries (1932 and 1937) and with the depression found survival along with numerous others in the Art Project of the WPA. "Then, characteristically landing on all fours," Miss Varian says, "I inherited a small sum of money which provided a paintable farm in Woodstock with an excellent studio and trout stream plus a magnificent view."

Critics and art patrons alike have appreciated Miss Varian's work, and as far back as 1929 the *Arts Magazine* wrote of her paintings: "Never self-conscious or pretentious; subjects informal and unhackneyed. . . [She paints with] sensitivity, delicacy, and lucidity." *Creative Art* wrote about one of her shows: "Entrancing color, rhythmic composition, and a personal viewpoint of refreshing charm distinguished the Dorothy Varian show here. . . She paints joyously with mature and confident craftsmanship."

More recently the *Art Digest* wrote of her work: "The artist's new interest in figure composition brings a note of pleasing contrast to her familiar landscapes. . . She identifies herself so personally with what she is painting that each picture takes on a human quality." *Art News* wrote at the same time that she "paints with genuine taste and feeling . . . enters so completely whatever she paints that one has a feeling that all her work is autobiography."

Among Miss Varian's best known paintings are her *Sandra in a Pink Slip, Plants and Artichokes, Farm in Winter, Interior with Stove and Nude,* and *Flowers on Red Table Cloth.* She is permanently represented in collections of the Whitney Museum of American Art, Newark Museum, Philips Memorial Gallery, Dartmouth College, and Fiske University as well as in many important private collections.

Five feet six inches tall, Dorothy Varian weighs 145 pounds and is a strawberry blonde. Her eighth one-man exhibition was held in 1943 at the Associated American Artists Gallery. That gallery is now her representative. Between painting sessions during the summer she digs away at her victory garden.

Who's Who in American Art 1940-41

VASILEVSKY, ALEXANDER M(IKHAILOVICH) (va-si-lev'skē) 1897(?)-

Marshal of the Soviet Union and chief of staff of the Russian Army

Address: b. Commissariat for Defense, Moscow, U. S. S. R.

Commenting on "the Soviet passion for anonymity," a news writer recently explained the obscurity in which some of the present leaders of the U. S. S. R. are cloaked by citing the rigors of war. "Since only the young and the tough could survive the strain, the young, the tough—and the unknown—were promoted. The result was the world's youngest and least known command." Perhaps the most important member of this young command, and certainly the most obscure, is Marshal Alexander Mikhailovich Vasilevsky, who, in less than a year, has been raised from major general ("the lowest general rank in the Red Army") to a position second-in-command to Joseph Stalin '42.

His meteoric rise, while not unusual in Soviet ranks, is all the more significant because of the tremendous responsibility which has been entrusted to him. He holds at least three major positions in the Soviet High Command. As marshal he is one of the six or seven members of the Supreme Command which plans general strategy. As chief of staff he is responsible for specific details of this general strategy, and as chief of political administration, Vasilevsky heads the commissars of the Red Army.

Due partly to the "anonymity" tradition, and largely to the fact that he has been in power for such a short time and no one has yet had the opportunity to publish a study of his career, Vasilevsky remains one of the "mystery men" of the War. It is not difficult, however, to construct a biography of the marshal, because there are certain characteristics common to nearly all Soviet generals. They are usually young men (in their '40's as a rule) who began their careers as soldiers in the Imperial Army, who then fought for the Revolution, went to military

ALEXANDER M. VASILEVSKY

schools like Moscow's Frunze Academy where they learned the tactics of mechanized warfare, and were finally graduated as officers in the Red Army.

What little is known of the life of Alexander Mikhailovich Vasilevsky seems to follow this pattern. He was born about 1897. According to Edgar Snow '41 he is a Cossack, and his parents were wealthy horse breeders. Other stories have it that he is the offspring of Volga peasants or is of Polish stock. In any event he went off to the First World War as a czarist soldier—drafted for military service in a Cossack regiment, according to Emil Lengyel '42. "He saw service against the Turks on the Caucasus front, later took part in the great Russian offensive of 1916 on the Eastern front." Then he returned to his village, to find it a bloody battleground. Many of the Cossacks made common cause with the old order against the Bolsheviks, but he fought on the side of the workers. After the Bolshevik victory he joined the Red Army, where he was discovered by one of his superiors and sent to the regimental school. Having won honors there, he was sent on to the Frunze Military Academy.

"A man of the schools rather than the field," Marshal Vasilevsky must have spent the years between the two World Wars studying large-scale military operations. He is considered the "professorial type" of Army man, but, like nearly all Russian staff officers, he has seen action in the field on many occasions. His swift rise to power is due in part at least to his work at the Stalingrad and Voronezh Fronts.

Marshal Vasilevsky has been a part of the Russian High Command since 1941. He was called in during the general reorganization of the Red Army which took place after the Russo-Finnish War. During that war Vasilevsky had served under Marshal Georgi K. Zhukov '42, who is now "chief of the operational staff which executes Vasilevsky's plans." Holding in 1941 the lowest rank of general in the Army, that of major general, Vasilevsky rose four grades within the next eighteen months. In the spring of 1942 he was made colonel general. Early in 1943 he was named Army general, and one month later he was made marshal of the Soviet Union.

Called Stalin's "young protégé," Vasilevsky's rise is the result of the 1943 "revitalization" of the Red Army. The famous triumvirate of marshals who had resisted the Germans in the first year of the invasion—Semyon M. Budenny '41, Semyon Timoshenko '41, and Klementii Voroshilov '41, were superseded by seven men, headed by Marshal Vasilevsky, "typical of the younger men who have gradually elbowed their way to prominence by sheer ability." These men are generally regarded as representing "the best in the modernized Red Army."

Vasilevsky's appointment as chief of the General Staff of the Russian Army was not revealed until April 1943, although he had actually been performing the duties of that office for some time previous to the official announcement. Marshal Boris M. Shaposhnikov '42, his predecessor, and the organizer of the "Soviet West Point," the Frunze Red Banner Military Academy, had been ill since the autumn of 1942, and in his capacity as deputy commissar of defense, Vasilevsky had been one of the top men in the Red Army throughout the winter fighting (1942-43).

When plans were made for the counteroffensives which were to save Stalingrad and lead to the magnificent victory there, Marshal Vasilevsky was sent to the Front with Marshal Zhukov to supervise the action. From there he hurried to the Voronezh Front to help coordinate offensive operations. For these activities Vasilevsky was awarded one of the highest honors which the Soviet Government offers, the order of Suvorov, 1st Degree. He was by this time also Vice-Chairman of the People's Commissariat of Defense. In the summer of 1943 it was he who turned the German offensive at the Kursk salient into a disastrous retreat. He "cleared the Nazi invader out of thousands of Russian villages and towns, liberated Kharkov, Kiev, Smolensk, sealed up the enemy in the Crimea," and in December was gathering his forces for the final kill.

A leader who has been "tempered and proved in the furnace of battle," Alexander Vasilevsky has served as spokesman for his commander in chief, Joseph Stalin, on several occasions. After the signal victory of the Allied forces in North Africa in May 1943, he sent the official Russian message of congratulations to General Eisenhower '42 and to General Alexander '42. He represents his government in High Command conferences, and in the spring of 1943 met with Lieutenant General Giffard Le Quesne Martel '43, "chief of the British Military Mission to Moscow," for the purpose of discussing mutual war problems.

Vasilevsky has been described by Edgar Snow as "a tall, blond, powerfully built Cossack with thick hair and a forelock hanging down in the Cossack manner. [His bow-legs also stamp him a Cossack.] He has a round face with greenish-gray eyes and speaks quietly and authoritatively." His great skill as a military man seems to lie in his genius for planning and his careful attention to minute details. But he believes, too, that "the army commander must be an artist as well as a scientist, or else he is not a commander at all." One of his most important considerations is the selection of subordinates to carry out his plans.

Emil Lengyel describes Vasilevsky as a man who loves to toy with gadgets and who is fond of the "nimble American jeep" as well as of Cossack horses. Chess is his favorite indoor recreation, and he was an amateur photographer before the War. Napoleon got along on very little sleep, but Vasilevsky is a great believer in seven hours a night—except for the Nazis, of course.

VICKERY, H(OWARD) L(EROY) Apr. 20, 1892- Naval officer; United States Government official

Address: b. 4836 Commerce Bldg, 14th St and Constitution Ave, Washington, D. C.; h. 4420 Dexter St, N. W., Washington, D. C.

Vice-chairman of the United States Maritime Commission, Rear Admiral H. L. Vickery, one of the Navy's youngest admirals, is a "miracle man" of the Second World War. In 1942 more than 8,000,000 tons of merchant shipping were built under his supervision. By the end of 1943 he aimed at a production of 18,900,000 more; and between January 1, 1942 and December 1, 1943, 25,284,389 tons of ships were actually delivered. The 1944 goal is 20,000,000 tons.

REAR ADM. H. L. VICKERY

Howard Leroy Vickery was born in Bellevue, Ohio, April 20, 1892, the son of Willis and Anna Louise (Schneider) Vickery. He attended the public schools and went to East High School in Cleveland. In 1910 he took the entrance examinations at the United States Naval Academy and failed. In addition to other shortcomings, he says, "I could never spell." The following year he tried again and was successful. He received his B. S. degree from Annapolis in 1915 and at the same time was appointed an ensign in the United States Navy. Vickery's ambition was to go to Asia, but instead he was sent to Boston, where he met and was married to Marguerite Blanchard in 1917.

The First World War had started shortly before Vickery's marriage. A few days after the wedding he went to sea on a ship guarding the first convoy to France. By the end of the War he had won two stripes on his sleeves and a year of study at the Massachusetts Institute of Technology, where he received his M. Sc. degree in 1921. The following year he was appointed supervisor of submarine construction in the United States Navy superintendent constructor's office at San Francisco. He also became docking and outside superintendent at the Boston Navy Yard (1921-25). At the Boston Navy Yard, according to Milton Silverman, "he annoyed repair crews by appearing unannounced at any hour, dressed in anything from pajamas to dinner jacket."

Vickery left these activities in 1925 when he was lent to the Haitian Government as a treaty engineer. He remained in Haiti for three years, then returned to the United States for a year as member of the Navy Bureau of Construction and Repair at Washington, D. C. The following year, 1929, he requested a transfer to Panama and was appointed technical adviser on shipping to the Governor General of the Philippines. While in this position he went to Germany, where the Philippine ships were being built, and "watched the official rebirth of the German Navy." In 1934 he returned to the Bureau of Construction and

VICKERY, H. L.—*Continued*

Repair as head of the secret War Plans Section of the Design Branch. During that year he also took graduate courses at the Army Industrial College.

One of Vickery's jobs in 1934 was the investigation of the Morro Castle disaster. After a year of work Vickery and his subordinates produced a report that "revolutionized shipbuilding and put into the law books, among many other things, the long-recommended use of asbestos insulation and automatic fire-sealing doors."

From 1937 until 1940 Vickery acted as assistant to Emory S. Land '41, the chairman of the United States Maritime Commission, which supervised all shipbuilding, design, and construction work for the rehabilitation of the Merchant Marine. Land and Vickery together were called "one of the most remarkable combinations in Washington." In 1940 President Roosevelt '42 appointed Vickery a full member of the Maritime Commission. During that year the first British commission came to ask American shipyards to build British freighters. There weren't enough shipbuilders at that time to fill the demands, so Vickery, against the advice of many, engaged as one of his shipbuilding experts a man named Henry J. Kaiser '42.

In 1942 Vickery became vice-chairman of the United States Maritime Commission and deputy administrator of the War Shipping Administration. Early in that year President Roosevelt asked him to produce 8,000,000 tons of shipping during 1942, promising him enough steel and freedom to select shipyards and shipbuilders as he pleased. And Vickery produced the 8,000,000 tons. By July he was able to reveal that more new American ships had already been constructed than the number sunk since Pearl Harbor, even though the Axis was still sinking ships faster than the United Nations were building them. The so-called Higgins scandal, which occurred in 1942 when the shipbuilding contracts of Andrew Higgins '43 were canceled, arose, Vickery says, from the increase in the speed of production in the other yards, which left insufficient steel for the new contracts. Higgins accepted this explanation and told Vickery he was a "gentleman," although the Truman '42 Committee which investigated the case was not quite so polite.

The Maritime Commission's goal for 1943 was 18,000,000 tons of shipping—more than double 1942 production. In April Vickery warned that this goal was threatened by manpower shortages, laying the blame largely on the high rate of labor turnover which was accounted for by such factors as men entering the armed forces and serious housing shortages. But two months later, his report was more hopeful. He announced that Liberty ships were down to fifty-six days average building time, U-boat losses down to one out of 200 ships; and that in the eighteen months since Pearl Harbor the United States had built shipping equal to the entire tonnage of Great Britain, Japan, Germany, and Norway as of January 1941.

More than once Vickery has warned that the shipbuilding industry must be continued after the War, however, "if victory is to outlast the ships we are building." In April he confided: "I am very much afraid that when the Germans and the Japs are licked this country may be faced with the temptation to which it succumbed following the last War. Let no one make the mistake of imagining that the shipbuilding industry can be mustered out as a whole at the end of the War and yet remain available for recall to the colors when the present ships have worn out—or—God forbid—if another war should occur." He therefore advocated the building of Victory ships rather than Liberty ships, on the theory that Liberties would be the seagoing white elephants of the post-War era. The Victory ship is thirteen and one-half feet longer than the Liberty ship, has five feet more beam, and is from four to six knots faster; and although fewer can be built, each one can make more trips. These facts failed to impress William Francis Gibbs, the War Production Board's shipbuilding controller and father of the Liberty ship, who maintained that the speed of Liberties could be raised after the War by changing their engines; that a change-over to the production of Victory ships during the War would require new ways, more manpower, and great numbers of turbines and gears, which were almost impossible to get; and that even the Victory ship would not be ideal for peacetime. In the summer of 1943 Vickery finally stormed to the White House, demanding that Gibbs be removed, and, according to one report, the President agreed. Donald Nelson '41, however, came to Gibbs' defense, even threatening to resign if he were removed, and so a compromise was forced whereby the bulk of 1944's shipbuilding would still be Liberty ships, but a few hundred Victory ships would also be built.

In August 1943 Vickery became chairman of a newly formed post-War planning committee to develop long-range plans for the American shipping industry. The next month he arrived in London for conferences with British shipping authorities, with whom he exchanged ideas on shipbuilding methods. Upon his return in October he informed reporters that he had told the British that the United States intended to become a maritime nation and to remain one after the War, whether or not Britain cooperates. British shipping men "expressed hurt and surprise" at the statement, not so much at the Admiral's declaration of American maritime ambitions as at his implied threat. The New York *Times* felt that Vickery's remark signified a future policy of "economic nationalism" for the United States, "announced in an inexcusably belligerent form. If Admiral Vickery was not speaking for the Administration, he had no right to speak in this way at all. But his statement will be accepted as Administration policy until it is unmistakably repudiated by the President." Later, however, the Admiral stated that the plans of the United States were not to be taken as a threat to other maritime nations, and that he was convinced that Britain would cooperate.

Vickery does not believe in "coddling" the shipyards. He never praises, but only blames. Instead of Christmas cards he sends a wire to every shipyard reading, "Get a horse."

According to Milton Silverman's article which appeared in the *Saturday Evening Post,* Vickery has a thorough knowledge of each individual shipbuilder and knows where to "needle" him where it will hurt most. Kaiser has alternately called him one of the greatest men in America and the first man he will strangle with his bare hands right after the War.

In appearance, says Silverman, Vickery "doesn't look or act like a slavedriver. He is quiet and mild in his speech, and he neither shouts nor pounds tables." Vickery is tall, slim, and solemn-faced, has brown hair and blue eyes. His favorite hobby is reading. (He himself has written a number of technical papers on ship construction.) The Vickerys have two children, Barbara Willis and Hugh Blanchard, a lieutenant in the Navy.

VICTOR EMMANUEL III, KING OF ITALY Nov. 11, 1869-

VICTOR EMMANUEL III, KING OF ITALY

King Victor Emmanuel III, who has been on his throne longer than any other living monarch with the exception of Queen Wilhelmina '40 of Holland, was born in the Palace of Capodimonte at Naples, Italy on November 11, 1869. He was the only son of King Humbert I and of Margherita of Savoy. To two generations of Italians the House of Savoy had meant Italian unity and freedom from foreign tyranny. The Savoyard dynasty had ruled over Piedmont for centuries, but the whole Italian peninsula had been brought under their rule, and Rome made the capital of Italy, only in 1870. As a King of Piedmont, Charles Albert, Victor Emmanuel's great-grandfather, had fought to recover Italian soil from the foreigner, remaining firm against Austrian threats and bribes, and had abdicated his throne after his defeat at Novara. His successor was Victor Emmanuel II, who became the first King of Italy through the continuation of his father's struggle and through the skillful political manipulations of his Prime Minister, Count Cavour, who won over Garibaldi after the latter's conquest of the Two Sicilies. Humbert I, Victor Emmanuel III's father, was a much paler personality than either of the two, but by the time his son was born he had already won from his people the title of Humbert the Good.

In his boyhood Victor Emmanuel III carried the title of Prince of Naples. He was a delicate, undersized child, but his father decided that he must be brought up in a school of Spartan discipline. His first tutor, a rigid Englishwoman, taught him morality and a hatred of the dissolute Roman aristocracy along with his reading, writing, and arithmetic. Her successor, Colonel Egidio Osio, was even more severe. The young prince worked at his lessons from 7 a. m. to 3 p. m., and after that could usually be found riding, shooting, sailing, fencing, or digging trenches and building ramparts in the Quirinal gardens under Osio's tutelage. Osio forced him to ride horseback even though his weak legs would not let him take a firm seat, punished him for sloppiness and tardiness, and once gave him three days alone on bread and water because he had screamed at his cousin: "When I am King I shall have your head cut off!" "I don't think that I have ever forgotten anything that Osio taught me," Victor Emmanuel said later, rather wryly. "It would be hard to."

It is probably due to Osio's tutelage that Italy's monarch can be described as "a human encyclopedia" even today. "He would break the bank of *Information Please,*" wrote Thomas Morgan in 1941. "Fadiman '41 would crown him a season's find. He is Kieran '40, F. P. A.'41, and John Gunther '41 in one. Architecture, mechanics, chemistry, agriculture, philosophy, history, animal husbandry, government, and the military sciences are at his fingers' ends. He can tell you the cost of operating a power-house, the page on which he read of a German spy in America, the mileage to all the cities of Europe, the budgets of nations, the dates and strategy of battles, the best breeds of cattle for the Alps or for the plains, the author of any book in any language referring to Italy, the winner of the Derby in any year, or—what do you want to know?"

When the young Prince was fourteen he entered a military academy, where he continued to apply himself studiously. Entering the Army at eighteen, he became a lieutenant, a captain, and a major in quick succession; soon after attaining his majority he was appointed to the command of the Florence Army Corps; at twenty-five he was promoted to the rank of lieutenant general, although he complained to his father that he had not yet learned how to be a colonel; and in 1896 he was appointed to the command of the Naples Army Corps. That same year the diffident young man was married to Elena, a daughter of King Nicholas of Montenegro, a tall, athletic Balkan Princess who hunted and rode like a man, had bad manners and a deep resonant voice. He had met her at the coronation of Czar Nicholas II

VICTOR EMMANUEL III, KING OF ITALY—*Continued*

of Russia at St. Petersburg. At the wedding ceremony her prie-Dieu was much lower than his, so that their heads appeared to be on about the same level, although Victor Emmanuel is only slightly over five feet tall.

Humbert I dealt with the Sicilian uprisings from Milan to the whole of Italy by recourse of 1893 and the risings of 1898 which spread to a state of siege and other exceptional laws. As a result anti-monarchist agitation increased, and on July 29, 1900 Humbert was assassinated by an anarchist while Victor Emmanuel was on a Mediterranean cruise with his wife. Victor Emmanuel III formally succeeded to the throne in August of the same year, and soon earned the country's confidence, particularly when he refused to punish the Socialists for the crime of his father's assassin. "Let us educate our generation in the love of country and honest work," was the keynote of his accession speech. Finding the country in a sorry economic condition, he traveled around Europe, attempting to patch up foreign trade, but always staying strictly within the limits of his constitutional powers, which put him in a key position only in times of great crisis. (Under the old Constitution, when an administration fell the King selected the Prime Minister after a series of consultations with the presidents of the Senate and the Chamber and with the leaders of the various powers.) He also found time to pursue his hobby of numismatics, in 1910 and 1913 publishing six volumes of a monumental work on the coins of Italy, *Corpus Nonmorum Italicorum*, of which four more volumes appeared later.

Victor Emmanuel III had always taught the prudence of Italy's remaining on friendly terms with England. His English was as perfect as his French, and as a young man he had visited London and had been invited to Windsor Castle and Buckingham Palace, where he was a great favorite. (Queen Victoria later told her daughters: "Victor Emmanuel is the most talented and most intelligent Prince in Europe.") It was not entirely unexpected, then, when at the beginning of the First World War Victor Emmanuel scrapped the Triple Alliance which had made him an ally of Germany and Austria, earning the epithet of "traitor king" from his imperial cousin the Kaiser. Neither was it a secret that he sympathized with the Interventionists who during the winter of 1914 and the spring of 1915 were struggling to force Italy into the First World War on the side of the Allies. His Prime Minister shared his views. Giolitti, however, supported neutrality, and there was a majority in the Chamber for Giolitti's policy. When the Prime Minister showed a disposition to intervene Giolitti therefore precipitated a Cabinet crisis, and the Prime Minister tendered his resignation. This the King refused to accept, showing his powers in time of crisis, and war was duly declared against Austria on May 23, 1915. Victor Emmanuel assumed supreme command of all the Italian forces on the land and sea.

The importance of Victor Emmanuel's role in the War itself is a point under dispute. He went at once to the war zone and remained there until the Armistice, having appointed his uncle Ferdinand, duke of Genoa, regent of the kingdom to act in his stead. At the Front he lived simply, constantly visiting the trenches and the most exposed positions as well as the military hospitals, and he earned the title *Il Fante* ("the foot soldier"). During one of his visits to a military hospital, in the autumn of 1917, he is said to have spoken to Corporal Benito Mussolini '42, and a few weeks later he saw Mussolini, wounded again, in another hospital. After a long conversation with the future Duce, he reportedly told his aide: "*Ecco*, that is a man who, I think, will go a long way."

According to most sources, Victor Emmanuel never interfered in the conduct of military operations or in the activities of the Comando Supremo, but limited himself to keeping contact with the troops. On the other hand, it has been reported that after the disaster of Caporetto in 1917 he summoned his Ministers and staff and ordered a general reorganization of the armed forces. Then, meeting the allied staff at Peschiera, he outlined the plan to retire to the Piave and chose the correct moment to start the successful Piave offensive. On the morrow of Caporetto, when the withdrawal to the Piave was effected, he also issued a stirring appeal to his people to "look adversity in the face with a virile, dauntless heart."

The Piave offensive resulted in the complete rout of the Austrians and the signing of the Armistice with Austria on November 4, 1917. On November 14 Victor Emmanuel returned to Rome, where, at the request of his Ministers, he accepted the Croce di Guerra. After the Armistice he visited Paris and the French Front with the Crown Prince, and subsequently London.

Despite the popularity of the King during the War, after the War there was a great deal of anti-monarchist agitation in Italy. Mussolini, the former Socialist, avoided the question when he first founded his National Fascist Party, but in 1921 he announced that he was "tendentially republican." According to one writer, "Mussolini's formula was as good as saying to the King and to Giolitti's old governing class: 'I might be prepared to accept the reins of government and to alter the more extremist parts of my program. It is a question of give and take.'" At any rate, in September 1922 Mussolini finally announced himself a monarchist. According to Frederic Sondern, Jr., in *Life* Magazine. about two weeks before the so-called March on Rome, Italo Balbo and General de Bono, Mussolini's leading lieutenants, went to see Queen Mother Margherita, their close friend, and asked whether the King would have any objection to the Fascist offensive. It was at that time that the King gave his consent to the *coup d'état*, says Sondern.

Whether Sondern is correct or not, on October 28, 1922 about 60,000 Black Shirts were marching on Rome. The Italian Prime Minister ordered the immediate arrest of Mussolini and his principal supporters and issued a decree establishing martial law throughout the country. No one believed that quelling the revolt would be a difficult military problem—a matter of twenty-four hours, according to General Badoglio '40. The King, however, refused to give his consent to the decree. Although the council of Ministers agreed on a resolution of resistance to the Fascists, the decree was torn off the walls after a colloquy between the King and his Prime Minister, and Salandra was commissioned to form a Cabinet with Fascist support. He immediately placed two or three portfolios at Mussolini's disposal, and when Mussolini refused the offer the King summoned Mussolini from Milan to form a ministry himself. Mussolini's words upon his arrival in Rome were: "Majesty, I bring you back the Italy of Vittorio Veneto." The March on Rome was really a triumphal parade, and the Fascist *squadre,* before returning home, marched past the Quirinal and paid homage to "Victor Emmanuel, the Fascist King."

Victor Emmanuel's motives for surrendering to Mussolini are somewhat controversial. Those who defend him say that he did not wish to see a bloody civil war, but the weakness of the Fascists at that time makes such reasoning dubious. At any rate, the *Encyclopaedia Brittanica* was undoubtedly correct in saying that the advent of the Fascist Government "strengthened the prestige of the Crown, which the troubles of 1919 to 1922 had seriously shaken." This was possibly reason enough for the King, who had seen thrones tottering all over Europe. And it was possibly the reason why he did not act in 1924 when, after the murder of Matteotti, the chiefs of the constitutional opposition to Fascism (such opposition still existed then) brought evidence of Mussolini's complicity in the murder to the Quirinal. At that time Fascism was at such low ebb in Italy that a word from the King might have spelled its end. He remained silent, however, and eventually Mussolini, by strong arm methods, brought the situation under control. Mussolini, in turn, apparently remained loyal to the King. In the winter of 1926 he was reportedly enraged with his followers when he heard of a Fascist plot for a revolt against the crown. And in 1927 William Dana Orcutt quoted Victor Emmanuel as having told him: "Mussolini is a wonderful man. You may tell my friends in America that the most wonderful thing about Mussolini is his loyalty to his King."

Monarchism and Fascism, then, apparently strengthened each other. And it was not long before the Vatican came to terms with both. In 1929 it became possible for the first time since 1870, when the troops of the new kingdom of Italy had marched into Rome and deprived the popes of their temporal power, for an Italian to be both a good Catholic and a Royalist. For a long time the stricter Catholic circles had remained unfriendly to the "usurper" of temporal power. The Pope, voluntary "prisoner of the Vatican" since 1870, had been particularly displeased when Victor Emmanuel had insisted on the burial of his father beside his grandfather in the Pantheon at Rome. The Lateran peace of February 11, 1929, which theoretically determined the spheres of Church and State, was therefore the greatest single diplomatic achievement of the Fascist Government, although friction between the Vatican and Mussolini's Government was by no means at an end. Two months later, standing at the right side of Mussolini before the opening session of the new legislature, Victor Emmanuel told the world "that in his opinion Italy's 'high place' in the family of nations was due to its seven years of Fascist rule."

Although theoretically Mussolini, as Prime Minister of Italy, was responsible to the King, in the years preceding the Second World War Victor Emmanuel never actively exerted himself against Il Duce. Yet if the King's power could have been measured by the amount of work he was in the habit of doing, one might have called it very real. He rose at six every day. His bath, toilet, and breakfast were over by seven, by which time he had also scanned the morning newspapers. He then received his secretary with the night's dispatches. This routine was finished by nine, when he was accustomed to begin conferences which continued until one. After lunching with his family he began work—inspections, reports, ceremonies—again at three, and he seldom finished before eight. He put wreaths on graves, reviewed parades, and pinned medals on people. Even in the evening he might have to attend an opera opening, a patriotic function, or some academic inauguration.

In addition to serving as "one of the best show pieces of the Fascist regime," some sources insisted that Victor Emmanuel was consulted by Mussolini before the Duce took any step of importance, and that his word "carried the greatest possible weight." This was probably Fascist legend, however. The King was once quoted as saying to a gentleman of his Court, "Be careful what you say to me, for I must tell everything to Mussolini." He showed himself in public every time Mussolini wanted him to, and he gave his approval of every Fascist law, even to the anti-Semitic laws of 1938 and to the law giving the Fascist Grand Council the right to pass on all questions bearing upon the succession to the throne.

Stories of his unofficial disapproval of many acts of the Fascist regime nevertheless persisted. It was reported that he was dead set against Mussolini's Ethiopian venture, and that he had not given his consent until his own generals persuaded him that it was wise. (On the other hand, it was said that he greeted the Abyssinian war with satisfaction, announcing: "If we win I shall be King of Abyssinia. If we lose, I shall be King of Italy." And he was generally credited with having induced King Leopold III of Belgium to dash to London and warn the British royal family that the fall of Fascism would mean the fall of the Italian monarchy, a warning that resulted in Baldwin's backing down on oil sanctions against Italy.) Furthermore, even though the King welcomed Hitler '42 personally at a station especially constructed for the occasion when the Führer visited Rome in 1938, Victor Emmanuel was consistently described as anti-German. Perhaps that was why the world pricked up its ears when in September 1939 he announced: "While I am head of the House of Savoy, Italy will not take up arms against France." But no one should have been surprised at what followed. In the spring of 1940 Victor Emmanuel showed no signs of abdicating his throne. After Italy entered the War he and the Queen visited hospitals, charity organizations,

VICTOR EMMANUEL III, KING OF ITALY—*Continued*

and campaign meetings to raise food, clothing, and other things for soldiers; when the Nazis conquered Yugoslavia, the Italian monarch crowned his cousin King of Croatia, wearing a Fascist black shirt for the ceremony; and in the spring of 1942 he and the Crown Prince paraded on the Savoy border for the political effect upon the Vichy French and upon their own people, reviewing troops massed near the border while Mussolini was demanding territories from Laval '40.

The rest of the Royal Family has also done its part in the War. Victor Emmanuel's oldest daughter, Princess Yolanda Margherita (born in 1901) is married to Count Calvi di Bergolo; Princess Mafalda (born in 1902) is the wife of Prince Philip of Hesse, who served as intermediary for the conclusion of the alliance between Hitler and Mussolini; the third daughter, Giovanna (born in 1907), was the former Queen of Bulgaria; and the youngest, Maria (born in 1914), was said in 1939 to be destined for the ever-hopeful Otto of Hapsburg '41. In Italy the Crown Prince, Umberto, Prince of Piedmont (born in 1904), is "looked upon as something of a playboy, and distrusted, like Aesop's bat, by Fascists and anti-Fascists alike," although circles which favor the perpetuation of the regime have attempted to build him up as a great anti-Fascist. He has not always been on good terms with Mussolini, but he has frequently paraded in a black shirt. He signed "the most flamboyant Fascist proclamations for the invasion of France" in 1940, and was made a marshal of Italy at Mussolini's request. Married to Princess Maria José of Belgium, he has a daughter, Maria-Pia (born in 1930), and a son, Victor Emmanuel, Prince of Naples (born in 1937).

Even his enemies concede virtues to Victor Emmanuel. According to G. A. Borgese, "One royal and traditional virtue has remained with the House of Savoy: simplicity of manners, which is in marked contrast to the rhetorical outpourings of the Fascists. The use of the Piedmontese dialect which is still partly current at court in itself precludes excessive flights of oratory." Although the King received a salary of 11,250,000 lire a year, or, roughly, $1,000,000, he always lived as simply as possible. The pomp which must be maintained at the Quirinal has always been disagreeable to him, and when in Rome, he was accustomed to spend as much time as possible at his Villa Savoia in the suburbs. The summers were likely to find him at his castle of San Rossore on the Mediterranean below Pisa, the autumns at Sant' Anna di Valdieri, where the Queen fished and he hunted mountain goats on the crags. Even his meals were famed for their frugality.

Victor Emmanuel seldom spoke in public, except when Mussolini handed him a paper to have it delivered by the regal voice before the assembled Parliament at the opening of a session. He dislikes publicity, newspapermen, photographers. He is, in other words, a quiet man who seldom goes out at night except on a King's business, and whose leisure was spent harmlessly on his famous collection of coins, one of the most complete in the world, and in keeping a diary. Before Mussolini, as a matter of fact, G. A. Borgese says that "he embodied the ideals—especially tidiness, thrift, and modesty—of the Italian bourgeois of his generation." He was "a good husband, a loving and assiduous father, a conscientious bureaucrat."

Even before the fall of Mussolini the general opinion, however, seemed to be that the monarchy, along with Fascism, was rapidly losing face. The King had narrowly escaped assassination twice. According to Herbert Matthews '43, "The King has lost the respect and probably earned the contempt of his people." According to Gaetano Salvemini '43, the Italians scorned him because of his cowardice, and everyone knew that his mind was affected and that his wife had to keep him busy in the evening playing a card game analogous to the American game of "slap-Jack!" It was also said that for years Italian coffee drinkers had muttered this rhyme over their cups of chicory:

When our Victor was plain King,
Coffee was a common thing.
When an Emperor he was made,
Coffee to a smell did fade.
Since he got Albania's throne
Coffee's very smell has flown
And should we gain another victory
It will be farewell to chicory.

But apparently the American and British Governments did not then share this opinion as to Victor Emmanuel's popularity. On November 11, 1941, his birthday, BBC sent him good wishes and greetings on behalf of the British people, and his name was never mentioned unfavorably in short-wave broadcasts to Italy from America. In Elmer Davis' '40 words, "This Government is not broadcasting personal attacks upon King Victor Emmanuel." Commented Gaetano Salvemini: "He might have added that anyone addressing the Italians on an American broadcasting station must pledge himself not to remind them that the King is as responsible as Mussolini for the tragedy of present-day Italy. And an army of newspapermen is instructed by the State Department to teach us, day in and day out, that if not the King then at least his son is to be regarded as the 'leader of the anti-Fascist groups.' . ."

In the United States the possibility of a regency which would eliminate both Victor Emmanuel and the Crown Prince in favor of the Crown Prince's young son was also mentioned. In May 1943, with an Allied invasion of Italy apparently imminent, and with rumors that Victor Emmanuel was ready to abdicate going around, Johannes Steel '41 wrote: "The House of Savoy . . . is making a desperate effort to save itself through the good diplomatic offices of the Vatican. . . Are the Allied armies fighting to save Italy for the House of Savoy and the financial and economic backers of Italian Fascism who will conveniently slink into the background during the transition period?" By June it was increasingly apparent that the House of Savoy was attempting to disassociate itself from Mussolini's regime, with the King holding his own defense councils and often issuing independent statements from the Quirinal.

On July 25 occurred the dramatic downfall of the Dictator. One version of the overthrow (that of Pertinax '40) has it that Mussolini did not succumb under an adverse vote of the Fascist Grand Council, but was abruptly dismissed by the King, with Marshal Pietro Badoglio and a dozen Italian generals at his side. Returning to power after almost twenty-one years of eclipse, the King ordered Badoglio, as his new Premier, to form a military government "to continue the conduct of the War"—still on the side of the Germans. At this time there were only a few German divisions in Italy, but the Allied invasion of the Italian mainland was delayed for some weeks, and when Italian anti-Fascists demonstrated against the War they were machine-gunned in the name of the King by Badoglio. Not until September 3 did Badoglio sign a secret Armistice with the Allies; by that time the Germans had occupied most of northern Italy, and were meeting strong resistance from the Italian people. On September 9 the Allies landed at Salerno, and terms of the Armistice were revealed.

The King and Badoglio, who had escaped into Allied territory, now began broadcasting appeals to the nation to oppose the Germans, and on October 13, 1943 the King formally declared War on Germany. By the close of October, Victor Emmanuel was still King, though only in four or five provinces in Apula, the heel of Italy, whose principal cities are Taranto, Brindisi, Bari, and Foggia, was his writ valid. The "Badoglio deal" was criticized by liberals on much the same grounds as the "Darlan '41 deal" of November 1942, and defended on the same grounds: those of "military expediency." It was pointed out, however, that by the time Badoglio surrendered there was no longer an army under his command anywhere.

Fast becoming the center of Italian political controversy, Victor Emmanuel, whose unpopularity with his own people became more and more evident every day, clung tenaciously to his throne. Both Count Carlo Sforza '42 and Senator Benedetto Croce, Italian philosopher and political leader, threw the weight of their great authority behind the movement for a regency, along with the Italian Committee of National Liberation. Meanwhile the much-criticized Badoglio was unable to form a representative government from among anti-Fascist elements while the King remained in power, managing only to piece together an "interim government of technical experts." (The harassed Premier promised at one time to resign as soon as the Allies took Rome.) On November 30 the Badoglio Government announced that it had deprived the King of his titles of King of Albania and Emperor of Ethiopia, and that it was putting into effect measures designed to purge Fascist elements from its administration. Italian liberals, however, complain that this was not really being done either by Badoglio or by the Allied Military Government.

Percy Winner provided a description of Italy's monarch in *Current History* in July 1929: "The King does not look the kingly part. In his face there is no force of character, no attractiveness of personality. His head, closely cropped, is small with a bluntish chin somewhat receding. The mouth, crooked at the right side, twitches in a serious jerk which pulls the skin from the nose and the scrawny neck. The eyes, of an uncertain watery blue, dart about incessantly, bird-like, under pinkish lids. Usually he seems bored or disinterested. When he smiles, his face crumples into a grimace, the lower lip closing upward toward the nose. He has the torso of a heavy grown man, with short and thin legs. On a horse, he looks a foot taller than he really is. His carriages are said to have seats built high for him. In walking he takes short, awkward steps, leaning forward heavily as though the legs were not strong enough to support the body. He salutes, grins, and nods with the regularity of a mechanical doll. [His] appearance has frequently been mentioned in scientific discussions of physical degeneration through inbreeding. His wife was imported from Montenegro for biological as well as political reasons." A military uniform hides his physical inperfections better than any other costume, and that is probably why he usually dresses that way in public, generally with a long coat or a greatcoat concealing his legs, and a high, peaked cap giving him height. He suffers intermittently from rheumatism.

VIERECK, PETER (ROBERT EDWIN)

(vēr′ek) Aug. 5, 1916- Author; educator

Address: h. 70 Winthrop St, Cambridge, Mass.

There is a story that during an interview before a Harvard committee which disposed of an important Fellowship award Peter Viereck was asked: "What do you plan to do in life?" "Oh, writing, teaching, journalism—something with words," the son of the notorious Nazi propagandist replied. *Metapolitics, from the Romantics to Hitler* (1941) cannot, however, be dismissed lightly as "something with words." The *Saturday Review of Literature* calls it "the best account of the intellectual origins of Nazism available to the general reader."

Peter Viereck was born in New York City on August 5, 1916, the son of George Sylvester and Margaret Edith (Hein) Viereck. He is a fourth generation American. "The first Viereck to land in America was my great-grandfather Wilhelm," he says. "He fought with Carl Schurz and he fled with Carl Schurz." (It is to Carl Schurz that

PETER VIERECK

Wilhelm's great-grandson's book is dedicated.) Young Viereck himself is "incurably American. I was born in this country and whenever I have visited Germany I have always felt like a perfect stranger." He received his early education at P. S. 166 in New York City and then was graduated from the Horace Mann School for Boys in New York City in 1933, thereafter enrolling at Harvard University.

Viereck was one of the founding editors of the *Harvard Guardian.* At the University he was awarded several prizes for his literary work, winning the Bowdoin Prize Medal for the best prose with an essay on "Romanticism" in the same year that he won the Garrison Prize Medal for the best poetry. (He was the first student in Harvard's history to hold these two awards simultaneously.) He was elected to Phi Beta Kappa, and he was one of seven Americans to win the Henry Fellowship Contest for study at Oxford University in England for the year 1937 to 1938. During part of the year which followed his graduation from Harvard (B. S., 1937) he also traveled through central Europe as foreign correspondent for the *Harvard Guardian.*

At one time or another Viereck has visited Germany, Italy, France, Holland, Belgium, Austria, Hungary, and Czechoslovakia. (He has crossed the Atlantic twelve times.) During his many trips to Germany he read books, pamphlets, and articles written only for German consumption, in preparation for his own study of Nazism.

Returning to his studies at Harvard in 1938, Viereck received his M. A. in history the next year, and then he began to study for his Ph. D. He also continued to write. Articles by him were soon appearing in newspapers, in *Common Sense,* and in *Decision*; poems (three of them lyrical, one political) appeared in the *New Republic, Poetry, Canadian Forum,* and *American Scholar.* The first sample of his political prose to be published in a magazine of wide circulation, however, was "But—I'm a Conservative!" which appeared in the "Under Thirty" section of *Atlantic Monthly* in April 1940.

"I am twenty-three years of age, unemployed, short of cash," Viereck confided in this article. "For six years I have studied at Harvard and at Christ Church, Oxford, as a Fellowship holder, getting my Bachelor and graduate degrees in history and literature. At the same time, my work for magazines has given me some practical experience in that less rarefied atmosphere of American journalism. In both spheres I have watched the convention of revolt harden into a dogmatic ritual. . . [Before August 1939] I was dismissed as an unenlightened reactionary for my 'fantastic' notion that the German and Russian state-socialisms are basically alike in economics and in ruthless methods." He now advocated a "New Conservatism" which "must appeal not only to independent-minded conservatives but also to . . . disillusioned 'fellow travelers.' The former must accept further economic planning and honestly repudiate their pre-1929 cant. The latter must honestly repudiate despotic Russia and Marxist materialism and the stirring up of a lawless mob movement: their pre-1939 cant." As for the New Conservative's "principle of principles," it should be "the necessity and supremacy of Law and of absolute standards of conduct." "You weaken the magic of all good laws every time you break a bad one," Viereck wrote, adding: "I don't care a hoot whether any country, including ours, decides to use capitalism or socialism or any other material-ism, so long as it is obtained through the vehicle of the traditional framework." The article caused some stir, although Viereck's insistence on Law and tradition as absolutes caused an otherwise sympathetic writer in *Common Sense* to ask: "Can one avoid suspecting, if the criteria are to be at once so vague, so rigid, and so ephemeral, that the 'movement' will soon be headed not by the enlightened Mr. Viereck but by the most moth-balled upholders of the *status quo?*"

By the time Viereck's ambitious *Metapolitics* appeared he was a teaching assistant in modern history at Harvard, where he was also active in the American Defense Harvard Group, an affiliate of the Committee to Defend America. (Many interventionist articles by him were appearing at this time in the Boston *Herald* and the Hartford *Current.*) The book is an "attempt to explain crucial points of the causal chain leading from the German past to the Hitler '42 cult of 1941," sort of a "psychoanalysis of Nazism." It begins with the outbreak of a "feeling of inferiority to the West" (Viereck's description of the Romantic Movement), includes a remarkable chapter on the "Metapolitics of Richard Wagner," and ends with a study of Alfred Rosenberg '41, "Poet Laureate of Metapolitics." "Metapolitics" itself is defined as the "semi-political ideology" resulting from the intertwining of romanticism, the "science" of racism, a "vague economic socialism" (it is "preposterous" to say that Hitler is the tool of the German capitalists), and "the alleged supernatural and unconscious forces of *Volk* collectivity." "The masses worship a prison-camp type of state with fanatic hysteria so long as it saves each of them, as romantic individuals, from his inner mental and emotional anarchy," Viereck says of the Germans as a people. But he says, too, that they have "two souls within one breast": one tugging them toward vicious, swaggering militarism, the other leaning toward the rational and democratic tradition. The "sane compromise solution" for Germany after the First World War would probably have been a "peaceful, liberal, constitutional monarchy."

"I wrote my book to show that the American way of life and the Nazi way of life are irreconcilable and unappeasable and can't go on together in the same world," the young Harvard instructor told a newspaper reporter. "I hope I proved it." Among other things, his book showed the intense anti-Christian bias of the Nazis, and revealed for the first time that in the 1920's, before Hitler came to power, they were already plotting to incite Japan to seize the Philippines from America. Perhaps its only reassuring features were Viereck's insistence on the impossibility of Nazi territorial conquests in America without the British Navy, and on the "far easier possibility" of Nazi conquests in the East.

Viereck's book was extremely well received. Thomas Mann '42 called it a work of "profound historical and psychological insight" and hailed as "extremely meritorious" its discovery that Hitler had deliberately borrowed his entire ideology from the little-known political writings of Wagner. Professor Sidney Fay of Harvard wrote of *Metapolitics*: "I have learned a lot from it and agree with almost all of it. I like the book very much." And in June 1942 Dorothy Thompson '40 mentioned it in her column as "one of the most illuminating books about German psychology yet published. . . It should be much more widely read and much more thoroughly reviewed than has yet been the case. It belongs with Konrad Heiden's *History of National Socialism*, Rauschning's '41 *The Revolution of Nihilism* and *The Voice of Destruction* as one of the few books read by a fairly large public that really tell what's up in Germany." By this time *Metapolitics* was being used as a text on Nazi ideology in many colleges throughout the country and had been placed on the required reading lists in several history and German courses at Harvard. Parts of it had also been sent to Germany and occupied Europe via transatlantic short wave from the National Broadcasting Company.

Quite naturally, the fact that the author of this anti-Nazi text was George Sylvester Viereck's '40 son did not escape reporters. In October 1941, asked by an interviewer about his relations with his father, Peter Viereck replied: "You see, I work up at Harvard most of the time and I don't get to see him often. In fact, my family rarely ever gets around the dinner table together. I've got a brother, George. He's twenty-three. He's up at Harvard, too, in the Law School. He's also anti-Nazi. Mother is a very sweet woman who isn't at all political-minded. Of course, I disagree with him [the elder Viereck] politically. But when we do have dinner together we stay away from politics. We talk about Goethe and the German poets. (Oh, why couldn't the Germans have stuck to poetry!) But to get me to attack him as a man is an impossibility. George Sylvester Viereck is my father." In March 1942, on the day that the elder Viereck was convicted of violation of the foreign agents' registration act, Peter Viereck received his Ph. D. degree from Harvard. He is, according to one of his Harvard professors, "competent to teach classes in French, German, and Russian, and in European history or politics."

Peter Viereck has been described by reporters as "gangling" and "hesitant." He is a Democrat, a member of the American Civil Liberties Union, and, quite obviously, a "classicist" (as he defines it, one who "stands firmly on an island of what he deems eternal verities and absolute standards, crying to the tides of flux: 'So far and no farther!"). He is particularly scornful of the "mass man" who says:

> *We want life on one level; what*
> *Stands vertical we roll down flat. . .*

He is unmarried, and in March 1943 was drafted into the Army as a private.

VINSON, FRED(ERICK) M(OORE) Jan. 22, 1890- Lawyer; United States Government official

Address: b. Office of Economic Stabilization, Federal Reserve Bldg, Washington, D. C.; h. 2637 Central Parkway, Ashland, Ky.

In May 1943 Fred M. Vinson, lawyer, tax expert, Federal judge, and ex-Congressmen, acquired one of the most important and difficult jobs in the Government: that of economic stabilization director. His appointment as successor to James F. Byrnes '41 met with almost unanimous approval. Wrote *Business Week*: "With his knowledge of the coal industry, his legal slant on the issues involved in price control, and more importantly his training for a dominant role in taxation, Vinson may well be able to carry on from where Byrnes left off." Vinson became, of course, a member of the small War Mobilization Committee.

This statistically-minded lawyer, Frederick Moore Vinson, was born at Louisa, Kentucky, "a little hill town on the edge of Big Sandy River," on January 22, 1890, the son of James and Virginia (Ferguson) Vinson. His father was the town jailer, and actually he was born in the front part of the jail building, where his parents made their home. James Vinson died when Fred was very young, but Mrs. Vinson, by taking in boarders, made enough money to send her son to college. In 1908 he was graduated from the Kentucky Normal College, but by this time he was not at all sure that he wanted to become a teacher. He therefore took his B. A. from Centre College, being graduated first in the class of 1909 and carrying off the Ormond Beatty alumni prize. Then, his mind made up to become a lawyer, he went on to acquire his LL. B. degree at

FRED M. VINSON

Centre. During all this time he helped to pay his expenses by teaching mathematics in the preparatory school attached to the college, for the flair for mathematics which today enables him to add six columns of figures in his head was already profitable to him. He also played shortstop on the college baseball team.

In 1911 young Vinson received his LL. B. along with the Jacobs junior law prize and the senior law prize, and that same year he hung out his shingle at Louisa, Kentucky. By 1913 he was city attorney of Louisa; in 1921 he became commonwealth attorney for the 32nd Judicial District of Kentucky, an office which he held for three years; and in November 1922 he was elected to Congress from the old 9th Kentucky District. In January of the next year he married Roberta Dixon and took her to Washington.

During his first years in Congress Vinson was not a particularly prominent figure, although he played on the House baseball team and once made the headlines by attempting to read on the House floor a poem of his own creation likening Calvin Coolidge's electrical gym horse to the mythical Trojan animal. In 1928 he was swept out of the House in the Hoover '43 landslide, but two years later he was elected for the second time from the old 9th Kentucky District, and he was to be reelected at every succeeding election (until his resignation from Congress in 1938) as representative from the old 9th Kentucky District.

According to *PM*, Vinson has had what is known as a "one hundred per cent labor record." He led the fight for the Guffey Coal Act and the Walsh-Healey Act; he voted for the National Labor Relations Board and other labor measures; he voted against a sales tax and for a "sound tax program." (Besides the sales tax, practically the only tax which he opposed was the cigaret tax. He comes from a tobacco-growing state.) He pushed the first bituminous coal bill, which has operated since 1936 as the Vinson-Guffey Coal Bill. In January 1936 he introduced a veterans' bonus bill including a clause intended to save the United States Treasury a billion dollars, after Roosevelt '42 had vetoed the Patman Bill on the grounds that it would lead to a disastrous inflation. The bill, which later became law, was sponsored by the American Legion, and provided for the payment of the adjusted compensation of veterans. Later that same year, as chairman of the tax subcommittee of the House Ways and Means Committee, a position to which he had fallen heir when Representative Hill of Washington was appointed to the Court of Customs and Patent Appeals, he carried through Congress the undistributed profits tax in face of the strongest sort of opposition from business, and the next year he temporarily saved this tax from extinction by inserting cushions against its impact on smaller firms. One of the earliest pay-as-you-go income tax supporters, in September 1937 he proposed a withholding tax on taxable salaries up to $5,000.

But it is for Vinson's connection with the Revenue Bill of 1938 that he is mainly remembered. The Congressman labored through the October 1937 recess as if Congress had never adjourned, studying changes in the tax structure that would end inequities in income levies and proposals for new taxes that would raise several more billions for the United States Treasury. His Ways and Means subcommittee began work on the same problem on November 4 of the same year, turned in a ninety-one-page report on January 14, 1938, and then, after hearing witnesses in open session for a few days, got down to the detail work of drafting the bill. In this Vinson had by far the largest share. The final Revenue Bill was a patched-up compromise between Vinson's committee's bill and a much-amended Senate bill sponsored by the late Pat Harrison which the Senate had hustled through without a record vote, and the most significant changes in it were the modification of Vinson's undistributed profits tax and of the capital gains tax. Vinson nevertheless took the House floor in May 1938 to explain it and to urge its passage. After the House had discussed it briefly the hour allotted for discussion was extended to pay tributes to Vinson, who had just been appointed to the District of Columbia Court of Appeals at a $12,500 salary. The bill was then passed by a vote of 242 to eighty-nine.

Even on the Court of Appeals, Vinson continued to be in the public eye. On March 2, 1942 he was appointed chief justice of the three-member Emergency Court of Appeals which was to handle cases arising under the Emergency Price-Control Act. There, according to *Newsweek*, he "had valuable experience in sopping up excess purchasing power and thwarting price rises . . . he refused to allow an increase in the rental of safe-deposit boxes —indicative of his anxiety to hold back inflation." In 1943, it was reported, "on the advice of his friend Speaker Sam Rayburn '40, Vinson turned down [an] offer to go into the Office of Economic Stabilization as Byrnes' assistant. Tired of the quiet Justice's life, he refused rather regretfully." On May 29, 1943, when he resigned from the Court of Appeals, it was to take Byrnes' own job. Byrnes congratulated him, saying: "This is a happy job.

Happy for me to turn it over to you." "I am smiling for the last time today," Vinson replied.

Labor rejoiced at Byrnes' removal as director of Economic Stabilization, even though Byrnes had been promoted, and, in general, applauded Vinson's appointment, for his labor record was considered good. Liberals pointed out that Vinson was now in a position to tell Prentiss Brown '43 either to do his job in the Office of Price Mobilization as he was meant to do it or to get out. And conservatives seemed to be equally happy. According to *Newsweek*, "Vinson had the same kind of popularity on both sides of the House as Byrnes had in the Senate," and, "underneath a New Deal veneer," was "regarded as an orthodox Southern Democrat, a first-rate politician, and a back-slapper second only to Senator Albert B. (Happy) Chandler '43." According to *Business Week*, he was not considered a "rabid" New Dealer.

It seemed very unlikely, however, that this unanimity of opinion would continue. Almost immediately it was reported that public and labor members of the War Labor Board would see Vinson to demand that the Board's former powers be restored: Roosevelt's hold-the-line order had made of the Board little more than a statistical agency, and they hoped that Vinson would restore its right to grant wage increases to correct inequalities. Next it was reported that Vinson was working on a new fiscal program that would point out the dangers of the "inflationary gap" and ask for new taxes, which the President was to present to Congress before the summer recess. Here were excellent opportunities to make enemies on one side or another. And others quickly followed. First the new director of Economic Stabilization approved a subsidy program for canned vegetables which brought howls both from the canners and from the Republicans. Then, on June 23, he vetoed a general wage increase of 8¢ an hour for 1,100,000 non-operating railway employees which had been recommended by an emergency board appointed by the President, and an official of the Brotherhood of Locomotive Engineers promptly accused him of having "destroyed the Railway Labor Act." (Vinson had previously told a Congressional subcommittee that so far the Government's wage controls had been more effective than its price controls, and that it was the "great mass of unrecognized consumers" with fixed incomes who were "suffering most from this inflation.") Vinson set up another board, which voted a sliding scale of increases of from 4¢ to 10¢ an hour; this decision was approved by Vinson, rejected by the non-operating unions. (The operating brotherhoods also rejected an offer of 4¢ an hour offered them by a Presidential emergency board.) In spite of Vinson's argument that such a raise would violate the "Little Steel" wage formula, on December 9 the Senate voted to authorize the straight 8¢ an hour increase for the non-operating unions. Later that month the House Interstate Commerce Committee moved to take all railway labor wage matters from Vinson's jurisdiction, for in the meanwhile a railway strike threatened. Finally President Roosevelt offered to arbitrate the railway wage dispute personally, and on December 29 the operating unions called off the threatened strike due to Federal control of the railroads.

Since his cheerfully received appointment in May, most of Vinson's other measures have been arousing opposition, too. On August 5 he ordered the grading and grade labeling of meats, as the OPA had lost its authority to require this under the terms of the Taft amendment to the Emergency Price Control Act; on November 15 the grade labeling fight was reopened. On September 11 he directed the WFA and the OPA to proceed immediately with a program to carry out the Administration's commitment to reduce living costs to the levels of September 15, 1942. (On October 1 Vinson issued a statement after one year of the stabilization act showing that prices had advanced only twelve per cent in the first nineteen months of hostilities as compared with a twenty-nine and one-half per cent increase in the average price levels from 1917 to 1918.) He has continually warned that the proposed legislation to ban the use of Federal subsidies would shatter the stabilization program and send the nation into the "familiar spiral" of inflation. Despite Congressional protests, on September 24 he approved a milk subsidy program; on November 18 he ordered a flour subsidy. He considered ceiling prices: on October 1 he upset the OPA ceiling on apples; later that month he clapped a ceiling on livestock, thus defeating a six months' campaign of the meat packers. In November he denied a requested average increase in the price of crude oil of 35¢ a barrel; in that same month, he authorized the OPA to increase soft coal prices an average of 17¢ a ton as a result of the wage increase granted to miners, with his approval. In December he announced a program for the increased production of badly needed civilian goods, beginning with low-priced clothing.

Vinson's efforts in late 1943 in behalf of the Administration's tax proposals of $10,650,000 were as coolly received by Congress as his fight for subsidies. He had previously sponsored some form of compulsory savings, but the Treasury feared that such a program might interfere with War Bond sales.

Vinson is dark, rangy, and long-faced, with bushy black eyebrows which he twists "when he's trying to figure out a tough one." He has, according to Herbert Corey, "a way of glancing hastily at an interlocutor and then looking sou'-by-west in the direction of Ashland, Kentucky." His mouth is "the mouth of a colonel in the regular Army, its severity tempered by an occasional, fleeting, not to be relied on, twinkle in his eyes." "Not a patient man by habit," he is, nevertheless, "the kind of a man who wrestles with a problem all day and then takes it up in his dreams."

Wrote *Newsweek* in June 1943: "He has James A. Farley's knack of remembering people, and a reputation for being a man's man. With Congressional buddies he has spent many an evening at a little steak house on Wisconsin Avenue much favored by the Representatives. He is an A-1 bridge player. But he is equally a family man and exuberantly proud of his two sons [Frederick Moore, Jr., and James Robert]." (The elder, Fred, Jr.,

VINSON, FRED M.—*Continued*

turned down a chance to go to West Point and expects to be inducted into the armed forces in two or three weeks.)

"Vinson is jovial, but he is also a hard worker and a fighter. He studied legislation on which he had to work or vote with a lawyer's precision. As to the fighting: people have long since given up arguing with him. . . A Senator once said of Vinson admiringly: 'He never walks around a fight. He goes right into the middle.' Because of Vinson's popularity back home and because of his fighting ability, his successor, Representative Joe B. Bates, says he wouldn't even try for office if Vinson ran against him."

Vinson is a Methodist, a Mason, a member of Phi Delta Theta, and a member of the American, Kentucky State, and Boyd County Bar associations. In 1938 his Alma Mater, Centre College, gave him an honorary LL. D. In Washington Mrs. Vinson is a director of Columbia Hospital and also serves on the staff of the Stage Door Canteen. Her only complaint about life in the hectic wartime capital is that newspapermen take such "awful pictures" of her and her husband.

WADSWORTH, JAMES W(OLCOTT)
Aug. 12, 1877- Member of the United States House of Representatives

Address: b. House Office Bldg, Washington, D. C.; h. Geneseo, N. Y.

In 1935 James W. Wadsworth was described by Raymond Clapper '40 in the *Review of Reviews* as follows: "Gentleman farmer. Conservative. Strictly anti-New Deal. Wealthy. Uncompromising in his views, and defeated for re-election to Senate some years ago because of his attitude against prohibition and woman suffrage. Highly respected. Friends quietly at work for him. Acceptability in farm belt doubtful." At that time Clapper put him on a list of Republicans from whom the next Presidential candidate would most probably be chosen.

Although no one has yet mentioned Wadsworth as a possible Republican nominee in 1944 for any office but the one he now holds, in his long political career he has been boomed for nearly every important office in the land. More than once he has missed getting the Republican nomination for Governor of New York State, for Vice-President of the United States, for President.

Born in Geneseo, New York on August 12, 1877, James Wolcott Wadsworth, the son of James Wolcott and Louisa (Travers) Wadsworth, comes of "founding father" stock. One of his ancestors, William Wadsworth, was a major general in the War of 1812; his grandfather, the first James of the line, was a major general of volunteers in the Civil War, military Governor of Washington, and was killed at the Battle of the Wilderness.

After attending St. Marks at Southboro, Massachusetts, young Wadsworth matriculated at Yale, where he received his B. A. degree in 1898, just in time to go off to the Spanish-American War. Upon his return he became a "gentleman farmer" in Geneseo, and in 1905, three years after his marriage to Alice Hay, he began his political career as a member of the New York State Assembly. He served in the Assembly for six years, then from 1911 to 1915 managed a large ranch at Paloduro, Texas. In November 1914 he was elected to the United States Senate to succeed Elihu Root, who gave him his support.

In the Senate Wadsworth was particularly active in urging adequate preparedness for America. In July 1915 he approved President Wilson's third note to Germany on the *Lusitania*. He backed the principle of selective service as early as 1916, and in April 1917 announced on the floor of the Senate that it would be impossible to get 500,000 men by volunteering without letting down the bars of efficiency. "The burdens of this War should fall equally on everybody capable of bearing that burden," he said. "We should be fair and democratic in this ideal of service, but we should so contrive our defensive system that it would be employed in the most efficient way. That is why we advocate selective draft—selection of the best material for the particular duty." Soon before the United States declared war on Germany, however, the Congressman resigned his own military commission, a fact that the exponents of woman suffrage were quick to point out when Wadsworth and his wife fought against the woman suffrage movement, calling it a plot to stop the War, and charging that German and pacifist influence was responsible for its victory in New York State. Wadsworth's stand on prohibition also won him the enmity of the prohibitionists at this time.

In January 1919 Wadsworth announced that he favored a quick peace, then a League of Nations, but two months later he signed the Senate round robin opposing the draft of the League, and he announced that he would vote against the League of Nations covenant in its present form. As chairman of the Military Affairs Committee in the Senate, a position to which he was assigned in May 1919, his opinions carried some weight. Urging reservations to the League, in December 1919 he said that no compromise could be reached in the Senate on the League of Nations unless President Wilson would recede from his attitude on Article X, and he continued to uphold the Senate fight against it.

Known as a staunch conservative who was fond of talking about states' rights and who favored high protective tariffs as much as he disliked high taxes, by this time Wadsworth was one of the Republican leaders in the Senate. In 1920 he headed the New York State delegation to the Republican National Convention, and in June he ordered the delegation to support Dr. Nicholas Murray Butler '40 for President. (He voted for Frank Lowden after Dr. Butler's candidacy proved impossible.) The A. F. of L. attempted to prevent his re-election to the Senate that year, as did woman suffrage leaders and prohibitionists, but his opponents failed. Mrs. Carrie Chapman Catt '40 promptly charged that the Republicans and Democrats had made a deal for Wadsworth's re-election—a charge which Wadsworth called "nonsense."

Among the legislation which Wadsworth opposed in the next few years were the excess profits tax, the soldier bonus bill, the Dyer anti-lynching bill, all sorts of Federal aid measures, the amendment to prohibit child labor, and the Sherman anti-trust law. A member of the Senate Foreign Relations Committee from October 1921 to March 1925 (when he was transferred to the Finance Committee), he advocated that the United States join the World Court only if free from the "political bondage of the League relations"; he continued to emphasize the importance of universal military training and preparedness; and he urged an investigation of Colonel Billy Mitchell's attacks on the Army and Navy air policies. His stand on nearly every queston alienated liberals. Caroline O'Day attacked Senator Wadsworth as the Republican boss of New York State; William Green '42 called his record "unsympathetic"; and Robert F. Wagner '41, who opposed him for re-election in 1926, charged him with having opposed farm legislation, having held up coal relief in defending the mine owners during the coal strike in the winter of 1925, and having failed to vote for the Workmen's Compensation Bill. (To this last charge Wadsworth replied that he had helped pass the first workmen's compensation act passed by New York State in 1925.) In addition, prohibitionists and those who had disapproved of his stand on woman suffrage once more raised their voices against him.

In spite of all this opposition, Wadsworth received the Republican nomination for the Senate again in 1926, and he put up a hard fight for his seat. Furthermore, Elihu Root, "sage of the Republican Party," wrote a benedictory preface to the highly flattering biography of the Senator written by H. F. Holthusen and published that year. "He never tries to get into the spotlight," wrote Root of Wadsworth, "or to make speeches merely for home consumption. He never seeks to curry favor with anybody or fears to follow his own sincere and honest judgment." By this time, however, Wadsworth had apparently antagonized too many voters for Root's words to carry much weight, for in up-State New York many staunch Republicans were at least equally staunch prohibitionists, and the "dry" Republicans had put a rival candidate into the field. In November 1926 Robert F. Wagner, the Democratic candidate, carried the day.

JAMES W. WADSWORTH

Wadsworth's next years were busy ones, although in April 1927 he announced that he was sidetracking politics for farming. In July 1927 he became a director of Colonial Western Airways, Incorporated. That same year he was mentioned frequently as a possible Presidential, Vice-Presidential, or gubernatorial candidate. His candidacy remained in the realm of possibilities, but he continued active in Republican politics, attempting to win his Party over to the "wet" cause. By July 1932 he was ready to run for Congress, and in November of that year he was elected to the House of Representatives.

In the House Wadsworth was given membership on the Banking and Currency Committee. After serving on the Committee for a couple of months he was transferred to the Committee on Interstate and Foreign Commerce, where he served for nearly ten years. He continued his opposition to the New Deal, attacking New Deal farm legislation (crop control, the AAA) with particular heat, and speaking ominously of the tremendous national debt which was being piled up. In January 1936 he failed to win the job of Republican floor leader; at the Republican National Convention that spring he was supported by many Republicans for the Vice-Presidential nomination; and in September of that year he was defeated for the chairmanship of the New York State Republican Resolutions Committee. In November he was easily re-elected to Congress.

Although unreconciled to Roosevelt's domestic policies, on many matters of foreign policy the Republican Congressman found himself in agreement with the President by this time. He backed the naval expansion bill of 1938, and in July 1939 he made a radio plea to lift the

WADSWORTH, JAMES W.—*Continued*

United States arms embargo. He and the former Senator Burke '40 of Nebraska sponsored the original Selective Service Act of 1940 even before the Administration could be brought to a formal commitment for the legislation; in 1941 Wadsworth called for national unity behind Roosevelt's Lend-Lease bill, saying that whatever was necessary to assure the safe arrival of American goods in England should be done at once; and in September 1942 he urged the draft of boys at eighteen. When in January 1943 he was chosen the New York member of the Republican Committee on Committees over the isolationist Daniel A. Reed, who was much his senior in point of House service, Administration supporters were, therefore, pleased. Representative Reed had been nominated by Representative Hamilton Fish '41. Reed's defeat meant that Wadsworth was named to the House Foreign Affairs Committee, charged with legislative responsibility over extending the Lend-Lease act which was to expire on June 30.

Wadsworth might be said to reflect the Army's viewpoint rather than the Administration's viewpoint even on the War, however. He has advocated placing the Office of Civilian Defense under the War Department, a proposal rejected by a close vote in the House. He has also advocated a system of permanent universal military training. But undoubtedly the most controversial piece of legislation which he has sponsored is the Austin '40-Wadsworth national service bill, introduced in Congress in February 1943, which would authorize the drafting of men and women for any and all forms of work connected with the war effort. This bill would empower the President (through the selective service local boards) to assign a person to a given occupation, and to the employer most in need of him or her, receiving the compensation and working the hours "applicable to the kind of work" to which the person is assigned. An amendment also provides that the person would not have to join a labor union unless he so chooses. This bill has been opposed not only by the C. I. O. and the A. F. of L., but also by Bernard M. Baruch '41, who points out that a draft to work, unlike a draft to fight, subjects an individual to the authority of a private employer operating for gain. "Enforced and involuntary service for a private master is and has been clearly and repeatedly defined by our Supreme Court as slavery," says Baruch. The bill is, however, endorsed by Secretary of War Stimson '40 and Under-Secretary Patterson '41, and it has the backing of many Congressmen. Wadsworth himself comments that the United States alone of all great nations has failed to mobilize completely, and insists that Washington has failed to conceive "the willingness of the American people to sacrifice."

On domestic issues Wadsworth is still found voting with the most conservative bloc of Republicans. In 1940 he headed Frank E. Gannett's campaign for the Presidency, nominating him at the Republican National Convention. In October of that same year he questioned 250 business firms on the effect of Federal securities controls, although denying hostility to the Securities and Exchange Commission, and by April 1941 *Business Week* was calling him, approvingly, "Wall Street Defender." Wadsworth had just introduced a bill to "reform" the SEC, attacking the various laws by which the Federal Government regulates the financial world, and accusing the SEC of a "sort of reign of terror over honest men who are afraid to go ahead with their enterprises lest they be pilloried before the public." Later, after Pearl Harbor, he fought against giving labor time and a half for overtime during the War.

In 1943 Representative Wadsworth voted for the continuation of the Dies '40 Committee, for repeal of Roosevelt's salary limitation order, for the Ruml '43 plan, for the Hobbs Anti-Racketeering Bill, against subsidies for farmers, against overtime pay for Government employees, against restoring funds for the control of Axis assets, for dismissal of the Government employees whom the Kerr Committee has branded "subversive," against the passage of the anti-poll tax bill, for strict limitation of the President's emergency fund, for approval of the conference report on the Smith '41-Connally '41 "anti-strike" bill and for overriding the President's veto of the bill. He voted against more money for soil conservation, incentive payments on certain crops, funds for crop insurance, money for rural electrification, funds for a price roll back; for liquidation of the Home Owners Loan Corporation, a reduction in funds for OPA enforcement, abolition of the domestic branch of the OWI, and continuation of the Dies Committee. He did, however, vote for extension of the Reciprocal Trade Act and for the Fulbright '43 post-War collaboration resolution (along with a majority of House Republicans); and he was one of the few Republicans who opposed slashing the appropriation for the OWI's Overseas Branch. In April 1943 he was appointed to the Republican Committee of House members to study post-War domestic problems.

In October 1943 Representative Charles A. Eaton of New Jersey proposed Wadsworth for the 1944 Presidential nomination. "He is a profound student of government and international relations and all the social problems we have to face," said Eaton. "He has courage and intelligence and experience to a unique degree. I doubt if there is a man in public life today with a profounder understanding of the tremendous problems and issues now facing the people." Replied Wadsworth: "I appreciate the compliment, but I can't take that seriously."

The energetic New York Congressman is six feet tall, weighs 170 pounds, and has blue eyes and brown hair, turning gray. "On his watch chain," said the late Lemuel F. Parton, "are two trophies, but not military. One attests his renown as a member of the Yale baseball team of 1898 and the other as a Yale Glee club singer of the same year—symbols of the human and gregarious traits which have made Mr. Wadsworth successful in public life and tagged him as 'Jimmy,' rather than James W. He is the squire of 14,000 fat acres near Geneseo, New York, where he likes to do farm work and, obviously to his credit, never has had his picture taken in overalls, even in a campaign year. This land came into the hands of an earlier Wadsworth in 1797." Besides livestock and horses, baseball is a favorite hobby of Wadsworth's. (In January 1942 he urged the continuance of professional baseball during the War.) In religion he is an Episcopalian, although he recently became linked with the Oxford Movement in newspaper columns through his attempt to get Moral Rearmament Workers deferred from the draft. He is a member of the Loyal Legion, the Spanish War Veterans, the Grange, and Delta Kappa Epsilon Fraternity, and a director of the Genesee Valley National Bank & Trust Company of Geneseo, New York.

Representative and Mrs. Wadsworth have three children: Evelyn, James Jeremiah, and Reverdy. In 1941 James J. Wadsworth resigned from the New York Assembly after ten consecutive years in Albany to devote his full time to duties in the personnel department of the Curtiss-Wright Company's Buffalo airplane plant.

WALKER, MARGARET (ABIGAIL) July 7, 1915- Author

Address: b. West Virginia State College, Institute, W. Va; h. 5524 Perrier St, New Orleans, La.

The first books of two young Negro poets, Countee Cullen and Langston Hughes '40, made news in literary circles in the early '20's; since then a number of volumes of verse by young Negro writers have appeared, among them *For My People* (1942) by Margaret Walker. Miss Walker is the first Negro poet to win the annual Yale Series of Younger Poets competition, of which the late Stephen Vincent Benét was editor. Three printings of the volume—unusual for a first book of poems—denote an exceptional critical recognition and popular success.

MARGARET WALKER

Margaret Abigail Walker was born July 7, 1915 in Birmingham, Alabama, the daughter of Sigismund C. and Marion (Dozier) Walker. "When I was five," she writes in an article published in *Common Ground* in the autumn of 1943, "I was busy discovering my world, and it was a place of happiness and delight. Then, one day, a 'white child' shouted in my ears 'nigger' as if he were saying 'cur,' and I was startled. I had never heard the word before, and I went home and asked what it meant, and my parents looked apprehensively at each other as if to say, 'It's come.' Clumsily, without adding hurt to the smart I was already suffering, they sought to explain but they were unable to destroy my pain. I could not understand my overwhelming sense of shame, as if I had been guilty of some unknown crime. I did not know why I was suffering, what brought this vague unease, this clutching for understanding."

This "clutching for understanding" only grew more intense as the child grew older. In school she "read the history books that glorify the white race and describe the Negro as a clown and a fool or a beast capable of very hard work in excessive heat," and "discovered the background of chattel slavery behind this madness of race prejudice." But when she went home to "the good books and the wonderful music and the gentle, intelligent parents" she could see no reason for prejudice on the basis of previous condition of servitude. Neither could she understand segregated churches and segregated hospitals and cemeteries and schools. "Some day," she daydreamed, "when I am fully grown, I will understand, and I will be able to do something about it. I will write books that will prove the history texts were distorted. I will write books about colored people who have colored faces, books that will not make me ashamed when I read them."

Margaret came of middle class parents and enjoyed the advantages of a superior educa-

WALKER, MARGARET—*Continued*

tion at Gilbert Academy; but she found other experiences even more educative. "Before I was ten I knew what it was to step off the sidewalk to let a white man pass; otherwise he might knock me off. I had had a sound thrashing by white boys while Negro men looked on helplessly. I was accustomed to riding in the Jim-Crow streetcars with the Negro section marked off by iron bars that could not be moved. For a year and a half I went to school in a one-room wooden shack. One year when my father's school work took him out of town constantly, my mother lived in fear of our lives because there was no man in the house to protect us against the possibility of some attack. Once we climbed the fire escape to see a movie because there was no Negro entrance, and after that we saw no movies. Another time my mother stood for hours upstairs in a darkened theatre to hear a recital by Rachmaninoff because there were no seats for colored. My father was chased home one night at the point of a gun by a drunken policeman who resented a fountain pen in a 'nigger's pocket.' My grandmother told the story of a woman tarred and feathered in the neighborhood . . . because it was rumored that a white man was visiting her. . . And always the answer and the question in a child's mind to each of these was 'Why? Why do they do these things?'"

After graduation from Gilbert Academy in 1930 Miss Walker entered Northwestern University, where she was to receive her B. A. in 1935. "I left the South with mingled emotions," she says. "I had been told that Negroes in the North were better off than Negroes down South. . . I was, nevertheless, shy and afraid over the prospect of going to a white school; I might prove backward as a result of my Southern training. I had also perforce become somewhat anti-white myself and I feared coming into close contact with white people. Yet I anticipated a new kind of freedom once I crossed the Mason-Dixon line."

She was surprised and hurt when few of the wonderful promises came true—when she was refused service in restaurants in Chicago and Evanston, when she discovered that the majority of Negroes in the Middle West had no money with which to take advantage of higher education. But what was most amazing was her first realization of the economic setup in America: when she discovered that "there are poor white working people exploited by rich white people," and poor Negroes exploited by wealthy Negroes. "A year out of college found me working with poor whites—Jew and Gentile—and poor Negroes, too. In Chicago for the first time I began to see that Negroes, as almost entirely a working-class people, belong with organized labor. . . I began to see race prejudice as a definite tool to keep people divided and economically helpless: Negroes hating whites and whites hating blacks, with conditions of both groups pitiful, both economically and psychologically." In 1936, when she cast her first vote in Chicago in a Presidential election, "many of the ills and evils of our society, as they immediately touched Negroes and all poor people, had been somewhat alleviated" through four years of the New Deal; but in the South neither Negroes nor poor whites had any voice in their government. She began to understand that "a voteless people is a helpless people."

Understanding, she began to reach out. "I saw it was eternally to the credit of Negroes in America that we were represented in Spain on the side of the Loyalists with men, nurses, volunteer workers, our humble gift of an ambulance, our moral support. We can be proud that Ethiopia found a willing ear for help from us. . . I realized it was essential for Negroes to be identified with every heroic struggle of an oppressed people, with the brave Chinese, the Indians, the South Africans, the Negroes in the West Indies who fight for liberty."

And she wanted to teach what she had learned. In 1942, after receiving her M. A. from the State University of Iowa in 1940, she became professor of English at Livingston College, Salisbury, North Carolina; from 1942 to 1943 she instructed in English at West Virginia State College. In 1942, too, her first book of poems was published.

For My People contains three groupings of curiously diverse and sharply contrasting poems. Section One is a series of "public poems" in which the poet speaks directly for the Negro people, composed mostly of free verse or rhythmical prose poems, Biblical in style. The following passage from the title poem is characteristic:

> *For my people lending their strength to the years, to the gone years and the now years and the maybe years, washing ironing cooking scrubbing sewing mending hoeing plowing digging planting pruning patching dragging along never gaining never reaping never knowing and never understanding. . .*

The second section contains a series of what Stephen Vincent Benét in his foreword called "blues," or folk ballads, simply, crudely, and effectively written in Negro dialect, drawing on folklore or outlawry for subject matter. The final section is a series of sonnets, formal in manner and personal in content.

The book was widely reviewed in periodicals and magazines ranging from the *Atlantic Monthly* to the *Daily Worker*. Critical reactions were various, the more favorable coming from Left-wing publications and from *Time* Magazine. The *New Republic* found the verses striking and sincere, but uneven in merit; Louis Untermeyer in the *Yale Review* wrote that the book has "vigor and undeviating integrity," but that the blues verses "read like nothing so much as Langston Hughes turned soft or Paul Laurence Dunbar turned sour." According to the *Christian Science Monitor*: "The sonnets are the weakest feature of the book, the public poems are spotty but frequently deeply moving, and the folk ballads are far and away the best." *Time* found Miss Walker's lyrics "psalmlike," her ballads "stark," and her sonnets "biting." Said the reviewer: "There is perhaps more quiet medicament for negrophobes in Margaret Walker's *For My People* than in any other book of Negro verse yet published. Poetess Walker . . . avoids the callow literary posturing that is the curse of most Negro versifiers. In this, her first book, she writes with civilized simplicity and dignity about the humanity of her people. The moral guilelessness which may well rate as the most valuable gift of the Negro to American civilization is exemplified in almost every stanza of this slim twenty-four-poem book."

Quoted by more than one reviewer were the following lines on the problems of her people:

Our birth and death are easy hours, like sleep
and food and drink. The struggle staggers us
for bread, for pride, for simple dignity.
And this is more than fighting to exist;
more than revolt and war and human odds
This is a journey from the me to you.
This is a journey from the you to me.
A union of the two strange worlds must be

The 1942 Honor Roll of Race Relations (a nationwide poll conducted yearly by the Schomburg Collection of Negro Literature of the New York Public Library) contained the names of twelve Negroes and six white persons; among those named was Margaret Walker, "for winning the Yale University Younger Poets competition with her book, *For My People.*"

Miss Walker is currently at work on another book of poems and on a collection of stories for children. She is unmarried, a Protestant by religious affiliation, and has no political affiliation. She enjoys music, books, movies, and the theatre; for recreation, she likes parlor games.

"I know there can be no individual solving of this matter of prejudice," she writes, "that neither Negroes nor whites can solve it alone. It is a mass problem. Yet I believe each individual has a role to play and a weapon he can use. I believe I am less fearful now and less inarticulate because I have achieved some basic understanding of the problem. If, by using the only means of expression I have, I can help make people more concerned and less confused about our interracial fate, I will have played my role in helping reach a common ground of good will and cooperation."

WANK, ROLAND (ANTHONY) (wăngk) Oct. 2, 1898- Architect

Address: b. c/o TVA, Knoxville, Tenn; h. 113 W. Norris Rd, Norris, Tenn.

ROLAND WANK

The day has long since passed when huge engineering projects were public eyesores, and when any remotely practical structure was automatically stripped by its designer of whatever artistic appeal it might have. Today art and practicality are so completely fused that in 1941 New York's Museum of Modern Art could have an exhibition composed of photographs of the Tennessee Valley Authority, one of the largest and most difficult engineering projects in the world. The man most responsible for the architecture of this mammoth undertaking is Roland Wank, an architect who believes that art has its place in everyday American life.

Born in Budapest, Hungary, October 2, 1898, Roland Anthony Wank was educated at the Royal Polytechnicum in Budapest (1917-19) and at the Technical University at Brünn, Czechoslovakia (1919-21). He also attended the College of Beaux Arts and the School of Applied Arts in Budapest. When he finished his training Wank was engaged as chief architect by several European engineering and construction organizations. In 1924 he came to America, where he was associated with the George Springsteen, Fellheimer, and Wagner firms until 1933.

It was not long before Wank was recognized as one of the outstanding talents in his field. In 1930 the American Institute of Architects awarded a gold medal to the Grand Street apartments in New York City on which he worked as chief designer. These apartments, "one of the stepping stones toward the low rent types later developed and popularized by PWA and USHA," constituted a cooperative housing project and marked the beginning of Wank's long career in public housing. Before entering Federal service, however, he was chief designer of the Union Terminal in Cincinnati and the T. H. and B. Station in Hamilton, Ontario, "Canada's first railroad building in modern style." For the past decade Wank has been connected with various Government agencies, including TVA, the Suburban Re-

WANK, ROLAND—*Continued*

settlement Administration, and the Rural Electrification Administration.

In 1933 the Tennessee Valley Authority was created by Congressional act. The responsibility for the architecture of this complex engineering and social project was assigned to Roland Wank. He immediately recognized his problem as not merely one of reworking the original plans of the engineers, but as "a new phase in architecture." His job was "to make sure that the dams look as efficient as the engineers have made them," and, in addition, to show "that a public architecture can be a great architecture."

Covering an area of some 40,000 square miles with a population of 2,000,000 people, the TVA was hailed by art critics as "unusually heartening and bracing," and one of the great feats of American architecture. To house the workers and future settlers around Norris Dam, the town of Norris, Tennessee, was built. Wank later wrote that he worked on the premise that "changing mores call for changes in architecture. Dependence upon environment calls for its control and planning for balance and dignity." He emphasized that Norris was not a "model town," because, he wrote, "we cannot make revolutionary improvements any more than we can pull rabbits out of a hat."

Wank's most important venture in community planning, outside of TVA, was the Greenhills (Ohio) Resettlement Project. Built by the Suburban Resettlement Administration, "the Greenhills center illustrates complete consolidation of facilities in a planned town." Wank has always felt that architecture should incite activity, and that planned communities should give the architect the opportunity "to create designs for joyous living implicit in the promise of democracy."

Although Roland Wank's fame rests chiefly on the buildings and projects he has designed, he is also known as the author of several magazine articles on the theoretical aspects of his work. In these articles he has stressed the need for cooperative action so that standards of housing may be raised. In 1943 he wrote, "Security can dwell henceforth only in dynamic, planned, unfettered expansion; we may also discover that in contemporary affairs the individual's lone quest for economic advantage is as sterile as it can be catastrophic to society, and our boundless power to create great and good works can be unleashed only by collectively planned action."

Wank, who became a naturalized citizen in 1930, has been married since 1922 to Piroska Szabo. They have two sons, Peter John and Andrew George. He and his family live in Norris, Tennessee, the town which he designed, and Wank likes to say that he made his bed and lies in it—and likes it too.

WARING, ROANE (wâr'ing) July 21, 1881- Lawyer; industrialist

Address: b. Waring, Walter & Cox, Sterick Bldg, Memphis, Tenn.

As a critic of wartime strikes and a staunch advocate of "nationalism" with less emphasis on international collaboration, Roane Waring had a stormy year in the office of national commander of the American Legion from September 1942 to September 1943. He was elected as the man who could "give the Legion and the country the kind of 'tough' leadership" needed in these critical times, and he fulfilled the prophecy by denouncing vociferously "bureaucratic squabbling," alleged violations of freedom of speech and of the press by the Roosevelt '42 Administration, and labor leaders who impede the war effort by strikes and slowdowns.

Roane Waring was born in Memphis, Tennessee, July 21, 1881. He studied law at the University of Virginia, was graduated in 1902, and is now senior member of the Memphis law firm of Waring, Walker, and Cox; he is likewise president of the Memphis Street Railway Company. In the First World War he served in France as a lieutenant colonel and assistant chief of staff G-3 of the 33rd Division, and took part in the Saint-Mihiel and Meuse-Argonne battles.

Though born and bred in the South, Waring apparently does not have the easy-going disposition usually attributed to Southerners. After his election by acclamation as commander of the Legion, he told the national convention in a fiery address that he would not fail to carry out the mandates of the convention faithfully; nor would the Legion fail the country in its demand for leadership, counsel, and guidance in the present emergency. Shortly after his election Waring, on behalf of the Legion, condemned the proposed $25,000-a-year limit on salaries as communistic in its inception, citing the fact that this provision was in the Communist Party platform in 1934. He added that this salary limitation would "stifle personal endeavor, private enterprise, free initiative, ambition—the right of man, no matter where he was born, whether immigrant or not, to come into this country and, by his own efforts, determination, skill, and brain, earn whatever he can earn." He made the same criticisms of the Government's suit to force the Associated Press to open its membership to any paper which could pay its share of the cost of gathering news, adding that the Government's move was an attack on freedom of the press and a violation of our constitutional liberties. These views, expressed at a luncheon before New York newspaper and press service executives, brought forth praise from some, but were violently attacked by others. One newspaper called his speech "so much hokum" and challenged his remarks regarding the Government's suit against the Associated Press, claiming that this suit was a stroke *for* a free press, since no one can put out a newspaper without free access to all the news. A few months later, when Waring spoke in opposition to war profiteering, the same newspaper contended that this was not consistent with his previous opposition to salary limitation.

In January 1943 Waring made the headlines again by advocating that those at home turn their attention to speeding up production and spend less time criticizing the Army's conduct of the War. He suggested that the manpower situation would be solved only "when thousands upon thousands of Government employees and bureau attachés, who only serve the purpose of harassing, delaying, and impeding American industry by unnecessary questionnaires and investigations, are released for labor and shown their places on the production line." He fought for the Austin-Wadsworth '43 bill which provided for conscripting civilians, both men and women, for farm and factory jobs. Later, when the Ruml '43 plan (to skip 1942 tax liabilities and put 1943 income taxes on a current basis) was being discussed, Waring spoke strongly in favor of it, contending that if the "back-taxing" system were continued, soldiers returning from the War would owe taxes on income received before they entered the services.

In the early spring of 1943 the energetic Legion Commander made a tour of Army installations in the United States, Panama, and the West Indies. Waring was described at that time by one newspaper as "touring the country delivering tirades against labor." Waring denied such charges, saying that his attacks were aimed only against "a small but dangerous minority of highjackers and racketeers that is seeking to crush organized labor," and adding, in special reference to the American Federation of Labor: "The majority of organized labor . . . is just as honest, just as patriotic and made up of just as fine citizens as any other group." Pro-labor groups within the Legion nevertheless continued to challenge his right to make such statements in the Legion's name.

ROANE WARING

After studying the military situation in the United States, Commander Waring went to the fighting front in North Africa at the personal request of General George C. Marshall '40, chief of staff of the United States Army. His report upon his return stressed strongly the misfortune of America's "false optimism," and urged that Americans realize the terrific strain under which their men were fighting, the handicap of being so far from their base of supplies, and the crying need for airplanes, tanks, guns, ammunition, and all other materials. In general, though, he had nothing but good to say of America's fighting forces. He felt that the Army was at least the equal of any other in the world today, and far superior in training and equipment to the one sent to France during the First World War. Waring created quite a flurry among War Department officials by claiming that the terrific number of casualties which American forces had suffered in Africa had not been correctly reported in the United States. Washington hastened to deny his charges and to explain their figures as announced to the American public.

The coal crisis brought forth Waring's most violent condemnation of the labor situation in general and John L. Lewis '42 in particular. Claiming that Lewis had defied the President, the War Labor Board, and all the rest of the Government of the United States, Waring again advocated that all who impeded the speedy production of war materials be treated as traitors. His attitude toward them was not appreciated by the mine workers in Pennsylvania, and the Legion post in Johnstown sent Lewis a resolution apologizing for its part in the election of "a man of the character and mentality of Roane Waring." The Legion Commander branded the perpetrators of the "apology" as un-American and immediately ordered an investigation, threatening to resign if the post were not expelled from the Legion in the event that it

WARING, ROANE—*Continued*

should refuse to repudiate its apology to Lewis. The investigating committee found that the resolution had not been submitted to the full membership of the post for adoption or rejection, though copies had been sent to the press and to the labor leader; so the Johnstown post repudiated its apology, and peace was outwardly restored to the Legion's ranks. Commander Waring, however, continued to castigate John L. Lewis whenever the opportunity arose, on one occasion complaining bitterly that, while Americans execute "a few German submarine men who came to this country following the order of their government to sabotage America," they then turn "and let John L. Lewis sabotage ten thousand times as much war production as those men could possibly have done, and we let him walk the streets of America a free man."

Whenever there was talk of post-War planning, Commander Waring urged that Americans give their entire attention to the winning of the War, feeling after his trip to North Africa that any Allied invasion of Europe would be bitterly contested every inch of the way and that the end of the War was still a long way off. He had little patience with talk of "international collaboration" and felt that, though America should be ready to assume her share of responsibility in world affairs, her citizens should not place the destiny of their country "in the hands of any international organization of any kind under any circumstances"; that any part Americans play in the rehabilitation of smaller and less fortunate countries after the War should be "executed through the laws of an American Congress."

Shortly before the national convention of the Legion in 1943, a group of union labor Legionnaires made charges, according to *PM*, that "certain powerful business interests are preparing to offer the 1943 National Convention $20,000,000 to underwrite an extensive and intensive Americanization program in accordance with their ideas." Most prominent of those "business interests" was said to be the National Association of Manufacturers. At the Convention, Waring had appointed a committee to study means of increasing the Legion's Americanization fund, but he denied that there was any connection between the Legion and the N. A. M. "Never at any place in the discussion," he said, "was any charge made by any responsible Legionnaires that the program had been approved by industrial leaders to subsidize the Legion." Warren H. Atherton '43 was elected Waring's successor and the body voted a resolution commending their former chief "for his great leadership in this extremely crucial year of our nation's history."

Roane Waring is "a big man, with a long, heavy, shrewd face, considerably lined." He comes from a long line of fighting ancestors who have played their parts in all the wars of the United States, and he is very proud of his son, Lieutenant Roane Waring, Jr., who is carrying on the family tradition with General MacArthur's '41 forces in the Pacific.

WARREN, HARRY Dec. 24, 1893- Song writer

Address: b. c/o American Society of Composers, Authors, and Publishers, 30 Rockefeller Plaza, New York City

The musical half of Hollywood's "most prolific song-writing team" (Al Dubin writes the lyrics) is Harry Warren, who never had a music lesson, but who is the composer of a large number of popular hit songs from *So This Is Venice* to *September in the Rain.* It has been said of Warren and Dubin—with only slight exaggeration—that if all of their songs were laid end to end they would stretch across the United States. Certainly they have had a liberal hand in most of the successful motion-picture musical productions during the past decade. And they have not sacrificed quality for quantity: in 1935 they won the Academy Award for *Lullaby of Broadway*, and Warren's *Nagasaki*, a standard "blues" orchestra number for years, has been called "a jazz classic."

Like Eddie Cantor '41 and other self-taught song writers with no other equipment than natural talent and an instinctive feeling for universal, popular taste in musical entertainment, Harry Warren rose from an obscure, poverty-beset background. He was born in a crowded flat in a teeming section of Brooklyn, New York on Christmas Eve, 1893. The time may have been auspiciously romantic, but "he was no Christmas present to his mother, who already had ten other children to look after." His father was a poor Italian bootmaker who earned only enough for the bare necessities of his large family. Even though his youngest son at a very early age showed a decided desire for music, any such luxury as a piano was out of the question. Teachers, too, cost money; and so there was no music for the boy except the organ and choir of the Catholic Church around the corner. His father finally got him a place in the choir, and that satisfied him for a while.

But young Harry yearned to play a musical instrument. First he taught himself as well as he could to play his father's old dilapidated accordion that had been brought many years before from Italy. Then he discovered a friendly barbershop proprietor who sold instruments on the side, and who allowed the boy to try out the various instruments. Harry learned to play a dozen or so of these, but the drums appealed to him most. He finally became so proficient with the traps and snares that he found employment playing with bands at local weddings and dances.

He had gone to the public schools in Brooklyn, and for a while went to the Commercial High School there, but he had no liking for formal education and no desire for a business career. At the age of fifteen he left school and joined a carnival show. With the money he earned that season he bought a secondhand piano for $70 and began to teach himself to play it. He couldn't read music, and he played by ear, gradually learning to pick out every melody he knew. In time he was able to include the piano in his repertoire of instruments. His community and carnival jobs increased, but he wanted something better.

He wanted a theatre job, but more able musicians than young Warren were out of work. He finally became a stagehand at Loew's Liberty Theatre in Brownsville, at $9 a week. The stagehands at that time had no union, but in a few years they began to organize, and Warren was asked to go on strike. He didn't like the prospect of picketing, so he left and found an opening as an extra player at the old Vitagraph Studio in New York, playing the piano for scenes which required "inspiration" for the actors. Real ability and willingness to work hard netted him an assistant director's job at the studio—in which he did everything from playing the piano to carrying props. Vitagraph at that time boasted such stars as Adolphe Menjou, Maurice Costello, Earl Williams, and Corrine Griffith, and Warren saw the making of such old silent screen classics as *Over the Top* and *For France,* the latter directed by Wesley Ruggles.

He himself might have become a director except for the First World War. Warren enlisted in the Navy, and when in 1918 he returned from active service, he couldn't get his old studio job back. Accordingly in order to live he played in beer gardens, motion-picture theatres, and dance halls. He tried also to write songs, and got nowhere; but while making the rounds of the music publishing houses he found a job with the firm of Max Stark and Ruby Cowan as a song plugger. That was in 1922, and marked his start in the direction he wanted to go.

In 1923 Warren had his first collection of songs published. "Among them were *Back Home in Pasadena,* where he had never been; *So This Is Venice,* about which he had only heard tell; *I Love My Baby*, though he didn't have one; and *Way Down South in Heaven,* despite the fact that he had never been further South than the Macy basement line." In England, as in America, the Pasadena song became a big hit; Paul Whiteman introduced the one about Venice in a concert featuring the *Rhapsody in Blue*; and *Way Down South* became one of the first popular tunes done in concert arrangement. As a song writer Warren had arrived.

The much-played orchestra number, *Nagasaki*, was soon followed by such popular songs as *Old Man Sunshine* and *By the River Ste. Marie.* Then came three smash hits in a row: *Cheerful Little Earful, Would You Like to Take a Walk?*, and *I Met a Million Dollar Baby in a Five and Ten Cent Store.* The first two were introduced by Hannah Williams in Billy Rose's '40 first show, *Sweet and Low;* the third was in Rose's *Crazy Quilt.* Ed Wynn's *Laugh Parade* featured two of Warren's songs.

At the invitation of Warner Brothers, Harry Warren went to Hollywood around 1930 in company with two other song writers, Joe Young and Sammy Lewis. The picture for which they wrote the music was not very successful, but the songs were. Returning to New York the following year, Warren teamed up with Al Dubin, a 265-pound partner. Together they wrote the hit, *Too Many Tears*, which was featured in the film *Blessed Event.* By 1932 Hollywood was ready to launch a big musical production era, and Warren and Dubin arrived to work for Warner Brothers. The first production on which they worked was the film *42nd Street,* in which Dick Powell and Ruby Keeler made their screen debuts singing and dancing to *Shuffle Off to Buffalo, Young and Healthy,* and *You're Getting to Be a Habit with Me.* The song-writing team did the music for *Gold Diggers of 1933*, the Eddie Cantor film *Roman Scandals*, and *Moulin Rouge.* They then did the songs for a series of Warner's musical productions, including Al Jolson's '40 *Wonder Bar*, which featured *Goin' to Heaven on a Mule.* From *Gold Diggers of 1935* came the hits, *Go Into Your Dance* and *Sweet Music,* besides the Academy Award winner, *Lullaby of Broadway.*

HARRY WARREN

In 1936 the Warren-Dubin team collaborated on music and lyrics for *Colleen, Hearts Divided, Sing Me a Love Song, Cain and Mabel, Sons O' Guns*; in 1937 they worked on *Melody for Two* and *Mr. Dodd Takes the Air.* During the next two years they collaborated, for various studios, on songs for *Jezebel, Golddiggers in Paris, Hard to Get, Honolulu, Naughty but Nice*, etc. After 1940 they did the music for various popular films—*Young People, Down Argentine Way, Tin Pan Alley*, and *That Night in Rio.* Well remembered among Warren's popular songs are *Where Do You Work-a-John?*, *Rose of the Rio Grande,* and *September in the Rain,* the latter said to be "one of the most sensational songs that has come along in years."

Harry Warren modestly attributes his outstanding success as a song writer to "luck." He is "a reticent, almost shy person who is respected and admired by his fellow music writers." He is married to the former Josephine Wensler, and has two children. For

WARREN, HARRY—*Continued*

the past fifteen years he has been a prominent member of the American Society of Composers, Authors and Publishers (ASCAP), of whose board he was a director for five years.

WASON, BETTY (wô'sən) Mar. 6, 1912- Foreign correspondent; author

Address: h. Peck Estate, West Haverstraw, N. Y.

As Lewis Gannett '41 says, "Betty Wason . . . is not the kind of glamour correspondent who goes up the Burma Road with Chanel No. 5, or the high-powered super-woman who never lunches with any one less than a duchess or a secretary of the interior." An anomaly among war correspondents, after appraising herself with an unbiased eye she determined that Greece was of interest to more people in America than Betty Wason and then proceeded to startle the reviewers by writing a book about the more popular subject. Further awe and admiration were provoked when it was discovered that this remarkably restrained young lady had apparently decided that what Betty had for breakfast across the face of Europe was of special moment to Betty alone, and even a week of dining at the Adlon in Berlin (the literary Waterloo of many an able reporter) leaves the reader of *Miracle in Hellas* (1943) unharrowed by Betty's gastronomic reactions thereto. Most eccentric of all, Miss Wason realized that the earth-shaking and tragic catastrophes which she witnessed (such as the occupation of Greece) did not occur for the sole and benevolent purpose of providing "scoops" for CBS and its duly accredited representatives. She even committed heresy by doubting the significance of her contribution: "In a lost world nothing seemed more futile than making radio broadcasts which might never be heard. . ."

Prophetically enough, Elizabeth Wason first saw the light of day on March 6, 1912 in Delphi, Indiana, a community which is conscious of its classical heritage and which calls its basketball team "The Oracles." No hint of her foreordained future disturbed the daughter of James Paddock and Susan Una (Edson) Wason as she grew up in Delphi and attended the local high school. After a year spent at Oberlin College young Betty transferred to Purdue University to take her B. S. in home economics in 1933. From 1933 to 1935, she devoted herself wholeheartedly to seeking a career, developing versatility and varied skills at some twenty-five assorted jobs including those of department store clerk, advertising copywriter, secretary, and publicity writer. Her training was not wasted, however, for she also worked as a food columnist, as a waitress, and as home economist for the Kentucky Utilities Company, in which capacity she became an itinerant cooking teacher in various Kentucky towns. She later directed the woman's hour for station WLAP in Lexington, Kentucky before coming to New York in 1935 to be assistant food editor on the staff of *McCall's* Magazine.

In 1936 she joined the publicity staff of Raymond C. Mayer, but by June 1938 boredom had caught up with her again and so at twenty-six she forsook security to set out for Europe as a free-lance correspondent for Transradio Press Service, backed by a one-way ticket, $300 in cash, and a complete ignorance of Europe, straight news reporting in general, and the technique of foreign journalism in particular. She nevertheless found it quite possible to learn by the trial and error method, sometimes missing a story because she didn't realize one existed and sometimes because she didn't know how to get it, but on the whole managing to get along. Her first real opportunity came when she found herself in Prague "before, during, and after the Munich crisis," thus gaining valuable experience in reporting international news. Adventure was just beginning for Betty Wason, for in November 1938 she covered such dramatic and stirring events as the formation of the new Czechoslovakian Government, the riots in Ruthenia, and the conference of foreign Ministers at the Belvedere Palace in Vienna, and she was "almost the only woman" to accompany the Hungarian troops when they marched into Czechoslovakia to "bite off a portion of it." (One of the captain's wives insisted on tagging along when she discovered that Betty was going.) In the next few months she demonstrated her uncanny luck or foresight by managing to be in Romania at the time of the assassination of Corneliu Codreanu, the Iron Guard leader, and by turning up in Rome during Neville Chamberlain's visit to Mussolini '42. In February 1939 she was in Paris reporting the fall of Madrid.

When she returned to the United States in 1939 Betty Wason joined the research staff of *PM* (which was then in organization) and planned that paper's food page. But writing copy was drudgery indeed after the thrills of life abroad, and in January 1940 she went to Europe again to work for Transradio. More worldly wise than before, she made arrangements to keep in touch with Paul W. White '40, public affairs chief of the Columbia Broadcasting System, in case a staff addition in Europe was needed. The position did not materialize for some months, but Betty managed to fill her time with jaunts to Italy, Berlin (during Sumner Welles' '40 visit to Hitler '42), and finally Finland, as the armistice was signed with Russia which ended the first phase of that war.

The invasion of Norway found her ensconced in Stockholm giving a vivid recital of the escape of the Norwegian royal family. "A Swede who had fled from the Swedish Legation in Oslo, along with the rest, was standing by his car outside the house where court and government were staying when he saw a German plane coming. He gave the one and only air alarm with his automobile horn. Down the road ran King Haakon '40, Crown Prince Olaf, the British and Polish Ministers, and all the other government officials. They had to stand waist-deep in snow beneath fir trees while bombs crashed. . . An hour later the second alarm came. This time the plane used machine-gun fire, and the court and visiting Ministers fell flat on their faces with bed sheets, which they had yanked off the beds hurriedly in their departure, spread over them for camouflage. . ." This broadcast so impressed CBS officials that they snapped her up immediately for full-time remunerative work as a radio reporter.

Not content with the conflicting rumors which drifted into Stockholm concerning the battles in the nearby countryside, Miss Wason made a daring sortie into war-torn Norway alone, managing to elude Swedish frontier guards and making her way by truck with a group of farmers, sleeping at night in a weather-beaten house high in the mountains where the temperature in her room was below zero. She managed to gather the news she was seeking (chiefly pieced together from the stories of wounded British soldiers she found hospitalized in a converted dance hall) only to find the difficulties of the return trip greatly intensified. "Deep snow drifts made the winding, mountainous roads almost impassable. Huge ruts gripped the truck's wheels in an unyielding vise. On her second overnight stop at the isolated inn she found her hosts unable to provide food. Happily she had stowed in her knapsack a can of baked beans. When the truck came upon an ambulance corps the next morning, stuck in the same place for two days and nights, she decided to cover by foot, through the snowy wilderness, the remaining ten miles to the Swedish border. Completely exhausted, she finally reached a Swedish frontier town where transportation to Stockholm was obtained." Her triumph in obtaining first-hand news in spite of the hardships involved was short-lived, however, for she soon discovered that unfavorable atmospheric conditions had prevented her hard-won broadcast from being heard!

According to Carmen M. Simpson of the *Christian Science Monitor*, Betty's thrills were hardly of her own seeking from that time on. "When the invasion of Norway was pushed off the newspapers' front pages by the Nazi onslaught of the Lowland countries, Miss Wason headed for the Balkans, rumored to be next in line for their attention. Going by way of Russia, she had several skirmishes with the Soviet police in Leningrad. Even in Turkey, where she subsequently arrived, after covering Balkan events, she was subjected to investigation. The British authorities were convinced that she was a Nazi spy; the Russians, thinking she was a British agent, offered her $300 a month and expenses to join their side. Meanwhile the Nazis set a man to trail her, and the Turks wanted her to investigate an Englishman they suspected. It was with relief that she left Turkey for Greece prior to that country's struggle to maintain its freedom."

Blackstone
BETTY WASON

Betty Wason's stay in Greece from August 1940 to July 1941 filled her with intense admiration for the spirit of the Greek patriots not only in the course of their successful war with the numerically superior and better-equipped Italian Army, but even more at the time of their defeat by the overwhelming force of the Nazi war machine, and during the first two bitter months of German occupation. She was inspired by this admiration to write *Miracle in Hellas; The Greeks Fight On* (1943). Criticized as pedestrian in style and embellished with fictional flourishes, the book is nevertheless written with "a flame in her eye and a fury in her heart," and brings home fully to the reader the miracle of the indomitable courage and fierce resistance of the Greeks in the face of every conceivable calamity. During the conflict with the Italians, Betty Wason visited the front lines, spending nights in hallways, sitting up in crowded trains or trucks, or occasionally bedding down in the crude front-line accomodations gallantly vacated by some Greek officer, and she once found herself in the midst of a battle with cannons booming in her ears and the ground quivering under her, "wishing violently at that moment that [she] had never entered the profession of journalism." When other foreign correspondents fled Athens fearful of the imminent Nazi invasion and the traitorous Greek Government, Betty Wason stayed on, spending the last day before the conquerors inundated the city putting through broadcasts to America.

(Continued next page)

WASON, BETTY—*Continued*

Her subsequent polite detention in Athens by the Nazis permittted her to see and record the pitiful tragedy of total warfare—the looting of the conquerors, the almost complete disappearance of edible food and all other necessities of life, the shame of the swastika flying over the Acropolis, the "spectacle of men who were once heroes piled three or four together in a single hospital bed, their wounds of battle undressed," the thin wail of the dying as they dropped of starvation on the streets of Athens. "Men appeared at my kitchen door bringing fish concealed in suitcases, or they pulled eggs furtively from a ragged pocket, or produced a piece of cheese wrapped inside a grimy handkerchief. These we purchased, whatever the price asked, guiltily dining on foods we knew the poor of the city no longer could obtain even with ration cards." She turned her schooling to account by teaching her own maid and the maids of her neighbors how best to prepare the meager food and nearly wept at the sight of a loaf of bread in an American movie. Through it all she could not lose sight of the nobility and pride and courage of the Greeks—who shared their dwindling rations with British soldiers whom they sheltered at great risk in their cellars, who refused to eat the tempting gifts of their shamefaced German boarders, who never lost hope and faith that Britain and America would one day come to their assistance. "Sometimes I think there is more heroism in taking staunchly the grim hardships of daily living than in standing without flinching before noisy and spectacular danger. . . It is not easy to recall splendor on an empty stomach, or in a ragged coat with wind whipping through the tatters. The greatest test of courage may be met on a desolate street corner, before a wintry wind."

Permission for American correspondents to leave was finally granted on June 20, 1941 (almost immediately after the Nazi Trans-ocean correspondents had been ordered to leave the United States), and a plane was provided to take Miss Wason as well as George Anthony Weller of the Chicago *Daily News* and Wes Gallagher of the Associated Press to Lisbon. The plane was requisitioned for service at the newly-opened Russian Front when it reached Belgrade, and the three correspondents were shuttled off in an Army plane to Vienna, where they were held incommunicado for thirty hours. Finally train transportation was provided to Berlin, and there the two men were released, but Betty Wason was held for an additional week because "the police wanted to know more about me. . . It was my third visit to Germany since the era of Nazi conquest began, and each time the food had been better as occupied countries fared worse." At last, chiefly through the intervention of the Berlin CBS correspondent, Harry W. Flannery '43, Miss Wason's passport was released and she was permitted to travel through Switzerland, France, Spain, and Portugal—and so home.

Described as a pert and diminutive brunette, five feet tall and weighing 105 pounds, Miss Wason is "a trifle on the plump side, with healthy coloring and a cheerful smile." Cooking and eating are still two of her favorite hobbies, and she has compiled a collection of succulent and economical recipes with a foreign flavor which was published in the fall of 1943 under the title *Cooking without Cans.* In addition to cooking, she is interested in music (the violin and piano) and fond of oil painting and sketching. Miss Wason has turned down all offers of lecture tours in order to devote all her time to writing. She has given many radio broadcasts. In late 1943 she was at work on a novel, which she hoped to have ready for publication in the spring of 1944. She spent part of the summer of 1943 at the Breadloaf Writers' Conference at Middlebury, Vermont to which she was granted one of the three annual fellowships.

WEBB, CLIFTON 1894- Actor; dancer
Address: b. c/o Booth Theatre, 222 W. 45th St, New York City; h. Greenwich, Conn; Park Lane, 299 Park Ave, New York City

Although the suave, sophisticated, cosmopolitan actor Clifton Webb is not provincial in appearance, outlook, or actions, he was born in a Middle Western city, Indianapolis, Indiana. When he was three years old, his family moved to New York City, and at the age of seven he was started on his career by a peculiar shift of circumstances and personages. It all came about when the little girl from the apartment beneath his own asked him to go to dancing school with her. Clifton, whose mother was in Washington on a visit, asked his grandmother if he might, and when she replied in the affirmative he eagerly accompanied his neighbor. Malcolm Douglas, then connected with the Children's Theatre in the city, was looking for a hero for one of his plays and chose that particular day to visit the dancing school in quest of talent. After having watched Clifton, Douglas asked the boy if he would like to act. The visit to the dancing school culminated in Clifton's grandmother's wiring her daughter to come home to discuss her son's pending theatrical career.

Mabel, as Clifton's mother is known to everyone, had been quite eager to be an actress, but had been thwarted by an unsympathetic family; she made no objections, therefore, to her son's pursuing the career to which she had aspired. Clifton's father, however, is reported to have said: "If you stick to this crazy business, young man, you'll be shining shoes when you're twenty-one, and on the road to the poorhouse a few years later." The boy made his stage debut in 1900 at the Carnegie Hall Theatre, as "Cholly" in *The Brownies*. His next appearance was in the title role of a dramatization of *Oliver Twist*. The actor who played Fagin objected to little Clifton for some reason or other and, with a maliciousness curiously reminiscent of his prototype, used to pinch him after every performance until he was black and blue. *The Master of Charlton Hall* followed. It was in that play that the boy was first "victimized" by upstaging. Clifton played the role of a little Southern boy whose father had gone off to fight the Yankees. The big scene in the drama came when Papa returned to have a heart-rending "duologue" with his son.

"During the first few performances the scene was played nose to nose, but as the run progressed the actor playing Papa began to stand farther and farther upstage, forcing Clifton to turn his back to the audience so that he would be facing him. Clifton did not know that this was one of the oldest theatrical tricks; what he did realize was that Papa was not standing where the director had told him to stand. At the next performance, when Papa began to wend his way upstage, Clifton turned to him and said fiercely, 'Will you come down here, please!' The startled actor returned downstage and was subdued for the balance of the run."

After a few more children's plays, Clifton retired to resume his education. He was graduated from grammar school at the age of thirteen and was sent to study painting with Robert Henri and singing with Victor Maurel. Deciding he wanted to be in opera, he learned some fifteen operatic roles in French and Italian. The Boston Opera Company gave him a contract and he made his debut as Laertes in *Mignon* before he was seventeen. Among the operas in which he subsequently appeared were *La Bohême*, *Madame Butterfly*, and *Hänsel und Gretel*.

Young Webb entered the light opera field with his appearance in *The Purple Road* (1913), a musical comedy. At this time the dance craze was sweeping the country. Webb teamed up with Bonnie Glass and later with Mae Murray, who danced her way into films. By the time he was in his early twenties he was the most popular ballroom dancer in New York City, with the possible exception of the Vernon Castles. In 1917 he appeared in the musical comedy *Love O'Mike*, with Peggy Wood '42, George Hassell, and Lawrence Grossmith. During its run the United States declared war on Germany, and Peggy Wood came out in the middle of a performance to inform the audience. The young man next appeared in *Listen, Lester* (1918) and in *As You Were* (1920), with Irene Bordoni and Sam Bernard.

CLIFTON WEBB

By 1921 Webb was well established as a dancer, and Charles B. Cochran, the noted English producer, asked him to come to London. Webb spent two seasons there and a season in Paris, achieving great success; he then returned to this country in a John Murray Anderson musical comedy, *Jack and Jill* (1923). He wanted to play straight roles, however, and when the trade paper *Variety*, meaning no disrespect, called him a "hoofer," Webb resolved to put his dancing shoes away forever. Pursuant to his resolution he played opposite Mary Boland in a straight comedy, *Meet the Wife* (1923) and received excellent reviews, even though he did no dancing. The actor still treasures the notice of George S. Kaufman '41, who wrote: "Mr. Webb will never have to put on his dancing shoes again."

Webb did, however, don his dancing shoes again for the fabulously successful *Sunny* (1925), which starred Marilyn Miller and had a phenomenal run of ninety-two weeks. He kept them out for *She's My Baby* (1928), with Beatrice Lillie, and for *Treasure Girl* (1928), although he played one or two straight roles in between. In the first *Little Show* (1929) he practically brought down the house with a snake-hips number he danced with the then unknown Libby Holman to *Moanin' Low*. *Three's a Crowd* (1930) followed, with Tamara Geva as his dancing partner. The two danced so well together that they were signed for *Flying Colors* (1932), his next vehicle. One of his most difficult as well as one of his best executed roles was in *As Thousands Cheer* (1933), in which he won wide acclaim for his adept impersonations of various celebrities. Said John Mason Brown '42 of his work in this show: "Mr. Webb continues to grow in versatility from one season to another. In addition to his dancing and his sure instinct for comedy, he has now become a master of make-up; his Mahatma Gandhi '42, his Douglas Fairbanks, Jr., '41, his elder Rockefeller, and his waiter who has modeled himself on Noel Coward '41 are astonishing achievements in grease paint and mimicry." The role also was a feat in temporal acrobatics, with Webb occasionally having only six or eight minutes in which to change his entire make-up as well as costume.

(Continued next page)

WEBB, CLIFTON—*Continued*

An interlude in Hollywood followed, socially a very satisfactory one, but professionally a failure. For eighteen months he swam at Malibu, attended all the soirees, met all the "right" people, and drew $3,000 a week; but not once in those eighteen months did a camera even turn in his direction. Webb remarks of his experiences there: "The only thing I can really chide the movie industry for is its negligent attitude toward the artist's chief assets, time and talent." He was supposed to have appeared in a film entitled *Elegance,* the story of which was based on the life of the famous dancer Maurice, but it was too hard to find a dancing partner who was good enough to perform with Webb. The part had originally been destined for Joan Crawford, but, because it "was completely the man's picture," Miss Crawford declined to star in it. Webb would not mind going back some day to Hollywood to take his ease in what he discovered was "a land of endowed vacations."

When the Sardi restaurant crowd began to murmur, "Clifton Webb, you remember him, don't you?" the actor asked to terminate his five-year contract and he returned to New York to appear in the Theatre Guild's production *And Stars Remain* (1936), with Helen Gahagan. Although the show was a failure, Webb, according to one critic, "showed wonderfully . . . how an actor-dancer with a full technical equipment for comedy can build a believable character out of a handful of vacuous lines." Webb took "full advantage of the ironic and humorous opportunities offered to him alone by the script." He did not dance; indeed, the play called for him to spend most of his time reclining upon a couch.

Webb also played in a revival of Oscar Wilde's *The Importance of Being Earnest* (1939), and during the summer of 1939 he played in a stock revival of *Burlesque.* For a year and one-half he then toured the country as Sheridan Whiteside, the protagonist of *The Man Who Came to Dinner.* Reviews of his performances were mixed. Cecil Smith in the Chicago *Tribune* wrote: "The whole play is Mr. Webb's and he takes remarkable possession." Some critics, however, could not reconcile Webb's slender figure with the corpulent figure of the late Alexander Woollcott '41, after whom the character was reputedly patterned. Webb remarks of his touring in the role which required him practically to live in a wheel chair; "I'm glad I made the role, but I'm also glad it's over. I was in that wheel chair for a year and a half, and not the least of the compensations of playing in *Blithe Spirit* is that I'm able to walk around a stage again."

In *Blithe Spirit* (1942), Noel Coward's '41 comedy about an English novelist whose first wife comes back to haunt and to make life uncomfortable for his second, Webb played one of the straightest roles he ever had. He seemed to have doffed his dancing shoes for good. As the haunted author, Clifton Webb, Wolcott Gibbs wrote in the *New Yorker,* "has just the correct wispy elegance and achieves, I should say, one of the best performances of his career." Another critic remarked that Webb could turn a line with as much neat dexterity as Coward could write it.

Speaking of the differences between musical comedy and dramatic comedy roles, Webb comments that "in revue sketches the comedian must be funny right from the start. He has no chance to tell the audience what sort of person he is playing. Sketches are so short he must establish himself immediately and be funny from the moment the curtains part. In a play, however, he has a chance to establish his character . . . to let those out front know what to expect from him . . . by the time he reaches the third act, if he has done a good job, everything he says is funny. He doesn't have to come out fresh every appearance and warm the audience up."

"The beau ideal of London and New York," Webb is an impeccable dresser and has always bought his clothes in England, for he feels that in England men really know how to dress. Webb is five feet eleven and one-half inches tall, but looks taller, which he says is something of an accomplishment, for anyone can be six feet tall, but it is a distinction to be less and appear more. Spare and dapper, Webb has assiduously avoided developing a "middle-age bread basket." Food, moreover, holds no charms for him, and he hopes that some day people will be able to eat by capsule.

Webb numbers among his friends Elsa Maxwell '43, Libby and Ralph Holmes, Katharine Cornell '41, Guthrie McClintic '43, Lynn Fontanne '41, Alfred Lunt '41, Grace Moore, Lily Pons, Louis Bromfield, Moss Hart '40, Geraldine Farrar, the Dwight Deere Wimans, Niki di Guinzburg, and Captain Edward Molyneux '42. From time to time Webb has been reported about to marry various fashionable ladies, but to date he is still a bachelor. His mother Mabel is his inseparable companion, and the two live at their Greenwich, Connecticut estate and at the Park Lane in New York City. A woolly black French poodle, Ernest, and Goo-Goo, a parrot who insults everyone, the Webbs included, complete their ménage.

WERNER, MAX Aug. 11, 1901- Military analyst; author

Address: b. c/o Sanford J. Greenburger, 11 W 42nd St, New York City

In October 1941 the German Army, continuing its then successful march into Russia, captured and occupied the city of Kharkov, capital of the Ukraine. At the same time Max Werner (whose real name is Aleksandr Mikhailovich Shifrin), journalist and military analyst, who was himself born in Kharkov, was vigorously and persuasively proclaiming to the world that the German military machine could and would be broken, that Russia possessed both the will and means to oppose Germany, and that a concerted and cooperative movement of anti-Hitler '42 forces could accomplish the task of destroying Nazi Germany and its satellite armies. These opinions, as is true of all of Werner's statements and predictions, have been the result of painstaking and scholarly research followed by careful reasoning and analysis.

Max Werner was born August 11, 1901, one of two sons of Mikhail and Eva (Kazmann) Shifrin, and in accordance with Russian custom was given his father's first name as his middle name. He attended the University of Kharkov, was graduated with a doctorate in social science, and at the age of twenty-one became an instructor of economics at the University. At that time his chief interest lay in the study of the inter-relationship of industry and agriculture in world economy.

In 1923 he left Russia and, after a brief stay in Italy, went to Heidelberg for further study and research in the field of industrial monopolies. Although he wrote chiefly on the business cycle in Europe and on the European labor market, at the same time foreign politics and sociology claimed a considerable share of his enthusiasm and attention. By 1927, convinced that the world was being catapulted toward another globe-encircling conflict, he began his studies of military affairs. Meanwhile he became a regular contributor to many Continental publications: at one time he was political editor of *Volksstimmen*, a Mannheim newspaper; *Die Gesellschaft*, a Berlin political and sociological monthly; and *Der Kampf*, a Viennese monthly.

When Hitler came to power in Germany, Werner's anti-Nazi opinions made him *persona non grata* with the new regime, and he fled to France, where he remained from 1933 to 1940. Here he concentrated on military science and history and spent several hours each day at the world's foremost library of military science—the Bibliothèque et Musée de la Guerre de Vincennes. In the medieval atmosphere of this moat-surrounded castle he delved not only into the military history of the nations which, he predicted, would be allied in opposite camps, but also into all factors affecting their national psychology, background, and reactions to war.

[illegible]

MAX WERNER

In 1937 his first book was published in Paris and was subsequently translated into German as *Kommender Krieg und Europa*. This was followed in 1938 by *Der Aufmarsch zum zweiten Weltkrieg*, whose appropriate title (Towards the Second World War) was changed by his English and American publishers to *The Military Strength of the Powers* (1939). This book concerned itself primarily with the revolutionary changes that had taken place in military techniques between 1918 and 1939 and with the importance of both German and Russian rearmament. According to Werner, Germany and the Soviet Union were by far the strongest and best-prepared military powers in Europe. France and Great Britain had a fairly strong economic potential, but were as yet poorly prepared for war; Italy and Japan, on the other hand, had a weak economic potential but a highly developed war potential. As for the character of future warfare, it would be determined "by elements of speed and surprise, mobility and maneuver."

This book was in general very well received and was the April 1939 choice of the Left Book Club in England. Excerpts were read before the House of Commons and, Werner believes, were influential in finally swaying Great Britain from her course of appeasement to one of vigorous opposition to Germany. But more than one critic remained skeptical of Werner's conclusions. The *Saturday Review of Literature*, for example, announced

WERNER, MAX—*Continued*

that his enthusiasm for the Red Army rendered the volume "absolutely worthless as a yardstick." Hanson W. Baldwin '42 of the New York *Times* found his conclusions "invalidated, or at least strongly qualified," by this same enthusiasm.

The Military Strength of the Powers was followed early in 1941 by *Battle for the World,* which, in spite of the existing German-Soviet pact, predicted the inevitable conflict of the two great Continental powers. A military coalition between the British Empire, the United States, and Soviet Russia would have to come about if the Nazis were not to win the War, Werner concluded. Russia would still like to join the Anglo-Saxon powers in finishing Hitler off, he said, if given assurance that she would not be left holding the bag. According to *Time* Magazine, this volume was "notable for [Werner's] total grasp of World War II and the social, political, military, and diplomatic forces involved in it."

By 1942 Max Werner's reputation as a military analyst was well established, and the critics almost unanimously heralded his next publication, *The Great Offensive*—a summary of the Second World War from June 1941 to the middle of 1942—as an important contribution in its field. Adverse criticisms were directed principally at what was considered the author's tendency to underrate the place of air and sea power in modern military strategy, and at Werner's insistence that the most favorable time for an Allied invasion of Europe was in 1942.

In the spring of 1943 Max Werner completed *Attack Can Win in '43,* whose thesis can best be stated in the book's own words: "This is the military dilemma facing the Allies: a Seven-Years' War or victory in 1943." Werner's solution to the dilemma was again coordinated action by the United States, Great Britain, and Russia, and an Allied invasion of Europe. In this slim volume Werner presented the doctrine of military time, the technique of weighing figures on military forces to ascertain the relative strength of armies, and other new concepts, and attacked several currently cherished beliefs, such as the theory that air supremacy without land action could lead to victory. Said the author: "If the doctrine of air power had been followed, North Africa would still be in Vichy-German hands, and the *Wehrmacht* would be on the banks of the Volga."

With the care and precision of a statistician, the background of a historian and psychologist, the author bolstered his arguments by frequent comparisons between the Second World War and the First World War, between battles on the Eastern Front and those fought in the West at the beginning of this War, between strategy used by military leaders of one nation and that used by another.

Werner pointed out repeatedly that a full-scale Anglo-American invasion army need not be stronger than the German forces. According to the author, if the Russian Army and the German Army were balanced at a ratio of one hundred to one hundred, then a military strength of only twenty-five would be sufficient to upset the balance (in favor of the Allies) and would force Hitler to choose between weakening the Eastern Front to fight the invasion or maintaining his best forces in Russia, leaving the occupation reserves to fight the invaders. The author had little doubt that German anti-invasion forces and installations had been highly overrated, and his faith in the satellite armies of Nazi Germany was small.

Called a "modern Nostradamus" by his friends, in 1938 Max Werner wrote that Japan was "the destined opponent of the United States of America." In November 1941 he wrote in the *Free World*: "The Mediterranean, however, is the Achilles heel of the Axis and thus of the Third Reich"; and, even earlier, in the *New Republic* (August 25, 1941): "North Africa and the Mediterranean are the logical bases for the Anglo-Saxon powers from which southern and western Europe can be wrested from Nazi occupation and rule."

This military expert attributes none of his powers of prophecy to extraordinary insight or perception but states that his conclusions are the inevitable result of thorough and widespread investigations. He emphasizes, however, the need for placing events and trends in their proper places in the scheme of things and warns of the danger of permitting a single battle or an isolated victory or defeat (such as Singapore) to distort one's picture of the military scene.

The legend of German invincibility, so widely circulated during the early years of the War, has been carefully examined by the author and has been found to be based on German propaganda, on the lack of such investigation as would have permitted the Allies a true picture of the military situation, and also on the fact that Russia was the first trained and equipped opponent, fully familiar with Blitz tactics, which Germany had to face. Yet even in 1943, as in the First World War, there was truth in the statement made in *Attack Can Win in '43*: "Before the German war machine can be overrun, the exaggerated belief in its power must first be overcome in the mind of the Allies."

The year 1943 would go down in history, claimed Max Werner, even before the sensational Russian victories and before the Allied invasion of Italy, as the year when more German generals knew they were on the road to defeat than did their opponents. Paralleling this situation with an analogy from the First World War, he pointed out that then, as now, German leaders knew their country was defeated before the Allies did.

Today Werner does most of his writing in English, although in the past he has written in Russian, German, and French. His books have had widespread publication and have appeared in India, Argentina, Mexico, and China.

In 1943 Werner is military analyst for the *New Republic* and for *Reynolds News* (London), writes a syndicated column for twenty to twenty-five newspapers in the United States, England, and Australia, and contributes to such magazines as *Liberty* and *Red Book* and to Russian periodicals published in the United States, among them *Novyĭ Put'*. Most of his time is spent in research and study, and, in addition to his article-writing, his present plans include two books for 1944—one, *Revolution in Foreign Politics*, a study of international affairs, the other, as yet untitled, a survey of the last phase of the second part of the War.

Werner is unmarried and lives with his mother and aunt in a comfortable but austerely furnished New York apartment. Since his arrival in America in 1940 he has had little time for his hobby—mountain-climbing—and only occasionally goes to the motion pictures or theatre. The simplicity of his surroundings suggest the scholar and objective thinker, although the personality of the writer is as vigorous as his clear, staccato speech. Sturdy in build, of medium height, with clear brown eyes, he presents a picture of a man who not only has the courage of his convictions, but of one who is so certain of them that he feels their presentation requires but little courage.

The cry for a full-scale anti-Hitler (later Anglo-American) force to invade Europe has permeated his work since the start of Russo-German hostilities. Although the surprise tactics of German warfare upset the calculations of even so careful a student as Max Werner as to the strength of the Maginot Line and the probable path of the German Army at the outbreak of the War, subsequently his profound grasp of world affairs has revealed almost uncanny insight. Today, believing that with careful planning another world war may be averted, he is active in post-War planning activities.

WERTH, ALEXANDER Feb. 4, 1901- Journalist

Address: b. c/o Ogilvy Webb, Goldsmith Bldg, Temple, London, E. C. 4, England; c/o Sunday Times, London, W. C. 1, England; h. 3 Middle Temple Lane, London, E. C. 4, England

Russian-born English journalist Alexander Werth has written a number of "stimulating and thought-provoking" books on present-day war conditions and conditions leading up to the War. A newspaper correspondent in Paris for a number of years, Werth transferred himself to Moscow when Russia entered the War. With qualifications which few "journalistic visitors" to Russia possessed, Werth had the advantage of most other correspondents linguistically and "sympathetically." His experiences in Russia resulted in his book *Moscow War Diary*, "a lively, credible picture of how the Russian people, soldiers and civilians alike, faced up to an even greater ordeal than Napoleon's invasion of 1812."

Alexander Werth was born in St. Petersburg (now Leningrad), Russia on February 4, 1901, the son of A. A. and C. C. (Smith) Werth. His father was Russian; his mother was English. "My boyhood," wrote Werth, "was that of any child of the small but increasingly important liberal, industrial bourgeoisie of Russia. My father was a *kadet,* a member of the Liberal Party, which had emerged from the 1905 Revolution, and so also was his brother, the St. Petersburg barrister. My father's people, who had moved from the Baltic provinces to St. Petersburg in the early years of the last century and had become completely Russified, though they still nominally belonged to the Lutheran Church, did not, however, rise to economic prosperity until the Russian industrial revolution of the '80's and '90's."

ALEXANDER WERTH

The elder Werth was a mining engineer who worked on the building of the Chinese Eastern Railway. When he returned to Russia he helped to develop the Donbass coal industry in the Donetz Basin. He also worked on the development of the almost untapped industrial resources of the Urals. "Looking back," commented Werth, "it has often given me some satisfaction to think that, although my father was a *burzhui*, he was at least a constructive *burzhui* and one who could rank as one of the pioneers of Russia's great industrial development."

The boy grew up in his beloved St. Petersburg. While still quite young he acquired a thorough acquaintance with Russian literature, as well as a love for the Russian theatre and ballet. He also was a devotee of music, and he played the piano himself—he still does. From 1909 to 1917 he studied at the Reformatskoie (Reformation) School, one of the three "German" schools in St. Petersburg, and he was graduated with first class honors. Other graduates of that school included Alfred Rosenberg '41, the Nazi "philosopher," and Ilyich, the leader of the Leningrad State Opera. Before the War his father had taken young Werth abroad on several occasions, as traveling in Europe was considered by well-to-do Russians an essential part of a boy's education. In 1917, soon after the Revolution had started, Werth's father decided to go to England and took the boy with him. "I thought I was going away for only a few months," Werth writes. "I stayed away for twenty-four years. Sometimes, in later years, I wondered if I would have gone had the decision rested with me."

(Continued next page)

WERTH, ALEXANDER—*Continued*

In Britain the boy attended Glasgow University, specializing in French literature, and he was graduated in 1922 with first class honors in Moderns. At the University he wrote "bad poetry" for the school magazine, took Carl Sandburg '40, D. H. Lawrence, James Joyce, and the Sitwells seriously, and read *The Dial.* Since his youth he had visited France frequently, and for his M. A. thesis (he received his degree in 1924) he did research in Paris. In 1923 he began free-lancing as a writer, and the following year he joined the staff of the Glasgow *Bulletin* as a sub-editor. After he had been working there for six months, however, he was discharged for writing a savage review of a music hall show. He then returned to college to study economics.

Meanwhile he had not forgotten Russia. "With my Liberal upbringing I was anti-Bolshevik at first," he declares, "but in the early '20's I became increasingly interested in what was happening in Russia. I began to subscribe to Soviet magazines and newspapers. . . I translated into English some of the new works of Soviet fiction. I was revolted by the cruelties of the regime but tried to understand the whys and wherefores. I felt that the end of Trotskyism in Russia was a healthy sign, and the complete changes made by Stalin '42 in the teaching of Russian history in school struck me as something profoundly significant. I disliked ignorant pro-Bolsheviks as much as I disliked uncritical anti-Bolsheviks."

In 1925 Werth earned money prizes in economics at the University and "a big brass medal [the Bradley Medal] in English literature." In that year he spent a few weeks in the United States. He had just enough money to go half way across the country, and he turned back after reaching Omaha, Nebraska. He thought Chicago's Michigan Avenue "much finer than the Acropolis." In later statements of his, however, he was much less complimentary to the United States. For a short time the young man studied for a Ph. D. at London University, but he soon dropped his studies. He could not decide whether he was most interested in politics, economics, or literature. In that same year he published a study on Chekhov. At the end of 1935 he was appointed research assistant in Paris to Professor Robert M. Haig of Columbia University—a member of the Rockefeller-subsidized Columbia University Council for Research in the Social Sciences which was about to start an exhaustive inquiry into French political and economic problems. Werth was co-author of Professor Haig's *Public Finances of France*, which was published in New York in 1929. In 1928 he assisted Professor M. M. Knight of the University of California in his research on French colonial problems. The year 1929 found Werth "rather at a loose end," and he returned to London where, becoming an English citizen, he worked as a translator and free-lance journalist for a time.

Late in 1929 the young journalist joined the staff of the Glasgow *Herald* and became the Paris correspondent of that newspaper. While on the continent he took occasional trips to Germany and other countries for journalistic purposes. He has visited nearly every country in Europe. In 1931 he was married to Miss F. Lendrum, and that same year he severed his connection with the *Herald* to become the Paris correspondent of the *Manchester Guardian,* succeeding Robert Dell. Although Paris was his headquarters he also did some work in Berlin and in Geneva. While working for the *Guardian* he wrote *France in Ferment* (1934), "an account of the grave French political crisis of 1933 to 1934 culminating, but not ending, in the great riots of February 6." His next book, *The Destiny of France* (published in the United States in 1937 as *Which Way France?*), was considered by critics as "a model of its kind." *France and Munich: Before and After the Surrender,* "a balanced and informed account of one of the great crises in French history," appeared in 1939 and it was followed in 1940 by *The Last Days of Paris* (*Les Derniers Jours de Paris* [1941]). These earlier writings inspired a rather amusing essay by James Thurber '40, for whom they failed miserably to illuminate the complications of French politics. In 1937 Werth had become Paris correspondent of the London Sunday *Times* as well as of the *Guardian* (1931), and in 1940 he left the *Guardian* in order to work solely as diplomatic correspondent of the *Times.*

In Paris Werth was recognized as "one of the keenest and most thoughtful observers of French and European politics." "One always knew where to find Alexander Werth in the good old days in Paris," wrote John Elliot. "Any afternoon when the Chamber of Deputies was in session the Paris correspondent of the *Manchester Guardian* was to be seen occupying his customary place on the front bench of the foreign press gallery. The French Parliament had the same fascination for Werth that the cafe life of the French capital held for other foreign correspondents. Most American and British reporters went to the Palais Bourbon only when some major debate, usually on foreign affairs, was on tap; but no discussion was too dull or trivial for Werth. He not only followed with rapt attention all the cuts and thrusts of the Parliamentary gladiators, but he knew most of the Deputies by their first names." He also knew Palgunov, the Tass Paris correspondent who was later to become head of the Press Department of the Russian Foreign Office—a great advantage for Werth when he went to Moscow. Werth lived in an artist's studio near the Sante Prison, beyond Montparnasse, although he does not paint. On the eve of the French capitulation he was evacuated with the rest of the British correspondents, leaving behind him his "comfortable flat with a splendid library in four languages, English, French, Russian, and German." He returned to London where he, his wife, and their daughter, Nancy Alexandra, lived through the worst times of the Blitz and were, on one occasion, bombed out.

In June 1941 the Germans invaded Russia. "I felt," writes Werth, "that I had to go to

Russia. I had spent my childhood and boyhood years in St. Petersburg; the Russian half of me was clamoring to 'go home.' . . I had always kept up my Russian, especially during my years in Paris; I had continued to read Russian books and papers, and had followed as closely as possible the political events of the Soviet Union and whatever was new in Russian thought and literature, not always with approval, but always with interest. To see Russia again—and in her hour of supreme national trial; how could such a chance be missed?"

Werth's Russian background and fluent Russian would seem to make him an eminently desirable correspondent. In the past, however, journalists of Russian origin had found it difficult to gain admittance to the Soviet Union because they had been suspected of "White" sympathies. Moreover, an ability to speak and read Russian had been a far from desirable qualification from the viewpoint of the Russian Government. Now that Russia had allied herself with the Western democracies, this attitude was somewhat relaxed. Although not a Communist, Werth was no "White" Russian. "Since the Nazi menace had appeared over Europe," he asserts, "I had always advocated the closest military collaboration with the Soviet Union. I had never made the mistake of saying there was 'nothing to choose between Hitler '42 and Stalin.' I was convinced that if the Litvinov '41 policy failed, it was not the fault of Litvinov, but the fault of Chamberlain and Bonnet. I was not at all convinced that the Molotov '40 policy that superseded it was a pro-German policy. It was merely the *faute de mieux* of the Litvinov policy. I believe to this day that, of all the great powers, the U. S. S. R. was, during those years, the only wholehearted supporter of the League of Nations, and that if Litvinov had not been let down by Britain and France this war would probably have been averted." According to Alice-Leone Moats '43, one of his colleagues, Werth was, indeed, so pro-Russian that he "resented anything slightly resembling a criticism of the Russians."

Werth was not sure, however, in what capacity he could go to Russia. He tried the War Office and the Foreign Office, but with no success at first. Then the Foreign Office News Department asked whether he would go to Russia as Reuter's special correspondent. Werth would have preferred working for a newspaper, in which journalists are honored with a by-line, but he was impatient to go to Russia, and he accepted the position. Reuter's agreed, however, to his continuing to send dispatches from Moscow to the London Sunday *Times*.

Werth spent three months in Moscow. He had apparently left England under the misapprehension that he was to be press attaché at the British Embassy, Alice-Leone Moats writes, and he "didn't seem to be too happy in Moscow. He disliked working for a news agency instead of a newspaper and was very snooty about agency men." A sobriquet that never failed to annoy Werth was "Alexander, the Agency Man." "With us," she says, "he stuck to one refrain: 'What am I doing in Moscow?' Standing in his favorite position—on one foot, an elbow crooked above his head, and rubbing his knuckles into his eye—he would repeat, 'What am I doing in Moscow? I should go back to London. I'm getting no real work done here and no cooperation at all from Reuter's.' At those moments he looked like a big bird trying to hide its head underneath a wing; at others, when he sat brooding in a corner, he looked, as one of his colleagues put it, just like a sick mule. It did seem, however, that Werth's annoyance with his home office was justified, for he spent days trying in vain to get permission from them to visit his native city of Leningrad." Finally, when railroad communication had been cut Reuter's London headquarters "suddenly had a brain wave," and wired him that Leningrad would make "a first-class story."

At one of Miss Moats' parties in the Soviet capital Werth met a Russian, "one of the leading lights of the Leningrad film studios." He informed Werth that Russia was no longer interested in Communist Parties outside of Russia. "The way I look at it," Werth reports the Russian as having said, "is that the world is going to change a lot in the course of this War; that we [the Russians] are going to become increasingly democratic—though there will inevitably be a few years' reconstruction, after all the damage the Germans have caused; and that you [the English], too, will develop a new kind of democracy, which may be quite a departure from the present capitalist democracy. But I don't think the Communist Party or the Comintern need worry you. . . Our people are not interested in the world revolution in the old sense of the word."

Werth returned to England just before the evacuation of the foreign embassies and journalists to Kuibyshev in October 1941. (In 1943 he was again in the Soviet Union, however, many of his dispatches appearing in the New York *Times*.) During his 1941 stay in Russia he had kept a diary, which, rewritten and condensed, he presented to the public in the spring of 1942 as the book *Moscow War Diary*. In the book he stated that he had not lost faith in Russia's ultimate victory. Russia, he said, had made more sacrifices, in her fight against Hitler, than any other nation. He felt that "there is really no human temperamental obstacle in the way of Anglo-Russian cooperation after the War. This is very important, for, all being well, Britain and Russia will inevitably be the two powers which will have a decisive role to play in the future reconstruction of Europe. . . With a rapprochement between Russia and Britain, Russia will, I am convinced, become increasingly democratic and European—the Russian people want to be both; *nekulturnyi* (uncivilized) is already the worst term of abuse in Russia—and they will want the full application of the Stalin Constitution as soon as peace conditions permit. In England we are steadily moving, in almost all directions, toward socialism in the wider sense of the word—toward a state of affairs in which the human spirit will be free, and the human body no longer exposed to the dangers of want and war."

"As for America," Werth continued, "it is too early yet to assess her part in this

WERTH, ALEXANDER—*Continued*

War. . . If, after the War, America cooperates with Europe in every way, then the next hundred years may become the golden age of civilization, of the human race. If she sinks back into isolationism and selfish capitalism, then Europe . . . will have to carry on alone. It will be more difficult. But with Britain and Russia as the pillars of this New Europe, it can be done. Only, all this would not mean much if in 1942 Russia were allowed to run short of equipment." Miss Moats calls Werth "insistently anti-American," and alleges that he made a speech in which he said that he believed the United States was not doing its share in the War and that "the American people must realize that they have to lend every effort and make every sacrifice for the sake of England and the Soviet Union." Maurice Hindus felt that Werth's "snap judgments about America and uncharitable comments on certain Americans" were a result of his "acquired British snobbism of the pre-War days."

Critics received the book favorably. Hindus called it "by far the best eyewitness account that has yet been printed about Russia at war." (Other critics agreed.) "From beginning to end," Hindus wrote, "the narrative is vivid and lusty, with sharp thrusts at things and people the author dislikes, with abundant sympathy and appreciation of the things and people that he admires. Primarily it is a book not about the Army or the battlefields but about the people in the rear—the way they look, talk, work, argue, play, and, above all, fight. . . Overwhelmed with British patriotism and enamored of Russian nationalism, he [the author] is in a mood to observe and appreciate the drama and the power of Soviet Russia not only in terms of the heroic fight against Hitler's Germany, but for the meaning it holds to his adopted country and to the freedom-loving world at large. "Excellent as the book is," William Henry Chamberlin felt, however, "it suffers inevitably from the limitations under which the foreign correspondent in Moscow was obliged to work. There was no access to Stalin or to any high Soviet official. As is the rule with all armies, correspondents were taken to the Front only in relatively quiet sectors where the Red forces were advancing. The author learned of the really titanic battles of the War just as people learn of them in America or England, through official communiqués. Information about losses, about military reserves, about the productivity of war industries was of the most fragmentary character. Werth displays good judgment in not indulging in overmuch speculation about the things which he could not know and making his book a record of what he saw and experienced, interspersed with reports of his talks with diplomats and other foreigners, and with Russian acquaintances, both Communist and non-Communist."

In the fall of 1942 *The Twilight of France 1939-1940*, made up of extracts from *France in Ferment, The Destiny of France*, and *France and Munich*, and edited by D. W. Brogan, was published. Critics considered that the book gave "a vivid picture . . . of the most critical and depressing period in modern French history. Those who want to understand how Vichy came about cannot do better than turn to Mr. Werth's study of the decline of the Third Republic." To Kingsley Martin, writing in the *New Statesman & Nation*, Werth's summary of the reasons for the fall of France seemed all "on a somewhat superficial plane," however.

In addition to his books Werth has written numerous magazine articles and has translated many books from the French and Russian, among which was *The Diaries of Tolstoy's Wife*. His favorite authors are Voltaire, Smollett, and Dostoevski. Not an athlete, he plays the piano and prefers Chopin and Schumann to Bach and Beethoven, although he "feels a little guilty about it." He is "no good at jazz."

WHITE, WILLIAM L(INDSAY) June 17, 1900- Journalist; author

Address: b. c/o Reader's Digest, Pleasantville, N. Y. h. 56 W. 12th St, New York City

The famous son of a famous father, William L. White, known as "Young Bill" to distinguish him from his celebrated father, William Allen White '40, has made a name for himself in the world of journalism and literature. White has gone through almost every stage possible for a newspaperman: he rose successively from reporter to circulation manager, managing editor, editorial writer, associate editor, and finally publisher. He has also served as war correspondent for both the press and the radio.

William Lindsay White was born in Emporia, Kansas on June 17, 1900, the son of William Allen and Sallie (Lindsay) White. When he was fourteen he became a reporter on his father's celebrated newspaper, the Emporia *Gazette*, at the same time going to school in his home town. Upon the outbreak of the First World War he joined the Student Army Training Corps, in which he spent three months. His first impression of international affairs was gained at the age of eighteen, when he accompanied his father, who wanted young Bill to get a real taste of journalism, to the Versailles Peace Conference.

On his return the younger White spent a year at the University of Kansas and subsequently entered Harvard, from which he received his B. A. in 1924, after, he says, "a brisk tussle on both sides." While in Harvard he was a member of the editorial board of the Lampoon. After his graduation he went back to work on his father's newspaper and in the next few years he made two trips to Europe, served one term in the Kansas State-Legislature (1931-32), and acted as the Republican county chairman in 1933. He married Kathrine Klinkenberg, former Kansan, of *Time* Magazine in 1931. The couple moved to Emporia. In 1935 White became a member of the staff of the Washington *Post*, and he and his wife took up residence in Washington the following year. He stayed there only three months; at the end of that time he "was fired for what they called demonstrated incompetence in every department of the paper." Two years later (1937) he joined the staff of *Fortune* Magazine and moved to New York. During much of those two years he worked on a novel, *What People Said*.

In 1938 White's novel, *What People Said*, appeared. It is an analysis of social conditions in a mythical small town somewhere between the Rockies and the Alleghenies, and treats of the story of the town's bond scandal and how it affected the lives of state officials.

Pinchot

WILLIAM L. WHITE

The material of the book is based on the Finney scandal in Kansas. The New York *Herald Tribune* predicted a wide, enthusiastic audience for this book, with only a smaller public appreciating "the ironic implications and the deadly satire of the story." The New York *Times* called it "cold and dry and underwritten, the suspense of its underlying narrative, which could have been made really exciting . . . weakened by the indirection of its method. But as social analysis it has rarely been surpassed in American literature."

From 1939 to 1940 White was the European correspondent for the New York *Post* and forty other American daily newspapers. He was in the comparative security of Berlin when the Columbia Broadcasting System asked him to cover the war then raging on the Finnish front. He proceeded to Stockholm, boarded a passenger plane which had a narrow escape from a fleet of Russian bombers over Abo, and finally made his way to Helsinki. From there he moved his microphone right up to the battle lines. His 1939 Christmas broadcast from the Mannerheim Line in Finland was awarded first prize by the National Headliner's Club as the year's best European broadcast. This broadcast so impressed the playwright, Robert Sherwood '40, that it inspired his play *There Shall Be No Night*. After the close of the Finnish campaign White returned to the United States, where he continued his writing and radio work, as well as his numerous lectures. Since 1940 White has been working full time for the *Reader's Digest*. In early 1943 he was made Roving Editor of the magazine.

During the winter of 1940 to 1941 White went to England on one of fifty former American destroyers, traded to Britain for naval bases, to represent the North American Newspaper Alliance and the *Reader's Digest* in London. He returned with a three-year-old English orphan whom he had adopted. The story of his adoption of the little girl, as

WHITE, WILLIAM L.—*Continued*

well as his experiences as a correspondent in England, during which time he went through some of the worst bombings of the War, is told in his *Journey for Margaret* (1941). The *New Yorker* called this "well written though familiar material." The Springfield *Republican*'s critic called it "a simple, moving, expert account of a reporter who felt as well as saw, who understood as well as heard." Lewis Gannett '41, writing in the New York *Herald Tribune,* was enchanted with the book, calling it "one of the most utterly heart winning books that any of the war correspondents have brought back," and Christopher Morley said: "This book says more to me than anything yet published about this War."

MGM's picturization of the book in 1942 won a place on the New York *Times*' list of the ten best pictures of the year. Adapted by David Hertz and William Ludwig and directed by W. S. Van Dyke 2d, the film was praised for its sincerity and lack of pretentiousness despite "occasional lapses into postured sentimentality." "Not in recent experience has Broadway seen a film so fervent, so tender, or so perceptive and true," wrote the *Times.*

White's next book, *They Were Expendable,* was published in 1942. It is the story of the part played by MTB Squadron 3 in the Philippine campaign, as told to the author by four of its young officers. Their many exploits, from the time when the first Japanese planes came over Manila Bay until the end of their brave little flotilla, have as their background "the whole tragic panorama of the Philippine campaign—America's little Dunkerque." White, according to the *New Republic,* "has produced a really thrilling story of heroic achievement by Americans in this War. . . His story is true. It is an unusual literary form, a book-length interview." The *New Yorker* called it "a short, grim, glorious book."

The title of the book came from a remark which Lieutenant Bulkeley, one of the heroes, made to White. "You see," said Lieutenant Bulkeley, "we were expendable." White said he didn't understand. "Well, Mr. White, it's like this: In a war, anything can be expendable—money, gasoline, equipment, or men. Suppose you're ordered to hold a position until you're killed or captured; the precious minutes you can hold up the enemy's advance is worth a gun and a man. You're expendable. You know the situation and you don't mind." White's publishers did not especially like the title and all that saved it was, according to White, the fact that "after they'd read the book, they could not think of a better title. There was a good reason for that. The title was built in."

White received the story from the Navy publicity department which had been offering the story around, but with no takers. The suggestion came to White that he might look into it on the chance that there was a good magazine story in interviews with the officers back from Bataan. He did look into it, wrote an article for the *Reader's Digest,* then decided to expand it into a book. The book was an immediate success. It became a best seller, was chosen as the Book-of-the-Month, and, late in 1942, received the signal honor of being chosen by the Council of Books in Wartime as an "Imperative," receiving an "I," which is equivalent to the "E" awarded to a manufacturing plant by the Navy Department. The "I" is given to new books "that are adjudged important contributions to the war effort and thought of the nation." MGM also purchased this book for filming.

White is the author of the chapter "I Saw It Happen" in *Zero Hour,* a book of essays on foreign affairs by six authors, published in 1940. He has also written numerous articles for various periodicals, including the *Atlantic Monthly, Life,* the *New Republic,* the *Saturday Evening Post* and others.

Queens Die Proudly, published in June 1943, used the same narrative interview plan as *They Were Expendable* to tell the story of the United States Army Air Force in the Pacific from December 1941 to the late summer of 1942. Raymond Holden said of it: "Mr. White's story not only takes you above and inside these great events, but opens up the fine hearts and souls of the men who made the events—something far more than mere history. As a record of the performance of our men and our planes this is not only a stirring story, it is also a valuable, a priceless document."

Achieving an independent reputation was difficult for the son of the famous William Allen White. "You can't imagine what it is like," said the younger White, "to be the son of a man like that unless you have lived through it. What I mean is, newspaper publishers who weren't quite sure of themselves and were wishing that they had some one like William Allen White to make decisions for them would think to themselves, 'Why, he has a son,' and they'd hire me. They'd feel fine then, thinking they had William Allen White around the place. The trouble was that I am just the son. I am another guy. I'm not for people such as Landon when they want to be President. So after a little while these publishers would hear that I was saying things that weren't solid Republican and they'd feel betrayed. They'd feel that I had gotten them to hire me under false pretenses. So I'd have to move on."

In 1943 White was living in New York City with his wife and his adopted daughter Barbara. He also has a 100-acre farm at Frenchtown, New Jersey, where he hopes to satisfy a long-standing ambition to own a cow. White is tall, round-faced, almost bald, mild-mannered, and resembles his father in physical appearance.

WICKER, IREENE Nov. 24, 1905- Radio script writer; singer; actress

Address: b. c/o National Broadcasting Co, 30 Rockefeller Plaza, New York City; h. 5 E. 54th St, New York City

"I consider children to be the most important people and our only future," says Ireene Wicker, the "Singing Story Lady" of radio. She feels, therefore, a tremendous concern about their entertainment, and believes that "radio can do a marvelous job educationally for youngsters. I feel that serial stories should be based on a constructive, hopeful note and be possible—also that there should be more participation programs for the younger children." Miss Wicker's programs have for five consecutive years won first place as the most popular juvenile entertainment in a national poll of radio editors, and have been recommended by many parents' and teachers' organizations. In her ten years on the air Miss Wicker, it is estimated by her agents, has entertained more than twenty-five million children. Her fan mail has "gone well over the million mark."

Ireene Wicker was born Ireene Seaton in Quincy, Illinois, on November 24, 1905, the daughter of Kenner and Margaret (Hunsaker) Seaton. Ireene's decision to become an actress arose from her successful first public debut at the age of four on Children's Day in the Presbyterian Church in Quincy. At the age of twelve she began as an actress with a stock company, and she continued spending her summer vacations in stock, despite parental objections. Miss Wicker was educated in the grade and high schools of Quincy and she spent one year at the University of Illinois, where she took a major part in college dramatics and music activities. She then studied at the Goodman School of the Theatre in Chicago, Illinois from 1927 to 1930, appearing at the Goodman Theatre in 1929 and 1930.

Meanwhile she had married Walter Charles Wicker, a radio writer, producer, and actor, by whom she had two children, Walter Charles, Jr. (who enlisted in the Canadian Royal Air Force as a fighter pilot during the Second World War and who was killed in action in April 1942) and Nancy. She became a member of the Chicago dramatic staff of the Columbia Broadcasting System in 1930, when she also began acting in various radio plays for NBC. In 1931 she also started to write for the radio and to acquire her reference library by "prowling about secondhand book stores." Her debut as a children's entertainer in radio came about as a direct result of the hobby with which she used to entertain her own children, the many music and children's books which she had collected serving as a basis for the stories and songs which they preferred to any radio program. Her acting ability, combined with her knowledge of what was required for a real children's program, made her audition for a Chicago radio station highly successful. She was immediately given time on the air and she began to write her own scripts, preparing the commentaries and telling the stories herself.

IREENE WICKER

The "Singing Story Lady" received such an enthusiastic response that in less than a year her program was placed on a nationwide hookup. At the same time she had a Sunday dramatic program, *Ireene Wicker's Music Plays*, for the Mutual Broadcasting Company. After a few years "The Singing Story Lady" was transferred to New York, where Miss Wicker's programs were broadcasted exclusively by the NBC Blue Network. On January 11, 1941, after a divorce, she was married for the second time—to Victor J. Hammer of the Hammer Galleries, New York, who manages the Hearst art department at Gimbel Brothers' Department Store. There are no children by this marriage.

During 1941 and 1942 Miss Wicker appeared in *Deadline Dramas* with Bob White, which was on the air for twenty-six weeks. She also starred in *Great Plays* and in *Baby*, a play which Arch Oboler '40 wrote especially for her. In the winter of 1942 she conducted a children's quiz program on NBC Television.

Miss Wicker's program has been selected as an outstanding children's program by the New York *World-Telegram*, Hearst Newspapers, *Radio Daily*, and *Motion Picture Daily* Radio Editors' Polls. It has been chosen the best program for children by the Women's National Radio Committee and by the National Federation of Press Women. *Radio Guide's* readers' poll found it the most popular children's program. *Parents' Magazine*, the National Parent-Teacher Association (and many of its branches), and the Michigan Child Study League all recommend it. *Radio Stars* Magazine selected Miss Wicker as one of the nine outstanding women in any field of radio work and gave her an award for "distinguished service to radio."

(Continued next page)

WICKER, IREENE—*Continued*

Miss Wicker was appointed Coordinator of Radio for Children of the Civilian Defense Volunteers Office in late 1942. "Children need to be patted on the back," Miss Wicker said. "Our new CDVO program will be mainly children's participation in war work. The children themselves will talk about what they're doing. And we'll have dramatizations of what other United Nations children are doing. . . What the children are doing in this country," she continued, "is really remarkable. They have so much enthusiasm, so much energy. Their thinking is so straight and uninhibited. . . I don't think they get half enough praise. I feel terribly strongly about the importance of everyone—particularly parents—praising children, making them feel that they are playing an active, vital part in war work. When they're bad, they get plenty of attention—and I think that's often the reason they are bad. If the good things they do got as much recognition as the bad, I believe it would be a long step toward curing delinquency."

Miss Wicker has recently been teaching a group of teen-age girls at the Stuyvesant Neighborhood House in New York how to tell stories to children during emergencies. She has done a great deal of research in the different kinds of stories to be told to various age groups, and, in addition to telling stories, she recommends playing singing and rhyming games. She believes that there is no better way of preventing children from having fright psychoses during the war of nerves than by telling them stories. In this connection Miss Wicker has been playing an active part on the National Association for Nursery Education Committee, composed of outstanding women in various professional fields.

Miss Wicker stresses the importance of recognizing the difference between reading a story and telling one. She also emphasizes the importance of knowing the story thoroughly and of being able to make it interesting enough to hold the child's attention. Cautioning the storyteller against assuming a superior tone, Miss Wicker also demands that he give the story his complete concentration. "Don't be afraid to let yourself go," she says. "Be sad, or gay, or grotesque, or humorous, or spellbound—whatever the story's mood, read it in that mood. And don't be afraid to laugh!" "Be natural," she says. "Be sincere. Be interested. Enjoy it yourself."

Dark-haired, hazel-eyed Miss Wicker is five feet two inches tall and weighs 104 pounds. Handsome and youthful in appearance, she has "a quick, broad smile and a completely unaffected personality." Her favorite recreations are music and the theatre; her favorite sport, horseback riding. *American Women* for 1939 and 1940 lists her as a Republican, but she now allies herself with the Democratic Party. Miss Wicker has written many children's songs and books, the latest of which is *The Little Hunchback Horse* (*Konyok Gorboonyok*), her version of an old Russian fairy tale, published in 1942. She has also edited a number of children's books, has adapted operas for juvenile audiences, and has made a number of recordings for Decca and for Victor. Miss Wicker likes to write out her scripts in longhand; then she has her secretary make a rough typewritten copy from which the "Singing Lady" revises. "I usually work best," says Miss Wicker, "when there is a definite deadline and it's close!"

WILBUR, BERNICE M(ARION) Jan. 29, 1911- United States Army nurse

Address: b. c/o War Department, Washington, D. C.

When Lieutenant General Lesley J. McNair '42 was wounded by German shell fragments on the Tunisian Front in April 1943 he was fortunate in having as his nurse Lieutenant Colonel (then 1st lieutenant) Bernice M. Wilbur, in charge of nursing service in the North African theatre of operations. "The thirty-two-year-old nurse told reporters . . . that it was more or less coincidence that she was chosen to nurse the injured general, who is in command of the United States Army's ground forces. 'I was up at the Front on an inspection trip when he got hit,' she said. 'Since I was up there watching a new evacuation unit, I was asked to stay and take care of General McNair.' "

Colonel Wilbur is well equipped both by training and experience for the responsible position of supervising 1,500 nurses under unpredictable conditions requiring resourcefulness and courage. Bernice Marion Wilbur was born in Brockton, Massachusetts on January 29, 1911. Her ancestry and breeding have taught her the New England virtue of "Yankee ingenuity," the ability to make things do, for which the region is justly famous. After her graduation from the Brockton High School in 1929 she enrolled for training at the New England Deaconess Hospital in Boston, being graduated in 1933. Miss Wilbur's first service was with the Pondville Hospital at Norfolk, Massachusetts, a state cancer hospital of 147 beds which had been established only six years previously. In May 1934 she resigned to take a position as a head nurse in her Alma Mater, the New England Deaconess Hospital, but remained in this post only until October of that same year. From January to July 1935 she was assistant operating room supervisor in the Palmer Memorial Hospital (a subdivision of the New England Deaconess Hospital). Following that she spent two years on private duty and then joined the Army Nurse Corps, with which she spent several years before resigning to go overseas as a dietitian with the Harvard Red Cross Unit in August 1941.

Three bombings and an epidemic fell to her lot while she was on duty in Salisbury, England, but her enthusiasm for nursing never flagged, and in July 1942 she rejoined the Army Nurse Corps. It was in December 1942 that she arrived in the North African theatre by boat from England, and in February 1943 she became chief nurse and 1st lieutenant.

Nursing in North Africa is far from glamorous, but Colonel Wilbur feels that "not one of the nurses would want to come home if [she] could." "She said nurses' work was hard, their hours long. In emergencies many gave their blood for transfusions. Working conditions were unpredictable. In the tile-floored French hospitals in which they served, there were no supplies. Nazi troops 'had even removed the tops from the salt shakers.'" The nurses had to use ripped clothing for bandages and when at last they fell exhausted from continuous nursing they were forced to stretch out on the dirt floors of the hospitals.

Some conception of the personal life of an Army nurse may be deduced from the instructions given her by the *American Journal of Nursing*. "Clothing and personal equipment should include essentials only. Nice little articles to dress up one's room should be left at home," the magazine states firmly. And a further warning: "As there are many souvenir hunters among the native populations of many countries, [the nurse] may to advantage re-enforce her issuance of insignia, bars, and buttons. . . Rayon, silk, and nylon [including toothbrushes] are not satisfactory; crickets and ants have an affinity for them."

According to *Science News Letter,* "Army nurses are toughened up just as soldiers are before leaving for duty in the combat zone. Nurses, the only women privileged to go wherever the American soldier goes, before embarkation receive special training to equip them for the strenuous life and work to follow in the combat zone. They are even taught to detect booby traps. . . Some nurses are given special instruction while in training. . . They are taught how to wear gas masks and drilled in putting them on. They undergo a course in chemical warfare where they learn how to detect the chemicals and the treatment of gas casualties. At the 'School of the Soldier,' however, the nurses learn individual defense against air and mechanical attack. They practice ambulance loading, and litter drill is given. Demonstrations in insect control are made. . . The Army nurse learns regular drill formation and how to move quickly and obey orders. She goes on long marches and gradually acquires the ability to carry her own heavy equipment."

In spite of the hardships, Colonel Wilbur has emphasized that life is not entirely a grim business for North African nurses. "Working in advanced areas, nurses were most interested in 'what's going on up ahead.' All studied French twice a week. Between 'pushes' or battles they had their dates [dressed in their new olive drab dress uniforms much like those of the WAC]. Nearby cities afford them recreational clubs and dances. Five of the nurses have married officers after obtaining permission from the office of General Dwight D. Eisenhower '42, which usually takes two months." The Arabs often invited the nurses to feasts, one of which, Colonel Wilbur recalls, "was seven-course, with every course chicken."

Colonel Wilbur accompanied General McNair on his plane trip to the United States, following treatment of his wounds in Africa. The General could not give enough praise for the efficient care he had received. In an interview granted to *Life* Magazine he said: "The medical service was superb. I know at firsthand the speed and efficiency with which they worked. I was wounded at 2:30 in the afternoon. Within ten minutes they had me at a Battalion Aid Station. There two medical officers put a tourniquet on my shoulder to stop the bleeding, bandaged me, fixed me up so I could be taken to the rear. I went from there in a jeep to the Division Clearing Station, where they gave me blood plasma and checked my dressing. They put me on a litter in an ambulance and started me farther to the rear. At 5:30, only three hours later, I was in a field hospital [where the General was put in the care of Colonel Wilbur, then wearing men's cover-alls and G. I. boots], had been treated twice, had had X-rays taken, and was ready to be operated on. That evening I came to in a warm bed, with no after-effects from the operation. I felt fine, ready to get up again. From the field hospital I was flown to a general hospital. In two days and a night I was ready to go home. I didn't get this sort of treatment because I was a general officer. Buck privates were getting the same care." Colonel Wilbur reported that the General was a good patient with remarkable recuperative powers—walking around the second day—and noted his interest in the hospitals, patients, and their bill of fare.

U. S. Army

LT. COL. BERNICE M. WILBUR

On May 1, 1943 while Bernice Wilbur was on her brief furlough in Boston she was awarded the silver oak leaves of a lieutenant colonel and the title of director, nursing service, North African theatre of operations. "In her role as chief nurse in North Africa the rank of 1st lieutenant was considered too low in view of the fact that the chief nurses in the European and southwestern theatres hold the rank of major or lieutenant colonel. Also, the British chief nurse in North Africa holds a

WILBUR, BERNICE M.—*Continued*

rank higher than 1st lieutenant." Though this furlough was her first since she went overseas in August 1941, Colonel Wilbur, who is a competent looking person with light brown hair, five feet seven and one-half inches tall and weighing 135 pounds, was very eager to get back quickly and is now again on duty in North Africa.

WILDER, THORNTON (NIVEN) Apr. 17, 1897- Author; educator; Army officer

Address: h. 50 Deepwood Dr, Hamden, Conn.

Three times Pulitzer Prize winner, Major Thornton Wilder occupies a prominent place in contemporary letters. Although he has achieved distinction both as novelist and as playwright, Wilder, says his sister, likes to consider himself as first and foremost a teacher—"that is his profession."

Thornton Niven Wilder was born in Madison, Wisconsin, on April 17, 1897, the son of Amos Parker Wilder, editor of the Wisconsin *State Journal*, and the former Isabella Thornton Niven, both of New England background. In 1906 the elder Wilder was appointed United States consul general at Hong Kong, China, and that year the Wilders moved to the Orient, where Amos Wilder remained for three years. The rest of the family remained at Hong Kong for less than a year, Thornton attending a German school in that city. They then returned to California and in 1911 sailed for Shanghai, where Amos Wilder had been transferred. Thornton attended a boarding school for missionaries' sons at Chefoo. In early 1913 he returned to the United States and attended the Thacher School, at Ojai, California, then the Berkeley High School in Berkley, California, from which he was graduated in 1915. In 1914 Wilder's father had been appointed secretary of the Yale-in-China Movement in New Haven, and the family later joined him there. The two Wilder sons (there were three daughters also) spent their summers during college preparatory and college years working on a farm, for their father felt that they needed farm work, "partly," Thornton Wilder says, "to toughen us up physically and partly to make sure we had sympathy with the physical laborer as well as the intellectual laborer. I think, too, that knowing the hazards of the business in writing, he slightly dreaded that his children might grow up to be writers." They all did.

MAJOR THORNTON WILDER

Amos Wilder, wrote Alexandra Krastin, "decided his own university, Yale, was too worldly to plunge his sons into after the austerities of the missionary background of China. So he packed the boys unwillingly off to Oberlin College in Ohio." Amos Wilder wanted the boys to have two years at a smaller and co-educational college before entering Yale University. The boys found Oberlin, however, pleasant enough, and Thornton studied there from 1915 until 1917, after which he entered Yale as a junior. Then, his education interrupted by the United States' entrance into the First World War, he served for one year as a corporal in the Coast Artillery Corps at Narragansett Bay.

After the Armistice, Wilder returned to Yale University. As an undergraduate at Yale he spent his time writing one-act plays, most of which were subsequently published in his collections of short plays. He showed great literary promise and attracted the attention of the late Professor William Lyon Phelps '43. After receiving his B. A. from Yale in 1920 Wilder went to Italy to study archeology at the American Academy in Rome during the fall of 1920 and the winter of 1921. Then he returned to the United States to become house master and teacher at the Lawrenceville School in Lawrenceville, New Jersey. He remained there seven years, teaching French, because it "left him free to wander where he wished in the paths of English literature." In 1925 he received an M. A. in French literature from Princeton.

Determined to write "for pleasure rather than for profit," Wilder devoted his spare time to creative literature, and his first novel, *The Cabala*, appeared in 1926, while the young man was still a member of the faculty of the Lawrenceville School. The following year his play, *The Trumpet Shall Sound*, was produced by the American Laboratory Theatre. Although *The Cabala* was well received in general, it was not until 1927 and the appearance of *The Bridge of San Luis Rey* that Wilder achieved real fame, not only in the United States but abroad. Given impetus by the commendation of such popular literary guides as his old acquaintance Professor William Lyon Phelps ("It is my firm conviction that Thornton Wilder is a star of the first magnitude"), *The Bridge of San Luis Rey* rapidly became a best seller and was awarded the Pulitzer Prize in 1928. A film version was made of it the following year.

In 1928 a collection of some of Wilder's short plays, *The Angel That Troubled the*

Waters, appeared. Giving up teaching temporarily in 1928, Wilder traveled through England and the Continent, where he spent most of the year 1929 working upon his novel, *The Woman of Andros,* based upon Terence's *Andria,* which was published in 1930. The novel was considered "a work of art, conscious, skillful, exacting, lucid, and graceful," showing "the same harmonious limpidity of style, the same brilliant insight and sympathetic irony" as were thought to have been evinced in *The Bridge.* Some critics, however, objected to the excessive smoothness of style, and believed that the situations were too patently arranged and the plot shopworn.

In 1930 Wilder returned to pedagogy, becoming a member of the English Department of the University of Chicago, where his duties occupied only six months of every year, leaving him time to write. There he gave courses in composition and comparative literature, the latter comprising the works of the Greek dramatists, Cervantes, and Dante. At the same time he lectured throughout the United States on various phases of literature and the drama. About the year 1930 he was given a Litt. D. degree by New York University. Countless publishers all over the country were trying at this time to lure Wilder away from his classroom duties to work with their magazines, but he refused to be parted from teaching. In 1931 *The Long Christmas Dinner and Other Plays in One Act* appeared.

Wilder's novel *Heaven's My Destination* was published in 1935, when he was still on the faculty of the University of Chicago. Chosen a Book-of-the-Month, the novel provoked much discussion and caused Wilder to forswear fiction for the theatre, which, he said, was freer from "editorial presence." (He emphasized, however, that the critical reception of his novel had nothing to do with his decision.) Critics were uncertain as to whether *Heaven's My Destination* was intended seriously or as a satire, whether the author wrote in praise of religious idealism or against it. Most found it "curious", "unexpected", "disturbing," and unlike Wilder's usual novels. In 1936 Wilder left the University of Chicago, returning in 1941 to teach summer school, so that he would not neglect his teaching entirely under the pressure of his other duties. After spending a year in Europe, in 1937 he settled down in New Haven, Connecticut.

Although Wilder's chief ambition was to become a playwright with a Broadway reputation, his recognition as one of the leading American dramatists did not come until 1938, when he was awarded the Pulitzer Prize for his extremely successful play, *Our Town,* an experimental drama produced without scenery and with much of the action given in monologue by the "stage manager" (chorus and commentator combined). That role, Wilder says, was a "hang-over from a novelist technique." A film version of *Our Town* (1940), in which Wilder had helped prepare the script, was released and met with much success. Wilder has worked on the West Coast several times and, wrote Miss Kratkin, "so greatly does he admire the things the movies can do best that he dreams some day of writing a film script which would be a motion picture from the first moment it occurred to him and which throughout its course would use the characteristic elements of the camera. His last film before entering the Army was the Hitchcock '41 thriller *Shadow of a Doubt* (1943)."

"I do not," Wilder has said, "regard the theatre now as being in a particularly valuable era. I often think that no one of today has had the privilege of seeing even a small part of what the theatre can do as magnificence, as eloquence, as setting, as religious power, as social commentary. . ."

Wilder's play, *The Merchant of Yonkers,* a comedy based upon a German play which stemmed from the English original by John Oxenford, was published in 1939 after having run on Broadway for thirty-nine performances. In 1942 Wilder's controversial play, *The Skin of Our Teeth,* was produced and won the Pulitzer Prize for 1943. The play is, wrote Lewis Nichols in the New York *Times,* "the story of man's constant struggle for survival and his wonderment over why he so struggles," and is presented "with pathos and broad comedy, with gentle irony, and sometimes a sly self-rallying." During the course of the play "the scenery bounces up and down, the players carry on rehearsals, at one point there is a call to the audience to send along its chairs to keep the fire going against the advancing ice age." Occasionally the actors step out of character in order to comment upon the play.

Critical opinion of the play ranged from "daffy", "wacky", "cock-eyed," to "impudent", "provocative", "unusual," and some even termed it "memorable" and "brilliant." "Viewed merely as a prank," wrote Howard Barnes in the New York *Herald Tribune,* "it is frequently amusing, but often wearisome. Contemplated as a sometimes striking but splendidly sincere attempt to make some sense out of this poor old world, it is a challenging and unforgettable communication between a group of artists and spectators." It was expected in the spring of 1943 that the Critics' Circle which was supposed to be more sympathetic to experimental forms would give its award to *The Skin of Our Teeth,* while the Pulitzer Committee would give its prize to *The Patriots,* a play conventional in form. Instead, the reverse was true—*The Patriots* won the Critics' Award, and *The Skin of Our Teeth* the Pulitzer Prize.

It was said, however, that one of the reasons for *The Skin of Our Teeth's* failure to receive the Critics' Award was the controversy which had started to rage over the play shortly before the critics convened. Two writers, in an article in the *Saturday Review of Literature,* alleged that Wilder's opus was a plagiarism of the late James Joyce's novel *Finnegans Wake* (1939). The two sent a telegram of protest to the Pulitzer Committee, but it was apparently disregarded. Wilder was invited to contribute a rebuttal of the charges to the *Saturday Review,* but he declined, he said, to help give free publicity to that magazine. Anyone interested in the subject, Wilder remarked, could read *Finnegans Wake* and judge for himself. Wilder, an ardent admirer of Joyce's, is said to be one of the few people who can understand *Finnegans Wake.* Wilder's friends say it is no secret that *The Skin of Our Teeth* was inspired by *Finnegans Wake* and followed its pattern to

WILDER, THORNTON—*Continued*

some extent, but contend that "there is a technical difference between an author's deriving his inspiration from another writer's work and appropriating it." The truth of the matter is, according to the producer of *The Skin of Our Teeth,* that Wilder got the idea when a chicken landed in his lap during the performance of another popular theatrical presentation, *Hellzapoppin* (1938).

In the spring of 1941 the United States State Department sent Wilder to spend a month each in three South American countries, Colombia, Ecuador, and Peru. There he gave formal and informal lectures in Spanish and met a good many of the literary and pedagogical lights of South America. In the fall of the same year he was appointed delegate to the international P. E. N. Club Congress, and with another delegate, John Dos Passos '40, flew to England, where Wilder lectured about the United States to the British. In London he was elected one of the five international heads of P. E. N. He has traveled extensively and speaks French, German, Spanish, and Italian.

Wilder still prefers "to write what he wishes and when he wishes," and "remains aloof from those who would take advantage of his quick success." His best ideas come to him, it is said, "in a shower bath." He was writing another play when, in the summer of 1942, he stopped work in order to enter the United States Army, where he is at present a major in the Air Intelligence Combat Force.

Major Wilder is of medium height and slim. He wears round steel-rimmed glasses over his eyes, which are blue and have been described as "hawk-like." His hair is dark and receding, iron gray at the sides; his eyebrows, "the most striking feature of his face," writes Ross Parmenter, "are large, bushy, beetling, and black," while his mustache is light brown. He has a "resolute" chin, and a "high, nervous" voice with which he "talks a blue streak." A German writer remarked that Wilder "looks like a highly organized, tense, spiritually mature member of the middle class, a reserved individual." An American magazine describes him as a "pleasant, jolly" man who "enjoys life thoroughly."

His hobbies are walking and reading, but, writes Isabel Wilder, "stronger than the word 'hobby' is his understanding and appreciation of music. He has a vast knowledge of music as composition and as performed, although he is not a trained musician himself." In the years prior to the War, Wilder became interested in the little theatre movement and acted in summer stock himself. Two summers he played the stage manager in his *Our Town* at two summer theatres, and cheerfully forgot his own lines from time to time. A bachelor, a Congregationalist, and a Democrat, Wilder lives in Connecticut with his family.

Somewhat shy and reluctant to grant interviews, "the most traditional and cloistered of novelists," according to *Time* Magazine, "he suddenly turned a somersault, became the most adventurous of playwrights." His early works were all of an artistic and scholarly nature, praised for a distinguished prose style, "precise, sensitive, and sophisticated," condemned for artificiality and mannerism. Wilder is, wrote Henry Seidel Canby '42 in 1935, the year of the change, "a minor . . . figure, narrow in scope . . . yet with the consecration to perfection, the conscientiousness, and the absolute excellence of . . . a Collins or an Addison." With his development as a dramatist, however, he has, some critics feel, "ceased to be . . . precious, ornate, speciously classical, and philosophical. . . He has, in other words, matured, and instead of pouring warm baths of soulfulness he now shows he is capable of depicting spiritual fundamentals."

WILLIAMS, WYTHE Sept. 18, 1881- Journalist; radio commentator

Address: h. Danistead, R. D. 4, Easton, Pa.

Two lucky accidents—being on the spot of an event of world-wide importance, and correctly predicting a date of world-wide interest—were the main turning points of Wythe Williams' long and varied journalistic career. Vacationing from his job on the old New York *World*, he arrived in London on the day of Edward VII's death, May 6, 1910, and he was immediately rushed into foreign service to cover the story of nine kings riding in the cortege of the dead ruler. Successful at this first try, he covered Europe for the next twenty-six years, becoming the first American correspondent to be expelled from Nazi Germany.

Accident number two was on August 30, 1939, when Williams was an invited guest on the radio program, *Hobby Lobby*. Then editor of the Greenwich (Connecticut) *Time*, in which he had been making sensational revelations on world affairs, Williams was asked to "stick your neck out and predict the date" of the outbreak of war. He replied: "It will be on us by September 6"—

missing by only three days. This program was heard by an official of the Philco Radio and Television Corporation, and Williams became a news commentator for Philco on March 4, 1940.

This enterprising gentleman who cashed in on his experiences with Lady Luck was born in Meadville, Pennsylvania, on September 18, 1881, the son of Wilbur Garretson and Caroline Kitchell (Wythe) Williams. He attended high school in St. Louis, Missouri, and then studied at Ohio Wesleyan University from 1898 to 1901. He began his newspaper career as a reporter on the Minneapolis *Tribune* in 1905. Following this, he worked on the Milwaukee *Sentinel* in 1906, the Chicago *Examiner* and *Daily News* from 1907 to 1908, and then joined the New York *World* in 1909. It was in 1910 that he happened on his first "accident" and became London correspondent for the *World* until 1912. He then held the same position for the New York *Times* for one year. He was transferred to Paris in 1913, and was war correspondent of the *Times* from 1914 to 1917. He was with the American Ambulance Unit in Paris in 1914, and was a correspondent with the Allied Armies from the first day of the War until its close, scooping the world on the terms of the Versailles Treaty.

In 1918 Williams was a special correspondent in Europe for *Collier's Weekly*, and he worked for the London *Daily Mail* in Berlin the next year. He returned to the United States as director of propaganda of the American Committee for Devastated France, but in 1925 went back to Europe as Paris correspondent on European politics for the *Saturday Evening Post* until 1926. He served as a special correspondent for the *Times* at the League of Nations in the year 1927 to 1928, and as chief correspondent of the Berlin Bureau of the *Times* in 1929. Williams was chief correspondent for the Hearst newspapers and Universal Service in London in 1931. While a correspondent in Europe, he wrote communiqués home on such topics as "Eyewitness in devastated France"; "Picture of devastated France as the Germans left it"; "Storming of the Aisne quarries"; and, in August 1917, "What our troops will face." From 1925 to 1927 he reported on and discussed such current problems as "Does France intend to pay?"; "Disarmament periscope"; "Geneva conference on international economic problems"; and "Germany's new bid for power."

Williams took over the country editorship of the Greenwich *Time* in Connecticut in November 1937, announcing at the time that he would let Europe have its next war "without assistance from me." But he kept his pipe lines to Europe and ran across many inside stories from abroad. One that caught the public fancy, *Time* Magazine writes, and hit the front pages all over the country, was "the racy tale in December 1938 of the supposed horsewhipping of amorous little Nazi Paul Joseph Goebbels '41 for love-poaching." This captivating news coup came through Prague, a German officer being the original source. The Prague writer mentioned the incident in a letter to Williams, as a generally known event in Germany. It was not stressed, Williams recalled, but "I stressed it," he said.

WYTHE WILLIAMS

Within three months after Williams joined the ranks of radio commentators for Philco, Mutual Broadcasting System took the program, aired it on two stations, and after about thirty news scoops had been revealed there was a one hundred per cent increase in listeners avid for Williams' brand of "red-hot news." On September 10, 1940 Mutual enlarged the audience for his newscast, which could now be heard on ninety-three stations every Tuesday and Thursday, from 8 to 8:15 p. m. (EDT), sponsored by the American Safety Razor Company. In addition to this, a Sunday program, sponsored by Mounds candy bar, was taken by eight stations. By then he was broadcasting over the largest radio hookup ever given any news commentator regularly on the air.

Williams, according to *Newsweek*, "feeds into the microphone a stream of inside dope that is not always accepted in a reverent spirit by specialists in foreign affairs. Most of the stuff, according to him, arrives by cable or mail, sometimes making use of 'an undetectable cipher,' from secret sources." This inside information, plus "an ability to add two and two and make four," accounted for Williams' many successes. He predicted the Russo-German non-aggression pact; he predicted that the Poles would last about twenty-one days; he knew about the Nazi invasion of Scandinavia and the Low Countries six weeks in advance; he was aware of the vulnerability of the Maginot Line and of treachery in French business, political, and military circles long before many of the French were; he even knew the plans for Hitler's '42 campaign in France. He also prophesied Italy's invasion of Greece, Field Marshal Rommel's '42 dispatch to Africa, Matsuoka's '41 trip to Berlin, and the hatching of the Nazi-Japanese alliance. It is, however, true that he failed to foresee the

WILLIAMS, WYTHE—*Continued*

stupefying success of the German offensive in the West in 1940; he predicted that the German armistice with France would be signed at Versailles rather than at Compiègne; he missed the story of the British evacuation at Dunkerque; and just before Germany attacked Russia he announced that Hitler and Stalin '42 were about to reach a new and definitive agreement.

One of his hottest hunches of 1940, and one which he couldn't even announce himself, was that the French were ready to sign an armistice. Not scheduled to broadcast that day, he passed the word along to Lowell Thomas '40, due to go on the air in a half hour. The report was promptly denied in all quarters, according to *PM*, from the State Department down to Williams' own station, WOR. Then, forty-eight hours later, it happened.

PM comments on Williams' general view of world affairs as not complicated "with much personal addiction to ideologies. He is just out for a story, first and last. He despises Hitler with an outspoken hatred, but he has never let this stand in the way of a wallop at the British where justified. His free hitting on the air has him tagged by some listeners as a pro-German. He is not."

On June 17, 1940 Williams announced his resignation as editor of the Greenwich *Time*, effective June 22, because, he said, "of the pressure of other work." At the time he was conducting a thrice-weekly radio broadcast and writing a newspaper column, "As the Clock Strikes," syndicated by John Elfreth Watkins. At the same time, Hendrik Willem Van Loon, who had contributed articles to the newspaper, resigned as director of the Greenwich Publishing Company.

Williams was in charge of *The Radio Round Table,* the first program of this nature to be categorized as "official" by the Government, which began at the end of September 1940. The program, on which various other commentators interpreted national defense progress, was rotated on the NBC, CBS, and MBS each week. The commentators, all of whom were tops in their field, worked without pay, taking reports of the various government agencies contributing to national defense and interpreting them to the public.

Williams' books include *Passed by the Censor,* recounting his experiences in France (1916), and *When Chenal Sings the Marseillaise* (1917). *This Flesh,* written in 1931, caused a law suit against Williams by Louise Hardie, a niece of Thomas Hardy, who charged that he had written a recognizable and derogatory portrayal of her as Shirley, a character "given to drinking, getting drunk, and telling questionable and risqué stories," all of which was untrue of herself, she claimed. *Dusk of Empire* was published in 1937. In it, Williams shows how America is "today actually . . . the great motive force making the wheels of the age spin around." His intention, he wrote, was "not to seek to reveal underlying causes for Europe's decline from her proud position, but rather to expose the decay that started the landslide, the extent to which it has spread, the imminence of the avalanche."

Although *Who's Who in America* (1942-43) lists Williams as a Republican, he claims his political affiliation is Independent and, in *Dusk of Empire*, written after the Presidential election of 1936, he remarks that because of his long residence in Europe, keeping him apart from American political alliances, he writes "neither as a Democrat nor Republican, but as an American who, after many years abroad, is more satisfied than ever to be a citizen of a nation where free thought and speech still rule."

Major R. Ernest Dupuy, commenting in the *Saturday Review of Literature* in 1938 on literature in connection with the development of American public opinion on neutrality, classed *Dusk of Empire* as one of the most significant books of 1937. He wrote: "To Wythe Williams, veteran correspondent, goes the palm for a sane discussion of the past and shrewd forecast of the future." Williams' argument in this book, strengthened by numerous startling revelations, was that only by vigorous use of American influence, of an American President, backed by the American people, could peace be maintained. He felt that no European statesman could lead the nations to peace. A *Newsweek* reviewer commented, "Williams compels unswerving attention. Seeing history made, he has seen through the men who made it. In the prose of a craftsman, he has written one of the most illuminating and exciting books ever turned out by a professional observer of Europe." On the other hand, Walter Millis "found it difficult to put much faith in this book as an analysis of contemporary history," and the *Christian Science Monitor* critic accused Williams of "inditing memoirs" under the illusion that he was writing history.

In 1939 Williams made an adaptation of Fritz Max Cahen's *Men against Hitler,* and in 1940 he contributed a chapter, "African Interlude," to *The Inside Story*, a book written collectively by members of the Overseas Press Club of America. In 1941 he wrote *Riddle of the Reich*, in collaboration with Dr. Albert Parry, formerly research director of the American Council against Nazi Propaganda. In this book Williams and Parry attempt the unraveling of the riddle of the Third Reich and the charting of Hitler's future course. The book offers a well-balanced and, in part, vastly illuminating account of conditions prevailing in wartime Germany and in the occupied territories, according to a New York *Times* reviewer. In the book the writers maintain that "inevitably, inexorably, the mantle of world leadership is descending upon the shoulders of Uncle Sam." Regardless of the outcome of the War, "the British Empire of yore and today is gone. . . France may never be more than a second-rate power." The "new imperialism" of the United States, one "imposing our admired commodities and our envied mode of life," must fill the vacant place, they conclude. Criticized for its "lurid journalese," its lack of unity, and its questionable generalizations concerning the world at large, the book was praised even more strongly for its readability and its "solid information" about Nazi Germany.

The publishers of *Riddle of the Reich,* Prentice-Hall, had most of the communications industry cooperating in all-out publicity tie-ups in April 1941. Thirty-five hundred Western Union offices throughout the country featured displays on Williams and his book. Motion-picture promotion was arranged with Columbia Pictures, which released a series of shorts entitled *The International Forum*, the first film of which featured Williams as discussion leader of a group of famous foreign correspondents.

Another book by Williams, *Secret Sources*, the story behind some of his famous scoops, was published in June 1943. In this he recounts how he was able to reconstruct details of European strategy and political intrigue from reports smuggled out of the censor-locked continent by William van Narvig, his European collaborator and observer, who was on the European end of this secret news pipeline—an organization planned by these two men. "As exciting and as filled with intrigue as any book Phillips Oppenheim ever wrote," was the verdict of the *Saturday Review of Literature*, and most reviewers agreed, although some wondered how much of it or how little they might take at face value.

Williams was married to Viola Irwin on March 22, 1913. They have three sons, Wilbur Mott, David Irwin, and Ian Wythe. Williams is a member of Sigma Chi and the National Institute of Social Sciences. He was president of the Anglo-American Press Association in Paris in 1922, of the International Association of Journalists accredited to the League of Nations in 1928, and of the Overseas Press Club of America from 1939 to 1940. He was decorated Chevalier of the Légion d'Honneur.

Williams is five feet nine and one-half inches tall, weighs 190 pounds, and has been characterized as a "heavy-set but vigorous sixty-one, with an easy going, pipe-smoking affability," and as the "ample, illustrious old war correspondent ... [who] has enjoyed many an I-told-you-so on international developments." At present Williams is working under contract on a book on wartime Washington.

WILSON, CHARLES E(DWARD) Nov. 18, 1886- United States Government official; industrialist

Address: b. c/o War Production Board, Washington, D. C.; h. 7 Hampton Rd, Scarsdale, N. Y.

CHARLES E. WILSON

In February 1943 the months-long battle for control over arms production between the United States armed services and the War Production Board came to a head when Donald M. Nelson '41 dismissed Ferdinand Eberstadt '42 and appointed Charles E. Wilson to the newly-created post of executive vice-chairman of the WPB, conferring on him greater powers than any previously given to an assistant. Since that time Nelson himself has faded into the background, and Wilson has become virtual boss of the United States arsenal.

Charles Edward Wilson, who left the presidency of the General Electric Company in September 1942 to go to Washington, has long been known as one of the nation's top production men. His is an American success story of the kind more common a few decades ago than today, but extraordinary at any time. He was born on Hudson Street in Manhattan's Lower West Side on November 18, 1886. His Irish father, George H. Wilson, was hurt in the first Sunday crush at the opening of Brooklyn Bridge, and he died some time later of internal injuries. Charles was only three at the time of his father's death, and his mother, Hannah Rebecca (Stiles) Wilson, had to go to work as a housekeeper and nurse in order to support herself and her young son. She wanted to keep him in school, but he was not yet thirteen when he quit to work as an office boy in the shipping department of the Sprague Electric Works on East 34th Street—his wages $3 a week, his hours from 7 a. m. to 7 p. m.

The tall, stringy youngster was not too young, though, for his energy and ambition to go unnoticed. His boss, Big Bill Ruete, told him: "What you must do, my boy, is to look forward and equip yourself for the next job. You have a good head for figures. So I'll put you in to help the shipping clerk. Get your facts and figures straight, learn everything you can about everything we ship out, and be able to tell me a month from now what was in

WILSON, CHARLES E.—*Continued*

every box and where it went." Charles took Ruete's advice. After his apprenticeship as an office boy he was given a job as a factory hand, and he became an expert mechanic. He also began to study evenings. He finished evening school courses in cost accounting and in general accounting, and then he took engineering courses with the International Correspondence School, earning his tuition by tutoring backward students in those subjects which he had already mastered. Somehow he also found time to swim, run, and box at the neighborhood YMCA and to sing (tenor) in the Oratorio Society. In the meanwhile he served successively in the accounting, production, engineering, manufacturing, and marketing departments. He was promoted from machinist to straw boss, from straw boss to foreman, from foreman to shop superintendent; and in 1906, at the age of twenty, he was made production manager of the Sprague Works, which by this time had become a part of General Electric. The next year he was made assistant superintendent, and on his $20-a-week salary he married Elizabeth Maisch on November 18, 1907.

Wilson acquired valuable experience in all phases of the rapidly growing business. In 1914 the Sprague Works branched into switchboards and panels, and he was made sales manager of the new lines, besides handling engineering and production. When General Electric added plants at New Kensington, Pennsylvania and at Maspeth, Long Island he was put in charge of them; and when in 1923 the Maspeth plant was shut down and its operations transferred to Bridgeport, Connecticut he was transferred, too, with the title of managing engineer. His duties expanded rapidly, as the Bridgeport plant swung into the production of appliances. In 1928 he became assistant to the vice-president in charge of the Merchandise Department, supervising manufacturing, engineering, and sales. In 1930 he was made vice-president and placed in charge of all appliances, which included sun lamps, electric clocks, washing machines, irons, heaters, and air conditioning. In 1937 he was elected to the board of directors and made executive vice-president, and he moved to New York. He soon began to function as general manager for all General Electric, although the actual portfolio belonged to Gerard Swope '41, and with Swope's retirement he became president of the company on January 1, 1940.

As president of General Electric during this war period, Wilson had the job of directing and supervising the scheduling and production of the largest volume of output General Electric had ever produced. New factories were rapidly built, and the number of workers increased tremendously, for the company had armament and allied contracts amounting to hundreds of millions of dollars. In May 1941 Wilson announced that General Electric was a full month ahead of schedule in its "biggest and most important" job, the building of propulsion units for Navy ships.

At the same time General Electric's new president was becoming known as a progressive and enlightened employer. "For many years our company has watched over the health and comfort of its employees," he once told an interviewer. "A concern that places the cash register above human rights and human values deserves to go out of business!" Particularly interested in post-War prospects, he had worked out America's probable national output two years after victory, broken down into new investments, consumption, and national defense, and with this before him he was planning the future of his own company, working out ways by which General Electric could provide jobs after the War for all those employed there at the time. He was "not exactly with the New Deal any more" (in 1933 he had served as deputy recovery administrator under the New Deal), but his fervent belief in private enterprise was combined with a recognition of "the obligation of the controllers of private enterprise to show that this system could provide 'total security.' "

"What will happen to our country, unless we plan, while we have time, for a new, better post-War system?" he once asked an interviewer, as reported in *American Magazine*. "The Free Enterprise System will have to provide full protection, full employment, full distribution of goods and services, or step aside for government agencies. . . Now is the time for private enterprise to show initiative, foresight, cooperation, social responsibility, self-discipline, long-range planning, on a scale undreamed of before. We must lay out a blueprint of how we will meet the post-War crisis, and map out not merely our own obligations but the government action we are prepared to support. I am not thinking of rivalry or conflict with government but of a new arm-in-arm concord free from the old confused suspicion."

It was natural enough that Wilson's name should have been frequently mentioned for a top position in the defense setup. In the spring of 1941 he had accepted the chairmanship of the Regional Advisory Committee for Industrial Morale, and he had only a brief moment of indecision when in September 1942 he was asked by Nelson and by President Roosevelt '42 himself to come to Washington as vice-chairman of the War Production Board in charge of production scheduling. "It took me forty years to climb to the presidency and forty seconds to step out," he said later. "[But] I keep reminding myself that there's a war on. Hell's broke loose and I've got to do something about it."

At the same time Ferdinand Eberstadt had been made vice-chairman on program determination and chairman of the WPB Requirements Committee, so that Wilson had no power to make decisions about the division of available materials. Eberstadt, who was known as favoring Army control over the WPB, grew in power as time went on, and it was not long before there was conflict between him and Wilson. Eberstadt and the armed services favored a plan based on the assumption that production would be forthcoming once the proper amounts of materials had been allocated; Wilson believed that the WPB must go into the plants, work out definite production schedules, then tell each plant where every bit of the product was to go and when. He also insisted that Eberstadt's plan kept war contracts out of the hands of small business.

In December 1942 a "compromise" was arranged whereby Wilson was given the power to survey Army and Navy production schedules, to balance them against industrial capacity and materials supplies, and to make sure that they could and did get completed. But, like many compromises, this settled little. According to Arthur Krock '43, Wilson next announced "that the dimensions of raw aluminum supplied by Mr. Eberstadt could not mechanically be turned into the airplane extrusions he urgently required." On February 4, after he had straightened out the aircraft situation by a closer scheduling of parts production, he was given control of several industry divisions which had been reporting to Eberstadt.

This, too, proved to be a makeshift arrangement. Later that same month Nelson finally decided that one vice-chairman must be supreme in the raw materials as well as in the fabrications field. He dismissed Eberstadt and promoted Wilson to be executive vice-chairman of the War Production Board in complete charge of all programs, including the war production scheduling program. "It is my conviction," said Nelson "that this change will bring harmony to the War Production Board and end the jurisdictional questions which, if permitted to continue, could only hamper the war effort." A day or two later a directive prescribing Wilson's functions and authority made him subject only to the policies and directions of Nelson himself. Wilson received authority "to direct and supervise" all staff services of the WPB, including that of the Rubber Director and the Smaller War Plants Division; and also authority "to appoint the personnel, to established the internal organization, and to define the functions and responsibilities of the units of the WPB under his control."

This move, hailed by labor and by New Dealers and, in general, by all those in favor of civilian control of the WPB, was, according to most commentators, fiercely fought by the military chiefs who command production and procurement policies of the services. One military official reportedly declared that it appeared either that Nelson ultimately would have to quit or that the Navy and War Department Under-Secretaries, James V. Forrestal '42 and Robert P. Patterson '41, respectively, would resign. Nelson, however, stood his ground, although I. F. Stone reported that he won his fight to remain chairman only after pressure on the White House from a group of New Deal Senators, from the C. I. O. and the A. F. of L., and from whatever big business influences he and Wilson could bring to bear. On February 25 he told reporters that he had never had any intention of resigning, and that, moreover, "the WPB was never preparing, is not preparing, and will not prepare for a showdown with the services. The services are the ones we are working for and working with to win this war."

On March 1 Rubber Director Jeffers '42 wrested control of his office from Wilson and returned it to Nelson's supervision. Otherwise Wilson remained in full control, and on March 3 Nelson picked three new vice chairmen to strengthen his executive vice-chairman's position. Other changes seemed imminent. Among other things, Wilson promised that billions of dollars in war contracts would be placed through the WPB's Smaller War Plants Corporation before the end of the year, and he halted WPB hiring in order to cut the budget. Later in March the WPB was reorganized by Nelson. Many organizational units were put under Wilson and made his particular responsibilities. In a later reorganization, in May, the Steel Division was placed under Wilson's supervision. In September Wilson was made chairman of a special production executive committee set up to administer emergency manpower controls established on the Pacific Coast; in November he took over the industry divisions and assumed the post of operations vice-chairman.

It is generally conceded that Wilson has done an excellent job in breaking the industrial bottlenecks that were holding up the war effort. He was responsible for getting production going in the destroyer-escort and airplane programs when they were the biggest problems on the entire war-production front, making personal trips to aircraft plants to speed production and straighten out the manpower tangle. He made a working organism of the Production Executive Committee. "There is no use trying to sugar-coat the pill," he said in November 1943. "This War is a grim thing. It was not designed to spread prosperity or make employment. It was designed to win a war, and for no other purpose." At the same time he announced that the time was rapidly approaching when industry could begin planning its post-War operations, including planning for post-War markets. By this time the manpower problem had begun to seem less forbidding: Wilson had done much to break up hoarding of manpower by forcing contractors off a cost-plus-fee basis and making them sell to the Government at a stated price per unit article. Later that same month the WPB was streamlined, with the dual aim of increasing the industry divisions' efficiency in meeting current wartime production problems and of preparing for the difficulties of reconversion. It was then that Wilson took command of the industry divisions and assumed the post of operations vice-chairman.

In a talk on 1944 production requirements late in December, Wilson emphasized that while the output of civilian goods must be increased, such increases must play a secondary role to munitions—for the amount of war materials sent to North Africa for the invasion of Sicily and Italy was "a mere trickle" compared to what would be necessary for coming European operations. Earlier that month, at the annual convention of the National Association of Manufacturers, he had warned that cliques and special interests were "trying to position themselves for the post-War period long before the country is out of danger and long before our fighting men have any chance to position themselves." "I am deeply alarmed today over the possibility that a Right-wing reaction may draw some

WILSON, CHARLES E.—*Continued*

sections of capital so far away from our tradition as to imperil the entire structure of American life as we know it," he said, speaking of "an American breed of maggot which has been all too numerous of late, and which is trying to break through the skin of democracy and suck the life blood out of it."

In mid-November, Wilson tried to resign from the WPB, feeling that his job in Washington had been accomplished. He was urged by government officials and industrialists to reconsider, however, and was finally induced by James F. Byrnes '41, head of the Office of War Mobilization, to withdraw his resignation until the President could talk to him about it. The end of December thus found him still in his post.

The man who has been the center of so much controversy is, according to *Fortune* Magazine, "over six feet tall, erect as a major of infantry, ruddy of countenance, and fairly bursting through well-tailored clothes with the abrupt, muscular movements of a massive frame." His light brown hair is graying. "His eyes are blue, quizzical, and a little out of focus, behind rimless spectacles. . . His jaw is firm but full and thickening a trifle around the jowls." He is a meticulous dresser, particularly fond of tweeds and herringbone stripes, and he doesn't leave the selection of so much as a shirt or a tie to his wife.

According to Arthur Krock, the hard-working Wilson "has forgotten every consideration of health on the job in Washington." "I seem to have been born with plenty of energy and five or six hours of sleep a night keeps me in trim," Wilson himself says, however. "I am lucky still to be in pretty swell shape, though I've slowed down a little." Friends wonder in what way he has slowed down, for when he is not at his desk he does lots of walking, plays good "businessman's golf" (in the lower 80's), rides, bowls, plays tennis and basketball, and he used to go deep-sea fishing off the Florida Keys in the winter. Among his less strenuous pleasures are associating with people, "especially young people" (for fifteen years in Bridgeport he ran a young people's forum at the Baptist Church and "got a wonderful kick out of it"), parties (particularly those which end up in "harmonizing"), good food, cigars, and reading. He spends his week ends in his Scarsdale home with his wife, who is almost as active as he is—but in a different line, social work.

WILSON, SIR HENRY MAITLAND

1881- British Army officer

Address: b. c/o Ministry of War, London, England

Huge, genial, imperturbable, General Sir Henry Maitland ("Jumbo") Wilson, since February 1943 commander in chief of the British forces in the Middle East, succeeded General Eisenhower '42 in December of that year as supreme Allied commander in the Mediterranean theatre. Paradoxically, this "mild-eyed man of great bulk" has an agile, flexible mind: he "can think as quickly as he can advance." He is Britain's Blitzkrieg expert and was the first man in the British Army to command a completely mechanized unit. He is also an excellent administrator, and he has been called by Winston Churchill '42 "one of our finest tacticians," although he was the target of some criticism in November 1943 after the German capture of Kos and Leros.

The Mediterranean commander belongs to a distinguished Suffolk family, his ancestors including Lord Raglan, who commanded the British in the Crimean War; Lord Cardigan, hero of the charge of the Light Brigade at Balaclava; Sir George Cooke, who fought at Waterloo; and Admiral Richard Howe. His uncle, General Sir Henry Fuller Maitland Wilson, commanded a corps at Salonika.

Born in 1881, General Henry Maitland Wilson, the son of the late Arthur Maitland Wilson, was, of course, educated at Eton, where his extraordinary size and good nature early earned him the nickname of "Jumbo." He was only eighteen when the Boer War (1899-1902) broke out, and he joined the Rifle Brigade in 1900. His "calmness and outstanding courage under fire" soon won for him two medals and a lieutenantship. Before his twenty-first birthday he was serving as a railway staff officer.

On his return to England the young officer settled down to the routine of Army life. He served as adjutant of the Oxford University O. T. C. for some time and was a brigade major at the outbreak of the First World War. From 1914 to 1917 he saw service in France and Belgium, was mentioned three times in dispatches, received his brevet of lieutenant colonel, and won the D. S. O. When the War ended he was a grade one staff officer serving with the Australian Army.

During the years immediately following the War General Wilson did office work: he held appointments at the Sandhurst Military College and at the Staff College in Camberley (1930-33). He commanded the 1st Battalion Rifle Brigade from 1927 to 1930, and was also second in command of a battalion in his regiment. He played a large part in the training of this battalion, and had the satisfaction of seeing his men win the Queen Victoria trophy for the Weapon Aggregate. Since he comes of squire stock, Sir Henry grew up as a sportsman: he was "a keen man to hounds." In the time between the Wars the officers often held fox hunts; Wilson hunted with a famous pack, the Garth, on a bobtailed horse called Badger. "Though Jumbo Wilson was not a lightweight and Badger was not a steeplechaser, somehow the two were always in attendance whenever the Garth hounds killed a fox." Men who had sweated blood across country would find Jumbo calmly riding up. "Do you know," he would say, "I had an idea the fox would come this way." On one of these hunts a fellow officer cocked an eye at Wilson and his mount, saying, "Here comes Jumbo. He looks like something out of a bygone age."

But with the outbreak of the Second World War it was soon discovered that General Sir Henry Wilson was not "something out of a bygone age." Although a "sound traditionalist" in background and training, he was farsighted enough to recognize the merits of "open game" mechanized warfare; youthful too, as generals go, he had survived Hore-Belisha's '41 shakeup, in 1937, of British Army organization. A lieutenant general in 1939, he was sent to command Britain's Army of the Nile. Following the collapse of France, Wilson found himself in an unenviable position. The key provinces of Syria and French North Africa, after giving indications that they would carry on the fight, decided to capitulate to Vichy. The British forces in Egypt were numerically weak and lacked equipment, while the Italians, their western front freed by the French capitulation, had massed a mighty and threatening force against them.

Sir Henry decided to attack when things looked blackest. His first task was to cut gaps in a 400-mile-long fence of barbed wire, twelve feet deep and about six feet high, running along the Egyptian-Libyan frontier from the sea. In three weeks he had the line honeycombed with openings through which armored patrols could pass. "Throughout July those patrols operated with an amazing success, instilling the fear of God into the Italians, cutting communications and snatching the initiative from the enemy. Many prisoners were taken, including a general." Sir Henry himself said: "In spite of the heat, the lack of water, and the sandstorms, our operation had been so successful that our patrols were operating deep into enemy territory." He described how fast moving British mobile units drove ahead seventy miles in two moonlit nights into enemy territory and gave the Italians little chance to detect them. Because his troops deployed over wide areas, Italian planes were never able to report large concentrations advancing anywhere in particular, and enemy bombers were never able to wipe out significant numbers of British troops.

Finally the British Army of the Nile all but annihilated Graziani's '41 army and swept on to Bengasi. While the general credit went to Wavell '41, it was his collaborator, Sir Henry Maitland Wilson, who directed the operations of the great advance. The story is told that, on the outset of the Libyan offensive, Wilson delivered an eloquent address to his men in which he told them the classic story of the "Golden Fleece." He urged them, figuratively, to go and get it. They responded so enthusiastically that even their officers had a hard time slowing them down. He learned afterward that, as the men had understood it, he meant a pub called the "Golden Fleece," about 300 miles down the road, famed for the foam on its golden beer and the beauty of its dancing girls.

British Official Photo

GEN. SIR HENRY MAITLAND WILSON

Following the Egyptian campaign General Wilson was made military governor of conquered Cyrenaica. It was then his hard luck to be sent to Greece to command a defense already hopeless. His small army, under orders of the Greek commander, Field Marshal Alexander Papagos, covered a front of sixty to seventy miles in Eastern Greece, while the bulk of the Greek Army faced the Italians in the West. When the Monastir Gap in the mountains to the North was pierced, and the Greek forces were attacked by the Germans in vastly superior numbers, it soon became clear that the Greeks could fight no longer. Hence the Government requested the withdrawal of the United Kingdom and Imperial contingent. General Wilson is said to have carried out the withdrawal in a masterly fashion.

By all professional accounts, the General's next campaign—in Syria—was a decided success. There German agents, airmen, and staff officers had flocked in huge numbers to pave the way for a Nazi *coup d'état.* Wilson's campaign, undertaken in collaboration with the Free French under General Catroux '43, "lasted only five weeks and . . . resulted in the retention of Syria in the Allied cause." Furnishing a brilliant example of war by maneuver, Wilson saved numerous lives by skirting the rear of the enemy rather than making frontal assaults. In July 1941 Sir Henry addressed an ultimatum to Vichy's high commissioner in Syria that Beirut be declared an open city. When the ultimatum had expired British forces closed in on the town.

Under General Sir Claude Auchinleck '42 (succeeding Wavell) Sir Henry Maitland Wilson had become commander in chief in Syria. In the new Persian-Iraq command (1942) in which his task included guarding the Suez Canal, General Wilson's army became inde-

WILSON, SIR HENRY MAITLAND— *Continued*

pendent of others in the Middle Eastern theatre. His forces were separated from those in Egypt by hundreds of miles of desert, "with no lateral communications except motor tracks and a railway that cuts through Turkey." But he faced the possibility, as an alternative to a German drive on the Caucasus, of a Nazi attack upon Turkey and Iraq to acquire petroleum.

Turkey, Syria, Iraq, and Iran had long occupied spotlight positions of strategic importance in the European phase of the War. Because of the increasing importance of this area, after the Casablanca Conference the Middle East command was reorganized with General Wilson placed in command of operations in February 1943. Serving under him were Major General Douglas Fitzgerald McConnel in Palestine, and Lieutenant General Sir Henry R. Pownall in special command of Iraq and Iran. The strength of the 9th and 10th British Armies in these areas was reported greatly increased.

General Sir Harold R. L. G. Alexander '42 had been given command under General Eisenhower '42 of all British, American, and French ground forces in North Africa when Wilson was made commander in chief of all British forces in the Middle East. The situation in the Middle East—because of the North African campaign and because of the great Russian successes during the winter of 1942—had, however, entirely changed. General Wilson pointed out that Iraq and Iran had become primarily transportation areas, through which more and more equipment for the Russian armies would be passing. "Difficulties had been encountered which have now been successfully bridged," he said, and added that another year of perfecting communications would soon pay large dividends. By April 1943 it was "no secret" that General Wilson's 9th and 10th Armies had not been neglected from the supply viewpoint, and the Axis was considerably worried over the possibility of an Allied invasion through the Balkans. On the final defeat of the Axis in North Africa, a "full dress conference of the Allied Middle East counsel, dealing with the Middle East as a forthcoming theatre of active war, was announced." That these activities were a major part of the "war of nerves" being played by the Allies was seen with the invasion of Sicily and the Italian mainland.

Sir Henry Maitland Wilson, however, had not been idle in his Middle Eastern post, but had been busy building up both defenses and good will in the territories under his command. In June 1943 he reviewed a huge parade in Cairo, "in which the colors of thirty-four nations arrayed against the Axis were massed together." The parade was significantly considered "a demonstration of the still greater military might yet to make itself felt against Europe when the time comes." Early in August 1943 General Wilson told newsmen that the critical situation in Italy following Mussolini's '42 fall might soon terminate in a collapse that would bear significantly on the Middle East situation. This proved to be the case; and by September 8 Wilson was in a position to order the surrendered Italian Army to take by force all points in the Dodecanese Islands, between Turkey and Greece, which were in German hands, and to cease all acts of hostility toward the peoples in whose countries they were. "Italian troops in the Balkans must not obey German orders—they must obey my orders," he announced.

General Wilson maintained military missions to General Mikhailovitch's '42 guerrilla forces in Yugoslavia and, after May 1943, to Tito's '43 Partisans—and his special message of November 1943 was the first official British corroboration of the charge that the Chetniks of General Mikhailovitch (whom the Allies had formerly supported) were helping the Germans. This "old Tory" praised the successes of Tito's Army of Liberation and warned that "certain men dishonoring the name of Chetnik" would be regarded as traitors and enemies of the United Nations if they continued to fight the Partisans.

At this time an Allied invasion of the Balkans was still thought to be imminent by some commentators. It did not take place, and when later in November the British lost the Dodecanese island of Leros to the Germans (the island of Kos had been lost the month before), speculation turned to criticism. This changed back into speculation again, however when in late December 1943 General Eisenhower was selected as supreme Allied commander in western Europe and Wilson succeeded him as supreme Allied commander in the Mediterranean, with his assistant the American Lieutenant General Jacob L. Devers '42. Wilson's "front" was now the entire stretch from the Pyrenees on France's Spanish border to the Maritsa River (part of the boundary between Turkey and Greece), and his appointment was taken as an indication that Allied strategy in the spring of 1944 might encompass a major move from the southeast through the Balkans simultaneously with the opening of a new front in Western Europe.

WINCHELL, WALTER Apr. 7, 1897- Journalist; radio commentator
Address: b. New York Daily Mirror, 235 E. 45th St, New York City

Walter Winchell has been described as "the greatest town gossip in the greatest town in the world." His syndicated columns are reported to have more than seven million readers and his Sunday broadcasts reach an estimated 20,000,000. (Since July 1943 he has been broadcasting over the complete Blue Network of 141 stations.) He has been hailed and decried as a journalist, as a "creative philologist," and as a patriot. His specialty has been diagnosed as the result of an acute case of "sublimated voyeurism," and Winchell has been known to refer to himself as an "informaniac." He has been the subject of frequent analysis, comment, and controversy, but the force of his influence upon American journalism, for good or for evil, is universally admitted. Not only does he have his imitators in almost every newspaper that does not subscribe to his syndicated column, but he is credited with having restored to metropolitan journalism a high regard for the newsworthiness of personalities. Winchell is credited with being one of the few Americans who have labored to "keep the American jargon" alive, a jargon, incidentally, which, for the most part, he has created as well as recorded.

In 1932 Winchell wrote, in his own style, the "fabulous story" of his progress "from scandal to national institution": "I was blessed-evented in New York City on April 7, 1897. . . Practically expelled from school for being a dunce. . . Was in Grade 6B at age of thirteen. Was tickled silly because then I had more time to sing songs (with slides) with Eddie Cantor '41 and George Jessel '43 at a 'nickelodeon.' . . Did a song and dance act a few years. . . Enlisted in the United States Naval Reserve as a gob. . . Served Admirals Marbury Johnston and Burrage as errand boy. . . Carried confidential naval secrets! . . Schooled by Glen Condon on *The Vaudeville News* from 1922 to 1924—when I connected with a newspaper. . . Been colyuming since then. . . *Daily Mirror* hired me in 1929. . . Can't golf, fish, swim, fly in plane, play piano, cook, or even ice skate! . . But I have a beautiful wife and daughter, age seven—so there!!!"

Winchell's real name has been variously reported as Lipschitz, Hirshfield, Weinshield, and Bakst. He insists that he was born Winchel, and that the second "L" was added by a careless electrician to a marquee sign. Winchell was born in New York City on April 7, 1897, according to *Who's Who in America*, the son of Jewish parents, Jacob and Janette (Bakst) Winchel. While he was still in elementary school he worked at the Imperial Theatre (now the Regun Theatre) at 116th Street east of Lenox Avenue in New York City. With George Jessel and Eddie Cantor he formed the "Imperial Trio," which "collected tickets, ushered a bit, and sang ballads during intermissions."

In September 1910 Gus Edwards signed up the three youngsters as part of a Newsboys' Sextette, and Winchell left school to embark on his vaudeville career. He worked two years for Edwards, earning, Harry Salpeter reports, about $15 a week as a performer plus $10 as assistant manager of the show. Then he left Edwards to go out on his own. He teamed up with a girl, and the pair were billed as Winchell and Greene.

In 1917 Winchell enlisted in the Navy, where, according to *Time* Magazine, "he fought the War in the New York City Customs House as receptionist to the late Rear Admiral Marbury Johnston, and it was prophetic that he seared his nose in a candle flame when, instead of giving his full attention to applying sealing wax to envelopes, he tried to hear what the Admiral was telling some other officers about the impending Armistice." Upon his release from the service Winchell returned to vaudeville. He was more successful in the West than in the East with his "song, dance, and patter" team, which was booked for two years on the Pantages Circuit, covering the Northwest and the California coast.

WALTER WINCHELL

In the spring of 1919 there appeared on the bulletin boards of theatres where the Pantages Road Show Number 151 was playing a "neatly typed page divided into three columns," conveying "such information as the fact that so and so's mother was getting over the grippe," and brightened by such quips as: "You tell 'em, Ouija. I'm bored." This paper, which appeared frequently, Winchell called *The Newsense*. It found its way into the editorial office of the New York *Vaudeville News*, edited by Glenn Condon, and "soon Winchell, as the author of 'West Coast Echoes,' became the *News*' most enthusiastic contributor." While his journalistic career was still in the amateur stage, Winchell was having his ups and downs in vaudeville. He had been married to and divorced from his partner, Rita Greene. According to St. Clair McKelway, Winchell's success as a vaudevillian had been "moderate." In 1922, however, when Condon offered Winchell a regular job on the *Vaudeville News*, Winchell left the theatre with few regrets.

The Vaudeville News, Time Magazine reports, was a house organ of the Keith-Albee circuit. "It had been founded to combat unionizing activity by the 'White Rats.'" The paper carried no advertising and was distributed free. Beginning at a salary of $25 a week, Winchell wrote jokes and trade gossip under the headings of "Merciless Truths" and

"Broadway Hearsay." The columnist is credited with having persuaded Condon that the paper ought to charge 5¢ an issue and solicit advertising. "The gossip he wrote," McKelway says, "was intimate but seldom malicious, and the vaudeville folk found it to their taste." The young man became acquainted with many important people, among them Fulton Oursler['42], a Macfadden editor. When Oursler started Macfadden's New York *Evening Graphic* in 1924 he hired Winchell as dramatic critic and gave him a Broadway column of his own.

Winchell started with the *Graphic* at an honorarium of $100 a week. In subsequent contracts his salary was raised to $165 and later to $300. At first his gossip column, "On Broadway," appeared only on Monday, but he was represented every day in the week in the dramatic and other columns. The newspaper credited him with drawing 75,000 of its daily average circulation of 350,000, and it was not long after Winchell left the *Graphic* for the New York *Daily Mirror* in 1929 that the *Graphic* expired. Winchell's initial contract with the King Syndicate, a Hearst affiliate which serves more than 170 newspapers besides the New York *Daily Mirror,* gave him $25,000 a year. It is said that some 200,000 of the *Daily Mirror's* circulation of 600,000 is drawn by Winchell, a personal following few journalists can claim.

Dorothy Kilgallen has referred to Winchell the columnist as a "streamlined Aesop spinning the chromium fables of night-time Manhattan, a gray young recording angel writing the fickle legends of Broadway." Besides his "On Broadway," Winchell developed a Monday column subheaded "This Town of Ours." Later he started "Man about Town," which "made a specialty of entertaining and impudent eavesdropping." As Winchell's contacts widened and his sources improved, his columns also improved. Much of his material has been called "unimportant and even untrue," but, on the other hand, he has printed many items which "would pass for a scoop in any newspaper office."

Winchell claims that he has never paid any money for information and that he never accepts an item unless the source is reliable. "Sometimes," he remarks sadly, "people give me a wrong steer. When I find out that a contributor has done that, I never use his stuff again. I don't know why. It's like finding that a girl has been unfaithful." There has been a great deal of conjecture as to just why people give Winchell information about the private lives and loves of themselves and others, which they undoubtedly do. It has been said that it is sometimes retaliatory information, and at other times the result of an undiscriminating hunger for publicity.

At first Winchell used to spend his evenings visiting all the outstanding night clubs. In time, however, news came to him at his nocturnal headquarters, a table at the entrance of the New York Stork Club. He occasionally visits other bars, and a great deal of his information comes by wire, telephone, and mail. He also has a car, equipped by police permission with a short-wave radio receiver, red lights, and a siren. Before the War he was accustomed to drive around the city going to fires, accidents, and robberies. He frequently beat the police and firemen to the scene, and once both Winchell and a pair of bandits were very much embarrassed when the columnist reached the scene of the crime before the police.

According to Harry Salpeter, Winchell wants to be taken seriously as an innovator in the American language. Numerous observers have commented upon his talent for slang, and H. L. Mencken, in his scholarly *The American Language,* has devoted considerable space to Winchell's contributions to current American speech. Mencken notes that Winchell has fathered such expressions as "Chicagorilla", "Joosh" (for Jewish), "pash" (for passion), and "shafts" (for legs), and "has devised a great many . . . words and phrases, some of them euphemistic and others far from it." For "married," Mencken reports, Winchell has used "welded", "sealed", "lohengrined", "merged," and "middle-aisled"; for "divorced", "reno-vated"; for "contemplating divorce", "telling it to a judge", "soured", "curdled", "in husband trouble", "this-and-that way," and "on the verge"; for "in love", "on the merge", "on fire", "uh-huh", "that way", "cupiding", "Adam-and-Eveing," and "man-and-womaning it"; for "expecting young," "infanticipating", "baby-bound", "storked." He is the author of "go-ghetto", "debutramp", "phffft", "foofff" (a pest), "Wildeman" (a homosexual), "Hard-Times-Square", "the Hardened Artery" (Broadway), "moom pitcher" (moving picture), "intelligentlemen," and countless others. It has been frequently remarked that the "bright young men of *Time,* the news magazine, undoubtedly owe an unpaid debt to Winchell. They are very fond of such Winchellisms as 'cinemaddict' and 'radiorator.'" Although many people feel that, since so many Winchellisms are coming into the language, "he will have to be reckoned with in the compilation of the next supplement to the *Oxford Dictionary,*" there are those who feel that his contributions have been valueless. McKelway refers to Winchell's "patter" as "arresting, ungrammatical, slangy, and vulgar." He maintains that the slang terms Winchell uses have only a momentary vogue and are along the lines of those that Sime Silverman of *Variety* has been using for years. "Whether *Time* took from Winchell or Winchell took from *Time,*" McKelway wrote, "the exasperating trick of coupling legitimate words together and making one word grow where there should be two is a matter for literary controversy. In any case no word first introduced by Winchell appears to have survived either in the language or in the vernacular. Nobody says 'making whoopee' any more, nobody says 'reno-vated,' and nobody can say 'cinemaddict' or 'WPAdministrator' without bruising his tongue."

Various people have tried to explain why Winchell has used the slangy style that has become his trade-mark. St. Clair McKelway, who feels that Winchell writes as "any mediocre vaudevillian talks on the vaudeville stage," holds the minority opinion. Some explain the phenomenon on the grounds that

Winchell's use of language is the result of his desire to escape libel. "It would clearly be dangerous," Henry Pringle wrote, "to print that a certain couple is about to be divorced. Winchell is confident, though, that the courts will recognize no slur if he merely says that they are 'on the verge.'" Harry Salpeter declares that Winchell told him that his style of writing "constitutes a protective device against his sense of inferiority as an illiterate," and there are others who agree that Winchell's contributions to "Americanese" are a result of his being the least educated of the professional writers: his paucity of vocabulary has led him to word coinage.

Besides his newspaper work Winchell has conducted a radio gossip column on Sunday nights for the Jergens Lotion Company for more than ten years. His radio remarks are similar to his column items, but are somewhat more innocuous and milder. He broadcasts bouncing up and down in an old armchair. Pringle reports that he "reaches a high pitch of excitement during his Sunday night broadcasts. He loosens his collar and tie and pushes his soft felt hat to the back of his head. He himself manipulates the keys which simulate the sounds of telegraph radio. 'Flash!' he shouts into the microphone while he jiggles the key, and then relates some item about Glorious Gorgeous of Hollywood, or Mrs. Blue Blood of Park Avenue. Telegraph and radio operators frequently write in to protest that his dots and dashes mean nothing —as, of course, they don't—and that he ought to hire a real operator." "We tried them and it didn't work," he says. "They were too slow. Besides, it stimulates me to do it myself."

Although Winchell is a mild individual with a fear of physical violence, he has frequently found himself in tight spots, and he has a permit to carry a gun. During prohibition he knew a number of the more prominent gangsters, and on occasion aroused the suspicions of the FBI when he prognosticated too accurately acts of violence between rival factions. He was the intermediary who delivered Lepke to J. Edgar Hoover '40, and he is a good friend of the FBI chief. Winchell attained some personal notoriety, too, at the time of Earl Carroll's trial after his famous bathtub party, a party which Winchell attended.

In the 1930's Winchell began to evince an increasing interest in politics and in international affairs. In March 1938, *Time* reported, Hearst sent a teletype message to editors of all Hearst newspapers using Winchell. The message read: "Please edit Winchell very carefully, and leave out any dangerous or disagreeable paragraphs. Indeed, leave out the whole column without hesitation, as I think he has gotten so careless that he is no longer of any particular value." The news magazine points out that the paragraphs that were subsequently deleted most frequently expressed "Winchell's hatred of the German Nazis," whom he called "Ratzis." Winchell first attacked Hitler '42 in his column in 1932, and started his fight on the German-American Bund shortly afterward. Native Fascists such as William Dudley Pelley were not spared either; and this fact, coupled with his heated support of President Roosevelt '42 and his foreign policies, had made him a great number of enemies by the time of Pearl Harbor.

In 1934 Winchell had enlisted in the United States Naval Reserve. When the United States entered the Second World War, Winchell donned his uniform as lieutenant commander. Although he was not on the Navy payroll, a number of Congressmen, notably Carl Vinson '42 of Georgia, recommended that Winchell either be called to active service or disenrolled from the Naval Reserve. Winchell subsequently revealed that he had applied for active duty, but that the Navy had told him that he was serving best in his current activities. He accused his detractors of trying to suppress his opinions. He was given several brief tours of active duty, the nature of which are a Naval secret.

When Winchell's contract with the King Features Syndicate came up for renewal in 1942, the columnist refused to renew it unless the Washington *Times-Herald* were dropped from the list of subscribers. Winchell and Eleanor Patterson '40 had been feuding for some time. The columnist sued the publisher for "deleting his attacks on pro-Axis Americans," and the publisher sued the columnist for "defamation." In November 1942 a new contract, dropping the *Times-Herald,* was signed, and the suits were abandoned in May 1943.

Several months earlier Secretary Knox '40 disclosed that Winchell had been placed on the inactive list. Winchell promptly declared that now he would be able to "continue his fight against the underground menace." The action ended the Congressional investigation which had been examining Winchell's "contemptuous and disrespectful" comment on pre-Pearl Harbor non-interventionists. Winchell told the United Press that he had offered his resignation to the Navy, but that "a high government official would not accept it." According to Representative Hoffman of Michigan, "the Secretary's assurance that Winchell will not be recalled to active duty will prove a boon to Naval morale. No longer will Navy Men wince at the spectacle of a Broadway gossiper sporting a lieutenant commander's stripes, while he snoops about night clubs in search of sexy tidbits."

After his broadcast of January 31, 1943 describing as "damn fools" those who returned pre-War isolationists to Congress, Winchell began to have a great deal of trouble with his radio sponsors about his scripts. He alleged that the advertising agency and the Blue Network were censoring his scripts, deleting, in particular, favorable remarks about Roosevelt and unfavorable remarks about certain Congressmen. He announced that he was not compensated for his distress by the quarter of a million dollars a year he was getting for the program, and he told Jergens Company to look around for another commentator. The agency contended that it was not anti-Roosevelt, but that it could not afford to offend the twenty-two million voters who had voted Republican in the last election. The matter was later satisfactorily adjusted, and the Jergens firm offered him another five-year contract, starting in 1946. In the fall of 1943 Winchell joined the fight against CBS's "unopinionated" news policy, which had resulted in censorship of other news commentators as well as himself.

(Continued next page)

WINCHELL, WALTER—*Continued*

According to some sources, The Radio Corporation of America, which owns both the Blue Network and NBC, was behind this censorship, which was based on the fear that Congress would not be friendly to new radio legislation which the industry was clamoring for if radio commentators were allowed to attack Congressmen. Winchell refused to become suddenly apolitical, however: he has continued to attack those whom he feels aid and abet the enemies of democracy, naming names (among them Hamilton Fish '41 and Martin Dies '40) and giving facts. In more than one instance he has also leaped into a legislative fray—when he spoke out for subsidies to combat inflation, for instance.

Winchell has not been sued for libel as often as his profession might lead one to suspect. His contracts with both his newspaper and his radio sponsors, however, relieve him of all responsibility for liability; and both employers, therefore, have Winchell's output subjected to careful legal scrutiny before use. Many people are supposed to have sworn vengeance on him for something he has printed, and he has been called many harsh names ("vulture", "outlaw," and "blab-boy" are among the milder ones), but he has actually suffered physical violence only twice: Al Jolson '40 once punched him without effecting serious damage, and he was once painfully bruised by some men whom he thinks were Nazi agents.

Winchell's working day begins late in the evening and ends in the morning, so that he comes home from work about the time his family is having breakfast. He was married for the second time in 1923 to June Magee, the Aster of the vaudeville team of Aster and Hill. According to Parker Morell, Mrs. Winchell exerts a tremendous influence upon her husband's work. Because he has "neither the time nor the inclination to read all the books and magazine articles, see all the movies, or listen to half the music and radio shows which he so shrewdly appraises in his columns," they are, for the most part, criticized on the basis of his wife's recommendations. "She hasn't been wrong yet," Winchell proudly tells his friends.

The Winchells have two children, Walda and Walter. Winchell, in the past, had been frequently criticized for lack of good taste because he talked so much about his family in his column. (In recent years he has dropped this practice.) The line he is proudest of having written, Morell reports, appeared after his son was born: "He tastes like honey—and smells like gardenias." As a matter of fact, Winchell's interest in the personal lives of others is matched only by his desire to keep his own life private. Morell comments that Winchell's apartment in town is "harder to get into than the United States mint. Only his secretary and a few close friends know its location. His sixteen-acre estate in the country is even more inaccessible. It is surrounded by a high fence with an iron gate, which practically takes a court order to get opened. The house itself is protected by iron bars on the children's windows and a system of invisible light rays connected to huge electric sirens. If an intruder ever tried to enter or leave the place while those rays were on, the noise of the sirens would be heard clear into the next township."

WINDUST, BRETAIGNE (win'dust brətān') Jan. 20, 1906- Stage director; actor

Address: b. c/o Lindsay and Crouse, 1430 Broadway, New York City; h. 36 Central Park S., New York City

Bretaigne Windust, one of the most successful directors on Broadway, has, in the course of his career, directed everything from Ibsen and Chekov to Sherwood '40, Lindsay '42, and Crouse '41. Windust's name, according to Lucius Beebe '40, is quite his own and not one dreamed up to overcome the commonplace connotations of Fish or Doakes. Windust he was born and Bretaigne he was christened by parents "not unaware of the poetic overtones of the combination," since it was hoped that he would prove one of the lights of the musical world. That hope, however, was blasted when their offspring embarked upon a theatrical career while yet at college. His name, according to his agents, sounds feminine to most people and, consequently, he receives a lot of mail addressed to "Miss Bretaigne Windust." Bretaigne was one of the less celebrated robber barons of the pre-Norman conquest; Windust's mother found him in an English history book and bestowed his name upon her son.

Ernest Bretaigne Windust was born in Paris, France on January 20, 1906. His parents were Ernest Joseph Windust, an English violinist with some reputation on the concert stage, and the former Elizabeth Amory Day, a New York singer. Her father was Dr. Walter de Forest Day, surgeon in charge of the department of Materia Medica at Columbia University, and first head of the Health Board in New York City. Dr. Day was a distant relative of Clarence Day, the original "Father" about whom *Life with Father*, which his grandson later directed so successfully, was written.

The first language young Windust spoke was German, because he had a German governess. When he finally learned to speak French, it was with a German accent. His English, the next language he acquired, had a French accent, and now, since coming to the United States, he has been trying to lose the British accent that still comes to the fore when he is not careful.

Just before the battle of the Somme, the Windust family (with the exception of the elder Windust) escaped to England on the last train to reach Boulogne, and it was in London that the boy's interest in the theatre was first kindled. During air raids he and his brother used to sit under a mattress-covered table, playing with a miniature theatre cut from shoe boxes. Their productions were all pantomimes since the antiaircraft barrage made speaking a little difficult. In England young Windust was "shooed around to no fewer than seven schools." He flunked practically every examination he took, he says, because the bombing at night used to keep him awake and make him tired the next day. In the five years that the Windust family lived in England they moved fifty-two times. Mrs. Windust always took flats by the week or by the month in the hope that peace was imminent and that they could return to their Paris apartment. In 1919 they finally were able to return to Paris, where the elder Windust had remained, visiting his family in England only occasionally. He had given up teaching the violin and had become the Paris representative of a British firm that did international importing and exporting.

The following year Mrs. Windust decided to leave her husband permanently and took her three children to the United States. They arrived in Hoboken in 1920. The family stayed first in New Haven, where the boy attended a private school. After a year in New Haven they moved to New York City, and young Windust attended the Episcopalian Trinity School there. In New York he and his younger brother became two of the highest paid boy sopranos in the city. They used to get $5 apiece for singing at funerals. After completing his high-school course Bretaigne had a severe attack of pneumonia and took a trip to Europe to recuperate. When he returned he entered Columbia University and he finally wound up at Princeton in 1926. There he joined the "Theatre Intime" players, serving as their president during his junior and senior years, and he organized and headed the fencing team in his spare moments. To his college classmates he was known as "Windy." His family still was not reconciled to the notion of his becoming an actor, and there was some talk of a career in the consular or diplomatic service, but it came to nothing when Windust, inspired by the famous Russian director Stanislavsky, joined with Charles Leatherbee of Harvard in founding the now almost legendary University Players of New Falmouth, Massachusetts, during a vacation from Princeton in 1928

"The company," Windust said, "was made up of young people from various colleges around the East—all of whom wanted a chance to act during the summer months. That was long before the back-to-the-cows movement was fashionable. We started out in a dilapidated movie house, and after a few seasons we had enough money to build our own theatre and to equip it as we wanted. It burned down . . . but that was after we'd sold it. . ." Windust selected most of the plays that the University Players produced, cast them, and directed them; but only in emergencies did he act in them. He would like to think "that the University Players have left a definite imprint on the professional theatre."

BRETAIGNE WINDUST

Some of the then unknowns in the troupe were Margaret Sullavan, James Stewart '41, Henry Fonda, Kent Smith, Jose Ferrer, Myron McCormick, Mildred Natwick, and Joshua Logan, all of whom have risen to prominence in various branches of the theatre. Their property man, John H. Morris, although he made no name for himself in the theatrical world, became a police commissioner and is now also chief of New York City's air raid wardens.

Windust continued spending his summers at Falmouth, directing and acting, even after he was graduated from Princeton in 1929. The rest of the year he worked with the Theatre Guild, beginning as an obscure assistant stage manager for several of their productions. In 1932 he directed the London production of Eugene O'Neill's *Strange Interlude.* After that he staged some short-lived productions for Arthur Beckhardt, and then went to the Cape Playhouse to direct *Goodbye Again.*

Since there seemed to be no field for his directorial talents during 1933, the young man turned his attention to acting, which he had hitherto not taken very seriously, and appeared in *I Was Waiting for You,* in *Oliver, Oliver,* and in *The Distaff Side.* The first two plays lasted only one week each. He had better luck with *The Distaff Side*: the reviews he got were generally good—when he was given any critical notice at all. The Lunts '41, however, noticed his work and immediately signed him for *The Taming of the Shrew.* He directed it and also appeared in the role of Tranio. In *The Taming of the Shrew* Windust created what was perhaps the first of the dramatic curtain calls and post-curtain tableaux that were later firmly established as the hallmark of his direction of a play.

While *The Taming of the Shrew* was still running, the Lunts began to rehearse Robert Sherwood's *Idiot's Delight* with almost entirely the same cast. It opened in 1937 with Windust playing the part of the young English husband.

(Continued next page)

WINDUST, BRETAIGNE—*Continued*

That was his last role, for since then he has confined himself exclusively to direction—except, of course, in cases of emergency. He put the Lunts through their paces in *Amphitryon 38* (1937), which he himself translated from the French and re-wrote; then he staged William Brady's revival of *The Circle* (1938), with Tallulah Bankhead '41 and Grace George, and Dwight Deere Wiman's *Great Lady* (1938). In that same year he also directed the revival of Barrie's *What Every Woman Knows.*

Windust's next assignment was *Life with Father,* written by Russel Crouse '41 and Howard Lindsay '42, the latter a friend of the director's. The critics were enthusiastic about the play, which opened in the fall of 1939, and characterized Windust's work as "an adroit directorial job," done "with a nice sense of tearful, no less than comic, values." Almost immediately after, Windust was called upon to stage *Arsenic and Old Lace,* which received even better reviews. He had, the critics agreed, directed the play "like a man inspired." When *Strip for Action,* for which the director prepared by going to burlesque shows constantly for two seasons, "soaking up atmosphere," appeared, Windust had three plays running on Broadway at the same time, all hits, and all comedies. *Strip for Action* closed late in 1942, but the other two plays were still running in 1943. At that time his connection with them had not ended, for he was still training road companies for both, rehearsing child actors to replace those who had outgrown their parts in *Life with Father*, and going to Hollywood to "sit in" on the filming of *Arsenic and Old Lace.* He has no objections to Hollywood, but could be lured to the Coast "only under conditions that were to his liking," since he makes an excellent living in New York and has "just about as much work as he can possibly handle." He directed Victor Wolfson's *The Family* (1943), of which he says, "I hope the public has forgotten all about that 'noble experiment.'" On August 18, 1943, Windust stepped at the last minute into the second lead of *Murder Without Crime*, replacing Michael Dyne, who was ill. This places him in the select company of "triple-threat" men who have produced, directed, and acted in the same play at the same time. *Murder Without Crime* closed after thirty-seven performances on Broadway.

In 1938 Windust was appointed chairman of the Chorus Equity Organizing Commission and assistant to Burgess Meredith '40, acting president of Actors Equity. He was being considered as a successor to Meredith, but Windust resigned because his professional duties had become too pressing.

Although Windust has directed many types of plays, comedy is his forte. He insists that comedy in general, and farce in particular, is far more difficult to act than any Shakespearean tragedy. He has made a study of slapstick comedy throughout the ages, and is "ready to swear that a lot of it hasn't changed since a pair of old Romans named Plautus and Terence were rolling the Senators in the aisles of the Coliseum—if they ever *had* plays at the Coliseum."

Recognized as one of the half-dozen top directors of the stage today, Windust has definite ideas on directing. Strategy is forty per cent, he explains, and also: "You have to know everything about the theatre to be a decent director." "There is, of course," he says, "no rule of thumb for the directing of a play. My personal approach is to take the script of a new show and live with it for a week or so, visualize the characters and scenes, and record what I'd like to see done with them more or less photographically in my memory. Then I chuck the script away and start working with the actual, ponderable factors, the sets, lighting, actors, and all the integral parts which will eventually condition my original concept of how the job should be done." He thinks that the two most important things in successful stage productions are "the creation of an atmosphere of make-believe, of innocent fascination on the part of the director, and producer, and the maintenance on the part of the players of a continuous illusion of first night." As a director, Windust is reputed to be a man of few words, but he does not spare them. His favorite phrase is: "Do it again, please."

Windust is five feet ten and one-half inches tall, weighs 150 pounds, and is blond. One of his favorite pastimes is eating—"a fact which is surprising in view of his slim figure." Lean, clean-cut, and well tailored, he, according to one interviewer, talks "theatre and Windust with the clarity and precision of an expert in both fields." His hobby is music; he plays the piano, dislikes opera, but likes symphony and chamber music, and is "a great balletomane." On September 18, 1937 he married Lora Baxter, a Broadway actress. The couple have no children. The Windusts have acquired a summer home in Provincetown, where the actor hopes to raise his own vegetables and flowers. His other chief desire is to present *Peter Pan,* "with a motion-picture girl as Peter. Her name is Katharine Hepburn '42. Ever hear of her?"

WOLFERT, IRA (wu̇l′fėrt ī′rə) Nov. 1, 1908- Author

Address: b. c/o North American Newspaper Alliance, 274 W. 43rd St, New York City

Newspapermen who cover the fighting fronts in the Second World War often find themselves sharing the dangers of combat along with the men in the service. It is not an easy life, but it means that the correspondent can write about war "as the fighter experiences and endures it." Ira Wolfert, a North American Newspaper Alliance writer who in September 1942 was sent to cover the action on Guadalcanal, did just that, and won a Pulitzer Prize in the process. He hid in foxholes, he flew in Fortresses, he got two bullet wounds. A veteran reporter, Wolfert has been used to getting scoops and exclusive stories; but the story he found at Guadalcanal was so definitely in the super-exclusive category that it needed to be told in a book, *Battle for the Solomons* (January 1943), which was followed in July by another, *Torpedo 8.*

Ira Wolfert has been a newspaperman since he was fifteen. He was born in New York City on November 1, 1908, the son of Jewish parents, Moses and Sophie (Seidl) Wolfert. After attending New York public schools he began his career as a copy boy in 1923, and he got to know a good bit about newspaper jobs three years before he entered Columbia University in 1926. He worked his way through the Columbia School of Journalism by serving as a taxicab driver and as a motorman. His trolley route was on the old Greene line between South Ferry and 59th Street. It was then that he established what he believes to be the record for a single run. Discovering at Battery Park that he was eighteen minutes behind schedule, he rocketed the trolley up Broadway, non-stop, and passed the 53rd Street Station carbarns on the dot—a thirty-two minute run in fourteen minutes. Unfortunately a spotter had clocked him going out—and he no longer had a job. He stuck to taxi driving until he got his LL. B. degree in 1930.

On February 18, 1928 Wolfert had married Helen X. Herschdorfer. (They now live on West End Avenue in New York City and have two children, Ruth and Michael.) After college Wolfert got a job as copyreader with the North American Newspaper Alliance. In his spare time he wrote and sold magazine articles, while his wife wrote and sold poetry. She is the author of an "as yet unpublished volume of poems" called *Nothing Is a Wonderful Thing.*

In February 1931 the Wolferts went to Europe and traveled extensively until their funds ran out. Then Wolfert found a position in Berlin representing the New York *Post.* "My wife just couldn't stand it in Germany," he says. "I couldn't either. We saw the War coming, and we saw that the rise of Hitler '42 was inevitable. . . My wife wanted to come back to America to live a peaceful life and to have children."

On his return to New York a year later Wolfert switched to general assignments for the N. A. N. A., and he has been with that news organization ever since. For a time he served as drama critic, and he became well known in theatre circles and well liked by stage and screen stars. His general "beats" included Broadway and Hollywood, and he also specialized in sports, interviews, and features such as the tour of the King '42 and Queen of England here in 1939. He also wrote ten articles on John L. Lewis '42 and the background of the C. I. O. "Lewis didn't like the series," says Wolfert, "but I enjoyed meeting him."

The big scoop of his career came when he was the only newspaperman to cover the Fighting French expedition to the islands of St. Pierre and Miquelon. He had been sent by the N. A. N. A. to Halifax, Nova Scotia on a tip. He annoyed the Free French leaders by trying to find out what was up, so finally Vice-Admiral Muselier told him to come along and see for himself. He did. On Christmas Eve the wires of the N. A. N. A. began ticking out his story from St. Pierre. While all America was reading his account his eight-year-old daughter demanded: "Why does Daddy have to write about the War on Christmas?"

IRA WOLFERT

In 1942 Wolfert was writing sports for the N. A. N. A., filling in for John Lardner, who was on a war correspondent job in New Guinea and Australia. Then, in September, came his assignment to the Solomons. It was at the time when the Russians had their backs to the wall at Stalingrad that Wolfert sailed on a freighter with a convoy to his post. One day, on the bridge, he noticed a signalman exchanging furious wigwags with the lead ship in the convoy. Anxious to hear if the Nazis had taken Stalingrad, Wolfert asked the signalman, "Is it possible to get any news from that fellow?" After another frenzy of wigwags, the signalman turned to Wolfert with a big grin and said, "It's the eighth inning. The Yanks are winning and Ruffing '41 has got a no-hitter so far." Then Wolfert asked if there was any news about Stalingrad. Once more the flags wigwagged and Wolfert's man announced: "The Russians are doin' O. K. too!" Wolfert recalls thinking that "it was rather a tribute to the United States Navy that at the height of a global crisis I was able to get more detailed information on the World Series than on the World War."

He found that having been a sports writer made him a big shot with the Marines when he arrived at Guadalcanal. "They used to flock around me, asking me all kinds of questions, mostly about personalities in sports. . . In addition to bringing in supplies, ammunition, and reinforcements, the Navy also used to bring in football scores. The scores then would form the basis for fresh arguments. I don't mean we sat around and chewed the fat about sports all the time. When I reached Guadalcanal there was a battle going on and it didn't stop for about two and one-half weeks. Conversation then was restricted to, 'That's our plane' or 'That's their plane.' Sometimes we said, 'Those are our guns' or 'Those are their guns.'"

Ira Wolfert reached Guadalcanal just as a Japanese task force had battered its way through, and the Americans were slugging it out with them. That action, together with the great Naval victory of mid-November, Wolfert describes in *Battle for the Solomons.* With the skill of a trained reporter and excellent storyteller, he gives intimate, close-up incidents of the fighting as the individual soldier knows it. He tells, from personal experience, what it felt like to wait before fighting: "Loneliness and boredom and anticipating Japs are much more terrible enemies for a man than bullets," and what it felt like to be in the thick of it when bullets were flying, when the conscious mind has a job to do, and the subconscious mind keeps trying to run away from the screaming uproar. "But our fellows, filled inside with this demented uproar and hemmed in all around outside by the uproar of battle, just stay there and do the work they have to do. They don't look like actors being brave. They look mostly like fellows working." The Americans and their officers are tough, he writes, but so are the Japanese. The Jap usually didn't surrender, but was willing "to go on fighting until his breath stopped." Wolfert's book concludes: "In the thousands of miles of war front that I have traveled these last months, I have seen nothing to make me think this is going to be a short or easy war, to make me think we are going to lose it, or to make me feel anything but very proud of American guys and their girls."

On his return to the United States, Wolfert completed his book on the Solomons action and a second book, *Torpedo 8,* and did some feature articles for magazines. What he said in an article in *The Nation* (January 23) started considerable controversy. A colonel on Guadalcanal, he wrote, wondered whether defense workers would insist on a forty-hour week if they had been with soldiers in the foxholes. Wolfert's answer was that "the fellows back home, the ones they were sore at, the ones who were unwilling to give up the rights they had won, were joining in both battles at once. They were helping to win the peace by trying to make a world into which the soldier would want to fit when he went home and took off his uniform." In an editorial (January 25, 1943) the New York *Times* took issue with Wolfert. It censured him for having stirred up a "vague restlessness" in the minds of the soldiers. It charged Wolfert with putting "politics" before the business of patriotic unity and war-winning. "Like the Popular Front in France, Mr. Wolfert and those for whom he speaks have not learned to put first things first. Because the Popular Front could not learn this, it unwittingly contributed not only to the loss of the workers' rights, but of France itself." Actually what Wolfert had said was that the Republican colonel's remarks about a U. S. O. on Guadalcanal, with its "emphasis on the unattainable," had created a "vague restlessness" in the men. The *Times'* misquotations were corrected, both in a letter from Wolfert published in the newspaper and in a *Nation* editorial.

In addition to his work as a reporter and feature writer for the N. A. N. A., Ira Wolfert has been trying his hand at fiction for a number of years. He has written several short stories which have appeared in *Harper's, Esquire,* the *American Mercury,* and other magazines. Two were considered good enough to be printed in the annual "best" collections (1938 and 1939) of Edward O'Brien. During his spare time in the past four years he has been at work on the novel published in the spring of 1943. Called *Tucker's People,* it is a long book about the "numbers" lottery in New York City (he got the material while he was covering the Hines policy racket trials) and the social consequences of this modern business enterprise. Wolfert calls it "the story of American business from Rockefeller to Hitler," and says that it "tells everything I know." Most critics found it an important book, whatever its defects. According to the New York *Times'* reviewer, "Wolfert's blowtorch intensity, his subtle shadings of character and meaning, his distinctive and even poetic style and his terrifying clarity of vision lift his first novel bodily above the run of the mill." Wrote George Mayberry in the *New Republic*: "The characters have a depth and many-sidedness that are rare in recent naturalistic fiction. . . The social framework and the relationship of the characters to it are well handled. . . The cross-references to legitimate business and totalitarianism are cogent and rarely dragged in by the heels. *Tucker's People* is slow getting under way, needs pruning in general, and there are overripe passages that badly misfire. But the faults, like the virtues of the book, are the result of generosity and eagerness."

Torpedo 8, which was published shortly afterward, was the story of the American bomber squadron which, after the disaster of Midway, took for its motto "Attack—and Vengeance." The Springfield *Republican*'s comment was: "The Wolfert approach lends itself to the hair-trigger life and excitement of the flier. A sort of ballpark English, one may tire of it when given in doses larger than *Torpedo 8.* But it is as fast and vivid as the yellow warhead of the torpedo ripping through the blue water." The New York *Times'* comment was that "one of the epics of the War has been recorded with stirring simplicity and beauty."

It was not for either of these books, however, but for *Battle of the Solomons* that Wolfert received one of the $500 Pulitzer Prize awards from Columbia University in 1943. At the time the award was announced, according to Leonard Lyons, he was in the Solomons. "His wife notified him, by wireless, and then went to Columbia, to collect the prize. There she was reminded by the University officials that her husband, who had studied there, still owed the university a student-debt of $650. Mrs. Wolfert returned to her home, got the $650, paid it to Columbia University, and then received the $500 Pulitzer Prize."

By November 1943 Wolfert had returned from the Solomons, where he had cut up old touches with the Air Force on Guadalcanal and had gone in with the Army on the campaign for Munda airport. "The fighting was more leisurely this trip," he reported, "and I had time to establish friendly relations with the natives among whom I lived in palaces and jungle hammocks, but hardly like a sultan. I tracked down the existence of a war aim among our troops on Guadalcanal . . . they say they are fighting the War to make sure Japan gets Guadalcanal and is made to live on it. Malaria got me down ultimately, and I returned home to nurse it. Europe will be my next stop. In the meantime, I have written a whole spate of magazine articles, have begun lecturing for Lee Keedick, and will start soon collaborating on a dramatic version for Jed Harris of my novel *Tucker's People.*" By December Wolfert had another novel already sketched out, and he had every intention of taking it to Europe with him. "There's a lot of time on your hands on these assignments," he said, "lulls in activity. And nothing much to do but just sit and wait for something to happen. If you have a typewriter and an idea, you're all set." At the time he failed to say during what "lull in activity" he had written the novelette which was to appear in *Cross Section,* a collection of new American writing scheduled for publication in the spring of 1944.

In conversation, Ira Wolfert is said to be as good a storyteller as he is when he writes. "He is widely read, deeply respected, and generally hailed as a jolly good fellow." He enjoys good food, and "you can find him at odd hours in all sorts of restaurants." For recreation he likes best that favorite indoor sport of newspapermen: poker.

WOLL, MATTHEW (wōl) Jan. 25, 1880- Labor leader

Address: 570 Lexington Ave, New York City

"In good liberal households," according to *PM*, "children are told not to follow in the Right-wing footsteps of Matthew Woll; ultraprogressive babies are nursed on the nightmare that Woll will get them if they don't watch out." The conservative vice-president of the American Federation of Labor and former president of the Photo-Engravers Union has been criticized by many Leftists for his "red-baiting" activities. Yet, wrote *PM* in 1941, "he may be remembered most for seeing clearly in the fog created by the Nazi-Soviet war. At a moment when anti-Soviet passions ran high, he might have rallied wide support for a no-help-to-Russia stand. He kept his eyes on what he considered the greater menace of Adolf Hitler '42."

Matthew Woll was born in Luxemburg on January 25, 1880, the son of Michael and Janette (Schwartz) Woll. In 1891, when he was eleven, his family brought him to Chicago. "America was to me then," said Woll many years later, "not only a land of opportunity, but a land where men were free to speak, to write, to assemble, and to worship God after the dictates of their conscience. America to me is still the land of promise."

MATTHEW WOLL

When Woll was fifteen he was apprenticed to a photo-engraver, and worked at that trade for a good many years. He married Irene Kerwin in 1899. (They have no children.) Two years after his marriage he entered the night school of the Lake Forest University's College of Law, completed his course in 1904, and was admitted to the Bar. In 1906, when Woll was only twenty-six, he was elected President of the International Photo-Engravers Union of North America, a position which he held until 1929, when the pressure of his other affairs caused him to resign and become the first vice-president.

By this time Woll was already important in the labor field. In 1915 and 1916 he was sent as a fraternal delegate to the British Trade Union Congress at Birmingham, England. He became the eighth vice-president of the A. F. of L. in 1919, known as the "Crown Prince" of the A. F. of L., for Gompers, the "Grand Old Man" of the Federation, was priming Woll, his protégé, to succeed him as president. In 1920, when John L. Lewis '42 ran for head of the A. F. of L. against Gompers, he was defeated two to one, "largely by the maneuverings of Woll," who exerted tremendous political influence within the A. F. of L. "In Woll's opinion, the Lewis candidacy was not only a form of *lèse majesté* against the Grand Old Man, but was also a threat to Woll's own ascendancy in the near future." Yet, when Gompers died in 1924, Woll was not elected president of the A. F. of L., for, according to *The Nation*, three reasons. First of all, another candidate insisted that he was next in line. Secondly, Woll, because of his birth in Luxemburg, was considered a German, and the anti-German prejudice aroused in the United States by the First World War was still prevalent. Finally, Woll's overbearing character and his somewhat theatrical appear-

WOLL, MATTHEW—*Continued*

ance were against him. Lewis was also against him, and Lewis' backing for his friend William L. Green '42 decided the issue.

By 1930 Woll had become first vice-president of the A. F. of L. He was, according to *PM*, the A. F. of L.'s liaison man with the reactionary National Civic Federation, suspected by workers to be a hyper-conservative combine of capitalists and Right-wing labor bigwigs. The National Civic Federation was founded in 1900 with the purpose of bringing labor and capital together. It was used to ward off strikes and attack militancy in the labor movement—and seemed to many to be actually an employers' organization. Woll "crusaded fiercely against real and imagined Communists in high and low places. Today he contends that he was a misunderstood man . . . but in any case he was a sure performer at most anti-Communist rallies." At the 1935 convention of the A. F. of L., however, John L. Lewis forced Woll to resign from the Civic Federation.

Even before this the battle over industrial versus craft unionism had begun in the A. F. of L. At a January 1934 conference Woll, known as one of the "moderates" who sought some form of compromise with the proponents of industrial unionism, had been chairman of a committee which submitted such a compromise. This proved unsatisfactory, however, and at the 1935 A. F. of L. convention the majority report, framed by Woll and by John Frey, urged that all industrial resolutions be non-concurred with. What followed is labor history. In 1936 Woll, as a lawyer and one of the Federation's leading intellectuals, was called upon by the executive council to justify what Herbert Harris calls its "totally illegal" act of suspension of the C. I. O. unions; he then suffered a nervous breakdown and was confined to a hospital bed for several days. He nevertheless continued to be known as a peace-maker, and in 1939 William Green, president of the A. F. of L., appointed him to a committee which, at Roosevelt's '42 request, had been formed to seek "peace with honor" with the C. I. O.—at the time still headed by Lewis. As one of the three members of the committee which later conferred with Lewis on his application for readmission to the A. F. of L., in July 1943 Woll concurred with Daniel Tobin's view that Lewis' United Mine Workers should be taken back into the Federation. "Such reaffiliation would be a big step forward to that all-inclusive unity of labor which all its true friends desire." By this time, though, the effect of such "unity" would have been to broaden the cleavage between the C. I. O. and A. F. of L.

During all this time Woll could be found constantly warning against the inroads of the Communist in the American labor movement. As president of the Workers Education Bureau he threw Brookwood Labor College out of the fold on the grounds that it was a radical institution and, according to his enemies, he "reduced labor education to the humiliating and innocuous point where its main source of financial support became the Carnegie Foundation and John D. Rockefeller's General Education Fund." In 1935 it was on his recommendation that the A. F. of L. council urged that the Federation constitution bar any union officered by Communists from representation at conventions. (The resolution was modified before its passage.) It was therefore to be expected that in 1943 Woll, although professing eagerness to see the United States Government reach a *modus vivendi* with the Soviet Union, should support the decision of the executive council of the A. F. of L. not to affiliate the Federation with the Anglo-Soviet trade union committee. According to Woll, the Federation would refuse to participate in any international conference of any kind at which the representatives of Soviet trade unions were to be present.

Woll is known as a political "neutral"—that is, in his camp are found Republicans, Democrats, and mugwumps. He is frequently critical of President Roosevelt and his policies. As early as 1937 he attacked the National Labor Relations Board as favoring the C. I. O. One of the four labor members of the War Labor Board since 1942, in April 1943 he sharply criticized the President's wage edict, saying that labor would insist on revision in order to restore the War Labor Board's previously held discretion as to wage adjustments. The wage freeze edict constituted "a disregard of understandings reached and assurances received by labor for foregoing its right to strike." Such pronouncements, together with his newly found sympathy for his old enemy John L. Lewis, may or may not have led to *War and the Working Classes'* classification of him as a "reactionary" labor leader who, like William Hutcheson '43 and Lewis himself, was "misleading" workers into unpatriotic, anti-War strikes." (*War and the Working Classes* is published in Moscow.)

In a speech before the United States Chamber of Commerce's finance section in 1943 Woll joined industrialists in denouncing the Government's corporation tax policy—used, he said, "for the destruction or conversion of our society into some idealistic state."

"Labor's contribution to democracy," says Woll, "has been positive as well as negative. In particular, labor's insistence on the development of a great system of free public education, which has today become our greatest single business enterprise, is an indication of the positive and constructive way in which labor has tried to see to it that all people should be given an opportunity to develop to the fullest their personality."

"The American worker," according to Woll, "believes in private enterprise; he does not believe that capital consists of a group of bitter enemies who must be destroyed along with privately owned property. . . The only safe course for America is the voluntary organization of capital, labor, and agriculture, and a coordination of effort between (sic) these three essential factors in our social and economic life."

"Labor," said Woll, "has . . . stood unhesitatingly in support of the rights of the minority. It was labor that first sounded the note of warning against Communism at a time its voice was held up to public ridicule. Again it was labor that first called attention to the menace of Fascism. It was likewise labor that received the first brutal and murderous assaults of Nazism. . . Aliens resident in the United States . . . are political and economic parasites. Their loyalties are not American. The trouble they brew for the country is out of proportion to their numbers. No other nation on earth would tolerate them. I don't think that we should. We'd help to solve the termite problem if we fixed a six months' deadline and after that deported every alien resident who was not on his way to citizenship."

It has been suggested by some critics that Woll, as the head of the Union Labor Life Insurance Company, had been giving more time to his business than to the labor movement, and, more significant, for allowing his salesmen to exploit his high office as vice-president of the A. F. of L. to sell policies issued by his company. "As president of his own union [1906-29]," a *PM* writer commented in 1941, however, "Woll has performed efficiently. Beginning with the union's infancy, he has won substantial economic gains for the photo-engravers, a fact which not even his severest critics tend to question. And in the broader labor situation most observers believe that Woll has been genuinely more anxious for labor unity than many figures on both sides of the fence."

Woll has been called "one of the A. F. of L.'s most representative spokesmen and its most intelligent exemplar of the Gompers pragmatism." He is the author of the book *Labor, Industry, and Government*, published in 1935, and he has written many articles on labor and economic topics, notably for the Hearst Press and for *Liberty* Magazine. He is president of the Sportsmanship Brotherhood, of the League for Human Rights, Freedom, and Democracy, and of the Union Label Trades Department and the United Nations Relief of the A. F. of L. He is a trustee and A. F. of L. representative of radio station WCFL (Chicago); director and member of the executive committee of the New York World's Fair, Inc.; director of the National Bureau of Economic Research; trustee of the Public Education Association (Chicago), of the Chicago Tuberculosis Institute, and of the National Tuberculosis Association. He is chairman of the American Labor Committee to Aid British Labor, of the A. F. of L.'s standing committee on education, social security, and national defense, and of a nine-man post-War planning committee named by William Green in December 1942. Among other affiliations he boasts membership in the Modern Woodmen of America, Knights of Columbus. He is editor of the *American Photo-Engraver*, and he has edited the *American Federationist*. He has represented American labor in England, Poland, and Norway.

Woll is short, no more than five feet two inches tall, "squat," and "florid of face," with "wiglike hair nestling thick upon his neck and a black bow tie encircling his wing collar." He talks in "correct and stilted verbiage." "The outmoded style of his attire," wrote one critic, "together with his over-formalized speech, are but the corporeal features of his loyalty to a viewpoint archaic, yet alluring."

Who's Who in America 1942-43

WOOD, SAM(UEL GROSVENOR) July 10, 1884- Film director; producer

Address: b. Sam Wood Productions, Columbia Pictures Corp., 1438 N. Gower St, Hollywood, Calif; h. 424 S. Irving Blvd, Hollywood, Calif.

Not since the hectic days of casting for *Gone with the Wind* (1941) have Hollywood and the general public both given so much attention to the production of a film as they have to the screen adaptation of Ernest Hemingway's novel of the Spanish War, *For Whom the Bell Tolls* (1943). But when the major responsibility for the picture, "one of the choicer directorial plums of the year," was assigned to Sam Wood, producers and audiences alike breathed a sigh of relief, for within the past quarter of a century Wood has turned out over seventy pictures, the majority of which have been labeled "hits." His rise to fame has paralleled the rise of the film industry itself.

Samuel Grosvenor Wood was born in Philadelphia, Pennsylvania, on July 10, 1884, the son of William H. and Katherine (Corn) Wood, non-professionals. He received his education at the M. Hall Stanton School in Philadelphia, spending most of his spare time on baseball sand lots and football fields. Lured to the West by the gold rush of 1900, Wood settled in Reno for a short time, but four years later he headed West again, this time to Los Angeles where he became a successful real estate investment broker. It was Sam Wood's ownership of a cutaway coat, "a rarity there in those days," that, according to Theodore Strauss of the New York *Times*, first "brought him before the cameras as an actor." He made his professional debut in the part of an unnamed butler in *A Gentleman of Leisure*, for the Famous Players Company, and played "heavy" roles until 1916. In that year he became a full director, directing Wallace Reid at the Famous Players Studios. Since he had invested in the motion-picture industry a good part of the fortune he had made in real estate, he determined to protect that investment, saying: "It was obvious to me that any picture was at the mercy of the director. So I decided to become a director."

Wood worked for a few years as assistant to Cecil B. De Mille '42 (1914-16). He spent fifteen years at Paramount and then switched to MGM; there he remained until 1939, when he began free lancing. In the early days he directed Jackie Coogan in *Peck's Bad Boy*, Gloria Swanson, "Red" Grange, Rudolph Valentino, Marion Davies, Norma Shearer, and a host of other film notables. He was particularly interested in sport films and was one of the first to realize their audience appeal. "Versatility" seems to be the key word to describe Wood in the days of the silent film as well as those of the talkie. He can range successfully from

SAM WOOD

the slapstick of the Marx Brothers to the tender sentimentality of *Goodbye, Mr. Chips* (1939) and the stark realism of *Kings Row* (1941).

Unlike many of his fellow directors Wood made himself as much at home in talking pictures as he had been in silent films. In 1933 he made *The Barbarian, Hold Your Man, Her Sweetheart,* and *Christopher Bean.* The next year saw the production of *The Stamboul Quest*, followed in 1935 by *Let 'Em Have It, A Night at the Opera,* in which he directed the Marx Brothers, and *Whipsaw,* a comedy gangster film of which one reviewer wrote: "Sam Wood has directed it at a brisk pace and with a rare knack of making the expected happen in the most unexpected way." *The Unguarded Hour,* a murder mystery melodrama, followed in 1936, and in 1937 Wood returned to slapstick comedy to direct the Marx Brothers in *A Day at the Races.* He admitted his preference for melodrama, however, saying: "Comedy is the toughest job I know of. You're always trying to squeeze an extra something out of every scene." In that same year he directed the archly melodramatic *Madame X* and *Navy Blue and Gold,* a story of student life at Annapolis. The next year brought *Stablemates,* in which Mickey Rooney '42 and Wallace Beery were co-starred in a sentimental sport story. It was on the set of *Stablemates* that Mickey Rooney began calling the director "Uncle Sam," a name which has clung to Wood ever since.

Considered "probably the most thorough director in the business," Wood attributes his success to his insistence upon having first-rate actors and technicians to work for him. "I have always surrounded myself with a fine staff, and I've tried to cast as to script, instead of scripting for stars." He is a bitter critic of the star system and admires the British film industry wherein leading actors are required to play bit roles on occasion. For this reason he went to England in 1938 to film James Hilton's '42 novel, *Goodbye, Mr. Chips.* He worked with an all-English cast which included only one name familiar to American audiences, Robert Donat. It was in *Goodbye, Mr. Chips* (1939), "a tenderly nostalgic chimera," however, that his talent for discovering new stars was revealed. He cast Greer Garson '42 in the role of the understanding "Mrs. Chips," and Paul Henreid '43 as the young German professor.

In the next year Wood discovered a new star in Martha Scott, whom he had seen in the stage version of Thornton Wilder's '43 *Our Town.* Wood was determined that Miss Scott should keep her role of Emily in the screen version which he was to direct, although her screen tests had not been successful. He finally persuaded Sol Lesser, the producer, to give her the part, and it proved to be a most happy bit of casting. *Our Town* (1940) called for the use of revolutionary screen techniques—a narrator, soliloquies, a graveyard scene in which the dead speak. Wood took a deep breath, said: "This is a picture about which we must be daring," and plunged in. Critics were unanimous in hailing the picture as a great success, sincere, moving, and faithful in its portrayal of small-town life.

From the revolutionary techniques of *Our Town,* Wood turned to the conventional "Western" to direct *Rangers of Fortune* (1940), a sentimental story which introduced to film audiences a new child star, thirteen-year-old Betty Brewer. Meanwhile, Wood's ability to direct screen versions of popular novels had been recognized when, after successfully completing *Mr. Chips,* he rushed into *Gone with the Wind* during the illness of its regular director, Victor Fleming. Wood had not read the novel until three days before he was to take the job. In 1940 he was assigned to direct another film adapted from a best-selling novel, Christopher Morley's *Kitty Foyle.* A starring vehicle for Ginger Rogers '41, *Kitty Foyle* was praised as a forthright, "thoroughly entertaining" picture of the life of "the average American girl."

In 1941 Wood directed *The Devil and Miss Jones,* a whimsical comedy which dealt with the relations between a crusty department-store owner and his underpaid employees. Major credit for the success of the comedy went to Wood, "who directed at an unhurried and therefore doubly amusing pace." Switching to precisely the opposite mood, Wood directed in the same year *King's Row,* Henry Bellamann's '42 gruesome novel of small-town psychological maladjustment. Describing the film as "potent, artful cinema," *Time* Magazine wrote: "This difficult and ugly story packs a considerable wallop—thanks to the shrewd direction of Sam Wood and effective performances by his cast."

Hollywood was meanwhile hastening to cash in on Ernest Hemingway's best-selling novel, *For Whom the Bell Tolls.* Paramount outbid all other companies for the book in 1940 and named Sam Wood as director and producer. In the fall of 1941, although the picture was not yet cast, Wood moved 240 men and tons of equipment up to snow-covered Sonora Pass in the High Sierras to film some of the battle sequences. Working in sub-zero temperatures, their bombing scenes were interrupted on December 7 by the news that the United States was at war and all planes were to be grounded. At the same time Wood was confronted with the formidable problem of casting the picture. Gary Cooper ['41] had been Hemingway's own choice for the role of "Robert Jordan," but was under contract to do *The Pride of the Yankees* (1942), the life of the late baseball hero Lou Gehrig ['40], for Samuel Goldwyn. After much diplomatic maneuvering, Wood agreed to direct *The Pride of the Yankees* on condition that Cooper be allowed to play Robert Jordan after he had completed the Gehrig role. Thus Wood returned to sport films to produce a magnificent testimonial to baseball and one of its great heroes.

In spite of casting difficulties, reported protests from the Spanish Government, and a ceiling of $5,000 which the United States has imposed on all single stage sets, *For Whom the Bell Tolls,* called "Hollywood's $4,000,000 headache," was released in the late summer of 1943. According to *Time* Magazine, Wood had by this time diluted the film "so that Spanish Fascists became 'nationalists' and Spanish Republicans came out like the American G.O.P."

Wood got together an independent producing unit in October 1942 and bought the screen rights to *The Land Is Bright,* the George S. Kaufman ['41]-Edna Ferber play which appeared on Broadway in 1941. He is affiliated with both Warner Brothers and Columbia and is to make one picture a year for each company. His most recent picture is *Saratoga Trunk,* the screen version of Edna Ferber's successful novel, which again co-stars Ingrid Bergman ['40] and Gary Cooper.

Wood, "a tall, rugged, and well-tailored man who looks as though he would appear equally at home in overalls," is anything but the typical Hollywood director. He never loses his temper on the set, does not smoke or drink, and dresses like a business executive. He is married to Clara L. Roush, a non-professional, and they have two daughters, Jeane (Mrs. John H. Hiestand) and Gloria, who, under the name of K. T. Stevens, has appeared in several films and theatrical productions. Although not an Academy Award winner, Wood's Hollywood reputation is secure. According to *Time,* "if a Hollywood executive were confronted with the dread fact of having to turn out at one try a Grade-A, sure-fire hit, he would almost inevitably turn to the tall, dignified, soft-spoken man who has been quietly making excellent pictures for the last twenty-six years."

WRIGHT, QUINCY Dec. 28, 1890- Author; professor

Address: b. University of Chicago, Chicago, Ill; h. 5744 Blackstone Ave, Chicago, Ill.

Into the current maze of discussion on post-War planning a monumental work of scholarship, *The Study of War* (1942), has come as a sobering influence. Author and editor of this two-volume study which is the product of more than fifteen years of research by students and faculty of the University of Chicago is Quincy Wright, noted authority on international law and, according to H. E. Barnes, "the foremost living student of war as an institution." Professor Wright began his studies of international law before the outbreak of the First World War, and in the years between that war and the present one has traveled extensively throughout Europe, Asia, and North America, lecturing and writing books and magazine articles. Since 1923 he has been professor of political science and international law at the University of Chicago.

Philip Quincy Wright (he dropped the "Philip" early in his career) is the son of Philip Green and Elizabeth Quincy (Sewall) Wright. He was born in Medford, Massachusetts on December 28, 1890. Wright attended schools in Illinois, receiving his B. A. from Lombard College in Galesburg, Illinois in 1912. In the following year he took his M. A. at the University of Illinois and remained there to work for his Ph. D., awarded him in 1915.

The University of Pennsylvania then granted him a research fellowship, and in 1916 Wright's first book, *The Enforcement of International Law Through Municipal Law in the United States,* was published. This

DR. QUINCY WRIGHT

monograph, "a study of the measures which this country has adopted to compel its citizens and others found within the confines of its jurisdiction to observe what Dr. Wright calls 'supra-national' law," was praised for its originality and its careful scholarship. In 1916, too, Wright was engaged as instructor of international law at Harvard University, where he taught for three years, taking time off in 1918 (and again in 1921) to serve as adviser in international law to the United States Navy Department.

From Harvard Dr. Wright went to the University of Minnesota as assistant professor of political science. In 1922 he was married to Louise Leonard, who in the fall of 1943 was serving as consultant to the Office of the Coordinator of Inter-American Affairs and as director of the Chicago Council on Foreign Relations. They have two children, Rosalind and Christopher.

Wright's *Control of American Foreign Relations*, in which he analyzed "from the point of view of constitutional and international law the powers of the American Government and people in making treaties" and gave particular attention to the treaty of Versailles, was published in 1922. Having risen meanwhile at the University of Minnesota from associate to full professor, Wright was awarded the Phillips Prize by the American Philosophical Society for this essay.

In 1923 Dr. Wright went to the University of Chicago as professor of political science. Except for interludes during which he traveled abroad he has been at the University ever since. He has published numerous monographs and magazine articles and has edited several collections of essays on international law. Dr. Wright's extensive travels have taken him to Japan, China (where he was visiting professor at the Tsing Hua University in Peiping in 1929), Russia, Syria, Egypt, and Geneva (where he taught at the Graduate School of International Studies in 1934 and 1937). In 1930 Dr. Wright wrote *Mandates Under the League of Nations*, a study of the mandate system which was hailed as "masterly" and "a distinct triumph for American scholarship."

His studies of the activities of the League of Nations convinced Wright of the ultimate effectiveness of such a body. Without strength, however, he recognized that no world federation could exist. (Justice and peace can be attained, he wrote in 1941, "only by organizing a genuine community of nations with such solidarity that adequate force can be relied upon to support justice.") Dr. Wright was an ardent champion of international organization during the 1920's and '30's when American opinion was prevailingly isolationist. More recently, however, since polls have shown that the majority of the American people are willing to participate in some form of world organization, he has been careful to point out certain obstacles in the path of such an order. Too many people, Wright complains, believe that states can enter a world union and yet preserve intact their own sovereignty. "The widespread indulgence in this hope has been a major factor during the last ten years in preventing the functioning either of an efficient balance of power or of an efficient world organization."

The solution to these difficulties lies not in blindly rushing into a carelessly organized federation of nations but in planning that federation strictly along the lines of international law and in recognizing the rights and needs of individuals in the organization. Wright says: "World organizations cannot acquire vitality unless their functioning is important to people. People want recognition, security, response, and new experience."

During the peaceful spring of 1926 a group of University of Chicago students and faculty members, under the direction of Professor Charles E. Merriam, made some studies in the causes of war. Professor Wright later presented a digest of these studies to the Social Science Research Committee of the University of Chicago, which recommended grants to finance the work. The research was then launched in earnest, and sixty-six complete studies were produced. "Graduate students," writes Garrett Mattingly in his review of *A Study of War*, "burrowed in all directions through libraries. Faculty members and visiting scholars advised. History and international law provided the main axis of research, but all the 'social sciences' were levied on. . ."

Late in 1941 the study was completed. Its conclusions proved far less spectacular than might be expected from a work of that nature. Ellsworth Huntington writes: "He [Wright] concludes that the attitude conducive to peace is neither to deny the possibility of war, nor to consider war inevitable, but to appraise the position in which we now stand in relation to the history of civilization." In the last analysis, Wright believes that the main opportunity for world peace lies in a reorganized and revitalized League of Nations which will respect the rights of individuals.

The reviewers of *A Study of War* were unanimous in pronouncing it "not the kind of book which the non-specialist layman would find useful for reading straight through. . ." Its footnotes, appendices, charts, graphs, and bibliographies naturally take it out of the realm of "popular" literature. But its indispensability to students and teachers was generally recognized. Max Lerner '42 praised Professor Wright's talent for synthesis: "I like the sheer scope and ambition of the job: in an era of specialization and of petty aims there is something healthy about undertaking and carrying through so huge a project." The sociologist Pitirim A. Sorokin, writing in *Ethics* of April 1943, considered *A Study of War* a "quantitative study of the movement of modern wars in the course of time . . . a first-class contribution to our knowledge of war," praised it for its "comprehensive grasp of the essential sociocultural and historical aspects of war," but criticized it for its "pseudo-scientific obtuseness." Eric Harrison, writing in the *Canadian Historical Review*, said: "In the contemporary climax of human affairs, it is not an historian but an international lawyer who has made the most profound and exhaustive study of war that is likely to appear in this generation." G. A. Borgese found Wright's study "an outstanding testimonial to the faith of an age which—not ironically at all—is fighting a planetary war for a planetary peace."

Politically independent, Professor Wright is at present serving the United States Government as consultant in international law for the Lend-Lease Administration. He is an active member of several post-War planning committees, including the Commission to Study the Organization of Peace, and is an editor of the *American Journal of International Law*. Dr. Wright is a friendly, soft-spoken man and one of the most popular members of the University of Chicago's faculty. He writes us that his favorite peace-time recreation is travel, which he always combines with study, and since the War began he has liked to spend his spare time walking and mountain climbing.

WRIGHT, TERESA Oct. 27, 1918- Motion-picture and theatre actress

Address: b. c/o Samuel Goldwyn Studios, 1041 N. Formosa Ave, Hollywood, Calif.

One of the most promising of the young hopefuls that Hollywood has ever discovered, Teresa Wright, most critics believe, stands an excellent chance of becoming the foremost dramatic actress of the screen. No glamour girl, Miss Wright has won critical approval through sheer acting ability. In 1943 she won the Academy Award as the best actress in a supporting role for the year 1942—an honor for anyone, but a signal honor for a newcomer to the films. Alton Cook, film critic of the New York *World-Telegram*, hailed Miss Wright as being "probably the great new actress of our time."

Universal Pictures

TERESA WRIGHT

Muriel Teresa Wright was born in the section of New York City known as Harlem on October 27, 1918. She dislikes the name Teresa, but was forced to drop her first name when she went on the stage, because there was already a Muriel Wright registered with Actors' Equity. Her father, Arthur Wright, is an insurance man who is living at present in Morristown, New Jersey.

When Teresa was still very small her parents separated, and she was farmed out among relatives in New York and New Jersey, until, at the age of eight, she was collected by her father and sent to Rosehaven, a private school for girls near Tenafly, New Jersey. The school specialized in "homey" atmosphere and she learned a little French, dancing, and music, but not much of the three R's. She had something of a theatrical heritage, for her Uncle Harry had been a stock company actor of the old school, and her father, as a boy, had played Little Eva with his own long blond curls. He had retained his interest in the theatre and, as a young man, used to hang around the opera houses and theatres of New York, working as an usher and a ticket taker. Although Muriel liked to dance and act, she resented the suggestion that a theatrical career would be suitable for her, because she thought that meant she wasn't bright enough to be anything but an actress.

The little girl spent three years at Rosehaven, then a year in school at Hartford, and continued her education at the public schools of Maplewood, New Jersey. At the Columbia High School in Maplewood she acquired a serious interest in a stage career (her life was "shaped" by a matinee of *Victoria Regina*, starring Helen Hayes '42) and she became the school's leading actress. A

WRIGHT, TERESA—*Continued*

friendly teacher remarked her unusual ability and, according to one source, got a scholarship for her from the Wharf Theatre in Provincetown, Massachusetts. Another source declares that the teacher merely induced her father to stake her to two summers' tuition. At any rate Teresa spent the summer of 1937 studying at Provincetown, painting props, setting the stage, and collecting old furniture for sets from the natives. She was lucky in getting more parts than the average apprentice. Her childlike appearance secured her most of the children's parts, because there was no one else to play them. She returned the next summer, after her graduation from high school in 1938. Miss Wright explains that she was graduated from high school at a rather late age because she entered school fairly late (at the age of eight), and not because of any mental deficiency.

In the fall of 1938 Miss Wright returned to New York and met a friend from Provincetown, Doro Merandi, who was in the cast of *Our Town.* Miss Merandi suggested that the young actress be hired to understudy Dorothy McGuire '41, who played Emily, the part subsequently played by Martha Scott. Miss Wright read for the part and got the job. She understudied Miss McGuire and Miss Scott in New York and on the road until the spring of 1939, and when Martha Scott went to Hollywood Miss Wright took over. She played the role of Emily in the Wee and McCoy production, with Eddie Dowling in Craven's part. They played in Boston, in New Haven (Thornton Wilder's '43 home town, where he coached the cast and entertained them in his home), in Providence, and in Maplewood, Miss Wright's home town, on which occasion Walter Hampden acted as stage manager.

In the summer of 1939 she played in stock with the Tamworth, New Hampshire, Barnstormers. She appeared that summer as the daughter in *The Vinegar Tree,* Blossom in *Susan and God,* Emily in *Our Town* (again), the little girl in *What a Life,* and Pheasant in *White Oaks.* In all these she played children or, at most, very young girls. At the end of the summer she returned to New York City, and, like all the other jobless actors that season, started giving readings for *Life with Father.* She read for the part of Mary Skinner, the ingénue, for which Oscar Serlin '43, the producer, had persuaded himself he fancied a blonde. Miss Wright is a brunette. He called her back to read five times, finally decided that it was immaterial whether a blonde or a brunette played the role, and gave her the part. When the play had settled down to a run Miss Wright decided to live artistically and took a big Greenwich Village studio "with a skylight and lots of atmosphere." On her second night there she was robbed, so she gave up atmosphere and moved to a one-room apartment on Sullivan Street, just off Washington Square.

Miss Wright was still in the play nearly two years later when Samuel Goldwyn started casting for the film version of *The Little Foxes.* For the part of Alexandra, according to a film magazine, "he wanted a girl who could look sixteen, demure, and un-actressy, yet be enough of an actress to play dramatic scenes with Bette Davis '41." Goldwyn couldn't find this paragon in Hollywood so he went East to "scout the Broadway possibilities." There, acting on a suggestion by Lillian Hellman '41 who had seen *Life with Father,* he saw Miss Wright and hired her. Her contract, framed by Oscar Serlin, is supposed to be unique in cinema history. Clause 39 follows:

"The aforementioned Teresa Wright shall not be required to pose for photographs in a bathing suit unless she is in the water. Neither may she be photographed running on the beach with her hair flying in the wind. Nor may she pose in any of the following situations: In shorts, playing with a cocker spaniel; digging in a garden; whipping up a meal; attired in firecrackers and holding skyrockets for the Fourth of July; looking insinuatingly at a turkey for Thanksgiving; wearing a bunny cap with long ears for Easter; twinkling on prop snow in a skiing outfit while a fan blows her scarf; assuming an athletic stance while pretending to hit something with a bow and arrow. . ."

Miss Wright's avoidance of the "leg-art or cheese-cake" type of publicity aroused more notice in the press than if the young and comparatively unknown actress had been content to enter Hollywood under an ordinary contract. Some critics were unkind enough to hint that this effect may have been intentional. Others said more generously that Miss Wright refused to pose in sweaters and bathing suits because she was afraid it would impede her acting career. They also quoted her as denying that it was because any complaints had been made on the score of her figure. At any rate, wrote the late Lemuel F. Parton in the New York *Sun,* Miss Wright would have a "startlingly different Hollywood career. . . She won't paint her fingernails; she will stabilize her hair-do in a simple, becoming mode; she will use cosmetics with restraint; she will have just an adequate wardrobe with a few simple dresses, such as a dowager aunt might select for a nice girl going to Sarah Lawrence or Sweet Briar; she won't have a swimming pool or a Doberman pinscher or a Rolls-Royce or a Beverly Hills villa or any other of the supposedly necessary aids and accouterments of an ambitious film girl on the up-and-up."

In *The Little Foxes,* Miss Wright's first picture, she gave an outstanding performance. "One of the notable contributions of the film," wrote *Newsweek*'s critic, "is the . . . screen debut of . . . Teresa Wright. . . Cast in the difficult role of the bewildered bystander who finally breaks away from her sordid environment and from 'the little foxes that destroy the vines,' the twenty-year-old [actually she was two years older] actress turns in a sensitive performance that shares first honors with Bette Davis' Regina Giddens." Other critics went so far as to say that Miss Wright stole the picture from Miss Davis. Miss Wright was nominated for an Academy Award for this, her first performance, but she did not win the Award until her third picture.

Miss Wright's five-year contract with Samuel Goldwyn provides that she is to be allowed to do one Broadway play a year. She returned to New York after her success in *The Little Foxes* in 1941 to star in Oscar Serlin's production of Molnar's *The King's Maid.* The play, which Serlin directed himself, died "rather grimly" in Boston before it had a chance to reach New York. "This small episode," said Miss Wright, "gave me pause." Kyle Crichton interprets this statement as seeming to mean that "Teresa will follow the line of most actresses who have a Broadway fixation and a juicy Hollywood contract. She will see Broadway on an average of about once every nine years."

Miss Wright was next cast as Eleanor Gehrig in *Pride of the Yankees*, the film story of the life of Lou Gehrig '40, the celebrated baseball player. The young actress objected to being chosen for this part, for hitherto she had been playing nothing but children, and she felt that her public would not accept her in an adult role. Mrs. Gehrig, when the picture opens, is twenty-three, exactly Miss Wright's age at the time, and she reaches thirty during the course of the picture. Miss Wright, however, is of an extremely youthful appearance and can look seven or eight years younger than she actually is. Another difficulty that Miss Wright saw was that of playing the part of a living person. Goldwyn, however, overcame her objections, and she accepted the role and played it, critics agree, very successfully. It was for this picture that Miss Wright was forced to wear high heels for the first time, in order to bring her face closer to Gary Cooper '41, the star.

In *Mrs. Miniver,* her third picture, Miss Wright played a "high-born English girl," Greer Garson's '42 daughter-in-law. The picture was received with enthusiastic approval by the critics, and Miss Wright did not fail to secure her share of the plaudits. *Mrs. Miniver* won the Academy Award for the best picture of 1942, and Miss Wright won an Academy Award for her work in the film. *Shadow of a Doubt,* which was released in 1943, followed. As the naïve niece of the villainous Uncle Charlie, she played, commented Howard Barnes in the New York *Herald Tribune,* with "quiet authority." Other critics found her suitably "aglow with maiden spirit and subsequent emotional distress." *Time* Magazine's reviewer believed that, good as the rest of the cast and the director were, "the show is really Miss Wright's." In December she returned to Hollywood from New York; after her appearance in *All Those Endearing Young Charms* she was to appear in a comedy, *The First Cold.* She was then to be lent to International Pictures for the feminine lead in *Casanova Q. Brown.*

Miss Wright's cinematic career has been singularly successful. She is not beautiful—she typifies the average American girl in appearance—and all the honors she has achieved, therefore, are real tributes to her acting ability. Samuel Goldwyn feels that Miss Wright is "one of the most highly sensitive acting instruments it has ever been his responsibility to engage. He talks about how easily she understands her director, how quickly she learns her lines, how sure she is not to pick up inflections and tempo from other actors. Rather than call her headstrong he will add that she knows what she wants."

When Miss Wright moved to Hollywood at first she lived in a Beverly Hills apartment over a garage. It had the Hollywood touch, however—a swimming pool. Now she and her husband, Niven Busch, a Hollywood story editor, live with his sister in the San Fernando Valley. Miss Wright and Busch were married in the summer of 1942 after his divorce from his first wife.

Although Miss Wright is a persistent publicity shunner, still "fan" magazines have been able to amass a few facts about her: she is five feet two inches tall, weighs 106 pounds, and has wavy brown hair (originally dark brown, now reddish for "photographic reasons") and greenish-blue eyes. She never uses any make-up but lipstick. She never plucks her eyebrows—they are "just as nature meant them, unplucked and unglamorized." She still doesn't use nail polish. She hates dresses and prefers a sweater and slacks to "anything." She is not noted for being well-dressed, and critical admirers note that her stockings invariably wrinkle about the ankles. She hates bananas and loves candy bars in between meals. She likes to read, "but always optimistic stories; heavy stuff gives her the willies." She can't cook; she can't sew; she wants five children. She collects old theatre magazines and dolls. She always keeps an autographed picture of Helen Hayes in her dressing room for inspiration. ("Helen Hayes is my ideal. She is the sort of woman I'd like to be.") She sleeps in silk nightgowns on an oversized bed. She takes acting seriously, and when she's "knee-deep in a part" she "tears herself to pieces, gets a nervous tummy, loses weight, thinks, eats, and breathes what she's doing." She never goes to night clubs. She suffers from a horror of gossip columns.

Despite Miss Wright's dislike for glamour photographs, studio artists have made some attempts at them which, remarked Kirtley Baskette in *Photoplay,* made her look like "a high-school senior impersonating Cleopatra in the class play." Also, Kyle Crichton reports, Goldwyn's religious observance of Miss Wright's hatred for publicity has caused her some uneasiness, since her competitors are getting their pictures in the papers and she is appearing only on the screen. "Friends have told me," Crichton quotes her as having said to Goldwyn's publicity head, "that I have a very nice figure."

YUST, WALTER (ūst) May 16, 1894- Editor

Address: b. 20 N. Wacker Dr, Chicago, Ill; h. 759 Prospect Ave, Chicago, Ill.

Although most listeners to the *Information Please* radio program would like to win a set of the *Encyclopaedia Britannica*, probably very few know anything about the assembling, editing, and publishing of this thirty-five million-word reference book which has become a wartime best seller. Its editor in chief, the man with "the biggest editorial job in the world," is Walter Yust. This job includes also the editing of the *Britannica Junior*, the *Britannica Book of the Year*, and the *Encyclopaedia Britannica World Atlas*. Yust, who reads manuscripts far into the night and seldom gets more than five hours' sleep, has not read by any means all the articles that go into the *Britannica*—he would like, some day, to find time to do so. But ten years of assembling the writings and opinions of scholars and experts in all branches of human knowledge, of selecting and rejecting, of constantly being aware that mistakes will happen, are said not to have dampened either his humor or his enthusiasm. "Editing the *Britannica*," says Walter Yust, "is one of the most exciting of all journalistic assignments."

An ex-newspaperman, the *Britannica* editor is "a friendly, seemingly unhurried, ascetic-looking man" whose dark hair is turning iron-gray. He was born May 16, 1894 in Philadelphia, Pennsylvania, the son of Robert and Dorothy (Bauer) Yust. He attended the Central High School in Philadelphia, and began his career as a newspaperman when he entered the University of Pennsylvania in 1912. After his graduation with a B. A. degree and Phi Beta Kappa honors in 1917, he worked during the War as secretary in charge of the YMCA at Camp Hill, Newport News, Virginia. Following a reportorial job with the Philadelphia *Evening Ledger* (1917) he was associated with the Philadelphia *Press* (1918-20). Then came three years in the South: with the Memphis *Press* (1921); the New Orleans *Item* (1922); and the *Double Dealer* (1923). He served as managing editor of the *Double Dealer.*

Yust went to New York in 1923 to become the associate editor of the "Literary Review" and editor of the "Literary Lobby" of the New York *Evening Post*. In that year also he was married to Ruth McClintock Barker. There are two children of the marriage: Jane Ann and Larry Barker. In 1926 he returned to Philadelphia to become literary editor of the Philadelphia *Public Ledger*, and he held this position until 1930. He then became associate editor of the *Britannica* publications, and in April 1938 the editor in chief.

The current complete, or fourteenth edition of the *Encyclopaedia Britannica,* costing $2,000,000 to prepare, was financed by Julius Rosenwald, philanthropic head of Sears, Roebuck and Company, which had acquired the *Britannica*'s full stock control. It appeared in 1929 just before the stock market crash, and in the depression that followed orders fell off and a heavy deficit piled up. Sears, Roebuck put its secretary-treasurer, E. Harrison Powell, in charge of solving the financial difficulties of the *Britannica.* Powell decided not to start a complete new edition (as had been the custom in the past), which would take years to prepare, but to substitute a continuous yearly revision of the edition already in existence. The idea rescued the *Britannica* financially, and in three years it began to make money. Walter Yust's current task is the supervision of these yearly revised printings. He also edits the *Britannica Book of the Year,* which is "a million-and-a half-word volume issued each year which summarizes the main events of the preceding year and is sold to current set purchasers for $2.85." There is, further, a *Britannica* library research service, which answers the questions of set owners and which helps them use the *Britannica* and other source materials.

In January 1943, by outright gift from Sears, Roebuck and Company, the University of Chicago acquired full property rights in the *Britannica.* The *Britannica Junior* was included in the gift. The faculty of the University was to act in an advisory capacity, but the University was not itself to conduct the production and sales of the sets, which were to be continued from 20 N. Wacker Drive, Chicago.

The biggest promotion the *Britannica* has had is through the sponsored radio program, *Information Please.* Since 1939 the questions submitted by the public to the experts have jumped from 6,000 to 21,000 a week. It is reported that *Britannica* salesmen occasionally had difficulty selling a set because the prospect was sure that he would some day win a set free from *Information Please.* This difficulty was avoided by promising a full refund to the buyer of the new set if he won one from *Information Please* within ninety days. To date refunds have been paid only to two people.

The editorial side of the *Britannica* is Walter Yust's exclusive domain. He has a world-wide staff of departmental editors to assist him, though since the Second World War, which has made communication with foreign experts difficult, more articles are being written by Americans. The departmental editor decides what subjects in his field shall be covered and which experts shall write the articles. Current departmental editors include: Deems Taylor '40, music; Roscoe Pound, law; Grantland Rice '41, sports; Julian Huxley '42, biology; Lieutenant Colonel Calvin Goddard of the United States Army Ordnance Department, military; United States Navy Captain Leland P. Lovette, Navy; etc.

Not all *Britannica* articles are revised every year. Under Yust's present plan each article must be examined at least every five years and revised if needed. The choice of articles for revision is dictated largely by changing world events. Hence, since the outbreak of the War, many changes have been made necessary in the military, aeronautical, naval, and industrial departments. All editions up to 1941, for instance, had carried an article on air warfare by Sir Robert Brooke-Popham '41. When that general, after losing Singapore, was called a "nincompoop" in England, his article was replaced in the *Britannica*'s new edition by one on the same subject by two American aviation officers. In 1941 Editor Yust decided that all articles on aeronautics and aviation needed scrutiny. The revision job was given to Dr. Daniel Sayre, director of statistics and information for the Civil Aeronautics Authority in Washington. Sayre, having read the thirty-four articles on aeronautics (at a fee of $5 a page) decided that eight required no change, revised twelve himself, and got others to rewrite thirteen. One of the articles was omitted. It is said that the *Britannica* spends more than $200,000 a year on editorial revision.

Many of the articles in the *Britannica*, which have been carried on through the various editions without revision, now stand as classics of good literature written by famous literary figures. Some of these date from the founding, in 1768, of the *Britannica* by "a society of gentlemen in Scotland." (Until shortly after the turn of the century a Scottish institution, the *Britannica* is today wholly American owned. It is printed in the United States and shipped abroad to be bound.) Macaulay's famous essay on Samuel Johnson is one of the original classic essays. Other notable contributions are the article on socialism by George Bernard Shaw, esthetics by Benedetto Croce, the courtship of animals by Julian Huxley, Charles Dickens by G. K. Chesterton. Sir Walter Scott, Robert Louis Stevenson, Thomas Malthus, William Hazlitt, and James Mill have also contributed to the *Britannica*.

Many important world figures have written articles, for which they are paid two cents a word, for the *Britannica*. Albert Einstein '41 earned $86.40 for his essay on space-time. Henry Ford wrote the article on mass production; Wilbur Wright the biography of his brother Orville Wright. Gene Tunney '40 wrote on boxing; Charles Evans Hughes '41 on the Monroe Doctrine; Bernard M. Baruch '41 on raw materials; and General Archibald Wavell '41 on several famous battles. Editor Yust's favorite, which he reads over and over, is T. E. Lawrence's article on the science of guerrilla warfare in volume ten.

G. Nelidoff

WALTER YUST

The *Britannica* has faithfully tried to live up to its slogan: "All life in one set of books—the richness of the human mind, the achievements of all civilizations, the problems and hopes of the future." From its 175 years of existence its influence upon human thinking has been inestimable; and today in particular the task of Walter Yust as editor is vital, with more and more people turning to reference works about the world, its peoples, and its leaders. We are told that President Roosevelt '42 relies on the *Britannica*: when, for instance, the Nazis invaded Denmark, he got out his set to read up on Greenland, the Danish possession nearest the United States.

The *Britannica* has come in for its share of criticism as well as praise. Its most severe critic in the last two generations is said to have been the late Willard Huntington Wright (S. S. Van Dine), whose book, *Misinforming the Nation*, denounced the *Britannica's* eleventh edition. He called it "full of rabid prejudices, scholastic ignorance . . . an astounding egotism, and an undisguised contempt for American progress." It is said that all of Wright's specific complaints on omissions and misconceptions have been corrected in the new edition. In the present printing, likewise, readers have noted errors and omissions. According to William A. Lydgate (who spends his spare evenings reading the *Britannica*), there is "no article of any kind on public opinion. Lovers of the music of Brahms will be surprised to find that his biography is given only two and a half columns while Beethoven gets nearly twelve columns. There is no biographical sketch of Margaret Sanger, founder of the birth control movement." According to Editor Yust, when Mary Beard '41, wife of Charles A. Beard '41, complained that too little space was given to women, he counted the biographies and found that 800 of the 13,000 were of women. But he wrote Mary Beard inviting her to take charge of preparing biographies

YUST, WALTER—*Continued*

of outstanding women. She and a staff of several women writers have been working on that project.

There are exciting moments, as well as critical ones, in Walter Yust's job. He likes to tell how a Naval officer at Pearl Harbor wrote to say that all his belongings had gone down with his ship on December 7 except a letter from Yust asking him to write a *Britannica* article, and the water-soaked notes he had prepared for it. From these notes the article was written—the one on Blockade, which appears in the 1942 *Britannica Book of the Year.* To lighten the duller moments of editing there are sometimes, also, humorous mistakes made in articles and in the offices of the *Britannica* itself. Yust relates how young filing clerks working on the index volume "listed gallstones under geology, defense mechanism under military, incest under business and industry, Pope Innocent under law, and physics under direct action."

The one quality necessary to an encyclopedia editor, according to Yust, is infinite patience —the patience to handle thousands of small details. Sometimes he and his staff must check as many as 100,000 index references a month. Sometimes no one seems to know which detail is correct—such as which way the eagles in the United States Army insignia are supposed to face. The *Britannica* played safe by showing some eagles facing one way and some the other. "The hardest thing in this world to get is a fact," Yust declares. One elusive fact is the length of the Ozark River. In one volume of the *Britannica* Yust found it given one length, in another volume another length. He wrote to five different authorities and got five different answers. "I don't know yet how long the darn thing is," he says.

Reading the *Britannica* in his spare time is not exactly Walter Yust's idea of a hobby. When he does have time to read he likes to relax with pocket-size detective novels. His favorite sport is baseball; and he writes us that his hobby is the "manufacture of hooked rugs."

ZEVIN, B(ENJAMIN) D(AVID) May 16, 1901- Publisher

Address: b. 2231 W. 110th St, Cleveland, Ohio; h. 22801 Lake Shore Blvd, Euclid, Ohio

The mass production of good books—original titles and reprints—at low popular cost, and the development of new channels for their distribution were ideas germinated during the depression and developed in the late '30's by certain enterprising young publishers. Prominent among them is B. D. Zevin, who originated the forty-nine-cent Tower Books in 1939 issued by the World Publishing Company, a well established Midwestern firm in which he was director of sales and advertising. He is now vice-president.

Like Robert de Graff '43 (publisher of Pocket Books) and others, Zevin was convinced that good, inexpensive books should be made available to the reading public. But the World Publishing Company, when he joined it in 1934, was doing comfortably enough with its editions of Bibles and popular-priced dictionaries. It was a complacent, "plushy business, lined with gilt-edged dividends, but any kind of a groove has some resemblance to a rut, and when B. D. Zevin joined the company he decided to pry it loose." That took time. Zevin, however, had not only good editorial judgment but sound business acumen. Furthermore he was fortunately established for his ventures, since his firm's own printing and binding equipment would reduce his manufacturing costs to a minimum.

His previous business experience and background were also factors that enabled Zevin to compete successfully in the low-priced, mass-production book business. A native of New York, Benjamin David Zevin was born on May 16, 1901, of Jewish parents, Herman and Hannah (Brooke) Zevin. He went to the New York public schools and to Stuyvesant High School, and then took special courses at New York University. His first job was with an advertising agency in 1919. When he was twenty-one he headed his own agency. Later he was associated with New York trade paper publishing, in the food industry. He became business manager of the *Daily Food News* in New York in 1928, and he held that position for five years.

It was in 1934 that he left New York to become advertising director for the World Publishing Company in Cleveland, Ohio. In 1936 he was made director of sales and advertising. When Zevin came to the Company he was a young man with ideas and the knowledge of new, shifting markets and trends in the publishing field. The World Publishing Company, whose president is Alfred Cahen, had been started by him on the traditional shoestring in 1905. Cahen had introduced a good many improvements into high-speed book production, and he was called twenty years later "the Henry Ford of the book business."

For years his company had produced books by the million for premium distribution by newspapers and mail-order houses. When Zevin entered the firm he began trying out his ideas for book production by making new, attractive, inexpensive editions of the dictionaries and Bibles which were already owned by the Company, and which were a gold mine in themselves. "By the time he was finished he had dictionaries that could do everything but give milk." One of his ideas was the production of three million 384-page pocket dictionaries for the Planters Peanut Company, which sold them for a dime a copy. During Zevin's first five years with the company, it is said, the sales of dictionaries and Bibles more than doubled.

By 1939 B. D. Zevin had risen from the position of advertising manager to that of vice-president of his company. He was now able to try out more radical experiments in new fields. He started Tower Books, "the first series of forty-nine-cent non-fiction reprints in America." They were books on self-help, hobbies, "how-to's," health, popular psychology. By 1941 sales were over a million copies; 1942 nearly doubled this figure, and "so far sales for 1943 are again double those of 1942. This fact, along with paper restrictions, has forced the Company to discontinue or curtail other lines."

The best seller in the Tower Series is *Roget's Thesaurus* (1941), the only published forty-nine-cent edition, and runners-up are Clement Wood's *A Complete History of the United States* (1941) and Millard Everett's *The Hygiene of Marriage* (1940). Fiction titles were added in September 1942. Best seller among these is Gypsy Rose Lee's *G-String Murders* (1942); "the customers evidently figure that at forty-nine cents you can't go wrong with Gypsy." Other authors in the Tower fiction list are James T. Farrell '42, James M. Cain, Sherwood Anderson, Elliot Paul '40, Nevil Shute '42, Irvin S. Cobb, Ngaio Marsh, James Gould Couzzens, John Steinbeck '40, Agatha Christie '40, Max Brand, E. M. Delafield, Marguerite Steen '41, Dashiell Hammett, Jim Tully, and Richard Wright '40. Pearl Buck, Somerset Maugham, and others are soon to be added.

Prepared for 1943 distribution, also, are sure-fire best-seller titles: *Cooking in Wartime* and *Home Canning*. Anthologies have always been popular with buyers of Tower Books, and many of these Zevin edits himself. He has signed up Boris Karloff '41 to compile a collection of tales of terror, and Will Cuppy to edit a new assortment of mystery stories.

In the twenty-five-cent field, Zevin's publications include the sale of 1,800,000 copies of *Global Atlas of the World at War* and over 1,000,000 copies of *The Simplified Guide to Your Income Tax*. A current item, *Vegetable Gardening in War Time*, by L. Richard Guylay, has an initial printing of 500,000. All Tower books are distributed through book stores, and also through popular-priced department stores, drug chains, five-and-tens, newsstands, and other outlets which have never carried books before.

Geoffrey Landesman

B. D. ZEVIN

Always an omnivorous reader, Zevin's own education has been acquired largely through his extensive reading. To this habit of reading he owes the basis for his sound editorial judgment. He has, of course, an editorial staff, which he trusts completely if they unanimously agree on a book. When they do not agree Zevin himself reads the book and makes his own decision. More often than not he will read the prospective selection out of just plain curiosity and interest. "He is that rarity among publishers, one who has read practically all the books his company publishes." Because of his fine sense of literary discrimination, he is considered one of the few men in the popular publishing field "who could step out tomorrow and take over control of a university press. A little house organ that he edits, called *Counterpoints*, is a neat blend of current humor and pertinent excerpts from really good books."

Further, Zevin is said to have "an almost belligerent sense of honesty about what the buyer of low-priced editions deserves. He has been known to publish books that won't make money for the company because he thinks they should have a wider circulation (for example, *Lunacy Becomes Us* [1942], an anti-Nazi propaganda job and a good one), or to turn down a book that he believed might be a best seller because it would mislead people (a tome written by a famous name which recommended high-priced branded cosmetics). . . Members of his staff will tell you with conviction that he is temperamental. But it is a sort of pleasant, paternal temperament which makes even his most fearful reprimands not too hard to take."

Zevin is married to the former Lillian Cahen, and is the father of four children: Bernice, Rima, Jaquelyn, and Robert Brooke. Slim, dark, genial, a hard worker who has time for an occasional pipe, Zevin has two hobbies. One, he writes us, is political economy. The other is amateur photography. In the opinion of experts, his camera work is said to have professional quality. In August 1943 Zevin moved his family to their newly

ZEVIN, B. D.—*Continued*

acquired estate in Euclid, Ohio; in the seventeen-room house he has a fine photographic library and the walls of his study are hung with his own photographs, many of which have been exhibited. Some of the best of these are of books: he owns a collection of fine old dictionaries and rare Bibles. Maps are another Zevin enthusiasm—his office desk faces a mural map of the world. "In expansive moods he tilts his chair back and contemplates the part of the English-speaking world which does not yet know World books and thinks: 'After the War. . .'"

ZORACH, WILLIAM (zor'äk) Feb. 28, 1887- American sculptor; water colorist

Address: b. Art Students League, 215 W. 57th St, New York City; h. 276 Hicks St, Brooklyn, N. Y.; Robinhood, Maine

"I have always derived my inspiration from my life and the life around me. I love animals and people; I am a social human being and yet I am a solitary one. I am a simple person, close to the earth. All I really want from life is to be able to conceive and create my work out of myself and my life, and then have someone want it badly enough to buy it so that it goes out into the world and I can still continue to create."

This is the creed of William Zorach, a painter until he was thirty, and since then primarily a sculptor. He was born in Eurburg, Lithuania, the son of Aaron and Toba (Bloch) Zorach. His parents were orthodox Jews, his mother from a farming family, his father owner of a small barge on the near-by river. He was the seventh of ten children. Both parents were illiterate. When Zorach was three his father lost his barge in a pogrom of the Jews, endemic to Czarist Russia, and he went to the United States to try to make a living there. The next year the mother and children followed. They settled in Port Clinton, Ohio, and the father went on the road as a peddler. When the boy was seven they moved to Cleveland, where the father became a junk dealer.

In Cleveland young Zorach attended the public schools, but after school and in summer he worked as a newsboy or helped his father in his junk-collecting trips. They saved money enough to buy a house for the large family, but the former owner, an old Southern gentleman, continued to live with them, and from him the children learned whatever they knew of culture and gracious living. The boy was always drawing in his textbooks and on the blackboard, or carving every bit of wood he could find. At thirteen he left school and for a while had "a new job every week" in various factories and machine shops. He was persuaded to go back to school, where a supervisor of art perceived the boy's talent and gave him a letter of introduction to the Morgan Lithograph Company of Cleveland. "He was hired immediately," wrote Paul S. Wingert, "at a weekly wage of $3—not, however, because of his ability to draw but rather because the company had just had a fire and needed a husky boy of Zorach's type to help clean up the debris."

A short time later when Zorach was fifteen he was made an apprentice by the firm, and all the journeymen promptly struck—he was just one apprentice too many. For a year he and all the other apprentices did all the work of the shop; they were strikebreakers, but they were also getting an intensive training in lithography. At the end of three years William was earning the vast sum of $9 a week. When he completed his term as apprentice he was engaged as a lithographer by the same firm, and he remained with them until 1908. Evenings he attended the Cleveland School of Art. His ambition still hardly extended beyond commercial art. In 1908, when he was twenty, he struck out for New York. He had no money—for a year he slept in a clothes closet! He went to the National Academy of Design mornings, afternoons, and evenings. While there he won a medal for excellence in drawing and an honorable mention for his painting. In the summers he went back to lithography to earn his keep for the rest of the year, meanwhile studying and copying in his spare hours at the Metropolitan Museum and at the Lenox Library.

Finally in 1910, like so many other young Americans in the arts, he worked his way to Paris. He chose La Palette as his school because they criticized in English there and he had no time to learn French. There he met another American student, a California girl named Marguerite Thompson, who was to become Mrs. Zorach. She was a "modern," and first introduced him to the "wildly modern" art of which later he became an exponent. Four out of five of the paintings he contributed to the Autumn Salon were exhibited. When, however, after a summer spent sketching in the South of France he returned to Cleveland, he was without funds, and an exhibition brought him just $15. There was nothing to do but return to lithography. That meant New York again. There, between his serious work, he did commercial drawing for a livelihood. "It was from these beginnings in commercial art," writes Wingert, "that he developed the antipathy which he now has toward it as a vocation."

In 1912 Zorach and Miss Thompson were married and settled down to work together in a small old brick house in Greenwich Village in New York. In 1913 he exhibited his paintings in two important shows in New York. Through these exhibitions his name first came to the attention of the collectors, the art critics, and the general public. As his work grew more and more "advanced," and as he became more and more absorbed in it, Zorach found he had lost the knack of turning out acceptable commercial drawings. Long, hard years were ahead for the artist couple. Several times friends lent them remote farms in New England where they could live and work. Two children were born—a son, Tessim, and a daughter, Dahlov (now Mrs. Adolph Ipcar and an artist in her own right. She had a one-man show at the Museum of Modern Art which traced her work from babyhood to maturity.) These names sound foreign, but they are not: Tessim comes from "Infinitesimal," Dahlov from a childhood lullaby, "Daddy love 'um." (The "William" by which Zorach is known is a teacher's adaption of his unpronounceable Lithuanian name.) Mrs. Zorach has specialized in a form of pictorial wool embroidery, called by some "embroidery painting," which has been compared to the Gobelin tapestries.

Success as a painter came slowly, but Zorach gradually became well known, and his work appeared frequently in gallery shows. He had never felt, however, that painting was his natural medium, and when in 1917 he began to carve wood blocks and to model in clay he knew he had found the material with which he could best express himself. In 1922 he abandoned oil painting conclusively for sculpture. He says: "I came to sculpture as a mature artist." Sculpture was an expanding universe, a liberation, and a natural form of expression. His sculpture was first exhibited in 1924, and he soon became known as an extremely gifted sculptor. In 1931 he received the Logan Medal and a $1,500 prize for sculpture from the Chicago Art Institute. He continued to paint, however, in water colors, and the following year he received the Logan Medal again and a $500 prize at the Institute's International Water Color Exhibition. "His water colors contain generally," comments Wingert, "the same solid construction and integrated design as his sculpture, and show him to be a colorist of importance."

Zorach was the sculptor for the new Post Office and Justice Buildings in Washington. His aluminum statue, *Spirit of the Dance*, was thrown out of Rockefeller Center as "too nude," but later restored with honors. His paintings and sculpture are in the Metropolitan Museum, the Whitney Museum of American Art, the Museum of Modern Art, all in New York City, the Phillips Memorial Gallery (Washington, D. C.), the Berkshire Museum (Pittsfield, Massachusetts), and the art museums of Newark, Cleveland, Brooklyn, and Los Angeles, as well as in many private collections. Unlike most modern sculptors, he does not make models in clay or plaster and have them pointed or copied, but carves directly from marble or granite. He works out of doors at his home in Maine in the summer, leaving the carvings outside, wrapped in canvas, through the winter. He never uses professional models, but employs his family and friends—people he knows.

WILLIAM ZORACH

Among Zorach's best known statues are larger-than-life marble nudes which he calls *Conflict, Mother and Child*, and *Youth*. This last is in yellow marble. The Rockefeller Center *Spirit of the Dance* is his only notable statue in aluminum, a material not available now to sculptors because of the War. *The Linesman*, representing a football player, is one of the few figures he has made in plaster, and it has not yet been cast in stone. The size, the flowing lines, the impression of solidity, and the fidelity to life in his sculpture are in marked contrast to his painting, which is ultra-modernist and often Surrealist in treatment. It is not surprising that he has done so much work for public buildings; not only are his statues made and weathered in the open air, but they give the spectator the feeling that they belong out of doors or in a vast hall from which they can be seen from afar. There is nothing delicate or finicking about them; they are truly "heroic." They are realistic and representational, in the classical tradition, and have no touch of the abstractionist technique of the school of art to which Zorach still belongs as a painter. One critic described his work by saying: "His forms have a peasant-like stockiness, but also an undulating beauty suggestive of the finest Oriental art."

What Zorach usually strives for in his figures is "the permanent character of human form in its fundamental relationships." "They retain to a remarkable degree," according to Wingert, "the intrinsic qualities of the stone, the living spirit of his subjects, and the broad decorative elements common to both." Zorach's sculpture has a "solemn, calm, meditative spirit, comparable to that of the ancient Egyptians, the early Greeks, and the Chinese. Although he has learned much from a study of past styles, yet his art does not derive from any one of them but is an individual interpretation based on essential sculptural principles."

Stocky, Zorach is five feet ten inches tall and weighs 200 pounds. He has long dark hair (he is partly bald), dark skin, and green eyes. "A serious man with a fine head," Zorach likes to live the simple life of a natural man of peasant stock who has always felt

ZORACH, WILLIAM—*Continued*

close to the soil. For years he and his wife have been interested in the Progressive School Movement, and both their children were educated entirely in such schools. He is vice-president of the Society of American Painters, Sculptors, and Gravers, and is on the board of the Sculptors' Guild. He was formerly New York City chairman of the American Artists' Congress, but resigned in protest against the group's Leftist political views. At present Zorach is an instructor at the Art Students League of New York City, and for many years he has also acted as art supervisor in a group of progressive schools in and around New York City.

In the early days of the Provincetown Players at Provincetown, Massachusetts, Zorach was one of the enthusiastic amateurs who produced and acted in the early plays of Eugene O'Neill—besides being the official scene painter. He has written autobiographical articles for the *Magazine of Art* which show a pleasant literary style. He dabbles little, however, in other arts; he is a slow, thorough worker, and most of his time is given to his own field. In summer, though that is the time when he does most of his sculpture, he finds time also to look after his farm in Maine (managed by his daughter and son-in-law), play with the Persian cat and the host of assorted animals which always seem to gather around him, and enjoy the society of his two-year-old grandson. Swimming is his favorite recreation. With his marked "gift for the monumental," Zorach has gradually earned recognition as one of the leading American sculptors of today.

NECROLOGY—1943

This is an index to notices of deaths which occurred between November 4, 1942 and December 31, 1943. Deaths which occurred late in 1943 are recorded in early 1944 issues of CURRENT BIOGRAPHY; references to those issues are included in this index. See 1940, 1941, and 1942 Yearbooks for the necrologies for those years.
